PRASIAE, or PRASIAEAE (Pausan., Thes.; Strab. Aris., Prasc., Pras.), Scyl. p. 17; Ptol. iii. 17. § 10: Prasian, Paus.: Eth. Bostraγνης, Paus.: Prasianēs, Steph., a town on the eastern coast of Laconia, described by Pausanias as the farthest of the Eleuther-Laconian places on this part of the coast, and as distant 200 stadia by sea from Cyphanta. (Paus. iii. 24. § 3.) Seylax (L.c.) speaks of it as a city and a harbour. The name of the town was derived by the inhabitants from the noise of the waves (βοσχεῖν). It was burnt by the Athenians in the second year of the Peloponnesian War, n. c. 430. (Thuc. ii. 56; Aristoph. Poc. 242.) Also in n. c. 414 the Athenians, in conjunction with the Argives, ravaged the coast near Prasian. (Thuc. vi. 105.) In the Macedonian period Prasian, with other Laconian towns on this coast, passed into the hands of the Argives (Polyb. iv. 36); whence Strabo calls it one of the Argive towns (viii. p. 368), though in another passage he says that it belonged at an earlier period to the Lacediemonians (vii. p. 374). It was restored to Laconia by Augustus, who made it one of the Eleuther-Laocian towns. (Paus. iii. 21. § 7; iii. 24. § 3.) Among the curiosities of Prasian Pausanias mentions a cave where Iaso nursed Dionysus; a temple of Asclepius and another of Achilles, and a small promontory upon which stood four brazen figures not more than a foot in height. (Paus. iii. 24. §§ 4, 5.) Leake places Prasian at St. Andrew in the Thyretis; but it must probably have stood at Tygros, which is the site assigned to it by Bubbayre, Ross, and Curtius. (Leake, Morea, vol. ii. p. 484: Bubbayre, Recherches, &c. p. 102; Ross, Reisen im Peloponnes, p. 165: Curtius, Peloponnes, vol. ii. p. 306. [See Vol. I. pp. 727, b, 729, n.]

PRASIAE, a demus in Attica. [Vol. I. p. 331, b.]

PRASIAD. LACUS. [Cercyentes.]

PRASIAC. [Prasiana.]

PRASIODES SINUS (Πρασίωδας κόλπος), Ptol. viii. 4. § 4), a gulf which Ptolemy places on the SW. side of the island of Taphrodon or Ceglon. No such gulf can now be traced upon the outline of this island; and there would seem to be some confusion between the gulf and a sea to which the geographer gives the same name of Πρασιωδίς, and which he makes extend along the parallel between the island of Menuthias (Zancibar?) and the Gulf of Sinus (vii. 2. § 1).

PRASNUM ROMONTORIUM (Πράσων Ῥωμοντόριον), Ptol. i. 7. § 2, seq.; viii. 3. § 6), or the C. of Leeks, was a headland in the region S. of Messos, to which the ancient geographers gave the appellation of Barbarica. The position of Prasnum is unknown; for it is impossible to identify Prasnum, the Green Promontory, with Cape Delgado, i.e. Cape Slenor, which, as the name implies, is a mere line upon the water. Neither is it certain that Prasnum, although a lofty rock, was a portion of the mainland at all, insomuch as the coast of Zingebar, where Prasnum is probably to be found, is distinguished alike for the verdure of its projections and the bright green islands that stretch along and beyond them. Moreover, Agathocles (p. 57) and Marcianus Heracleotus (op. Hudson, Geoj. Min. i. p. 12) mention a sea in this region called, from its colour, Prasodes, the Green. The coast and islands of Zingebar derive their rich verdant appearance from the prevalence of the bambix or cotton-tree. All that is known of Prasnum is that it was 150 or 150 miles S. of the headland of Rhapta, lat. 4° 8', and a station for that obscure but active and continually trading which Egypt under the Ptolemies and the Caesars carried on with the eastern emporia of Africa. (Cooley, Claudius Ptolemy and the Nile, pp. 88—90.) [W. B. D.]

PRASUS. [Prasius.]

PRECIANI, a people of Aquistan, who surrendered to P. Cassus, Caesar's legatus in n. c. 56. We know nothing about them, and even the name is uncertain, for the MSS. write it in several different ways. (Cass. B. G. iii. 27.) [G. L.]

PRELIUS LACUS, a lake mentioned only by Cicero (pro Mil. 27), and in a manner that affords no indication of its position. But it is probable that it is the same which is called Lucus Aprilius in the Itineraries, and apparently Prilia by Pliny (Arctius Laxis), the modern Lago di Castiglione, on the coast of Etruria. (Chaver. Ital. p. 474.) [E. H. B.]

PREMINIS. [Primes.]

PRESPIENTHUS (Πρεσπιένθος), an island in the Aegean sea, one of the smaller Cyclades, lying between Oliaros and Siphnos. (Strab. x. p. 485; Plin. iv. 12. s. 22.)

PRHEIA [Gallaecia, p. 934, b.]

PRHNUS. [Praxus.]

PRHANTAE, a people of Thrace, on the Hebrus, (Plin. iv. 11. s. 18.) Forliger (vol. iii. p.1076) conjectures that they may have inhabited the Πρασκωνεία mentioned by Herodotus (vii. 108). [T. H. D.]

PRIAP'TI POI'TUS (Πριαπτίον αμφίων, Ptol. vii. 4. § 35), a port which Ptolemy places on the NW. side of the island of Taphrodon (Ceglon). Mannert imagines that it is represented by the modern Ne·goubo, The name may not unaturally have arisen from the Greeks having noticed at this place the prevalence of the Linga or Pallidie worship. [V.]

PRIAYPTUS (Πριαπτός; Eth. Πριαπτρός), a town of Mydia on the Prontous, situated on a headland on the spur of Mount Pityus. Some said that it was a colony of Mletus, and others regarded it as a settlement of Cyzicus: it derived its name from the worship of the god Priapus. It had a good harbour, and ruled over a territory which produced good wine. (Strab. xiii. p. 587; Thucyd. viii. 107; Pomp. Mela, i. 19; Plin. iv. 24. v. 40; Steph. B. s. r. Geogr. Rav. ii. 18. v. 19; Arrian, Anab. i. 12. § 7.) Ruins of Priapus still exist near Karabon. (Bichter, Wallfahrten, p. 435; Raschle, Lex. Nacional. iv. i. p. 51.) [L. S.]

PRHIENE. (Πρήνη: Eth. Πρενοῦς, Πρενώς), an Ionian city, near the coast of Caria, on the south-eastern slope of Mount Mycale, and on a little river called Gassen, or Gassen. It had originally been situated on the coast-sea, and had two ports, one of which could be closed (Seylax, p. 37), and a small fleet (Herod. vi. 6); but at the time when Strabo wrote (xii. p. 579) it was at a distance of 40 stadia from the sea, in consequence of the great alluvial deposits of the Maeander at its mouth. It was believed to have been originally founded by Aeppyrus, a son of Anchises, who received afterwards additional colonists under a Boeotian Philotas, whence it was by some called Cadme. (Strab. xiv. pp. 633, 656; Plin. vii. 2. § 7; Eustath. ad Dionys. 825; Diog. Laërt. i. 5. 2.) But notwithstanding this admixture of Boeotians, Priene was one of the twelve Ionian cities (Herod. i. 142; Aelian, i. V. iii. 56; Vitruv.
PRIFERNUM, a town of the Vestini, mentioned only in the Tabula, which places it 12 miles from Pritum, the same distance from Amitternum, and 7 miles from Areia. (Tab. Peut.) But the roads in this district are given in so confused a manner, that notwithstanding these data it is impossible to fix its site with any certainty. It is placed by Ramanelli (vol. iii. p. 283) in the neighbourhood of Assergio, but this is little more than conjecture. [F. H. B.]

PRIMIS MAGNA and PARVA (Πριμις μεγάλη, Πριμις μικρα, Πτολ. iv. 7. § 19), the names of two towns in Asphonia, situated upon the extreme or right bank of the Nile. Primis Magna, called simply Primis by Pliny (iv. 29. s. 35), and Prnemis (Πρημνης) by Strabo (xxiv. p. 820), was taken by the Roman commander Petronius in the reign of Augustus. After taking Prnemis, which is described as a strong place, the Roman commander advanced against Napata. (Strab. l. c.) Ptolemy places it beyond Napata and just above Meroe. Here is is known as Primis Parvam. (Comp. Kennick, Ancient Egypt, vol. ii. p. 464.)

PRIMOTOLIS (Πριμωτόλις, Const. Chalced. pp. 127, 240; falsely Πριμωντόλις, Hieroc. p. 682, and Πρωμωντόλις, Const. Ephes. p. 528), a town in Pamphylia, the latter name of Aspendus. (See Wesseling, ad Hieroc. p. 682.)

PRINASSUS (Πρινασσός: Eth. Πρινασσαντις), a town in Caria, of uncertain site, taken by Philip V., king of Macedonia, and known also by its coins. (Polyb. xvi. 11; Steph. B. s. v.; Festini, p. 89; Cranmer, Asia Minor, vol. ii. p. 217.)

PRINOESSA, an island off the coast of Lucania, in Acarnania, mentioned only by Pliny (iv. 12. s. 19).

PRINUS. [Mantinea, p. 264.]

PRION (Πριόν), a mountain in the island of Cos, which is about 2760 feet high. (Plin. v. 36.) From a scholiast (ad Theod. vii. 45) it might be inferred that Oromedon was another name for Mount Prion; but according to another ancient commentator Oromedon was either a surname of some divinity, or the name of some wealthy and powerful man. [L. S.]

PRION (Πριών), a river in Arabia. [Pirionotes.]

PRIONOTUS MONS (Πριόνοτος μονός), a mountain in the southern part of Arabia, in the territory of the Adramite, identified by Forster with Ras Broom, a headland forming the termination of a mountain chain and jutting out prominently into the ocean in long. 49°, about 35 miles NE. of Moghda. Prion was a river flowing into the sea near this promontory. (Ptol. vi. 7. §§ 10, 13; Forster, Arabia, vol. ii. p. 204, seq.)

PRISTA (Πρίστα, Ptol. iii. 10, § 10, where, however, some read Τριστα; called in the Itin. Ant. p. 222, Secunctapista; in the Nat. Iap. Saxagamie Prista; and in Prosop. de Aed. iv. 11, p. 507, Ενερτηγράντα), a place in Mes sia Inferior, on the Danube, the station of the 5th cohort of the 1st Legio Ital. Identified with Ruthechuck. [T. H. D.]

PRIVERNUM (Πρίβερνον; Eth. Privernum-attis; Piperno Vecchio), an ancient and important city of the Volscians, afterwards included, with the rest of the territory of that people, in Latium, in the more extended sense of the name. It was situated in the Volscian mountains, or Monti Lepini; but not, like Setia and Norba, on the front towards the plain of the Pontine Marshes, but at some distance farther back, in the valley of the Amausus. Virgil represents it as an ancient city of the Volscians, and the residence of Metabus, the father of Camilla (Aen. xi. 540); and there is no reason to doubt that it was originally a city of that people. Its name is not indeed mentioned during any of the earlier wars of the Volscians against Rome; but on these occasions the name of the people is generally given collectively, and the brunt of the war naturally fell upon those cities which more immediately adjoined the frontiers of Latium. When the name of Privernum first appears in history it is as a city of considerable power and importance, holding an independent position, and able not only to engage in, but to sustain, a war against Rome single-handed. In B. C. 358 the Privernates drew upon themselves the hostility of Rome by plundering theAUD of the Roman colonists who had been recently settled in the Pontine Plains. The next year they were attacked by the consul C. Marcus, their forces defeated in the field, and they themselves compelled to submit (Liv. v. 15, 16). But though their submission is represented as an unconditional surrender (deditio), they continued to form an independent and even powerful state, and only a few years afterwards again ventured to attack the Roman colonies of Norba and Setia, for which they were speedily punished by the consul C. Plautius: their city is said to have been taken, and two-thirds of their territory forfeited. (Id. vii.
42, viii. 1.) This was seen after divided among the
karan plebeians. (Id. viii. 11.) They do not ap-
pear to have taken any part in the general war of the
Latin and Campanians against Roan; but in n. c.
327 the Privernates again took up arms single-
handed, with only the assistance of a few of the
Fundi.
Notwithstanding this, the war was deemed of
sufficient importance to employ two consular armies;
and it was not till after a long siege that Priver-
num was reduced by C. Plancius, the consul of the
following year. The walls of the city were destroyed,
and the leaders of the defection severely punished;
but the rest of the people were admitted to the Ro-
man protection. Probably, however, the city was the first in
stance without the right of suffrage, though this also
must have been granted then in the year n. c. 316,
when the Uffentine tribe was constituted, of which
Privernum was the chief town. (Liv. vii. 19—21,
x. 20: Fast. Capit.; Val. Max. vi. 2. § 1; Festus,
Z. u. Uffentia; Niebuhr, vol. iii. p. 176.) According
to Festus (p. 235) it became a Prefecture; but
notwithstanding this subordinate condition (which
was perhaps confined to the short period before it
attained the full franchise), it seems to have been a
flourishing municipal town under the Roman govern-
ment.
Its territory was one of those which the
agrarian law of Servilius Gallus proposed to assign
to the Roman populace (Cic. de leg. Agr. ii. 25);
but though it escaped upon this occasion, it sub-
sequently received a military colony (Lib. Colon. p.
236). The period of this is uncertain: according
to Zumpt (de Colon. p. 401) it probably did not
take place till the reign of Trajan. In inscriptions
it bears the title of a colony; though others term it
a municipium; and neither Pliny nor Polyenn a sign
it the rank of a colony. (Plin. iii. 5. s. 9; Pol. iii.
1. § 63; Zumpt. l. c.) It was noted, as well as the
neighbouring Setia, for the excellence of its wine
(Plin. xiv. 6. s. 8); but we hear little of Privernum
under the Roman Empire, and have no subsequent
account of its fate. From its secluded position, no
mention occurs of it in the Itineraries. The ruins of
the ancient city, which according to Cluverius are
considerable, are situated about 2 miles N. of the
modern Piperno, on the site still called Piperno
Vecchia. The period or occasion of the abandonment
of the ancient site is unknown; but it is certainly
wrong to connect it with a great earthquake which
is alluded to by Cicero as taking place at Privernum
(Cic. de Div. ii. 43). On that occasion, we are told,
the earth sank down to a great depth,—a phenomenon
which may have given rise to a remarkable chasm
or cavity still visible in the neighbourhood of Piperno.
The ancient city was more probably deserted in con-
sequence of the ravages of the Saracens in the tenth
century, from which all this part of Latium suffered
severely (Rampoldi, Corografia d'Italia, vol. iii. p.
238), and the inhabitants sought refuge in more
elevated and secure positions, such as that of the
modern town of Piperno. [E. H. B.]
PROBALINTIUS. [Marathon.]
PROBATA. [Boscoreale, p. 412, b.]
PROCEASTIS, the most ancient name of
Chalcodon, according to Pliny (v. 32. s. 43).
PROCA TTA (Praexenia: Procida), a small
island off the coast of Campania, situated between
Cape Misenum (from which it is distant less than 3
miles) and the larger island of Aeumna or Isea. In
common with the latter it is of volcanic forma-
tion, and appears to have been subject in ancient
times to frequent earthquakes. Pliny and Strabo
even tell us that it was a mere fragment broken off
from the neighbouring island of Aegina by one of
the violent convulsions of nature to which it was
subject. But this statement certainly has no his-
torical foundation, any more than another, also re-
corded by Pliny, that both islands had been thrown
up by volcanic action from beneath the sea. Such
an event, however true as a geological inference,
must have long preceded the historical era. (Strab.
i. p. 69, ii. p. 123, v. pp. 248, 258; Plin. ii. 88.)
The same phenomena led the poets to associate
Procya with Aemilia or Larinum, in connection
with the fable of the giant Typhon (Aemilia); and
perhaps Strakus even ascribed it a giant of its
542. xii. 147; Ovid. Met. xiv. 89.)
Virgil's epithet of "Procya alta" is less appro-
priate than usual,—the island, though girt with
perpendicular cliffs, being flat and low, as compared
either with Ischia or the neighbouring headland of
Misenum. There does not appear to have been any
town on the island in ancient times. Statius (Silv.
i. 276) terms it a rugged island, and Juvenal (Sat.
i. 5) speaks of it as a wretched and lonely place
of residence. At the present day, on the contrary,
it is one of the most fertile and flourishing spots in
the Neapolitan dominions, its whole area being
cultivated like a garden and supporting a popu-
lation of 4000 inhabitants. It is distant between 2
and 3 miles from Cape Misenum, but only about
a mile and a half from the nearest point of the
mainland, which is now known as the Monte di
Procida. [E. H. B.]
PROCONNESSUS (Proconnesus, or Prokon-
nesus in Zosim. ii. 30, and Herod. p. 662), an island
in the western part of the Propontis, between Priapi
and Cyzicus, and not, as Strabo (xii. p. 598) has
it, between Parium and Priapi. The island was
particularly celebrated for its rich marble quarries,
which supplied most of the neighbouring towns, and
e specially Cyzicus, with the materials for their
public buildings; the palace of Mausolus, also, was
built of this marble, which was white intermixed
with black streaks. (Vitruv. v. 8.) The island
continued in its south-western part a town of the
same name, of which Aristaeus, the poet of the
Armenia, was a native. (Herod. iv. 14; comp. Syl-
lay, p. 35; Strab. l. c.) This town, which was a colony
of the Milesians (Strab. xii. p. 587), was burnt by a
Phoenician fleet, acting under the orders of the
Ptolemies. (Herod. vii. 33.) Strabo distinguishes
between old and new Proconnesus; and Syl-lay, besides
Proconnesus, notices another island called Elapho-
nesus, with a good harbour. Pliny (v. 44) and the
Scholiast on Apollonius Rhodius (ii. 278) consider
Elaphonessus only as another name for Proconnes-
us; but Elaphonessus was unquestionably a distinct island,
situated a little to the south of Proconnesus. The
inhabitants of Cyzicus, at a time which we cannot
ascertain, forced the Proconnesians to dwell together
with them, and transferred the statue of the goddess
Hindyme to their own city. (Paus. viii. 46. § 2.)
The island of Proconnesus is mentioned as a balsacan
in the ecclesiastical historians and the acts of the
Council of Chalcedon. The celebrity of its marble
quarries has changed its ancient name into Mermec
or Marmora; whence the whole of the Propontus
is now called the Sea of Marmora. Respecting some
autonomous coins of Proconnesus, see Sestini, Mon.
Vet. p. 75. [L. S.]
PROERNA (Proerena), a town of Phthiotis, in
PROLAQUEUM.

Thessaly (Strab. ix. p. 434), which Stephanus B. writes Proorna (Προορνα), and calls by mistake a town of the Malians. In n. c. 191 Proerna, which had been recovered by the consul Caius. (Liv. xxxvi. 14.) We learn from this passage of Livy that Proerna stood between Pharsalus and Thanaucī, and it is accordingly placed by Leake at Glykυkoskouou. (Northern Greece, vol. i. p. 459.)

PROLAQUEUM (Πιορακος), a village or station on the branch of the Via Flaminia which crossed the Apennines from Nuceria (Νοκερα) to Septempeida (S. Sererius). It was situated at the foot of the pass on the E. side of the mountains, and evidently derived its name from its being at the outskirt of a small lake which discharges its waters into the Poteneza. Cluverius speaks of the lake as still existing in his time: it is not marked on modern maps, but the village of Pioraco still preserves the traces of the ancient name. The Itinerary reckons 16 M. P. from Nuceria to Prolaqueum, and 15 from thence to Septempeida. (Itin. Ant. p. 312; Clever. Ital. p. 614.)

PROMONA (Προμωνα, Appian, Illyr. 12, 2—5; Pest. Tab.; Geogr. Rav. iv. 16), a town of the Liburni, situated on a hill, and, in addition to its natural defences strongly fortified. Octavius, in the campaign of B. C. 34, surrounded it and the adjacent rocky heights with a wall for the space of 40 stadia, and defeating Teutinius, who had come to its relief, forced an entrance into the town, and obliged the enemy to evacuate the citadel. There is every reason to believe that Promona stood on the skirts of the craggy hills, which, with the neighbouring district, now bear the name of Promusia. As the Pentinger Table places it on the road from Bariuni to Salona, it must be looked for on the SE. side of the mountain, in the direction of Dernis. (Wilkinson, Dabulatta, vol. i. p. 206.)

PRONAEA. [NEMEIA.]

PRONI, PRONNI, or PRONESUS (Προνίς, Pol.; Πρωννίς, Thuc.; Πρωννίζος, Strab.), one of the four towns of Cephallenia, situated upon the south-west coast. Together with the other towns of Cephallenia it joined the Athenian alliance in n. c. 431. (Thuc. ii. 30.) It is described by Polybius as a small fortress; but it was so difficult to besiege that Philip did not venture to attack it, but sailed against Pale. (Pol. v. 3.) [PALE.]

Livy, in his account of the surrender of Cephallenia to the Romans in n. c. 159, speaks of the Nysioti, Crani, Paleenses, and Samaei. Now as we know that Proni was one of the four towns of Cephallenia, it is probable that Nysioti is a false reading for Pronesiotes, which would be the ethnic form of Pronesus, the name of the town in Strabo (x. p. 455). Proni or Pronesus was one of the three towns which continued to exist in the island after the destruction of Same. (Comp. Plin. iv. 12, s. 19.)

The remains of Proni are found not far above the shore of Limenia, a harbour about 3 miles to the northward of C. Kapri. (Leake, Northern Greece, vol. iii. p. 66.)

PROPHTHASIA. [DEAEANIA.]

PROPTONIS (Προπτόνις, Sea of Mormera), the sea between Thrace and Asia Minor, forming an intermediate sea between the Aegean and the Euxine, with the latter of which it communicates through the narrow strait of the Thracian Bosporus, and with the former through the Hellespont. Its ancient name Propontis describes it as the sea between the entrance of the Pontus or Euxine; while its modern name is derived from the island of Mormora, the ancient Proconnesus, near the western entrance of the sea. (Appal. de Mund. p. 6; Steph. B. s. v. PROPTONIS.) The first authors who mention the name Propontis under this name are Aeschylus (Pers. 876), Herodotus (iv. 85), and Scylax (pp. 28, 33); and Herodotus seems even to have made an accurate measurement of this sea, of which he states the length, to be 1400 stadia, and the breadth 500. Later writers such as Strabo (ii. p. 125) and Agathemerus (ii. 14), abandoning the correct view of their predecessor, state that the breadth of the Propontis is almost equal to its length, although, assuming the Propontis to extend as far as Byzantium, they include in its breadth a portion of the Thracian Bosporus. Modern geographers reckon about 120 miles from one strait to the other, while the greatest breadth of the Propontis from the European to the Asiatic coast does not exceed 40 miles. The form of the Propontis would be nearly oval, were it not that in its south-eastern part Mt. Argathonissus with the promontory of Poseidum forms two deep bays, that of Astacus [ΣΙΝΟΣ ΑΣΤΑΚΩΝ] and that of Clin [ΚΛΙΝΟΣ ΣΟΝΥΣ]. The most important cities on the coasts of the Propontis are: PERLIX- TRUS, SELYMBRIA, BYZANTIUM, CHALCEDON, ASTACUS, CHUS, and CYZICUS. In the south-west there are several islands, as PROCONNESUS, OPHUSA, and ALONE; at the eastern extremity, south of Chalcedon, there is a group of small islands called DEMONNEIS, while one small island, Besbicis, is situated in front of the bay of Cius. (Comp. Polyb. iv. 39, 42; Strab. xii. p. 574, xiii. pp. 563, 583; Plut. v. 2, § 11, vii. § 5, viii. 11. § 2, 17; § 2, Agath. i. 13; Dionys. Per. 137; Pomp. Mela, i. 1, 3, 19, ii. 2, 7; Plin. iv. 24, v. 40; Kruse, Uber Herodots AusBeanung des Pontus Euxinus, s.c., Brezam, 1820.)

PROSCHIUM (Πρόσχιομ; Eθ. Προσχιουος), a town of Astolia, between the Achelous and the Euxinus, is said to have been founded by the Aeolians when they removed from the Homeric Pylem up into the country. [PYLEN.] Proschiom also laid claim to high antiquity, since it possessed a shrine said to have been dedicated by Hercules to his eponymous Cythrus, whom he had unintentionally slain. It is clear, from a narrative of Thucydides, that Proschiom lay west of Calydon and Pleronn, and at no great distance from the Achelous. Leake places it on the western part of Mt. Zygus (the ancient Acracytus), near the monastery of St. George between Antolikos and Anghekolakstros. (Strab. x. p. 431; Athen. x. p. 411 a.; Thuc. iii. 102, 106; Steph. B. s. b.: Leake, Northern Greece, vol. i. p. 119.)

PROSEIS. [ARCADIA, p. 192, b. No. 7.]

PROSOLEDENE. [PORODELENE.] PROSPALTA. [ΑΤΤΙΚΑ, p. 332, 3.]

PROSYMINA (Προσμίνα; Eθ. Προσμιώαν, Steph. B. s. v.), an ancient town in the Argeis, in whose territory the celebrated Heraea, or temple of Hera, stood. (Strab. viii. p. 373.) It is mentioned by Pausanias (i. 17, § 2) mentions only a district of this name. (Leake, Peloponnesiaca, pp. 264, 269.) [See Vol. I. pp. 206, 207.]

PROTA (Πώτα), one of a group of small islands in the east of the Propontis, not far from Chalcedon. (Steph. B. s. v. ΧΑΛΚΕΩΝ.) Its distance from Chalceita was 40 stadia, and it is said still to bear the name of Prota. [L. S.]
PROTE. (Πρότη). 1. An island off the western coast of Messenia. [See Vol. II. p. 342, b.]
2. One of the Storechades off the southern coast of Gaul. [Storechades.]

PROTONICA, a place in Bithynia, on the road from Nicom to Ancyra. (Hes. Hieros. p. 573.) It is possibly the same place as Protomacra (Πρωτομάκρα) mentioned by Ptolemy (v. 1. § 15). [L. S.]

PROVINCIA. The part of Gallia which bordered on Italy and was bounded on the south by the Mediterranean was Gallia Provinciana (Caes. B. G. i. 19), a term by which Caesar sometimes distinguishes this part of Gallia from the rest, which he calls "omnis Gallia" (B. G. i. 1) or "tota Gallia" (B. G. vii. 66). The Province in Caesar's time was bounded on the north by the Rhone from the western extremity of the Lacus Lemmannus (Lake of Geneva) to the junction of the Rhone and the Sabaean. Geneva, which belonged to the Allobroges, was the furthest town in that direction (GENEVA). Along the southern side of the Lake of Geneva the limit was the boundary between the Allobroges who were in the Province and the Nantuates who were not. (B. G. iii. 6.)

The Alps were the eastern boundary. Ocelum (Ocriculum) was in the Citerior Provincia or Gallia Cisalpina, and the country of the Vocontii was in the Ulterior Provincia or in the Province Gallia (B. G. i. 10). On the west the Mons Cevena (Cévennes) southward from the latitude of Lugdunum (Lyon) was the boundary. The Volsca Avercumi were within the Province, and also the towns of Narbo (Narbonne), Carcass (Carcassonne), and Tolosa (Toulouse), as we see from a passage in Caesar (B. G. iii. 20). Part of the Ruteni, called Provinciales (B. G. vii. 7), were in the Province; and also the Helvii, who were separated from the Arverni by the Cevena (B. G. vii. 8). The Ruteni who were not in the Province, the Gabali, Nitobriges, and Cadurci bordered on it west.

The Roman troops were in this country during the Second Punic War when Hannibal was on his road to Italy; but the Romans first got a footing there through the people of Massilia, who called for their help n. c. 154. In n. c. 122 the Romans made a settlement, Aquae Sextiae (Alès), which we may consider to be the commencement of their occupation of the country east of the Rhone. [GALLIA, Vol. I. p. 953.] The conquest of the Salyes and Vocontii, and of the Allobroges, gave the Romans all the country on the east side of the Rhone. The settlement of Narbo (Narbonne) in n. c. 118, near the border of Spain and in a position which gave easy access to the basin of the Garonne, secured the Roman dominion on the west side of the Rhone as far as the Pyrenees. But the Romans had many a bloody battle to fight before they were safe on Gallic ground. The Volceni (Vaison) were in the country of the Volcani in the interior by the conquest Valerius Capio (n. c. 106) extended the limits of the Province as far as this rich town. (Dion Cass. Fr. 97, Sc.) But the Roman dominion was not safe even in n. c. 58, when the proconsul Caesar received Gallia as one of his provinces. His subjugation of all Gallia finally secured the Romans on that side. [Vol. I. p. 954, Sc.]

In the division of all Gallia by Augustus the Province retained its limits pretty nearly: and it was from this time generally called Narbonensis Province, and sometimes Narbonensis Bracatura. Names which occur in the Greek writers are: Κολοναυατία Νάρ- 

PROVINCIA. ἣ Ναρβονεία, and ἦ Γαλατία ἦ περὶ Ναρβονη. There is no doubt that the name Bracatura or Bracata is derived from the dress of the Galli ("cos his sagatos bracatoups variarsi." Cic. pro Fonteio, c. 13), and the word "braca" is Celtic.

Strabo (iv. p. 178) says that the form of the Narbonensis resembles that of a parallelogram; but his comparison is of no use, and it is founded on an erroneous notion of the position of the Pyrenees. [Vol. I. p. 949.] Ptolemy determines the eastern boundary of the Province by the west side of the Alps, from Mons Adulas (perhaps Mont St. Gobard) to the mouth of the Vrons (Vor), which separated Narbonensis from Italy. Part of the southern boundary was formed by that part of the Pyrenees which extended from the boundary of Aquitania to the promontory on the Mediterranean where the temple of Venus stood, by which Ptolemy means Cap Creus [PORTUS VENERIS]. The rest of the southern boundary was the sea, from the Alpilles to the mouth of the Tar. The western boundary remained as it was in the time of Caesar, as it seems; for Carcaso and Tolosa are placed in Narbonensis by Ptolemy and Pliny. (iii. c. 4.) Ptolemy places Lugdunum or Convenae, which is on the Garonne and near the Pyrenees, within the limits of Aquitania, and he mentions no place in Aquitania east of Lugdunum (CONVENAE). East of the Convenae and at the foot of the Pyrenees were the Consorari, part of whom were probably in Aquitania and part in Narbonensis (CONSORANI). The western boundary of Narbonensis therefore ran from the Pyrenees northward, and passed west of Toulouse. Perhaps it was continued northwards to the Tarn (Tarn), which was probably one of the borders of the Province; but his notion of the direction of the Jura was not exact, though it is true that the range touches a part of the northern boundary. Ptolemy makes the Adulas the southern limit of the eastern boundary of Belgium (ii. 9. § 5); and Adulas is also the northern limit of the eastern boundary of Narbonensis. The southern boundary of Belgic Buddhism was the northern boundary of Narbonensis. It is difficult to say whether the geographer is making a boundary of his own or following an administrative division; but we may consider that the Narbonensi contained the upper valley of the Rhone (the Valais) for the Berae or Alpa which form the northern side of this great valley are a natural boundary, and the Helveti were not in the Valais [HELVETI].

We may conclude then that the Sequani, Venetri, and Nantuates, who were not within the Province as defined by Caesar, were within the limits of the Narbonensis. One of the common roads to Italy was from Octodurus (Martigny in the Valais) over the Alpas Pennins (Great St. Bernard). The Narbonensis is thus a natural division comprehending the plain of the Rhone, the Leman lake and the countries south of it to the Alps, the country on the south side of the Rhone from the lake to
PROVINCIA. 673

Lyon, and the country south of Lyon. The part of the Province south of Lyon is a valley between the Alps on the east and the Cévennes on the west, which becomes wider as we advance south. On the east side the lower Alps and the Alpine valleys cover a large part of the country. On the west, the Cévennes and the lower ranges connected with them leave a very narrow tract between the Rhone and the mountains till we come to the latitude of Uriage and Nine. The southern part of the Rhone valley between Massillon and the Pyrenees contains a large extent of level country. The southern part of this great valley is more Italian than Gallic in position, climate, and products. The Rhone, which cuts it into two parts, has numerous branches which join it from the Alps; but the mountain streams which flow into it from the Cévennes are few [Rhodanus].

The rivers of the Province west of the Rhone flow from the Cévennes and from the Pyrenees into the Mediterranean. They are all comparatively small. The Cévennes of Avensus is probably the Gardon, as we can conclude from the name; the Ledus is the L. Laras, which flows past Montpellier; the Auranus (Hérault) flows past Agathe (Agde); the Libria or Libris may be the Lirous [Libris]; the Orbis or Orbis (Orbe); the Narbo or Aetax (Aude), which passes Narbonne; the Ruscino or Tets (Tet), and the Ticis (Tech), which enters the Mediterranean a few miles north of Portus Veneris (Port Vendre). Between the Var and the Rhone there are very few streams, for the form of the surface is such that nearly all the drainage runs into the Rhone. There is the Argences (Arguenx), and a few insignificant streams between the Argences and the delta of the Rhone.

The extreme western part of the Province comprehends a portion of the basin of the Garonne, for Toulouse is on this river. The valley of the Aude between the Cévennes and the Pyrenees forms an easy approach from the Mediterranean to the waters of the Garonne and to the Atlantic; a circumstance which facilitated the commerce between the Mediterranean and the Atlantic, and made this a commercial route at a very early period. [NARBO.]

The coast from the Pyrenees to the Rhone, and to a point a few miles south of Massilia forms a great bay called the Golletus Sicilis; it is generally flat, and in many places it is lined by marshes and lakes. This part of the coast contains the Delta of the Rhone. East of Massilia the country is hilly and dry. The port of Massilia is naturally a poor place. Exit of it is the port of Telos Martius (Toulon), and a few other ports of little value. Melas's remark (ii. 5) is true: "On the shore of the Province there are some places with some names; but there are few cities, because there are few ports and all the coast is exposed to the Augus and the Aenami." There are a few small islands along the eastern coast, the Stochadeis, Planasia, Lecon, and other rocky islets. The dimensions of the Province, according to Agrippa's measurement, are said to be 270 M. in length and 245 M. in breadth. But we neither know how the measures were taken, nor whether the numbers in Pliny's text (iii. 4) are correct. However we learn that this, like many other parts of the empire, was surveyed and measured under Agrippa's orders.

The length of the coast of Narbonensis is about 250 miles. The direct distance from Toulouse to the mouth of the Var is near 300 miles; and from the junction of the Rhone and the Scène, the direct distance to the sea measured along a meridian is about 180 miles. But these measures give only an imperfect idea of the area of the country, because the outline is irregular. Strabo (iv. pp. 178, 179) has preserved a measurement which has followed a Roman road from the Pyrenees to the Var. The distance from the temple of Aphrodite at the Pyrenees to Narbo is 65 Roman miles; thence to Neminus 88; from Nemimus through Ugermann and Tarasco to the warm springs called Sextiae (Aqua Sextiana), which are near Massilia, 53; and thence to Antipolis and to the Varus, 73; the whole making 277 miles. Some reckon, he says, from the Aphrodium to the Varus 2600 stadia, and some add 200 more, for they do not agree about the distance. Two thousand six hundred stadia are 325 Roman miles. When Strabo wrote, the distance along the road from Narbo to the Var was not measured, or he did not know it. The other great road which he describes is a road through the Vocontii and the territory of Cottius: "As far as Ugermann and Tarasco the road from Neminus is the same as the route just described; but from Tarasco to the borders of the Vocontii over the Druentia and through Caballio (Cavallion on the Durance) is 63 miles; and again, from Caballio to the other limit of the Vocontii toward the land of Cottius to the village Epebrodunum (Embremun, Embrun) is 99 miles; then 99 more through the village Brigantium (Brignon) and Scomagnus and the passage of the Alpes (the pass of Mont Gentiere) to Ocelum [Ocelum], the limit of the land of Cottius; the country from Scomagnus is reckoned a part of Italy, and from there to Ocelum is 27 miles." He says in another place (iv. p. 187) that this road through the Vocontii is the shorter, but though the other road along the Massiliotic coast and the Ligurian territory is longer, the passes over the hills into Italy are easier, for the mountains in those parts sink lower.

These were the two great roads in the Province. There was a road in the west from Narbo through Caracaio to Alesia. There was also an Aralate (Aire) to the bifurcation of the Rhone northward on the east side of the Rhone, through Avenio, Aramisos, Valenti, and Vienna (Vienne), to Lugdunum; this was one of Agrippa's roads (Strab. iv. p. 208). There was no road on the opposite side of the river, or no great road, the land on that side not being well adapted for the construction of a road. There were other roads over the Alps. There was a road from Lugdunum and Vienna up the valley of the Isara (Isére) to the Alpes Graiae (Little St. Bernard), which in the time of Augustus was much used (Strab. iv. p. 260); and there was the road from Augnus Praetoria (Asosi) in Italy over the Great St. Bernard to Octodurum (Martigny) and Pemni- lucum, at the east end of the Lake of Geneva; and thence into the country of the Helvetii.

Within the limits of Narbonensis there is every variety of surface and climate, Alpine mountains and Alpine valleys, sterile rocky tracts and fertile plains, winter for nine months in the year and summer for as many months. Pliny says of it: "Acreorum cultu, virorum morumque dignatione, amplific- dine opinum, nulli provinciarum postrema hom-ine Italy veriusc." (Pliny, iii. 4.)

The climate is only mild in the south part and in the lowlands. As we descend the Rhone a difference is felt. About Aenusio (Orange) the olive appears, a tree that marks a warm climate. "All..."
the Narbonitis," says Strabo, "has the same natural products as Italy; but as we advance towards the north and the Cenomanon (Cévennes), the land planted with the olive and the fig, and the other things are grown. The grape also does not ripen well as we advance further north" (iv. p. 178).

Strabo's remark about the olive is true. As we advance from Nîmes by the great road to Clermont Ferrand in the Auvergne, we ascend gradually in a north-west direction to a rocky country well planted with vines, mulberry trees, and olives. After proceeding a few miles further the olives suddenly disappear, a sign that we have passed the limits of the temperature which they require. The country is now an irregular plateau, rocky and sterile, but in parts well planted with mulberries and vines; and there is a little wheat. Before descending to Aulusia (Aubusson), which is deep snuf in a gorge of the Vardo (Gardon), a few more olives are seen, but these are the last. We are approaching the rugged Cévennes.

The native population of the Province were Aquitani, Celtæ, and Ligures. The Aquitani were in the parts along the base of the Pyrænes. The Ligures in the historical period occupied the south-east part of the Province, north and east of Aiciscilia; and it is probable that they were once on the west side of the Rhone also. The Greeks were on the coast, east and west of the city of Massilia (Massilia). After the country was reduced to the form of a Province, the Italians flocked to the Province to make money. They were petty dealers (mercatores), bankers, and money-lenders (negociatores), sheep-feeders, agriculturists, and traders. (Cic. pro P. Quinctio, c. 3, pro M. Fonteio, c. 5.) The wine of Italy was imported into the Province in Cicerico's time, and a duty was levied on it, if not at the port, at least in its transit through the country (pro Fonteio, c. 9). Cicerio sneeringly says, "We Romans are the most just of men, for we do not allow the Transalpine nations to plant the olive and the vine, in order that our olive plantations and vineyards may be worth more" (de Rei Publica, iii. 9). It does not appear from Cicero when this selfish order was made. But the vine is a native of Narbonensis, and the Greeks made wine, as we might safely assume, and they sold it to the Galli. Postdonius, whom Cicero knew, and who had travelled in the country, says that the rich Galli bought Italian wine and wine from the Massaliots. (Postdonius, ep. Athen. iv. p. 132.) If any of the Galli got this wine, the Galli of the Province would have it.

This favourite province of the Romans was full of large cities, which under the Empire were ornamented with works both splendid and useful, amphitheatres, temples, theatres, and aqueducts. Many of these buildings have perished, but the magnificent monuments at Arles and Nîmes, and the less striking remains in other cities, show what this country was under Roman dominion.

The tribes or peoples within the limits of the Province are very numerous. Pliny has a long list. On the west side of the Rhone at the foot of the Pyrænes were the Comorani and Sardenses or Sordi. North of them were the Volcae Tectosages, whose capital was Tolosa; and the Ruteni Provincialid. The Volcae Arcemolici occupied the country east of the Tectosages and extended to the Rhone. The position of the Tascin, a small people mentioned by Pliny, is only a matter of conjecture (Tasconi). North of the Arcemolici only one people is mentioned between the Cévennes and the Rhone, the Helvii (Helvii). The Aradeche (a mountain stream from the Cévennes) flows through their country into the Rhone. It was a tributary of the valley of the Aradeche that Caesar got over the Cévennes, in the passage of the Arverni through the snow in the depth of winter (B. G. vii. 8). He could go no other way, for he tells us that he went through the territory of the Helvii.

East of the Rhone the tribes were very numerous for the surface is larger and full of valleys. It has been already observed that the Seduni, Varagi, and Nantuates must have been included in the Narbonensis of Augustus. The Allobroges occupied the country south-west of Geneva, to the Isere and the Rhone. Pliny's list of names in the Province comprises all Pidonesy, with some slight variations, except the Communi, Eliocci, and Scotti. Some of the names in Pliny are probably corrupt, and nothing is known about some of the peoples. The following are the principal peoples south of the Nantuates and Allobroges: the Centrones, Graioceli, Medulli, Catargizes, Tricori, Segorcellani, Tricastini, Cavares, Vocansii, Villigentes, Bodiociti, and Albici, all of them north of the Drasentia or its branches. South of them were the Salyes or Salluvii, the neighbours of Massilia; the Suecici, Oxyai, Decuates, and the Narci, who were separated from the latter by the Var. [G. L.]

PRUSA (ΠΡΟΥΣΙΑ: Eih. Προωοαες), generally with the addition of ένις Κρος Κολορατους, to distinguish it from another place of the same name, was situated at the northern foot of Mount Olympus, in Mysia. Pliny (v. 43) states that the town was built by Hannibal during his stay with Prusias, which can only mean that it was built by Prusias, whose name it bears, on the advice of Hannibal. According to the common text of Strabo (xii. p. 564), it was founded by one Prusias, who waged war against Croesus, for whom Stephanos B. (ii. 40) substitutes Cyrus. As no such Prusias is known in the age of Croesus or Cyrus, various conjectures have been made upon the passage of Strabo, but without success. At all events, it is acknowledged by Dion Chrysostomus (Orat. xiiii. p. 585), who was a native of the town, that it was neither very ancient nor very large. It was, however, as Strabo remarks well governed, continued to flourish under the Roman emperors (Plin. Epist. x. 83), and was celebrated for its warm baths, which still exist, and bore the name of the royal waters." (Athen. ii. p. 43; Steph. B. s. v. Οίκουσα.) Under the Greek emperors it suffered much during the wars against the Turks (Nicei. Chon. pp. 186, 389); when at last it fell into their hands, it was for a time the capital of their empire under the name of Erusa or Brossa, which it still bears, for it still is one of the most flourishing towns in Asia Minor. (Brown's Travels in Walled's Turkey, vol. ii. p. 108; Scistini, Mon. Vet. p. 70; Hamilton, Researches, i. p. 71, &c.)

Plutemy (v. i. § 13) and Pliny (v. 43) mention a town of the same name on the river Hyppis or Hyppius, in Bithynia, which, according to Mennon (cc. 29, 42, 49), had formerly been called Cieren (Cierous), and had belonged to the territory of Heraclea, but had been taken by Prusias, who changed its name. But there seems to be some confusion here between Cierius and Cius, the latter of which is known to have received the name of Prusias from the king of that name. (Strab. xii. pp. 563, 566.) [L. S.]
PRYMNEIA

PRYMNEIA or PRYMNE/SUS (Πρύμνεια, Πρυμνεύς; Euth. Πρυμνεύνειας), a small town in central Phrygia. (Ptol. v. 2. § 24; Hieroc. p. 677; Conc. Chalcid. p. 673.) Ptoleomy (Travels, i. c. 15) found an inscription containing the name of this town near *Aphion* Carisnar. Leske (Asia Minor, p. 55) shows that the inscription does not refer to Prymneia, but to some person whose name ended in mennes. No inference, therefore, can be drawn from it as to the site of that town. Franz (Fünf Inschriften, p.5) has proved, by uncontroversial arguments from other inscriptions, that Prymneia must have been situated at *Seid-el-Ghazi*, between *Esik-Shehr* and *Conia*, where a few remains of an ancient Greek town still exist. (Leske, Asia Minor, p. 21.)

PESANIAS (Περσανίας), a small river in the east of Pontus, which has its sources in the Massich Mounes, and flows into the Bay of Abgarra. (Arrian, Peripl. P. E. p. 7; *Ainoum. Peripl. P.* E. p. 15, where it is called Prytanes.) It is perhaps the same river as that called by Sclax (p. 32) Par-  

PASCALM (Πασκαλία), a promontory on the NW. coast of Crete, forming the termination of Mt. Tityrus, now called C. Spada. (Ptol. iii. 15. § 8.)

PSAMATHUS. [Τασαμαθος.]

PSAPHE. [Τασαμαθος.]

PESEBOA or PSEBO (Πεσόβο, Strab. xvii. p. 822; Πεσῆ, Steph. B. s. n.), the modern *Tsepna*, one of the enormous lakes S. of Meroe, which feed the principal tributaries of the Nile. The 10th parallel of N. latitude nearly bisects the lake Psebo. According to Stephanaeus, it was five days' journey from Aetiothiopia, i.e. from *Azyrma*. In the centre of the lake was a populous island — a depot of the ivory trade, and frequented also by the hunters of the Hippopotamus, the hides of which animal were exported to Egypt, and employed as coverings for shields. On the E. and S. the lake was encompassed by lofty mountains, which abounded in mineral wealth (Theophrastus de Lapid. p. 695, ed. Schneider), and whose periodical torrents, according to Agatharchides (c. 5. ap. Hudson, Geogr. Min.) poured their waters over the plains of the Trog- 

PSELEIS (Πσελείς, Strab. xvii. p. 820; *Hta. Anton.* p. 162; Πσελείς, Aristid. *Aegina* p. 512), was a town of the region Dodecaschoenus situated on the left bank of the Nile. Originally Pseleis was little more than a suburb of the older Aethiopian town Tachompos; but it speedily outgrew its parent, so that in process of time Tachompos was denominated Contra-Pseleis. In n. c. 23 the Aethiopian nation, alarmed by the approach of the Romans to their frontier, barrassed the neighbour- hood of Phila and Syene, and it became necessary to repel their incursions. C. Petronius, accordingly, who had succeeded Aelius Gallus in the government of Egypt, undertook to drive them back, and Pseleis was one of the towns which was submitted to him. (Strab. l. c.; Dion Cass. liv. 5.) So long as the Romans maintained their hold on Northern Aethiopia, Pseleis was the permanent head- quarters of a troop of German horse. The modern hamlet of *Dakkeh* occupies a portion of the site of the ancient Pseleis. [W. B. D.]

PSESSII, or PSESSI (Ψέσσιοι, Ptol. v. 9. § 17; Ψέσσιοι, Apollod. ap. Steph. B. s. r.; in Plin. vi. 7; the old editions have Pesi, but Sillig reads Pessi; it appears from an inscription that Pessi is the correct form, inser. in Jahn's Jahrbücher, vol. xxxvi. p. 225), a people in Sarmatia Asiae placed by Ptolemy between the lake Maeotis and the Hippici Mentes after the Simurni.

PSEDOCETIS (Ψηδοκέτης), a town of the Elisari in Arabia Felix, identified by some modern writers with *Mochba*. (Ptol. vi. 7. § 7.)

PSEIDOPENIENAS. [*Hesperides.*]

PSEIDONTOMOS (Ψειδοντόμος ποσείδως, Ptol. vii. 1. §§ 8, 33, 85, 86), a stream of western India, which Ptolemy describes as flowing from Mt. Bettigo near *Coimbator* to the sea near Muziris (Mangalore). It cannot with certainty be identified with any existing river, especially as along that coast, between lat. 10° and 15°, there are a great number of streams which, flowing but a short distance from mountains which approach the sea, are little better than torrents. [V.]

PSEILE, a small island, forming one of a cluster, off the coast of Ionia, opposite to Clazomenae. (Plin. v. 31. s. 38.)

PSILLIS (Ψιλλίς), a small river on the coast of Phrygia, flowing into the Euxine between Artane and Calpe, and affording at its mouth a good road for small vessels (Strab. xii. p. 545; Ptol. v. 1. § 5; *Ainoum. Peripl. P.* E. p. 2; Plin. vi. i.; *Arrian, Peripl. P.* E. p. 13, where it is called *Pisilla*; *Mari- cian, p. 69, where it is written *Pallissus*; comp. Stephan. B. s. v. *Armenia.*) [L. S.]

PSOPHIS (Ψόψις; Eth. Ψοψίδα), a city in the NW. extremity of Arcadia, bounded on the N. by Arcadia, and on the W. by Elis. It was a very ancient place. It is said to have been originally called Erymathus, and its territory to have been ravaged by the Erymanthian bear. (Paus. viii. 24. § 2; *Heaut. ap. Steph. B.* s. v. *Ψόψις; Apollod. ii. 5. § 4.) It afterwards received the name of Phegia or Phegeia (Φηγία, Φηγεία), apparently from the oaks (Φηγός), which are still found upon the site of the town; though the ancients, as usual, derived the name from an eponymous founder, Phegeus. (Stephan. B. s. v. *Φηγία, Φηγεία; Paus. L. c.) It was called Psophis by Echephron and Promachus, sons of Hercules, who are said to have come from Sicily and given to the town this name after their mother Psophis. (Paus. L. c.) Psophis, while still called Phegia, was celebrated as the residence of Alcaeen, who fled thither from Argos, after slaying his mother, and married Alpheisiboea, the daughter of Phegeus. (Paus. viii. 24. § 8; *Dict. of *Biogr.* s. v. *Alcaeenon.*) In consequence of their connection with Alcaeaon, the Psophidsi took part in the second expedition against Thesus, and rejoined to join the other Greeks in the Trojan War. (Paus. viii. 24. § 10.)

Psophis is rarely mentioned in history. In n. c. 219 it was in possession of the Eleians, and was taken by Philip, king of Macedonia, who was then in alliance with the Achaeans. In narrating this event Polybius gives an accurate description of the town. "Psophis," he says, "is confessedly an ancient foundation of the Arcadians in the district Azanis. It is situated in the central parts of Peloponnesus, but in the western corner of Arcadia, and adjoining the Achaeans dwelling furthest towards the west. It also overhangs conveniently the country of the Eleians, with whom the city was then in close alliance. Philip marched thither in three days from Capylana, and encamped upon the hills opposite to the city, where he could safely have a view of the whole city and the surrounding places. When the king observed the strength of the place, he was a

**X x 2**
less what to do. On the western side of the town there is a rapid torrent, impassable during the greater part of the winter, and which, rushing down from the mountains, makes the city exceedingly strong and inaccessible, in consequence of the size of the ravine which it has gradually formed. On the eastern side flows the Erymanthus, a large and impetuous river, concerning which there are so many stories. As the western torrent joins the Erymanthus on the southern side of the city, its three sides are surrounded by rivers, and rendered secure in the manner described. On the remaining side towards the north a strong hill hangs over, surrounded by a wall, and serving the purpose of a well-placed citadel. The town itself also is provided with walls, remarkable for their size and construction." (Pall. iv. 70.)

From this description it is evident that the Erymanthus on the eastern side of the city is the river of Sopopi; and that the western torrent, which we learn from Pausanias (viii. 24. § 3) here the name of Arcamius, is the river of Ghermotaina. About 300 feet below the junction of these rivers the united stream is joined by a third, smaller than the other two, called the river of Lopeni or Stupi, which rises on the frontiers of Crete, near Seirae. From these three rivers the place is now called Tripotamo. The banks of the Erymanthus and the Arcamius are precipitous, but not very high; and between them and the steep summit of the hill upon which the town stood there is a small space of level or gently-rising ground. The summit is a sharp ridge, sending forth two roots, one of which descends nearly to the angle of junction of the two streams, the other to the bank of the Erymanthus at the eastern extremity of the city. (Leake, Morea, vol. ii. p. 242.)

Philip, in his attack upon Psophis, crossed the bridge over the Erymanthus, which was probably in the same position as the modern bridge, and then drew up his men in the narrow space between the river and the walls. While the Macedonians were attempting to seize the walls in three separate parties, the Eleians made a sally from a gate in the upper part of the town. They were, however, driven back by the Cretans in Philip's army, who followed the fugitives into the town. Euripidas and the garrison then retreated into the citadel, and shortly afterwards surrendered to Philip. (Pall. iv. 71, 72.)

Pausanias saw at Isophis a ruined temple of Aphrodite Erycina, herm of Pausanias and Echepiron, the tomb of Alcmeon, and near the Erymanthus a temple dedicated to that stream. (Paus. viii. 24. § 7.)

Leake also noticed a part of a theatre, not mentioned by Pausanias, on the side of the hill towards the Arcamius. Nine hundred feet above the junction of the two rivers, and near the walls on the bank of the Erymanthus, Leake also found some remains of a public building, 96 feet in length, below which there is a source of water in the bank. He conjectures that they may be the remains of the temple of Erymanthus.

Psophis was about 2 miles in circumference. The town-walls followed the crest of the ridge to the northward and the bank above the two rivers on the opposite side; and they are traceable nearly throughout the entire circuit of the place. On the north-eastern side of the town, which is the only part not protected by the two rivers, or by the precipices at the back of the hill, there was a double inclosure. Leake could not trace the inclosure of the citadel.

At the distance of 30 stadia from Psophis was Seirae (Σείραι), which Pausanias describes as the boundary of the Psophili and Cleitorii (viii. 23. § 9, 24. § 3). On the road from Psophis to Thelpsia by Tropaeum, upon the left bank of the Laden, near which was the grove Aphrodisium, after which came a column with an ancient inscription upon it, marking the boundaries of Psophis and Thelpsia. (Leake, Morea, vol. ii. p. 240, seq.; Bobbeye, Récherches, §. p. 158; Curtius, Peloponnesos, vol. i. p. 384, seq.)
brought some of these people in his train when he led the way into the depths of the desert which skirts the Lesser Syrtis (Plut. Cat. Min. 56; Lucan, xix. 801), and Octavius made use of the same burning, these poison-suckers, it was said, in order to restore his victim, Cleopatra, to life. (Dio Cass. li. 14; comp. Lucan, ix. 925.)

**PSYLLIUM** (Ψυλλιον, Ψυλλευον, or Ψυλλα), a fortified emporium on the coast of Bithynia, between Creugas and Tium. (I. Ptol. v. 1. § 7; Arrian, Perip. P. E. 14. Anonym. Perip. P. E. p. 5; Marcian, p. 70; Steph. B. s. v. Ψυλλα; Tab. Pent. erroneously calls it Scyleium.) [L. S.]

**PSYLAE** (Ψυλλαε), a small island in the Aegean sea, to the north-west of Chios, at a distance of 50 stadia from Cape Mela-thi, and Octavius made use of the same burning, only 20 stadia in circumference. It was a lofty, rocky island, and contained on its south-west coast a small town of the same name. (Strab. xiv. p. 645; Plin. v. 36; Steph. B. s. v.; Hom. Od. iii. 171.) Its modern name is Irakia. [L. S.]

**PSYTTALEIA** (Ψυττάλεια), a small islet off the Attic coast between Peiraecus and Salamis. For details see SALAMIS.

PTANDARIS or PTANDARA, a place in Cappadocia on the south-west of Arbelaus (Herod. v. pp. 178, 180, 210, 212, &c., where we sometimes read an ablative Pterandar, and sometimes PTANDARIS). [L. S.]

**PTARENUS** (Πτάρενος, Arrian, Ind. c. 4), a small tributary of the Upper Inius, which flows into that river a little above Peshivan. Lassen conjectures that it is the present Barraginda. (Lassen, Map of Anc. Indus.) [V.]

**PTELEA,** an ancient name of Ephesus. (Plin. v. 29. s. 31.)

**PTELEON** (Πτέλεον), a small lake in Mycia, near Oldion, on the coast of the Hellespont (Heron, vii. 42; Strab. xiii. p. 595; Schol. ad Ptol. v. 2. § 3.) [L. S.]

**PTELEUM.** 1. (Πτέλεων: Εθ. Πτέλεανος, Πτελεοκρός, Πτελεσιές), a town of Thessaly, on the south-western side of Pithiotis, and near the entrance of the Sinus Pegasus. It stood between Anthron and Halos, and was distant from the latter 110 stadia, according to Artemidorus. (Strab. i. p. 438.) It is mentioned by Homer as governed by Polydorus, to whom the neighbouring town of Aetoros also belonged. (Il. i. 697.) In n. c. 192, Antiochus landed at Pteleum in order to carry on the war against the Romans in Greece (Liv. xxxv. 43). In b. c. 171, the town, having been deserted by its inhabitants, was destroyed by the consul Licinius. (Liv. xxvi. 67.) It seems never to have recovered from this destruction, as Pliny speaks of Pteleum only as a forest ("nemen Pteleon," Plin. iv. 8. s. 15.). The form Pteleon is used by Lucan (vi. 392) and Mela (ii. 3). Pteleum stood near the modern village of Pteleo, or Pteleo, upon a peaked hill crowned by the remains of a town and castle of the middle ages, called Old Pteleo. On its site is a large marsh, which, as Leake observes, was probably in the more flourishing ages of Greece a rich and productive meadow, and hence the epithet of ΑΧΑΙΟΧΩΡΗ, which Homer (l. c.) applied to Pteleum. (Leake, Northern Greece, vol. i. p. 341, seq.)

2. A town of Triphylia, in Elis, belonging to Nestor (Hom. Ill. ii. 594). It is said by Strabo to have been a colony from the Thessalian Pteleum. This town had disappeared in Strabo's time; but its un-inhabited woody site was still called Ptelea-lemnum (Strab. viii. pp. 349, 350.)

3. A fortress in the territory of Erythrae, in Ionia. (Thuc. ii. 72. s. 31.) Pteleum is mentioned Pteleon, Helen, and Dorinthus near Erythrae, but these places are confused by Pliny with the Triphylian towns in Homer (l. c.).

**PTEORIA** (Πτερία), the name of a town and district in Cappadocia, mentioned only by Herodotus (i. 76), who relates that a great battle was fought in this district between Cyprus and Croesus. Stephanus B. mentions Pterium, a town of the Medes, and Pteria, a town of Sinope (s. v. Πτερία).

**PTEROS,** one of four islands—the other three being Lubazanian, Coboris, and Sumbrae—lying off the coast of the Seven, or in Arabia, and corresponding in number, and the last of the four in name, with the Sohar islands. (Plin. vi. 28. s. 32; Forster, Arabia, vol. ii. p. 230.)

**PTOLEMAERIA** (Πτολεμαίρια), a town of the Eutresis, in Arcadia, which was deserted in consequence of the removal of its inhabitants to Megapolis. (Paus. vii. 28. § 3.)

**PTOLEMAIS.** 1. (Πτολεμαῖς Ptol. i. 8. § 1, iv. 7. § 7, viii. 16. § 10; Πτολεμαῖς, Strab. xvii. pp. 768—767; Agatharch. ap. Phot. pp. 457—459, ed. Bekker; Ptolemais Epitheas, Plin. vi. 29. s. 34), was originally an Aethiopian village situated on the southern skirts of the forest which extended from the S. side of the Trogodytic Benue to lat. 17° N. Its convenient situation on the coast of the Red Sea and in the heart of the region where elephants abounded induced Ptolemy Philadelphus (n. c. 282—246) to occupy, enlange, and fortify the village, which thenceforward was named Ptolemais after its second founder, Philadelphus, indeed, before he colonised this outpost of his kingdom, used every effort to persuade the Aethiopian hunters [ΕΛΕΦΑΝΤΟΦΑΓΟI] to abstain from the flesh of these animals, or to reserve a portion at least of them for the royal stables. But they rejected his offers, replying that for the kingdom of Egypt they would not forego the pleasure of hunting and eating elephants. Hitherto the Aegyptians had imported these animals from Asia, the Asiatic breed being stronger and larger than the African. But the supply was precarious; the cost of importation was great; and the Aethiopian forests afforded an ample supply both for war and the royal household. As the depot of the elephant trade, including that also in hides and ivory, Ptolemais attained a high degree of prosperity, and ranked among the principal cities of Aethiopia. From its market it is probable that Carthage also derived its supply of elephants, since about the period of Philadelphia's reign the Carthaginians employed these animals more frequently in war. (Liv. xvii. Epit. Florus, ii. 2. § 28.) Ptolemais had, properly speaking, no harbour, and the Aegyptian vessels were compelled to run up to Berenice whenever the N. or E. winds prevailed; in the present day the Red Sea coast at this point is approachable only by boats. The roadstead of Ptolemais, however, was partially sheltered from the E. winds by an island covered with olive-trees. In its

**PTOLEMAIS.** 677
neighbourhood the fresh-water lake Moeris afforded it a good supply of water and fish. The shell of the true land-tortoise was found at Ptolemais: it is described by Agyatharchides (op. Cit. Min. p. 40, Hesych. s. v. Μαρ.; Eryth. p. 746) as covered with small lozenge-shaped plates, of the whiteness of the pearl-oyster. To ancient geographers the position of Ptolemais was of great importance, being one of the points from which their computations of latitude were made. Modern geographers, however, are not agreed as to the degree in which it should be placed, identifying it with Bos-Assis, opposite the island of Weldeley, while others (Vincent, Voyage of Nearchus, vol. ii. p. 92) prefer a more southerly site, near the port of Mira-Mombarrik. (Comp. Mannert, vol. i. p. 48. ed.)

3. (Πτολεμαίας ἡ Ἐμεσίων, Ptol. i. 15, § 11, iv. 5, § 56; Πτολεμαῖος πόλις, Strab. xvii. p. 813), a city of Upper Egypt, NW. of Abydos, and situated on the western side of the Nile. It can hardly be regarded, however, as an Egyptian city, its population and civil institutions being almost exclusively Greek, and its importance derived entirely from the favour of the Ptolemies. The ruins of Ptolemais Hermii are supposed to be at the modern hamlet of Memeh. (Champollion, Ε. Εύγης, i. p. 253, seq.; [W. B. D.]

Ptolemais (Πτολεμαίας), a small town on the coast of Paphlagonia, between the river Meles and the town of Corionessus, is mentioned only by Strabo (xiv. p. 667). Leake (Asia Minor, p. 197) conjectures that Ptolemais did not stand on the coast, as it is not mentioned in the Stadatmis, but occupied perhaps the situation of the modern town of Alara, where is a river, and upon its banks a steep hill crowned with a Turkish castle. (Comp. Richter, Volkstum, p. 334.)

Ptolemais Cyrenaicae. [Barca.]

Ptolemais Phoeniciae. [Ace.]

Ptolemis. [Mantinea, p. 362, b.]

Ptolemis. [Mantinea, p. 412, a.]

Ptychia. [Coreya, p. 671, h.]

Publicanos, Ad, in Gallia, is placed in the Itins, on a road which leads from Vienna (Vienne) on the Rhone to the Alpis Graia (Little St. Bernard). In following this road Ad Publicanos comes after Mantua [Mantala], and its position is at the commencement of the territory of the Centroines or La Tarentaises. Wesseling observes that the name Ad Publicanos indicates a toll place at a bridge. [Pons Ararati.]

Adnville supposes that Ad Publicanos was at the point where the Arli, a tributary of the Isere, is crossed, near which there was an ancient H-epitum or Sabinum, as it was called, such as we find on several Roman roads. This place is now called L'Hôpital de Conflans, and is near the junction of the Arli and the Isere. Ad Publicanos was probably on the boundary of the Allobreges and Centroines, where some dunes would be good. These dunes or customs were established as a period of Gallic history even anterior to the Roman conquest. (Strab. iv. p. 190.) Gallia was crossed with these dunes, which continued to the time of the French Revolution of 1789. The distance between Mantua and Ad Publicanos is marked xvi. in the Itins, which does not agree with the site fixed by D'Anville. Other geographers place Ad Publicanos at the junction of the Fontaines. [G. L.]

Puccinum (Πυκκινον; Diumino), a town of Umbria, in the territory of the Camii (Ptol. in. 18. s. 22), though Ptolemy assigns it to Istria (Ptol. m. 1. § 28). It is placed by Pliny between the river Timavus and Tergeste, which leaves little doubt that it is the place called Diuno, about 16 miles from Trieste, and about 2 from the sources of the Timavus. It stands on the brow of a small rocky ridge or slope facing the sea, and the neighbouring district is still noted for its wine, which was famous in the days of Pliny, and was reckoned particularly wholesome, so that Livia the wife of Augustus ascribed the great age to which she attained principally to its use of it. (Plin. xiv. 6. s. 8. xvii. 4. s. 3.) [E. II. B.]

Pulcrum Prom. [Apollinis Prom.]

Pulcraiiae. [Tolla.]

Pultovia, a place in Upper Pannonia, on the south-west of Petovio, on the river Pulcidi. (H. Hieros, p. 561; comp. Muchar, Noricum, i. p. 248.)

Punicum (Sta Marinelle), a village or station on the coast of Etruria, mentioned only in the Tabula, which places it 6 miles beyond Pyrgi (Sta Secura) on the Via Aurelia; and this distance enables us to fix its site at the modern village or hamlet of Sta Marinella, where there are still some traces of a Roman port, and more extensive remains of a Roman villa in the immediate neighbourhood (Tab. Vet.; Nibby, Distorti di Roma, vol. ii. p. 319; Domenico, Etruria, vol. ii. p. 7). [E. B. D.]

Punicum, called by D'Anville (see Ad. iv. p. 287) Pusaia, a town of Mesia Superior, at the mouth of the Pungus (Tab. Vet.). [T. H. D.]

Puliscia, a town of the Liburni (Geogr. Rav. iv. 26), which has been identified with Jabunatz on the mainland facing the S. of the island of Arbe. (Negebaur, Die Südslavien, p. 225.) [E. B. J.]

Pura. [Geosital.]

Purpurariae Inis, islands off the coast of Manaretana, which are said to have been discovered by Juba (Plin. vi. 57), who established there a manufacture of purple. If his description of them as being 625 M. F. from the Fortunate Islands be received, they cannot be, as D'Anville supposed, Lanzarote or Fuente Ventura, the two nearest of the Canaries to the African continent. Still greater difficulties exist in supposing them to be Madeira and Porto Santo, which are too remote from Juba's kingdom to be the seat of a manufacture of purple carried on by him. Lelwel (Eudkissenungen der Carthager und Griechen, p. 140) considers them to be the islands of Lanzarote Sta Clara, with the smaller ones of Graciosa and Alegranza. (Renck, Phoenicia, p. 229; Humboldt, Cosmos, vol. ii. p. 129, trans.) [E. B. J.]

Puteoli. (Paventou, Ptol. Dian Cass; Porlano Strab. Act. Apost. Eth. Puteolani; Ponzolo), a maritime city of Campania situated on the northern shore of the Sinus Cumanus or Crater and on the east side of the smaller bay as the Sinus Baianus. It was originally a Greek city of the name of Dicaelochia (Δικαιορία, Strab.; Δικαιορία, Steph. B. 1. Eth. Δικαιορίως and Δικαιορίς, Steph.), and was a colony of the neighbouring Cunae, to which it served as a port. (Strab. iv. p. 24.) There can be little doubt that because of this statement, last Stephans of Byzantium and Eusebius ascribe its foundation to a colony from Samos; and it is not improbable that in this as in many similar instances, the colony from Cunae was reinforced by a fresh band of emigrants from Samos (Steph. B. 1. x. Porolou; Euseb. ii. p. 293, ed.)
The first mention of Puteoli in history is during the Second Punic War, when it was fortified by Q. Fabius by order of the senate, and protected by a strong garrison to secure it from the attacks of Hannibal, n. c. 213. That general, indeed, in the following season made an attempt, though without success, to make himself master of the city, the possession of its port being an object of the greatest importance to him. (Liv. xxiv. 7, 12, 13.) Livy speaks of Puteoli as having first become frequented as a port in consequence of the war; and though this is not strictly correct, as we know that it was frequented long before under the name of Bisonarchia, it is probable that it then first rose to the high degree of commercial importance which it subsequently retained under the Romans. Thus in n. c. 212 it became the principal port where the supplies of corn from Etruria and Sardinia were landed for the use of the Roman army that was besieging Capua (Liv. xxv. 22); and the next year it was from thence that Claudius Nero embarked with two legions for Spain. (Id. xxvi. 17.) Towards the close of the war also (n. c. 203) it was at Puteoli that the Carthaginian ambassadors landed, on their way to Rome. (Id. xxvi. 22.) It was doubtless the growing importance of Puteoli that led the Romans to establish a colony there in n. c. 194 (Liv. xxxiv. 45; Vell. Pat. i. 15): the date is confirmed by a remarkable inscription of n. c. 105 (Mommsen, Inscrip. R. N. 2458), and it seems to have become before the close of the Republic, as it continued under the Empire, one of the most considerable places of trade in Italy. From its being the first really good port on the south of Rome (for Antium could never deserve that epithet) it became in a manner the port of the imperial city, although distant from it not less than 150 miles. Not only did travellers on foot from the East to Rome frequently land at Puteoli and proceed thence by land to the city, as in the well-known instances of St. Paul (Act. Apost. xxviii. 13) and Cicero on his return to Rome from his quasi-state in Sicily (Cic. pro Planc. 26), but the same course was pursued with the greater part of the merchandise brought from the East, especially with the costly wares sent from Alexandria, and even the supplies of corn from the same quarter. (Strab. xvii. p. 793; Suet. Aug. 98; Senec. Ep. 77.) Strabo speaks of Puteoli as one of the most important trading cities of his time (v. p. 215), and it is evident from the expressions of Senea (L. c.) that this had not failed off in the days of Nero. The trade with Alexandria indeed, important as it was, was only one branch of its extensive commerce. Among other things the iron of Ilva, after being smelted at Populonia, was brought to Puteoli (Diod. v. 13): and the city carried on also a great trade with the Tartarians in the south of Spain, as well as with Africa. (Strab. iii. p. 145.) We learn also from an inscription still extant, that its trade with Tyre was of such importance that the Tyrians had a regular factory there (Boeckh, C. I. no. 5185) and it was also a regular mart of a large number of merchants from Syria as resident there. (Mommsen, I. R. N. 2488.) Indeed there seems no doubt that it was under the Roman Empire one of the greatest—if not the greatest—emporiums of foreign trade in all Italy. For this advantage it was in a great measure indebted to the excellence of its port, which, besides being naturally well sheltered, was further protected by an extensive mole or pier thrown out into the bay and supported on stone piles with arches between them. Hence Senea speaks of the population of Puteoli assembling on this mole (in pilis) to watch the departure of the ships from Alexandria. (Sen. Ep. 77.) Puteoli had peculiar facilities for the construction of this and similar works, from the excellent quality of its volcanic sand, which formed a mortar or cement of the greatest hardness and durability, and wholly proof against the influence of the sea-water. (Strab. v. p. 245; Plin. xxxv. 13. s. 47.) This kind of cement is still known by the name of Pozzolana.

It was from the extremity of the mole of Puteoli that Caligula carried his celebrated bridge across the bay to the opposite shore of Rome. (Compar. Liv. xix. 49, 32; Dion Cass. lix. 17; Joseph, Ant. xix. 1. § 1.) It is scarcely necessary to observe that this bridge was merely a temporary structure [Balaen], and the remains still visible at Pozzolani which are popularly known as the Bridge of Caligula are in fact the piles or piers of the mole of Puteoli. The construction of this mole is generally ascribed to Augustus, without sufficient authority; but it is probable that it dates from at least as early a period: and we learn that there were in his time extensive docks (navalia) at Puteoli, in which the huge ships that had been employed in bringing the obelisks from Egypt were preserved,—a sufficient proof of the magnitude of these establishments. (Plin. xxxvi. 9. s. 14.) Another proof of the importance of Puteoli is the fact that Claudius established there, as well as at Ostia, a cohort of troops to guard the city against fire, in the same manner as was done at Rome (Suet. Claud. 23). In A. D. 95 Domitian constructed a new line of road leading direct to Puteoli from Sinnossa, where it terminated the Appian Way. (Dion Cass. lixii. 14; Stat. Silv. iv. 3.) Previous to that time its communication with Rome must have been by way of Capua, to which a branch road (not given in the Itineraries) led direct from Puteoli.
Puteoli certainly continued to enjoy under the Empire the rank of a colony. (Plin. iii. 5. s. 9; Orell. Inscr. 1694, 3697, &c.) In addition to the original "colonia civium" settled there, as already mentioned, in B.C. 194, it appears to have received a fresh colony under Sulla (Val. Max. i. 3. § 8; Plut. Sull. 57; Zumpt. de Colon. p. 260), and certainly was again colonised by Augustus. (Lib. Col. p. 236.) The inhabitants had, as we learn from Cicero (Phil. ii. 41), warmly espoused the cause of Brutus and Cassius after the death of Caesar, which may have been one reason why Augustus sought to secure so important a point with a colony of veterans. But, as was often the case, the old inhabitants seem to have continued apart from the colonists, with separate municipal rights, and it was not till the reign of Nero that these also obtained admission into the colony. (Tac. Ann. xiv. 27.) In A.D. 69 the Puteolani zealously espoused the cause of Vesuvius (Tac. Hist. iii. 67), and it was probably in consequence of this that the city afterwards assumed the honorary title of "Colonia Flavia Augusta Puteoli," by which we find it designated in inscriptions. (Orell. Inscr. 3698; Zumpt. L. c. p. 395; Mommsen, 2429. 2493.) It is not improbable, however, that it may at the same time have received a fresh accession of colonists.

In addition to its commercial importance, Puteoli, or rather its immediate neighbourhood, became, before the close of the Republic, a favourite resort of the Roman nobility, in common with Baiae and the whole of this beautiful district. Thus Cicero, as we learn from himself, had a villa there, to which he gave the name of Academia, but which he more often mentions merely as his Puteolamum. (Cic. de Fat. i. ad Att. i. 4, xvi. 7, xii. 1., &c.) It passed after his death into the hands of Antonius Vetutius, and the outbreak of a thermal spring there became the occasion of a well-known epigram, which has been preserved to us by Pliny. (Plin. xxxi. 2. s. 3.) This villa was situated between Puteoli and the lake Avernus; it was subsequently chosen as the place of burial of the emperor Hadrian. (Spar. Hadr. 25.)

We know little of Puteoli in history during the later periods of the Roman Empire, but there is every reason to suppose that it continued to be a flourishing and populous town. Its mole and port were repaired by Antoninus Pius (Mommsen, Inscr. 2490), and numerous inscriptions have been found there, some of which belong to a late period, and attest the continued importance of the city down to the reign of Honorius. (Mommsen, 2494—2500.) But it shared to the full extent in the calamities of the declining empire: it was taken and plundered by Alaric in A.D. 410, and again by Genserici in 455, and by Totila in 543. Nor did it ever recover these repeated disasters. After having for some time been almost deserted, it partially revived in the middle ages; but again suffered severely, both from the ravages of war and from the volcanic eruptions of the Solfurana in 1189, and of the Monte Negro in 1538. At the present day Pozzuoli, though retaining its episcopal see, and about 8000 inhabitants, is a poor place, and suffers severely from malaria in summer.

It, however, retains many remains of its ancient greatness. Among these one of the most conspicuous is the amphitheatre, on the hill behind the town, which is of considerable size, being larger than that at Pompeii, and calculated to be capable of containing 25,000 spectators. It is in good preservation, and, having been recently excavated and cleared out, affords in many respects a good specimen of such structures. It derives additional interest from being more than once alluded to by ancient writers. Thus Suetonius mentions that Augustus presided at games there, and it was in consequence of an insult offered to a senator on that occasion that the emperor passed a law assigning distinct seats to the senatorial order. (Suet. Aug. 44.) It was there also that Nero entertained Trinidades, king of Armenia, with magnificent shows both of gladiators and combats of wild beasts. (Dion Cass. lixii. 3.) Near the amphitheatre are some ruins, commonly known as the temple of Diana, but which more probably belonged to a range of terraces or baths; as well as several piscinas or reservoirs for water on a great scale, some of which are supposed to have been connected with the service of the amphitheatre. Near them are the remains of an aqueduct, intended for the supply of the city, which seems to have been a branch of that which led to Museum. In the city itself the modern cathedral is in great part constructed out of the remains of a Roman temple, which, as we learn from an inscription on the architrave, was dedicated to Augustus by L. Calpurnius. From another inscription we learn that the architect was L. Cecceius Auctus, evidently the same who is mentioned by Strabo as having been employed by Agrrippa to construct the tunnel at Postillo. (Mommsen, L. R. N. 2484, 2485; Strab. v. p. 245.) The masonry is of white marble, and there still remain six beautiful Corinthian columns of the same material.

Much more celebrated than these are the remains of a building commonly known as the temple of Serapis or Serapeum. The interest which attaches to these is, however, more of a scientific than antiquarian character, from the evidence they afford of repeated changes in the level of the soil on which they stand. (Lyell, Principles of Geology, 8th ed. p. 459, &c.; Daubeny On Volcanoes, p. 206.) The edifice is one of a peculiar character, and the received attribution is very doubtful. Recent researches have rendered it more probable that it was a building connected with the mineral springs which rises within it, and was adapted both for purposes of worship and for the medical use of the source in question. The general plan is that of a large quadrangular atrium or court, surrounded internally by a portico of 48 columns, with chambers at the sides, and a circular temple in the centre. Not far from the temple of Serapis are the ruins of two other buildings, both of which now under water: the one of which is commonly known as the temple of Neptune, the other as the temple of the Nymphs; but there is no real foundation for either name. We know, however, from Cicero that there was a temple of Neptune at Puteoli, as might naturally be expected at so frequented a seaport, and that its portico fronted the bay. (Cic. Acad. ii. 25.) The remains of the ancient mole have been already mentioned; there are now portions of 16 piers remaining, 13 of which are still visible above water.

On the coast proceeding from Pozzuoli towards the Lucrine lake (or rather on the ancient cliff which rises above the low line of coast) are some ruins called (with at least more probability than in most similar cases) those of the village of Cicere, which is certainly, as we learn from Pliny, situated between Puteoli and the Lucrine lake. (Plin. xxxi. 2. s. 3.)
PUTOLANUS SINUS.

About a mile from Pozzuoli to the N.E., on a hill between the town and the Lago d'Angano, is the remarkable spot now called the Solfatara, and in ancient times known as the Forum Vulcani ('Ηραίων πυρωδός, Strab.). It is evidently the crater of an extinct volcano, retaining only so much of its former appearance as to emit sulphurous gases in considerable quantity, the deposit of which forms large accumulations of sulphur. It is well described by Strabo, in whose time it would seem to have been rather more active than at present, as well as in a more poetical style by Petronius (Car. B. Civ. 67—75); and is noticed also by Lucilius, who justly points to the quantity of sulphur produced, as an evidence of igneous action, though long extinct. (Strab. v. p. 246; Lucil. Aen. 431.) It does not seem to have ever broken out into more violent action, in ancient, any more than in modern, times; but in the middle ages on one occasion (in 1198) it broke into a violent eruption; and a stream of trachytic lava, which has flowed from the crater in a SE. direction, is probably the result of this outbreak. The effect of the sulphureous exhalations on the soil of the surrounding hills is visible for some distance, and imparts to them a peculiar whiteness of aspect, whence they were called the Leucogaei Colles. (Plin. vii. 11. s. 29, xxxv. 15. s. 50.) Pliny also mentions in connection with them some mineral springs, to which he gives the name of Leucogaei Fontes. (Id. xxxi. 2. s. 8.) They are probably those now known as the Piscicellarii.

There were two ancient roads leading from Puteoli, the one to Capna, the other to Neapolis. Both of them may still be distinctly traced, and were bordered, for some distance after they quit the city, with ranges of tombs similar to those found outside the gate of Pompeii, though of course in less perfect preservation. They are nevertheless in many respects of much interest. Pliny mentions the road (which he calls a Via Consularis) that led from Puteoli to Capna; it was the track on the left of this towards Cumae that was the district properly called the Campi Laborini, or Laboriae, distinguished even above the rest of Campania for its surpassing fertility. (Plin. viii. 11. s. 29.) Concerning the topography of Puteoli and ruins still remaining at Pozzuoli, see Maxzella, Situs et Antiquitas Pytolorum in Graecis et Burman's Theatrum, vol. ix. part iv.; Ranalli, Viaggio a Pozzuoli, 5vo. Naples, 1817; and Jorio, Guida di Pozzuoli, 5vo. Naples, 1813. [E. B. J.]

PUTOLANUS SINUS. [CRATER.]

PUTPUT, a station in Africa Proper, 12 M. from Neapolis (Nabel) (Tit. Anton.; Pest. Tab.), which has been identified by Barth (Wanderungen, pp. 142, 143) with Hammâmût. Sir G. Temple (Excursions, vol. ii. p. 10) considers it to be Shagul (Σαγόυ, Ptol. iv. 3. § 9), because of the two inscriptions with " Civitas Sigiantha," which Shaw found at Hammâmût. (Trav. p. 163.) [E. B. J.]

PYCNUS (Πυκνός, Ptol. iii. 17. § 8), a river on the N. coast of Crete, a little W. of Cydonia. [LYDIA.]

PYDNA (Πυδνα, Scyl. v. 26; Scymn. Ch. 626; Ptol. iii. 13. § 15; Steph. B.; P. plv. iv. 17), a town on the coast which originally stood on the coast of Fieria, in the Thermaic gulf. Thermistocles was conducted by two Macedonian guides across the mountains, and found a merchant ship about to sail for Asia. (Thuc. ii. 137.) Pydna was blockaded by the Athenians, who, after prosecuting the siege in vain, concluded a convention with Perdicas. (Thuc. i. 61.) It was taken b. c. 411 by Archelaus, who removed its site to 20 stadia from the sea. (Diodor. xiii. 49.) Afterwards it was gained for Athens by Timotheus; but in the two first years of the disastrous Social War (356—354), Pydna, by the exchange of which for Amphipolis there had been made a secret provision, was betrayed to Philip by a party of traitors in the town. (Demosth. adv. Leptinem, p. 476. § 71, Olynth. i. 10. § 5, Olynth. ii. p. 19. § 6; Ulpian, ad loc.; Theopompos, F. 189, ed. Didot.) Several Athenian citizens were taken in Pydna, and sold into slavery, whom Demosthenes ransomed from his own funds. (Plut. Iul. X. Orator, p. 851, vol. ix. p. 381, ed. Reiske.) Towards the close of the year b. c. 316, Olympias retired to Pydna, where she was besieged by Cassander, and taken prisoner by him. (Diodor. xix. 40; Poly. xiv. 11. § 3.) In the spring of b. c. 169, Perseus abandoning Dium, retreated before the consul Q. Marcina Philippus to Pydna. (Livy. xlv. 6.) After again occupying the strong line of the Enipae, Perseus, in consequence of the dexterous flank movement of P. Scipio Nasica, was compelled to fall back upon Pydna. On the 22nd of June, b. c. 168 (an eclipse fixes the date, Clinton, F. H. vol. iii. p. 82), the fate of the Macedonian monarchy was decided in a plain near the town, which was traversed by a small river, and bordered by heights affording a convenient retreat and shelter to the light infantry, while the plain alone contained the level ground necessary for the phalanx. (Livy. xlv. 32—46; Plut. Per. 13—23.) The Epirotissar of Strabo and a Scholiast upon Demosthenes (Olynth. i. p. 10) assert that the Kirpos of their time was the same place as Pydna; but their authority is of no great weight, and Colonel Leake (Northern Greece, vol. iii. pp. 429—435) has shown that the ancient site is better represented by Ayia, where there are Hellenic remains, and, on the slope towards the sea, two " tumuli," probably monuments of the battle. Itiro, it may be supposed, rose upon the decay of Pydna and Methone, between which it lies. For autonomous coins of Pydna, see Eckhel, vol. ii. p. 76. [E. B. J.]

PYDNAE or PYDNA (Πυδνα), a small town on the coast of Lycia, between the river Xanthus and Cape Hieron. (Stadiasmus. M. Magni, p. 221.) It is probably the same place as the one called by Polyennys (v. 3. § 5) Pydna, and which he places at the foot of Mount Cragus, where ruins of an ancient town were observed by Beanfort. (Leake, Asia Minor, p. 182.)

PYGELA or PHYGELA (Πυγέλα, Φηγέλα; Eth. Πυγελέως), a small town on the coast of the Cystrian bay, a little to the south of Ephesus, was said to have been founder by Agamemnon, and to have been peopled with the remnants of his army; it contained a temple of Artemis Munychia. (Xenoph. Hellen. hellen. 2. § 2; Strab. xiv. p. 639; Steph. B. e. v.; Harpoecrat. s. e.; Plin. v. 31; Sylax. p. 37; Pomp. Mela, 1. 17; Liv. xxxviii. 1.) Dioscorides (v. 12) commands the wine of this town, which is still celebrated. Chandler (Travels p. 176) observed its ruins on a hill between Ephesus and Scilla Nova. (Comp. Leake, Asia Minor, p. 261.) [L. S.]

PYLAE. [THERMOPOLAE.]

PYLAE CILICIÆ. [CILICIA.]

PYLAE SYRIÆ. [ARAMIDES; ISSUS.]

PYLAEA (Πυλαία), a suburb of Delphi, and
the place of meeting of the Amphictyonic Council

[Deiull. p. 767, b.]

PYLENE (Πυλένη: Eth. Πυλενίων), an ancient town of Aetolia, between the Acheleans and the Eueans, mentioned in the Homeric catalogue of the Grecian ships, is placed by Pliny on the Corinthian gulf. It would therefore seem to have existed in later times; although Strabo says that the Acheleans, having removed Pyle, higher up, changed its name into Prochilium. The site of Pylene is uncertain. (Hom. II. ii. 639; Plin. iv. 3; scepsulsa Pyle, Stat. Theb. iv. 102; Steph. B. s. v.)

PYLON (Πυλών), a town on the Via Egnatia, being the frontier town of Illyria and Macedonia. (Strab. vii. p. 523.) It is not mentioned in the Itineraries.

PYLUS (Πυλώς: Eth. Πυλώς), the name of three towns on the western coast of Peloponnesus.

1. Pylus, an island, described by Pausanias as situated upon the mountain road leading from Elis to Olympia, and at the place where the waters flow into the Peneus (vi. 22. § 5). Strabo, in a corrupt passage, assigns to it the same situation, and places it in the neighborhood of Scollium or Mt. Scolis (μεταντὸς πυρειων κατὸ τοῦ σκόλλεντος ἐδώδας [read κατά τῆς τοῦ σκόλλεντος ἐμ- ἔθους] Πυλῶς φρέατος, Strab, vii. p. 338). Pausanias (i. c.) says that it was 80 stadia from Elis. Diodes (xiv. 17) gives 70 stadia as the distance, and Pliny (iv. 5. s. 6) 12 Roman miles. According to the previous description, Pylus should probably be identified with the ruins of Agramipthô-khôri, situated on a commanding position in the angle formed by the junction of the Peneus and Ladon. This site is distant 7 geographical miles from Elis, which sufficiently agrees with the 80 stadia of Pausanias. Leake, however, places Pylus further S., at the ruins at Kâlebi, mainly on the ground that they are not so far removed from the road between Elis and Olympia. But the fact of the ruins at Agramipthô-khôri being at the junction of the Peneus and Ladon seems decisive in favor of that position; and we may suppose that a road ran up the valley of the Peneus to the junction of that river with the Ladon, and then took a bend to the right into the valley of the Ladon. (Leake, Northern Greece, vol. ii. p. 228, Peloponnesica, p. 219; Bobage, Richerches, etc. p. 122; Curtius, Peloponnesica, vol. ii. p. 39.) The Eleian Pylus is said to have been built by the Pylon, son of Cleon of Megara, who founded the Messenian Pylus, and who, upon being expelled from the latter place by Pelens, settled at the Eleian Pyles. (Paus. iv. 36. § 1. vi. 22. § 5.) Pylus was said to have been destroyed by Heraclea, and to have been afterwards restored by the Eleians; but the story of its destruction by Heraclea more properly belongs to the Messenian Pylus. Its inhabitants asserted that it was the town which Homer had in view when he asserted that the Acheans flowed through their territory ('Ἀλπεαυόν, ἄνετα εὐφράτην ἔδεα Πυλων διὰ γαίης, I. v. 543). On the position of the Homeric Pylus we shall speak presently; and we only observe here, that this chain was admitted by Pausanias (vii. 22. § 6), though its absurdity had been previously pointed out by Strabo (cit. p. 350, seq.). Like the other Eleian towns, Pylus is rarely mentioned in history. In n. c. 402 it was taken by the Spartans, in their invasion of the territory of Elis (Diod. xiv. 17), and in n. c. 306 it is mentioned as the place where the democratical exiles from Elis planted themselves in order to carry on war against the latter city. (Xen. Hell. vii. 4. § 16.) Pausanias saw only the ruins of Pylus (vi. 22. § 5), and it would appear to have been deserted long previously.

2. A town in Triphylia, mentioned only by Strabo, and named by him Ἰγροδιανᾶς, Ἀρακτίδας, and Ἀσπρωσίδας. He describes it as situated 30 stadia from the sea, on the rivers Mamathus and Arcadius, west of the mountain Monte and north of Lepreum (viii. p. 344). Upon the conquest of the Triphylian towns by the Eleians, Pylus was annexed to Lepreum (viii. p. 355; comp. pp. 339, 343, 344). Leake observes that the village Τζοράδζι, on the western extremity of Mount Muhte, at the fork of two branches of the river of Ai Sidheo, seems to agree in every respect with Strabo's description of this town. (Peloponnesica, p. 109.)

3. A town in Messenia, situated upon the promontory Coryphasium, which forms the northern termination of the bay of Navarino. According to Thucydides (iv. 70), it possessed an emporion 400 stadia from Methone. (Thuc. iv. 3), and according to Pausanias (v. 36, § 1) 100 stadia from Methone. It was one of the last places which held out against the Spartans in the Second Messenian War, upon the conclusion of which the inhabitants emigrated to Cyllene, and from there to the other Messenians, to Sicily. (Paus. iv. 18. § 1, iv. 23. § 1.) From that time its name never occurs in history till the seventh year of the Peloponnesian War, c. 324, when Demosthenes, the Athenian commander, erected a fort upon the promontory, which was then uninhabited and called by the Spartans Coryphasium (Κορυφαειον), though it was known by the Athenians to be the site of the ancient Pylus. (Thuc. iv. 3.) The erection of this fort led to one of the most memorable events in the Peloponnesian War. Thucydides has given a minute account of the topography of the district, which, though clear and consistent with itself, does not coincide, in all points, with the existing locality. Thucydides describes the harbour, of which the promontory Coryphasium formed the northern termination, as fronted and protected by the island Sphacteria, which is formed by two rivers, and thence took a bend to the two narrow entrances to the harbour, — the one at the northern end, opposite to Coryphasium, being only wide enough to admit two triremes abreast, and the other at the southern end wide enough for eight or nine triremes. The island was about 15 stadia in width, covered with wood, uninhabited and untrodden. (Thuc. iv. 8.) Pausanias also says that the island Sphacteria lies before the harbour of Pylus like Rhenia before the anchorage of Delos (v. 36. § 6). It is almost certain that the fortress erected by the Athenians stood on the site of the ruins of a fortress of the middle ages, called Pylaia-Armarion, which has been changed into Xararion by the habit of using the accusative case, ἐς τὸν Ἀβαρὸν, and by attaching the final ο of the article to the substantive. The distances of 400 stadia from Sparta and 100 stadia from Methone, given respectively by Thucydides and Pausanias, are the correct distances of Old Xararion from those two ancient sites. (Leake, Peloponnesica, p. 191.) Sphacteria (Σφαχτέων) is now called Sphagia, a name which it also bore in antiquity. (Σφαχία, Strab. viii. p. 359; Plin. Nat. Hist. viii. p. 190; c. Armerion, Syn. v. 3. § 31; tres Sphagias, Plin. iv. 12. s. 25.) The following description will be rendered clearer by the
two accompanying maps, of which the former contains the whole locality, and the latter the fortress of Old Navarino and its immediate neighbourhood on a larger scale.

The chief discrepancy between the account of Thucydides and the existing state of the coast is found in the width of the two entrances into the bay of Navarino, the northern entrance being about 150 yards wide, and the southern not less than between 1300 and 1400 yards; whereas Thucydides states the former admitted only two triremes abreast, and the latter only eight or nine. Therefore not only is the actual width of the two entrances very much greater than is stated by Thucydides, but this width is not in the proportion of the number of triremes; they are not as 8 or 9 to 2, but as 17 to 2. To explain this difficulty Col. Leake supposes that Thucydides was misinformed respecting the breadth of the entrances to the harbour. But to this a satisfactory reply is given by Dr. Arnold, that not only could no common false estimate of distances have mistaken a passage of nearly 1400 yards in width for one so narrow as to admit only eight or nine ships abreast, but still less could it have been supposed possible to choke up such a passage by a continuous line of ships, lying broadside to broadside, which Thucydides tells us the Lacedaemonian commanders intended to do. Moreover the northern entrance has now a shoal or bar of sand lying across it, on which there are not more than 18 inches of water; whereas the narrative of Thucydides implies that there was sufficient depth of water for triremes to sail in unobstructed. The length of

17 stadia, which Thucydides ascribes to Sphacteria, does not agree with the actual length of Sphagia, which is 25 stadia. Lastly Thucydides, speaking of the bay of Pylus, calls it "a harbour of con-

b. Small channel connecting the lagoon of Osmyn-Aga with the Bay of Navarino.

ciderable magnitude" (λυκέν ὀντι ὑπ χαμάρ); an expression which seems strange to be applied to the spacious Bay of Navarino, which was not only the largest harbour in Greece, but perfectly unlike the ordinary harbours of the Greeks, which were always closed artificially at the mouth by projecting mole when they were not sufficiently land-locked by nature.

In consequence of these difficulties Dr. Arnold raised the doubt whether the island now called Sphagia be really the same as the ancient Sphacteria, and whether the Bay of Navarino be the real harbour of Pylus. He started the hypothesis that the peninsula, on which the ruins of Old Navarino stand, is the ancient island of Sphacteria converted into a peninsula by an accumulation of sand at either side; and that the lagoon of Osmyn-Aga on its eastern side was the real harbour of Pylus, into which there was an opening on the north, at the port of Votihoi-Kilid, capable of admitting two triremes abreast, and another at the south, where there is still a narrow opening, by which eight or nine triremes may have entered the lagoon from the
great harbour of Navarino. Upon this hypothesis Col. Leake observes, that in itself it is perfectly admissible, inasmuch as there is scarcely a situation in Greece on the low coasts, near the mouths of rivers, where, by the operation of waters salt or fresh, or both united, some change has not taken place since the times of ancient history; and that in the present instance, therefore, there is no great difficulty in imagining that the lagoon may be an ancient harbour converted into a lagoon by an accumulation of sand which has separated it from the sea. But, among the many difficulties which beset this hypothesis, there are two which seem quite fatal to it; one of which has been stated by Mr. Grote and the other by Col. Leake. The former writer remarks that, if the peninsula of Old Navarino was the real ancient Sphacteria, it must have been a second island situated to the northward of Sphagia; and that, consequently, there must have been two islands close together and near the scene. This, as Mr. Grote observes, is quite inconsistent with the narrative of Thucydides, which presupposes that there was only one island—Sphacteria, without any other near or adjoining to it. Thus the Athenian fleet under Eurytemon, on first arriving, was obliged to go back some distance to the island of Prote, because the island of Sphacteria was full of Lacedaemonian hoplites (Thuc. iv. 13); whereas, if the hypothesis of Dr. Arnold were admitted, there would have been nothing to prevent them from landing on Sphagia itself. It is true that Xenophon (Hell. vi. 2. § 3) speaks of Zaphyra in the plural, and that Pline (iv. 12. s. 23) mentions ' tres Sphagiae; ’ but two of them appear to have been mere rocks. The objection of Col. Leake is still more fatal to Dr. Arnold's hypothesis. He calls attention to the fact that the French Commission observed that the walls of the castle of Old Navarino stand in many parts on Heliconic foundations, and that in some places three courses of the ancient work remain, consisting of a kind of masonry which seems greatly to resemble that of Messenian wall. But remains of ancient masonry, in its Heliconic antiquity, some foundations are traced of a more ancient inclosure at the northern end of the peninsula, with a descent to the little harbour of Voudhó-Kihía by means of steps cut in the rock. Remains of walls of early date are to be seen likewise towards the southern extremity of the hill, among which is an ancient city,—all tending to prove that the entire peninsula of Navarino was occupied at a remote period of history by an ancient town. This peninsula could not, therefore, have been the ancient Sphacteria, which never contained any ancient town. The only way of reconciling the account of Thucydides with the present state of the coast is to suppose, with Mr. Grote and Curtis, that a great change has taken place in the two passages, which separate Sphagia from the mainland since the time of Thucydides. The mainland to the south of Navarino must have been much nearer than it is now to the southern portion of Sphagia, while the northern passage also must have been both narrower and clearer. (Leake, Moræa, vol. i. p. 401, seq.; Peloponnesica, p. 190, seq.; Arnoldi, Appendix to Thucydides, vol. ii. p. 400, seq.; Grote, Greece, vol. vi. p. 319; Moræa, vol. i. seq.; Pellegrino, p. 172, seq.; Bobiaye, Recerrecha, p. 113; Expedition Scientifique de la Moræe, vol. i. pl. vii.)

It is unnecessary to relate here the events which followed the erection of the Athenian fort at Pylus, and which terminated with the capture of the Spartans in the island of Sphacteria, as they are given in every Grecian history. The following extract from Col. Leake illustrates the description of Thucydides in the most satisfactory manner: "The level and source of water in the middle where the Lacedaemonians encamped was the northern to which they retired,—the landing-places on the western side, to which the Helots sought provisions,—are all perfectly recognisable. Of the fort, of loose and rude construction on the summit, it is not to be expected that any remains should now exist; but there are some ruins of a signal-tower of a later age on the same site. The summit is a pile of rough rocks ending in a peak; it slopes gradually to the shore on every side, except to the harbour, where the cliffs are perpendicular, though here just above the water there is a small slope capable of admitting the passage of a body of men active in climbing among rocks and difficult places. By this pass it is probable the Messenians came upon the rear of the Lacedaemonians on the summit; for just at the southern termination of the pass there is a passage through the cliffs which border the greater part of the eastern shore of the island, so that by this opening, and along the pass under the rocks to the northward of it, the Messenians had the means of passing unseen from the centre of the island to the rear of the Lacedaemonians on the summit. Though this hill slopes gradually from its rocky peak to the shore on every side except towards the harbour, it does not admit of a landing at its foot, except in the calmest weather; nor is it easily assailed on any side by land, on account of the ruggedness of the summit, except by the means to which the Messenians resorted; so that the words of Thucydides respecting it are perfectly accurate (ε δε λαδοσ της αποφυγας και ετι εις την ηπιαν ομιας). The southern extremity of the island is rocky, steep, and difficult of access, and forms a separate hill; in every other part the ground slopes from the cliffs on the side of the Lacedaemonians. But the cliffs which, though rocky, is low; so that when the weather is calm it is more easy in face of an opponent to land, and to make way into the island on that side than on the eastern shore, where the cliffs admit of an easy access only in two places, one towards the northern end, the other in the middle of the island, where an opening in the cliffs leads immediately into the most level part of it; exactly in the opening stands a small church of the Panaghia. There are also two small creeks adjacent to each other, near the southern end of the eastern side of the island, opposite to Nafplioti, near these creeks on the side of the Lacedaemonians encamped,—this summit there is a well. The principal source of water is towards the middle of the island, at an excavation in the rock 20 feet deep, which seems to be more natural than artificial; for below a shallow surface of soil, in which there is a circular peristernium of modern masonry, the excavation in the rock is irregular and slanting. In one or two places there are groves of high bushes, and there are low shrubs in every part of it. It often happens, as it did in the seventh summer of the Peloponnesian war, that a fire, occurring accidentally or of intention, clears the face of Nafplioti; near these creeks towards the summit; the northern hill exhibits at this moment recent marks of a similar conflagration." (Moræa, vol. i. 408, seq.)

The peninsula of Ceryphus is a precipice on
The eastern side or towards the lagoon; while on the western side or towards the open sea it slopes gradually, particularly on the SW., where Demosthenes succeeded in preventing the landing of the Lacedaemonians. The promontory is higher at the northern end. Below the ruined fortress at the northern end there is a fine cove, called Ιονιδο-Κιλία (Βαϊάδο-κοιλάδι), "the ox's hollow," which gives name to the small circular port immediately below it, which has been already spoken of. This cove is 60 feet long, 40 wide, and 40 high, having a roof like a Gothic arch. The entrance is triangular, 30 feet long and 12 high; at the top of the cove there is an opening in the surface of the hill above. This cove was, according to the Peloponnesian tradition, the one into which the infant Hercules and the cattle he had stolen from Apollo. It is mentioned in the Homeric hymn to Hermes as situated upon the sea-side (v. 341); but in Antonius Liberalis (c. 23) it is expressly said to have been at Coryphaismus. In Ovid (Met. ii. 684) Mercury is represented as beholding from Mt. Cyllene the unguarded cattle proceeding into the fields of Pylius.

The bay of Ιονιδο-Κιλία is separated by a low semicircular ridge of sand from the large shallow lagoon of Ωυνογ-Αγο. As neither Thucydides nor Pausanias mentions this part of the coast, it is likely that it was never the scene of any important action. If so, the cove forms so striking a feature in the topography of this district, we may confidently conclude, with Leake, that it is of recent formation. The peninsula must, in that case, have been surrounded with a sandy plain, as Pausanias describes it; and accordingly, if we suppose this to have been the site of the Homeric Pylius, the epithet ημαθεός, which the poet constantly gives to it, would be perfectly applicable.

The Athenians did not surrender their fortress at Pylius to the Lacedaemonians in accordance with the treaty made in B.C. 421 (Thuc. v. 35), but retained possession of it for fifteen years, and only lost it towards the close of the Peloponnesian War. (Diod. xiii. 64.) On the restoration of the Messenians to their country by Epaminondas, Pylius again appears in history. The remains of the walls already described belong to this period. On the other hand, there was a dispute between the Messenians and Achaeanas respecting the possession of this place. (Liv. xxvii. 30; Polyb. xviii. 25.) It was visited by Pausanias, who saw there a temple of Athena Coryphasium, the twin goddess of Vostro, and the remains of a house, forming a picture of him, his tomb, and a cove said to have been the stable of the oxen of Neleus and Nestor. He describes the latter as within the city; which must therefore have extended nearly to the northern end of the promontory, as this cave is evidently the one described above. (Paus. v. 36.) There are imperial coins of this city bearing the epigraph ΠΥΛΙΟΝ, belonging to the time of Severus. (Eckhel, vol. ii. p. 277.) It would appear from Leake that the restored city was also called Coryphasium, since he says that "at the time of the Achaean League there was a town of Coryphaismus, as we learn from a coin, which shows that Coryphasium was a member of that confederacy." (Peloponnesiano, p. 191.)

The modern name Αθάρινο, corrupted, as already said, into Νεσαρίνο, is probably due to the Avars, who settled there in the sixth century of the Christian era. The mediaeval castle was built by the widow of the Frankish chieftain William de la Roche. Her descendants sought a more convenient place for their residence, and erected on the southern side of the harbour the Νεσαρίνο or modern Ναρώρινο. It commanded the southern end of the harbour, which became more and more important as the northern entrance became choked up. Containing, as it does, the best harbour in the Peloponnesus, Ναρώρινο constantly appears in modern history. It was taken by the Turks in 1500. In 1685 it was wrested from them by the Venetian commander Morosini, and remained in the hands of the Venetians till 1715. In more recent times it is memorable by the great battle fought in its bay, on the 20th of October, 1827, between the Turkish fleet and the combined fleets of England, France, and Russia. (Curtius, Peloponnesus, vol. ii. p. 181.)

It remains to speak of the site of the Homeric Pylius. According to a generally received tradition, Neleus, the son of Poseidon, migrated from Iloées in Thessaly, and founded on the west coast of Peloponnesus a kingdom extending westward as far as that of the Atribe, and northward as far as the Alpheus, or even beyond this river. Neleus incurred the indignation of Hercules for refusing to purify him after the murder of his son Iphitus. The hero took Pylius and killed Neleus, together with eleven of his twelve sons. But his surviving son, Nestor, upheld his father's name, and distinguishing himself in youth and manhood, accompanied in his old age the Grecian chiefs in their expedition against Troy. Upon the invasion of Peloponnesus by the Dorians, three generations after Nestor, the Noleids quitted Pylius and removed to Athens, where they obtained the kingly power. The situation of this Pylius—the Πόλος Νηλήνος, as it was called—was a subject of much dispute among the Grecian geographers and grammarians. Strabo (vii. p. 339) quotes a proverbial verse, in which three towns of this name were mentioned—

Εστι Πύλος πρός Πυλιόν· Πύλος τ'ετερ' ἐστι καὶ ἄλλος,

of which the former half—Εστι Πύλος πρός Πυλιόν—was at least as old as the time of Aristophanes, when Pylius became famous by the capture of the Spartans at Sphacteria. (Aristoph. Εξώπτ. 1058.) The claims of the Eleian Pylius to be the city of Nestor may be safely set on one side; and the choice lies between the towns in Triphylla and Messenia. The ancients naturally decided in favour of the Messenian Pylius. This is the opinion of Pausanias (iv. 36), who unhesitatingly places the city of Nestor on the promontory of Coryphaium, although, as we have already seen, he agrees with the people of Elis that Homer, in describing the Alpheus as flowing through the land of the Pylians (II. v. 545), had a view to the Eleian city. (Paus. vi. 22. § 6.) It is however, much more probable that the "land of the Pylians" was used by the poet to signify the whole kingdom of the Nelean Pylians since he describes both Thryessa on the Alpheus and the cities on the Messenian gulf as the extreme or frontier places of Pylius. (Ομήρουσα πόλις . . . κατά Πυλον ἡμαθέως, II. xi. 712; ἔστιν Πύλον ἡμαθεός, II. ix. 153.)

In this sense these expressions were understood by Strabo (viii. pp. 337, 350). It is curious that Pausanias, who paid so much attention to Homeric antiquities, does not even allude to the existence of the Triphylian Pylius. Pindar calls Nestor "the Messenian old man." (Pynth. vi. 35.) Isocrates
PYLUS.

mention Messenia as his birthplace (Panath. § 72); and Phercydes (ap. Schol. ad Hom. Od. xi. 289) and Eustathius (ad Od. iii. p. 1453) describes the Messenian Pylus as the city founded by Pylus. This was also the opinion of Diodorus (xiv. 66), and of many others. In opposition to their views, Strabo, following the opinion of the ὄρατον τῆς Ἐυρώτας, argues at great length that the Triphylian Eliss was the city of Nestor. (Strab. viii. pp. 339, seq., 348, seq.) He maintains that the description of the Alpheius flowing through the land of the Pylians (II. v. 545), which, as we already have seen, was the only argument which the Eleians could adduce for their claim, is applicable to the Triphylian Pylus; whereas the poet's mention of Nestor's exploits against the Eleians (II. xi. 670, seq.) is fatal to the supposition of the Messenian city being his residence. Nestor is described as making an incursion into the country of the Eleians, and returning thence with a large quantity of cattle, which he safely lodges by night in the Neleian city. The third day the Eleians, having collected their forces on the Alpheius, Nestor marched forth from Pylus, and at the end of the first day halted at the Mynius (subsequently called the Anigmus), where he passed the night; starting from thence on the following morning, he arrived at the Alpheius at noon. Strabo argues that neither of these events could have taken place if Nestor had marched from so distant a city as the one at Coryphusias, while they might easily have happened if the Neleian city had been situated at the Triphylian Pylus. Again he argues from the Odyssey that the Neleian Pylus could not have been on the sea-coast, since Telemachus, after he had disembarked at the temple of Poseidon and had proceeded to Pylus, sent a courier to his ship to fetch his companions (Od. iii. 423); and on his return from Sparta to Pylus, he desired Pidistratus to turn off to the sea-side, that he might immediately embark, as he wished not to be detained in the city by Nestor. (Od. xv. 199, seq.) These arguments, as well as others, adduced by Strabo (p. 357, seq.), Thirlwall (Hist. of Greece, vol. i. p. 96), and several modern scholars; but Leake, Curtius, and others have adhered, with much greater probability, to the more common view of antiquity, that the Neleian Pylus was situated at Coryphusias. It has been shown that Pylus was frequently used by Homer to signify the Neleian kingdom, and not simply the city, as indeed Strabo himself had admitted when arguing against the claims of the Eleian Pylus. Moreover, even if it should be admitted that the argument of Nestor's exploits against the Eleians makes it better for the claim of the Triphylian Pylus, yet the narrative of the journeys of Telemachus is entirely opposed to this claim. Telemachus in going from Pylus to Sparta drove his horses thither, without changing them, in two days, stopping the first night at Phere (Od. iii. 485); and he returned from Sparta to Pylus in the same manner. (Od. xv. 182, seq.) Now the Messenian Pylus, Phere, and Sparta, lie in a direct line, the distance from Pylus to Phere being about 33 miles by the road, and from Phere to Sparta about 28 miles. On the other hand, the road from the Southern Pylus to Sparta have been by the valley of the Alpheius into that of the Eurotas; whereas Phere would have been out of the way, and the distance to it would have been much more than a day's journey. Besides which, the position of the Messenian Pylus, the most striking upon the whole western coast of Peloponnesus, was far more likely to have attracted the Thessalian wanderers from Iolcos, the worshippers of the god Poseidon, than a site which was neither strong by nature nor near the coast.

But although we may conclude that the Messenian Pylus was the city of Nestor, it is a matter of doubt whether the city itself existed on the promontory Coryphusias from the earliest times. The Greeks rarely built a city in the earliest period immediately upon the coast, and still more rarely chose a site so badly supplied with water as Coryphusias, of which the Athenians experienced the inconvenience when they defended it in the Peloponnesian War. There seems much probability in the account of Strabo (viii. p. 339) that the ancient Messenian Pylus was situated at the foot of Mt. Agesaleos, and that upon its destruction some of its inhabitants settled at Coryphusias. If then we suppose the city of Nestor to have stood a little way inland, and Coryphusias to have been its port-town, the narrative of Telemachus' return becomes perfectly clear. Not wishing to lose time at the royal residence, he drives straight to the port and goes quietly on board. Hence, one of Strabo's most serious objections to the Messenian Pylus disappears. Strabo was justified in seeking for a separate site for the city and the port, but he seems to have forgotten the existence of the Old Pylus inland, which he had himself mentioned. (Leake, Morea, vol. i. p. 116, seq.; Curtius, Peloponnesus, vol. ii. p. 174, seq.)

PYRAEI, a people in Ilyria (Plin. iii. 23, s. 26; Mela, ii. 3, § 12), perhaps the same as the Pireei of Strabo. [PIRAEI.]

PYRAMUS. [Augos, p. 202, s.]

PYRAMUS (Πυραμος), one of the great rivers of Asia Minor, which has its sources in Catania near the town of Arabissus. (Strab. i. p. 33, viii. p. 675.) For a time it passes under ground, but then comes forward again as a navigable river, and forces its way through a glen of Mount Taurus, which it leaves when a little dog can leap across it. (Strab. xii. p. 536.) Its course, which until then had been south, now turns to the south-west, and reaches the sea at Mallus in Cilicia. This river is deep and rapid (Tzetz. ad Lygoph. 440); its average breadth was 1 stadium (Neposch. Aen. ii. 4, § 1), but it carried with it such a quantity of mud, that, according to an ancient oracle, its deposits were one day to reach the island of Cyprus, and thus unite it with the mainland. (Strab. l c.; En-nath. ad Dionys. 867.) Stephanus B. (v. e. r.) states that formerly this river had been called Leucosyrus. (Comp. Nemesi, p. 40; Ptol. v. s. 8, § 4; Plin. v. 22; Pomp. Mela, i. 13; Curtius, iii. 75; Arrian, Aen. ii. 5, § 8.) Its modern name is Selaun or Arvam. [L. S.]

PYRANTHUS (Πυρανθος; Eth. Πυρανθος), a small town in Crete, near Gortyn, probably the modern Pyrathii. (Steph. B. s. r.; Pushley, Crete, vol. i. p. 291.)

PYRASUS (Πυρασος, Strab. Steph. B. s. r.; Πυρασος, Hom: Eth. Πυρασος), a town of Phthiotis in Thessaly, mentioned by Homer along with Phyllace and Don, and described by him as Πυρασος ανεκιθημεν, of which, no traces have been found. (Diodorus, v. 1, 295.) Pyrasso was situated on the Pegasian gulf, at the distance of 20 stadia from Thbes, and possessed a good harbour (ειδυλλιον, Strab. ix. p. 435.) It had disappeared in the time of Strabo. Its name was
superseded by that of Demerium, derived from the temple of Demeter, spoken of by Homer, and which Strabo describes as distant two stadia from Pyrænae. Beneamum, a town far from the coast of the Cantabrian sea, and which doubtless was the still practicable route over the Biliosa by Fuentebadia; the most easterly, was also the most frequented, and is still used, near the coast of the Mediterranean by Juncaria (now Junquera); and one which lay between these two, leading from Caesargrangua to Beneamum (now Burego). (Hin. Ant. pp. 390, 452; Strab. iii. p. 160; Livy xxiii. 23, &c.) Respecting the present condition of the Pyrenees, the reader may consult Diodorus, Historia, i., and Livy, History, ii. 31. seq.; Huber, Sitzungsber. Spanien, Göt. 1833; and Forl, Handbook of Spain, p. 579, seq. From the last authority, it will be perceived, that the character of the Gallic and Spanish sides has been somewhat reversed since the days of Strabo; and that, while "the French slope is full of summer watering-places and sensual, the Spanish side is rude, savage, and Iberian, the lair of the smuggler and wild bird and beast." [T. H. D.]

PYRÆNAEI PORTUS. [INDIGETES.]

PYRÆTI (Πύραι), called by the Scythians Pyraphic, described by Herodotus (iv. 48) as a large river of Scythia, flowing in an easterly direction and falling into the Danube. The modern Truth.

PYRGII (Πυργοί: Eth. Pyrgenias: Santa Sevra), a city on the coast of Etruria, situated between Abisium and Castrum Novum, and distant 34 miles from Rome (Hin. Ant. p. 290.) It was rather more than 6 miles (50 stadia) from Caere, of which it served as the port (Strab. v. p. 226), but it is probable that it was not originally designed for that purpose, but grew up in the first instance around the temple of Eileithyia, for which it continued to be celebrated at a much later period. (Strab. l. c.; Diod. xv. 14.) The foundation of this temple is expressly ascribed to the Pelasgians, and the pure Greek form of the name certainly tends to corroborate this statement. It is probable that both Pyrgi and the neighbouring Caere were originally Pelasgian settlements, and that this was the cause of the close connection between the two, which led to Pyrgi ultimately passing into the con-

PYRGL. 687

Garumna, the Iberians, and a number of smaller rivers. (Strab. L c., and iv. p. 182.) Only three roads over them were known to the Romans; the most westerly, called a town far from the coast of the Cantabrian sea, and which doubtless was the still practicable route over the Biliosa by Fuentebadia; the most easterly, was also the most frequented, and is still used, near the coast of the Mediterranean by Juncaria (now Junquera); and one which lay between these two, leading from Caesargrangua to Beneamum (now Burego). (Hin. Ant. pp. 390, 452; Strab. iii. p. 160; Livy xxiii. 23, &c.) Respecting the present condition of the Pyrenees, the reader may consult Diodorus, Historia, i., and Livy, History, ii. 31. seq.; Huber, Sitzungsber. Spanien, Göt. 1833; and Forl, Handbook of Spain, p. 579, seq. From the last authority, it will be perceived, that the character of the Gallic and Spanish sides has been somewhat reversed since the days of Strabo; and that, while "the French slope is full of summer watering-places and sensual, the Spanish side is rude, savage, and Iberian, the lair of the smuggler and wild bird and beast." [T. H. D.]

PYRÆNIÆ PORTUS. [INDIGETES.]

PYRÆTI (Πύραι), called by the Scythians Pyraphic, described by Herodotus (iv. 48) as a large river of Scythia, flowing in an easterly direction and falling into the Danube. The modern Truth.

PYRGII (Πυργοί: Eth. Pyrgenias: Santa Sevra), a city on the coast of Etruria, situated between Abisium and Castrum Novum, and distant 34 miles from Rome (Hin. Ant. p. 290.) It was rather more than 6 miles (50 stadia) from Caere, of which it served as the port (Strab. v. p. 226), but it is probable that it was not originally designed for that purpose, but grew up in the first instance around the temple of Eileithyia, for which it continued to be celebrated at a much later period. (Strab. l. c.; Diod. xv. 14.) The foundation of this temple is expressly ascribed to the Pelasgians, and the pure Greek form of the name certainly tends to corroborate this statement. It is probable that both Pyrgi and the neighbouring Caere were originally Pelasgian settlements, and that this was the cause of the close connection between the two, which led to Pyrgi ultimately passing into the con-

PYRGL. 687

Garumna, the Iberians, and a number of smaller rivers. (Strab. L c., and iv. p. 182.) Only three roads over them were known to the Romans; the most westerly, called a town far from the coast of the Cantabrian sea, and which doubtless was the still practicable route over the Biliosa by Fuentebadia; the most easterly, was also the most frequented, and is still used, near the coast of the Mediterranean by Juncaria (now Junquera); and one which lay between these two, leading from Caesargrangua to Beneamum (now Burego). (Hin. Ant. pp. 390, 452; Strab. iii. p. 160; Livy xxiii. 23, &c.) Respecting the present condition of the Pyrenees, the reader may consult Diodorus, Historia, i., and Livy, History, ii. 31. seq.; Huber, Sitzungsber. Spanien, Göt. 1833; and Forl, Handbook of Spain, p. 579, seq. From the last authority, it will be perceived, that the character of the Gallic and Spanish sides has been somewhat reversed since the days of Strabo; and that, while "the French slope is full of summer wateri-
could never have been a large town, and appears under the Romans to have sunk into comparative insignificance. It is indeed noticed by Livy, together with Corinna, in the list of maritime colonies which in B.C. 191 contended in vain for exemption from military levies (Liv. xxxvi. 3); but we have no account of the time at which the colony was established there, nor does any subsequent mention of it occur in that capacity. Its name is mentioned by all the geographers among the towns on the coast of Etruria; but Strabo terms it only a small town (πυργω), and Servius calls it in his time merely a fort (castellum), which would agree well with the character of the remains. (Strab. v. p. 225; Mel. ii. 4; Plin. iii. 3, s. 1; Plut. iii. i. § 4; Martial, vii. 3; Serv. ad Arn. l.c.) But in the time of Justinian it had altogether sunk into decay, and its site was occupied only by a large villa. (Rutil. Itin. i. 223.) No subsequent notice of it is found until it reappears in the middle ages under the title of Santa Severa.

The itineraries vary much in the distances they assign between Pyrgi and the other stations on the coast; but they agree in placing it between Asilium and Castrum Novum: and this circumstance, coupled with the distance of 50 stadia from Caere, given by Strabo, leaves no doubt that it is correctly identified with this station. (Strab. v. p. 226; Rutil. Ant. ii. pp. 290, 301; Itin. Marit. p. 498; Tab. Peut.)

The site of the fortress of that name is unquestionably that of an ancient city. The walls of the present castle, which is of mediaeval date, are based on foundations of very ancient character, being constructed of polygonal blocks of stone of large size, neatly fitted together without cement, in the same manner as the walls of Caosa and Saturnia. The line of these foundations, which are undoubtedly those of the walls of the ancient city, may be traced throughout their whole extent, enclosing a quadrangular space of about half a mile in circuit, abutting on the sea. Some remains of Roman walls of later date occur at the extremities on the sea-coast; but no remains have been found of the celebrated temple which was probably situated within the enclosure; nor are there any traces of the ancient port, which must have been wholly artificial, there being no natural inlet or harbour. (Canina, in the Ann. dell’Inst. Arch. 1840, pp. 32—44; Dennis, Etruria, vol. ii. pp. 11—16.)

The goddess to whom the temple was dedicated is called by Strabo Eileithyia, but several other writers call her Leneothea (Arist. l.c.; Polyag. l.c.), who was identified with the Mater Matuta of the Romans. There is no doubt that the same deity is meant by both appellations. (Gerhard, Gotttheiten der Étrusker, pp. 9, 23.)

**PYRGUS** or **PYRGI.** 1. (Πύργος, Hor. Polyb.: Πυργύ, Strab., Steph. B. s. e.: Eth. Πυργυρύς), the most southerly town of Tripolyia in Elis, at the mouth of the river Neda, upon the Messenian frontier (Strab. viii. p. 348), and hence described by Stephanus B. (s. r.c.) as a Messenian town. It was one of the settlements of the Myiyea. (Herod. iv. 148.) It opposed its gates to Philip in the Social War. (Dion. Cass. xvi. 77, 86.) Leake places Pyrgi at some ancient remains upon the right bank of the Neda, not far from its mouth. (Morea, vol. i. p. 57, vol. ii. p. 207.)

2. A town in hollow Elis in a district named Perrippia, which Polybius mentions in conjunction with Lasion. (Polyb. v. 102; comp. Liv. xxxii. 32.)

**PYRHM.**

**PYRNS** (Πύρνος: Eth. Πύρνων), a town of Caria, of uncertain site. (Steph. B. s. e.; Plin. iv. 28; Eum. v. 24.)

**PYROGERI,** a people dwelling on the Hebrus in Thrace, mentioned by Pliny, iv. 11. 18. [T.H.D.]

**PYRRA** (Πῦρρα: Eth. Πῦρραίος). 1. A town on the coast of the deep bay on the west of the island of Lesbos, which had so narrow an entrance that it was called the Eniprus of Pyrrha. It was situated at a distance of 80 stadia from Mytilene and 100 from Cape Malea. (Athens iii. p. 88; Strab. xii. p. 617.) In the Lesbian revolt the town sided with Mytilene, but was reconquered by Paches. (Ihuc. iii. 18, 23, 35; comp. Nicias, p. 36; Steph. B. s. e.) In Strabo's time the town no longer existed, but the suburbs and port were still inhabited. (Pliny (v. 39) reports that Pyrrha had been swallowed up by the sea. The bay of Pyrrha is now called Caloni.

2. A small town on the Maeander, opposite to Miletus; it was 50 stadia distant from the mouth of the river. (Strab. xiv. p. 636; Plin. v. 29; Schol. ad Plut. v. 2. § 5.)

**PYRHA** (Πυρρα), a promontory of Thessaly, now Α. Δεισκρίτη, in the Paganese gulf, forming the northern boundary of the district Phthiotis, and near which were the two islets of Pyrrha and Demopolis. (Strab. iv. p. 125; Leake, Northern Greece, vol. iv. pp. 359, 360, 371.)

**PYRHEUM.** [Αμφρακι, p. 120, a.]

**PYRHEI CASTRIA** (Πυρνη Χάρα). 1. A fortress in the N. of Laconia, was probably at or near the junction of the Oenus and Eurotas, and is supposed to have been so named from having been the place of encampment of Pyrrhaus, when he invaded Laconia in B.C. 272. (Polyb. v. 19; Liv. xxxiv. 27; Leake, Peloponnesia, p. 345.)

2. In Greek Illyria. [Vol. i. p. 563, a.]

**PYRHHICUS** (Πυρριχος), a town of Laconia, situated about the centre of the promontory ending in Cape Taenarum, and distant 40 stadia from the river Scyras. According to some it derived its name from Pyrrhaus, the son of Achilleis, according to others from Pyrrhus, one of the Curetes. Sivenus was also said to have been brought up here. It contained temples of Artemis Astrateia and of Apollo Amazonius,—the two surnames referring to the tradition that the Amazons did not proceed further than this place. There was also a well in the agora. The ruins of this town have been discovered by the French Commission near the village of Koura, where they found the well of which Polyssianus speaks, the torso of a female statue, the remains of baths, and several Roman ruins. Leake observes that the distance of 40 stadia from the Scyras to Pyrrhichus must be measured, not from the mouth of that river, as Boblaye proposes, but from near its sources. Augustus made Pyrrhichus one of the Eleuther-Loaconian towns (pans. iii. 21, § 7, iii. 25, §§ 1—3; Boblaye, Recercheres, &c. p. 88; Leake, Peloponnesia, p. 174; Curtius, Peloponnesia, vol. ii. p. 276.)

**PYRIUM.** [Πυριστος.]

**PYRSTAE** (Πυρστος: Eth. Πυρστατικος), according to Strabo (vi. 319), a tribe of Parnassus, but undoubtedly the same people as the Illirian Pyrystae. [L.S.]

**PYTHIUM.** (Πυθιυμ). a town of Perrhaebia in Thessaly, situated at the foot of Mount Olympus, and forming a Tripolis with the two neighbouring towns of Azoras and Doliche. Pythium derived its name from a temple of Apollo Pythius situated on one of the summits of Olympus, as we learn from an
PYTHIO.

QUADRA TAE. 689

epigram of Xenocrates, a Greek mathematician, who measured the height of Olympus from these parts (Plin. Astr. i. 15). Games were also celebrated here in honour of Apollo. (Steph. B. s. v. Πυθων.) Pythium commanded an important pass across Mount Olympus. This pass and that of Tempe are the only two leading from Macedonia into the north-east of Thessaly. Leake therefore places Pythium on the angle of the plain between Kókkino polo and Larisa, though no remains of the ancient town have been discovered there. (L. s. 53; Plin. ed. 2, ii. c.; Plut. i. 13, § 42; Leake, Travels in Greece, vol. iii. p. 341, seq.)

PYTHIO. [Delph.]

PYTHO/POLIS. [Mythilopolis.]

PYRIXARES. [Euphrates.]

I'XYITES (Πιξιτης), a small river in the east of Pontus, emptying itself into the Exunie 60 stadia on the north-east of Pyrrhus. (Plin. vi. 4; Arrian, Perip. P. E. p. 6; Anonym. Perip. P. E. p. 15.) It is possibly the same as the Cissa mentioned by Ptolemy (v. 6, § 6), and is commonly identified with the modern Vitez. [L. S.]

PYXUS. [Buxentunum.]

Q.

QUACERNI. [Quequerini.]

QUAD (Kwasluin), a great German tribe in the south-east of Bohemia, in Moravia and Hungary, between Mor Gabreta, the Hercynian and Sarmatian mountains, and the Danube. (Tae. Germ. 42, Ann. xii. 29, Hist. i. 5, 21; Plut. ii. 11, § 26; Plin. iv. 25.) They were surrounded on the north-west by the Marcomanni, with whom they were always closely connected, on the north by the Gothini and Osii, on the east by the Jazsysi, Mengaetani and on the south by the Pannomini. It is not known when they came to occupy that country, but it seems probable that they arrived there about the same time when the Marcomanni established themselves in Bohemia. At the time when the Marcomannian king Marobodius and his successor Catulda, on being driven from their kingdom, implored the protection of the Romans, the latter in A. d. 19 assigned to them and their companions in exile the districts between the rivers Marus and Cusus, and appointed Vannius, a Quadian, king of the territory (Tae. Ann. ii. 63; Plin. iv. 25). This new kingdom of the Quadi, after the expulsion of Vannius, was divided between his nephews Vango and Sido, who, however, continued to keep up a good understanding with the Romans. (Tae. Ann. xii. 29, 30.)

Tacitus (Germ. l. c.) says that down to his own time the Marcomanni and Quadi had been governed by kings of the house of Marobodus, but that then foreigners ruled over them, though the power of these rulers was dependent on that of the Roman emperors. At a later time the Quadi took an active part in the war of the Marcomanni against the Romans, and once nearly annihilated the whole army of M. Aurelius, which was saved only by a sudden tempest. (Dion Cass. xxxi. 8.) Notwithstanding the peace then concluded with them, they still continued to harass the Romans by renewed acts of hostility, and the emperor was obliged, for the protection of his own dominions, to erect several forts both in and around their kingdom, in consequence of which the people were nearly driven to abandon their country. (Dion Cass. xxxi. 11, 13, 20.)

A.D. 180 the emperor Commodus renewed the peace with them (Dion Cass. xxiii. 2; Lapiud. Com. 3; Herodian, b. 6), but they still continued their incursions into the Roman empire (Entrep. ix. 9; Vopisc. Aurel. 18; Ann. Marc. xii. 12; xiiii. 6). Towards the end of the fourth century the Quadi entirely disappear from history; they had probably migrated westward with the Suevi, for Quadi are mentioned among the Suevi in Spain. (Heron. Ep. 9.) According to Ammianus Marcellinus (xvii. 12) the Quadi resembled in many respects the Sarmatians, and they were long spoken of as a coat of mail consisting of linen covered with thin plates of horn; they had in war generally three swift horses for every man, to enable him to change them, and were on the whole better as skirmishers than in an open battle in the field. Ptolemy (l. c.) mentions a considerable number of towns in their country, such as Eburodunum, Melitodunum, Caridargis, Medoslinium, &c.; the Celtic name of which suggests that these districts previous to the arrival of the Quadi had been inhabited by Celts, who were either subdued by them or had become amalgamated with them. The name Quadi itself seems to be connected with the Celtic word col, cold, or cold, that is, a wood or forest, an etymology which receives support from the fact that Strabo (vii. p. 290), the first ancient author that notices them, mentions them under the name of Kókkono. Tacitus evidently regards them as Germans, but Latham (ad Tac. Germ. p. 154) is inclined to treat them as Sarmatians. (Comp. Wilhelm, Germanien, p. 225, fol.)

QUADRA TES. In the inscription on the arch of Susa, published by Maffei, there is a list of the Alpine peoples who were under the dominion of Cottius. The first name is the Seguvii, and the last is the Quadates. There is nothing that enables us to fix the position of the Quadates.

Phiny (iii. 4) mentions a people in Gallia Narbonensis under the name of Quarautes. After naming the Osybi and Linganni (Lingauni), he adds: "Super quos Suecri, Quarautes, Adjunitices." The valley of Queiras on the left bank of the Duranecz, below Ericron, and a little above Embrun, is supposed to represent the position of the Quadates. D'Anville conjectures that the Quadates of the inscription may be the same as the Quarautes, for the of the inscription, if it is not very clear, may have been taken for a B; or the complete name may have been Quadates, the name of Quarautes in old records being Quadrium.

2. A fort in Upper Pannonia, on the road between Arrabona and Carnuntum, not far from the banks of the Danube. (It. Ant. p. 247.) Muchar (Noricum, p. 264) identifies it with a place between Ocar and Oroenfur, now occupied by a large farm of Count Zita.

VOI. II.
and Crescentia, near the confluence of the Jura with the Po; but the exact site has not been determined. Though the name is not mentioned by any of the geographers, it would seem to have been in the later ages of the Empire a place or station of importance, as we learn from the Notitia that a body of troops (Sarmatiae Gentiles) was permanently stationed there. (Notit. Dign. vol. ii. p. 121)

[Quadraburgum.]

Boii, Calien, p. 528.) Other geographers conjecture solely from the resemblance of name that it may be Quadaburg, not far from Cleve, which appears to have been a Roman place, for Roman coins and inscriptions have been found there. (G. L.)

Quarreria. [Quarreria.]

Quarreriurn, a people in Istria, of uncertain site. (Plin. iii. 19. s. 23.)

Quarentecis Locus, a place mentioned in the Not. Imp. as under the command of the governor of Boetia Secundus: " Praefectus clasius Sambricarum in loco Quarentecis suis Hornebo."
The place seems to be Quarto, on the Sambr, which keeps the ancient name. The word Quarto indicates a distance of it from some principal place, it being usual for chief towns to reckon distances along the roads which led from them to the limits of their territory. This principal place to which Quarentecis belonged was Basaeum (Barrai), and the distance from Quarto to Bami is four Gallic leagues. The great Roman road from Dunecorum (Reims) to Bauto passed by Quarto. "Quarentecis" is the adjective of a term "Quartis" or "Quarta," and is found in the first red of the year 1153. " Altare de Quarto supra Sambrum," which is the church of Quarto. (G. L.)

Querreriurn (Plin. iii. 3. s. 4; Quarreriurn, Inscriptiones, ap. Gento, p. 245. 2; Quercurn, Kosmopoi. Potii. ii. 6. § 47), a people in the NW. of Hispania Tarraconensis, a subdivision of the Gallaeci Basarri.

Quercutula (Eth. Quercutulanos; Kap. Korutulians, Diom.,) an ancient city of Lutinum, mentioned only by Pliny among the populi Allenses, or extinct communities of Lutinum, and by Dionysius among the the Latin cities which constituted the league against Rome. (Plin. iii. 5. s. 9; Dionys. v. 61.) Neither passage affords the slightest clue to its position, and the name is not elsewhere mentioned; indeed, it seems certain that the place was not in existence at a later period. It is undoubtedly erroneous to connect (as Gell has done) the name of the Porta Quercutulana at Rome with this city (Becker, Romanisch. vol. 179); and we are absolutely in the dark as to its position. It has been placed by Gell and Nibby at a place called Corcula, about 3 miles NE. of Gabii and the same distance from Hadriam's villa new Tivoli; but this is a mere conjecture. (Gell, Top. of Rome, p. 369; Nibby, Dictorni, vol. ii. p. 668.)

QUINTANA. [Anazarbus.]

Quintanae or AD Quintanae, a station on the Via Labicana or Latio, 15 miles from Rome, and at the foot of the hill occupied by the ancient city of Labium, now La Colonna, from which it was about a mile distant. (Itin. Ant. p. 304; Gell, Top. of Rome, p. 5.) Under the Roman Empire it became the site of a village or suburb of Labium, the inhabitants of which assumed the name of Laviaci Quintanae. (Bari.)

[Quinta.] [E. H. B.]

Quintana casts, a foot in the east of Vindelicum, not far from the banks of the Danube, between Batava Castra and Augustana Castra. Its garrison was composed of a troop of Blhitarian horsemen. (It. Ant. p. 249; Notit. Imp., where it is called QuarniCa Castra; comp. Equipp. Vit. S. Severini, 15, 27.) Muchur (Norica, p. 285) identifies its site with that of the modern village of Krajcen.

[Quinza.]

Quizia (Kosci, also Bocq, Ptol. iv. 2, § 3), a place on the coast of Mauretania Cæsariensis, called by Psaltery a colony, and in the Antonine Itinerary a municipality, but in Pliny designated as Quixa Vexinata prope gursum opinuum. It was situated between Portus Magnus and Auresana, at the distance of 40 stadia from either. It is the modern city near Oren. (Ptol. l. c.; It. Ant. p. 13; Pia v. 2; Mela, i. 6.)

R.*

BAHAM. [Rhema.]

Bambaes (Pausan., Ixxx., Excip. i. 11., xiii. 37, Numb. xxxii. 3, 5), was, according to D'Anville (Mêmes sur l'Egypte, p. 72), identical with Hercopolis in the Delta; but according to other writers (Jablosky, Opus. ii. p. 136, Winer, Bibl. Ruhmterterbuch, vol. ii. p. 351) the same as Heliopolis in the same division of Egypt. (W. B. D.)

Rabbath-Ammon. [Philadephia.]

Rabbath-Mobab, a town in the country of Moab, stated by Stephen, bishop of Xenia, to lie on the border of Moab and Bashan, Raumer, Winer, and other moderns, to be identical with Ar of Moab, the classical Aroecus. This identification is almost certainly erroneous; and indeed it is very doubtful whether a Rabbath did exist at all in the country of Moab. All the notices of such a name in the Bible are identified with Rabbath-Ammon, except in Joshua (xiii. 25), where Aror is said to be "before Rabbath," which may possibly be Rabbath-Ammon, and certainly cannot, in the absence of other ancient evidence, be admitted to prove the existence of a Rabbath in Moab. There is, however, some evidence that such a town may have existed in that country, in the modern site of Labba, marked in Zimmerman's map about halfway between Kerak (Kir of Moab) and the Moab (Ammon), and by him identified with Aroecus, which last, however, was certainly identical with Ar of Moab, and lay farther north, on the south bank of the Armon, and in the extreme border of Moab (Numb. xxi. 15, xiii. 36). (Aroecus.) Rabbah is placed by Burckhardt 3 hours north of Kerak (Syria, p. 377), and is doubtless the site noticed in Abulafia's Tabula Syriac as Rabbath and Mob (90). Irby and Mangels

* For those articles not found under RA-, RB-, RC-, see RHA-, RIB-, RIB-, RIC-.}
passed it two hours north of Kerak. "The ruins," they say, "are situated on an eminence, and present nothing of interest, except two old ruined Roman temples and some tombs. The whole circuit of the town does not seem to have exceeded a mile, which is a small extent for a city that was the capital of Moab, and which bore such a high-sounding Greek name." (Journal, June 5, p. 457.) They must not be held responsible for the double error involved in the last cited words, regarding the etymology of the name Areta, and its identity with Rabbath, which are almost universal. [G. W.]

**RAMAG**

RAMAGDARO or RAGINDO, a town in the southeast of Noricum, on the great road leading from Celicia to Postumium, between the rivers Savus and Dravus. (It. Ant. p. 129; It. Héros, p. 561; Tab. Peut.) Muchar (Noricum, p. 240) looks for its site near Mount Studentis; but other geographers entertain different opinions, and nothing certain can be said. [L. S.]

**RAGAU** (Peyau, Isidor. Statthm. Parth., § 13.) a town mentioned by Isidorus in the district of Parthis called Apavartecene. It is probably the same place as the Ragaua of Polenky (Peyaua, vi. 5, § 4). It is not clear whether there exist at present any ruins of this town, but it must have been situated to the E. of Niahapur, between that town and Herat. [V.]

**RAGHAVA. [Rapatva.]**

**RAMAH (Paqâ.)** 1. A city of the tribe of Benjamin, mentioned with Gibeah and Beerah (Josh., xviii. 25), and also with Bethel, as in or near Mount Ephraim. (Judges, iv. 5.) From xix. 13 of Judges it would appear to have been not far north of Jerusalem, and lying near to Gibeah of Benjamin. Being a border city between the kingdoms of Israel and Judah, it was fortified by Baasha king of Israel, "that he might not suffer any to go out or come in to Asa, king of Judah." (1 Kings, xv. 17, comp. xii. 27.) It was placed by Eusebius 6 miles north of Jerusalem, over against Bethel (Onomast. s. v.), and by S. Jerome 7 miles from Jerusalem near Gaba, and was a small village in his day. (Comment. in Hos. cap. v., in Sophon. cap. i.) Josephus places it 40 stadia from Jerusalem. (Ant. viii. 12, § 3.) Its site is still marked by the miserable village of Er-Râsá, situated on a hill on the east of the Nebbâ road, 2 hours north of Jerusalem, and half an hour west of Jebo, the ancient Gibeah. Its situation is very commanding, and it retains a few scattered relics of its ancient importance. (Robinson, Bibb. Res. vol. ii. pp. 315, 316.)

2. See also Ramatha and Ramoth. [G. W.]

**RAMATH-LEHI,** or simply LEHI (translated in LXX. Araviphos or avrophos), where Samsen slew the Philistines with the jaw-bone of an ass. (Judges, xv. 14—19.) The name Ramleh appears so like an abbreviation or corruption — perhaps a corruption — of this name, that it may well be identified as the scene of this slaughter. And here probably was the Ramah in the Thumitic toparchy in which Eusebius and S. Jerome found the Ramathaim Sophim of Samuel, and the Arimathea of the Evangelists, which they place near to Lydda in the plain. (S. Matth. xxvii. 57; S. Mark, xv. 42; S. Luke, xxiii. 50; S. John, xix. 38, Apyabaiia; Eusebius, Onomast. s. v. Armathia Sophim; S. Jerome, Epiphan. Pseudo, p. 673.) Dr. Robinson, indeed, controverts all these positions; but his arguments cannot prevail against the admitted facts, "that a place called Ramathaim or Ramatha did anciently exist in this region, some few hours' journey from Lydiah." (Bibl. Res. vol. iii. p. 49), and that no other place can be found answering to this description but Ramleh, which has been regarded from very early times as the place in question. The facts of Ramleh having been built by Salman, son of the khalif Abd-el-Me'ilî, after the destruction of Lydiah in the early part of the 8th century, and that the Arabic name signifies the "sand," will not seriously militate against the hypotheses with those who consider the greater probability that the khalif would fix on an ancient, but perhaps neglected, site for his new town, and the common practice of the Arabs to modify the ancient names, to which they would attach no meaning, to similar sounds intelligible to them, and in this instance certainly not less appropriate than the ancient name; although the situation of the town "on a broad low swell in the sandy though fertile plain," would satisfy the condition required by its presumed ancient designation. (Bibl. Res. vol. iii. p. 25—43.) It may be questioned whether the monouse of Ramathaim, mentioned with those of Apheirena and Lydiah, as taken from Samaritis and added to Judan (1 Maccab. xi. 34; Josephus, Ant. 2. § 3, 4, § 9), derived its name from this or from one of the other Ramahs, in Benjamin. [G. W.]

**RAMATHA.** (Paqaua), the form in which Josephus represents the name of Samuel's native city, Ramathaim Sophim (LXX. Araviphos Sophim) of Mount Ephraim (1 Sam, i. 1), perhaps identical with Ramah, where was his ordinary residence (vii. 17, viii. 4, xix. 18—24, xxv. 1), but distinct from the Ramah above named. Ancient tradition has fixed this city at Neby Samwil, i. e. "The Prophet Samuel," a village situated on a very high and commanding hill, two hours to the NNW. of Jerusalem, where the place of his sepulture is shown. Eusebius and S. Jerome, however, found it in the western plain, near Lydiah (Onomast. s. v. Armathia Sophim; see Ramath-lehi). Dr. Robinson has stated his objections to the identification of Ramathaim Sophim with Neby Samwil, and has endeavoured to fix the former much further to the south, on the hill called Soba, a little to the south of the Jaffa road, about 3 hours from Jerusalem; while Mr. Wolcott has carried it as far south as the vicinity of Hebron. (Robinson, Bibb. Res. vol. ii. pp. 139—144, 330—334, Bibb. Sacra, vol. i. pp. 40—42.)

These objections are based on the hypothesis that the incidents attending Saul's election to the kingdom, narrated in 1 Sam. ix. x., took place in Ramah of Samuel, of which, however, there is no evidence; and his difficulty would press almost with equal weight on Soba, as the direct route from Soba to Gibeah (Jebo) would certainly not have conducted Saul by Rachel's sepulchre. Neither can the district of Mount Ephraim be extended so far south. Indeed, this last seems to be the strongest objection to Neby Samwil, and suggests a site further north, perhaps Ram-Eliah, in the same parallel of latitude as the other Ramah and Bethel, which were certainly in Mount Ephraim. (Judges, iv. 5.) On the other hand, the name Ramah, signifying "a height," is so remarkably applicable to Neby Samwil, which is evidently the site of an ancient town, which could not, as Dr. Robinson suggests, have been Misaph, that it would be difficult to find a position better suited to Ramathaim Sophim than that which tradition has assigned it. [Mizrach.] [G. W.]

XV 2
RAMATHAIM-ZOPHIM.

RAMATHAIM-ZOPHIM. [Ramathaim.] RAMBA'CARIA (P'um'ebâ'khi, Arrian, Amb. vi. 21), a village of the Orites, the first which was taken by Alexander the Great in his march westwards from the Indus. There can be no certainty as to its exact position, but the conjecture of Vincent seems well grounded that it is either the Ramnagar or the Ramgar of the Agin Akhberi. (Vincent, Voyage of Nevehus, vol. i. p. 185.) [V.]

RAMELE, a place in Galilee Nabozenoös, which the Itins. fix on the road between Embroodrom (Embrun) and Brigantium (Briaxacen). D'Anville says that there is a place called Ram on this road near the Durance, on the same side as Embroon and Briaxacen, and at a point where a torrent named Biuses joins the Durance. [G. L.]

RAMISTA or REMISTA, a place in Upper Pan- nomia, on the road running along the river Savus to Sosia (H. Hieros. p. 561; Geogr. Rav. iv. 19; Tab. Pent.) Its site has not yet been ascertained with certainty.

RAMIOTH, identical in signification with Ram and Ramah, equivalent in Hebrew to "an eminence," and hence a generic name for towns situated on remarkable heights, as so many in Palestine were. Besides those above named [Ramah; Ramathaim; Ramathaim-Zophim] there was a Ramah in the tribe of Asher, not far from Tyre; and another in Naphthali (Josh. xix. 29, 36) in the north and a Ramath in the tribe of Simeon, appropriately called "Ramath of the South" (ver. 8.), to which David sent a share of the spoils of Ziklag (1 Sam. xxx. 27), and yet a Ramoth in Issachar, assigned to the Levites of the family of Gershom. (1 Chron. vi. 74.) More important than the foregoing was—

RAMOTH-GLILEAD (Râmoth Âdv Gâlî'âd), a city of the tribe of Gad, assigned as a city of refuge, first by Moses and subsequently by Joshua. (Deut. iv. 43; Josh. xx. 8, 35, note.) It was also a Levitical city of the family of Merari. (Josh. xxi. 38.) The Syrians took it from Ahaz, who lost his life in seeking to recover it. (1 Kings. xxi. 22.) Eu-chissea places it 15 miles west of Philadelphia (Ouamast. s. v., where S. Jerome erroneously reads east; Re- land, p. 966), in the Perea, near the river Jabok. Its site is uncertain, and has not been recovered in modern times. [G. W.]

RANILUM, a town in the interior of Thrace. (Tab. Pent.) [T. H. D.]

RAPHANAEA (Pa'chnâsia), a maritime town of Syria, only once named by Josephus, who states that the Sabattic river flowed between Areona and Raphanaea. (B. J. vii. 5. § 1.) [Saba- nitics.] [G. W.]

RAPHIA (Râphîa, Râ'phia), a maritime city in the extreme south of Palestine, between Gaza and Rhinocorura, a day's march from both, reckoned by Josephus, Polybios, and others, as the first city of Syria. (Joseph. B. J. iv. 11. § 5; Polyb. v. 80.) It was taken from the Egyptians by Alexander Jannaeus, and held by the Jews for some time. It was one of the ruined and depopulated cities restored by Gabinius. (Ant. xii. 13. § 3, 15. § 4, xiv. 5. § 3.) It is mentioned also by Strabo (xvi. p. 759) and in the Itinerary of Antoninus, between the above-named towns. Coins of Raphael still exist, and it was represented by its bishop in the council of Elpeus, and in those of Constantinople. A. D. 536 and 553. (Beland, a. e. pp. 967, 968; Le nicien, Orienta Christianae, vol. iii. pp. 629, 630.) It was in the neighbourhood of this city that a great battle was fought between Poleney Philopator and Antiochus the Great, in which the latter was routed with immense losses. (3 Maccab. i. 2; Polyb. v. 80, &c.; Hieron. ad Don. cap. xi.) Its site is still marked by the name Refah, and two ancient granite columns in situ, with several prostrate fragments, the remains apparently of a temple of considerable magnitude, (Iby and Mangles' Jones, October 8.) [G. W.]

RAPP'AU, (Râpp'sa, Markian, Perip. ii. § 32, ed. Müller), a small place on the coast of Gadesia, between the river Arabia and the Purtus Mulieern. It is probably the same as that called by Ptolomy Ragriara (Râpp'sa, vi. 21. § 2.) It may be doubted whether it can now be recognised, unless indeed the name has been preserved in that of Arabot, a bay in the immediate neighbourhood. (See Müller, ad Arrian. Indic. § 26.) [T. H. D.]

RAPPATHIA (Itin. Ant. p. 426, where the reading varies between Scaclia, Serapia, Sarapia, and Es- cupria), a town of Lucania, on the road from Ossana to Eora, and 35 miles N. of the former place; now Ferreirà. (Comp. Florcz. Esp. Srov. xiv. p. 202.) [T. H. D.]

RAPPASSA (Râpa'ssa or Râ'ssâ, Ptol. vii. 1. § 50), a place which Ptolomy calls the metropolis of the Casperein in India infra Gangem. Its exact situation cannot be determined; but there can be no doubt that it was in Western India, not far from the Vindob. Ms. Lassen places it a little S. of Ajmir. [V.]

RAS'NEA. [Etruria, pp. 855, 859.]

RATAE (Itin. Ant. pp. 477, 479; Pâtre, Ptol. ii. 3. § 29, where some read Pâte), a town of the Cortiani in the interior of Britannia Romana, and on the road from London to Lincoln. It is called Batecoron in the Geogr. Rav. (v. 31). Camden (p. 557) identifies it with Leicester. [T. H. D.]

RAT'ANEUM (Plin. iii. 22. s. 26; Ptolemy, Dion Cass. li. 11), a town of Dalmatia, which was burnt by its inhabitants, when it was taken by Germanicus in the reign of Augustus. (Dion Cass. l.c.)

RAT'IA'RIA (Pataria, Propoc. de Vet. iv. 6, p. 290; Pataria Morav., Ptol. iii. 9. § 4, viii. 11. § 5; Pataria, Hieroc. p. 653; Pataria, Theophylact. l. 8; Ratariis, Geogr. Rav. iv. 7), a considerable town in Moesia Superior on the Danube, and the head-quarters of a Roman legion; according to the Itinerary (p. 219), the Leg. xiv. Gemnia, according to the Not. Imp. (c. 30), the Leg. xiii. Gemina. It was also the station of a fleet on the Danube (ibid.). Usually identified with Arzcr-Palatena. [T. H. D.]

RAT'IATUM (Pataris), a town of the Pictories (Ptol. ii. 7. § 6). Poleney mentions it before Limo- num, and places it north of Limonum, and farther west. Some editions of Poleney place Ratiatum in the territory of the Lenovices, but this is a mistake. In the records of a council held at Orkions in A. D. 511, the bishop of the Pictavi signs himself "de civitate Ratiatica." The name was preserved in that of the Iugus Ratiensia, from which comes the modern name of Prince de Ketze. Gregory of Tours speaks of Ratiatum as "infra terminum Pictavorum qui adjunct civitatii Numante". The district of Ketze was taken from the diocese of Poitiers and attached to the diocese of Nantes in the time of Charles the Bald. Balty. (Mem. de l'Acad. des Inscription, tom. xiv. p. 729) fixes Ratiatum at the site of the two churches of St. Pierre and St. Op-
RATOMAGUS.

portuna de Retz, which are near Mackwood and on the Teut, a small river in the department of La Vendée. The Teut enters the sea near Bourgneuf, opposite to the Île Noirmoutier (D’Avrile, Notice, &c.; Ubert, Gallien, p. 393). [G. L.]

RATOMAGUS. [RATOMAGUS.]

RAVENNA (Presopuov, Straub; Pâpov, Iol. et al.: Eth. Ravennas -Rivia: Ravenna), one of the most important cities of Gallia Cispadana, situated a short distance from the sea-coast, at the southern extremity of the extensive range of marshes and lagunes, which occupied the whole coast of Venetia from thence to Aitumn. (Strab. v. p. 213; Itin. Ant. p. 126.) It was 33 miles N. of Ariminum.

Though included within the limits of Cisalpine Gaul, according to the divisions established in the days of Strabo and Pliny, it does not appear to have ever been a Gaulish city. Strabo tells us that it was a Thessalian colony, which probably meant that it was a Pelasgic settlement, and was connected with the traditions that ascribed to the Pelasgi the foundation of the neighbouring city of Spina. [SPINA.]

But they subsequently, according to the same writer, received a body of Umbrian colonists, in order to maintain themselves against the growing power of the Etruscans, and thus became an Umbrian city, to which people they continued to belong till they passed under the Roman government. (Strab. v. pp. 214, 217.) Pliny, on the other hand, calls it a Sabine city,—a strange statement, which we are wholly unable to explain. (Plin. iii. 15. s. 20.) It seems probable that it was really an Umbrian settlement, and retained its national character, though surrounded by the Ligurian Gauls, until it received a Roman colony. No mention of the name is found in history till a late period of the Roman Republic, but it appears to have been then already a place of some consequence. In n. c. 82, during the civil wars of Marius and Sulla, it was occupied by Metellus, the lieutenant of the latter, who made it the point of departure from whence he carried on his operations. (Appian, B. C. i. 69.)

Again it was one of the places which was frequently visited by Caesar during his command in Gaul, for the purpose of raising levies, and communicating with his friends at Rome (Cic. ad Att. vili. 1, ad Fuit. iv. 9, viii. 1); and just before the outbreak of the Civil War it was there that he established his head-quarters; from whence he carried on negotiations with the senate, and from whence he ultimately set out on his march to Ariminum. (Id. id. ii. 32; Cass. B. C. i. 5; Suet. Caesar. 30; Appian, B. C. ii. 32.) Its name again figures repeatedly in the civil wars between Antony and Octavian, especially during the war of Peruna (Appian, B. C. iii. 42, 97, v. 33, 50, &c.); and it is evident that it was already become one of the most important towns in this part of Cisalpine Gaul.

It is uncertain at what period Ravenna received a Roman colony. Strabo speaks of it as having in his time, as well as Ariminum, received a body of Roman colonists (v. p. 217); but the date is not mentioned, and it certainly did not, like Ariminum, pass into the condition of a regular Colonia, numerous inscriptions being extant which give it the title of a Municipium. It is probable that the settlement alluded to by Strabo took place before Augustus, and it is certain that it was to that emperor the city of Ravenna was indebted for the importance which it subsequently enjoyed during the whole period of the Roman Empire. The situation of the city was very peculiar. It was surrounded on all sides by marshes, or rather lagunes, analogous to those which now surround the city of Venice, and was built, like that city, actually in the water, so that its houses and edifices were wholly constructed on piles, and it was intersected in all directions by canals, which were crossed either by bridges or ferries. The lagunes had a direct communication with the sea, so that the canals were scouried every day by the flux and reflux of the tides,—a circumstance to which Strabo attributes, no doubt with justice, the healthiness of the city, which must otherwise have been uninhabitable from malaria. (Strab. v. p. 213; Jornand. Get. 29; Sidon. Apoll. Epist. i. 5; Precept. B. G. 1. 1; Claudian, de Vi. Cons. Hon. 495.)

The old city had a small port at the mouth of the river Bedesia, mentioned by Pliny as flowing under its walls (Plin. iii. 15. s. 20); but Augustus, having determined to make it the permanent station of his fleet in the Adriatic, constructed a new and spacious port, which is said to have been capable of containing 250 ships of war (Jornand. l. c.), and was furnished with a celebrated Phaæos or lighthouse to mark its entrance. (Plin. xxxvi. 12. s. 18.) This port was near 3 miles distant from the old city, with which it was connected by a long causeway: a considerable town rapidly grew up around it, which came to be known by the name of Portus Classis or simply Classis; while between the two, but nearer to the city, there arose another suburb, scarcely less extensive, which bore the name of Caesarea. (Jornand. l. c.; Sidon. Apoll. l. c.; Precept. B. G. ii. 29; Geogr. · Kav. iv. 31.) In addition to these works Augustus constructed a canal, called from him the Fossa Augusta, by which a part of the waters of the Padus were carried in a deep artificial channel under the very walls of Ravenna and had their outlet at the port of Classis. (Plin. iii. 16. s. 20; Jornand. l. c.)

From this time Ravenna continued to be the permanent station of the Roman fleet which was destined to guard the Adriatic or Upper Sea, as Misenum was of that on the Lower (Tac. Ann. iv. 3, Hist. ii. 100, iii. 6, 40; Suet. Aug. 49; Veget. de R. Mil. v. 1; Not. Diagn. ii. p. 118); and it rose rapidly into one of the most considerable cities of Italy. For the same reason it became an important military post, and was often selected by the emperors as their head-quarters, from which to watch or oppose the advance of their enemies into Italy. In A. D. 193 it was occupied by Severus in his march upon Rome against Didius Julianus (Spartian, Did. Jul. 6; Dion Cass. lxxiii. 17); and in 258 it was there that Pupienus was engaged in assembling an army to oppose the advance of Maximin when he received the news of the death of that emperor before Aquileia. (Herodian, viii. 6, 7; Capit. Maximin. 24, 25, Max. et Beilb. 11, 12.) Its strong and secluded position also caused it to be selected as a frequent place of confinement for prisoners of distinction, such as the son of the German chieftain Arminius, and Marobodus, chief of the Suevi. (Tac. Ann. i. 58, ii. 63; Suet. Tib. 20.) The same circumstances at a later period led to its selection by the feeble and timid Honorius as the place of his

TY 3
RAVENNA.

residence; his example was followed by his successors; and from the year 404, when Honorius first established himself there, to the close of the Western Empire, Ravenna continued to be the permanent imperial residence and the place from whence all the laws and rescripts of the emperors were dated. (Jord. iv. Ep. 29; Gibbon, c. 303-5.) Even before this period we are told that it was a very rich and populous city, as well as of great strength (Zosim. ii. 10); it was the capital of Piacenum (as that name was then used) and the residence of the Consularis or governor of that province. (Orell. Inscr. 3649; Böcking, ad Not. Dipl. ii. pp. 339, 443.) But the establishment of the imperial court there naturally added greatly to its prosperity and splendour, while its inaccessible situation preserved it from the calamities which at this period laid waste so many cities of Italy. Yet Ravenna as a place of residence must always have had great disadvantages. Sidonius Apollinaris, who visited it late in the fifth century, complains especially of the want of fresh water, as well as the rudeness of the canals, the swarms of grutes, and the croaking of frogs. (Sidon. Apoll. Ep. i. 5, 8.) Martial, at a much earlier period, also alludes to the scarcity of fresh water, which he jestingly asserts was so dear that a cistern was a more valuable property than a vineyard. (Martial, ii. 4.)

After the fall of the Western Empire Ravenna continued to be the capital of the Gothic kings, Odoacer, who had taken refuge there after repeated defeats by Theodoric, held out for nearly three years, but was at length compelled to surrender. (Jornand. Get. 57; Cassiod. Chron. p. 649.) Theodoric himself established his residence there, and his example was followed by his successors, until, in 539, Vitiges was after a long siege compelled by Junius to surrender the city to Belisarius. (Procop. B. G. ii. 28 29.) It now became the residence of the governors who ruled a part of Italy in the name of the Byzantine emperors, with the title of exarchus, whence the whole of this province came to be known as the Exarchate of Ravenna. The Byzantine governors were in a state of frequent hostility with the Lombard kings, and were gradually stripped of a large portion of their dominions; but Ravenna itself defied their arms for more than two centuries. It was besieged by Longinus about 750, and its important suburb of Classe totally destroyed (P. Diac. vi. 49); but it was not till the reign of his successor Astolphus that Ravenna itself fell into the hands of the Lombards. But the exact date, as well as the circumstances of its final conquest, are uncertain. (Gibbon, c. 49.)

The situation of Ravenna at the present day presents no resemblance to that described by ancient writers. Yet there is no doubt that the modern city occupies the same site with the ancient one, and that the change is wholly due to natural causes. The accumulation of alluvial deposits, brought down by the rivers and driven back by the waves and tides, has gradually filled up the lagoons that surrounded and canals that intersected the city; and the modern Ravenna stands in a flat and fertile plain, at a distance of 4 miles from the sea, from which it is separated by a broad sandy tract, covered in great part with a beautiful forest of stone pines. Though Ravenna is one of the most interesting places in Italy for its medieval and early Christian antiquities, it presents few remains of the Roman period, and those for the most part belong to the declining years of the Empire. A triumphal arch, known by the name of Porta Aurea, was destroyed in 1585; it stood near the modern gate called Porta Adriana. Several of the ancient basilicas date from the Roman period; as does also the sepulchral chapel containing the tomb of Gaia Piacenza, mother of Honorius, and mother of Valentinian III. A portion of the palace of Theodoric has been preserved in its original state, and the mausoleum of that monarch, just without the walls, is a monument of remarkable character, though stripped of its external ornaments. An ancient basilica, still called S. Apollinare in Classe, about 3 miles from the southern gate of the city, preserves the memory and marks the site of the ancient port and suburb of Classe; while another basilica, which subsisted down to the year 1553, bore the name of S. Lorenzo in Cesarea; and thus indicated the site of that important suburb. It stood about a quarter of a mile from the south gate of the city, between the walls and the bridge now called Ponte Nuovo. This bridge crosses the united streams of the Ronco and Montone, two small rivers which previously held separate courses to the sea, but were united into one and confounded within an artificial channel by Clement XII. in 1736. The Ronco, which is the southernmost of the two, is probably the same with that of Pliny, mentioned by Ptolemy; and Pliny says that it was in his time still called Bedecus. Hence the Montone must be identified with the Viris of the same author. The Anemo, which he places next in order, is clearly the same now called the Arone or Lamone, which flows under the walls of Faenza. (Pim. iii. 15. s. 26; Clover. Ital. p. 306.)

The natural causes which have produced these changes in the situation and environs of Ravenna were undoubtedly in operation from an early period. Already in the fifth century the original port constructed by Augustus was completely filled up, and occupied by orchards. (Jornand. Get. 29.) But Ravenna at that period had still a much frequented port, where the fleets of Belisarius and Narses could ride at anchor. The port of Classe itself is now separated from the sea by a strip of sandy and marshy plain about 2 miles broad, the greater part of which is occupied by a forest of stone pines, which extends for many miles along the coast, with a portion of it also returned to the land. The existence of this remarkable strip of forest is attested as early as the fifth century, the name of Pineta being already found in Jornandes, who tells us that Theodoric encamped there when he besieged Odoacer in Ravenna. (Jornand. 57.) But it is probable that it has extended its boundaries and shifted its position as the land has gradually gained upon the sea.

The territory of Ravenna was always fertile, except the sandy strip adjoining the sea, and produced abundance of wine of good quality, but it was remarked that the vines quickly decayed. (Strab. v. p. 214; Plin. xiv. 2. s. 4.) Its gardens also are noticed by Pliny as growing the finest asparagus, while the adjoining sea was noted for the excellence of its turbot. (Plin. ix. 54. s. 79, xiv. 4. s. 19.)

RAVUS (Ravus, Ptol. ii. 2. § 4), a river on the W. coast of Hibernia, according to Camden (p. 1385) the Tribus. Others identify it with the Gabranticum (T. [I. 9.] D.)

RAURACI, or RAURICI (Raurici). The form Raurici appears in Ptolemy (ii. 9. § 18), in Pliny (iv. [E. II. B.])

RAVUS (Ravus, Ptol. ii. 2. § 4), a river on the W. coast of Hibernia, according to Camden (p. 1385) the Tribus. Others identify it with the Gabranticum (T. [I. 9.] D.)

RAURACI, or RAURICI (Raurici). The form Raurici appears in Ptolemy (ii. 9. § 18), in Pliny (iv. [E. II. B.])
RAURANUM.

17), and in some inscriptions, Tpolony mentions two towns of the Rauraci, Rauriciorum Augusta and Argentovaria [Augusta Rauriacorum; Argentoniana]. Augusta is August near Béziers, in the Swiss Canton of Bâle, and Argentovaria may be Artenheim. The position of these places helps us to form a measure of the extent of the territory of the Rauraci, which may have nearly coincided with the bishopric of Bâle.

The Rauraci joined the Helvetii in their emigration, b. c. 58. [Helvetii.] [G. L.]

RAURANUM, in Gallia, is placed by the Table and Alcaeus as one of the three main roads from Toulon to Sannontom (Saintes) to Limonum (Poitiers). It is Raurana in the Table, but the name Rauranum occurs in a letter of Paulinus to Ausonius (Ep. iv. ad Auson. v. 249), who places it "Pictonici in arvis." The place is Rom or Roum, near Chenay, nearly due south of Poitiers. (D'Anville, Notice, &c.; Ukert, Gallien, p. 392.) [G. L.]

RAURARIS. [Arutaris.]

REATE. (Pedre, Sraib); Pedro, Dionys.; Eth. (Pedro, Tel.) Rete, the ancient city of the Sabines, and one of the most considerable to that people. It was situated on the Via Salaria, 48 miles from Rome (Itin. Ant. p. 306), and on the banks of the river Velinus. All writers agree in representing it as a very ancient city: according to one account, quoted by Dionysius from Zenodota of Trozen, it was one of the original abodes of the Umbrians, from which they were expelled by the Pelasgi; but Cato represented it as one of the first places occupied by the Sabines when they descended from the neighbourhood of Amicenum, their original abode. (Dionys. ii. 49.) Whatever authority Cato may have had for this statement, there seems no reason to doubt that it was substantially true. The fertile valley in which Reate was situated lay in the natural route of migration for a people descending from the highlands of the central Apennines: and there is no doubt that both Reate and its neighbourhood were in historical times occupied by the Sabines. It was this migration of the Sabines which led to the expulsion of the Aborigines, who, according to Dionysius, previously occupied this part of Italy, and whose ancient metropolis, Lista, was only 24 stadia from Reate. (Dionys. i. 14, ii. 49.) Silius Italicus appears to derive its name from Rea, and calls it consecrated to the Mother of the Gods; but this is probably a mere poetical fancy. (Sil. Ital. viii. 415.) No mention of Reate occurs in history before the period when the Sabines had been subjected to the Roman rule, and admitted to the Roman Franchise (n. c. 290); but its name is more than once incidentally noticed during the Second Punic War. In n. c. 211 Hannibal passed under its walls during his retreat from Rome, or, according to Coelcins, during his advance upon that city (Liv. xxvi. 11); and in n. c. 205 the Reatini are specially mentioned as coming forward, in common with the other Sabines, to furnish volunteers to the armament of Selpho. (Id. xxviii. 45.) We are wholly ignorant of the reasons why it was reduced to the subordinate condition of a Praefectura, under which title it is repeatedly mentioned by Cicero, but we learn from the great orator himself, under whose especial patronage the inhabitants were placed, that it was a flourishing and important town. (Cic. in Cat. iii. 2, pro Scarr. 2. § 27, de Nat. Deor. ii. 2.) Under the Empire it certainly obtained the ordinary municipal privileges, and had its own magistrates (Zumpt, de Col. pp. 93, 188; Gruter, Insacr. p. 334. 3, &c.); under Vespasian it received a considerable number of veteran soldiers as colonists, but did not obtain the rank of a Titula of a Colony. (Lib. Col. p. 257; Orell. Insacr. 3083; Gruter, Insacr. p. 538. 2; &c.)

The territory of Reate included the whole of the lower valley of the Velinus, as far as the falls of that river; one of the most fertile, as well as beautiful, districts of Italy, whence it is called by Cicero the Bactante Tempe (ad Att. iv. 13.) But the peculiar natural character of this district was the deep river, which, in high water, gives rise to a series of small lakes, remarkable for their picturesque beauty. The largest of these, now known as the Lago di Fic di Lugo, seems to have been the one designated in ancient times as the Lacus Velinus; while the fertile plains which extended from Reate to its banks were known as the Rosei or more properly Roseae Campi, termed by Virgil the "Bessa rura Velinii." (Virg. Aen. vii. 121; Cic. ad Att. iv. 15; Varro, R. E. i. 7. § 10, ii. 1. § 16, iii. 2. § 10; Plin. xxiv. 4. s. 3.) But this broad and level valley is at an elevation of near 1000 feet above that of the Nar, into which it pours its waters by an abrupt descent, a few miles above Interamnana (Terni); and the stream of the Velinus must always have constituted in this part a natural cascade. Those waters, however, are so strongly impregnated with carbonate of lime, that they are continually forming an extensive deposit of travertine, and thus tending to block up their own channel. The consequence was, that, while the channel was artificially regulated, and their channel kept clear, the valley of the Velinus was inundated, while on the other hand, if these waters were carried off too rapidly into the Nar, the valley of that river and the territory of Interamnana suffered the same fate. The first attempt to regulate the course of the Velinus artificially, of which we have any account, was made by M. Curius Dentatus, after his conquest of the Sabines, when he carried off its waters by a deep cut through the brow of the hill overlooking the Nar, and thus gave rise to the celebrated cascade now known as the Falls of Terni. (Cic. ad Att. iv. 15; Serv. ad Aen. vii. 712.) From the expressions of Cicero it would appear that the Lacus Velinus, previous to this time, occupied a much larger extent, and that a considerable part of the valley was then first reclaimed for cultivation.

But the expedient thus resorted to did not fully accomplish its object. In the time of Cicero (n. c. 54) fresh disputes arose between the citizens of Reate and those of Interamnana; and the former appealed to the great orator himself as their patron, who pleaded their cause before the arbiters appointed by the Roman senate. On this occasion he visited Reate in person, and inspected the lakes and the channels of the Velinus. (Cic. pro Scarr. 2. § 27, ad Att. iv. 15.) The result of the arbitration is

T Y 4
unknown; but in the reign of Tiberius the Realines had to contend against a more formidable danger, arising from the project which had been suggested of blocking up the outlet of the Lacus Velinus altogether on a measure which, as they justly complained, would undoubtedly have inundated the whole valley. (Tac. Ann. i. 79.) Similar disputes and difficulties again arose in the middle ages; and in a.d. 1400 a new channel was opened for the waters of the Velians, which has continued in use ever since.

No other mention occurs of Reate under the Roman Empire; but inscriptions attest its continued municipal importance; its name is found in the Itineraries (Itin. Ant. p. 306), and it early became the see of a bishop, which it has evidently continued ever since. Throughout the middle ages it was, as it still continues to be, the capital of the surrounding country. No ancient remains are now visible at Reate.

The territory of Reate was famous in ancient times for its breed of mules and asses; the latter were particularly celebrated, and are said to have been sometimes sold for a price as high as 300,000 or even 400,000 sesterces (Varr. R. R. ii. 8, § 3; Plin. v. 43. 68), though it is difficult not to suppose those mentioned were burros, or asses, rather than mules. Q. Axius, a friend of Varro, who had a villa on the Lacus Velinus, and extensive possessions in the Reatine territory, is introduced by Varro in his dialogues De Re Rustica, as discoursing on the subject of breeding horses, mules, and asses. (Varr. R. R. ii. 1. § 8; Strab. v. p. 228.) It was at the villa of this Q. Axius that Cicero lodged when he visited Reate. (Cic. ad Att. iv. 15.) The Septem Aquae, mentioned by him in the same passage, and alluded to above as a see of a bishop, which it has evidently continued ever since, was afterwards abandoned, and the name was continued to the small lakes in the valley of the Velians. [E. H. B.]

RECHIUS. [Bolge.]

REDINTUINUM (Pediautovo), a town in the northern part of the country occupied by the Marcomanni (Bohemia's), is mentioned only by Ptolemy (ii. 11. § 29); some geographers regard it as having occupied the site of the modern Prozge, and others identify it with Bortesce; but nothing certain is said about it by the modern writers. [L. C.]

REDONES (Pythoie, Pythoie), in the Celtogallia Lugundensis of Ptolomy (ii. 8, § 12), are placed by him west of the Semones and along the Liger. Their capital is Condate (Rennes). But the Redones were not on the Loire. Pliny (iv. 18) enumerates the Redones among the peoples of Gallia Lugundensia; "Diabundi, Redones, Turones." After the bloody flight on the Sambre (a. c. 57) Caesar sent J. Crassus with a single legion into the country of the Veneti, Redones, and other Celtic tribes between the Seine and the Loire, all of whom submitted. (B. G. ii. 54.) Caesar here enumerates the Redones among the maritime states whose territory extends to the ocean. In b. c. 52 the Redones with their neighbours sent a contingent to attack Caesar during the siege of Alesia. In this passage also (B. G. vii. 75), the Redones are enumerated among the states bordering on the ocean, which in the Celtic language were called the Armoric States. D'Anville supposes that their territory extended beyond the limits hitherto designated as the district of Rennes into the dioceses of St. Malo and Dol. Their chief town, Rennes, is the capital of the department of Ille-et-Vilaine. [G. L.]

REGAILUS LACUS. the modern Regen in Bavaria, is noticed only once. (Geogr. Rav. iv. 25.) [L. S.]

REGIA (Prygia, Ptol. ii. 2. § 10). 1. A place in the interior of Hibernia, no doubt so named by them from its being a royal residence, under a proper name of which was unknown to them. It was perhaps seated on the river Culmone, in the neighborhood of Omagh. 2. (Etia 'Prygia, Ptol. i. c.) another place of the same description, conjectured to have been on the river Dur. 3. Regia Carissa. [CARISA.] [T. H. D.]

REGIANA (called by Ptol. ii. 4. § 13, 'Prygia; comp. Geogr. Rav. iv. 44. and Regina, Plin. iii. 3), a town of Rieti, was destroyed by the Gauls from Hissapis to Emerita. (Itin. Ant. p. 415.) Small Appius, in liaison with Puebla de la Regia, where there are Roman remains. [T. H. D.]

REGIACUM (Prygiasin, Ptol. iii. 10. § 10), a place on the Danube in Moesia Inferior. It is probably the same place as the Augusta of the Itinerary (p. 220; comp. Top. Purt.) and the Agydesus of Procopius (de Aed. iv. 6), in which case it may be identified with Coznac, at the confluence of the Ogrec and Danube. [T. H. D.]

REGILLUM (Pygglav), a town of the Sabines mentioned by several ancient writers as the place of residence of Attis or Attius Clansus, who migrated to Rome about B.C. 505, with a large body of clients and followers, where he adopted the name of Appius Claudius and became the founder of the Claudian tribe and family. (Liv. ii. 16; Dionys. v. 40; Suet. Tib. i. Serv. ad Aen. vii. 706.) About 60 years afterwards C. Claudius, the uncle of the decemvir Appius Claudius, withdrew into retirement to Regillum, as the seat of his forefathers ("antiquam in patriam," Liv. iii.), and Dionys. vii. 15.) The name is not noticed on any other occasion, nor is it found in any of the geographers, and we are wholly without a clue to its position. [E. H. B.]

REGILLUS LACUS (Pryglavlar aiyw, Dionys.: "Lago di Cornufelle"), a small lake in Latium, at the foot of the Tuscanian hills, celebrated for the great battle between the Romans and the Latins under C. Marius, in b. c. 496. (Liv. ii. 19; Dionys. viii. 3; Cic. de Nat. ii. ii. 3; Pline. xxxii. 2. 11; Val. Max. i. 16. 8; Vit. Juv. i. 11.) Hardly any event in the early Roman history has been more disguised by poetical embellishment and fiction than the battle of Regillus, and it is impossible to decide what amount of historical character may be attached to it; but there is no reason to doubt the existence of the lake, which was assigned as the scene of the combat. It is expressly described by Livy as situated in the territory of Tusculum ("ad lacum Regilium in agro Tusculano," Liv. ii. 19), and this seems decisive against the identification of it with the small lake called Il Laghetto di Ste Prassede, about a mile to the N. of La Colonna; for this lake must have been in the territory of Lucium, if that city be correctly placed at La Colonna (Labicun), and at all events could hardly have been in that of Tusculum. Moreover, the site of this lake being close to the Via Labicana would more probably have been indicated by some reference to that high-road than by the vague phrase in agro Tusculano. A much more plausible suggestion is that of Celli, that it occupied the site of a volcanic crater, now drained of its waters, but which was certainly once occupied by a lake, at a place called Cornufelle, at the foot of the hill on which...
REGINA.

stands the modern town of Frascati. This crater, which resembles that of Gabii on a much smaller scale, being not more than half a mile in diameter, was drained by an artificial emissary as late as the 17th century; but its existence seems to have been unknown to Oliverines and other early writers, who, unless Laber笸 called the Lake Regillus, on the express ground that there was no other in that neighbourhood. (Cluver. Ital. p. 946; Nibby, Distorni, vol. iii. pp. 8—10; Gall, Top. of Rome, pp. 186, 371.) Extensive remains of a Roman villa and baths may be traced on the ridge which bounds the crater, and an ancient road from Tusculum to Labicum or Gabii passed close by it, so that the site must certainly have been one well known in ancient times. [E. H. B.]

REGINA. [Eegius; Regiana.]

REGINIA, in Gallia Lugudunensis, is placed in the Table on a road from Condante (Rennes). The first station is Fanum Martis, and the next is Regina, 39 Gallic leagues from Condante. D'Avouille fixes Regina on Erquy on the coast, between S. Brieuc and S. Malo. [Fanum Martis.] [G. L.]

REGINUM, a town in the northern part of Vindealia, on the southern bank of the Danube, on the road leading to Vindobona. This town, the modern Ratisbon, was adopted the lake or pool near London by the Roman historians, but it was nevertheless an important frontier fortress, and, as we learn from inscriptions, was successively the station of the 1st, 3rd, and 4th Italian legions, and of a detachment of cavalry, the Ala II. Valeria. The town appears to have also been of great commercial importance, and to have contained among its inhabitants many Roman families of distinction. (Itin. Ant. p. 250; Tab. Peut., where it is called Castra Regia; comp. Reffeiusburg, Der Oberdonandkreis Bayern, iii. p. 38, 36.)

REGIS VILLA (Ρηγιαιωιλλα, Strab.), a place on the coast of Etruria, which, according to Strabo, derived its name from its having been the residence of the Pelasgic king or chief Melkus, mentioned by the neighbouring Pelasgi in this part of Etruria. (Strab. v. p. 225.) None of the other geographers mentions the locality; but Strabo places it between Cosa and Graviscae; and it is therefore in all probability the same place which is called in the Maritime Itinerary REGAE, and is placed 3 miles S. of the river Armenta (Flora) and 12 miles from Graviscae. (Itin. Martit. p. 499.) The site is now marked only by some projecting rocks called Le Mareette. (Denis's Etruria, vol. i. p. 398; Westphal's Mag. d. Int. 1830, p. 30.) [E. H. B.]

REGIS'TUS or RESISTUS. [Bisanthi.]

REGIUM LEPIDI or REGIUM LEPIDUM (Ρηγιων λεπίδων, Strab.; Ρηγιων λεπιδων, Plut.; Eth. Regiinsis: Reggio), sometimes also called simply REGIUM, a town of Gallia Cispadana, situated on the Via Aemilia, between Mutina and Parnus, at the distance of 17 miles from the former and 18 from the latter city. (Itin. Ant. pp. 99, 127; Strab. v. p. 216.) We have no account of its foundation or origin; but the name would raise a presumption that it was founded, or at least settled and enlarged, by Aemilius Lepidus when he constructed the Aemilian Way; and this is confirmed by a passage of Festus, from which it appears that it was originally called Forum Lepidi. (Fest. s. v. Rhegium. p. 270.) The origin of the appellation of Regium, which completely superseded the former name, is unknown. It did not become a colony like the neighbouring cities of Mutina and Parma; but it evidently never rose to the same degree of opulence and prosperity as those cities, but became, nevertheless, a flourishing municipal town. It is repeatedly mentioned during the civil war with M. Antonius, both before and after the battle of Mutina (Cic. ad Fam. x. 9. xii. 5); and at a somewhat earlier period it was there that M. Brutus, the father of the murderer of Caesar, was put to death by Pompey in B.C. 79. (Oros. v. 22; Plut. Pomp. 16.) Its name scarcely occurs in history during the Roman Empire; but its municipal consideration is attested by inscriptions, and it is mentioned by all the geographers among the towns on the Via Aemilia, though ranked by Strabo with those of the second class. (Strab. v. p. 216; Plin. iii. i. 16. 20; Orell. Inscr. 3983, 4133; Tac. Hist. ii. 50; Plhegon, Macrovb. 1.) Ploeney alone gives it the title of a Colonia, which is probably a mistake; it was certainly not such in the time of Pliny, nor is it so designated in any other authority. Zumpt, however, supposes that it may have received a colony under Trajan or Hadrian. (Zumpt, de Colon. p. 403.) St. Ambrose notices Regium as well as Placentia and Mutina among the cities which had fallen into great decay before the close of the fourth century. (Ambros. Ep. 39.) It was not long before this that an attempt had been made by the emperor Gratian to repair the desolation of this part of Italy by settling a body of Gothic captives in the territory of Regium, Parma, and the neighbouring cities. (Ammm. xxxi. 9. 4.) The continued existence of Regium at this period is proved by the Itineraries and Tabulae (Itin. Ant. pp. 283, 287; Itin. Hier. p. 616; Tab. Peut.), and it is mentioned long after the fall of the Western Empire by Paulus Diaconus among the "locupletus urbes" of Aemilia. (P. Diaec. Hist. Lang. ii. 18.) In the middle ages it rose to a great degree of prosperity, and Reggio is still a considerable town with about 16000 inhabitants. Its episcopal see dates from the fifth century.

The tract called the Campi Machi, celebrated for the excellence of its wool, was apparently included in the territory of Regium Lepidi. [E. H. B.]

REGNI (Ρηγιων, Potl. ii. 3. § 28), a people on the S. coast of Britannia Romana, seated between the Canti on the E. and the Belgae on the W., in the modern counties of Surrey and Sussex. Their chief town was Noviomagus. (Comp. Camden, p. 179.) [T. H. D.]

REGNUM, a town of the Belgae, not far from those of Britannia Romana, and seemingly a place of some importance, since there was a particular road to it. (Itin. Ant. p. 477.) Camden (p. 133) identifies it with Ringwood in Hampshire. Horsley, on the contrary (p. 441), conjectures it to have been Chichester; but, though Roman antiquities have been found at Chichester, its situation does not suit the distances given in the Itinerary. [T. H. D.]

REHOB (Ρηςαδ, al. Ραδαθ, al. Ρεβαθ), a town in the tribe of Asher, occupied by the Canaanites. (Josh. xix. 28; Judg. i. 31.) A second city of the
REHOBOTH (translated εὐρυγαῖα in LXX.), one of the wells dug by Isaac in the country of Gerar,—after Esek (contention) and Sitnah (hated), —for which the herdsmen did not strive: so he called it Rehoboth: "And he said, For now the Lord hath made room for us, and we shall be fruitful in the land." (Gen. xxvi. 18, 20—22.) There was a town in the vicinity of the well, the traces of which are still visible, named by Mr. Rowlands, in 1843, "About a quarter of an hour beyond Schota, we came to the remains of what must have been a very well-built city, called Rohbeh. This is undoubtedly the ancient Rehoboth, where Abraham, and afterwards Isaac, digged a well. This lies, as Rehoboth did, in the land of Gerar. Outside the walls of the city is an ancient well of living and good water called Bir-Rohbeh. This most probably is the site, if not the well itself, digged by Isaac." (Williams's Holy City, vol. i. Appendix, pp. 145, 146.)

REI APOLLINARES (Ric), in Gallia Narbonensis. Among the Oppida Latina of Gallia Narbonensis, or those which had the Latinitas, Pliny (iii. c. 4) enumerates "Abebecis Teurum Apollinarium." The old reading, "Ablecetorium Apollinarium," is a blunder made by joining two words together, which has been corrected from the better MSS., from the inscription Col. Rejor. Apollinaris, and from the Table, which has Reis Apollinaris. The name may have taken its name from a temple of Apollo built after the town became Roman. The name Abebeis may be corrupt, or it may be a variation of the form Alibici or Alibecii. [Alnec.] As Pliny calls the place an Oppidum Latinum, we might suppose that it was made a Colony after his time, but the name Col. Jul. Aug. Apollinaris. Rejor, which appears in an inscription, shows it to have been a colony of Augustus.

Ri€ is in the arrondissement of Digne in the department of Dauphiné. There are four columns standing near the town, which may be the remains of a temple. The bases and the capitals are marble: the shafts are a very hard granite, and about 18 feet high. There is also a small circular building consisting of eight columns resting on a basement, but it has been spoiled by modern hands. There now stands in it a rectangular altar of one block of white marble, which bears an inscription to the Mother of the Gods and the Great Goddess. At Ri€ there have been discovered an enormous quantity of fragments of granite columns; and it is said that there have been a circus and a theatre in the town. (Guide du Voyageur, Richard et Hoequart, p. 792.)

REITHE DOMA (Ombia Remedia in Geogr. Inv. iv. 7), a place in Moesia Superior on the Danube. (Tab. Peut.) [T. H. D.]

REMI (Pryot), a people of Gallia Belgica (Polyb. ii. 9, § 12) along the Sequana (Seine). Their capital was Durocortorum (Remi). This is Ptolemy's description (ii. 9, § 12).

CAESAR (B. G. ii. 3) says that the Remi were the nearest to the Celts of all the Belgae, and he makes the Sequana and Matrona (Armo) the boundary between the Belgae and the Celts. The Suessiones were the neighbours of the Remi. (B. G. ii. 12.) When Caesar had entered the country of the Remi from the south (n. c. 57), he came to the Axona (Aine), which he says is on the borders of the Remi. Eight miles from the Aine and north of it was Bibra, a town of the Remi. The Remi then extended as far north as the Aine, and beyond it. Their capital, Durocortorum, is between the Aine and the river, and is surrounded by the Remi.

When the Belgae in the beginning of n. c. 57 were collecting their forces to attack Caesar, the Remi were traitors to their country. They submitted to the Roman proconsul and offered to supply him with corn, to give hostages, to receive him in their towns and to help him against the rest of the Belgae and the Germans with all their power. (B. G. ii. 3.) The Suessiones who were in political union with the Remi joined the Belgae. When the great meeting of the Gallic states was held at Bibrae in n. c. 57 to raise troops to attack Caesar at Alesia, the Remi did not come, and they continued faithful to Caesar. When Caesar entered Gallia in n. c. 58, the Aedui and the Sequani were the leading nations; but when the Sequani were humbled, the Remi took their place, and those nations that did not like to attack themselves to the political party of the Aedui, joined the Remi. Thus the Aedui were the first of the Gallic political communities and the Remi were the second. (Caes. B. G. vi. 12.) Even the Carnutes, a Celtic people, had attached themselves to the Remi. (B. G. vi. 4.) Caesar rewarded the fidelity of the Remi by placing the Suessiones in dependence on them (viii. 6.).

Pliny (iv. 17) mentions the Remi as one of the Foederae Populi of Belgica. When Strabo wrote (p. 194) they the Remi were a people in great favour with the Romans, and their city Durocortorum was the occasional residence of the Roman governors. [Durocortorum.]

Lucan (Pharsal. i. 424) has a line on the Remi:

"Optima excusso Locus Iheusumque lacertum."

But the military skill of the Remi is otherwise unknown. They were a cunning people, who looked after themselves and betrayed their neighbours. [G. L.]

REFANDUM, a town of the Coritani in Britannia Romanum, probably Repton in Derbyshire. (Not. Imp.; Camden, p. 586.) [T. H. D.]

REPHAI M VALLIS (γραφαῖ Ραφαι, Σκήρα Ραφα, καλά τὰς Τίτανά, LXX.; καθγεώτων, Joseph.) a valley mentioned in the north border of the tribe of Judah, the south of Benjamin (Josh. xv. 8, xviii. 18), in the vicinity of Jerusalem. It is translated "the valley of the giants" in the authorised version, except in 2 Sam. v. 18, 22, where we find that the valley of Rephaim was a favourite camping ground for the Philistines, soon after David had got possession of the stronghold of Sion; and 1 Sam. xvi. 13, where it is represented as a fruitful corn-bearing tract of land, well answering to the wide valley, or rather plain, immediately south of the valley of Hebron, traversed by the Bethlehem road, which is commonly identified by travellers as the "valley of the giants," although Eusebius places it in Benjamin (Onomast. s. v.).
REPHIDIM.

It evidently derived its name from the Rephaim, a family of the Amalekites (Gen. xiv. 5) settled in Ashteroth Karnaim, supposed by Rehah to be of the race of the Gephyrae, who came with Cadmus from Phoenicia to Greece. (Hered. v. 57; Rehah, Piadest. p. 141, comp. pp. 79, 835.) The Philistines who are said to have encamped there may have bequeathed their name to the valley. [G. W.]

REPHIDIM (Ῥηφίδιος), the eleventh encampment of the Israelites after leaving Egypt, the next before Sinai, "where was no water for the people to drink." (Num. xxxii. 14.) Moses was accordingly instructed to smite the rock in Horeb, which yielded a supply for the needs of the people, from whose murmurings the place was named Masah and Meribah. Here also it was that the Israelites first encounetered the Amalekites, whom they disastrously succumbed; and here Moses received his father-in-law Jethro. (Exod. xvii.) Its position, Dr. Robinson surmises, must have been at some point in Wady-esch-Sheikh, not far from the shores of Horeb (where he takes to be the name of the mountain district), and about a day's march from the particular mountain of Sinai. Such a spot exists where Wady-esch-Sheikh issues from the high central granite cliffs; which locality is not fully described by Burckhardt, and Dr. Wilson, who agrees in the identification, and names the range of rocky mountains W'titayih. He says that "water from the rock in Horeb could easily flow to this place." (Robinson, Bib. Res. vol. i. pp. 178, 179; Burckhardt, Travels in Syria, &c. p. 488; Wilson, Lands of the Bible, vol. i. p. 254.) Dr. Lepsius contests this position and proposes El-Hesane, only a mile distant from the convent-mountain of Psharon, as the Rephidim (= the resting-place) of the Exodus. This is at the foot of Gebel Serbel, which he regards as the mountain of the law, and finds the stream opened by Moses "in the clear-running and well-flavoured spring of Wadi Fir'an, which irrigates the fertile soil of El-Hesane, and causes it to exhibit all the riches of the gardens of Faran for the space of half a mile." (Lepsius, A Tour from thebes to the Peninsula of Sinai, pp. 74-76.) [G. W.]

HERGONIUM (Ἡργονίωμ), Ptol. ii. 3, § 7), a town of the Novantae, the province of Valantia and the SW. part of Britannia Barbarica, which seems to have been seated at the S. extremity of the Sinus Reggionius (Lich Lyon) near Staurac. Camden identifies it with Bourgoy (p. 1203). [T. H. D.]

HERGONIUS SINUS (Ψεργόνιος κόις, Ptol. ii. 3, § 1), a bay in the country of the Novantae, so named from the town of Reggionius (q.v.). Now Lich Lyon, formed by the Moll of Gallowsay. (Hovseay, p. 375.) [T. H. D.]

RESAPA AE BEZEPH (Ῥεσάφης), a city of Syria, reckoned by Ptolemy to the district of Pamphylia (v. 15, § 24), the Raspha of the Peutinger Tables, 21 miles from Sare; probably identical with the Rossaf of Almfreda (Tab. Syr. p. 119), which he places near Rakka, not quite a day's journey from the Euphrates. It is supposed to be identical with the Reseph of Scripture (Psâma, LXX.), taken by Semachri, king of Assyria, as he boasts in his inscription, to be Henoch. (2 Kings, xix. 12.) It has been identified with Serup, apparently without sufficient reason. (Mannert, Geographie von Syrien, p. 413.)

REUDIGI, a German tribe on the right bank of the river Albia, and north of the Longobardi, which may have derived its name from the Latin word, River, or from the Latin word, Redu, (Tac. Germ. 40.) Various conjectures have been hazarded about their exact abodes and their name, which some have wished to change into Rindungi or Deuringi, so as to identify them with the later Thuringi, but all is uncertain.

REVESSIO (Ῥέβεσίω), in Gallia, is the city of the Vellavi, or Vesunia, as the name is written in Ptolemy (ii. 7. § 20). Reveissio is the name of the place in the Table. In the Not. Provence, it is written Civitas Villavorum. Mabillon has shown that the place called Civitas Vetalia in the middle ages is St. Paulien or Pavihan, and the Civitas Vetalia is supposed to be the ancient capital of the Vellavi. St. Paulien is in the department of Haute Loire, north of Le Puy. [G. L.]

RHA (Ῥα τωτηρών), Ptol. v. 9, §§ 12, 17, 19, 21, vi. 14, §§ 1, 4; Amm. Marc. xiiii. 8, § 28: Pâs, Agathem. ii. 10: Volga) a river of Asiatic Sarmatia, which according to Ptolemy (l. c.), the earliest geographer who had any accurate knowledge of this longest of European streams, had its twin sources in the E. and W. extremities of the Hyperborean mountains, and discharged itself into the Hycarian sea. The affluents which Ptolemy (vi. 14, §§ 4) describes as falling into it from the Rhymnici Montes, and which must not be confused with the river Ryhumus [Rhymmus], are the great accession made to the waters of the Volga by the Kama in the government of Kasan. Ammianus Marcellinus (l. c.) says that its banks were covered with the plant which bore the same name as the river—the "rha" or "rheom" of Dosecorides (pâ, ρεον, iii. 11) and "rhacoma" of Pline (xxvii. 165), or official rhacarab. (Comp. Pereira, Nat. Med. vol. ii. pt. 1. p. 1343.) The old reading Rha in the text of Pomponius Mela (iii. 5. § 4) has been shown by Tschacke (ad loc.) to be a mistake of the earlier editors, for which he substitutes Casius, a river of Albania. The oakus (Οάκος, Herod. iv. 123, 124), where, according to the story of the Scythian expedition, the erection of eight fortresses was supposed to mark the extreme point of the march of Dareius, has been identified by Klaproth, and Schafarik (Slav. Alt. vol. i. p. 499) who mentions that in the language of some tribes the Volga is still called "Rheu"—with that river. [E. B. J.]

RIIABENI (Ρασαίρην), a people of Arabia Deserta, next to the Agabeni, who were on the confines of Arabia Felix. (Ptol. v. 19. § 2.) Above them were the Masani; the Oreneni lay between them and the NW. extremity of the Persian Gulf. Mr. Forster justly remarks that "the description of Ptolemy rather indicates the direction, than defines the positions of these several tribes." (Geog. of Arabia, vol. ii. p. 238.) [G. W.]

RHAEDIJUM (Ῥαεδίουμ, Procop. B. P. ii. 19, de Aedifi. ii. 4), a strongly fortified height, in an inaccessible part of Mesopotamia, two days' journey from Dura in the direction of Persia. The works were placed on the brow of very steep rocks which overlook the surrounding country. Justinian added additional works to it. It has not been identified with any modern place. [V.]

RHACALINI, [Ραχολάνηι.] RHACATAE (Ῥακάται), a German tribe mention by Ptolemy (ii. 11. § 26) as occupying, together with the Teracatrea, the country on the south of the Quadi, on the frontiers of Pannonia;
but nothing further is known about either of them. [L. S.]

RHACOTIS. [AXEDELECK, p. 93.]

RHAEBA (Paeis, Pue. ii. 2: 10), a town in the Rhedan Sinus. According to Camden (p. 1357) Rhedan in Queen's County. [T. II. D.]

RHAEDESTUS. [BRAZITHE]

RHAELEIAE (Parria), a place in the Arcadian district of Cyprus, at the confluence of the Gortynius and Aphyneis. (Paus. viii. 28. 3.)

RHAEETIA (Parria). The name of this country, as well as of its inhabitants, appears in ancient inscriptions invariably with the h, as Raetia and Ravci, while the MSS. of Latin authors commonly have the forms Rhaetius, and Rhaeticus—a circumstance which goes far to show that the true correct spelling is without the h. Rhaetia was essentially an Alpine country, bordering in the north on Vindelicia, in the west on the territory inhabited by the Helvetii, in the south on the chain of the Alps in Moesia Adula to Moes Oeca, which separated Rhaetia from Italy, and in the east on Noricum and Venetia; hence it comprised the modern Grisons, the Tyrol, and some of the northern parts of Lombardy. This country and its inhabitants did not attract much attention, which in the present circumstances which were then in existence towards the end of the first century A.D. the two provinces appear united as one, under the name of Rhaetia, which accordingly, in this latter sense, extended in the north as far as the Danube and the Lines. At a still later period, in or shortly before the reign of Constantine, the two provinces were again divided, and ancient Rhaetia received the name Rhaetia Prima, its capital being called Curia Rhaetorum (Urbur); while Vindelicia was called Rhaetia Secunda. The boundaries which separated the two are not accurately defined by the ancients, but it is highly probable that the Alpine chain extending from the Lake of Constance to the river Inn was the natural line of demarcation; it should, however, be observed that Rodeney (ii. 12) includes under the name of Rhaetia all the country west of the river Lucus as far as the sources of the Innantis and Rhenus, while he applies the name of Vindelicia to the territory between the Lies and Oceanus.

Ancient Rhaetia or Rhaetia Proper was throughout an Alpine country, being traversed by the Alps Rhaetiae and Mons Adula. It contained the sources of nearly all the Alpine rivers watering the north of Italy, such as the Addus, Narus, Alibus, Cleusus, Minus, and others; but the chief rivers of Rhaetia itself were the Athius with its tributary the Isargus (or Irgaus), and the Aeus or Oceanus. The magnificent valleys formed by these rivers were fertile and well adapted to agricultural pursuits; but the inhabitants depended mainly upon their flocks (Strab. viii. p. 316). The climate influence of the valley was wise, which was not at all inferior to that grown in Italy, so that Augustus was particularly partial to it (Strab. i. 206; Plin. xiv. 3. 5; Suet. Georg. ii. 96; Colum. iii. 2; Martial, xiv. 100; Suet. Aug. 77). Besides this Rhaetia produced abundance of wax, honey, pitch, and cheese, in which considerable commerce was carried on.

The ancient inhabitants of Rhaetia have in modern times attracted more than ordinary attention from their supposed connection with the ancient Etruscans. They are first mentioned by Polybius (xxiv. 10; comp. Strab. iv. p. 204, vii. pp. 292, 313). According to tradition the Rhaetians were Etruscans who had originally inhabited the plains of Lombardy, but were compelled by the invading Gauls to quit their country and take refuge in the Alps, whereby they were cut off from their kinsmen, who remained in Italy and finally established themselves in Etruria, (June xxiv. 45; Plin. iii. 24; Steph. Pat. 21; 4; Mag. 13.) This tradition derives some support from the fact recorded by Dionysius of Halicarnassus (I. 24) that the Etruscans in Etruria called themselves Ituseni, which is believed to be only another form of the name Rhaeti. A decision of this question is the more difficult because at the time when the Romans conquered Rhaetia the bulk of its inhabitants were Celts, which in the course of a few centuries became entirely Romanised. But, assuming that the Rhaeti were a branch of the Etruscan people, it is not very likely that the invasion of Italy by the Huns they should have gone back to the Alps across which they had come into Italy: it seems much more probable to suppose that the Etruscans in the Alps were a remnant of the nation left behind there at the time when the Etruscans originally migrated into Italy. But, however this may be, the anxiety to obtain a key to the mysterious language of the Etruscans has led modern inquirers to search for it in the mountains and valleys of ancient Rhaetia; for they conceived that the Etruscan language and people were a separate and distinct race of Celts, and that the ancient Celts who afterwards divided, and by the name Rhaetia or Rhaetia Proper, were a branch of the Etruscans. Several names of places also bear a strong resemblance to those of places in Etruria; and, lastly, a few ancient monuments have been discovered which are in some respects like those of Etruria. The first who, after many broad and unfounded assertions had been made, undertook a thorough investigation of these points, was L. Steub, who published the results of his inquiries in a work Uber die Urheimat der Rhaetier and ihrer Zusammenhang mit den Etrus kern, Munich, 1843, 8vo. A few years ago another scholar, Dr. W. Freund, during a residence in Rhaetia collected a vast number of facts, well calculated to throw light upon this obscure subject, but the results of his investigations have not yet been published.

As to the history of the ancient Rhaetians, it has already been intimated that they became known to the Romans in the second century B.C. They were a wild, curious, and2aious mountain people, who indulged their propensity to rob and plunder even at the time when they were subject to Rome, and when their rulers had made a great road through their country into Noricum (Dion Cass. liv. 22;
RHAGAE.

Hor. Carm. iv. 14, 15). Like all mountaineers, they cherished great love of freedom, and fought against the Romans with rage and despair, as we learn from Florus (iv. 12), who states that the librean women, who also took part in the war, after having spent their arrows, threw their own children in the faces of the Romans. Still, however, they were obliged to yield, and in B. C. 15 they were finally subdued, and their country was made a Roman province. During the later period of the Empire their territory was almost entirely depopulated; but it somewhat recovered at the time when the Ostrogoths, under Theodoric, took possession of the country, and placed its administration in the hands of a Duke (Epiph. Vit. S. Severini, 29; Cassiod. Terr. iv. 4). After the death of Theodoric, the Boioarii spread over Rhaetia and Noricum, and the river Iucus became the boundary between the Alamanii in Vindelicia, and the Boioarii in Rhaetia. (Egin. Vit. Carol. M. 11.) The more important among the various tribes mentioned in Rhetia, such as the Leoosti, Videeri, Calcutones, Venzones, Sarinotes, Isaci, Belinetimes, Gaxauni, Tribentini, and Ecuganii, are discussed in separate articles. The most important are those of the few towns of the country; the others are known almost exclusively through the Itineraries, two roads having been made through Rhetia by the Romans, the one leading from Augusta Vindelicorum to Commum, and the other from the same town to Verona; Paulus Diaconus, however, mentions a few towns of the interior which were not situated on these high-roads, such as the town of Metz, which was destroyed in the eighth century by the fall of a mountain, and the site of which is now occupied by the town of Meran. [L. S.]

RHAGAE (Peayal, Arrian, Anab. iii. 30; Strab. xi. pp. 514, 524; Paryia, Isidor. Char. 7; Paryia, Stephan. B. s. v.; Paryia, Ptol. vi. 5. 4; Rhages, Tobit, i. 14: Eth. Paryopou), a great town of Media Magna, the capital of the province of Rhagiana, which is first known to us in history as the place to which the Jewish exiles were sent. (Tobit, i. 14, iv. 20, ix. 2.) It was situated in the eastern part of the country towards Parthia, one day’s journey from the Pelus Capitolium, the most important among the few towns of the country; the others are known almost exclusively through the Itineraries, two roads having been made through Rhetia by the Romans, the one leading from Augusta Vindelicorum to Commum, and the other from the same town to Verona; Paulus Diaconus, however, mentions a few towns of the interior which were not situated on these high-roads, such as the town of Metz, which was destroyed in the eighth century by the fall of a mountain, and the site of which is now occupied by the town of Meran. [L. S.]

RHAGIANA. [RHAGAE.]

RHAMANITAE. 1. (Paavavirai, Strab. xvi. p. 782), supposed by Mr. Forster to be identical with the Rhamanites of Polemy (Pallavirai, vi. 7. § 24), whom that geographer places under Mount Climax. He says “their common position, north of Mount Climax, connects with the resemblance of the two names to argue the identity” (Geog. of Arabis, vol. i. p. 68, note); but it is by no means clear that the Rhamanitae lay near Mount Climax. All that Strabo says of them is, that Marsiaba, the limit of the expedition of Aelius Gallus, the siege of which he was forced to raise for want of water, lay in the country of the Rhamanites; but nothing in geography is more difficult to determine than the situation of that town. [M. S.]

2. A people of the same name is mentioned by Pliny, as existing on the Persian Gulf, identical with the Arsati of Polemy and the Epifarnatae. [G. W.]

RHAMNUS.

RHAMNUS. 1. (Paavavos, -ovort: Eth. Paavavos, fam. Paavavoria, fam. Paavavus), a demus of Attica, belonging to the tribe Aeantis (Steph. B., Harpocr., Suid., s. c.), which derived its name from a thick prickly shrub, which still grows upon the site. (Paavavos, contr. of Paavavus from fovos.) The town stood upon the eastern coast of Attica, at a distance of 60 stadia from Marathon, and upon the road leading from the latter town to Oropus. (Paus. i. 33. § 2.) It is described by Sclayx (p. 21) as a fortified place; and it appears from a decree in Demosthenes (pro Cor. p. 238, Reiske) to have been regarded as one of the chief fortresses in Attica. It was still in existence in the time of Pliny ("Rhamnus pagus, locus Marathon," iv. 7. s. 11.).

In Pliny it is described as the birthplace of the orator Antipho [Dict. of Bgr. s. v.:], but it was not so celebrated in antiquity on account of its worship of Nemesis, who was hence called by the Latin poets Rhamnusia virgo and Rhamnusia dea. (Catull. Ivxv. 71; Claud. B. Get. 631; Orv. Met. iii. 406, Trist. v. 8. 9; Stat. Silv. iii. 5. § 5.) The temple of the goddess was at a short distance from the town. (Paus. l. c.; comp. Strab. ix. p. 399.) It contained a celebrated statue of Nemesis, which, according to Pausanias, was the work of Phidias, and was made by him out of a block of Parian marble, which the Persians had brought with them for the construction of a trophy. The statue was of colossal size, 10 cubits in height (Hesych. s. v.; ZenoP. Pro. v. 82); and on its basis were several figures in relief. Other writers say that the statue was the work of Agoracritus of Paros, a disciple of Phidias. (Strab. ix. p. 396; Plin. xxxvi. 5. s. 4. § 17, Silius.) It was however a common opinion that Phidias was the real author of the statue, but that he gave up the honour of the work to his favourite disciple. (Suid. s. v.; ZenoP. l. c.; Tzetz. Chil. vii. 940.) Rhamnus stood in a small plain, 3 miles in length, which, like that of Marathon, was shut out from the rest of Attica by surrounding mountains. The town itself was situated upon a rocky peninsula, surrounded by the sea for two-thirds of its circumference, and connected by a narrow ridge with the mountains, which closely approach it on the land side. It is now called Oresi-Neastra. (Oeppel-Kaerpa, a corruption of Oeppel-Kaerpa, Jکr’s Castle, a name frequently applied in Greece to the ruins of Hellenic fortresses.) It was about half a mile in circuit, and its remains are considerable. The principal gate was situated upon the narrow ridge already mentioned, and is still preserved; and adjoining it is the southern wall,
about 20 feet in height. At the head of a narrow glen, which leads to the principal gate, stand the ruins of the temple of Nemesis upon a large artificial platform, supported by a wall of pure white marble. But we find upon this platform, which formed the τείχειον or sacred enclosure, the remains of two temples, which are almost contiguous, and nearly though not quite parallel to each other. The larger building was a peripteral hexastyle, 71 feet long and 33 broad, with 12 columns on the side, and with a pronaus, cela, and posticum in the middle. The smaller temple was 31 feet long by 21 feet broad, and consisted only of a cela, with a portico containing two Doric columns in antis. Among the ruins of the larger temple are some fragments of a colossal statue, corresponding in size with that of the Rhamnusian Nemesis; but these fragments were made of Attic marble, and not of Parian stone as stated by Pausanias. It is, however, not improbable, as Leake has remarked, that the story of the block of stone brought by the Persians was a vulgar fable, or an invention of the priests of Nemesis, who might have derived it. Among the ruins of the smaller temple was found a fragment, wanting the head and shoulders, of a statue of the human size in the archaic style of the Acanian school. This statue is now in the British Museum. Judging from this statue, as well as from the diminutive size and ruder architecture of the smaller temple, the latter appears to have been the more ancient of the two. Hence it has been inferred that the smaller temple was anterior to the Persian War, and was destroyed by the Persians just before the battle of Marathon; and that the larger temple was erected in honour of the goddess, who had taken vengeance upon the insulance of the barbarians for outraging her worship. In front of the smaller temple are two chairs (Σταθέα) of white marble, upon one of which is the inscription Νεμειος Ζωστρατος άνέθηκεν, and upon the other Θεια Ζωστρατος άνέθηκεν, which has led some to suppose that the smaller temple was dedicated to Themis. But it is more probable that both temples were dedicated to Nemesis, and that the smaller temple was in ruins before the larger was erected. A difficulty, however, arises about the time of the destruction of the smaller temple, from the fact that the forms of the letters and the long vowels in the inscriptions upon the chairs clearly show that those inscriptions belong to an era long subsequent to the battle of Marathon. Wordsworth considers it ridiculous to suppose that these chairs were dedicated in this temple after its destruction, and hence conjectures that the temple was destroyed towards the close of the Peloponnesian War by the Persian allies of Sparta. (Leake, Decr. of Attica, p. 105, seq., 2nd ed., Northern Greece, vol. ii. p. 434, seq.; Wordsworth, Athens and Attica, vol. iv. p. 34, seq.; Unedited Antiquities of Attica, c. vi. p. 41, seq.)

2. A harbour on the W. coast of Crete near the promontory Chitonemus. (Ptol. iii. 17, § 2.) Pliny, in the contrary, places it in the interior of the i-land (iv. 12, s. 29). BHAPPAI. ACTI. OF ST. TITHE. [BHAPTA.] BHAPTA (rā Ḍārā, Ptol. i 9, § 1, 14, § 4; Peripl. Mar. Ergythr. p. 10), was, according to the account of the Periplo, the most distant station of the Arabian trade with Aegypt, Aethiopia, and the ports of the Red Sea. Its correct lat. is 15° 5'. The name is derived from the peculiar boats in use there. These are termed by the natives dows (dd), and, like the modern boats of Pata on the Mozambique coast, were frequently of 100 or 150 tons burthen. But whether vessels of this size or merely canoes, all the craft at this part of the E. coast of Africa were formed of the hollowed trunks of trees and joined together by cords made of the fibres of the cocoa instead of iron or wooden pins, and hence the Africans gave them, and the harbour which they principally frequented, the name of "the sewed" (रा बाट rejected. Polyebacks (i. 17, § 7, iv. 7, p. 28, vii. 3, § 6, i. 17, § 12, &c.) of a people called BHAPTA, a name BHAPTA, and a tribe of Africans named BHAPTA. All these may probably be referred to the immediate neighbourhood of the town Bhapta, since the empire was doubtless the most striking object to the caravans trading there and to the Greek merchants accompanying the caravans. The promontory was one of the numerous bays or headlands that give to this portion of the E. coast of Africa the appearance of a saw, the shore-line being everywhere indented with sharp and short projections. These projections are in some places covered by sand or coral reefs, are narrow and difficult to be discovered. This portion of the coast, indeed, from lat. 20° S. to the mouth of the Gourdin, the modern appellation of the Rhaptus of Polyeon and the Periplus, is bordered by coral reefs and islands, — e.g. the Damus and Jobah islands, — generally a league or even less from the mainland. Some of these islands are of considerable height; and through several of them are arched gorges large enough to admit the passage of a boat. As the shore itself also is formed of a coral conglomerate, containing shells, madrepore, and sand, it is evident that this has been a gradual rising of the land and corresponding subsidence of the sea. The reefs also which have been formed on the main shore have affected materially the course of the rivers, — barring the mouths of many, among them the Rhaptus, and compelling others, e.g. the Wabbi, to run obliquely in a direction parallel to the coast. Another result of the reefs has been that many rivers which are too small to have outlets into the sea, have become marshes or shallow lakes; and, consequently, streams that in Polyeon's age were correctly described as running into the ocean, are now means severed by it sand and ridges of coral.

Rhaptha seems, from the account in the Periplus, to have been, not so much the name of a single town, as a generic term for numerous villages inhabited by the builders of the "seamed boats." These were probably situated nearly opposite the modern island of Pata; and whether it implies one or many places, Rhapta certainly was on the coast of Aethiopia. The RhaptaeAnthropi are described in the Periplus as men of lofty stature; and in fact the natives of E. Africa, at the present day, are generally taller than the Arabs. Each village had its chief, but there was a principal sheikh or chief to whom all were subject. This division into petty communities under a general head also still subsists. In the first century A.D. the Rhaptus were held in subjection by the sheikhs and people of Maza, whence came ships with Arab masters, and pilots who understood the language of the Rhaptae and were connected with them by intermarriage. The Arabs brought to the Rhaptae spear-heads, axes, knives, buttons, and beads; sometimes also wine and wheaten bread, not much indeed for barter, as for presents to the
RHAPKTUM.

Rhodian chiefs. From Rhapta they exported ivory (inferior to that of Adjulis, tortoise-shell (the next best in quality to that of India), rhinoceros-horn, and nautilus (a shell probably used in dyeing). These commercial features are nearly repeated at the present day in this region. The African still builds and masts the ship; the Arab is the navigator and steersman. The ivory is still inferior quality, being for the most part found in the woods, damaged by rain, or collected from animals drowned by the overflow of the rivers at the equinoxes. The hawskbill turtle is still captured in the neighbourhood of the port Gortrux, and on the shore opposite the island of Pota. (See Vincent, 'Voyage of Nearchus,' vol. ii. pp. 169–183; Coodey, 'Chaldaux Pтолему and the Nile,' pp. 68–72.) [W. B. D.]

RHAPTUM PROMONTORIUM. [RHAPTA.]

RHAPYS ELYSIUM. [RHAPTA.]

RHASTIA (Parthia), a town in the country of the Troad near Galatia, in Asia Minor, which is noticed only by Ptolemy (v. 4. § 9). [L. S.]

RHATOSTATHYBIUS (Ρατωσταθύβιος), Ptol. ii. 3. § 3), a river on the W. coast of Britannia Romania, according to Camden (p. 733) the Taf. [T. H. D.]

RHACUS (Ρακος), Scyl. p. 19; Polyb. xxxi. 1. § 1, xxxii. 13. § 1: Eth. Paeonos, fem. Paeonis, Steph. B. s. v.). From the story told about the Cretan bees by Antenor in his "Cretoica" (ap. Ael., N. A. avii. 35; comp. Diod. v. 70). It seems that there were two cities of this name in Crete. The existence of two places so-called in the island of Rhacus must give rise to some such legend as that which he mentions. (Pashley (Crete, vol. i. p. 235) fixes the site of one Rhacus at Hygyia Myro, between Cossus and Gortyna, and from its proximity to Mt. Ida infers that it is the more ancient. [E. B. J.]

COIN OF RHACUS.

RHEBAS (Ρῆβας), a very small river on the coast of Bithynia, the length of which amounts only to a few miles; it flows into the Euxine, near the entrance of the Bosporus, north-east of Chalcedon, and still bears the name of Rhesos. (Scylax, p. 34; Dionys. Per. 754; Ptol. v. 1. § 3; Arrian, 'Peripl. P. E.' p. 13; Marcian, p. 69; Plin. vi. 1; Steph. B. s. v.). This little river, which is otherwise of no importance, owes its celebrity to the story of the Argonauts. (Orph. 'Arg. 711; Apollon. Rhod. ii. 650. 789.) It also bore the names of Rhoeas and Rhinos (Plin. l. c.; Solin. 43), the last of which seems to have arisen from a confusion with the Rhesus mentioned by Homer. [L. S.]

RHEDONES. [RHEDONES.]

RHEGIUM (Ρήγιον: Ech. 'Ρηγίον, Rheginus: Remyos), an important city of Magna Graecia, situated near the southern end of the Bruttian peninsula, on the N. side of the Sicilian straits, and almost directly opposite to Messana in Sicily. The distance between the two cities, in a direct line, is only about 6 geog. miles, and the distance from Rhegium to the nearest point of the island is somewhat less. There is no doubt that it was a Greek colony, and we have no account of any settlement previously existing on the site; but the spot is said to have been marked by the tomb of Jocastus, one of the sons of Aesopus. (Herod. 'Hist.' 25.) The foundation of Rhegium is universally ascribed to the Chalcidians, who, in a year of famine continued to send to their citizens at Apollo; and these, under the direction of the oracle at Delphi, proceeded to Rhegium, whether they were also invited by their Chalcidic brethren, who were already established at Zancle on the opposite side of the strait. (Strab. v. p. 257; Herod. l. c.; Diod. xiv. 40; Thuc. vi. 4; Scymn. Ch. 311.) With these Chalcidians were also united a body of Messenian exiles, who had been driven from their country at the beginning of the First Messenian War, and had established themselves for a time at Marcistus. They were apparently not numerous; as Rhegium always continued to be considered a Chalcidian city; but they comprised many of the chief families in the new colony; so that, according to Strabo, the predominating magistrates of the city were always taken from among these Messenian citizens, down to the time of Anaxarcaus, who himself belonged to this dominant caste. (Strab. vi. p. 257; Paus. iv. 23. § 6; Thuc. vi. 4; Herod. l. c.). The date of the foundation of Rhegium is uncertain; the statements just mentioned, which connect it with the First Messenian War would carry it back as far as the 6th century B.C.; but they leave the precise period uncertain. The city was considered as founded after the end of the war, and Antiochus, who is cited by Strabo, seems to refer it to the beginning; but his expressions are not decisive, as we do not know how long the exiles may have remained at Marcistus; and it is probable, on the whole, that we may consider it as taking place shortly after the close of the war, and therefore before 720 B.C. (Paus. l. c.; Antioch. 'Hist. Strab. l. c.). In this case it was probably the most ancient of all the Greek colonies in this part of Italy. Various etymologies of the name of Rhegium are given by ancient authors; the one generally received, and adopted by Aristeleus ('Hist. Strab. l. c.), was that which derived it from the burning assunder of the coasts of Sicily and Italy, which was generally ascribed to an earthquake (Diod. iv. 95; Justin. iv. 1, &c.) Others absurdly connected it with the Latin regius (Strab. l. c.), while Heracleides gives a totally different story, which derived the name from that of an indigenous hero. (Herod. 'Hist.' 25.)

There seems no doubt that Rhegium rose rapidly to be a flourishing and prosperous city; but we know almost nothing of its history previous to the time of Anaxarcaus. The constitution, as we learn from Heracleides, was aristocratic; the management of affairs resting wholly with a council or body of 1000 of the principal and wealthiest citizens. After the legislation of Claudius at Catana, his laws were adopted by the Rhegians as well as by the other Chalcidic cities of Sicily. (Herod. l. c.; Arist. 'Pol. ii. 12, v. 12.) The Rhegians are mentioned as affording shelter to the fugitive Placeus, who had been driven from Corsica, previous to the foundation of Velia. (Herod. l. 106, 167.) According to Strabo they adjoined towns, but these could only have been small places, as we do not hear of any colonies of importance founded by the Rhegians; and their territory extended only as far as the Halieus on the E.
RHEGIUM.

where they adjusted the Locrian territory, while the Locrian colonies of Medma and Hipponion prevented their extension on the N. Indeed, from the position of Rhegium, it seems to have always maintained closer relations with Sicily, and taken more part in the politics of that island than in those of the other Greek cities in Italy. Between the Rhegiants and Locrians, however, there appears to have been a constant spirit of enmity, which might be readily expected between two rival cities, such near neighbours, and belonging to different races. (Thuc. iv. 1. 24.)

Rhegium appears to have participated largely in the political changes introduced by the Pythagoreans, and even became, for a short time after the death of Pythagoras, the head-quarters of his sect (Jamb. Vit. Pyth. 33, 130, 251); but the changes then introduced do not seem to have been permanent.

It was under the reign of Anaxilas that Rhegium first rose to a degree of power far greater than it had previously attained. We have no account of the circumstances attending the elevation of that despot to power, an event which took place, according to Diodorus, in B.C. 494 (Diod. xi. 48), but we know that he belonged to one of the ancient Messenian families, and to the oligarchy which had previously ruled the state. (Strab. vi. p. 257; Paus. iv. 23. § 6; Arist. Pol. v. 12; Thuc. vi. 4.) Hence, when he made himself master of Zancle on the opposite side of the straits, he gave to that city the name of Messana, by which it was ever afterwards known. [MESSANA.] Anaxilas continued for some years ruler of both these cities, and thus was undisputed master of the Sicilian straits: still further to strengthen himself in this sovereignty, he fortified the rocky promontory of Scyllaeum, and established a naval station there to guard the straits against the Tyrrhenian pirates. (Strab. vi. p. 257.) He meditated also the destruction of the neighbouring city of Locri, the perpetual rival and enemy of Rhegium, but was prevented from carrying out his purpose by the intervention of Hieron of Syracuse, who espoused the cause of the Locrians, and whose enmity Anaxilas did not choose to provoke. (Schol. ed. to Diod. in B.C. 494. Diod. xi. 48.) Hence, indeed, married to the Syracusan despot, whose friendship he seems to have sought assiduously to cultivate.

Anaxilas enjoyed the reputation of one of the mildest and most equitable of the Sicilian rulers (Justin. iv. 2), and it is probable that Rhegium enjoyed great prosperity under his government. At his death, in B.C. 476, it passed without opposition under the rule of his two sons; but the government was administered during their minority by their guardian Micythus, who reigned over both Rhegium and Messana for nine years with exemplary justice and moderation, and at the end of that time gave up the sovereignty into the hands of the two sons of Anaxilas. (Diod. xi. 48, 66; Herod. vii. 170; Justin. iv. 2;Macrobi. Sat. i. 11.) These, however, did not hold it long: they were expelled in B.C. 461, the revolutions which at that time agitated the cities of Sicily having apparently extended to Rhegium also. (Herod. xi. 76.)

The government of Micythus was marked by one great disaster; in B.C. 473, the Rhegiants, having sent an auxiliary force of 3000 men to assist the Tarentines against the Iapygians, shared in the great defeat which they sustained on that occasion [TARENTINI]; but the statement of Diodorus that the barbarians not only pursued the fugitives to the gates of Rhegium, but actually made themselves masters of the city, may be safely rejected as incredible. (Diod. xi. 76. Herod. vii. 170.) A story told by Justin, that the Rhegiants being agitated by domestic dissensions, a body of mercenaries, who were called in by one of the parties, drove out their opponents, and then made themselves masters of the city by a general massacre of the remaining citizens (Justin. iv. 3), must be placed (if at all) shortly after the expulsion of the sons of Anaxilas; but the whole story has a very apocryphal air; it is not noticed by Diodorus, and it is certain that the old Chalcidic citizens continued in possession of Rhegium down to a much later period.

We have very little information as to the history of Rhegium during the period which followed the expulsion of the despots; but it seems to have retained its liberty, in common with the neighbouring cities of Sicily, till it fell under the yoke of Dionysius. In B.C. 427, when the Athenians sent a fleet under Laches and Charoucides to support the Locrians against the entrance of the Sicilian fleet, it was at once repulsed by the citizens of the Chalcidie cities of Sicily, and not only allowed their city to be made the head-quarters of the Athenian fleet, but themselves furnished a considerable auxiliary force. They were in consequence engaged in continual hostilities with the Locrians. (Diod. xii. 54; Thuc. iii. 86, iv. 1. 24. 25.) But they pursued a different course on occasion of the great Athenian expedition to Sicily in B.C. 415, when they refused to take any part in the contest; and they appear to have persevered in this neutrality to the end. (Diod. xiii. 6; Thuc. vii. 44.)

It was not long after this that the increasing power of Dionysius of Syracuse, who had destroyed in succession the chief Chalcidie cities of Sicily, became a subject of alarm to the Rhegiants; and in B.C. 399 they fitted out a fleet of 50 triremes, and an army of 6000 foot and 600 horse, to make war upon the despot. But the Messenians, who at first made common cause with them, having quickly abandoned the alliance, they were compelled to desist from any further attempts at invasion; but the entry of the Athenian auxiliaries enabled them to continue the war. (Diod. xiv. 40.) The latter, who was meditating a great war with Carthage, was desirous to secure the friendship of the Rhegiants; but his proposals of a matrimonial alliance were rejected with scorn; he in consequence concluded such an alliance with the Locrians, and became from this time the implacable enemy of the Rhegiants. (Ib. 44. 107.) It was from hostility to the latter that he a few years later (B.C. 394), after the destruction of Messana by the Carthaginians, restored and fortified that city, as a post to command the straits, and from which to carry on his enterprises in Southern Italy. The Rhegiants in vain sought to forestall him; they made an unsuccessful attack upon Messana, and were foiled in their attempt to establish a colony of Naxians at Mylæ, as a post of offence against the Messenians. (Ib. 87.) The next year Dionysius, in his turn, made a sudden attack on Rhegium itself, but did not succeed in surprising the city; and after ravaging its territory, was compelled to draw off his forces. (Ib. 89. 90.) But in B.C. 390 he resumed the design on a larger scale, and laid regular siege to the city with a force of 20,000 foot, 1000 horse, and a fleet of 120 triremes. The Rhegiants, however, opposed a vigorous resistance; the fleet of Dionysius suffered severely from a storm, and the approach of winter at length compelled him
RHEGIUM.

Rhegium was now restored to the survivors of its former inhabitants (Pol. i. 7; Liv. xxxi. 31; Appian, l. c.); but it must have suffered severely, and does not seem to have since recovered its former prosperity. Its name is hardly mentioned during the First Punic War, but in the second the citizens distinguished themselves by their fidelity to the Roman cause, and repeated attempts of Hannibal to make himself master of the city were uniformly repulsed. (Liv. xxiii. 30, xxiv. i. xxvi. 12, xxix. 6.) From this time the name of Rhegium is rarely mentioned in history under the Roman Republic; but we learn from several incidental notices that it continued to maintain its own laws and manners, which were termed by the Romans a "sede rara civitatis," though bound, in common with other cities in the same condition, to furnish an auxiliary naval contingent as often as required. (Liv. xxxi. 31, xxxvi. 16, xxxvii. 42.) It was not till after the Social War that the Rhegienses, like the other Greek cities of Italy, passed into the condition of Roman citizens, and Rhegium itself became a Roman Municipium. (Cic. Verr. iv. 60, Phil. i. 3, pro Arch. 3.) Shortly before this (n. c. 91) the city had suffered severely from a reconquest of the Gauls, which had destroyed a large part of it (Strab. v. p. 258; Jul. Obsequ. 114); but it seems to have, in great measure, recovered from this calamity, and is mentioned by Appian towards the close of the Republic as one of the eighteen flourishing cities of Italy, which were promised by the Triumvirs to their veterans as a reward for their services. (Appian, B. C. iv. 3.) Rhegium, however, had the good fortune to escape on this occasion by the personal favour of Octavian (July, 43); and during the war which followed between him and Sextus Pompeius, n. c. 38—36, it became one of the most important posts, which was often made by Octavian the headquarters of both his fleets and armies. (Strab. v. p. 258; Appian, B. C. v. 81, 84; Dion Cass. xlvii. 18, 47.) To reward the Rhegienses for their services on this occasion, Augustus increased the population, which was in a declining state, by the addition of a body of new colonists; but the old inhabitants were not expelled, nor did the city assume the title of a Colonia, though it adopted, in gratitude to Augustus, the name of Rhegium Julium. (Strab. l. c.; Pol. iii. 1 § 9; Orell. Inscr. 3838.) In the time of Strabo it was a populous and flourishing place, and was one of the few cities which, like Neapolis and Tarentum, still preserved some remains of its Greek civilisation. (Strab. vi. pp. 253, 259.)

Traces of this may be observed also in inscriptions, some of which, of the period of the Roman Empire, present a curious mixture of Greek and Latin, while others have the names of Roman magistrates, though the inscriptions themselves are in Greek. (Morisani, Inscr. Regiae, iv. 4to. Neap. 1770, pp. 83, 126, &c.; Boeckh, C. I. 5760—5768.)

Its favourable situation and its importance, as commanding the passage of the Sicilian straits, preserved Rhegium from falling into the same state of decay as many other cities in the south of Italy. It continued to exist as a considerable city throughout the period of the Roman Empire (Plin. iii. 5. s. 10; Pol. l. c.; Itin. Ant. pp. 112, 115, 490), and was the termination of the great highway which led through the southern peninsula of Italy, and formed the customary mode of communication with Sicily. In A.D. 410 Rhegium became the limit of the progress of Alaric, who after the capture of Rome advanced through Campania, Lucania, &c.

VOL. II.
and Bruttium, laying waste those provinces on his march, and made himself master of Rhegium, from whence he tried to cross over into Sicily, but, being frustrated in this attempt, retraced his steps as far as Cassantia, where he died. (Hist. Miscell. xiii. p. 535.) Somewhat later it is described by Cassiodorus as still a flourishing place (Tar. xii. 14), and was still one of the chief cities of Bruttium in the days of Paulus Diaconus. (Hist. Lang. ii. 17.)

During the Gothic wars after the fall of the Western Empire, Rhegium bears a considerable part, and was a strong fortress, but it was taken by Totila in A. D. 549, previous to his expedition to Sicily. (Procop. B. G. i. 8, iii. 18, 37, 38.) It subsequently fell again into the hands of the Greek emperors, and continued subject to them, with the exception of a short period when it was occupied by the Saracens, until it passed under the dominion of Robert Guiscard in A. D. 1060. The modern city of Reggio is still a considerable place, with a population of about 10,000 souls, and is the capital of the province of Calabria Ultra; but it has suffered severely in modern times from earthquakes, having been almost entirely destroyed in 1783, and again in great part overthrown in 1841. It has no remains of antiquity, except a few inscriptions, but numerous coins, urns, mosaics, and other ancient relics have been brought to light by excavations.

Rhegium was celebrated in antiquity as the birthplace of the lyric poet Hycus, as well as that of Lycurgus the historian, the father of Lycophron. (Suid. s. v. Ἱεκος; Ἱ. ζ. ν. Ἱεκος.) It gave birth also to the celebrated sculptor Pythagoras (Dios. Lex. viii. i. § 47; Paus. vi. 4, § 43), and to several of the minor Pythagorean philosophers, whose names are enumerated by Lamblichus (Vit. Pyth. 267), but none of these are of much note. Its territory was fertile, and noted for the excellence of its wines, which were especially esteemed for their salubrity. (Athen. i. p. 26.) Cassiodorus describes it as well adapted for vines and olives, but not suited to corn. (Tar. xii. 14.) Another production in which it excelled was its breed of mules, so that Anaxilas the deepost was almost entirely destroyed by the Roman army, and again in great part overthrown in 1841. It has no remains of antiquity, except a few inscriptions, but numerous coins, urns, mosaics, and other ancient relics have been brought to light by excavations.

Rhegium itself, as already mentioned, the termination of the line of high road which traversed the whole length of Southern Italy from Capua to the Sicilian strait, and was first constructed by the praetor Popillius in B. C. 134. (Orell. Inscr. 3508; Mommsen, Inscr. R. N. 6276; Bichsel, Mon. Epigr. pp. 11, 12.) But the most frequented place of passage for crossing the Strait of Messana was, in ancient as well as in modern times, not at Rhegium itself, but at a spot about 9 miles further N., which was marked by a column, and thence known by the name of Columna Rhegina. (Uitna. Ant. pp. 98, 106, 111; Plin. iii. 5. s. 10; ἃς Πυθαγόρης στρατ., Strab. v. p. 257.) The distance of this from Rhegium is given both by Piny and Strabo at 121 miles or 1000 stadia, and the latter places it only 6 stadia from the promontory of Cenys or Punta del Pezio. It must therefore have been situated in the neighbourhood of the modern village of Villa San Giovanni, which is still the most usual place of passage. But the distance from Rhegium is overstated by both geographers, the Punta del Pezio itself being less than 10 miles from Reggio. On the other hand the inscription La Poilà (from Popilii Papii) gives its distance from the place of passage, which it designates as "Ad Statumam," at only 6 miles. (Mommsen, Insc. R. N. 6276.) Yet it is probable that the spot meant is really the same in both cases, as from the strong current in the straits the place of embarkation must always have been nearly the same. [E. H. B.]

**COIN OF RHEGNUM.**

RHEGMA (Ρηγμα), the name of a lake or lagoon formed by the river Cydnus in Cilicia, at its mouth, about 5 stadia below Taras; the inhabitants of this city used it as their port. (Strab. xiv. p. 672; Stadiasmus. Mar. Magn. §§ 155, 156, where it is called "Ρηγμαία; it. Hieros, p. 579.) The two last authorities place the Rhegma 70 stadia from Taras, which may possibly refer to a particular point of it, as the Rhegma was very extensive. [L. S.]

RHEGMA. [ΕΠΙΜΑΡΑΝΤΙΑΣ.]

RHEMEAS (Ρημαία, Böckh, Inscr. no. 4590), a term of Arranthis, as appears from an inscription found by Burchhardt (Travels, p. 69) at Deir-el-Lohen, situated three-quarters of an hour from the modern village of Rima-el-Lahf, where there stands a building with a flat roof and three receptacles for the dead, with an inscription over the door. (Böckh, Inscr. 4587—4589; comp. Buckingham, Arab Tribes, p. 256.)

RHEITHRUM. [ΙΤΑΘΑ, p. 98, a.]

RHEITI. [ΑΤΤΙΚΑ, p. 528, a.]

RHEIN. [ΕΡΙΝ., p. 570.]

RIENES (Ῥηνεῖα), one of the largest rivers in Europe, is not so long as the Danube, but as a commercial channel it is the first of European rivers, and as a political boundary it has been both in ancient and modern times the most important frontier in Europe. The Rhine rises in the mountains which belong to the group of the St. Gothard in Switzerland, about 46° 30' N. lat. There are three branches. The Forder-Rhein and the Mittel-Rhein meet at Dissicia, which is only a few miles from their respective sources. The United stream has an east by north course to Reichenau, where it is joined by the Hinter-Rhein. At Chur (Curum), which is below the junction of the Hinter-Rhein, the river becomes navigable and has a general northern course to the Bodensee or Lake of Constance, the Lacus Brigantins or Venetos. This lake consists of two parts, of which the western part or Untersee, is about 30 feet lower than the chief part, called the Lake of Constanz. The course of the Rhine from the Untersee is westward, and it is navigable as far as the falls of Schaffhausen, which are not mentioned by any of the ancient geographers. It is interrupted by a smaller fall at Laufenburg, and there is a rapid near Rheinfelden, 10 miles below Laufenburg. The course is still west to
The Rhine, which was divided at Panzerden, runs north to Arnhem (Arenacum), above which town it communicates with the Yssel at Doesburg by a channel which is supposed to be the Fossa Drusia, the canal of Drusus. [FLEVO LACUS.] The Yssel runs north from Doesburg to the Zuider Zee, which enters on the east side of the town of Kampen. The Rhine runs westward from Arnhem, and at Wyck by Duurstede, as already said, sends off the branch called the Leek, which joins the Maas. The Rhine divides again at Utrecht (Trajectum): one branch called the Veekt runs northward into the Zuider Zee; the other, the Rhine, or Old Rhine, continues its course with diminished volume, and passing by Leiden enters the North Sea at Katwyck. The whole course of the Rhine is estimated at about 950 miles.

The delta of the Rhine lies between the Yssel, which flows into the Zuider Zee, and the Maas, if we look at it simply as determined by mere boundaries. But all this surface is not alluvial ground, for the eastern part of the province of Utrecht and that part of Guelderland which is between the Rhine, the Zuider Zee, and the Yssel contains small elevations which are not alluvial.

This description of the Rhine is necessary in order to understand what the ancient writers have said of it.

The first description of the Rhine that we possess from any good authority is Caesar's, though he had not seen much of it. He says (B. G. iv. 13) that it rises in the Alpine regions of the Lepontii, and passes in a long course along the boundaries of the Nautnates, Helvetii, Sequani, Mediomatrici, Triboci, and Treviri, in a rapid course. The name Nautnates is corrupt [NANTNATES]. If we make the limits of the Treviri extend nearly to the North Sea or the commencement of the low country, Caesar has shown pretty clearly the place where the Rhine enters the great plain. On approaching the ocean, he says, it forms many islands, and enters the sea by several mouths (capita). He knew that the Rhine divided into two main branches near the sea; and he says that one of the branches named the Vahalia (Vaal) joined the Mos (Maas), and formed the Insula Batavorum [BATAVORUM INSULA]. He speaks of the shores of the river, and its breadth and depth in that part where he limits his wooden bridge over it. (B. G. iv. 17.) He made the bridge between Cohlenz and Andernach, higher up than the place where the river enters the low country. He crossed the Rhine a second time by a bridge which he constructed a little higher up than the first bridge. (B. G. vi. 9.)

Those persons, and Caesar of course, who said that the Rhine had more than two outlets were criticized by Asinius Pollio (Strab. iv. 192), and Virgil (Aen. vii. 724). Elemine but Sallustius Pollio's authority. But if the Mos divided as it does now, Caesar was right and Pollio was wrong.

Strabo, who had some other authorities for his description of the Rhine besides Caesar, and perhaps besides Caesar and Pollio, does not admit Pollio's statement of the Rhine having a course of 6000 stadia; and yet Pollio's estimate is much below the truth. Strabo says that the length of the river in a right line is not much above one-half of Pollio's estimate, and that if we add 1000 stadia for the windings, that will be enough. This assertion and his argument founded on the rapidity of the stream, show that he knew nothing of the great circuit that the Rhine makes between its source and Basle. He knew, however, that it flowed north, but unhappily he supposed the Seine also to flow north. He also made the great mistake of affirming that the county of Aent may be seen from the mouths of the Rhine. He says that the Rhine had several sources, and he places them in the Alsaci, a part of the country where the Rhine is the Adulas, or Addua (Addua), which flows south into the lake Larius (Lago di Como). [ADDUA.]

The most difficult question about the Rhine is the outlets. When Pliny and Tacitus wrote, Drusus the brother of Tiberius had been on the lower Rhine, and also Germanicus, the son of Drusus, and other Roman commanders. Pliny (iv. 14) speaks of the Rhines and the Mos as two distinct rivers. In another passage (iv. 16) he says that the Rhine has three outlets: the western, named Helium, flows into the Mos; the most northerly, named Fleum, flows into the lakes (Zuider Zee); and the middle branch, which is of moderate size, retains the name Rhinen. He supposed that there were islands in the Rhine between the Helium and the Fleum; and the Batavorum Insula, in which were the Caminatenses also, is one of them. He also places between these two branches the islands of the Frisia, Chauci, Frisianenses, Scuri, and Masonici. The Fleum of Pliny corresponds to the Flevo of Mola [FLEVO LACUS], who mentions this branch and only another, which he calls the Rieusus, which corresponds to Pliny's Rhinen. Mola mentions no other outlets. He considered the third to be the Mos, we may suppose, if he knew anything about it.

Tacitus (Ann. ii. 6) observes that the Rhine
divides into two branches at the head of the Batavorum Insula. The branch which flows along the German bank keeps its name and its rapid course to the Ocean. The branch which flows on the Gallic bank is broader and less rapid; this is the Valulis (Uaetl), which flows into the Mos. (Hist. v. 23.) [Batavorum Insula.] He knows only two outlets of the Rhine, and one of them is through the Mos. The Rhine, as he calls the eastern branch, is the boundary between Gallia and Germania. East of this eastern branch he places the Frisi (Ann. iv. 72.); and herein he agrees with Pliny, who places them between the Middle Rhine and the Fleum. Accordingly the Rhenus of Tacitus is the Rhenus of Mela and Pliny. This third branch of the Rhine seems to be that which Tacitus calls the work of Drusus (Ann. ii. 6), and which Seutonius (Claudius, c. 1) mentions without saying where it was: "Drusus trans Rhenum fossas novi et immensi operis effect, quae nunc adhuc Drusiana vocantur." Germanicus, in his expedition against the northern Germans (Tac. Ann. ii. 6), ordered his fleet to assemble at the Batavorum Insula, whence is sailed through the Fossa Drusiana, and the lakes into the Ocean and to the river Amisia (Est). This course was probably taken to avoid the navigation along the sea-coast of Holland. On a former occasion Germanicus had taken the same course (Ann. i. 60), and his father Drusus had done the same. Ptolemy (li. 9. § 4), who wrote after Tacitus and Pliny, is acquainted with three outlets of the Rhine. He places first the outlet of the Mos in 24° 40' long., 53° 20' lat. He then comes to the Batavi and to Lugdunum, which town he places in 26° 30' long., 53° 20' lat. The western mouth of the Rhine is in 26° 45' long., 53° 20' lat. The middle mouth is in 27° long., 53° 30' lat.; and the eastern in 28° long., 54° lat. His absolute numbers are incorrect, and they may be relatively incorrect also. His western outlet is a little east of Lugdunum, and this should be the Old Rhine and the Rhine Proper. The mouth is further east, and the eastern mouth further east still. The eastern mouth may be the Yssel, but it is difficult to say what Ptolemy's middle mouth is. Gosselin supposes that Ptolemy's western mouth may have been about Zandvoord. He further supposes that the Middle Mouth according to his measures was about the latitude of Bakken, about 4 leagues above Zandvoord, and he adds that this mouth was not known to those writers who preceded Ptolemy, and we may conjecture that it was little used, and was the first of the outlets that ceased to be navigable. The third mouth he supposes to correspond to the passage of the IJte. But nothing can be more vague and unsatisfactory than this explanation, founded on Ptolemy's measurements and pure conjecture. So much as this is plain. Ptolemy does not reckon the Mos as one of the outlets of the Rhine, as the Roman writers do; and he makes three outlets besides the outlet of the Mos. This country of swamps, rivers, and forests through which the Lower Rhine flowed has certainly undergone great changes since the Roman period, owing to the floods of the Rhine and the inundations of the sea, and it is very difficult, perhaps impossible, to make the ancient descriptions agree with the modern localities. Still it was a fixed opinion that the Rhine divided into two great branches, as Caesar says, and this was the division of the Rhine from the Waal at Panneorden, or wherever it may have been in former times. One of the great outlets was that which we call the Maas that flows by Rotterdam; the other was the Rhine Proper that entered the sea near Leiden, and it was the stream from Panneorden to Leiden that formed the boundary between Gallia and Germania. (Serv. ad Aenid. viii. 727.) Ptolemy places all his three outlets in Gallia, and it is the eastern month which he makes the boundary between Roman Gallia and Great Germany. If Ptolemy, in his "Adiutamen," by Yssel, he makes this river from Arnhem to the outlet of the Yssel the eastern limit of Roman Gallia in his time. This may be so, but it was not so that Pliny and Tacitus understood the boundary. Whatever changes may have taken place in the Delta of the Rhine, D'Anville's conclusion is just, when he says that we can explain the ancient condition of the places sufficiently to make it agree with the statements of the ancient authors. The mouth of the Rhine has been kept in their limits by embankments of earth which begin at Ijssel, in the Prussian province of Dusseldorff, and extend along the Rhine and its branches to the sea. The Romans began these works. In the time of Nero, Pompeius Paulinus, to keep his soldiers employed, finished an embankment ("agger") on the Rhine which Drusus had begun sixty-three years before. (Tac. Ann. xiii. 53.) It has sometimes been supposed that this "agger" is the "moes" which Civilius broke down in the war which he carried on against the Romans on the Lower Rhine. (Tac. Hist. ii. 19.) The consequence of throwing down this "moes" was to leave nearly dry the channel between the Batavorum Insula and Germania, which channel is the Proper Rhine. The effect of throwing down the "moes" was the same as if the river had been driven back ("velut abacto amne"). This could not have been effected by destroying an embankment; but if the "moes" of Drusus was a dike which projected into the river for the purpose of preventing most of the water from going down it, and forming the channel of the Rhine on the north side of the Batavorum Insula, we can understand why Civilius destroyed and why Drusus had constructed it. Drusus constructed it to keep the channel full on the north side of the Batavorum Insula, and to maintain this as a frontier against the Germans; and so we have another proof that the Rhine Proper or the Middle Rhine was the boundary between Gallia and Germania in this part, as every passage of Tacitus shows in which he speaks of it. Civilius destroyed the "moes" to stop the Romans in their pursuit of him; for they were on the south side of the island, and had no boats there to make a bridge with. Ukert understands it so, and he is probably right. Another great Roman work in the Delta of the Rhine was the canal of Corbul. The Roman conquerors left durable monuments of their dominion in all the countries which they invaded, even in the watery regions of the Rhine, where they had to fight with floods, with the tempests of the ocean, and with people whose home was in the marshes and forests. The Rhine was the great frontier of the Romans against the German tribes. All the cities on the west or Gallic side, from Leiden to Bazel, were either of their foundation or were strengthened and fortified by them. In the time of Tiberius eight legions guarded the frontier of the Rhine.
RHENU S.

This article may be read with the articles BATA- VORUM INSULA, FLEVO LACUS, FO SSA COR NUL- OMISS, MOSA, MO Sella, and GALLIA Transalp ina. (D'Aville, Notiz, d'c., "Rhenus"; P o nny Cy clopaedia, art. "Rhine"; and, Uekt, Galliae, who has collected all the ancient and many modern authorities. [G. L.]

RHenus (Reno), a river of Gallia Cispadana, and one of the southern tributaries of the Padus. (Plin. iii. 16. s. 20.) It flowed within about a mile of the walls of Bononia (Bologna), on the W. side of the city, and is celebrated in history on account of the interview between Anthony, Octavian, and Lepidus, which is generally believed to have taken place in a small island formed by its waters. [Bononia.] It has tributaries in the Apennines nearly 50 miles above Bologna, and is a considerable stream, though called by Silius Italicus "parvus," to distinguish it from its far greater namesake, the Rhine. (Sili. Ital. viii. 599.) In the time of Pliny it is probable that it discharged its waters into the principal channel of the Padus, but at the present day they are turned aside into an artificial channel before reaching that river, and are thus carried into the arm now known as the Po d'Primero. Hence the mouth of that branch of the Po is now called the Foce del Reno. Pliny tells us that the reeds which grew on the banks of the Rhenu s were superior to all others for making arrows. (Plin. xvi. 36. s. 65.) [E. H. B.]

Rhesaena (Piera or, Ptol. v. 18. § 13; P e r o, Steph. B. s. v.; A mm. Marc. xxxii. 5; R essaina, Tab. Peut.; Rasin, Notit. Imp.; Eth. Peavast, Steph. B. s. v.), a town of considerable importance at the northern extremity of Mesopotamia; it was situated near the sources of the Chaboras (Khabur), on the great road which led from Carrhae to Nisipha rum, about 88 miles from Nisibis and 40 from Dara. (Procop. B. P. ii. 19, de Aedifix. ii. 2.) It was near this town that Gordion the Younger fell in a battle with the Persians. (A mm. Marc. l. c.) A coin exists of the emperor Decius, bearing the legend CEI. KOA. PHCAINCHIO, which may in all probability be referred to this town. In the Notit. Imp. the place is subject to the government of the Dux Ostrohaenae (Notit. Dign. ed. Boecking, i. p. 400); and a bishop of Basianus is mentioned among those who subscribed their names at the Council of Nicaea. Under Theodosius, the town appears to have been partially rebuilt, and to have received the title of THEODOSTOPOLIS. (Hieroc. p. 793.) There can be no doubt that it is at present represented by Ras-al-Ain, a considerable entrepôt of commerce in the province of Diarbeik. It was nearly de stroyed by the troops of Timur, in A.D. 1393. (D'H erbelot, Dict. Orient. i. p. 140, iii. p. 112; Niebahr, ii. p. 390.) [V.]

COIN OF RHESEAENA.

RIETICO, a mountain of Germany, mentioned only by Pomp. Mela (iii. 3), along with Mount Taurus. As no particulars are stated it is impos sible to identify it, and German writers are so divided in their opinions that some take Rhetico to be the name of the Siebenengebirge, near Borna, while others identify it with a mountain in the Tirol. [L. S.]

RHIDAGUS (Curt. vi. 4, § 7), a river of Hyrcania, which flows from the mountains NW. to the Caspian. Alexander crossed it on his march in pursuit of Dareius. It appears to be the same as the Chastres of Ammianus (xiv. 23, 14), and may perhaps be represented by the present Adjus. [V.]

Rhinocorus or RHINOCORUS (Ρηνοκόρος, Polyb. T rol. Joseph.; Ρηνοκορός, Strab.; E th. Ρηνοκορός, Ρηνοκορούρης), a maritime city on the confines of Egypt and Pal istine, and consequently reckoned sometimes to one confine, sometimes to the other. Strabo, going south, reckons Gaza, Raphia, Rhinocorus (xvi. p. 759); Polybius, going north, reckons it to Egypt, calling Raphia the first city of Coele Syria (v. 80). Ptolemy also reckons it to Egypt, and places it in the district of Cassotivs (iv. § 12), between Ostracine and Anthedon. The Itinerarium Antonini (p. 151) places it xxi. M.P. south of Raphia, and the same distance north of Ostracena. The following curious account of its origin and fate is given by Diodorus Siculus. Actisanes, king of Athopha, having conquered Egypt, with a view to the suppression of crime in his newly-acquired dominion, collected together all the suspected thieves in the country, and, after judicial conviction, cut off their noses and sent them to colonise a city which he had built for them on the extremity of the desert, called, from their mishap, Rhinocorus (κακαί bivos καλωτιωμαι, αι. ρ. κειμονια), situated on the confines of Egypt and Syria, near the shore; and from its situation desolate and nearly all the necessities of life. The soil around it was salt, and the small supply of well water within the walls was bitter. Necessity, the mother of invention, led the inhabitants to adopt the following novel expedient for their sustenance. They collected a quantity of reeds, and, splitting them very fine, they wove them into nets, which they stretched for many stadia along the sea-shore, and so snared large quantities of quails as they came in vast flocks from the sea (i. 60). Strabo copies this account of its origin (l. c.): Seneca ascribes the act to a Persian king, and assigns the city to Syria (de Ira, iii. 20). Strabo (xvi. p. 781) mentions it as having been the great emporium of Indian and Arabian merchandise, which was discharged at Lence-Come, on the eastern coast of the Red Sea, whence it was conveyed, via Petra, to Rhinocorus, and thence dispersed to all quarters. In his day, however, the trade of commerce flowed chiefly down the Nile to Alexandria. The name occurs in Jor phus, but unconnected with any important event. It is known to the ancient ecclesiastical writers as the division between the possessions of the sons of Noah. S. Jerome states that the "River of Egypt" flowed between this city and Pelusium (R eland, Pa las est. pp. 285, 286, 569—572); and in one passage the LXX. translate the "River of Egypt" by Rhinocorura. (J avith, xvii. 12.) It is remarkable that this penal colony, founded for suspected convicts, should have become fruitful in saints; and its worthy and exemplary bishop Melas, in the time of the Arian persecution, who was succeeded by his brother Solon, became the founder of a succession of religious men, which, according to the testimony of Sozomen, continued to his time. (Hist. Eccles. vii. 31.) Rhinocorura is now El-Arish, as the
River of Egypt is Wady-el-Arish. The village is situated on an eminence about half a mile from the sea, and is for the most part enclosed within a wall of considerable thickness. There are some Roman ruins, such as marble columns, &c., and a very fine well of good water. (Irby and Mangles, Travels, p. 174, October 7.)

[QUESTIONS]

RHEP. [UNREADABLE]

RHIPEI MONTES (év 'Peania ὤμη), a name applied by Grecian fancv to a mountain chain whose peaks rise to the N. of the known world. It is probably connected with the word ἱππη, or the chariots drawn by horses, the mountain wind or "tramontana" of the Greek Archipelago, which was conceived to issue from the caverns of this mountain range. Hence arose the notion of the happiness of those living beyond these mountains — the only place exempt from the northern blasts. In fact they appear in this form of Prasiai, in Aleman (Fragm. p. 80, ed. Wecker), a lyric poet of the 7th century B.C., who is the first to mention them. The contemporary writers Damaestes of Sigeiai (Ap. Steph. B. s. v. 'Spruddy), Heliodoros of Lechos (Ap. Clem. Alex. Strom. i. p. 305) agree in their statements in placing the fabled tribes of the Nepisaeans in the Rhizaean mountains from which the north wind blows, and on the other side of these, on the sea-coast, the Hyperboreans. The legends connected with this imagined range of mountains lingered for a long period in Grecian literature, as may be seen from the statements of Hecataeus of Abdera (Ap. Athen. H. A. xi. 1) and Aristotle (Met. i. 13; comp. Soph. Oed. Col. 1248; Schol. ad loc.; Strab. vii. pp. 295, 299.) Herodotus knows nothing of the Rhizaean mountains or the Alps, though the positive geography of the N. begins with him. It would be an idle inquiry to identify the Rhizaean range with any actual chain. As the knowledge of the Greeks advanced, the geographical "mythos" was moved further and further to the N. till it reached the 48th degree of latitude N. of the Lesbian lake and the Caspian, between the Don, the Volga, and the Jaks, where Europe and Asia melt as it were into each other in wild plains or steppes. These "mountains of the winds" followed in the train of the meteorological "mythos" of the Hyperboreans which wandered with Heracles far to the W. Geographical discovery embodied the picture which the imagination had formed. Poseidonius (Ap. Athen. vi. p. 223, d.) seems to have considered this range to be the Alps. The Roman poets, borrowing from the Greeks, made the Rhizaean chain the extreme limit to the N. (Virgil. Georg. i. 240; Propert. i. 6.3; Sil. It. xi. 459;) and Lucan (n. 273) places the sources of the Tanais in this chain. (Comp. Mela, i. 12; §§ 18, 21; Plin. iv. 24; Anm. Mar. xxvi. 8. §§ 84; Procop. B. G. iv. 6; Sil. Apoll. ii. 343; Jornand. Get. 16; Osor. i. 2.) In the earlier writers the form is Rippii, but in the later writers the form which followed him the π is became aspirated. In the geography of Ptolemy (iii. 5, §§ 15, 19) and Marcian (Peripl. § 39, ed. Diot) the Rhizaean chain appears to be that gently rising ground which divides the rivers which flow into the Baltic from those which run to the Danube.

[Q. E. B. J.]

RHINIA (Ῥίνια), a town in Upper Pamonia, of uncertain site (Ptol. ii. 13. § 4; Orelli, Inscript. n. 4991), though it is commonly identified with Czur. (Schwabauer, Antiquitates Sabarum, p. 41): —

[Q. E. B. J.]

RHITHYMNA (Ῥιθυμνά), a town of Crete, which is mentioned by Ptolemy (iii. 17, § 7) and Pliny (iv. 29) as the first town on the N. coast to the E. of Amphiuma, and is spoken of as a Cretan city by Steph. B., in whose text its name is written Rhithymna (Ῥιθυμνά: Eik. Ριθυμώνας, Ριθυμόνοι). It is also alluded to by Lykophron (76). The modern Rhithymnas or Retimo retains the name of the ancient city upon the site of which it stands. Eckel (Nam. Vet. Aenodoti, p. 155; comp. Basche, iv. p. i. p. 1024) first assigned to Rhithymna its ancient coins; maritime emblems are found on them. (Pashley, Cret., vol. i. p. 101.) [E. B. J.]

COIN OF RHITHYMNA.
have retired among the Enclehees. (Sclav, l. c.) Whether the Phoenicians had reached the E. shore of the Adriatic does not appear, but it could only be from traces of Phoenician settlements that this term was assigned to his wanderings. (Wilkinson, Pal- 

tativa, vol. i. p. 381; Negelein, Die Süd-Slavens, 
Peta, v. 9.) [E. B. J.]

RHIZONICUS SINUS. [Rhizon.]

RHIZOPHAGI AETHIOPIES (Pecondus, Dio-
dor. iii. 23; Strab. xvii. p. 770, seq.; Ptol. iv. 8. § 29), one of the numerous tribes of Aethiopia, whom the Greeks named after the diet peculiar to them. The root-eating Aethiopians dwelt above Merœs, on either bank of the Astaboras (Tavazzé), and derived their principal sustenance from a kind of cake or pâleta, made from the reeds and bulrushes that covered that alluvial region. These were first scrupulously cleansed, then powdered between stones, and the pulp thus obtained was dried in the sun. The Rhizoplagi are described as a mild and harmless race, living in amity with their neighbours, and, probably because they had nothing to lose, unmolested by them. Their only fees were lions, who sometimes com-

mitted the greatest havoc among this unarmèd race; and their best friends, according to Diodorus (comp. Agatharch, ap. Haucon, Geog. Genez. Min. p. 37), were a species of Rhizus of an irregular western course to Lyon (Lugdunum) is joined there by the Saône, the ancient Arar (Arar; Lugdunus). The length of the course of the Rhone from the Lake of Ge-

cera to Lyon is about 130 miles. The Saône, as Caesar says, is a slow river, but the current is seen very plainly under the bridges in Lyon. The Rhone is a rapid stream, and violent when it is swelled by the rains and the waters from the Alpine regions.

From Lyon the Rhone flows in a general southerly course. The direct distance is about fifty miles from Lyon to Arèze (Arelate) where the river divides into two large branches which include the Isle of Cornagne. The whole course of the Rhone from the ice-fields of Switzerland to the low shores of the Mediterranean is above 500 miles. The valley of the Rhone below Lyon is narrow on the west bank as far as the junction of the Arde-

cche, and it is bounded by high, bare, and rocky heights. Some of the hill slopes are planted with vines. All the rivers which flow into the Rhone from the highlands on the west are small: they are the Ardevèche, Céze, Gardou (Vanlo), and some smaller streams. The left bank of the Rhone from
Lyon downwards is generally flat, but there are several parts where the rocks rise right above the water, and in these places the railway from Lyon to Marseilles is cut in the rocks close to the river. At St. André, a small town on the west bank above the Arve, crossed the plain without any limits on the west side of the Rhone. On the east side the hills are seen in the distance. From one of the middle-age towers built on the amphitheatre of Arles, there is a view of the great plain which lies all round that city to the north, west, and east, and stretches southward to the coast of the Mediterranean. The two large affluents of the Rhone on the east side are the Isere and the Durance (Druman). The Rhone was earlier known to the Greeks and Romans than any other river of Western Europe. The oldest notices of this river must have come from the Phcenicians and the Greeks of Massalia. What Azicnas has collected from some source (Or. Marit. 623—690) is unintelligible. Pliny (iii. 4) very absurdly derives the name Rhodanus from a town which he names Roda; but the name Rhodanus is older than any city, and, like the names of other European rivers, it is one of the oldest memorials that we have of the languages of the Western Polybius (iii. 47) supposed that the Rhone rose further east than it does, but he knew that it flowed down a long valley (στάσα) to the west, though he does not mention the Alpes of Genevens. Ptolemy (ii. io), the latest of the classical geographers, had no exact notion of the sources of the Rhone, though the Romans long before his time must have known where to look for them. He makes the sources of the Arar come from the Alps, by which the Jura is meant, and in this statement and what he says of the course of the Arar and Dubis he may have been influenced by Strabo (i. 98), as it has been supposed. The blunders about the sources of this river are singular. Mela (iii. 3) mentions the Damnius and Rhodanus among the rivers of Germany; and in another passage he says that it rises not far from the sources of the Ister and the Rhynus (ii. 5).

There is much difference in the statements about the number of the mouths of the Rhone. Timaeus, quoted by Strabo (p. 183), says that there were five outlets, for which Polybius reproves Timaeus, and says that there were only two. Polybius (iii. 41), names the eastern branch the Massilia, the Massalinus, Arvensis, as cited by Strabo, made five mouths. Strabo does not state how many he supposed that there were. He says that above the mouths of the Rhone, not far from the sea, is a lake called Stomatium, which some make one of the outlets of the Rhone, and those particularly do who enumerate seven outlets of the river. But he shows that this was a mistaken opinion. Caesar built ships at Arles when he was going to besiege Massilia, and he brought them round the Rhone to the city, and by the eastern branch, as we may assume. The Rhone was navigated by the people on its banks at the time when Hannibal with his army came to cross it, and much earlier. Polybius is the earliest extant writer who has given us any precise information about this river. Hannibal (b. c. 218) crossed it at a point above the division of the stream, and of course higher than Arles, for we assume that the bifurcation was not higher than that city in his time, if it ever was. (Polyb. ii. 43.) He probably crossed the river at Lmusain and below the junction of the Gardon. He then marched northwards on the east side of the river to the In-
RHODIUS. 713

vela in Lycia, i. pp. 166, 181.) The town had a temple of Asclepius, and its citizens are not called, as Stephanus Byz. asserts, 'Apoli, but 'Apolo-o-

Rhodius (Pδος), a river of Troas, having its sources in Mount Ida, a little above the town of Astyra; it flows in a north-western direction, and after passing by Astyra and Creunaste, discharges itself into the Hellespont between Dardanus and Abydos. (H. C. ii. 21, xx. 215: Hesiod, Theog. 341; Strab. xii. p. 554, xiii. pp. 593, 603; Plin. v. 93.) Strabo (vi. 595) asserts, that Rhodius is a tributary of the Aeaeus; but they must have been mistaken, as the river is mentioned on the coins of Dardanus. (Sestini, Geogr. Nomin. p. 39.) Pliny (L. c.) states that this ancient river no longer existed; and some modern writers identify it with the Pydus mentioned by Thurydides (vii. 106; comp. Hesych. and Phavorin. s. v. Ρδος.) Richter (Walfahrten, p. 437) describes its present condition as that of a brook flowing into the Dardanelles by many mouths and marshes. (RHODOPE (Ροδοπη, Herod. vi. 49; Thuc. ii. 96; Polyb. xxxiv. 19; Strab. iv. p. 208, vii. pp. 313, 329, 331; Mela, i. 2, § 2; Plin. iii. 29, iv. 5, s. 17; Amm. Marc. xci. 10. § 3; Malchus, op. Exc. de Leg. Rom. p. 90), a mountain chain forming the W. continuation of Haemus, and the frontier between Thrace and Macedonia, of which little more is known than the name. On its desolate heights, the lurking places of the fierce Sattrae, was the great sanctuary and oracle of the Thracian Dionysus. As the Strabo took its sources in Rhodope (Strab. viii. p. 331) the high ridges round Dionysa and Ohiosthultan must be assigned to Rhodope, which may probably be said to belong to the central of the three continuous chains, which under the name of the Despato Dogh branches out to the S. of the Balkan (Haemus) at about 23° E. long. [E. B. J.]

RHODONTIA (Ροδοντια: Eth. Ροδοντιον), a fortress on Mt. Calidromus, defending one of the passes to Thermopolea. (Strab. ix. p. 428; Liv. xxxvi. 16, 19; Steph. B. s. c; Leake, Northern Greece, vol. ii. pp. 60, 62.)

RHODUS (Ρδος; Eth. 'Pδος; Rhode): one of the chief islands of the Aegean, or more properly of that part of the Aegean which is called the Carpathian sea, about 9 or 10 miles from the coast of Caria. In the earliest times it is said to have borne the names of Ophiussa (Steph. B. s. c. Ρδος), Naxia, Telchinia (Strab. xvi. p. 633), Astera, and Protocallis. (Curtius, Polycrates, T. thyria, Macra, and Odysseia, (Plin. v. 36.) It extends from south to north, and is 920 stadia in circumference (Strab. xiv. p. 605), or, according to Pliny, 125 Roman miles, though others reduced it to 103. The island is traversed from north to south by a chain of mountains, the highest point of which was called Atabyris or Atabyrius, and the towns were all situated on the coast. Mount Atabyris is 4360 feet above the level of the sea, and on the top of it stood a temple of Zeus Atabyrius. Rhodes was believed to have been at one time an island of the sea, and the Telchines, its most ancient inhabitants, are said to have immigrated from Crete. (Pind. Olymp. viii. 23, &c.; Plin. ii. 87; Arist. xii. p. 653, ed. Dind; Strab. t. c.; Diod. v. 53.) The Telchines, about whom many fabulous stories are related, are said to have been nine in number, and their sister Halia or Amphitrite became by Poseidon the mother of six sons and one daughter, Rhodes, from which in the end the island received the name it still bears. Others, however, with better reason, derive the name Rhodes from *ρεδος, a rose, for the rose appears as a symbol on coins of the island, so that Rhodes would be "the island of Roses." (Eckhel, vol. ii. p. 602; Sestini, Num. Vet. p. 389.) These most ancient and fabulous Telchines are said to have perished or been driven from the island during an inundation, and Helios then created a new race of inhabitants, who were called after him Helidae; they were seven in number, and became ancestors of seven tribes, which partly peopled Rhodes itself and partly emigrated to Lesbos, Cos, Caria, and Egypt. The Helidaeans are said to have greatly distinguished themselves by the progress they made in the sciences of astronomy and navigation. (Pind. t. c. 160, &c.; Diod. v. 56; Conon, Narrat. 47; Strab. xiv. p. 654.) After this various immigrations from foreign countries are mentioned: Egyptians under Damaus, Phoenicians under Calmus, Thessalians and Carians, are each said to have furnished their contingent to the population of Rhodes. Whatever we may think of these alleged immigrations, they can have but little affected the national character of the Rhodians, which in fact did not become fixed until a branch of the Doric race took possession of the island, after which the Doric character of its inhabitants became thoroughly established. Some Dorians or Heracleidae appear to have been settled there as early as the Trojan War, for the Heracleid Telephoons is described as having sailed to Troy with nine ships. (H. ii. 653; Diod. iv. 58, v. 59; Apollod. ii. 8, § 2.) After the Trojan War Aethensaeus, a Heracleid from Argos, led other settlers to Rhodus. (Strab. xiv. p. 653; Diod. xv. 59; Apollod. iii. 2, § 1; comp. Thuc. vii. 57; Aristid. Orat. xiv. p. 839.) After this time the Rhodians quietly developed the resources of their island, and rose to great prosperity and influence. The three most ancient towns of the island were Lindus, Ialysus, and Camirus, which were believed to have been founded by three grandsons of the Helen Ochmus bearing the same names, or, according to others, by the Heracleid Telephoons. (Diod. iv. 58, v. 57.) These three towns, together with Cos, Cnidus, and Halicarnassus, formed what was called the Doric hexapolis, which had its common sanctuary on the Triopian headland on the coast of Caria, Apollo being the tutelary deity of the confederation. (Herod. i. 144.) The rapid progress made by the Rhodian towns at a comparatively early period is sufficiently attested by their colonies in the distant countries of the west. Thus they founded settlements in the Balearic islands, Rhoda on the coast of Spain, Furnebeque, Salapia, Siris, and Sybaris in Italy, and Gela in
Sicily: while the countries nearer home were not neglected, for Sili in Cilicia, and Gagea and Corydalis in Lybia, were likewise vegetation colonies. But notwithstanding this early application to navigation and commerce, for which Rhodes is so admirably situated between the three ancient continents, the Rhodians were not ranked with the great maritime powers of Greece. Herodotus speaks of them only as forming a part of the Doric confederacy, nor does Thucydides mention their island more frequently. The Rhodians, in fact, did not attain to any political eminence among the states of Greece until about B.C. 408, after the battle of Leuctra aeminium. Rhodes, the city of Athens at the northern extremity of the island, and raised it to the rank of a capital. During the first period of the Peloponnesian War the towns of Rhodes paid tribute to Athens, and were reluctantly compelled to serve against Syracuse and Gela in Sicily (Thuc. vii. 57); but in B.C. 412 they joined the Peloponnesians. The popular party being favourable to Athens, soon afterwards attempted a reaction, but it was crushed (Diod. xii. 38, 45). In B.C. 396, Hiero was exiled, and the political eminence of the Athenians, which had been preserved by the waters of Rhodes, the Rhodians again embraced the cause of Athens (Diod. xiv. 79; Polyb. vi. 7. § 6); but the democracy which was now established was ill managed, and did not last long; and as early as B.C. 390, the exiled aristocrats, with the assistance of Sparta, recovered their former ascendancy. (Aristot. Politi. v. 4. 2; Xen. Hellen. iv. 8. § 20, & c.; Diod. xiv. 97.) The fear of Sparta's growing power once more threw Rhodes into the hands of the Athenians, but soon after the battle of Leuctra a new change again took place; at least the Thebans, in B.C. 364, were zealously engaged in sowing discord for the purpose of drawing Rhodes, Chios, and Byzantium over to their own side. During the Social War, from B.C. 357 to 355, the Rhodians were arrayed against Athens, being instigated by the demagoge of Caria and his successor Artemisios. But as they became alarmed by the growing power of the Carian dynasty, they solicited the protection of Athens through the influence of Demosthenes. (Hermes. de L. Rhodo. 2.) The form of government throughout this period was oligarchical, which accounts for the insolent conduct of Hegesilochus, as described in Athenaeus (x. p. 444). Rhodes furnished Darius, the last king of Persia, with one of his bravest and ablest generals in the person of Memnon, who, if he had had the sole direction of affairs, might have checked the victorious career of Alexander, and saved the Persian empire. But as it was, Rhodes, like the rest of Greece, lost its independence, and received a Macedonian garrison (Curt. iv. 5). The expulsion of this garrison after the death of Alexander was the beginning of a glorious epoch in the history of Rhodes; for during the wars against the successors of Alexander, and especially during the memorable siege of the city of Rhodes by Demetrius Phalaecon, the Rhodians gained the highest esteem and regard from all the surrounding princes and nations. During the period which then followed, down to the overthrow of the Macedonian monarch by the Rhodians, which kept up friendly relations with Rome, acted a very prominent part, and extended its dominion over a portion of the opposite coasts of Caria and Lybia—a territory which is hence often called the Περὶα τῶν Ρωδιῶν [ΠΕΡΙΑΚΑ]—and over several of the neighbouring islands, such as Casus, Carpathus, Telos, and Chalce. After the defeat of Perseus the Romans deprived the Rhodians of a great amount of territory and power, under the pretext that they had supported Mithridates; but the anger of Rome was appeased, and in the war against Mithridates the Rhodians defended themselves manfully against the Pontian king. During the civil war between Caesar and Pompey they sided with the former, and their adherence to him led them, after his death, to resist Cæsars; but the republicans, after defeating them in a naval engagement, entered the city of Rhodes by force, and having put to death the leaders of the hostile party, carried off the public property, and filled the temples (Ann. Bell. Cic. iv. 72; Plut. Brut. 30; Dion Cass. xlvii. 32). This calamity in B.C. 42 broke the power of the Rhodians, but it still remained one of the great seats of learning. Tiberius, before his accession to the imperial throne, resided at Rhodes for several years. The emperor Claudius deprived it of all political independence (Dion Cass. lx. 24); but although he afterwards restored its liberty, it was at all times a very precarious possession, being taken away at the will of the conqueror in the same manner as that of the emperors suggested (Tac. Ann. xii. 58; comp. Suet. Iep. 8; Entrop. vii. 13). In the arrangements of Constantine, Rhodes, like other islands, belonged to the Provincia Insularum, of which it was the metropolis (Hierocles, p. 685, &c.). During the middle ages it continued to enjoy a considerable degree of prosperity, and was the last place in Western Asia that yielded to the Moslem invaders. The great prosperity which the Rhodians enjoyed during the best period of their history is due not only to the waters of Rhodes which had been throughout this period taken place; at least the Thebans, in B.C. 364, were zealously engaged in sowing discord for the purpose of drawing Rhodes, Chios, and Byzantium over to their own side. During the Social War, from B.C. 357 to 355, the Rhodians were arrayed against Athens, being instigated by the demagogue of Caria and his successor Artemesius. But as they became alarmed by the growing power of the Carian dynasty, they solicited the protection of Athens through the influence of Demosthenes. (Hermes. de L. Rhodo. 2.) The form of government throughout this period was oligarchical, which accounts for the insolent conduct of Hegesilochus, as described in Athenaeus (x. p. 444). Rhodes furnished Darius, the last king of Persia, with one of his bravest and ablest generals in the person of Memnon, who, if he had had the sole direction of affairs, might have checked the victorious career of Alexander, and saved the Persian empire. But as it was, Rhodes, like the rest of Greece, lost its independence, and received a Macedonian garrison (Curt. iv. 5). The expulsion of this garrison after the death of Alexander was the beginning of a glorious epoch in the history of Rhodes; for during the wars against the successors of Alexander, and especially during the memorable siege of the city of Rhodes by Demetrius Phalaecon, the Rhodians gained the highest esteem and regard from all the surrounding princes and nations. During the period which then followed, down to the overthrow of the Macedonian monarch by the Rhodians, which kept up friendly relations with Rome, acted a very prominent part, and extended its dominion over a portion of the opposite coasts of Caria and Lybia—a territory which is hence often called the Περὶα τῶν Ρωδιῶν [ΠΕΡΙΑΚΑ]—and over several of the neighbouring islands, such as Casus, Carpathus, Telos, and Chalce. After the
active zeal for literature, philosophy, and art. The intellectual activity maintained itself in Rhodes long after it had died away in most other parts of Greece.

The island of Rhodes, which appears even in the earliest traditions as extremely wealthy (Hom. Il. ii. 670; Pind. Olymp. vii. 49; Philosr. imag. ii. 27), is in many parts indeed rough and rocky, especially the coast near the city of Rhodes, and the district about Lindus, but on the whole it was extremely fertile; its wine, dried raisins and figs, were much esteemed, and its saffron, oil, marble, achatia, sponges, and 8-b, are often spoken of. The most important productions of Rhodian industry were ships, arms, and military engines. Besides the places already mentioned, the ancients notice Ixia and Manasimia, two forts in the south, and a place called Achaia.

By far the most important place was the city of Rhodes at the north-eastern extremity of the island. It was built in B.C. 408 upon a regular plan formed by the architect Hippodamus, the same who built the walls of Peiraeus. (Strab. xiv. 45, xx. 83; Harpocrat. s. v.: Προάδεσμα.) It was constructed in the form of an amphitheatre rising from the coast, and was protected by strong walls and towers, while nature provided it with two excellent harbours. The acropolis rose at the south-western extremity, and on the slope of it was the theatre. According to Strabo, Rhodes surpassed all other cities for the beauty and convenience of its ports, streets, walls, and public edifices, all of which were adorned with a profusion of works of art both in painting and sculpture. The principal statues were in the temple of Dionysus and the gymnasium; but the most extraordinary statue, which is described as one of the seven wonders of the ancient world, was the brazen statue of Helios, commonly called the Colossus of Rhodes. It was the work of Chares of Lindus, who employed upon its execution twelve years. It cost 300 talents, and was 70 cubits in height: its gigantic size may be inferred from the fact that few men were able to encompass one of its thumbs with their arms. (Plin. xxxiv. 18; Strab. l. c.) The Colossus stood at the entrance of one of the ports, but the statement that it stood astride over the entrance, and that the largest ships could sail between its legs, is in all probability a mere fable. It was overturned by an earthquake, 56 years after its erection, that is, in B.C. 224, or according to others a few years later. Potency promised the Rhodians, among other things, 300 talents for its restoration (Polyb. vii. 89), but it is said not to have been attempted in consequence of an oracle (Strab. l. c.). Later authorities, however, speak of it as standing erect; the emperor Comodus is said to have ordered his own bust to be put upon it; and Cedrenus relates that a king of the Saracens sold the fragments to a merchant who employed upwards of 900 camels to carry them away. Notwithstanding the great splendour of the city, the number of its inhabitants does not appear to have been very great, for during the siege of Demetrius Poliorcetes no more than 6000 citizens capable of bearing arms are mentioned. (Diod. xx. 84.) But Rhodes has nevertheless produced many men of eminence in science and literature, such as Panaceius, Stratoches, Andronicus, Endemus, Hieronymus, Peisander, Simmias, and Aristides; while Poseidonius, Dionysius Thrax, and Apollonius, surrounded the Rhodian, resided in the island for a considerable time. The present town of Rhodes contains very few remains of the ancient Greek city. (Camp. P. D. Paulsen, Descriptio Rhodi Maced. Aoetole, Göttingen, 1818; H. Rost, Rhodus, ein Hist. Arch. Fragment, Altona, 1823; Th. Mege, Vorgeschichte von Rhodos, Köln, 1827; Hottier, Descript. des Monuments de Rhodos, Bruxelles, 1828; Boss, Reisen auf den Griech. Inseln, l. pp. 79—113, which contains a good account of the middle-age history and the present condition of the island and city with maps and plans; seeini. Mon. Vet. p. 91.)

COIN OF RHODUS.

RHODUSSA, an island off the southern coast of Caria, near the entrance of the port of Panormus. (Plin. v. 35; Stadiasmus. Mar. Mag. p. 248, where the name is written Ρωδοσαι.) It is marked in modern charts by the name of Limosa or Koragash. [L. S.]

RHODUSSAE, a group of small islands in the Propontis, south of Pityusas, is mentioned only by Ptolemy (v. 44). [L. S.]

RHOE (Ρόη), a place on the coast of Bithynia, 20 stadia to the east of Culpe, on a steep promontory, contained a road fit only for small vessels. (Arrian, Peripil. P. E. p. 13; Anonym. Peripl. P. E. p. 5.) [L. S.]

RHOETACES. [Albaniia, p. 89, b.]

RHOETEUM (vο Ροετοτιον ποντιοι δυσσων), a promontory, or rather a rocky headland, running out in several points in Mysia or Troas, at the entrance of the Hellespont, north of Ionia; it contained a small town of the same name situated on an eminence. The place is very often mentioned by the ancients. (Herod. vii. 43; Scylax, p. 32; Strab. xiii. p. 595; Steph. B. s. v.; Pomp. Mela, i. 18; Plin. v. 33; Thucyd. iv. 52, viii. 101; Appollon. Rhod. i. 929; Tryphiod. 216; Virg. Aen. vi. 595; Liv. xxxvii. 37.) The promontory is now called Inebek, and the site of the ancient town is believed to be occupied by Paleos Castro, near the village of Raphelinae. (Kjelber, Wallfahrten, p. 475; Leake, Asia Minor, p. 275.) [L. S.]

RHOGANA (Ρωγαν, Ptol. vi. 8. § 7; Marchian, Peripl. i. § 28, ed. Müller), a small place on the coast of Carmania, between the promontories of Carpella and Alambater. It is perhaps the same place as the Goganna of Arrian. [GOGANA.] [V.]

RHOGANDA′NI (Ρωγανδαιοι, Ptol. vii. 4. § 9), a tribe of ancient Ceylon, at the southern end of the island. Potency mentions that in this part of the island were the best pastures for the elephants, which is the case, too, at the present time. [V.]

RHOGO (Ρογο), an island off the coast of Lycia, not far from the entrance of the Phoenicus Portus. (Plio. v. 35; Steph. B. s. v.; Stadiasmus. Mar. Mag. §§ 217, 218, where it is called Rhopo, Ροπο.) [L. S.]

RHOGONIS (Ρωγονις, Arrian. Ind. c. 39), a river of ancient Persis, which flows into the Persian
Gulf in lat. 29° 20', long. 48° 25' E. It was little better than a torrent, and is now doubtless marked by the present Bender riv. Polony (vi. 4, § 2) and Amniuus (xxiii. 6) call it Rhodumax (Ptolemy, Ρηθοδομαξ) and Marcianus (Peripl. i. § 24, ed Müller) Rhoeomannus (Ροιομαννος). (Vincent, vol. i. p. 401: Thvenot, v. p. 535.)

RHOSOCOPUS (Ρωσόκοπος), a place on the coast of Pamphylia, near the mouth of the Cestrus, is mentioned only in the Stadiasmus (§§ 199, 200).

RHOSOGIACUM or RHOSOLOGIA (Ρθοσολογία), a small place in the country of the Tectosaga, Galatia, on the road from Ancyra to Caesarea Mazaca, not far from the river Halys. (It. Ant. pp. 143, 206; Ptol. v. 4, § 8, where some read Ρςώσολογία or Ρωσολογίακος; It. Hieros. p. 575, where it is called Rissodiaceum.) [L.S.]

RHUSUS. [Issus.]

RHXOLANU. [Ρχολάναν.]

RBUANA (Ρούβανα al. Ρούβανα Βασιλείας), an inland town of Arabia, placed by Polony (vi. 7, § 33) in long. 87°, lat. 22°. Apparently not far distant to the SW. bay of the Therma and on the river Larn. [G. W.]

RHUBON, RHUDON (Ρουθων εἰς, Ptol. iii. 5, § 2; Ρουθων εἰς, Marcian. Herod. Peripl. § 39, ed. Müller), a river of European Sarmatia which took its source in the Alani Montes and discharged itself into the Venedicus Sinus. Schafarik (Slav. Alt. vol. i. p. 497) has identified it with the Dana, which, taking a direction generally W., flows into the Gulf of Riga below Fort Damburke, after a course of 665 miles. This same terminology connects the mythic Eridanus and the trees that went amber with, the Bludon of Macrian (Rhubon appears to be a corrupted form), which Sabins, a commentator upon Virgil, a. d. 1544, calls Rhodanus. The amber could be brought by land, or by water from the coasts where it was collected to the Dana, and thence by boats conveyed to the Byorsthenes and the coasts of the Euxine. The name “Eri-damus,” closely connected with Rhodanus, is composed of the words “Rha” and “Duo,” roots which, in several of the Indo-European languages, signify “water,” “river;” a far instance in “Rha,” the old name for the Volga, and Donumius, Tanais, Donapria, Duamistris, and the like. [E. B. J.]

RHUBRICATUS (Ροωμπρικάτος, Ptol. iv. 3, § 5), a river of Armenia, the same as the Usus of the Peut. Tab., which flowed 5 M. P. to the E. of Hippo Reginus, now called the Sebaste (Barth, Wunder-ungen, p. 70).

RHUIDEA or RUDIEA (Ροωδία, Ptol.; Ροωδία, Strab.; Eoh. Rudius; Rughe), an ancient city of the Salentines, in the interior of the Roman province of Calabria, and in the immediate vicinity of Lupiae (Larco). (Strab. vi. p. 281; Ptol. iii. 1, § 76.) Strabo calls it a Greek city (ῥωμαϊκή Ελληνίδα); but we have no other indication of this fact, and all the other notices we find of it would lead us to infer that it was a native Salentine or Messapian town. Under the Romans it appears to have enjoyed municipal rank (an inscription has "Municipici Rudini," Oriol. 389-58); but in other respects it was a place of little importance, and derived its sole celebrity from the circumstance of its being the birthplace of the poet Ennius. (Strab. l.c. Mel. ii. 4, § 7; Sil. Ital. xii. 393; Cic. de Or. ii. 42.) That author is repeatedly termed a Calabrian (Hor. Carm. iv. 8; Ovid. A. A. iii. 409; Sil. Ital. l. c.; Acron, ad hor. l. c.), and these passages confirm the accuracy of Polony, who assigns Rindiae to the Salentines, and therefore to the Calabriacs according to the Roman use of the name. Fliny and Mela, on the contrary, enumerate Rudiae among the towns of the Pediculi together with Barium and Egnatia, and the latter author expressly excludes it from Calabria (Plin. iii. 11, s. 16; Mel. l. c.). But it seems impossible to reconcile this statement with that of Strabo, who places it near Lupiae, in the interior of the peninsula, or with the actual situation of Rudiae, which is clearly ascertained at a place still called Rughe, though now uninhabited, about 2 miles W. of the town; and the author's note, which was doubtless discovered, as well as several others in the Messapian dialect, and many vases and other objects of antiquity. The identity of this place with the municipal town of Rudiae can therefore admit of no doubt; nor is there any reason to question the fact that this was also the birthplace of Ennius: but considerable confusion has arisen from the mention in the Tabula of a place called “Rudac,” which it places 12 miles W. of Rughe, on the road to Caesarius. As this place would have been within the limits of the Pediculi or Penetii, it has been identified by some writers to be the same with the Rudiae of Fliny and Mela, and therefore the birthplace of Ennius; but the claims of Rughe to this distinction appear unquestionable. (Galateo, de Sit. Inapg. p. 77; Bonomi, vol. ii. pp. 93—102; Mommsen, Ueber Ital. Dialekte, p. 58.)

The Rudiae of the Tabula, which is otherwise quite unknown, must have been situated somewhere in the neighbourhood of the modern Adamo. [E. B. J.]

RHUS. [Megara, p. 313, b.]

RHUTIEAE [Ρουτιείας.]

RHYMICHIC MONTES (Ρουμβάκα Ὥην, Ptol. vi. 14, §§ 4, 10, 11), a mountain chain of Asiatic Sarmatia, of which no nearer indication can be given than that it belongs to the great meridian chain, or rather assemblage of nearly parallel mountain chains, of the same name. [E. B. J.]

The river RHYMUS (Ρομβάκας, Ptol. vi. 14, §§ 4, 24), which has been a sore puzzle to geographers, took its source in these mountains and discharged itself into the Caspian between the Rha (Volga) and the Daux (Ural). In the present day there is, W. of the embouchure of the Ural to the great delta of the Volga, only one small stream which reaches the Caspian, under the name of the Naryn Chara (Goebel, Reise in die Stephen, vol. ii. p. 342). This river is probably the Rhymus of Polony. (Humboldt, Asie Centrale, vol. ii. p. 187.) [E. B. J.]

RHYNIACUS (Ροωμιακός), an important river in the province of Helle-pontus, which has its sources at the foot of Mount Olympus in Phrygia Epicetetus, near the town of Azaoni. (Sylvaç, p. 35; Pint. vi. 40; Tomp. Mela, i. 19; Strab. xii. p. 576.) According to Fliny, it was at one time called Lycus, and had its origin in the lake of Miletopolis; but this notion appears to have been supposed at first in a north-western direction, forming the boundary between Myasia and Bithynia, through the lake of Apollonia, and in the neighbourhood of Miletopolis receives the river Megistus, and discharges itself into the Propontis opposite the island of Besbicus.
RHYPES.

The Scholiast on Apollonius Rhodius (i. 1165) states that in later times the Rhynades, after receiving the waters of the Megistus, was itself called Megistus; but Eustathius (ad Hom. H. iii. 771) assures us that in this time it still bore the name of Rhynades. According to Valerius Flaccus (iii. 35) its yellow waters were discernible in the sea at a great distance from its mouth. In B.C. 73 Lucullus gained a victory over Mithridates on the banks of this river. (Plut. Luc. 14; comp. Polyb. v. 17; Ptol. v. 1 §§ 4, 8; Steph. B. s. v.). The Rhynades is now called Lypad, and after its union with the Megistus (Suagnithri) it bears the name of Michaelis or Macedon. (See Hamilton's Researches, ii. 54.)

RHYPES (Ρυπες, Ρυνα, Steph. B. s. v.: Eich. Ρτψι, Ρυνα), a city of Achaia, 30 stadia W. of Aegium, was originally one of the twelve Achaean cities. It had ceased to be a member of the League in the time of Polybius, who mentions Leontium in its place. Rhypes, however, continued to exist down to the time of Augustus; but this emperor transferred its inhabitants to Patrae, and its territory (Πολις, or ἡ Ρυπα) was divided between Aegium and Patrae. Its ruins were seen by Strabo and near to the island of Cythnos, which was called Rhypes, and lay between Aegium and Patrae. We learn from Strabo that this town was mentioned by Aeschylus as καταυαθί Ρυνα, or "Rhypes stricken by the thunderbolt." It was the birthplace of Mysscellus, the founder of Coroton. (Herod. i. 145; Paus. vii. 6 § 1, viii. 18 § 7, vii. 23 § 4; Strab. viii. pp. 386, 387.) In the territory of Rhypes there was a demus called Leuctrum (Αστερος, Strab. p. 387), and also a seaport named Erinium (Ερινευδε, or Ερινευδε Αμφετηρης), which is mentioned by Thucydides, and as was described by Pausanias as 60 stadia from Aegium. (Thuc. vii. 34; Paus. vii. 22 § 10; Plin. iv. 6.)

The geographers of the French Commission place Rhypes at some ruins on the right bank of the river Tholos, where it issues into the plain; and the distance of the position of the Tholos from Vostitana (Aegium) is that which Pausanias assigns as the interval between Aegium and Rhypes. But Leake, thinking it highly improbable that two of the chief cities of Achaia should have been only 18 stadia from each other, and hardly within the stretch of the Rhynes or his text, as to the distance between Rhypes and Aegium. He accordingly places Rhypes further W. on the banks of the river of Salmenico, and supposes Erinium to have been its port and to have been situated immediately above it at the harbour of Lambiri. The position of Lambiri answers very well to that of Erinium; but the reason given by Leake does not appear sufficient for rejecting the express statement of Pausanias as to the distance between Aegium and Rhypes. (Leake, Pausanias, ii. p. 458, seq.)

RHYTHMUM (Ρυθρυμ, Stephan. B.; Plin. iv. 20; Eich. Ρυθρυμει), a town of Crete which Homer (ii. 648) couples with Phæstos as "well-peopled cities." The city belonged to the Gortynians (Strab. x. p. 479; Nonnus, Dionys. xii. 233.) The corrupt reading Ρυθρυμ in Steph. B. (e. e. Ρυθρυμ) should be emended into Ρυθρυμ. (Hick. Krete, vol. i. p. 414.) The city must have existed somewhere near to the road which leads from Kasteliana to Haghiius Diskos; but Pashley (Crete, vol. i. p. 293) could find no vestiges of antiquity in the neighbourhood.

RIBLAH (Ριπλαθα), a city "in the land of Hamath," where Jehoash or Shallum was cast into chains by Pharaoh Necho, and where Nebuchadnezzar subsequently gave judgment on Zedekiah. (2 Kings, xxiii. 39, xxxv. 6.) We find Nebuchadnezzar there again, after an interval of several years, when the last remnant was carried captive and slain there. (Jerem. iii. 27.)

RICCIACUM, in North Gallia. The Table has a road from Divodurum (Metz) to Augusta Trevirorum (Trir.) From Divodurum to Carnuncus is xiii., from Carnuncus to Ricciacus x, and from Ricciacus to Augusta x. D'Anville guessed Ricciacus to be Remich on the Mosel; but it is only a guess. There is evidently an error in the Table in the distance between Divodurum and Ricciacus, which is a great deal too much. The geographers have handled this matter in various ways. (Carmes.) (See also Ubert, Gallien, p. 512, and the note.)

RICINIA. 1. (Eth. Ricinensis: Ru, near Macedonia), a municipal town of Picenum, situated on a hill above the right bank of the river Potentia (Potenx), about 15 miles from the sea. Piny is the only geographer that mentions it (iii. 13 s. 19), but the "ager Ricinensis" is not described as of the Liber Colonianus (p. 226), and we learn from an inscription that it received a colony under the emperor Severus, and assumed in consequence the title of "Colonia Helvia Ricina" (Orell. Incert. 915; Clever. Ital. p. 735.) Its ruins are still visible, and include the remains of a theatre and other buildings. They are situated about 3 miles from Maccaretra, and 6 from Recanati, which has preserved the traces of the ancient name, though it does not occupy the ancient site. (Halsten, Notver. p. 137.) The Tabula correctly places it at a distance of 12 miles from Septempeda (S. Severina.) (Tab. Peut.)

2. A small town on the coast of Liguria, mentioned only in the Tabula, which places it on the coast to the E. of Genoa. It is commonly identified with Recco, a town about 12 miles from Genoa, but the Tabula gives the distance as only 7, so that the identification is very doubtful. (Tab. Peut.; Geogr. Rav. i. 32.)

RICINA (Ρικινα, Ptol. ii. 2 § 11), one of the Ebudes insulae or Hebrides. [T. II. D]

RHUDUNA, one of the islands off that part of the Gallic coast which was occupied by the Armoricace states. As the Marit. Ita. mentions Caesarica (Jersy), Sarvia (Guerney), and Riduna, it is concluded that Riduna is Aurigny or Alderney off Cap de la Haye. [G. L.]

RIGODULUM, a place on the Mosella (Moisel), "protected either by mountains or the river." (Tacitus, Hist. iv. 71.) In the war with Civilis this place was occupied by Valentinus with a large force of Treviri. Civilis, who was at Mainz, marched to Rigodulum in three days (tertia castris) and stormed the place. On the following day he reached Colonia Treverorum (Trir.) It is supposed that Rigodulum may be Reul on the Mosel. Lipius assumes Rigodulum to be Rigal near Confluences (Cohlen), but that is impossible. Ammianus Marcellinus (xxi. 6) places Rigudulum near Confluences, but his authority is small; and there may be some corruption in the text. [G. L.]

RIGODUNUM (Ριγδουνων, Ptol. ii. 8 § 16), a town of the Brigantes in the N. of Britania Romana. Camden (p. 974) conjectures it might have
RIGOMAGUS, a village of Cisalpine Gaul, forming a station on the road from Ticinum (Pavia) to Augusta Taurinorum (Turin). It is placed by the Itineraries 36 M. P. from Launemell (Lonello), and 36 M. P. from Augusta or Taurinum: these distances coincide with the site of Trino Vecchio, a village a little to the S. of the modern town of Trino, on the left bank of the Po (Itin. Ant. p. 329; Cluver. Itin. p. 243; Wallenck, Géogr. des Géants, vol. iii. p. 23). [E. H. B.]

RIGOMAGUS (Remagen), on the Rhine. The Table places it between Bonna (Bonn) and Antuancum (Andernach), viii. from Bonna and ix. from Antuancum. The Antonine Itinerary, which omits Rigmamus, makes the distance xvii. from Bonna to Antuancum. Remagen is on the Rhine and on the north side of the Ahr near its junction with the Rhine. Ukert (Gallien, p. 513, note) speaks of a milestone found at Remagen with the inscription "Col. Agrripp m. p. xxx." [G. L.]

RIMMON (Römșur), a city of the tribe of Simeon (Jos. xix. 7), mentioned by Zecharias as the extremity of the land of Judah (xiv. 10). Placed by Eusebius S. of Daron, 16 miles from Heetherusum. (Onomast. s. vv. Römșur, Rima.) He places another town of the same name 15 miles north of Jerusalem. (Ibid. s. v. Römmû.) [G. W.]

RIÓBE, in North Gallia, a name which appears in the Table on a road which passes from Andernagus (Scalv) through Calagum (Châlly). Rioche comes after Calagum, but the distance is not given.

A road, which appears to be in the direction of a Roman road, runs from Châlly to Orbi, a few miles north of the Seine; and D'Anville thinks that the name Orbi and the distance from Rioche to Condite (Monteure-sur-Tonne) enable us to fix Rioche at Orbi. [Condite, No. 2; Galacum.] [G. L.]

RIHA (Plin. iii. 1. s. 3, according to the Codex Reg., though the common reading is Ripopara), a place in Hispania Boetica, which according to Rosinoco (Dissert. Plin. ii. p. 11) occupied the site of the modern Condro del Rio. (Comp. Ukert, vol. ii. part i. p. 380.) [T. H. D.]

RIHA, a river on the E. coast of Thrace. (Plin. iv. 11. s. 18.) Reichard conjectures it to be the Konezik.

RISAIDIR (Polyb. ap. Plin. v. 1), a harbour on the W. coast of Mauretania, which may be identified with the Acra of the Ship-journal of Hamno (Aegina, Perip., § 5, ed. Müller). It now bears the name of Agadir, signifying in the Berber language (Paradis, Dictionnaire Berbère, p. 110) "a fortress," and is described as being the best roadstead along the coast of Marocco. Agader or Santa Cruz, which was called Guerguensem in the time of Leo Africanus, was walled round and strengthened by batteries in 1503 by Emmanuel, King of Portugal; but was taken from the Portuguese by the Moors in 1536. (Jackson, Marocco, p. 113; Journal of Geogr. Soc. vol. vi. p. 292.) [E. B. J.]

RHITHYMNA. [Rhithymyna.]

RITIUM (Pëtrëuv), a place in the south-east of Lower Pannonia, situated close to the Dunbe, and on the road leading to Tauranum. (It. Ant. p. 242; Poly. ii. 16. § 5; Tac. Pont.) It contained a garrison of Dalmatian cavalry. (Not. Imp., where the name is mis-spelt Ricium.) According to Muchar (Noricum, i. p. 265), its site is now occupied by the town of Tiel. [L. S.]

RITUMAGUS, in Gallia, a Mansio which is placed in the Anton. Itin. and in the Table on a road on the north side of the Seine from Rotomagus (Rosen) to Lutetia (Paris); and between Rotomagus and Petronalum. The distance of Ritumagus from Rotomagus is vii. in the Table and ix. in the Itin., which distance fixes Rutmagus near Redepont, at the passage of the Andelle, a small stream which flows into the Seine. [G. L.]

RIHOBODGDIUM PROM. (Rõhobdogh Prom, Poly. ii. 2. § 2), a promontory on the N. coast of Hibernia in the territory of the Róbódi, conjectured by Camden (p. 1411) to be Fair Head. [T. H. D.]

ROBÓBRÁRIA, a station on the Via Latina, 16 miles from Rome, the site of which is probably marked by the Osteria della Molaro, at the back of the bill of Tusculum (Itin. Ant. p. 305; Westphal, Rin. Kampagne, pp. 76, 97.) [Via Latina.] [E. H. B.]

ROBÔRETIM. [Gallaecca, Vol. i. p. 934, a.]

ROBRIKA, in Gallia, is placed by the Table on the north side of the Loire, on a road from Juliomagus (Angera) to Caesarodunum (Tours). The distance of Robrika from Juliomagus is xvii. and xviii. from Caesarodunum. D'Anville fixed Robrika at the distance of 16 Gallic leagues from Angera at the bridges of Longué, over the Latin, which flows into the Loire. He conjectures that Robrika contains the Celtic element Briga, a bridge or river ford, which is probable. Though D'Anville cannot make the two actual distances severally correspond to those of the Table, he finds that the whole distance between Angera and Tours agrees with the whole distance in the Table between Juliomagus and Caesarodunum. Wallenckner has shown in a Memôro cited by Ukert (Gallien, p. 481), that the ancient road deviated in many places from the modern road. [G. L.]

ROBUR. Ammianus Marcellinus (xx. 3) mentions a fortress named Robur, which Valentinian I., a.d. 374, built near Baflia (Basle) on the Rhine in Switzerland. Schœcklin guessed that Robur was on the site of the cathedral of Basle, but the words of Ammianus do not give much support to this conjecture: "Prope Basilianum, quod appellant acie Robur." Others have made other guesses. [G. L.]

RODUMNA, in North Gallia, is placed in the Table on a road between Samarobriva (Ambiens) and Augusta Suessium (Swissons). It is xx. from Samarobriva to Ratiunum, a distance which followed along the ancient road brings us to Roié, which represents Rodium; but D'Anville says that to make the ancient and modern distances agree we must go further, and as far as the belfry named Rozlitz. [G. L.]

RODUMNA (Rodionia), in Gallia, is one of the towns of the Sequani. (Poly. ii. 8. § 14.) Rodunna appears in the Table on a road which leads to Lugdunum (Lyons) through Forum Sequianorum. Rodunna is Rousane on the west bank of the Loire, which gave name to the former district of Rouannais. [G. L.]
THE SITUATION.

Rome was seated on the Tiber, and principally on its left bank, at a distance of about 15 miles from its mouth. The observatory of the Collegio Romano, which is situated in the ancient Campus Martius, lies in 41° 53' 52" N. lat., and 12° 28' 40" long. E. of Greenwich.

Rome lies in the vast plain now called the Campagna, which extends in a south-easterly direction about 90 miles from Cape Livorno, a little S. of Civita Vecchia, to the Circumvallation; whilst its breadth is determined by the mountains on the NE. and by the Mediterranean on the SW., in which direction it does not exceed about 27 miles in its greatest extent. Looking from any of the heights of Rome towards the E., the horizon is bounded from the N. almost to the S. by a nearly continuous chain of mountains, at a distance varying from about 10 to 20 miles. This side offers a prospect of great natural beauty, which, to the lover of antiquity, is still further enhanced by the many objects of classical interest which it presents.

In the extreme north, at a distance of about 20 miles, lies the round and isolated mass of Soracte. Then follows the Picturesque chain of the Sabine Apennines, in which the peaked and lofty summit of Lucrétia, now Monte Ceneri, forms a striking feature. A few miles farther S., at the point where the Anio precipitates its waters through the chain, lies Tibur, embosomed in its grey and sombre groves of olives. More southward still, and seated on the last declivities of the Sabine mountains, is the "frigidum Praeneste," celebrated for its sources and its temple of Fortune (Cic. Div. ii. 41), and, like the neighbouring Tibur, one of the favourite spots of Horace. (Od. iii. 4.) A plain of 4 or 5 miles in breadth now intervenes, after which the horizon is again intercepted by the noble form of Mons Albanus (Monte Carlo), which closes the line of mountains towards the S. This mass is clearly of volcanic origin, and totally unconnected with the Apennines. The mountain awakens many historical recollections. Its summit was crowned by the temple of Jupiter Latiaris, the common sanctuary and meeting place of the Latin cities, conspicuous from the surrounding plain, and even visible to the mariner. Beneath lay Alba Longa with its lake; at its southern foot Lavinium, and on its northern declivity Tusculum, consecrated by the genius and philosophy of Cicero. To the S. and SW. of Mons Albanus there is nothing to obstruct the view over the undulating plain till it sinks into the sea; but on the W. and NW. the prospect is bounded to a very narrow compass by the superior elevation of Mons Janucius and Mons Vaticanus.

The plain marked out by these natural boundaries is intersected by two considerable rivers, the Tiber and the Anio. The former, first called Alba, and afterwards Tiberis or Tibiris (Liv. i. 3; Plin. iii. 5. s. 9; Virg. Aen. viii. 330, &c.), entering the plain between Soracte and the Sabine chain between the limits of Alba Longa and the Anio, enters the Tiber, and, after increased volume passes through the city and discharges itself into the sea at Ostia. The course of the Tiber marked the limits of Etruria: the angular territory between it and the Anio is attributed to the Sabines; whilst on the southern side the line of the Anio and of the Tiber formed the boundary of Latium.

The Campagna of Rome consists of undulating ridges, from which scanty harvests are gathered; but the chief use to which it is applied is the pasturing of vast herds of cattle. These, with the picturesque herdsmen, mounted on small and half wild horses and armed with long poles or lances, are almost the only objects that break the monotony of a scene where scarce a tree is visible, and where even the solitary houses are scattered at wide intervals. Yet amidst this uniformity the Campagna must have presented a very different aspect. Even within sight of Rome it was thickly studded with cities at first as flourishing as herself; and in those times, when "every road of ground maintained its man," it must have presented an appearance of rich cultivation.

Such is the nature of the country in the immediate neighbourhood of Rome. The celebrated group of
seven hills—the site on which the eternal city itself 
was destined to rise—stands on the left bank of the 
Tiber. To the N. of them is another hill, the Mons 
Pincius or Collis Hortorum, which was excluded from 
the ancient city, but part of it was enclosed in the 
walls of Aurelian. The Tiber, at its entrance into 
Rome, very nearly approaches the foot of this hill, 
and then describes three bold curves or reaches; 
first to the SW., then to the SE., and again to the 
SW. The distance from the spot where the Tiber 
enters the city to the SW. point of the Aventine is, 
in a direct line, about 2 miles. At the extremity of 
the second, or most eastern reach, it divides itself 
for a short space into two channels and forms an island, 
called the Insula Tiberma. At this spot, at about 
300 paces from its eastern bank, lies the smallest 
but most renowned of the seven hills, the Mons 
Capitolinus. It is of a saddle-back shape, depressed in 
the centre, and rising into two eminences at its 
S. and N. extremities. On its N. or rather NE.

side, it must in ancient times have almost touched 
the Collis Quirinalis, the most northerly of the seven, 
from which a large portion was cut away by Trajan, 
in order to construct his forum. The Quirinalis is 
Somewhat in the shape of a hook, running first to 
the SW., and then curving its extreme point to the 
S. Properly speaking, it is not a distinct hill, but 
merely a tongue, projecting from the same common 
ridge which also throws out the adjoining Viminal 
and the two still more southern projections of the 
Esquiline. It will be seen from the annexed plan, 
without the help of which this description cannot be 
understood, that the Quirinal, and the southermost 
and most projecting tongue of the Esquiline, almost 
meet at their extremities, and enclose a considerable 
hollow which, however, is nearly filled up by the 
Viminal, and by the northern and smaller tongue of 
the Esquiline. These two tongues of the Esquiline 
were originally regarded as distinct hills, under the 
names of Cispius, the northern projection, and Op-

in the southern one; but they were afterwards considered as one hill, in order not to exceed the prescriptive number of seven. S. of the Esquiline lies Mons Calvisius, the largest of the seven; and to the W., of Mons Avinutius, the next largest, the NW. side of which is closely bordered on the Tiber. In the centre of this grand hill of hills lies the lozenge-shaped Mons Palatinus, facing on the NW. towards the Capitoline, on the NE. towards the Esquiline, on the SE. towards the Caelian, and on the SW. towards the Aventine.

It may be observed that, of the seven hills above described, the Quirinal and Viminal are styled colles, whilst the others, though without any apparent reason for the distinction, are called montes. It cannot depend upon their height, since those called colles are as lofty as those dignified with the more imposing name of montes; whence it seems probable that the difference originated in the ancient traditions respecting the Septimontium. A less important eminence, called Velia, which was not reckoned as a distinct hill, projected from the NE. side of the Palatine towards the Esquiline, and separated the two valleys which in after times became the sites of the Forum Romanum and of the Colosseum. The Germander is another but still smaller hillock, or spur, of the Palatine, on its western side.

On the opposite bank of the Tiber, Mons Vaticanaus and Mons Janiculius rise, as before remarked, to a considerably greater height than the hills just described. The former of these lies opposite to the Pincian, but at a considerable distance from the river, thus leaving a level space, part of which was called the Ager Vaticanus, whilst the portion nearest the river obtained the name of Prata Queretina. To the S. of Mons Vaticanaus, and close to the river, at the extreme western point of its first reach, the Mons Janiculus begins to rise, and runs almost straight to the S. till it sinks into the plain opposite to Mons Avinutius. The open space between this hill and the southernmost curve of the Tiber formed the Regio Transiberina. The sinuous course of the river from the Pincian to the Capitoline left a still more extensive plain between its left bank and the hills of Rome, the northern and more extensive portion of which formed the Campus Martius, whilst its southern part, towards the Capitoline, was called the Prae Flaminia.

From the preceding description it will be perceived that the Capitoline, Aventine, Caelian, and Palatine were completely isolated hills, separated from one another by narrow valleys. Those valleys which lay nearest the Tiber seem, in their original state, to have formed a marsh, or even a lake. Such was the Vallis Murcia, between the Palatine and Aventine, in later times the seat of the Circus Maximus; as well as the low ground between the Palatine and river, afterwards known as the Velabrum and Forum Boarium; and perhaps even part of the Forum Romanum itself. Thus, in the combat between the Romans and Sabines, on the spot afterwards occupied by the forum, the afflicted horse of Mettius Curtius, the Sabine leader, is described as carrying him into a marsh. (Liv. i. 12.)

Nay, there are grounds for believing that the Tiber, in the neighbourhood of Rome, formed at a very remote period an arm of the sea, as pure marine sand is often found there. (Niebuh, Lect. on Ethnogr. vol. ii. p. 59.)

In order to assist the reader in forming a clear idea of the nature of the Roman hills, we shall here insert a few measurements. They are taken from a paper by Sir George Schultich in the "Philosophical Transactions," An. 1777 (vol. lxvii. p. 2. p. 594), and have been esteemed the most accurate. (Bocker, Handbuch, vol. i. p. 83, note.) Other measurements by Calandrilli are also annexed. The latter are according to the Paris foot, which equals 12.785 inches English.

In ancient times, however, the hills must have appeared considerably higher than they do at present, as the valleys are now raised in many places from 15 to 20 feet above their former level, and in some parts much more. (Lamisden, Ant. of Rome, p. 137.) This remark is more particularly applicable to the forum, which is covered with rubbish to a great depth; a circumstance which detracts much from the apparent height of the Capitoline; whose sides, too, must formerly have been much more abrupt and precipitous than they now are. The much superior height of the Janiculum to that of any of the hills on the W. bank of the Tiber, will have been remarked. Hence it enjoyed a noble prospect over the whole extent of the city and the Campus Martius beyond, to the mountains which bound the eastern horizon. The view has been celebrated by Martial (iv. 64), and may be still enjoyed either from the terrace in front of S. Pietro in Montorio, or from the spot where the Fontana Paolina now pours its abundant waters:—

"Hinc septem dominos videre montes
Et totum ilicet asestare Roman,
Albanos quoque Tuscusloque colles
Et quoduncunque jacent sub urbe frigus."

CLIMATE.

The climate of Rome appears to have been much colder in ancient times than it is at present.

VOL. II.
sent. Dionysius (xii. 8) records a winter in which the snow lay more than 7 feet deep at Rome, when houses were destroyed and men and cattle perished.

Another severe winter, if it be not the same, is mentioned by Livy (v, 13) as occurring b.c. 398, when the Tiber was frozen over and the roads rendered impassable. (Cf. xl. 45, &c.) A very severe winter is also alluded to by St. Augustin (de Civ. Dei. iii. 17). That such instances were rare, however, appears from the minuteness with which they are recorded. Yet there are many passages in the classics which prove that a moderate degree of winter cold was not at all unusual, or rather that it was of ordinary occurrence. Thus Pliny (xxii. 28) speaks of long snows as being beneficial to the corn; and allusions to winter will be found in Cicero (ad Qu. Fr. ii. 12), Horace (Od. i. 9, iii. 10), Martialis (iv. 18), and in numerous other passages of ancient writers.

At the present time the occurrence of even such a degree of cold as may be inferred from these passages is extremely rare. One or two modern instances of severe winters are indeed recorded; but, generally speaking, snow is seldom fall, and never lies long upon the ground. This change of climate is accounted for by Dr. Arnold as follows: "Allowing that the peninsular form of Italy must at all times have had its effect in softening the climate, still the woods and marshes of Cispadane Gaul, and the perpetual snows of the Alps, far more extensive than at present, owing to the uncultivated and uncleared state of Switzerland and Germany, could not but have been felt even in the neighbourhood of Rome. Besides, even in the Apennines, and in Etruria and in Latium, the forests occupied a far greater space than in modern times; this would increase the quantity of rain, and consequently the volume of water in the rivers; the floods would be greater and more numerous, and before man’s dominion had completely subdued the whole country, there would be a large accumulation of water in the low grounds, which would still further increase the coldness of the atmosphere." (H. of Rome, vol. i. p. 449.)

But if the Roman climate is ameliorated with regard to heavy snows of its winters, there is no reason to believe that the same is the case with respect to that unhealthy state of the atmosphere called malaria. In ancient times, Rome itself appears to have been tolerably free from this pestilence, which was confined to certain tracts of the surrounding country. This may have been partly owing to its denser population; for it is observed that in the more thickly inhabited districts of Rome there is even at present but little malaria. Strabo, speaking of Latium, observes that only a few spots near the coast were marshy and unhealthy. (I. 231.) and a little further on gives positive testimony to the healthiness of the immediate neighbourhood of Rome (ἐπιστ. δετα, τα μεν προς την Ραιμιν εναισχυντα και τα προστατευον αυτη, τα δε προς την δαιλαταν τα μεν αναπο προς την δαιλαται ιτια ετισι ραιμιν, τα δε άλα προστατευον τε και παραιησεως αεριημενα, ib. p. 239). To the same purpose is the testimony of Livy, who represents the Camillus describing the hills of Rome as "subhibernudos colles" and of Cicero (de Rep. ii. 69): "locumque elegit et faviculos abundantem et in regione pestilentibus salubrem; colles enim sunt, qui cum perhantur ipsi, tum affertur umbra vallibus." It is surprising how Becker (Handbuch, p. 82) can interpret Cicero's meaning in this passage to be that the lower parts of Rome were unhealthy, when it is obvious that he meant just the reverse, — that the shade of the hills secured their healthiness. Little can be inferred with regard to any permanent malaria from the altars which we are told were erected to the goddesses Orbis and Febris on the Esquiline and in other places. (Cic. N. D. ii. 23; Plin. ii. 5; Valer. Max. ii. 5, § 6.) Even the most healthy spots are not always exempt from fevers, much less a populous city during the heats of autumn. The climate of Rome is at present reckoned unhealthy from June till October; but Horace dreaded only the annual heats. (Od. ii. 14, 15; Sat. ii. 6, 19.) The season is more accurately defined in his Epistle to Maecenas, where he places it in the ripening of the fig:

"dum fructus prima calore ignoti Designatorum decorat historiis atris."

(Ep. i. 7. 5.)

In the same epistle (v. 10) he seems to expect as a usual occurrence that the Alban fields would be covered with snow in the winter.

PART I. HISTORY OF THE CITY.

I. TRADITIONS RESPECTING THE FOUNDATIONS OF ROME.

The history of the foundation of Rome is lost in the darkness of remote antiquity. When the greatness of the city, and its progress in arts and letters, awakened curiosity respecting its origin, authentic records on the subject, if indeed they bad ever existed, were no longer to be found. Hence a license of conjecture which has produced at the least no fewer than twenty-five distinct legends respecting the foundation of Rome. To record all these, many of which are merely variations of the same story, would be beside the purpose of the present article. The student who desires a complete account of them will find them very clearly stated in Sir G. Cornewall Lewis's Inquiry into the Credibility of the early Roman History (vol. i. p. 394, seq.), and also, though not so fully, in Niebuhr's History of Rome (Eng. Transl. vol. i. p. 231, seq.), chiefly derived from the following ancient sources: Dionysius. Hi. Rom. 72 —74; Plut. Rom. 1, 2; Servius, ad Virg. Aen. i. 273; and Festus, s. v. Roma. The importance of the subject, however, and the frequent allusions to it in the classical writers, will not permit us to pass it over in perfect silence; and we shall therefore mention, as comprehensively as possible, some of the principal traditions.

All the theories on the subject may be reduced to three general heads, as follows:—I. That Rome was founded in the age preceding the Trojan War. II. That it was founded by the Anoons, or other persons, a little after the fall of Troy. III. That it was founded by Romulus, grandson of Numitor, king of Alba Longa, was its founder, several centuries after the Trojan War.

Many who held the first of these opinions ascribed the building of Rome to the Pelasgi, and thought that its name was derived from the force (Hepya) of their arms. (Plut. Rom. 1.) Others regarded it as having been founded by an indigenous Italian tribe, and called Valentin; a name of the same import, which, after the arrival of Evander and other Greeks, was translated into Rome. (Niebuhr, Hist. vol. i. p. 214.) A more prevalent tradition than either of the preceding was, that the city was first founded by the Arcadian Evander, about sixty years before the Trojan War. The fact that Evander...
settlement on the Palatine hill seems also to have been sometimes accepted by those who referred the real foundation of Rome to a much later period. The tradition respecting this settlement is interesting to the topographer, as the names of certain places at Rome were said to be derived from circumstances connected with it. The Palatium, or Palatine hill, itself was thought to have been named after the Arcadian town of Pallantium, the a and e having been dropped in the course of time; though others derived the appellation in different ways, and especially from Pallas, the grandson of Evander by his daughter Dyna and Herculea (Pans. viii. 43; Dionys. i. 32.) So, too, the Porta Carmentalis of the Servian city derived its name from a neighbouring altar of Carmenta, or Carmenta, the mother of Evander. (Dionys. L. c.; Virg. Aen. viii. 338.) Nothing indeed can be a more striking proof of the antiquity of this tradition, as well as of the deep root which it must have taken among the Roman people, than the circumstance that to a late period divine honours continued to be paid to Carmenta, as well as to Evander himself. Another indication of a similar tendency was the belief which prevailed among the Romans, and was entertained even by such writers as Livy and Tacitus, that letters and the arts of civilization were first introduced among them by Evander. (Liv. i. 7; Tac. Ann. xi. 14; Plut. Q. C. 3.)

The greater part of those who held the second opinion regarded Aeneas, or one of his immediate descendants, as the founder of Rome. This theory was particularly current among Greek writers. Sometimes the Trojans alone were regarded as the founders; sometimes they are represented as uniting in the task with the Albigenii. Occasionally, however, Greeks are substituted for Trojans, and the origin of Rome is ascribed to a son of Ulysses and Circe; may, in one case Aeneas is represented as coming into Italy in company with Ulysses. But though this view was more particularly Grecian, it was adopted by some Latin writers of high reputation. Sallust (Cat. 6) ascribes a Trojan origin to Rome; and Propertius (iv. 1), without expressly naming Aeneas as the founder, evidently refers its origin to him:

"Hoc qudemque vides, hoope, qua maxima Roma est,
Aute phrygum Aenean collis et herba fuit;"

though in the same passage he also refers to the occupation of the Palatine hill by Evander. One very prevalent form of this tradition, which appears to have been known to Aristotle (Dionys. i. 72), represents either a matron or a female slave, named Romé, as burning the ships after the Trojans had landed. They were thus compelled to remain; and when the settlement became a flourishing city, they named it after the woman who had been the cause of its foundation. The third form of tradition, which ascribed the origin of Rome to Romulus, was by far the most universally received among the Romans. It must be regarded as ultimately forming the national tradition; and there is every probability that it was of native growth, as many of its incidents serve to explain Roman rites and institutions, such as the worship of Vesta, the Lupercalia, Larentalia, Lemuria, Arval Brothers, &c. (Lewis, vol. i. p. 409.) The legend was of high antiquity among the Romans, although inferior in this respect to some of the Greek accounts. It was recorded in its present form by Fabius Pictor, one of the earliest Roman annalists, and was adopted by other ancient antiquarians and historians (Dionys. i. 79). Nay, from the testimony of Livy we may infer that it prevailed at a much earlier date, since he tells us (s. 23) that an image of the she-wolf suckling the two royal infants was erected near the Ficus Luminalis by the curule aediles, n. c. 296.* The story is too well known to be retold here. We shall merely remark that although according to this tradition Aeneas still remains the mythical ancestor of the Romans, yet that the building of two cities and the lapse of many generations intervene between his arrival in Italy and the foundation of Rome by his descendant Romulus. Aeneas himself founds Laviniun, and his son Ascanius Alba Longa, after a lapse of thirty years. We are little concerned about the sovereigns who are supposed to have reigned in the latter city down to the time of Numitor, the grandfather of Romulus, ex-

* It has been conjectured that this was probably the same statue mentioned by Cicero (de Div. i. 12, Cat. iii. 8), and described as having been struck by lightning; but this can hardly be the case, as the image described by Cicero stood in the Capitol. A bronze statue answering Cicero's description is still preserved in the Capitoline Museum at Rome, which is regarded by Niebuhr as a genuine relic (Hist. vol. i. p. 210), and has been immortalized in the verses of Byron. A modern critic finds it a production too clumsy for the state of Roman art at the time assigned by Livy, and thinks that the holes in the hind-leg of the wolf were not produced by lightning, but arise from a defect in the casting. (Braun, Ruins and Museums of Rome, p. 81.) Fabius Pictor, however, who mentions this statue in the passage cited from his work by Dionysius (L. c.), expressly remarks the primitive nature of its workmanship—"κάκη ψηφιστή παλαιός ἄγγειος,—though considerably less than a century must have elapsed between his time and the date of its erection. It was rude, therefore, even when compared with the state of Roman art towards the end of the third century B.C., though it had been erected only at the beginning of that century. Mommsen is inclined to believe that the Capitoline wolf is the genuine one erected by the Quiniani and described by Livy, from the circumstance of its having been found near the arch of Severus. (De Cumulo Roma, in the Annull. dell' Instituto, 1844, vol. xvi. p. 300.) Whoever has seen the group will perhaps at all events agree with Winckelmann that the twins are evidently of a different period from the wolf.
cept in so far as they may serve to ascertain the era of Rome. The account which has the most preten-
sions to accuracy is that given by Dionysius (i. 65, 70, 71) and by Diodorus (Fl. lib. viii. vol. iv. p. 21, Bifont.). The reigns here given, allowing five years for that of Arneus, who died in the seventh year after the taking of Troy, is 432 years—that is, down to the second year of Numitor, when Rome was founded by Romulus, in the first year of the 7th Olympiad. Now this agrees very closely with Varro's era for the foundation of Rome, viz., 753 n. c. For Troy having been taken, according to the era of Eratosthenes, in 1184 n. c., the difference between 1184 and 753 leaves 431 years for the duration of the Alban kingdom.

Varro's date for the foundation of Rome is that generally adopted. Other authorities place it rather later: Cato, in 751 B. C.; Polybios, in 750; Fabius Pieter, in 747.

This is not the place to enter into the question whether these dates of the Alban kings were the invention of a later age, in order to satisfy the requirements of chronology. It will suffice to remark that the next most prevalent opinion among those Romans who adopted the main points of this tradition assigned only three centuries to the Alban kings before the foundation of Rome. This was the opinion of Virgil (Aen. i. 272).

"Hie jam tercentum totous regnabitur annos,"

—of Justin, of Trogus Pompeius (xliii. 1), and of Livy (i. 29), who assigns a period of 430 years for the existence of Alba, and places its destruction a century after the foundation of Rome. At all events the preponderance of testimony tends very strongly to show that Rome was not founded till several centuries after the Trojan War. Timaeus seems to have been the first Greek writer who adopted the account of the foundation of Rome by Romulus. (Niebuhr, Hist. vol. i. p. 218.)

II. The City of Romulus.

The Roman historians almost unanimously relate that Romulus, traditionally considered as Romulus on the Palatine. (Liv. i. 7; Vell. iii. 24; Tac. Ann. xii. 24; Dionys. i. 88; Gall. xiii. 14; Ov. Tr. iii. 1, 29, &c.) The ancient settlement of Evander on the same hill, as well as a city on the Capitoline called Saturnia (Varr. L. L. v. § 42, Mill.; Festus, p. 322, Mill.), and another on Mons Jani-
culius called Aenea or Antipolis (Dionys. i. 73; Plin. iii. 9), must be supposed to have disappeared at the time of its foundation, if indeed they had ever existed. It seems probable enough, as Dionysius says, that villages were previously scattered about on the seven hills; but the existence of a place called Vat-
tea or Vaticum, on the right bank of the Tiber, and of a Quirinum on the Quirinal, rests solely on the conjecture of Niebuhr (Hist. vol. i. p. 223, seq., 289, seq. Eng. Trans.)

Pomerium.—Tacitus has given in the following passage the fullest and most authentic account of the circuit of the Roman city: "Sed imitum con-
debat, et quod primum Romam passaverat, posuerat hand abaurum rear. Igitur a foro Boario, ubi aerarium tauri simulacrum adaequirum, quia id genus animalium aratro subditur, sucesse designandi oppidi coeptus, ut magnum Herceius aram ampletrecterat. Inde certis spatii interjecti lapides, per ima montis Palatini ad aram Consi, mox ad Curias Vetere,
tum ad scaculum Larum; forumque Romanum et Capitolum non a Romulo sed a Tito Tatius additum urbi credidere." (Ann. xii. 24.)

According to this description, the point where the furrow of the pomerium commenced was marked by the statue of Orcus, whence the name of the Roman Boarium was by some writers afterwards derived. The Forum Boarium lay under the westermost angle of the Palatine; and the furrow probably began a little beyond the spot where the Aenean Argentarius now stands, close to the church of S. Giorgio in Velabro, embracing the altar of Hercules, or Ara Maxima, which stood in the same forum:

"Constitutique sibi, quae Maxima dicitur, aram, Hic ubi pars urbis de borem nomen habet." (Ov. Fast. i. 1581.)

Hence it proceeded along the north side of the Vallis Murcia (Cirens Maximus), as far as the Ara Consi. According to Becker (Handbuch, p. 98, de Muria, &c. p. 11), this altar must be sought towards the lower end of the Circus, near the southermost angle of the Palatine; but he gives no authority for this opinion, which is a mere assumption, or rather a petitio principii from the passage before quoted, when the name of this point that it must necessarily be referred to the spot indicated. (Handb. p. 468, and p. 665, note 1438.) But there is nothing at all in the words of Tacitus to warrant this inference; and there seems to be no good reason why we should dispute the authority of Tertullian, from whom we learn that the Ara Consi stood near the first metus of the circus, and therefore somewhere near the middle of the SW. side of the Palatine (et metus a Cupidinum in Cireno desinit ad primas metas de Smyr. x). Hence, after turning up, of course, the southermost point of the Palatine, where the Septizonium of Severus afterwards stood, the pomerium proceeded through the valley between the Palatine and Caelus (Vtc. de S. Gregorio) to the Curiae Vetere. The situation of this last place has been the subject of much dispute. Niebuhr (Hist. vol. i. p. 288), though with some hesitation (ib. note 735), and Bunsen (Beschreibung, vol. i. p. 138), place the Curiae Vetere near the baths of Titus on the Esquiline, and they are followed by Becker (Handb., vol. ii. p. 143). This view appears, however, to be founded on no authority, except that of the modern writers Blondus Flavius and Lucius Faunus, who state that the part of the Esquiline called Carinae, and even the baths of Titus themselves, were designated in ancient notarial documents as "Curia Vetere." But, first, it is highly improbable that Tacitus, in his description, should have taken so long a stride as from the Ara Consi, in the middle of the SW. side of the Palatine, to the Esquiline, without mentioning any intervening place. Again; if the line of the pomerium had proceeded so far to the N., it must have embraced the Vela as well as the Palatine, as Bunsen assumes (l.c.); and this must have destroyed that squareness of form which, as we shall see further on, procured for the city of Romulus the appellation of "Roma Quadrata." That the furrow was drawn at right angles following the natural line of the hill we are assured by more than one authority (тριγωνικόν καθαρον σχήμα της λήμφης, Dionys. i. 88; antiquissimum pomerium, quod a Romulo instituto est, Palatini montis radiatius terminabantur, Gall. xiii. 14). But, further, it may be shown from satisfactory testimony that the Curiae Vetere were not seated on the Esquiline, but between the Palatine and Cachan. Thus the Notitia, in de-
scribing the 10th Regio, or Palatium, marks the
boundaries as follows, taking the reverse direction
of that followed by Tacitus: "Continet casam Romuli,
aedem Matris Deum et Apollinis Rhamnusii, Pentas-
pyum, domum Augustinianam et Tiberianam, Au-
gratorium, aream Palatinam, aedem Jovis Victorii,
domum Dionis, Curiam Veterem, Forumum Respici-
etem, Septizonium Divi Severi, Victorianam Germani-
cicanam, Lupercal."

The Curiae Veteres are here mentioned in the singular number; but there is some
authority for this deviation. Thus Ovid (Fast. iii. 139) says:

"Janna tune regis posta vireb arbore Phoebi;
Aut tua tuas idem, Curia prisc, faxes."

where the Curia Prisca is identified with the Curiae
Veteres by the following passage in Macrobius:

"Eodem quoque ingrediens nomen tam in Regia
Curiisque atque fluminum dominus, laureae veteres
novis laureis mutabantur." (Sat. i. 12.) Now, in order
to determine the precise situation of the Curia Vetus of
the Nottia, it must be borne in mind that the "Domus
Augustiniana," or palace of Augustus, occupied a
considerable portion of the NE. side of the Palatine,
commencing at the N. corner, as will be shown in
the topography of the latter city, and en-
abling probably opposite to the arche of Titus, where
the entrance was situated. Proceeding eastward,
along the same side of the hill, we find enumerated
the Auguratorium and Aera Palatina. Then follows
the temple of Jupiter Victor, which we must not
confound, as Becker does (Hanse. p. 100, cf. p. 422,
note 847; see Preller, Regiones, p. 186), with that
of Jupiter Stator, since the latter, according to the
Nottis, lay rather more northwards in the 4th
Regio, and probably on or near the Summa Sacra Via.

That of Jupiter Victor, then, must have LIIN
the E. of the palace, and as there is but a short
space left on this side of the hill, it is probable that
the Domus Dionis must be placed at least at its
extreme NE. angle, if not on the side facing the
Caelian. The Curia Vetus, of course, lay more to
the S., and perhaps towards the middle of the E.
side of the Palatine. Its site near the temple (or
statue) of Fortuna Respiciens is confirmed by the
Basia Capitolina, which mentions in the 10th Regio
a "Vicus Curiarium" near to the mother of Fortuna
Respiciens, (Gruter, Inser., c. l.) The fourth point
mentioned by Tacitus— the Aedes Larum—lay on
the Summa Sacra Via, and therefore at about the
middle of the NE. side of the Palatine hill. ("Aedem
Larum in Summa Sacra Via," Mon. Auctor.; "Ancus
Martius (habuit) in Summa Sacra Via, ubi aedes
Larum est," Solin. i. 24.) At this point the historian
finishes his description of the pomerium of Romula,
and proceeds to say that the forum and Capitl
were believed to have been added to the city not by
that monarch but by Titus Titus. Hence he is
charged with leaving about a third of the pomerium
undefined; and, in order to remedy this defect,
Becker (de Mur. o.c. p. 14, Hanse. p. 102), not
without the sanction of other critics and editors,
proposes to alter the punctuation of the passage, and
to read "tum ad sacellum Larun forumque Ro-
manum; et Capitolium non a Romulo," &c. But in
truth little is gained by this proceeding— only the
short space from the arch of Titus to the N. point
of the Palatine, whilst the remaining part of the
line from thence to the Forum Boarium still remains
undescribed. But what is worse, even this little is
gained at the expense of truth; since, strictly speak-

ing, a line drawn from the Aedes Larum to the forum
would include the temple of Vesta (S. Maria Liber-
atrix), which, as we learn from Dionysius (l. 63),
lay outside the walls of Romulus. Moreover, ac-
cording to the emended punctuation, it might be
doable whether Tacitus meant that the forum was
included in the Romulian city, or not; and it was
apparently to obviate this objection that Becker
proposed to insert hoc before et (hoc et Capitolium).
But these are liberties which sober criticism can
hardly allow with the text of such a writer. Tacitus
was not speaking like a common topographer or
regiornan, who is obliged to identify with painful
accuracy every step as he proceeds. It is more con-
sistent with his sententious style that, having car-
ried the line thus far, he left his readers to complete
it from the rough indication— which at the same
time conveyed an important historical fact— that
the forum and Capitol, which skirted at some dis-

tance the northern angle of the hill, were added by
Tatius, and lay therefore outside the walls of Ro-

mulus. His readers could not err. It was well
known that the original Rome was square; and,
having indicated the middle point in each of the
sides, he might have been charged with dullness had
it been written, "tum ad sacellum Larum, inde ad forum

---

**PLAN OF THE ROMULIAN CITY.**

A. Mons Palatini.
B. B. Mons Capitolinus.
C. Cella Quirinalis.
D. Mons Aventinus.
E. Forum Romanum.
a. a. Velia.
b. b. Latorius Lucol.
c. c. Terme.
d. d. Clavis Capitolina.
e. e. Sacra Via.
f. f. Summa Sacra Via.
The Roman augurs: "Pomœrium est locus intra agrum effatum per tolius urbis circuitum poen muros regionibus certis determinatums, qui facit finem urbani auspicii" (xiii. 14). From this passage it appears that the pomœrium itself stood within another district called the "ager eflatus". This was also merely a religious, or augural, division of territory, and was of five kinds. viz. the ager Romanus, Gabinius, peregrinus, hosticus, and incertus, or the Roman, Gabinian, foreign, hostile, and doubtful territories. (Varr. v. § 53, Mill.) These agri or territories were called "effati", because the augurs declared (effati sunt) after this manner the bounds of the celestial auguries taken beyond the pomœrium. (I. d. § 53, Mill.) Hence in this sense the Ager Romanus is merely a religious or augural division, and must not be confounded with the Ager Romanus in a political sense, or the territory actually belonging to the Roman people, It was the territory declared by the augurs as that in which alone augurs were to be taken respecting foreign and military affairs; and hence the reason why we find so many accounts of generals returning to Rome to take the auguries afresh. (Liv. viii. 30, x. 3, xxiii. 19, &c.)

It is impossible to determine exactly how much space was left for the pomœrium between the furrow and the wall. In the case of the Roman city, however, it was probably not very extensive, as the nature of the ground, especially on the side of Mons Caecilius, would not allow of any great divergence from the base of the hill. Besides, the boundaries already laid down on the N. side, as the Sacellum Larum and Aedes Vestae, show that the line ran very close under the Palatine. This question depends upon another, which there is no evidence to determine satisfactorily, namely, whether the wall crowned the summit of the hill or ran along its base. The former arrangement seems the more probable, both because it was the most natural and usual mode of fortification, and because we should otherwise in some parts hardly find room enough for the pomœrium. Besides, since at least of the gates of the Romanun city, as we shall see further on, was approached by steps, and must therefore have stood upon a height. There seems to be no good authority for Niebuhr's assumption (Hist. vol. i. p. 287, seq.) that the original city of Romulus was defended merely by the sides of the hill being escarped, and that the line of the pomœrium was a later enlargement to enclose a suburb which had sprung up round about its feet. It is surprising how Niebuhr, who had seen the ground, could imagine that there was room for such a suburb with a pomœrium. Besides, we are expressly told by Tacitus (L. c.) that the line of the pomœrium which he describes was the beginning of building the city (initium condendi). Indeed Niebuhr seems to have had some extraordinary ideas respecting the nature of the ground about the Palatine, when he describes the space between that hill and the Caecilius, now occupied by the road called Via di S. Gregorio, as "a wide and convenient plain!" (Hist. i. 389, cf. p. 391.) An obscure tradition is mentioned indeed by Greek writers, according to which there was a Roma Quadrata distinct from and older than the city of Romulus (προ δε της μεIssας ταυτης Ρώμης, υν ἑκτεντο Ρώμης περι την Φασιόνην οἰκον ὑπ Παλατίνοις, τετράγωνος ἑκτεντο Ρώμη παρα Ρώμης παλαιοτέρων τόπων, Dion Cass. Fr. Inf. 3, 3, p. 10, S.; cf. Tzetzes, ad Lycur. v. 1232). But, as Becker observes (Handb.)
HAEC EST RSA ROMANA ECCLESIA I. (L. L. v. § 144, MÜLL.)

The gate here called Mucio by Varro is the same as that called Mugio by other writers, by an ordinary interchange of c and g, as in Caesars, in Gains, Cermalus for Germulis, &c. Thus Varro himself, as cited by Nonius (xii. 31. p. 531, m.) is made to call it Mugio. In Paulus Dianæus (p. 144, MÜLL.) we find the adjective form Mugionia, erroneously formed, however, from Mugius, the name of a man; and lastly, the form Mugonia in Solinus (i. 24).

The most important passage for determining the situation of this gate is Livy's description (i. 12) of the battle between the Sabines and Romans. The former occupy the Capitoline hill, the latter are arrayed in the valley beneath. The Romans mount to the attack, but are repulsed and driven back towards the "old gate" ("ad veterem portam") of the Palatium. Romulus, who is stationed on the high ground near it (the summit of the Vela), vows to erect on this spot a temple to Jupiter, under the name of "Stator," if he arrest the flight of the Romans. At this time the Sabines had driven back the Romans to the extreme of the town and the forum, and the Matres Curtius had even penetrated nearly to the gate of the Palatium. The Romans, however, rally; the Sabines are repulsed, and the combat is renewed in the valley between the two hills. Dionysius confirms the site of the gate by describing it as leading to the Palatium from the Summa Sacra Via; which street, as will be seen when we come to describe the topography of the latter city, crossed the ridge of the Vela at this spot (Ῥωμαίων μετὰ Θερμωνίας Δ� (ἰσόν Πριστάρα) παρά ταῖς καλουμέναις Μυκοκίναις πόλαις, αἱ φερομέναι εἰς τὸ Παλάτιον ἐκ τῆς ἱερᾶς ἀδύν, ii. 50). The spot is further identified by a graphic passage in Ovid, where the citizen who serves as Cicero to his book conducts it from the fora of the Caesars along the Sacra Via, and, having crossed the eastern extremity of the Forum Romanum, arrives at the temple of Vesta; then proceeding onwards up the Sacra Via, first points out the former residence of Numa, and then, turning to the right, indicates the gate of the palace:

"Paruit et decursum, Haece sunt foro Caesari, iniquit; Hacea est sacrar quasi versus seum habit;
Ilic locus est Vestae, qui Pallada servat et ignem;
Ilic fuit antiqui regia pars Numea.
Inde petens dextram, Porta est, alt, ista Palati;
Ilic Stator; hoc primum condita Roma loco est."

(Ti. i. 27.)

The site of the temple of Jupiter Stator here given is confirmed by other writers. Thus it is described by Livy (i. 41) as near the palace of Tarquinus Priscus, from the windows of which, overlooking the Nova Via, Tarquinius addressed the people. Now, as will be shown in its proper place, the Nova Via ran for some distance parallel with the Sacra Via, and between it and the Palatine, and, at its highest point near this gate, was called "Summa," like the Sacra Via. Thus Solinus (i. 24): "A Tarquinus Priscus ad Mugoniunum Portam super Summanum

3 A 4
Novam Viam (Jabubavicti)." The site of the temple of Jupiter Stator near the Summa Sacra Via is uncertain. Becker asserts without adopting the proof adduced by Becker from the equestrian statue of Cloelia, the history of which he completely misunderstands. The passage from Pliny (xxxiv. 13) which he quotes (note 156) relates to another and apparently a rival statue of Valeria, the daughter of Publilia, who disputed with Cloelia the honour of having swum the Tiber, and escaped from the custody of Porsona. Indeed, the two rival legends seem to have created some confusion among the ancients that at one time there was a disputed pass in the time of Plutarch whether the existing statue was that of Cloelia or Valeria. (Popul. 19.) Becker confounds these two statues, and asserts (note 155) that Pliny, as well as Dionysius, speaks of the statue of Cloelia as no longer existing in his time. But Pliny, on the contrary, in the very chapter quoted, mentions it as still in being: "Cloelia etiam status est aequitis." It was the statue of Valeria that had disappeared, if indeed it had existed at all, from the time of the Pelasgi. Pliny, therefore, must share the casting bestowed by Becker on Plutarch and Servius for their careless topography; whose assertion as to the existence of the statue in their time he will not believe, though the latter says he had seen it with his own eyes (ad Aen. vili. 646). The only ground which Becker has for so peremptorily contradicting these three respectable authorities is a passage in Dionysius (v. 35); who, however, only says that when he was at Rome the statue was restored in its place (raeay YnV KiiAeC XPXX 7i) and that on inquiry he was told that it had been destroyed (cdavainy) in a fire that had raged among the surrounding houses. But Dionysius may have been misinformed; or perhaps cdavainv is to be taken in its literal sense, and the statue was only removed for a while out of sight. We may assume, therefore, that it had been restored to its original position in the period which elapsed between Dionysius and Pliny, and that it continued to adorn the Summa Sacra Via for some centuries after the time of the former writer.

The preceding passages abundantly establish the site of the Porta Muciaenis at that spot of the Palatine which faces the Summa Sacra Via, or present arch of Titus; nor does it seem necessary, by way of further proof, to resort to the far-fetched argument adduced by Becker from the nature of the ground (Handb. p. 113), namely, that this is the only spot on the NE. face of the hill which offers a natural ascent, by the road (Via Palatina) leading up to the Convent of S. Romonancia. That road, indeed, has all the appearance of being an artificial rather than a natural ascent, and may have been made centuries after the time of Romulus. Unfortunately, too, for Becker's round assertion on this subject (Handb. p. 109), that we must ab initio embrace as an incontrovertible principle that gates are to be sought only where the hill offers natural ascents, we find that the only other known gate, the Porta Romana, was, on his own showing, accessible only by means of steps. For the site and this gate Varro again our principal authority. We have seen in the passage before quoted from that author that it opened into the Nova Via, near the Certulium Volupiae, by means of steps. Varro again alludes to it in the following passage: "Hoc sacrificium (to Area Larentia) fit in Velabro, qua in Novam Viam exitur, ut ait quidam, ad sepulcrum Aecae, ut quod ibi proprie factum Dies Marinus servilbus asser- dete: qui uterque locus extra urbem antiquam fallit, non longe a Porta Romana, de quae in priore libro dixi." (L. vi. § 24, Mull.) The site of the Certulium Volupiae cannot be determined; but the Velabrum is one of the most certain spots in Roman topography, and is still indicated by the church which bears its name, S. Giorgio in Velabro. We learn from both these passages of Varro—for Scaliger's emendation of Nova Via for Novalia in the former is incontestable—the exact site of the Porta Romana is marked. Becker appears to have confounded the Velabrum near the spot where the Nova Via entered it, and as the Porta Romana was not far from this place, it follows that it must have been at the lower end of the street or in the intra Nova Via. Varro's account is confirmed by Festus (p. 262, Mull.), who, however, calls the gate Romanus instead of Romanula: "Sed porta Romana instituta est a Romulo inimico civio Victoriae, qui locus gravis in quadrum formatus est; appellata autem ab Aen. furmatns, a porta Romulae, qui, adhuc autem, porta Romana erat Romanum." Here the same steps are adduced to that are mentioned by Varro. The Clavis Victoriae was that part of the NW. declivity of the Palatine which overlooked the Nova Via. It was so named either from a temple of Victory seated on the top of the hill ("in aedem Victoriae, quae est in Palatio, pertulere dieum," Liv. xxii. 14), or more probably—as this temple was not dedicated by L. Postumius till c. 295—from an ancient grove, sacred to Victory, on this side of the Palatine, near the Lupercal (Dionys. i. 32), the tradition of which, though the grove itself had long disappeared, probably led to the temple being founded there.

The Romanesque city must undoubtedly have had at least a third gate, both from the testimony of Pliny and because it cannot be supposed that its remaining two sides were without an exit; but there is no authority to decide where it lay. Becker thinks that it was seated at the southernmost point of the hill; but this, though probable enough, is nothing more than a conjecture. Becker sought the site mentioned by Varro, was most probably as old as the time of Romulus, though it certainly never belonged to the Palatine city. Its situation and true nature will be discussed presently. We find, however, a gate called Ferentium mentioned by Plutarch (Rom. 20), who relates that Romulus, after the murder of Tatius, which was followed by visible signs of the divine anger, purified Rome and Laurentum by rites which still continued to be observed at that gate. We also find an account in Festus (p. 213) of a Porta Portilatana, which was so called "propter aliqua piscula quae ibidem erat," and some have assumed (v. Müller, ad Fest. I. c.) that these two gates were identical. It is well known that the Roman gates had sometimes two names; and this seems especially probable in the case of those which had some religious ceremony connected with them. Becker (Handb. p. 177) rejects, however, with something like indignation the idea that such a gate could have belonged to the Romanesque city, and would therefore either place it in the Lucus Ferentius, or alter the text of Plutarch, his usual expedient. Altogether, however, it does not seem quite so improbable that it may have been the third and missing gate of Romulus, since its name indicates its site near the S. extremity of the Palatine, just where we are in want of one.
III. Progress of the City till the Time of Servius Tullius.

We can only pretend to give a probable account of the progress of the city under the first five kings. The statements on the subject in ancient authors are divergent, though the contradictions are not so apparent as they may seem. In the course of his reign Romulus added to his original city on the Palatine the Capitoline hill, then called Saturnus, the Caesian, and then called Querquetulans, and the Aventine. But we must distinguish the nature of these additions. Dionysius (ii. 37) represents the Capitoline and Aventine as enclosed by Romulus with a strong fortification consisting of a ditch and palisades, chiefly as a protection for herdsmen and their flocks, and not as surrounded with a wall, like the Palatine. Yet it is evident from the account of the attack of the Sabines on the Capitoline (Liv. i. 11) that it must have been regularly fortified, and we have a gate. Romulus had already marked it out as the eur or citadel of his future city; and when he had defeated the Caesinenses and slain their king, he carried thither and dedicated the first spolia opima at an oak-tree held sacred by the shepherds, but which now became the site of the temple of Jupiter Feretrius (ib. c. 10). When Livy tells us that this was the first temple consecrated at Rome, he probably means when the exception of those which were usually erected at the foundation of every city. That the Capitoline was a much more important hill in the time of Romulus than the Aventine and Caesian is also shown by the fact of his opening upon it the asylum for slaves and fugitives, in order to increase the population of his city. This asylum was situated somewhere in the hollow between the two eminences of the Capitoline, and the site retained till a late period the name of "Inter duos locos" (ib. c. 10; Dionys. ii. 15; Strab. v. 230; Plut. Rom. 9; Ov. Fast. iii. 431, &c.).

The Capitoline hill, or Mons Saturninus, appears then to have been a real addition to the Romulean city; but the Aventine seems to have remained down to the time of Ancus Martius a mere rudely fortified enclosure for the protection of the shepherds. Various etymologies, all perhaps equally unsatisfactory, have been invented for the name of Aventine. One legend derived it from an Alban king so called, who was buried on the hill (Liv. i. 3; Varr. L. L. v. § 43, Müll.; Paul. Diaec. p. 19, Müll.), another from a descendant of Hercules, mentioned by Virgil (Aen. vii. 656). Servius in his commentary on this passage makes Aventine a king of the Aborigines, but adds from Varro that the Aventine was assigned by Romulus to the Sabines, who named it after the Avena, one of their rivers. This account is not found in the remains which we possess of Varro, who, however (l. c.), adds a few more etymologies to that already given. Of these, one, taken from Naevius, derives the name of the hill from the birds (aves) that resorted thither from the Tiber, to which Virgil also seems to allude (Aen. viii. 233). Varro himself thinks that it was so called "ab adventu," because, being formerly separated from the other hills by a marsh or lake, it was necessary to go to it in boats; whilst others derived the name "ab adventu luminum," because, having upon it a temple of Diana common to all the Latins people, it was a place of great resort. But these various etymologies only prove that nothing certain was known.

The preponderance of authority tends to show that the Capian hill was also colonised in the time of Romulus. Caius Vibennus, or Caelius Vibenna, an Etruscan general who came to the assistance of Romulus against Tatinus and the Sabines, had this hill assigned to him and settled upon it with his army; whence it derived its name of "Caelius," it having been previously called Querquetulans from its woods of oak. (Varr. L. L. v. § 46; Müll.; Dionys. ii. 36; Paul. Diaec. p. 44, Müll.) The traditions respecting the incorporation of this hill are, however, very various. Some authors relate that it was added by Tullus Hostilius (Liv. i. 30; Entrop. i. 4; Aur. Vict. Vir. Ill. 3), others by Ancus Martius (Cic. Rep. ii. 18; Strab. v. p. 234) whilst some, again, place the arrival of Caeles as low down as the reign of Tarquinius Priscus. (Tac. Ann. iv. 65; Festus, p. 335, Müll.) The last account probably arose from some confusion between the arrival of the Tuscanians under Romulus, and a subsequent one under the Tuscan king Tarquinius. But the sacred books relating to the Argive chapels established by Numa mention the hill under the name of Caelius (Varr. ib. § 47), and it therefore seems probable that the arrival of Vibenna must be placed under Romulus. This Tuscan settlement appears, however, not to have been permanent. After the death of their leader a portion of his followers incurred the suspicion of the Romans, and were removed from the hill to a less defensible position on the plain, apparently between the Palatine and Capitoline, where they founded the Vicus Tuscus; whilst the remainder were transferred to the adjoining hill called Caeculius (Varr. ib. § 46). Whence also Propertius:

"Et tu, Roma, meis trullnisti praeemia Tuscis
Unde hodie vicus numina Tuscos habet;
Tempore quo sociis venit Lycomedius armis,
Atque Sabina feri contubidi arma Tati."—

(iv. 2. 49.)

Here the Tuscan general is named Lycomedius, which seems to be derived from Lucumon, the name given to him by Dionysius (ii. 42, 43), and which was probably only an appellative for an Etruscan prince. The hill having been vacated by this removal of the Tuscanians, was again colonised under a subsequent king, which in some degree reconciles the conflicting accounts; but all we shall say further about it at present is, that in the reign of Tiberius an attempt was made to change its name again, and to call it Mons Augustus, either because Tiberius had laid out a great deal of money there in repairing the damage occasioned by a fire, or from a decree of the senate, which appointed that name to be used because a statue of Tiberius had been saved from the flames. (Tac. Ann. iv. 64; Suet. Tib. 48.) But this name never came into common use.

Legend of Tarpeia.—Porta Capena and Temple of Juno.—The story of Tarpeia involves two or three points of topographical interest. It shows that the Capitoline hill was regularly fortified, and had a gate. The deed of Tarpeia, whether treacherous or patriotic, for there are two versions of her history, occasioned a change in the name of the hill. It had previously been called Mons Saturninus, from Saturn, to whom it was sacred ( Fest. p. 322); and there was a tradition that some Eleusins, who had obtained their dismissal from the army of Hercules on his return from his western expedition, had been attracted to settle upon it by the resemblance of its name to that of Kροϊνος, a mountain of their own country. (Dionys. i. 34.) After the foundation of the Capitol
its appellation, as we shall have occasion to relate further on, was again altered to that which it ever afterwards continued to bear; yet one part of the southern portion of the hill still retained the name of Ropes Tarpeia, from the vestal having been buried on it. (Varr. L. L. v. § 41, Mill.) Dionysius (ii. 40) adopted the account of Piso, who attributed the death of Tarpeia to a patriotic attempt to deceive the Sabines, in preference to that of Fabius, which brands her with disloyalty. The latter, however, seems to have obtained most currency among the Romans; and Propertius even derives the name of the hill from her father, Tarpeius, who committed suicide in a garrulous manner:—"O Fortuna morte est cognomen altissimi." (v. 4. 93).—whilst he brands the tomb of the vestal with infamy. ("Tarpeiae turpe sepulcrum," v. 4. 1). The obscure legend of the Porta Pandana, which existed somewhere on the Capitol in the time of Varro (L. L. v. § 42), is also connected with the story of Tarpeia; and Tatius is said to have stipulated, in the treaty which he made with Romulus, that this gate should always be left open. (Fest. p. 563, and Paul. Diaec. p. 230, Mill.) According to an incredible account current among Romans (i. 14), it was a gate of the old Saturnian city, and was originally called Porta Saturnia; nor is the version of Polyaeus more satisfactory (Stratag. viii. 35), who refers the story of the Porta Pandana to the treaty with the Gauls, by which the Romans engaged always to leave one gate open, but, in order to evade the consequences, built it in an inaccessible place.

After peace had been concluded between Romulus and Tatius, they possessed two distinct but united cities,—the former reigning on the Palatine, the latter on the Capitoline, and dwelling on the spot where the temple of June Moneta afterwards stood (Plut. Rom. 2; Sol. i. 21.) When Tacitus says, in the passage before cited, that Tatius added the Capitoline to the city, we are perhaps therefore to understand that he built upon it and made it habitable, whilst previously it had been only a sort of military outpost. The valley between the two hills formed a kind of natural ground, a sampedtive to the city, a common market-place. The gate called Janualius, mentioned by Varro in the passage cited from him when treating of the Romulean gates, seems undoubtedly to have belonged to the Sabine town. Niebuhr, who is followed by Runen (Beschr. vol. i. p. 145), is of opinion (Hist. i. 292) that it was built by the two cities as a barrier of their common liberties; that it was open in time of war in order that success might pass from one to the other; and that it was used during peace, either to prevent the guards which might arise from unrestricted intercourse, or as a token that the cities, though united, were distinct. Becker, on the other hand, denies that it ever was a gate at all, maintaining that it only got that name catachrestically, from the temple which it subsequently formed being called "Porta Belli." (pp. 118, 119, and note 167). But there seems to be ample evidence that it was originally a gate. Varro, in the passage cited, evidently considered it as such; and it is also mentioned by Macrobius, as a real gate, through the situation which he assigns to it will hardly be allowed even by those who give the greatest extention to the walls of the Romulean city ("Cum subito Sabino—Romani portam, quae sub radicibus collis Viminalis erat, quae postea ex eventum Joviniais vocata est, clandere testamentum," Sat. i. 9). We may learn from Ovid, not only its real situation, but also that it was the very gate which Tarpeia betrayed to the Sabines. The passage fixes its site so accurately and consequently also that of the temple of Janus,—an important point in Roman topography,—that it is necessary to quote it at length:

We see from these lines, that the gate attacked by the Sabines lay at the bottom of a path leading down from the Capitoline, which path still existed in the time of Ovid, and was situated between the forum of Caesar and the Forum Romanum. The gate was consequently at the bottom of the NE. slope of the Capitoline hill, a little to the N. of the present arch of Septimius Severus. We also learn that a small temple or sacellum was dedicated to Janus at this spot. Whether the ancient gate was incorporated in this temple, or whether it was pulled down, or whether the temple was erected by the side of the gate, cannot be determined; but at all events it was commemorated by the title of Porta Januaria. It is no objection to Ovid's account, as far as the topographical question is concerned, that it differs from the one usually received, which represents the Sabines as successful through the treachery of Tarpeia, and not as repulsed through the intervention of Janus. He seems to have combined two different legends; but all that we are here concerned for is his accurate description of the site of the temple, and consequently of the gate.

Its sit is further confirmed by Procopius (B. G. i. 25. p. 122, Dind.), who mentions it as situated a little beyond the statues of the three Fates, as will appear in the second part of this article. The temple was dedicated by the peace-loving Numa, who made the opening and shutting of it the sign of war and peace. (Liv. i. 19.) Niebuhr, therefore, besides assigning an inadmissible and even absurd meaning to this custom, has forestalled its date, when he mentions it as coming into use at the union of the two independent cities.

After writing what precedes, the compiler of this article met with an essay by Dr. Th. Mommsen, published in the "Anmali dell' Institute" for the year 1844 (vol. xvi.), and entitled De Comitio Romano, in which that writer (p. 306, seq.) considers that he has irrefragably established the temple of
Janus was not situated in the place here assigned to it, but in the Forum Oltorium outside the Porta Carnentina. As the opinion of so distinguished a scholar as Millowsen is entitled to great attention, we shall here briefly review his arguments. They may be stated as follows. That the temple of Janus was in the Forum Oltorium may be shown from Tacitus and Saturninus. Tacitus says: "Erat Forum Oltorium C. Duilias struxerat (dedicavit Tiberrii)." (Ann. i. 49); and also from Festus: "Religioni est quibusdam porta Carmentali egregi et in aede Jani, quae est extra eam, senatorum haberi, quod ea egressi sex et trecenti Fabii apud Cremaram omnes interfecit sunt, cum in aede Jani S.C. factum esset, ut proficisceretur" (p. 283, Mill). But this temple was not undoubtedly the same as the famous one founded by Numa, and Duilias could only have restored, not built it; since it can be shown that there was only one Temple of Janus at Rome before the time of Domitian. Thus Ovid (as may be seen in the passage before quoted) asks Janus, —

"Cum tot sint Jani eur stas sacras, in uno,
Hic ubi juncta foris templo dubie labes ?"

The same thing appears from the following passage of Martial (x. 28. 2), which shows that: before Domitian erected the Janus Quadrifrons in the Forum Transitorium, the god had only one little temple: —

"Pervius exigum habitabas ante Penates
Purina qua medium Roma terebat ite."

The situation of this same temple of Janus is also testified by Servius (ad Aen. vii. 607): "Sacrararium (Jani) Nuna Pompliaius fecerat — Quod Numa in situatar, transtulit tempum est ad Forum.
And again: "Sacrararium hoc Nuna Pompliaius fecerat circa iunianum Argiletum juxta theatrum Marcelli." Thus the situation of the sole temple of Janus is proved by the preponderance of the best authority, and does not rest on mere conjecture. In these remarks of Mommsen's we miss that accuracy of interpretation which is so necessary in treating questions of this description. The word "struxerat," used by Tacitus, denotes the erection of a new building, and cannot be applied to the mere restoration of an ancient one. Nor, had there been no other temple of Janus, would it have been necessary to designate the precise situation of this by the words "apud Forum Oltorium." Again, the words of Ovid refer, not to one temple, but to one Janus, which, however, as we have seen, was converted into a sort of small temple. — "When there are so many Jani, why is your image consecrated only in one ?" Thus, then, was not a temple in the larger sense of the word; that is, a building of such a size as to be fit for assemblies at the senate, but merely the little sacellum described by Ovid. Let us hear Mommsen's own description of it, drawn from this passage, and from that of Martial just quoted: —

"Fuit enim janii aedae (quod inclementissime apparat ex Ovidii verbis supra laudatis) non nisi Janus aliquis, sive biresive quadrifrons, Dei status oratus, Es, quam Numa fecit, fornic et persis ad portam Carnentalem applicatus, quo translatam omnis qui a Campo Marti Foroque Oltorio venientes Bearium Romanaeve petebant" (p. 307). But of course the point the building of Numa could have been attached to a gate erected in the time of Servius — how is it possible to conceive that, as Mommsen infers from the words of Festus, the senate could have been assembled in a little place of this description, the common thoroughfare of the Romans? Besides, we have the express testimony of Livy, that the Senatus Consultum, sanctioning the departure of the Fabii, was made in the usual place for the meetings of the senate,—the Curia Hostilia. "Consal e Curia egressus, comitate Fabiorum agmine, qui in vestibulo privato, et ait sancto consilio exspectantes, steterant, dictavit reditii" (ib. 48). We can therefore only agree in part with the somewhat severe censure which Mommsen has pronounced on Becker on this occasion. — "At quod sommavitt de aede Jani sine simulacro (p. 259), quod Festum, quod Servium gravissimi errores in usuravit (p. 139, n. 234, seq.), id est hominiti philologia" (p. 307). It appears, we trust, pretty plainly, that Festus and Servius must have been in error; but we cannot admit a temple without an image. The explanation we have already given, that Ovid is alluding to a Janus, not to a proper temple, may obviate the difficulty. But we
see no reason why Janus, a very ancient Latin divinity, and to whom the Mons Janiculus appears to have been sacred before the building of Rome, should not have been honoured with a regular temple built on the spot wherein the index of peace and war. As the question, however, is connected with the situation of the Argetulum and Forum Caesarian, we shall have occasion to revert to it, and have mentioned it here only because the legend of Tarpeia, and subsequent building of the temple, are closely connected with the history of the city.

Romulus, after his mysterious disappearance, was deified under the name of Quirinus, and his successor, Numa, erected a temple to the new God on the Quirinal. (Dionys. ii. 63; Poly. Hist. ii. 500.) This hill, which was previously named Agonus (Fest. p. 254; Dionys. ii. 37), appears in the time of Numa to have been divided into four distinct eminences, each named after some deity, namely, Quirinalis, Salutaris, Mucialis, and Latiaris (Varr. L. L. v. § 51, Mill.). But from what deity the name of Mucialis was derived remains inexplicable. The name of Quirinalis, which, however, some derive from the Quirites, who had come with Tattius from Cares, and settled on the hill (Varr. L. L. v. § 51), ultimately swallowed up the other three. The temple of Quirinus probably stood near the present church of S. Andrea del Vincio. This question, however, as well as that concerning the sites of the other three temples, will recur when treating of the topography of the city. Numa, who was himself a Sabine, also founded a capitol (Hieron. i. p. 298), subsequently called, by way of distinction, * belus Capitolium,* on the Quirinal, which hill had been chiefly colonised by his connexions. Of course the name "Capitolium" could not have been applied to it till after the foundation of the Roman Capitol, and originally it was the * arx * of the city, containing the three usual temples of Jupiter, Juno, and Minerva. (Varr. L. L. v. § 158, Mill.) This ancient temple of Jupiter is alluded to by Martial (v. 22, 4), and probably stood on the southern part of the Quirinal on the present height of Montmartoli.

Tullus Hostilius is said to have added the Caedial Hill and the district of the Aventin to the city after the destruction of Alba Longa. When the population of Rome was doubled by the inhabitants of Alba being transferred thither; and in order to render the Caedial still more thickly inhabited Tullus chose it for his own residence. (Liv. i. 39; Enarr. i. 4; Victor, "Iuv. Ill. 4.) The two accounts of the incorporation of this hill by Romulus and Tullus contain, as we have before remarked, nothing contradictory; otherwise, Dionysus Halicarnassensis would hardly have committed himself by adopting them both (ii. 36, 50, iii. 1). The first Tuscan settlement had been transferred to another place. But when Cicero (de Rep. ii. 18) and Strabo (v. p. 234) state that the Caedial was added to the city by Ancus Martius, this is a real divergence for which we cannot account; and the hill could hardly have been incorporated by Tullus and again by Ancus.

Ancus is also said, by the two authorities just quoted, to have added the Aventine; and there is no improbability in the thing, since Ancus never made it a proper part of his city, and we learn from Plutarch ("Num. 15") that it was uninhabited in the time of Numa. We must remember that the earlier enclosures were made rather to assert a future claim to the ground when the number of citizens was in

creased, than that they were absolutely wanted at the time of making them ("Crescebat interim urbs, multis figuris alia atque alia apptendita loca; quoniam in eandem interea multis vicissitudinis, quam adduidum tum sublimem erat, monumentum." Liv. i. 38). The account of Ancus having added the Aventine is confirmed by Dionysius (iii. 43) and by Livy (ii. 33), who state that it was assigned to the citizens of the conquered Polloturium. Yet the history of the Aventine is more mysterious than that of any other of the Roman hills. At the end of the third century the city we find it, as an * ager publicus, * taken possession of by the patricians, and then, after a hard contest, parcelled out among the plebeians by a Lex Tiliae (Dionys. x. 31, 32; cf. Liv. iii. 91, 32), by whom it was afterwards principally inhabited. It remained excluded from the pomerium down to the time of Claudius, though the most learned Romans were ignorant of the reason. After some further victories over the Latins, Ancus brought thousands more of them to Rome; yet we can hardly understand Livy's account (i. c.) that he located them in the Valls Murcia; not only because that spot seems too limited to hold so large a number, but also because Ancus himself, as well as Livy, had already to have been designed, and even perhaps begun, at that spot. (Dionys. iii. 68.) At all events they could not have remained there for any length of time, since Livy himself mentions that the circus was laid out by Tarquinius Priscus (i. 33). The fortifying of the Janiculum on the right bank of the Tiber, the building of the Subbician bridge to connect it with Rome, and the foundation of the port of Ostia at the mouth of the river, are also ascribed to Ancus Martius, as well as the fortification called the Taurian Quirinum. (Liv. i. 33; Dionys. iv. 45; Victor, "Iuv. Ill. 5; Flor. i. 4.")

The circuit of Rome, then, at the time of the accession of Tarquinius Priscus, appears to have embraced the Quirinal, Capitoline, Palatine, Aventine, and Caelian hills, and the Janiculum beyond the Tiber. The Viminal and Esquiline are not mentioned as having been included, but there can be no doubt that they were partially inhabited. Whether the first named hills were surrounded with a common wall is not mentioned; but what we are not sure, whatever their extent, seem to have been of a very rude and primitive description (γιαγαν και φασιν τα εργαζομενων νων, Dionys. iii. 67). Tarquinius does not appear to have made any additions to the city, but he planned, and perhaps partly executed, what was of much more utility, a regular and connected wall to enclose the whole city. (Liv. i. 36, 38; Dionys. iii. 67.) Nay, according to Victor ("Iuv. Ill. 6), he actually completed this wall, and Servius only added the agger (ib. c. 7). The reign of Tarquinius was indeed a remarkable epoch in the architectural progress of the city. We must remember that he was of Tuscan birth, and even of Greek descent; and therefore it is natural to suppose that his knowledge of architecture and of the other arts of civilised life was far superior to that of the Romans and Latins; and hence the improvements which he introduced at Rome. It is satisfactory to discover and point out undesigned coincidences of this description, which greatly add to the credibility of the narratives of ancient writers, since there is too much disposition at the present day to regard them as the inventors or propagators of mere baseless fables. Tarquinius also constructed these wonderful sewers for draining the Velabrum and
forum which exist even to the present day; he improved the Circus Maximus, planned the temple of the Capitoline Jupiter, and erected the portions of tabernae around the forum (Liv. i. 35, 38; Dionysius. iii. 67—69; Tac. Hist. iii. 72); in short, he must be regarded as the founder of the subsequent architectural splendour of Rome. The additional space included by Servius Tullius in the line of wall which he completed is variously stated in different authors. Dionysius (iv. 13) and Strabo (v. p. 234) relate that he added the Vininal and Esquiline hills: Livy states that the hills which he added were the Quirinal and Vinimal, and that he enlarged or improved the Esquiline ("auget Esquilias," i. 44); while Victor (Vit. Ill. 7) mentions that he added all three. It is possible that Livy means all that back or eastern portion of the Quirinal and Esquiline which run together into one common ridge, and which was fortified by the agger of Servius Tullius; and in this way we may account for his expression of "auget Esquilias," which alludes to this extension of the hill, and the consequent amalgamation of its previously separate tongues, the Oppius and Cispius. Hence there is but little real contradiction in these apparently divergent statements. Though the elder Tarquin may dispute with Servius the honour of having built the walls of Rome, yet the construction of the agger is unanimously ascribed to Servius, with the single exception of Pliny (iii. 9), who attributes it to Tarquin the Proud. The custom, however, has prevailed of ascribing not only this, but the walls also, to Servius. A description of these walls and of their gates, and an inquiry into the circumference of the Servian city, will be found in the second part of this article; but there are two other sections of the city, viz., the Capitoline and the Aventine, which require investigation here, namely, the Regions of Servius and the Septimontium.

Regions of Servius. — Servius divided the city into four political districts or regions, which, however, were not commensurate with its extent. Their number seems to have been connected with that of the city tribes; but there are many particulars concerning them which cannot be explained. Our knowledge of them is chiefly derived from Varro (L. L. § 45, 114, Mill.), from whom we learn that they were: 1. The Suburana, the limits of which cannot be precisely determined, but which embraced the Caelian hill, the valley of the Colosseum, and part of the Sacra Via, that western portion of the southern tongue of the Esquiline (Mons Oppius) known as the Carinara, the Ceroliemis, — which seems to have been the valley or part of the valley between the Esquiline and Caelian, and the Subura, or valley north of the Oppius. II. The Esquilina or Esquilia, which comprehended the smaller or N. tongue of the Esquiline (Mons Cispius) and its eastern back or ridge, as far as the rampart or agger of Servius, and perhaps also the eastern back of the Oppius. III. The Collina, so called from its embracing the Quirinal and Vinimal hills, which, as we have before said, were called colles, in contradistinction to the other hills called montes. The intervening valleys were, of course, included. IV. The Palatina or Palaetum, embraced that hill with its two spurs or offshoots, Vela and Capitolium.

When we compare these regions with the map of Rome we are immediately struck with some remarkable omissions. Thus, the Capitoline hill, with the valley to the E. (forum), and valley to the S. (Veiiabrum and Forum Burarium), together with the Aventine, are entirely excluded. Various conjectures have been proposed to account for these omissions. Some have imagined that the Capitol was excluded because the division of Servius regarded only the plebeian tribes, and that the Capitol was inhabited solely by patricians. Becker (Handb. p. 386) rightly rejects this hypothesis; for, which he prefers to it, seems hardly better founded, namely, that the hill, as being the citadel, was occupied with public buildings to the exclusion of all private ones, or, at all events, as being common to all, could not be incorporated with any one region. But this would have been a better reason for the exclusion of the Quirinal, which was at that time the proper capitol of the city; nor does it seem to be a fact that private buildings were excluded from the Capitol. Various reasons have also been assigned for the exclusion of the Aventine; the principal of which are, the unfavourable auguries which had appeared upon it to Remus, and the circumstance of its containing a temple of Diana, which was common to all the Latins. But if we attentively read the account given by Varro of the Servian Regions (L. L. v. §§ 41—54, Mill.), we shall perceive that the division was entirely governed by the distribution of the Argive chasels, instituted probably by Numa; though Varro does not explain why they should have had this influence. Thus, after giving an account of the Capitoline and Aventine, he proceeds to say (§ 45): "Reliqua urbis locis diversis, quom Argororum sacrae in septem et xx. partibus sunt disposita. Argaeos dictos putar principianos qui cum Hercule Argivo veneire possint." Of course the first statement is contradicted by Livy (viii. 21, 14), who seems to have had some knowledge of the matter, but no recent scholar puts a different interpretation upon the passage. Thus Bunsen (Beschreibung der Stadt Rom, vol. i. p. 147), whose general view of the matter seems to be approved of by Becker (Handb. p. 127, note 183), takes Varro's meaning to be, that the remaining parts of the city did not originally form each a separate district, like the Capitol and Aventine, but were divided into smaller parts, with different names. This view has been already condemned by Müller (ad loc.), and indeed its improbability is striking; but it requires a somewhat minute examination of the passage to show that it is altogether untenable. Livy also mentions these chasels as follows: "Multa alia sacrificia beacue sacris sacros faciendas, quae Argos pontifices recant, dedicavit (Numa)." (i. 21.) Now Bunsen is of opinion that the statements of Livy and Varro are inconsistent, and that whilst the former under the name of Argae means places, the latter alludes to the city. In connexion with this view he proceeds to construe the passage in Varro as follows: "The name of Argae is derived from the chiefs who came with the Argive Hercules to Rome and settled in Saturnia. Of these parts of the city we first described (viz. in the Sacris Argoemum)"
the Suburan Region, as second, &c." (\"Den Namen Argeer leitet man ab von den Aufführern die mit dem Arger Herules nach Rom kamen, und sich in Saturnia niederliessen. Von diesen Stadttheilen finden sich zuverlässigere (nämlich in den Suetii Argerorum) die Suburanische Region, als zweite, &c.\" (Beschr. i. 690, cf. p. 148.) But to say that the name of Argives was derived from other Argives can hardly be what the author intended. Besides, the sense is disjointed; for the relative qui (wrongly translated \"of these parts of the city\") cannot be made to refer to an antecedent that is separated from it by a long sentence. As the text stands, qui must necessarily refer to Argos in the sentence immediately preceding. It might be thought that this sentence has been interpolated, since Varro called an Arge or Argus, \&c. Itaque dicimus hic Argas cum hannibalicidicibus; cum oppidana, Graecennae hic Argos, \&c. Latine, \&c. (L. L. ix. § 89, Mill.) We see from this passage that the more ancient Latin name for the town of Argos was Argae or Arguses, \&c. and hence it might be inferred to be Livy's meaning that the chapels were called Argos or Argusae, \&c. Not Argives. But Argei, in still more ancient Latince than that of Varro, was also the name for Argives as we find from a verse which he quotes from Ennius (vi. § 44):—

\"Libaque, factores, Argos et tutulatos,\"

whence we are disposed to think that the name of Argives, however anomalous the usage may appear, was really applied to these chapels, just as a modern Italian calls a church S. Pietro or S. Paolo, and that the meaning of Varro in the second sentence of the passage quoted, is : \"It is thought that these Argei (i.e. the sacraria so called) were named after the chiefs who came to Rome with the Argive Hercules;\" in which manner Varro would coincide with Livy in making these Argei places. How else, too, shall we explain Ovid (Fast. iii. 791):—

\"Itur ad Argeae, qui sinit una pagina dicet?\"

And in like manner Maenius Sabinus, quoted by Gellius (N. A. x. 15): \"Atque etiam cum Pla(n)ina pro Argea in Lazio. \"A passage in Plautus Diopianus throws a gleam of light upon the matter: though, with more grammatical nicety than knowledge of antiquity, he has adopted, apparently from the Greek, a neuter form unknown to any other writer: \"Argae hera appellantur Romae, quod in his septem essent quidam Argervorum illustres viri,\" (p. 19, Mill.) Hence it appears that these chapels were the (reputed) burial places of these Argive heroes, and their masculine appellation thus gains still further probability. \"E qui,\" &c. would mean, therefore, that the different Servian Region s were marked off and named according to these chapels.

We have already remarked that though Varro mentions 27 of these chapels, he enumerates only 24. Hence Becker (Heaud. p. 386), as well as Bunsen, are of opinion that the three odd ones were upon the Capitol. The only reason assigned for this conjecture is that the hill had three natural divisions, two heights with a depression between. If we have in Paulus Diaipon there befits the meaning of Varro's meaning, it is impossible that the Capitol should have had any of these chapels. Bunsen, however, goes still further, and, connecting the chapels with the Argive men of straw which were annually precipitated into the Tiber, thinks that their number might have been 30, allotting the remaining three to the ancient Capitol on the Quirinal, although Varro had already accounted for his usual number of six in that district. (Beschr. i. 149.) However, it is not at all improbable that the tradition of the Argive mannikins was connected with that of the chapels, since it may be inferred from the context of the passage in Varro, explaining the line of Ennius before quoted, that they were instituted by Numa. Thus the preceding line (§ 43), \"mensas constituit ideaque ancilia,\" refers to Numa's institutions, which is again alluded to in § 45, \"eundem Pompilium alti fessae flaminibus.\" In § 44 Varro describes the custom regarding the men of straw as follows: \"Argei ab Arge; Argei facti e scirpeis, simulacra hominum axui, et quodamis de ponte sublicio a sacerdotibus publice deolet soleni in Tiberim.\" The origin of the custom is variously explained; but the most probable account is that it was intended to commemorate the abolition by the Argives of human sacrifices once offered to Saturn, for which these men of straw were substituted. None of the MSS. of Varro, however, gives the number of 27 or 30; though the latter was introduced into the text by Alcius from the account of Dionysius (i. 38). Hence it would perhaps be more in accordance with the principles of sound criticism to reduce the number of chapels given by Varro (v. § 45) from 27 to 24, instead of increasing them to 30; as they would then not only correspond with the number of these Argive mannikins, but also with that of the chapels which Varro separately enumerates.

\textit{Septimontium.}—The \textit{Septimontium} seems also to be in some degree connected with these Argive chapels and the Servian divisions of the city. The word \textit{Septimontium} had two meanings; it signified both the complex of seven hills on which Rome stood, and a festival (\textit{Septimontiales sacrum, Soet. Dom. 4}) celebrated in commemoration of the traditions connected with them. Now it is remarkable that Antistius Labeo, quoted by Festus (p. 348, Mill.) in his account of the places where this festival was celebrated, omits all mention of the Capitoline and Aventine, just as they seem to have been left out of Numa's town and the regions of Servius subsequently formed according to it: \"Septimontium, ut Anistius Labeus, in sacra diversâ, Palatio, cui sacrificium quod fit, Palatari dicetur. Veliae, cui item sacrificium Fagutil, Suburnearum, Cerimoda, Oppio Caesio monti, Cipio monti.\" There were Argive chapels at all these places, and hence a strong presumption that the festival of the \textit{Septimontium} was founded by Numa, the author of most of the ancient Roman solemnities. That Labeo considered the places he enumerates to be hills is evident, not only as a direct inference from the term \textit{Septimontium} itself, but also from his express words, \"hanc montium series,\" \"there are holidays on the hills here recited.\" Moreover, we know as a certainty that five of the places mentioned were hills, namely, the Palatino, Velia, Oppius, Caius, and Caelus,—a strong presumption that the others also were heights. Yet Niebuhr \(\textit{Hist. i. 359},\) Bunsen, (Beschr. i. 683,) and Becker (Heaud. p. 124,) assume that one or two of them were no hills at all. The places about which there can be any doubt are Fagutil and Tventum. Respecting the latter there can be no doubt at all; it was certainly a valley. Now the Fagutil was a ridge of the E–quiline containing the Locus Fagutalis. It was the residence of Tarquinii Superbus: \"Esquilius (habitatio) super clivum Pullium, ad Fagutalem unum.\" (Solin. i. 25.) But if the grove was above the clivus it must
have been on a height. Servius had occupied a residence not far from it, over the Clivus Urbis (Ib., Liv. i. 48), and it was probably situated at or near the spot now occupied by the church of S. Martina. There is not the slightest ground for Niebuhr's assumption (Hist. i. 390) that the Fagutal was what he calls "the plain" between the Caelian and Palatine. The Cermalus or Germalina—for originally α and χ were the same letter—was, like the Velia, only a distinct portion of the Palatine hill. (C' Huiie (Palatio) Cermalum et Velias conjuxerunt," var. v. § 64, Mill.) Prelter (Regiones, p. 180) considers the Germalus to be that side of the Palatine which overhangs the Velabrum between the modern churches of S. Giorgio in Velabro and S. Anastasiana; and it is not improbable, as Becker conjectures (p. 418), that the hill formerly projected further to the W. than it now does, and descended in shelves or ledges. It does not appear on what grounds Niebuhr (L. c.) assumed the Germalus to be a "spot at the foot of the Palatine." It contained the Lupercal, which, being a cave or grotto, must have been excavated in a hill or cliff, as indeed Dionysius states in his description of it: ήδε δέ τ' άρχον, άς λεγεται σημαίαν ὕπο τ' άλφα μεγα (1. 32). All the places, then, enumerated by Labeo appear to have been heights, with the exception of the Subura. But on counting the names, we find that he mentions eight places instead of seven, or one more than is required to make a Septimontium. Hence Niebuhr (Ib. p. 389) omitted the Subura,—not, however, because it was situated in the plain,—and was followed by Bunsen (Beschr. i. 141), who afterwards altered his mind, and struck out the Caelus (Ib. p. 683); and this last opinion is also followed by Becker (Handb. p. 124) and Müller (ad Fest. p. 341). The chief reason assigned for this view is that a principal part of the first regio (Suburanas) was called Caelimontium,—a name afterwards preserved as that of one of the regions of Augustus; and on comparing this name with that of Septimontium it is inferred that, like the latter, it must have indicated a distinct and independent city union, and could not therefore have been included in any antecedent union. But if there had been any distinct and independent township of this kind, we must surely have heard of it in some of the ancient authors. We do not know when the term Caelimontium first came into use; but it is not improbable that it arose from another small hill, the Caelius Minor or Caelolium, having been annexed to the larger one. Martial mentions them both in the following lines:—

"Dum per limina te potientorum
Sulatria toga ventilat, vagumque
Major Caelius et minor fatigat."—(xii. 18.)

We learn from Varro that the junction of these two hills had taken place in or before his time: "Caelius cum Caelio numem conjunctum" (I. L. v. § 46, Mill.), though popular use, as we see from the lines of Martial, sometimes still continued to regard them as distinct; nor can we tell for what purpose they had been united. Little can be inferred from the order in which the hills are mentioned in the text of Festus, as local sequence is entirely disregarded; or from the circumstance that Cispitus is called "numen" and Oppius not, unless we leave out "Caelius," or from the omission of Caelius in some of the MSS. of Paulus Diaconus. On the whole it seems most probable that Suburrae may be the redundant word; unless indeed we might suppose that there were two Fagutals or groves of Jupiter, and that Suburrae was inserted here to define the place of the one which overhangs it.

Becker regards the Septimontium not as a proper city festival, but as commemorating traditions connected with the site of Rome long previous to the building of the city. In confirmation of this he refers (Handb. p. 125) to a passage in Varro (L. L. v. § 41, Mill.) and to another in Festus (p. 321), where it is said that a people of Reate, called Sacrami, drove the Ligurians and Sicilians out of Septimontium; and a third passage is adduced from Servius (ad Aen. xi. 317) to prove that the Sicilians once occupied the site of Rome; that they were expelled thence by the Ligurians, and the Ligurians in their turn by the Sacrami. Now, without entering into the historical questions connected with these obscure traditions, it may be allowed in general to be probable enough that such traditions were at one time (76.), or perhaps even 185); but when, as we have ventured to assume, Numa instituted the festival, he made them the basis of it; just as he instituted the Argive chalups and the twenty-four mannikins to commemorate the tradition of the Argive chiefs and their abasement of human sacrifices. But the festival, nevertheless, was a proper city festival. Becker urges (Handb. p. 124) that the Septimontium described by Labeo could not have been in commemoration of a city union immediately preceding that of Servius, because it included the Oppians and Cispitus, which were first added to the city by Servius. A great deal depends upon what we understand by the words "added to the city" ("zur Stadt geogen"). To say that they were not included in the walls and agger afterwards completed by Servius would be a mere peculiarity; but they must have been inhabited and formed part of the city before his time, since there were Argive chalups upon them (Varr. v. § 50); and these chalups, as we have seen, formed the basis of the city union formed by him. The festival must certainly have been post-Romulian, since some of the names of places where it was celebrated were not known before the time of Romulus. Caelius occupied the Caelian hill in his reign; the name of Cermalus is said to be derived from the twins (germane) Romulus and Remus, who were landed there (Varr. v. § 54); whilst Oppians and Cispitus are said by Festus (p. 348, Mill.), on the authority of Varro, not to have been so named till the reign of Tullus Hostilius. But as they are mentioned by those names in the sacred books of the Argives (Varr. v. § 50) it is probable that they were so called at least as early as the time of Numa.

Such, then, was the ancient Septimontium. The walls of Servius included a different group of seven hills which came to be regarded by the later Romans as the real Septimontium. They are those already described at the beginning of this article, namely, the Quirinal, Viminal, Esquiline, Caelian, Aventine, Capitoline, and Palatine.

IV. PROGRESS OF THE CITY TILL THE TIME OF AUGUSTUS.

Having thus brought down the history of the city to the foundation of the Servian walls, we shall proceed to sketch its progress to the time of Augustus, and then till the walls of Aurelian. The former walls marked the rise and consolidation of a city, which,
though soon to become formidable to its neighbours, was not yet secure from their attacks. The latter, enclosing an area more than twice as large as that defended by the Servian walls, betokened the capital of a larger plan which, after becoming the mistress of the world, was beginning to tote under the weight of its own greatness, and found itself compelled to resort to the same means of defence which had protected its infancy — no longer, however, to ward off the attacks of its immediate neighbours, but those of the remotest tribes of Asia and Europe. Thus the history of the city, during this period of eight centuries, reflects in some degree the history of the Roman people, and exhibits the varying fortunes of the greatest of all human empires. Unfortunately, however, the materials even for a slight sketch of so vast a subject and so long a period are scanty and inadequate; nor, even were they more abundant, would our present limits allow more than an attempt to draw such an outline as may serve to illustrate the topography of the city.

Tarquin the Proud, the last of the Roman kings, seems to have effected little for the city, except by completing or improving the works of his predecessors. For the most important temple of the Capitoline Jove, the description of which will be found in the second part of this article. The expulsion of the Tarquins (b. c. 510) restored to the Roman people the use of the Campus Martius. This ground, which from the earliest times had probably been sacred to Mars ( Dionys. v. 13), had been appropriated by the Tarquins, and at the time of their expulsion was covered with the crops which they had sown. The unholy nature of this property prevented its distribution among the people, like that of other Roman empires. Unfortunately, however, to be cut down and thrown into the Tiber; and according to the legend its quantity was so great that it caused the island afterwards known as the Insula Tiberna, or that of Aesculapius. (Liv. ii. 5; Dionys. l.c. Plut. Pubb. 8.)

The defeat of the Etruscans under Aruns, who had espoused the royal cause, was, according to the usual principle of the Romans of incorporating the vanquished nations, the means of adding a fresh supply of citizens, as there will be occasion to relate in another place.

We have little or nothing to record respecting the history of the city from this period till its capture by the Gauls c. 390. After the fatal battle at the Allia, the Romans returned dispirited. The city, together with the older inhabitants, was abandoned to its fate; many families escaped to Veii and other neighbouring towns; whilst the men of an age to bear arms occupied the Capitol, which they prepared to defend. The flight of the Vestal virgins, who succeeded in escaping to Caere, is connected with a topographical legend. Being unable to carry away all their sacred utensils, they buried some of them in casks (dolios), in a chapel near the house of the Flavii Quirinalis; whence the place, which seems to have been near the Circa Maxima, in the Forum Boarium, obtained the name of Dolio, and was held so sacred that it was forbidden to spit upon it. (Liv. v. 40; Val. Max. i. 1. § 10.) Varrus, however (I.L. v. § 157), did not reject this story, but rather that the name other to some bones having been deposited there, or to the burial at an earlier period of some sacred objects belonging to Numia Pomplianius. The Gauls entered the city unopposed, and passed the open Porta Collina. (Liv. vi. 41.) The time during which they held it is variously given at from six to twelve months. (Polib. ii. 22; Flor. i. 13; Plut. Cuman. 30; Serv. Aen. viii. 632.) Their attempt on the Capitol is alluded to elsewhere. They set fire to and otherwise devastated the city; but perhaps we are not to take literally the words of Livy and other writers, to the effect that they completely destroyed it (v. 42, 43; Flor. i. 13; Plut. Cuman. 21). It is at least apparent, from Livy's own narrative (c. 55), that the Curia Hostilia was spared; and it seems probable that the Gauls would have preserved some of the houses for their own sakes. We may, however, conclude, that the destruction was very great and terrible. Fortunately the Romans would not have discussed the project of emigrating to Veii. The firmness and judicious advice of Camillus persuaded them to remain. But the pressing necessity of the case, which required the new buildings to be raised with the greatest haste, was fatal to the beauty and regularity of the city. People began to build in a promiscuous manner, and the materials, afforded at the public expense, were granted only on condition that the houses should be ready within a year, and the buildings be distributed in the manner, as the Capitol was laid down; each man built as it suited him; the ancient lines of streets were disregarded, and houses were erected even over the charcae. Hence down to the time of Augustus, and perhaps later, the city, according to the forcible expression of Livy (v. 55), resembled in arrangement rather one where the ground had been seized upon than where it had been distributed. It may be inferred from a statement of Cornelius Nepos, as quoted by Pliny, that the greater part of the city was roofed with shingles. (A Scandula contextumibus Romani. B. c. 390; Cornelius Nepos nactus est, xvi. 15.) Livy indeed mentions the public distribution of tiles, but these perhaps may have been applied to other purposes besides roofing, such as for making the floors, &c.; and the frequent and destructive fires which occurred at Rome lead to the belief that wood was much more excessively used in building than is customary in modern times. Within a year the new city was in readiness; and it must have been on a large scale, since by the Gallic invasion, since it had acquired a great accession of inhabitants from the conquered towns of Veii, Capena, and Falsici. Those Romans who, to avoid the trouble of building, had occupied the deserted houses of Veii, were recalled by a decree by which those who did not return within a fixed time were declared guilty of a capital offence. (Liv. vi. 4.) The walls of Rome seem to have been left unguarded by the Gauls, notwithstanding Plutarch's assertion to the contrary. (Carm. 82.) We nowhere read of their being repaired on this occasion, though accounts of subsequent restorations are frequent, as in the year n. c. 351 (Liv. vii. 20), and again in 217, after the defeat at Thrasseae. (Did. xxii. 8.) Nothing can convey a higher notion of Roman energy than the fact that in the very year in which the city was thus rising from its ashes, the Capitol was supported by a substructure of square and solid masonry, of such massiveness as to excite wonder even in the Augustan age. (Liv. i.e.; Uln. xx. 24. v. 2.)

The censorship of Appius Claudius Cænus, n. c. 312, forms a marked epoch in the progress of the city. By his care Rome obtained its first aqueduct, and its first regularly constructed high-road, the Aqua and Via Appia. (Liv. ix. 29.) But the
war with Pyrrhus which soon ensued, and afterwards the still larger and more destructive ones waged with the Carthaginians, prevented the progress which might have been anticipated from these beginnings. The construction of a second aqueduct, the Anio Vetus, in the censorship of Man. Curiius Dentatus and L. Papirius Cursor, b. c. 272, testifies, however, that the population of the city must have continued to increase. In the year b. c. 229 we find the censor C. Flaminius constructing the Flaminian Way, as well as the circus which bore his name. (Liv. Epit. xx.; Paul Dio, p. 89.) But it was the conquests of the Romans in Lower Italy, in Sicily, and Greece, which first gave them a taste for architectural magnificence. The first basilica was erected at Rome in the year b. c. 184, and was soon followed by others, as there will be occasion to relate when we come to speak of the forum. But it was not till ten years later that the city was first paved by the care of the censors Q. Fulvius Flaccus and A. Postumius Albinus. They also paved the public highways, constructed numbers of bridges, and made many other important improvements, both in the city and its neighbourhood. (Liv. xii. 27.) Yet, notwithstanding these additions to the public convenience and splendour, the private houses of the Romans continued, with few exceptions, to be poor and inconvenient down to the time of Sulla. The house of the Musicians, on the Palatine, seems to have exhibited one of the earliest examples of elegant domestic architecture. (Cic. de Off. i. 39.) This was pulled down by Scarrus in order to enlarge his own house. The latter seems subsequently to have come into the possession of Claudius (Ascon. ad Cic. Mil. Arg.), and its magnificence may be inferred from the circumstance that he gave 14,500,000 sesterces for it, or about 150,000l. (Plin. xxxvi. 24. s. 2.) Indeed, as we approach the imperial times, the dwellings of the leading Romans assume a scale of extraordinary grandeur, as we see by Pliny's description of that of Crassus the creditor, who was censor in b. c. 92. It was also on the Palatine, and was remarkable for six magnificent lotus-trees, which Pliny had seen in his youth, and which continued to flourish till they were destroyed in the fire of Nero. It was also distinguished by four columns of Hymettian marble, the first of that material erected in Rome. Yet even this was surpassed by the house of Q. Catulus, the colleague of Marcellus in the Cimbrian war, which was also built to increase, as well as to mark, the glory of C. Aquilus the Vinumarian, a Roman knight, distinguished for his knowledge of civil law. (Plin. xvii. 1.) M. Livius Drusus, tribune of the people in b. c. 93, also possessed an elegant residence, close to that of Catulus. After his death it came into the possession of the wealthy M. Crassus, of whom it was bought by Cicero for about 30,000l. (ad Fam. v. 6). It seems to have stood on the N. side of the Palatine, on the declivity of the hill, not far from the Nora Via, so that it commanded the view of the forum and Capitol. It was burnt down in the Cidian riots, and a temple of Freedom erected on the spot; but after the return of Cicero was restored to him, rebuilt at the public expense. (Cic. ad Att. ii. 24. Fam. v. 6; Vell. Pat. ii. 45; Dion Cass. xxviii. 17, xxxix. 11, 20; App. B. C. ii. 15, 22.) The house of Lepidus, consul in b. c. 77, was also remarkable for its magnificence, having not only columns, but even its thresholds, of solid Numidian marble. (Plin. xxxvi. 8.) The luxury of private residences at Rome seems to have attained its acme in those of Sallust and Lucretius. The distinguishing feature of the former, which lay on the Quirinal, was its gardens (Horii Sallustiani), which probably occupied the valley between the Quirinal and Pincian, as well as part of the latter hill. (Becker, Handb. p. 583.) The house of Lucullus, the conqueror of Mithridates and Tigranes, was situated on the Pincian, and was also surrounded with gardens of such remarkable beauty, that the desire of possessing them, which they awakened in the breast of Messalina, caused the death of their subsequent owner, P. Valerius Asiaticus. (Tac. Ann. xi. 1; Dion Cass. ix. 31.) From this period they formed one of the most splendid possessions of the imperial family. (Plut. Lucull. 39.)

The ambitious designs entertained by the great leaders of the expiring Republic led them to court public favour by the foundation of public buildings rather than to lay out their immense wealth in adorning their own residences. The house inhabited by Pompey in the Cænae was an hereditary one; and though, after his triumph over Mithridates and the pirates, he rebuilt it on a more splendid scale and adorned it with the beaks of ships, yet it seems even then to have been far from one of the most splendid in Rome. (Plut. Pompe. 40, seq.) On the other hand, he consulted the taste and convenience of the Romans by building a theatre, a curia, and several temples, like manner Caesar, at the height of his power, was content to reside in the ancient Regia; though this indeed was a sort of official residence which his office of Pontifex Maximus compelled him to adopt. (Suet. Cæs. 46.) But he formed, and partly executed, many magnificent designs for the embellishment of the city, which his short tenure of power prevented him from accomplishing. Among these were a theatre of unexampled magnitude, to be hollowed out of the Tarpeian rock; a temple of Mars, greater than any then existing; the foundation of two large public libraries; the construction of a new forum; besides many other important works, both at Rome and in the provinces. (Suet. Cæs. 26. 44; App. B. C. ii. 102, 36.)

The firm and lengthened hold of power enjoyed by Augustus, and the immense resources at his disposal, enabled him not only to carry out several of his uncle's plans, but also some new ones of his own; so that his reign must be regarded as one of the most important epochs in the history of the city. The foundation of new temples and other public buildings did not prevent him from repairing and embellishing the ancient ones; and all his designs were executed with so much magnificence that he could boast in his old age of having found Rome of brick and left it of marble. (Suet. Aug. 28.) In these undertakings he was assisted by the taste and munificence of his son-in-law Agrippa, who first founded public and gratuitous baths at Rome (Dion Cass. liv. 29); but as we shall have occasion to give an account of these works, as well as of those executed by Pompey and Caesar, in the topographical portion of this article, it will not be necessary to enumerate them here; and we shall proceed to describe the important municipal reforms introduced by Augustus, especially his new division of the city into Vicl and Regions.

Regions of Augustus.—Although Rome had long outgrown its limits under Servius Tullius, yet the municipal divisions of that monarch subsisted till the time of Augustus. to whom made them his model, so far as the altered circumstances of the city would...
permit. Servius had formed the different Vici into religious corporations somewhat analogous with our parishes, with an appointed worship of the Lares, and proper feasts or Comitata. During the Republic these corporations became a kind of political clubs, and were often made the engines of designing demagogues (Plut. C. Marius p. 21). Augustus, in his new distribution, also adopted the scheme of embodying the Vici as religious corporations, and for this purpose erected chapels in the crossways, and set up images of the gods vicarii, as the Apollo Sambalarius and the Jupiter Tragedicus. (Suet. Aug. 57.) Many bases of these statues have been discovered. By the term Vici we are to understand a certain collection of houses insulated by streets running round all its sides; whence the term came also to be applied to the streets themselves ("altere vici appalltur, cum id genus aedificiorum definitur, quae continentur sunt in oppidis, quaeve itineribus regionibusque distributa inter se distant, nominibusque dissimilibus discriminis causa sunt disparitatis," Fest. p. 371, et ibi Mill). Comitum, which means properly a cross-road, was also, especially in ancient times, only another name for Vici; and thus we find Pliny describing Rome as divided into Comita Larum instead of Vici (iii. 9). The Vici and Comitia, regarded as streets, were named (from the Regions Pia, etc.), and also in insulae (vide the Regions Piae, etc.). (Suet. Aug. 45; Ann. Marc. xxviii. 4 § 29.) They were named after temples and other objects. The Vici were composed of two classes of houses called respectively insulae and domus. The former were so called because, by a law of the XII. Tables, it was ordained that they should be separated from one another by an interval of 2½ feet, called ambitus, and by later authors circumvallus (Varr. l. l. v. § 22, Mill.; Paul. Diaec. p. 16, 111 Mill). This law, which seems to have been designed for purposes of health and for security against fire, was disregarded during the Republic, but again enforced by Nero when he rebuilt the city (Tac. Ann. xvi. 43); and there is an ordinance on the subject by Antoninus and Venus (Dig. viii. 2, 14). By insulae, therefore, we are to understand single houses divided by a small space from the neighbouring ones, not a complex of houses divided by streets. The latter division formed a Vici. Yet some insulae were so large and disposed in such a manner that they almost resembled Vici (vide Fest. p. 371. et ibi Milli). The insulae were subdivided by the Regions Palatinae, and were generally let out in floors ("coenacula meritorias," Dig. xii. 2, 30). It appears from the same authority that they were farmed by persons who underlet them; but sometimes the proprietors kept stewards to collect their rents. Insulae were named after their owners, who were called "domini insularum" (Soest. Cesn. 41, Tib. 48). Thus we hear of the insula Eucarpiana, Critonia, Arriana, &c. (vide Ginter, 613; Marat. 948. 9.) Rent was high (Juv. iii. 166), and investments in houses consequently profitable, though hazard, since the principle of insurance was altogether unknown. (Gell. xvi. 1, 2.) Cassius was a great speculator in houses, and was said to possess nearly half Rome. (Plut. c. 2.) The domus, on the contrary, were the habitations or palaces of the rich and great, and consequently much fewer in number than the insulae, the proportion in each region being as 1 to 25 or 30. The domus were also commonly insulated, but not by any special law, like the insulae. They were also composed of floors or stories, but were occupied by a single family (Uctron. 77); though parts of them, especially the postica, were sometimes let out (Plut. Trin. 1. 2, 157; Suet. Nero, 41, Vitell. 7). The number of insulae and domus in each Vicus would of course vary. Augustus appointed that each should be under the guidance of magistrates elected from its plebeian inhabitants ("magistri e plebe cujus insulae," Vide Liv. 35.)—Vicarii, in his new meaning of the householders composing a Vicus, (Suet. Aug. 30). Hence Livy calls them "infinitum genus magistratum" (xxiv. 7). They were called Magistri, Magistri Vicorum, Curatores Vicorum, and Magistri Larum, and their number varied from two to four in each Vicus. In the Basis Capitoldina each Vicus had 4 Magistri; but the Notitia and Curisamum mention 48 Vico-magistrati in each Region, without reference to the number of Vici. On certain days, probably the Consulipitalia (Ascon. in Cic. Tusc. p. 7), these magistrates were allowed to assume the toga praetexta, and to be attended by two lictors; and the public slaves of each Region were at their command, who were commonly at the disposal of the aediles in case of fire. (Dion Cass. lv. 8; Liv. i. c.) The principal duties of their office were to attend to the worship of the Lares, recessions of the people, &c. For Augustus restored the Ludi Comitiales and the regular worship of the Larici in spring and summer (Suet. Aug. 31), and caused them to be held annually. The Larici, which stood in the atrium or chapel of each comitum. (Ov. Fast. v. 145.) The Vicomagistri likewise superintended the worship of the popular deities Statia Mater and Valcanus Quetus, to whom, as protectors against fire, chapels were erected, first in the forum, and afterwards in the different streets. (Fest. p. 317, Milli; cf. Preller, Regionen, p. 84.)

A certain number of Vici, varying according to the Notitia and Curisamum from 7 to 78 constituted a Region and Augustus divided Rome into 14 of these Regions. The 4 Servian Regions were followed in the first 6 of Augurians. In determining the boundaries of the Regions Augustus seems to have caused them to be measured by feet, as we see them enumerated in the Notitia and Curisamum. The limits appear to have been marked by certain public buildings, not by cippi. We may safely assume that Augustus included the suburbs in his city, but not within a pomerium, since the Porticus Octaviana is mentioned, as being outside of the pomerium, although it lay far within the City. The names which are added to the two Regions which stood in the atrium or chapel of each comitum are often only distinguished by numbers; and officially they were perhaps never distinguished otherwise. Some of the names of Regions found in the Notitia and Curisamum are post-Augustan, as those of Isia and Serafis and Forum Pacis. The period when names were first applied to them cannot be determined. They are designated only by numbers in Tacitus and Frontinus, and even in the Basis Capitoldina which belongs to the time of Hadrian. We find, indeed, in the De Rerum Natura (p. 2) but so also he says "Regio Martii Campi," which never was a Region (Cass. 39, Nero, 12); and in these instances Regio seems to be used in its general sense.

The boundaries of the Regions cannot be traced with complete accuracy; but, as it is not our intention to follow those divisions when treating of the topography of the city, we shall here insert such a general description of them as may enable the reader to form some notion of their situation and relative size. Region I., or Porta Capena, embraced the
suburb lying outside of that gate, to the E. of the baths of Antoninus. It contained 10 Vic., and among its principal objects were, the temple of Mars, the arch of Drusus, and the sepulchre of the Scipio. Regio II., or Caesalentina, lay to the N. of this, and comprehended the whole extent of the Caelian hill. It had 7 Vic., and among its monuments may be mentioned the Arcus Dolabella and the aqueduct of Nero. Regio III., called Isis and Serapis, lay to the N. of the Caesalentina, and embraced the valley of the Colosseum, and that southern portion of the Esquiline anciently known as Mons Oppium. It comprehended 12 Vic., and its principal objects were the valley itself and the Flavian amphitheatre or Colosseum. Regio IV., called Templo Putei and Sacra Via, was situated to the W. of that of Isis and Serapis, and comprehended the Velian ridge and the greater part of the valley between the Palatine, Esquiline, Viminal, and Quirinal, to the exclusion, however, of that western portion which lay immediately under the Capitoline. Yet it embraced the buildings on the N. side of the forum, including the temple of Faustina, the Basilica Paulli, and the Area Velia. It had 15 Vic., and its chief objects were the walls of the ancient forum, the Cosseum, since it included the Colossus and the Meta Sulpiax, both of which objects stood very near that building. Its principal monuments, besides those already mentioned, were the temple of Venus and Rome, and the basilica of Constantine. It embraced the Subura, the greater portion of the Sacra Via, and the Forum Transitorium, and contained 8 Vic. Regio V., or Esquiline, included the northern portion of the Esquiline (Mons Cipusius) and the Vicus near the banks of the Tiber. It comprehended the E. of the Servian walls and agger. Thus it extended so far as to embrace the Amphitheatre Castrense, which adjoins the modern church of S. Croce in Gerusalemme, and the so-called temple of Minerva Medica, near the Porta Maggiore. It had 15 Vic., and among its remaining principal objects were the gardens of Macenas, the arch of Gaius, and the Nymphæum of Alexander Severus. Regio VI., called Alta Semita, embraced the Quirinal, and extended to the E. so as to include the Praetorian camp, the Parioli, and its chief objects were the baths of Diocletian, the house and gardens of Sulla, and the ancient Capitol. Regio VII., or Via Lata, was bounded on the E. by the Quirinal, on the N. by the Pincian, on the S. by the Servian wall between the Quirinal and Capitoline, and on the W. by the road called Via Lata till it joined the Via Flaminia—a point which cannot be accurately ascertainment. The Via Lata was the southern portion of the modern Corso, and probably extended to the N. nearly as far as the Antonine columns. The Region comprehended 15 Vic. Being without the Servian walls, part of this district was anciently a burying place, and the tomb of Bibulus is still extant. Regio VIII., or Forum Romanum Magnum, was one of the most important and populous in Rome. The ancient forum obtained the name of " Magnum " after the building of that of Caesar. (Dion Cass. lxxxiii. 22.) This Region, which formed the central point of all the rest, embraced not only the ancient forum, except the buildings on its N. side, but also the imperial fora, the Capitoline hill, and the valley between it and the Palatine as far as the Velabrum. It contained 34 Vic., among which were the densely populated ones Jugarius and Tuscanus. The monuments in this district are so numerous and well known that it is unnecessary to specify them. Regio IX., called Circus Flamininus, comprehended the district lying between the Via Lata on the E., the Tiber on the W., the Capitoline hill and Servian wall on the S.; whilst on the N. it seems to have extended as far as the present Piazza Navona and Piazza Colonna. It contained 35 Vic., and among its objects of interest may be named the circus from which it derived its name, the three theatres of Balbus, Pompey, and Marcellus, the Pantheon, and many other celebrated monuments. The Campus Martius, or northern part of the area between the hills and the Tiber, was not comprehended in any of the 14 Regions. Region X. and the porticoes consisted of the Palatine hill and its declivities. It had 20 Vic. Its boundaries are so well marked that we need not mention its numerous and well-known monuments till we come to describe its topography. Regio XI., or Circus Maximus, derived its name from the circus, which occupied the greater part of it. It comprehended the valley between the Palatine and Aventine, and also apparently the northern declivities of the latter hill, as far as the Porta Trigemina. On the N., where it met the Region Romanum, it seems to have included the Velabrum. It contained 19 Vic according to the Notitia. 21 according to the Curia- sum. Regio XII., called Piscina Publica, was bounded on the W. by the Aventine, on the N. by the Caelian, on the E. by Regio I., or Porta Capena, and on the S. it probably extended to the line of the Aurelian walls. It had 17 Vic., and its most remarkable monument was the baths of Caracalla. Regio XIII., or Aventina, included that hill and the adjoining banks of the Tiber. It had 17 Vic. according to the Notitia, 18 according to the Curia- sum. Regio XIV., Transiberina, or Transalbania, comprehended all the suburb on the W., or right bank of the Tiber, including the Vatican, the Janiculum with the district between them and the river, and the Insula Tiberina. This, therefore, was by far the largest of all the Regions, and contained 78 Vic. Municipal Regulations of Augustus.—All these Regions were under the control of magistrates chosen annually by lot. (Suet. Aug. 30.) The government of the Regions was not corporative, like that of the Vic., but administrative; and one or more Regions seem to have been intrusted to a single magistrate chosen among the aediles, tribunes, or pretors. (Procull. Regiones, p. 77.) The supreme administration, however, was vested in the Praefectus Urb. At a later period other officers were interposed between the praefect and these governors. Thus the Basie Capitolina mentions a Curator et Demoinator in each Region. Subsequently, however, the latter office seems to have been abolished, and the Notitia and Curianum mention two curators in each Region. There were also subordinate officers, such as praecores or clerics, and a number of imperial slaves, or libertini, were appointed to transact any necessary business concerning the Regions. (Procull. p. 79.) One of the chief objects of Augustus in establishing these Regions seems to have been connected with a scheme of the city police. For this purpose he established 7 Cohortes Vigilium, whose stations were so disposed that each cohort might be available for two Regions. Each was under the command of a tribune, and the whole was superintended by a Praefectus Vigilium. (Suet. Aug. 30; ...
Dion Cass. iv. 26; Paulus, de Offic. Praefct. Vigil., Dig. i. 15.) As these stations were necessarily near the borders of Regions, we find them frequently mentioned in the Notitia and Curatorum. They seem to have been a sort of barracks. But besides the 7 principal stations, the Praecentarium mentions 14 exceptoria, or outposts, which seem to have been placed in the middle of each region. The corps of which they were composed were probably supplied from the main stations. The duties of the vigiles were those of a night-pole, namely, to guard against fire; the duties of the vigiles, however, were very different. The first of these duties had anciently been performed by certain triumviri, called from their functions Nocturni, who were assisted by public slaves stationed at the gates and round the walls. The same office was, however, sometimes assumed by the aediles and tribunes of the people. (Paulus, L.c.) The vigiles were provided with all the arms and tools necessary for their duties; and from a passage in Petronius (c. 79) seem to have possessed the power of breaking into houses when they suspected any danger. The numbers of the vigiles amounted at last to 7000 men, or 1000 in each cohort. Augustus also established the Cohortes Praetoriae, or imperial guard, of which 9 cohorts were disposed in the neighbourhood of Rome, and 3 only, the Cohortes Urbanae, were permitted within the city. (Tac. Ann. iv. 5; Suet. Aug. 49.) These cohorts of Augustus were under the command of a Praefectus Urbii. (Tac. Hist. iii. 64.) It was his successor, Tiberius, who, by the advice of Sejanus, first established a regular Praetorian camp at Rome, a little to the eastward of the agger of Servius, and placed the bands under the command of a Praefectus Praetorio. (Tac. Ann. iv. 2; Suet. Tib. 37.) Augustus also paid considerable attention to the method of building, and revived the regulations laid down by P. Rutilius Rufus with regard to this subject in the time of the Gracchi (Suet. Aug. 89); but all we know of these regulations is, that Augustus forbade houses to be built higher than 70 feet, if situated in a street (Strabo. v. p. 2995.) The height was subsequently regulated by Nero and Trajan, the last of whom fixed it at 60 feet. (Anuci. Viet. Epist. c. 13.) Yet houses still continued to be inconveniently high, as we see from the complaints of Juvenal, in the time, probably, of Domitian, and dangerous alike in case of fire or falling, especially to a poor poet who lived immediately under the tiles:

"'Nos urbem colimus tenui tabicinque fultum
Magna parte sui; nam sic habitabant obstat
Villucus, et veteris iuriae quum text latum
Securos pendente jecit dormire ruina.

Vivendum est ille ubi nulli invenienda, nulli
Norte mutus. Jan posit aquam, jam frivola
transfert.

Uralgeam; habulata tibi jam terrae funam;
Tu necis; nam si gradibus trepidatur ab imis
Ultimus ardebit, quem tegula sola tueat
A pluvia, molles ubi redint ona columbarum."

(iii. 193.)

Augustan Rome. —Strabo, who visited Rome in the reign of Augustus, and must have remained there during part of that of Tiberius, has left us the following lively picture of its appearance at that period: "The city, having thus attained such a size, is able to maintain its greatness by the abundance of provisions and the plentiful supply of wood and stone for building, which the constant fires and continual falling and pulling down of houses render necessary; for even pulling down and rebuilding in order to gratify the taste is but a sort of voluntary ruin. Moreover the abundant mines and forests, and the rivers which serve to convey materials, afford wonderful means for these purposes. Such is the Anio, flowing down from Alba (Fucensia), a Latin city lying towards the territory of the Marsians, and so through the plain till it falls into the Tiber; also the Nar and the Tenaes, which likewise furnished them with corn, and the Erno, the Etruscan Tiber; and the Clainis, which waters Etruria and the territory of Clusium. Augustus Caesar took great care to obviate such damages to the city. To guard against fires he appointed a special corps composed of freedmen; and to prevent the falling down of houses he ordained that no new ones should be built, if they adjoined the public streets, of a greater height than 70 feet. Nevertheless the renovation of the city would have been impossible but for the many adjoining mineral and forests, and the facility of transport.

"Such, then, were the advantages of the city from the nature of the country; but to these the Romans added those which spring from industry and art. Although the Greeks are supposed to excel in building cities, not only by the attention they pay to the beauty of their architecture and the strength of their situation, but also to the selection of a fertile country and convenient harbours, yet the Romans have surpassed them by attending to what they neglected, such as the making of high-roads and aqueducts, and the constructing of sewers capable of conveying the whole drainage of the city into the Tiber. The high-roads have been constructed through the country in such a manner, by levelling hills and filling-up hollows, that the waggons are enabled to carry freight sufficient for a vessel; whilst the sewers, vaulted with hewn blocks of masonry, are sometimes large enough to admit the passage of a hay-cart. Such is the volume of water conveyed by the aqueducts that whole rivers may be said to flow through the city, which are carried off by the sewers. Thus almost every house is provided with water-pipes, and possesses a never-failing fountain. Marcus Agrippa paid particular attention to this department, besides adorning the city with many beautiful monuments. It may be said that the ancient Romans neglected the beauty of their city, being intent upon greater and more important objects; but later generations, and particularly the Romans of our own day, have attended to this point as well, and filled the city with many beautiful monuments. Pompey, Julius Caesar, and Augustus, as well as the children, friends, wife and sister of the last, have bestowed an almost excessive care and expense in providing these objects. The Campus Martius has been their special care, the natural beauties of which have been enhanced by their designs. This plain is of surprising extent, affording unlimited room not only for the chariot races and other equestrian games, but also for the multitudes who exercise themselves with the ball or hoop, or in wrestling. The neighbouring buildings, the perpetual verdure of the grass, the hills which crown the opposite banks of the river and produce a kind of scenic effect, all combine to form a spectacle from which it is difficult to tear oneself. Adjoining this plain is another, and many porticoes and sacred groves, three theatres, an amphitheatre, and temples
The three Regions utterly destroyed must have been the xith, xth, and ivth, or those called Circus Maximus, Palatium, and Templum Pacis. The forum must have suffered considerably, but the Capitoline seems to have escaped, as the Capitoline temple, after its first destruction in the time of Sulla, and the second and the entire still burn by the Vitellians. The narrow and crowded streets, and the irregular Vicus of which ancient Rome was composed, rendered it impossible to arrest the conflagration. Nero was at Antium when it broke out, and did not return to Rome till the flames were threatening his own palace, which he had not the power to save. This was the Domus Transitoria, the domain of which he had extended from the Palatine to the gardens of Maccenas on the Esquiline. What chiefly directed suspicion against Nero, as having wilfully caused the fire, was the circumstance of its breaking out afresh in the Aemilian property of his minister Tigellinus.

Much irreparable loss was occasioned by this fire, such as the destruction of several time-honoured fanes, of many master-pieces of Grecian art, besides a vast amount of private property. Among the venerable temples which perished on this occasion, were that of Juno Nepet, erected by Servius Tullius, the altar and temple of Hercules in the Forum Boarium, the temple of Jupiter Stator, founded by Numa, those of Vesta and of the Penates Populi Romani, and the Regium of Numa. Yet, on the other hand, the fire made room for great improvements. Nero caused the town to be rebuilt on a regular plan, with broad streets, open spaces, and less lofty houses. All the buildings were isolated, and a certain portion of each was constructed with Alban or Gabinian stone, so as to be proof against fire; to guard against which a plentiful supply of water was laid on. As a means of escape and assistance in the same calamity, as well as for the sake of ornament, Nero also caused porticoes to be built at his own expense along the fronts of the insulae. He supplied the proprietors with money for building, and specified a certain time by which the houses were to be completed (Tac. Ann. xv. 38—43; Suet. Nero, 38). Thus Rome sprang a second time from her ashes, in a style of far greater splendour than before. The new palace, or Domus Aurea, of the emperor himself kept pace with the increased magnificence of the city. Its bounds comprehended large parks and gardens, filled with wild animals, where solitude might be found in the very heart of the city; a vast lake, surrounded with large buildings, filled the valley in which the Flavian amphitheatre was afterwards erected; the palace was of such extent as to have triple porticoes of a thousand feet; in the vestibule stood a colossal figure of Nero himself, 120 feet in height; the ceilings were panelled, the chambers gilt, and inked with gems and mother-of-pearl; and the baths flowed both with fresh and sea water. When this magnificent abode was completed, Nero vouchsafed to honour it with his qualified approbation, and was heard to observe, “that he was at last beginning to lodge like a man.” (Suet. Nero, 31; Mart. de Spect. 2.)

Changes under subsequent Emperors.—The two predecessors of Nero, Caligula and Claudius, did not affect much for the city; but the short and turbulent reigns of his three successors, Galba, Otho, and Vitellius, were characterised rather by destruction than improvement. Caligula indeed perfected some of the designs of Tiberius (Suet. Cal. 3 n 3).
(21); and the reign of Claudius was distinguished by the completion of two aqueducts and the construction of several beautiful fountains (id. Claud. 20). The factional struggles between other and Vettius were marked by the ominous burning of the Capitol. At length the happier era of the public-spirited Vespasian was distinguished alike by his regard for the civil liberties of the Romans, and for their material comforts, by the attention which he paid to the improvement of the city, and by his restoring to the public use and enjoyment the vast space appropriated by Nero for his own selfish gratification. The bounds of the imperial palace were again restricted to the limits of the Palatine, and on the site of the Rotunda of Nero, a magnificent amphitheatre was destined for the amusement of so many thousands of the Roman people, whose ruins we still gaze at with wonder and admiration. Vespasian was likewise the founder of the temple of Peace, near the Forum, and of a temple to Claudius on the Caelian hill. Titus pursued the popular designs of his father, and devoted a large portion of the former imperial gardens on the Esquiline to the foundation of public baths. (Suet. Tit. 7; Mart. iii. 20. 15.) Under this emperor another destructive fire raged for three days and nights, and in Vespasian laid the greatest part of the city in ashes. (Suet. Tit. 8.) The chief works of Domitian were the rebuilding of the temple of Jupiter Capitolinus, which had again been burnt, on the mere external gilding of which he is said to have expended 12,000 talents, or nearly three million sterling; and the foundation of a new forum, which, however, was not finished till the time of Nerva, whose name it bore. (I. dom. 5.) Trajan conducted the last of the imperial form, with which was connected the Basilica Ulpia, (Vitruv. lxxiv. 1.) but Rome probably attained its highest pitch of architectural splendour under the reign of his successor Hadrian. That emperor had a passion for building, and frequently furnished his own designs, which, however, were not always in the best taste. His most remarkable works were the Mausoleum on the right bank of the Tiber, now the Castello di S. Angelo, the Temple of Venus and Rome near the Colosseum, and the enormous walls whose ruins may still be seen at the foot of the ascent which leads to Terminus. (Suet. Hadr. 24; Phot. Bibl. 80. p. 63, ed. Beek.) It would be tedious and unprofitable to recount the works of succeeding emperors down to the time of Aurelian; and it may suffice to mention that those who most contributed to renovate or adorn the city were Septimius Severus, Caracalla, and Alexander Severus. During this period Rome betrayed unequivalent symptoms of her approaching decline and fall. Large bodies of the barbarians had already penetrated into Italy, and, in the reign of the accomplished but feeble Gallienus, a horde of the Alemanni had invaded and assaulted Rome itself. After a lapse of eight centuries its citizens again trembled for the safety of their families and homes; and the active and enterprising Aurelian, whilst waging successful wars in Egypt and the East, found himself compelled to secure his capital by fortifying it with a wall. This great undertaking, commenced A. D. 271, was completed in the reign of Probus, the successor of Aurelian. (Vopisc. A. D. 21. 39; Anf. Vict. Cap. 35; Petrop. lII. 15; Isin. 1. 40.) The accounts of the circumference of this wall are discrepant and improbable. Vopiscus (Aure. c. 39) mentions the absurd and extravagant measure of nearly 50 miles; which, otherwise, has been adopted by Lipsius and Isaac Vossius, as well as by Nibby (Munro, gc. p. 120, seq.). The walls of Aurelian were repaired by Hemonus, and with the exception of that part beyond the Tiber, and some modest additions by the Pales, are substantially the same as those which now exist, as appears from the inscriptions on the gates. Without the additions referred to, their circumference would be between 11 and 12 miles, thus reducing the city to about the same dimensions as those given by Pliny in the time of Vespasian; nor is there any reason to believe that, in the sinking state of the Empire, the city would have received any increase of inhabitants. Another measurement by Ammon, the architect, just before the siege of the city by Alaric, gave a circumference of 21 miles (Phot. Bibl. 80. p. 63, ed. Beek.); but this number, though adopted by Gibbon, and nearer to the truth, cannot be accepted any more than that of Vopiscus. (Gibbon, Decl. and Fall, vol. ii. p. 17, ed. Smith, and notes.) Pluteus suggested that Vopiscus meant peces instead of passus, and other emendations of both the passages have been proposed; but without discussing the merit of these, it is sufficient to know that the texts are undoubtedly either corrupt or erroneous. (Eutrop. iv. 27.) The Roman emperors are shown from the following considerations, which will, for the most part, apply to both the statements:—

1st, the incredible extent of the work; 2nd, the absence of any traces of such walls; 3rd, of any buildings within their supposed limits, such as would naturally belong to a city; 4th, the fact that the extant inscriptions attest to Honorinus the restoration of an old line of walls and towers, not the construction of a new one. (Umbury, in Class. Mus. iii. p. 362.)

VI. DECLINE AND FALL OF THE CITY.

The history of the city from the time of Aurelian presents little more than a prospect of its rapid decline. The walls of that emperor were ominous of its sinking fortunes; but the reign of Diocletian forms the first marked era of its decay. The triumph of that emperor and of his colleague Maximian, A. D. 303, was the last ever celebrated at Rome, but was distinguished by the trophies of an important Persian victory. (Eutrop. iv. 27.) The Roman emperors had long ceased to be of Roman extraction; Diocletian, the descendant of slaves, was born in Dalmatia; Maximian, the son of a peasant, was his fellow countryman; and thus neither was welded by any ties of birth or patriotism to the ancient glories of the eternal city. These were the first emperors who deserted the capital to fix their residence in the provinces. Maximian established his court at Milan, whilst Diocletian resided at Nicaea, on the embellishment of which he lavished all the treasures of the East, in endeavouring to render it a rival worthy of Rome. His only visit to the ancient capital seems to have been on the occasion of his triumph; it was not prolonged beyond two months, and was closed with unexpected precipitation and abruptness. (Lact. Mort. Per. c. 17.) Yet his reign is distinguished as having conferred upon the city one of the latest, but most magnificent of its monuments,—the baths on the Quirinal which bear his name, by far the largest in Rome, whose enormous ruins may still be traced, and afford room enough for various churches, convents, and gardens. (Vopisc. Prob. 2; Orell. Inscr. 1056.) Subsequently, indeed, Maxentius,
ROMA.

the partner and rival of Constantine, resided at Rome during the six years of his reign, and affected to prize the elegance of the ancient metropolis; whilst his lust and tyranny, supported by squandering its treasures, created more disgust among the Romans than they had been of their former sovereigns. Maximian, however, adorned the city which he polluted by his vices, and some of his works are among the last monuments worthy to be recorded. He restored the temple of Venus and Rome, which had been damaged by a fire, and erected that magnificent basilica, afterwards dedicated in the name of Constantine, whose three enormous arches may still be viewed with admiration. (Aur. Vict. Ces. c. 40. § 26.) The final transfer of the seat of empire to Byzantium by Constantine gave the last fatal blow to the civic greatness of Rome. Yet even that emperor presented the city—we can hardly say adorned it—with a few monuments. One of them, the arch which records his triumph over Maxentius, still subsists, and strikingly illustrates the depth of degradation to which architectural taste had already sunk. Its beauties are derived from the barbarous pilage of former monuments. The superb sculptures which illustrated the acts and victories of Trajan, were ruthlessly and absurdly carried off by that emperor, whilst the original sculptures that were added, by being placed in juxtaposition with those beautiful works, only serve to show more forcibly the hopeless decline of the plastic arts, which seem to have fallen with paganism.

**Rome in the Time of Constantius II.** From this period the care of the Romans was directed rather towards the preservation than the adornment of their city. When visited by the Second Constantine, in A.D. 357, an honour which it had not received for two and thirty years, Rome could still display her ancient glories. The lively description of this visit by Ammianus Marcellinus, though written in a somewhat inflated style, forms a sort of pendant to Strabo's picture of Rome in the age of Augustus, and is striking and valuable, both as exhibiting the condition of the eternal city at that period, and as illustrating the fact that the men of that age regarded its monuments as a kind of Titanic relics, which it would be hopeless any longer to think of imitating to-day, whilst the historian, "the seat of empire and of every virtue," Constantius was overwhelmed with astonishment when he viewed the forum, that most conspicuous monument of ancient power. On whatever side he cast his eyes, he was struck with the thronging wonders. He addressed the senate in the Curia, the people from the tribunal; and was delighted with the applause which accompanied his progress to the palace. At the Circus games which he gave, he was pleased with the familiar talk of the people, who, without betraying pride, asserted their hereditary liberty. He himself observed a proper mean, and did not, as in other cities, arbitrarily terminate the contests, but, as is customary at Rome, permitted them to end as chance directed. When he viewed the different parts of the city, situated on the sides of the seven hills and in the valleys between them, he expected that whatever he first saw must be superior to everything else: such as the temple of the Tarpeian Jove, whose excellence is like divine to human; the baths which occupy whole districts; the enormous mass of the amphitheatre, built of solid Tiberine stone, the height of which almost baffles the eye; the Pantheon, which may be called a circular Region, vaulted with lofty beauty; the high, but accessible mounds, bearing the statues of preceding princes; the temple of Rome, the forum of Peace; the theatre of Pompey, the odeum, the stadium, and other similar ornaments of the eternal city. But when he came to the Forum of Trajan, which we take to be a structure unparalleled in the whole world, he was confounded with astonishment as he surveyed those gigantic proportions, which can neither be described nor again imitated by man. Wherefore, laying aside all hope of attempting anything of the kind, he merely expressed the power and the wish to imitate the horse of Trajan, on which that prince is seated, and which stands in the middle of the Atrium. Hereupon prince Hormisdas, who stood near him, exclaimed with national gesticulation: 'First of all, emperor, order such a stable to be made for it, if you can, that the horse you propose making may lodge as magnificently as the one we behold.' The same prince being asked his opinion of Rome said that the only thing which displeased him was to perceive that men died there as well as in other places. So great was the emperor's surprise at all these sights that he complained that rumour, which commonly magnifies everything, had here shown itself weak and malignant, and had given but a feeble description of the wonders of Rome. Then, after much deliberation, he resolved that the only way in which he could add to the ornaments of the city would be by erecting an obelisk in the Circus Maximus." (xvi. 10.)

The same historian from whom the preceding topographical picture has been transcribed has also left some lively and interesting notices of the manners of the Romans at this period. These have been paraphrased in the eloquent language of Gibbon, to whose work the reader is referred for many interesting particulars concerning the state of Rome at this time (vol. iv. pp. 70—89, ed. Smith). We may here observe with surprise that whilst Alaric, like another Hannibal, was threatening her gates, her nobles were revelling in immoderate wealth, and squandering the revenues of provinces on objects of pomp and luxury, though, as we have seen, the arts had fallen to so low an ebb that there was no longer any hope of rivalling the works of their ancestors. The poor citizens, few of whom could any longer boast a pure Roman descent, resembled the inmates of a poorhouse, except that their pleasures were provided for as well as their wants. A liberal distribution of corn and bacon, and sometimes even of wine, relieved their necessities, whilst health and recreation were promoted by gratuitous admittance to the baths and public spectacles. Yet Rome was now struggling for her existence. We have already mentioned the restoration of the walls by Honorius. It was under the same emperor that the first example occurs of that desecration by which the Romans stripped and destroyed their own monuments. If we may credit Zosimus (v. 38), Stilicho was the first to lay violent hands on the temple of the Capitoline Jove, by stripping off the plates of gold which lined its doors, when the following inscription was found beneath them: "Misero regi servatur." In after times this example was but too frequently followed; and it may be said with truth that the Romans themselves were the principal destroyers of their own city.

**The Barbarians at Rome.**—After two sieges, or rather blockades, in 408 and 409, by the Goths
under Alaric, Rome was captured and sacked on a third occasion in 410 (A. v. c. 1163)—the first time since the Gallic invasion that the city had actually been in the hands of an enemy. But though it was plundered by the Goths, it does not appear to have sustained much damage at their hands. They evacuated it on the sixth day, and all the mischief they seem to have done was the setting fire to some houses near the Salarian gate, by which they had entered, which unfortunately spread to and destroyed the neighbouring palace of Sallust (Procop. B. v. i. 2.) Nearly half a century later, in the reign of Maximus, Rome was again taken, and sacked by the Vandals, under Geseric, A. D. 455. This time the pillage lasted a fortnight; yet the principal damage inflicted on the monuments of the city was the carrying off by Geseric of the curious tiles of gilt bronze which covered the temple of the Capitoline Jupiter (Procop. B. 5.). That edifice, with the exception, perhaps, of the spoliation by Solilcho, appears to have remained in much the same state as after its last rebuilding by Domitian; and though paganism had been abolished in the interval, the venerable fane seems to have been respected by the Roman Christians. Yet, as may be perceived from an edict of the emperor Majorian, A. D. 457, the inhabitants of Rome had already commenced the disgraceful practice of destroying the monuments of their ancestors. The zeal of the Christians led them to deface some of the temples; others, which had not been converted into Christian churches, were suffered to go to ruin, or were converted into quarries, from which building materials were extracted. Petitions for that purpose were readily granted by the magistrates; till Majorian checked the practice by a severe edict, which reserved to the emperor and senate the cognizance of those cases in which the destruction of an ancient building might be allowed, imposed a fine of 50 lbs. of gold (2000£ sterling) on any magistrate who granted a license for such dilapidations, and commanded all subordinate officers engaged in such transactions to be whipped, and to have their hands amputated (Vor. Major. tit. vi. p. 35: “Antepenarum aedem dissipatrum speciosum construction; et ut earum aliquip reparetur magnam diruntur,” &c.)

In the year 472, in the reign of Olybrius, Rome was for the third time taken and sacked by Ricimer; but this calamity, like the two former ones, does not appear to have been productive of much damage to the public monuments. These are, however, of her former glory they were the special care of Theodoric, the Ostrogoth, when he became king of Italy, who, when he visited the capital in the year 500, had surveyed them with admiration. “The Gothic kings, so injuriously accused of the ruin of antiquity, were anxious to preserve the monuments of the nation whom they had subdued. The royal edicts were framed to prevent the abuses, the neglect, or the depredations of the citizens themselves; and a professed architect, the annual sum of 200 lbs. of gold, 25,000 tiles, and the receipt of requisitions from the Laurenzi, who were so particular to signum for the ordinary repairs of the walls and public edifices. A similar care was extended to the statues of metal or marble, of men or animals. The spirit of the house, which have given a modern name to the Quirinal, was applied to the barriarins; the brazen elephants of the Via Serra were ingeniously restored; the famous heifer of Myron decorated the cattle as they were driven through the forum of Peace; and an officer was created to protect these works of art, which Theodoric considered as the noblest ornament of his kingdom.” (Gibbon, Decline and Fall, vol. v. p. 21, ed. Smith; cf. Excerpt. de Thone. Theod. 67.) The letters of Cassiodorus, the secretary of Theodoric, show that Rome had received little or no injury from its three captures. The Circus Maximus was uninjured, and the Ludii Circenses were still exhibited there (Varian. iii. 51.); the thermes and aqueducts were intact (ib. vii. 6); the Claudian aqueduct was still in play, and discharged itself on the top of the Aurelian wall; it was a valley (ib.). That the aqueducts were perfect also appears from Procopius (B. G. 1. 19), who says that in the subsequent siege under Vitiges, the Goths broke them down, to deprive the inhabitants of their supply of water. The theatres had suffered only from the effects of time, and were repaired by Theodoric (Cassiod. 1b. iv. 51.)

In the year 536 the Gothic garrison, with the exception of their commander Lencianus, who surrendered to flight, evacuated Rome on the approach of Belisarius, the lieutenant of Justinian. Belisarius entered by the Asinarian gate, and, after an alienation of sixty years, Rome was restored to the imperial dominion. But in a few months the city was bequeathed by the numerous host of Vitiges, the newly elected king of the Goths; and its defence demanded all the labour and ability of Belisarius. For this purpose he repaired the walls, which had again fallen into decay. Regular bastions were constructed; a chain was drawn across the Tiber; the arches of the aqueducts were fortified, and the mole of Hadrian was converted into a citadel. That part of the wall between the Flaminian and Pincian gates, called muro torto, was alone neglected (Procop. B. G. i. 14, seq.), which is said to have been regarded both by Goths and Romans as under the peculiar protection of St. Peter. As we have before said, the Goths invested the city in six divisions, from the Porta Flaminia to the Porta Praenestina; whilst a seventh encampment was formed near the Vatican, for the purpose of commanding the Tiber and the Milvian bridge. In the general assault which followed, a feat was made at the Salarian gate, but the principal attacks were directed against the mole of Hadrian and the Porta Praenestina. It was on this occasion that at the former point the finest statues, the works of Praxiteles and Lysippus, were converted into warlike missiles, and hurled down upon the besiegers. When the Longobard language was crimsoned in the pontifical city of Urban VIII., the Stepping Farm of the Barberini Palace was discovered, but in a sadly mutilated state. (Winckelm. Hist. de l'Art, vol. ii. p. 52, seq.) But the assault was not successful, and after a fruitless siege, which lasted a year, the Goths were forced to retire.

After the recall of Belisarius the Goths recovered strength and courage, and, under Totila, once more threatened the walls of Rome. In 544 Belisarius was again despatched into Italy, to retrieve the cause which had been abandoned him; but on this occasion he was deserted by his usual fortune, and, after a fruitless attempt to relieve the city, was compelled to retreat to Ostia. (Procop. B. G. iii. 19.) In December, 546, the Goths were admitted into the city by the treachery of some Avarian sentinels posted at the Asinarian gate. Rome was again subjected to pillage, and appears to have suffered more than on any former occasion. A third part of the walls was destroyed in different places, and a great many houses were burnt.
Theoph. i, 111, on hands, is a description of the hands of Belisarius, who warned him not to sully his fame by such wanton barbarity. Upon Totila's marching into Lucania, Belisarius, at the head of 1000 horse, cut his way through the Goths who had been left to guard the city. He repaired with rude and heterogeneous materials the walls which had been demolished; whilst the gates, which could not be suddenly restored, were guarded by his bravest soldiers. Totila returned to Rome by forced marches, but was thrice repulsed in three general assaults. Belisarius, however, being commanded by Justinian to proceed into Lucania, left a garrison of 3000 of his best troops at Rome under the command of Diegones. The city was again betrayed by some Isaurians in 549, who opened the gate of St. Paul to Totila and his Gothic, Totila, who seems now to have considered himself as in confirmed possession of Italy, no longer exhibited any desire to destroy the edifices of Rome, which he regarded as the capital of his kingdom, and he even exhibited the equestrian games in the Circus. (Procop. B. G. iv. 22.) But in 552 he was defeated and slain by the eunuchs in the battle of Tagina. Narses then marched to Rome, and once more sent its keys to Justinian, during whose reign the city had been no fewer than five times taken and recovered. (Ib. 26—35; Theoph. Chron. vol. i. p. 354, ed. Bom.) Rome under the Goths. Towards the close of the sixth century Rome had touched the lowest point of degradation. The Roman citizens lived in continual fear of the attacks of the Lombards; the inhabitants of the surrounding country, who no longer dared to devote themselves to the pursuits of agriculture, took refuge within the walls; and the Campagna of Rome became a desert, exhalings infernal vapours. The indigence and the celibacy of a great part of the inhabitants produced a rapid decrease of population, though their scanty numbers did not protect them from famine. The edifices of Rome fell into decay; and it is commonly believed that Pope Gregory the Great, who filled the papal chair from 590 to 604, purposely defaced the temples and mutilated the statues,—a charge, however, which rests on doubtful evidence, and which has been strenuously repelled by Gregory's biographer Philatia (ap. Bayle, Grégoire ler.). Bar- gaicus, in his epistle on the subject (In Gronius, Theaur. Ant. vol. iv.), says that the Circus Maximus, the baths and theatres, were certainly overthrown desecrately, and that this is particularly evident in the baths of Caracalla and Diocletian (p. 1885). He attributes this, as a merit, to Gregory and one or two subsequent popes, and assigns as a reason that the baths were nothing but schools of licentiousness (p. 1889, seq.). It seems more probable, however, that the destruction of the baths arose from the failure of the aqueducts—a circumstance which would have rendered them useless—and from the expense of keeping them up. Bargaicus himself attributes the ruin of the aqueducts to the latter cause (p. 1891); but they must also have suffered very severely in the Gothic wars. Hence perhaps the large foundations of the thermae, having become altogether useless, began to be used as stone quarries, a circumstance which would account for the appearance of useful damage. That ruin had made great progress at Rome before the time of Gregory, is manifest from some passages in his own works in which he deprecates it. Thus in one of his letters he says:—\[quid autem ista de hominibus dicimus, cum ruinis crebriscentibus ipsa quae destruxit aedificia videmus?\] (Hom. 18 in Ezech. ap. Donatum, de Urbe Roma, i. 28, sah. fin.) He would hardly have written thus had he himself been the cause of these ruins. The charge probably acquired strength from Gregory's avowed antipathy to classical literature.

Whilst the dominion of Italy was divided between the Lombards and the exarchs of Ravenna, Rome was the head of a duchy of almost the same size as her ancient territory, extending from Viterbo to Terracina, and from Narni to the mouth of the Tiber. The fratricide Constans II. is said to have entertained the idea of restoring the seat of empire to Rome (A. D. 662). (Hist. Misc. ap. Muratori, Script. R. I. liii. pt. i. p. 137.) But the Lombard power was too strong; and, after a visit of a few days to the ancient capital, he abandoned it for ever, after pillaging the churches and carrying off the bronze roof of the Pantheon. (Schlosser, Gesch. d. bieder stürmenden Kaiser, p. 80.) In the eighth century the Romans revived the style of the Republic, but the Popes had become their chief magistrates. During this period Rome was constantly harassed and suffered many sieges by the Lombards under Luitprand, Astolphus, and other kings. In 846 the various measure of its calamities was filled up by an attack of the Saracens—as if the former mistress of the world was destined to be the butt of wandering barbarians from all quarters of the globe. The disciples of Mahomet pillaged the church of St. Peter, as well as that of St. Paul outside the Porta Ostiensi, but did not succeed in entering the city itself. They were repulsed by the vigilance and energy of pope Leo IV., who repaired the ancient walls, raised fifteen towers which had been overthrown, and enclosed the quarter of the Vatican; on which in 852 he bestowed his blessing and the title of Città Leonina, or Leonine city (now the Borgo di S. Pietro). (Annales, i. Leon. iv.) In the period between 1081 and 1084 Rome was thrice fruitlessly besieged by the emperor Henry IV., who, however, by means of corruption at last succeeded in gaining possession of it; but the ruins of the Sepulchrum, defended by the nephew of Pope Gregory VII., resisted all the attacks of Henry's forces. Gregory shut himself up in the castle of S. Angelo, and invoked the assistance of his vassal, Robert Guiscard. Henry fled at the approach of the warlike Norman; but Rome suffered more at the hands of its friends than it had ever before done from the assaults of its enemies. A tumult was excited by the imperial adherents, and the Saracens in Robert's army, who despised both parties, seized the opportunity for violence and plunder. The city was freed; a great part of the buildings on the Campus Martius, as well as the spacious district from the Lateran to the Colosseum, was consumed, and the latter portion has never since been restored. (Malaterra, iii. c. 87; Donatus, iv. 8.)

But Rome has suffered more injury from her own citizens than from the hands of foreigners; and its ruin must be chiefly imputed to the civil discord of
of the Romans, and to the use which they made of the ancient monuments to serve their own selfish and mercenary purposes. The facions of the Guelphs and Ghibelines, of the Colonna and Urbinii, which began in the tenth century and lasted several hundred years, must have been very destructive to the city. In these sanguinary quarrels the ancient statues were converted into castles; and the multitude of the latter may be estimated from the fact that the senator Brancaleone during his government (1252—1258) caused 140 towers, or fortresses, the stronghold of the nobility, to be built in Rome and its neighbourhood; yet subsequently, under Martin V., we still hear of forty-four existing in one quarter of the city alone. (Matthew Paris, Hist. Maj. p. 741, seq.) Some of these were erected on the most celebrated buildings, as the triumphal monuments of Caesar, Titus, and the Antonines. (Montefano, Diari. Ital. p. 186; Anonymous, ib. p. 283.) But still more destructive were the ravages committed on the ancient buildings during times of peace. The beautiful sculptures and architectural members, which could no longer be imitated, were seized upon and appropriated to the adornment of new structures. We have seen that this barbarous kind of spoliation was exercised as early as the reign of Constantine, who applied the sculptures of some monument of Trajan’s to adorn his own triumphal arch. In after ages Charlemagne carried off the columns of Rome to decorate his palace at Aix-la-Chapelle (Sigebert, Chron. in Bonnet, Historien de France, v. p. 375); and several centuries later Petrarch learnt that his friend and patron, Robert, king of Sicily, was following the same pernicious example. (“Itaque nunc, heu dobor! heu aequus dignigum! de vestris mariserei columnis, de histrinis temploarum in quae nuper ex orbe toto concursurus devotissimos fictati, de imaginibus sepalorum sub quibus patrum vestrorum venerabilis ciuis erat, ut religiis eadem, desidiosa Napoli adornator,” Petrar. Opp. p. 536, seq.) It would be endless to recount the depredations committed by the popes and nobles in order to build their churches and palaces. The abbe Barthi’leni (Mem. de l’Acad. des Inscr. xxviii. p. 585) mentions that he had seen at Rome a manuscript letter relating to a treaty between the chiefs of the factions which desolated Rome in the 14th century, in which, among other articles, it is agreed that the Colosseum shall be common to all parties, who shall be at liberty to take stones from it. (De Sale, Lie de Pedrarque, i. 328, note.) Sixtus V. employed the stones of the Septizonium in building St. Peter’s. (Greg. Leti, Vita di Sisto I. iii. p. 50.) The nephews of Paul III. were the principal destroyers of the Colosseum, in order to build the Farnese palace (Muratori, Ann. d’Italia, iv. p. 371); and a similar reproach was properly applied to those of Urban VIII. (“Quod non fecerunt Barbari, ferre Barbarini,” Gibbon, viii. p. 284, note.) But even a worse species of desecration than this was the destruction of the most beautiful marble columns, by converting them into lime. Poggio complains (A. d. 1430) that the temple of Concord, which was almost perfect when he first came to Rome, had almost disappeared in this manner. (“Captio aliquo forum versus superest porticus aedis Concordiae, quum cum primum ad urbem accesserit, vidit integrum, opere marmore admodum spectaculare, Romani postmodum, ad calicem, asdem totum et porticos pariter, disjectis columnis, saut domo, hic urb. Fort. p. 12.”) And the same practice is reproved in the verses of Aeneas Sylvius, afterwards Pope Pius II.—

“Sed tunc hic popularis, muris defossa vestutis, Calecis in obscurem marmora duras coquit.”

Impia terrcentum si sic gens egetis annos Nulium hic indicium nobilitatis erit.

(In Mabillon, Nova It. i. 97.)

The melancholy progress of the desolation of Rome might be roughly traced from some imperfect memorials. The account of the writer called the Anonymous, the only one which is known to us, is compiled from the 9th century, which has been published by Mabillon (Anat. iv. p. 502), and by Hânel (Archiv. f. Philol. u. Philos. i. p. 115), exhibits a much more copious list of monuments than that of another anonymous writer, who compiled a book De Mira
gages in the works of Petrarch exhibit the neglected and desolate state of Rome in the 14th century,—the consequence of the removal of the holy see to Avignon.

Thus, in a letter to Urian V., he says: “Jacent domus, labant maenalia, tempia ruinata, sacra reperuit, calcantur leges.” And a little after: “Lateranum huni jacet et Ecclesiarum mater on
nium tecto carnis ventis patet ac pluvius,” &c. (Cf lib. ix. ep. i.) Yet the remains of ancient Roman splendour were still considerable enough to excite the wonder and admiration of Manuel Chrysoloras at the commencement of the 15th century, as may be seen in his epistle to the emperor John Palaeologus, (subjoined to Codinus, de Antiq. C. P. p. 107, seq.) Much destruction must have been perpetrated from this period to the time, and even during the life, of Poggio. But the progress of desolation seems to have been arrested subsequently to that writer, whose catalogue of the ruins does not exhibit a great many more remains than may yet be seen. Care is now taken to arrest as far as possible even the inevitable influence of time; and the antiquarian has at present nothing to regret except that more active means are not applied to the disinterment of the ancient city. The funds devoted to the re-
erection of a magnificent basilica far without the walls, and on so unwholesome a site that the very monkeys are forced to desert it during the heats of summer, might, in the eye at least of transmontane taste, have been more worthily devoted to such an object.

VII. POPULATION OF ROME.

Before we close this part of the subject it will be expected that we should say something respecting the probable amount of the population of Rome. The inquiry is unfortunately involved in much obscur ity, and the vagueness of the data upon which any calculation can be founded is such that it is impossible to arrive at any wholly satisfactory conclusion. The latitude hence allowed may be judged from the fact that the estimates of some of the best modern scholars are about four times as great as those of others; and whilst Dureau de la Maile, in his Economie politique des Romans (i. p. 340, seq.), sets down the population at 562,000 souls, Hrack, in his Römische Geschichte (vol. i. pt. ii. p. 383, seq.), estimates it at 2,265,000; my Lipsius, in his work De Magnitudine Romana (iii. 3), even carried it up to the astounding number of 8,000,000. But this is an absurd exaggeration; whilst, on the
other hand, the estimate of Durand de la Malle is undoubtedly much too low.

The only secure data which we possess on the subject are the records of the number of citizens who received the congiaria or imperial largesses, for it is only during the imperial times that we can profess to make any calculation. We learn from the Monurnentum Agescreanum that Augustus, in his 12th consulate, distributed a pecuniary gift to 320,000 of the plebs urbana. ("Consul xii. trecentis et viginti milibus pecuniae secessuris dignitatem dedidit," Dug. Aug. 41.) The distributions of corn seem to have been regulated on stricter principles, as these were regular, not extraordinary like the largesses. From these the children were probably excluded, and there was, perhaps, a stricter inquiry made into the titles of the recipients. Thus we learn from the Mon. Agescreanum that those who received corn in the 13th consulate of Augustus amounted to rather more than 290,000. (Cf. Dion Cass. iv. 10.) From the same document it appears that three largesses made by Augustus, of 400 sesterces per man, were never distributed to fewer than 250,000 persons. ("Quae
mea congiaria pervenerunt ad hominem millia numquam minus quinquaginta et ducenta," T. H., where Hick, Roman Geach. i. pt. ii. p. 388, by erroneously reading sexerterium instead of hominum, has increased the number of recipients to 625,000.) From a passage in Spartian’s life of Septimius Severus (c. 23) it would seem that the number entitled to receive the distributions of corn had increased. That author says that Severus left at his death wheat enough to last for seven years, if distributed according to the regular canon or measure of 75,000 modii daily. Now, if we calculate this distribution according to the system of Augustus, of five modii per man monthly, and reckon thirty days to the month, then this would leave the number of recipients at 450,000 (75,000 × 30 = 2,250,000 + 5 = 450,000). According to these statements we can hardly place the average of the male plebian population of Rome during the first centuries of the Empire at less than 350,000; and at least twice as much again must be added for the females and boys, thus giving a total of 1,050,000. There are no very accurate data for arriving at the numbers of the senators and knights. Bunsen (Beeckh. i. p. 184), without stating the grounds of his calculation, sets them down, including their families, at 10,000. But this is evidently much too low an estimate. We learn from Dionysius Halicarnassensis (vi. 19) that in the annual procession of the knights to the temple of Castor they sometimes mustered to the number of 5000. But this must have been very far from their whole number. A great many must have been absent from sickness, old age, and other causes; and a far greater number must have been in the provinces and in foreign countries, serving with the armies, or employed as publicani, and in other public capacities. Yet their families would probably, for the most part, reside at Rome. We see from the complaints of Horace how the equestrian dignity was prostituted in the imperial times to liberti and aliens, provided they were rich enough for it. (Epod. iv. in Memmi.; cf. Juv. i. 28.) We should, perhaps, therefore, take below the mark in fixing the number of knights and senators at 15,000. If we allow a wife and one child only to each, this would give the number of individuals composing the senatorial and equestrian families at 45,000, which is a small proportion to 1,050,000 freemen of the lower class. It may be objected that marriage was very much out of fashion with the higher classes at Rome during the time of Augustus; but the omission was supplied in another manner, and the number of kept women and illegitimate children, who would count as population just as well as the legitimate ones, must have been considerable. In this calculation it is important not to underrate the numbers of the higher classes, since they are very important factors in estimating the slave population, of which they were the chief maintainers. The preceding sums, then, would give a total of 1,095,000 free inhabitants of Rome, of all classes. To these are to be added the aliens residing at Rome, the soldiers, and the slaves, the first of these classes must have been very numerous. There must have been a great many provincial persons settled at Rome, for purposes of business or pleasure, who did not possess the franchise, a great many Greeks, as tutors, physicians, artists, &c., besides vast numbers of other foreigners from all parts of the world. The Jews alone must have formed a considerable population. So large, indeed, was the number of aliens at Rome, that in times of scarcity we sometimes read of their being banished. Thus Augustus on one occasion expelled all foreigners except tutors and physicians. (Suet. Aug. 42.) According to Seneca, the greater part of the inhabitants were aliens. "Nullum non hominem genus concurrat in urbem et virtutum et vitis magna prae mia potentiem. Unde domo quisque sit, quaeve; vulpis majorem partem esse, quae reiectis sedibus suis venerator in maximum quidem et pulcherrimam urbe, non tamen sumum." (Cons. ad Hel. e. 6.) In this there is no doubt some exaggeration; yet we find the same complaints reiterated by Juvenal:

"Jam pridem Syrus in Tiberim defectu Orantes,"

"Hic alta Sicyme, ast hic Amydonea reticta."

"Hic Andro, ille Samo, hic Traillibus an Alabandis, Esquiliis dictumque patetun a Vanime collem, Viscara magnaram domum, dominique futuri."

(gii. 62, seq.)

It would perhaps, then, be but a modest estimate to reckon the aliens and foreigners resident at Rome, together with their wives and families, at 160,000. The soldiers and the vigiles, or police, we can hardly estimate at less than 25,000; and as many of these men must have been married, we may reckon them, with their families, at 50,000. Hence 100,000 aliens and 50,000 military, &c., added to the foregoing sum of 1,095,000, makes 1,243,000 for the total miscellaneous free population of Rome. There are great difficulties in the way of estimating the slave population, from the total absence of any accurate data. We can only infer generally that it must have been exceedingly numerous; a fact that is evident from many passages of the ancient authors.
The number of slaves kept as domestic servants must have been exceedingly large. Horace mentions (Sat. i. 3. 12) that the singer Tigellius had sometimes as many as 200 slaves; but when he was taken with a sudden fit of economy, he reduced them to the very modest number of 10. No doubt, however, he was a first-rate vocalist, and, like his brethren in modern times, a man of fortune. Tillius the praetor, who was a stingy churl, when he went to Tiber, had 5 slaves at his beds to carry his cooking utensils and wine. (Th. i. 6. 107.) Horace himself, who of course was not so rich a man as Tigellius, when he sat down to his frugal supper of cakes and vegetables, was waited upon by 3 slaves; and we may presume that these did not compose his entire household. (Ib. v. 115.)

In the reign of Nero, 400 slaves were maintained in the palace of Pedanius Secundus, who were all put to death, women and children included, because one of them had murdered his master. (Tac. Ann. iv. 42.) The slaves no longer consisted of those born and bred on the estates of their masters, but were imported in multitudes from all the various nations under the wide-spread dominion of the Romans. ("Postquam vere nationes in familiae haudem, quibus diversi ritus, externa sacra, aut nulla sunt, colluviam istam non nisi metu coequercerat." (Ib. c. 44.) The case of Pedanius, however, was no doubt an extraordinary one. It cannot be imagined that the plebs urbana, who received the public rations, were capable of maintaining slaves; nor probably are many to be assigned to the aliens. But if we place the patrician and equestrian families at 15,000, and allow the moderate average number of 30 slaves to each family, this would give a total number of 450,000. Some also must be allowed to the richer part of the plebs—to persons who, like Horace, were not patrician nor equestrian, yet could afford to keep a few slaves; as well as to the aliens resident at Rome, so that we can hardly compute the number of domestic slaves at less than 500,000. To these must be added the public slaves at the disposal of the various municipal officers, also those employed in handicraft trades and manufactures, as journeymen carpenters, builders, masons, bakers, and the like. It would not perhaps be too much to estimate these at 300,000, thus making the total slave population of Rome 800,000. This sum, added to that of the free inhabitants, would give a total of 2,045,000.

The Novell and Carlsberg state the number of insulae at Rome at 46,602, and the number of domus at 1790, besides balnea, lupariaria, military and police stations, &c. If we had any means of ascertaining the average number of inhabitants in each insula, it would afford a valuable method of checking the preceding computation. But here again we are unfortunately reduced to uncertainty and conjecture. We may, however, pretty surely infer that each insula contained a large number of inmates. In the time of Augustus the yearly rent of the cæsarea of an insula ordinarily produced 40,000 sesterces, or between 300l. and 400l. sterling. (Dig. 19. tit. 2. s. 30, ap. Gibbon, ch. 31, note 70.) Petronius (c. 93, 97), and Juvenal (Sat. iii. passim) describe the crowded state of these lodgings. If we take them at an average of four stories, each accommodating 12 or 15 persons, this would give say 50 persons in each insula; and even then the inmates, men, women and boys, would be paying an average yearly rent of about 74l. per head. The number of each domus can hardly be set down at less, since the family, with tutors and other hangers on, may perhaps be fairly estimated at 10, and the slaves in each domus at 40. We learn from Valerius Maximus (iv. 4. § 8), that sixteen men of the celebrated Genus Aelia lived in one small house with their families; but this seems to have been an exceptional case even in the early times, and cannot be adopted as a guide under the Empire. Now, taking the insulae actually inhabited at 40,000—since some must have been left to, or under repair—and the inhabited domus at 1500 = 41,500, and the number of inmates in each at 50, we should have a total population of 2,075,000, a sum not greatly at variance with the amount obtained by the previous method. But the reader will have seen on what data the calculation proceeds, and must draw his own conclusions accordingly. (Cf. Bussen, Beschreibung der Stadt Rom, i. p. 183, seq.; Dau- reau de la Malle, Economie politique des Romains i. p. 540. seq.; Mommsen, Die Romischen Tribunen, p. 187, seq.; Hirtius Tullius et sachze des Augustus, p. 383, seq.; Zumpt, Uber den Stand der Bevölke- rung im Alterthum, Berlin, 1841: Gibbon, Decline and Fall, vol. iv. p. 87, seq., with the note of Smith.)

PART II. TOPOGRAPHY.

Having thus given an account of the rise and progress, the decline and fall of the Roman city, we shall now proceed to describe its topography. In treating this part of the subject we shall follow those dividers which are marked out either by their political importance or by their natural features rather than be guided by the arbitrary bounds laid down in the Regions of Augustus. The latter, however convenient for the municipal purposes which they were intended to serve, would be but ill calculated to group the various objects in that order in which they are most calculated to arrest the attention of the modern reader, and to fix them in his memory. We shall therefore, after describing the walls of Servius Tullius and the several ramparts which preceded to the Capitol, one of the most striking objects of ancient Rome, and then to the Forum and its environs, the remaining hills and their valleys, with the various objects of interest which they present.

I. WALLS AND GATES OF SERVIVS TULLIIUS.

At the commencement of the Roman Empire the walls of Servius Tullius could no longer be traced. Instead of dreading the assaults of the surrounding petty nations of Italy, Rome had now extended her frontiers to the Euphrates and the Atlantic; her ancient bulwarks were become entirely useless, and the increase of her population had occasioned the building of houses close to and even over their remains; so that in the time of Domitius of Halicarnassus, who came to Rome in the reign of Augustus, it was difficult to discover their course (iv. 13). To attempt now to trace their exact outline would therefore be a hopeless task. The remains of the agger of Servius are still, however, partly visible, and the situation of a few of the ancient gates is known with certainty, whilst that of others may be fixed with at least some approach to accuracy from notices of them contained in ancient authors. It is from these materials that we must endeavour to reconstruct the line of the Servian walls, by first determining the probable sites of the gates, and by then drawing the
wall between them, according to indications offered by the nature of the ground.

We learn from Cicero that Servius, like Romulus, was guided in the construction of his wall by the outline of the hills: "Cujus (urbis) est tractatus ductusque muri quum Romuli tum etiam reliquerat, nempe simplicitatem ad maiora parte arduis praeruptisque montibus, ut unus aditus, qui est inter Esquiline Quirinaliisque montem, maximo aggerre objecto fassa cingetur vastissimam: atque in ea munia arx circumjuncta arduo et quasi circumcisio saxis nitetur, ut etiam in illa tempestate horribili Gallici adventum incolumis atque intacta permaneat." (De Rep. ii. 6.) Becker (de Muris, p. 64, Handh. p. 129) asserts that Cicero here plainly says that Servius erected walls only where there were no hills, or across the valleys, and concludes that the greater part of the defences of the city consisted of the natural ones offered by the hills alone. Becker, however, appears to have formed no very clear ideas upon the subject; for notwithstanding what is here said, we find him a few pages further on, conducting the line of wall not only along the height of the Quirinal, but even over the summit of the Capitoline hill itself! (Handh. pp. 131, 136, de Muris, pp. 65, 70.) Neither his first, or theoretical, nor his second, or practical, view, is correct. The former is in direct contradiction to his authority; for Cicero says that the other kings did like Romulus; and he, as we have seen, and as Becker himself has shown, walled in his city all round. Cicero says, as plainly as he can speak, that there was a wall, and that it was defined along its whole extent ("ae definitus ex omni parte") by the line of the hills. If it did not run along their whole length, we cannot explain Pliny's assertion (iii. 9) that the agger equalled the height of the walls ("Namque eum (aggerem) munus acquiravit qua maxime patebat (urbs) aditus plano: caetero munia est praeclarius munis, aut abruptis montibus," &c.), since it would be a no great extolling of its height to say that it was raised to the level of a wall in the valley. Cicero, however, notices two exceptions to the continuous line, and the fact of his speaking of these as exceptions proves the temporary gap in the wall in the remainder of the circuit. The first exception is the agger just mentioned, upon the top of which, however, according to Dionysius (ix. 68), there seems also to have been a sort of wall, though probably not of so great a height as the rest, at least he uses the comparative when speaking of it: τέγχας αγέγερται ψηφιλέρως (iv. 54). The second exception was the Arx, or Capitoline hill, which, being on its western side much more abrupt and precipitous than the other hills, was considered as sufficiently defended by nature, with a little assistance from art in escaping its sides. That there was no wall at this spot is also proved, as Niethard remarks (Hist. vol. i. p. 396) by the account of the Gauls scaling the height. (Liv. iv. 47; comp. Banbury, Class. Moa. vol. iii. p. 347.) The Capitol, therefore, must have been the spot to which Dionysius alluded, when he said that Rome was partly defended by its hills, and partly by the Tiber (ix. 68), as well as Pliny in the passage just cited, where we must not infer from the plural (montibus) that he meant more than one hill. This is merely, as in Dionysius also, a general mode of expression; and we have before observed that Pliny's own account shows that the wall crowned the hills. Lastly, had there been no wall upon them, it is difficult to see how there could have been gates; yet we find Becker himself placing gates at spots where, according to his theoretical view, there could have been no wall. Niebuhr (L. c.), who, like Becker, does not confine the escarpment to the Capitol, but thinks that the greater part of the city was fortified solely by the steepness of its hills, places towers, walls, and gates just upon the scars; but this view, improbable in itself, and unsupported by any authority, cannot be maintained against the express testimony of Cicero. There seems, however, to have been an interior fortification on the E. side of the Capitoline, protecting the ascent by the city, as we shall see in the sequel. It was probably intended to secure the citadel, in case an enemy succeeded in forcing the external walls. We have seen before that the hill was fortified by Romulus; but whether these ancient fortifications, as well as those on the Palatine, were retained by Servius, it is impossible to say.

We may assume then that the wall of Servius, or his predecessor,—which seems to have been built of stone ("muro lapideus," Liv. i. 15),—surrounded the whole city, with the exception of the Capitoline hill and a small part defended by the Tiber,—thus justifying the noble lines of Virgil (Georg. ii. 533):—

"recun facta est pulcerrima Roma Senseque una sibi muro circumcincta est."  

Our next task will be to determine the outline of this wall by means of the site of the different gates; though, of course, where the outline of the hills is well defined this alone will be a guide. The situation of two of the gates may be considered certain, viz., that of the Porta Collina, at the N. extremity of the agger, and that of the Esquiline at its southern end. Taking, therefore, the former as a starting-point, and proceeding continually to the left, we shall make the circuit of the whole city, till we again arrive at the Porta Collina.

This, the most northerly of all the gates, lay near the point where the Via Salaria branches off from the Via Nomentana, From the spot of Proculus mentioned in Livy 134.) as being probably the Porta Salutaris, so named, apparently, from its being on that division of the Quirinal which in the time of Numa and in the sacred books of the Argives was called Collis Salutaris, from an ancient acsaculum of Salus which stood upon it (Varr. L. L. v. § 51). When Paulus Diaconus tells us (p. 327, Mill.) that it was named after the temple of Salus, he seems to be alluding to the later and more famous temple dedicated by C. Junius Brutus in n. c. 303, which we shall have occasion to describe in the sequel: but it is probable that it obtained its name, as we have said, at a much earlier period. As the new temple probably stood at or near the site of the ancient one, and as the Notitia in describing the 6th Region, or Alta Semita, takes this temple for a starting-point, and, proceeding always in a circuit to the left, arrives at last at the baths of Diocletian, it may be assumed that this gate was the first important object westward of the baths. It seems to have been a Clivus Salutaris, which Caerina (Roma Antica, p. 187) places, with much probability in the Via delle Quattro Fontane, where it ascends from the Piazza Barberina. (Cf. Preller, Regionen, p. 134.)

The next gate to the left seems to have been the Porta Sanquirale, so named from the temple of Sanquirale (Paul. Bac. p. 345, Mill.) This was the same
divinity as Deus Filius (Fest. p. 241, Mull.), whose saliculum is mentioned by Livy (viii. 20) as situated near the temple of Quirinus. It is also recorded in the fragments of the Ar. live books as seated on the Collis Miscalis (Varr. L.L. v. § 62, Mull.), which hill comes next in order after the Collis Sabinus. We have already mentioned the temple of Quirinus as having been situated near the present church of S. Andrea and it may therefore be assumed that the Porta Sanqualis spanned the ascent to it at or near the modern Via della Dataria.

Between the Porta Sanqualis and the Capitoline hill there were probably two gates; at all events there must undoubtedly have been one in the very narrow ravine which in early times separated the Capitoline from the Quirinal, and which afforded the only outlet from the neighbourhood of the forum. This was, perhaps, the Porta Ratumena, which we learn from Pliny (viii. 65: "unde postea nonne est"); and Plutarch (Deiph. 13: παρὰ τὴν πόλιν, ἡ νυν Ἄριστομένων καλοτήν) was still existing in their time. Becker, indeed, disputes the inference of its existence from Pliny's words, and disbelieves the assertion of Plutarch. But there is nothing at all incredible in the fact, and therefore no reason why we should dispute it. We know, from the example of London and other cities, that a gate, and especially the name of a gate marking its former site, may remain for ages after the wall in which it stood has been removed. Even the local tradition of its name would have sufficed to mark its site; but it seems highly probable, from the nature of the ground where it stood, that the gate itself had been preserved. The road through so narrow a gorge could never have been disturbed for building or other purposes; and it is probable that the gate remained standing till the ravine was enlarged by cutting away the Quirinal in order to make room for Trajan's forum. We learn from the passages just cited, as well as from Festus (p. 274), that the gate derived its name from a charioteer, who, returning victorious from the Circensian games at Veii, was thrown out of his chariot and killed at this spot, whilst the affrighted horses, thus freed from all control, dashed up the Capitoline hill, and, as the legend runs, did not finish their mad career till they had thrice made the circuit of the temple of Jupiter Capitolinus. (Plin. viii. 65.) So remarkable an event would have been quite a sufficient ground in those days for changing the name of the gate. But it matters little what faith we may be disposed to place in the legend; for even if it was an invention, it must have been framed with that regard to local circumstances which would have lent it probability, and no other gate can be pointed out which would have so well suited the tenor of the story. Its existence at this spot is further confirmed by the tomb of Bibulus, one of the few remaining monuments of the Republic, which stands in the Macell del Corvi, and by the discovery of the remains of another sepulchral monument a little farther on, in the Via della Pedacchia. It is well known that, with a few rare exceptions, no interments were allowed within the walls of Rome; the tomb of Bibulus must therefore have been a little without the gate, and its front corresponds to the direction of a road that would have led from the forum into the Campus Martius (Carm. Numa Antica, p. 218). Bunsen, however, is of opinion (Beoschr. vol. iii. p. 35) that it lay within the walls, and infers from the inscription, which states that the ground was presented as a burial-place to Bibulus and his descendants by the Senate and people "honoris virtutisque causa," that he was one of those rare exceptions mentioned by Cicero (Leg. ii. 23) of persons who obtained the privilege of being buried within the city. A more unfortunate conjecture was hardly ever hazarded. Becker has justly pointed out, that the words of the inscription merely mean that the ground was presented to Bibulus, without at all implying that it was within the walls; and an attentive consideration of the passage in Cicero will show that it could not possibly have been so. Ever since the passing of the law of the XII. Tables against interment within the walls, Cicero could find only one example in which it had been set aside, namely, in honour of C. Fabriicius. Now if Bibulus had lived in the period between the composition of the De Legibus and the final abolition of the Republic, we could not have failed to hear of an individual who had achieved so extraordinary a mark of distinction; and if, on the other hand, he lived before that work was written, —of which there can scarcely be a doubt,—then Cicero would certainly have mentioned him.

Besides the gates already enumerated between the spot from which we started and the Capitoline hill, there seems also to have been another for which we can find no more convenient site than the SW. side of the Quirinal, between the Porta Ratumena and Porta Sanqualis, unless indeed we adopt the not improbable conjecture of Prolllein (Scheidewin's Philologus, p. 84), that the Ratumena was one of the gates of the fortification on the Clivus Capitolinus, and that the Porta Fontinalis was the gate in the gorge between the Quirinal and the Capitoline. This latter gate is mentioned by Paulinus Diaconus (p. 85, Mull.), in connection with a festival called Fontinalia. It is also mentioned by Varro (L.L. vi. § 22, Mull.), and other writers; and we learn from Livy (xxxv. 10) that a portico was constructed from it to the altar of Mars, forming a thoroughfare into the Campus Martius. The same historian again mentions the Ara Martyris as being in the Campus (xl. 45), but there is nothing to indicate its precise situation. Numa instituted a festival to Mars, as a pledge of union between the Romans and Sabines (Fest. p. 372, Mull.), and it is probably on this occasion that the altar was erected. It is impossible to say from what side of the street the gate and portico leading from it in the short strip of wall on the S. side of the Capitoline, and therefore its site was perhaps that already indicated. The altar must have stood at no great distance from the gate, and could hardly have been so far to the W. as the
of the Tiber once actually flowed through this gate ("Flumentana Porta Romae appellata, quod Tiberis partem ex fluxisse affirmat," p. 89, Mill.) The site is further confirmed by a passage in Varro alluding to the populousness of the suburb just outside the gate: "Nan quod extra urbern est adexiturum, nihil magis ideo est villa, quam eum aerificia qui habitant extra portam Flumentanam, aut in Arvini- lianis" (vi. III. 2). This neighbourhood had early become very thickly inhabited, as is evident from the many porticoes, theatres, temples and other buildings, which are mentioned there (see Prerell, Regimen, p. 156, seq.) But Livy's narrative of the trial of Manlius (vi. 20) is one of the most striking proofs of the situation of the P. Flumentana, though it is a stumbling-block to those who hold that the temple of Jupiter was on the SW. summit of the Capitoline hill. A spot just outside the Porta Flumentana, called "Lucas Peetelims," whence the Capitol could not be seen ("unde conspicus in Capitollm non esset"). A glance at any map of Rome will show that this was the only spot in the Campus Martius where the temple, from its being hidden by the SW. summit, which we assume to have been the Arx, was concealed from view. The tribunes would doubtless have been glad to conceal the Arx also, had it been in their power; but an appeal to the Arx alone would have lacked the effect of the retigio which swayed so much with the superstitious Romans. They were no longer in the presence of those rescued deities in whose sight Manlius had invoked their judgment. There is no occasion therefore to try, with Becker, to alter Livy's text, by reading Flumentaria for Flumentana, or seek to place the scene of the trial at another spot, since the Comitia Centuriata were usually assembled in the Campus.

The ancient topographers, as well as the modern Italians (Nibby, Mura, etc. p. 132; Canini, Indicazioni Topografiche, pp. 34, 632, ed. 1850), place another gate, the PORTA TRIUMPHALIS, between the Carmentalis and the Flumentana. That there was such a gate is certain, since it is frequently mentioned in classical authors, but unfortunately in such a manner that no decided inference can be drawn respecting its situation. Hence various theories have been advanced on the subject, which have led to warm controversies. The German school of topographers, though not united among themselves, have agreed in departing from the Italian view, chiefly because it appears to them absurd to imagine that there could have been three gates in so short a piece of wall. If, however, as it will be shown to be probable, the Porta Triumphalis was opened only on certain occasions of state, then there seems to be very little force in this objection. Bunsen and his followers allow that it formed a real entrance into the city, but strangely enough make it lead into the Circus Maximus: whilst Becker, on the other hand, holds that it was no gate at all properly
so called, but a mere triumphal arch situated in the Campus Martius. The theory of Bunsen necessarily rests on the assumption of a different line of wall from that last drawn in page 387. New line as another line is also adopted by Niebuhr (Hist. i. p. 397, Ethnogr. ii. p. 49), it will be necessary to examine this point before proceeding to the question of the gate. Niebuhr and Bunsen are, however, far from coinciding. The line drawn by the former proceeds along the banks of the river; that drawn by the latter runs from the Porta Carmentalis to the N. angle of the Circus Maximus, and, adopting the NW. front of the circus, or what was called the Aurelian line, proceeds onwards to the Aventine, thus shutting the greater part of the Forum Bearium out of the city. Both these theories, however, agree in so far as they assume an *encaicte continue*, or continued line of wall; and therefore, if this notion can be shown to be false, both fall to the ground. Now it can be proved on the very best evidence that there was no wall in this part of the city, which was defended solely by the Tiber. We have already adduced a passage from Dionysius in confirmation of this statement; and the same author in another passage repeats the same thing in so plain a manner that there can be no reasonable doubt of the fact: *σφαστὴν ἡ πόλις ἀλώνια κατὰ κράτος ἀπέχουσα νόθα ἐκ τῶν παρὰ τὸν ποταμὸν μερῶν* (v. 23). But Dionysius does not stand alone. We have Livy also as a voucher for the same fact, who, in narrating the enterprise of Pansa against Rome, observes that the citizens regarded some parts of their city as secured by the wall, and other parts by the Tiber. "Alius autem, alias Tiberi objectis, custodia tuta" (ii. 10). The same fact appears, though not in so direct a manner, from the same author's account of the procession of the virgins from the temple of Apollo, outside the Carmental gate, to that of Juno Regina on the Aventine, to which we have before briefly alluded. The route is described as follows: "A porta (Carmentali) Jugario vico in forum venere. Inde vico Tusco Velabrumque per Bearium forum in clivium Publicum aequem Junoae Reginae regionem (v. 35). Now the small space allotted by Bunsen to the Forum Bearium must have been *inside* of the wall, since the temples of Fortuna and Mater Matuta, which stood upon it (Liv. xxxiii. 27), were within the Porta Carmentalis (id. xxv. 7). The procession, then, after passing through that forum, must have gone out of the city at another gate,—Bunsen's Fimmen- tana,—and have entered it again by the Trigemina, before it could reach the Clivium Publicum,—facts which are not mentioned by Livy in his very precise description of the route.

Having thus shown on the best evidence that no wall existed at this point, it would be a mere waste of time to refute arguments intended to show that it possibly might have existed,—such as whether a wall with a gate would keep out an inundation, whether the Fluvii went over the Sabinean bridge, and others of the like sort, which would have puzzled an ancient haruspex. We will therefore proceed to examine Becker's hypothesis, that the Porta Triumphalis was in fact, no gate at all, but merely an arch in the Campus Martius, a theory which is also adopted, though with some little variation, by Peller (Regiones, p. 162; and Aschung, p. 239).

Becker places this arch at the spot where the Campus Martius joins the Regia called Circus Flaminius, and takes it to be the same that was re-built by Domitian (of course he must mean rebuilt, though it is not very clearly expressed. *De Maris*, p. 92, *Handl.* p. 135). He conjoins what follows on the other lines in a poem of Martial's (viii. 65) in which he describes the erection of this arch and of some other buildings near it:—

"Hac est digna tuas, Germanica, porta triumphis,
Iros additus urben Martia habere decret."  

Becker, however, is totally unable to prove that this arch and the temple of Fortuna Redux near it were even in the Campus Martius at all. Thus he says *Hodie duplicibus* (p. 642); if indeed expressly said that the Ara of Fortuna Redux was in the Campus Martius; but it becomes probable from the circumstance that Domitian built here, and, as we have *conjecturat* at p. 153, close to the Porta Triumphalis, a temple to the same goddess." The argument then proceeds as follows: "We *know from Martial* that Domitian built a temple to Fortuna Redux where her altar formerly stood, and also a triumphal arch near it. We *do not know* that this altar was situated in the Campus Martius; but it is *probable* that it was, because Domitian built this temple close to it, and also close to the arch, which, as I *conjecturat*, was the Porta Triumphalis!"

There is, however, another passage of Martial, either overlooked or ignored by Becker, which tends very strongly to show that this arch of Domitian's really was in the Campus Martius, but at quite a different spot from that so conveniently fixed upon by him. It is the following (x. 6):—

"...Felices quibus urba dedit spectaculum
Sabinus Arceto sidernoque duceum,
Quando cedile dies quo Campus et arbore et
omnis
Lunehcit Latia culta fenestra narrat
Quando morae dulces, longunue Caesare pulvis,
Totaque Flaminia Roma videnda via?"

There can be no doubt that these lines refer to the same triumphal entry of Domitian's as those quoted by Becker. Thus Livy says (p. 437), that the arch and other monuments stood on the Via Flaminia, and therefore at a very considerable distance from the spot assigned to them by Becker.

This arch having broken down, Preller comes to the rescue, and places the Porta Triumphalis near the Villa Publica and temple of Bellona, close to the Via Lata. For this site he adduces several plausible arguments; near the temple of Bellona was the piece of ager hostilis, where the Fatales went through the formalities of declaring war; as well as the Columna Belliaca, whence a lance was thrown when the army was going to take the field; also a Saelaculum "citra aedem Bellonae," in which audience was given to foreign ambassadors whom the senate did not choose to admit into the city. The Villa Publica also served for the reception of the lictor, and probably also of Roman generals before their triumph, and of all who, being cœnorum, could not cross the pontem, and therefore in the ordinary course took up their abode there. After this ceased to exist, the Divititorium was used in its stead, in which Claudius passed some nights, and in which probably *Vespasian* and *Titus* slept before their triumph. This
who, we are told, assembled the senate at the same place precisely on the ground that it was outside of the pomerium, and that consequently he did not violate their privileges by assembling them there (καὶ τὸ ὀκταετῶν τῆς Βουλῆς ἱπταμένοι διὰ τὸ ἔξω τοῦ τιμωρίου αὐτῆς κύριος). But as these instances occurred in the imperial age, as may be said with Becker (Handb. p. 151, note) that the ceremony no longer had any meaning, we will go back for an example to the early ages of the Republic. First, however, we must demand the acknowledgment that the triumphal gate passed by Vespasian was the same, or at least stood on the same spot, as that which had been in use from time immemorial. We cannot allow it to be shifted about like a castle on a chessboard, to suit the convenience of commentators; and we make this demand on the authority of Josephus himself in the very passage under discussion, who tells us that it took its name from the circumstance that the triumphal processions had always passed through it (ἀντὶ τοῦ πεμπτηθεὶ δι’ αὐτῆς δεῖ τοὺς Βραδεὺσ τῆς προσφοράς ἀπ’ αὐτῶν τετυχων). Now Livy, in his account of the triumph of the consuls Valerius and Horatius, relates that they assembled the senate in the Campus Martius to solicit that honour; but when the senators complained that they were overawed by the presence of the military, the consuls called the senate away into the Praetor Flaminia, to the spot occupied in the time of the historian by the temple of Apollo. ("Consules ex composito edem duxerunt urbem accessisse, senaturique in Martium Campus excurreverunt. Qui jam tum Apollinaris appellabant) excurreverunt senatum," iii. 63.) This temple was situated close to the Porticus Octaviae (Becker, Handb. p. 605), and therefore considerably nearer the city than the spot indicated either by Becker or Preller. The consuls therefore must have already passed beyond the Porta Triumphalis before they began to solicit the senate for leave to do so! Becker, however, has been more careful, and has not extended the jurisdiction of the city beyond the walls of Servius, at this part of the Campus, before the time of the emperor Claudius. But what results from his view? That the whole affair of the Porta Triumphalis was mere farce,—that it led nowhere,—that the triumphant general, when he had passed through it by permission of the senate, was as much outside the city boundary as he was before. But that it afforded a real entrance into the town clearly appears from the passage in Cicero's oration against Piso (c. 23); "Cum ego Caelimontana porta introgressi dixi, sponsione me, ni Esquilina introitus, huo promittissima hæcessit. Quasi vero id aut ego seire debuerim, aut vestrum quisquam audiens, aut ad rem pertinent qua tu porta introieris, modo ne triumphali; quae porta Macedonici semper proconsulibus antea te patuit." The Porta Triumphalis being here put on a level with the Caelimontana and Esquilina, the natural conclusion is that, like them, it afforded an actual, though not customary, entrance within the walls. We further learn from the preceding passage that this same Porta Triumphalis had been open to every proconsul of Macedonia before Piso, including of course L. Aemilius Paulus, who triumphed over Perseus n. c. 167.
But to return to Becker's explanation of the passage of Josephus. Admitting Plutarch's account of the triumphs of Paulinus and Lucullus, namely, that they passed through the Circens Flamininus, yet what does this prove? how is it connected with the Porta Triumphalis? These generals may have marshalled their processions in the Campus and passed through the Circens Flamininus in their way to the Porta Triumphalis. The procession would have been equally visible in the Circus of Nero as in the stadium of Domitian, just as the Lord Mayor's show may, or might, be seen at Westminster as well as in the city. It is possible indeed that in the case of Vespasian there was no procession till he arrived at the gate; but it does not necessarily follow that the same line was always precisely observed. In truth we may perceive a difference between the expressions of Josephus and those of Plutarch. The former says that Vespasian went διὰ τῶν διήτροτων; whilst Plutarch says, or at least Josephus, that the people assembled ἐν τοῖς διήτροιοι καὶ ἐκ τῆς καλύπτους; of Lucullus, that he adhered τῶν φλαμίνεων πρότυπων. Here the circi are precisely designated as hippodromes; but Josephus uses the general term διήτροις, which may include theatres of all kinds. Now we will suggest a more probable route than that given by Becker, according to which the pageant must have crossed the forum twice. After coming out at the further end of the circus, Vespasian turned down to the left, between the Palatine and Caelian, the modern Via di S. Gregorio. This would bring him out opposite his own magnificent amphitheatre, the Colosseum, then in course of construction. Even if it had not risen much above its foundations, still its ample area by means of scaffoldings, would have accommodated a vast number of spectators; and as to Vespasian personally, it would have imparted no small relief to his triumph to pass through so magnificent a work of his own creation. Hence his road lay plain and direct over the Campus Martius, to the Forum Capitolium. Now, taking all these things into consideration, we will venture to suggest a very slight change in the text of Josephus, a change not so great as some of those often proposed by Becker upon much smaller occasions, and which will release us from a great deal of perplexity. The alteration is that of an Ν into a Π, a very slight one in the usual character; and, by reading απενεργειοῦντος for απενεργείος, we would make Vespasian depart from the Porticus Octavia towards the gate which had always been used for triumphs, instead of retracing his steps towards one of which nobody can give any account, but whatever may be thought of the individual case of Vespasian, still we hold it to be incontestable that the ancient Porta Triumphalis, against which the sole objection seems to be that it was near two other gates, is to be sought in that part of the Servian wall between the P. Carmentalis and the P. Flamininiana. The objection just alluded to would indeed have some force, if we could assume, with Becker (Hist. xlv. 534.,) that the Porta Triumphalis, just like an ordinary one, lay always open for common traffic. But it is surprising how anybody could come to that conclusion after reading the passages which Becker has himself cited from Suetonius, Tacitus, and Dion Cassius, or that in Cicero'soration against Piso before quoted. The first of these authors relates that after the death of Augustus the senate voted, or proposed to vote, that, as an extraordinary mark of honour, his funeral should pass through the triumphal gate, preceded by the statue of Victory which stood in the curia: "Et consensuerit quidam funus triumphali portae decadentum, precedente Victoria, quae est in curia" (Asg. 100; cf. Tac. Ann. i. 8); and Dion says (lvi 42) that this was actually done, and the body burned in the Campus Martius. Now if the Porta Triumphalis had been an ordinary gate and common thoroughfare, what honour would there have been in passing through it? as in the story of Plutarch, the spectator has discovered that any distinction had been conferred? Wherefore Preller (Regenens, p. 240) has rightly come to the conclusion that it was usually kept shut.

Between the Capitoline and the Aventine, along the banks of the river, the wall, as we have shown, was discontinued, but it was recommenced at the spot where the latter hill approaches the Tiber. This may be shown from the well-ascertained position of the PORTA TRIGEMINAE, which, as we learn from a passage in Frontinus, lay just under the Clivus Publicius, at the northernmost point of the hill ("incipit distribui Appia (aqua) in Publico Clive ad Portam Trigemimum," Ag. 3); and the Clivus Publicus, as we know from a passage in Livy respecting the procession of the virgins before alluded to, formed the ascent to the Aventine from the Forum Boarium ("inde vicus Tuscae Velabroque per Bœrium forum in Clivum Publicium atque adem Junecus Reginae perpectum"). There are some difficulties connected with the question of this gate, from its being mentioned in conjunction with the Porta Sublicia; but there will be occasion to discuss the situation of that bridge in a separate section; and we shall only remark here that the narratives alluded to seem to show that it was at no great distance from the gate. It is probable that the latter derived its name from its having three Jani or archways.

A little beyond the Porta Trigemina most topographers have placed a PORTA NAVALIS, which is mentioned only once, namely, by P. Diaconus in the following passage: "Navalis Porta va vicina Nava- licum dicta" (p. 179, Mill.), where we are told that it derived its name from the vicinity of the government dockyards. It has been assumed that these docks lay to the S. of the Aventine, in the plain where Monte Testaccio stands; but Becker has the merit of having shown, as will appear in its proper place, that they were in the Campus Martius. There was, however, a kind of emporium or merchant dock, between the Aventine and Tiber, and, as this must have occasioned considerable traffic, it is probable that there was a gate leading to it somewhere on the W. side of the hill, perhaps near the Priorato, where there seems to have been an ascent, but whether it was called Porta Navalis it is impossible to say. The writer of this article is informed by a gentleman well acquainted with the subject, that traces of the Servian wall have very recently been discovered at the NW. side of the Aventine, below S. Sabina and S. Alessio.

The line of wall from this point to the Caelian hill cannot be determined with any certainty. Round the Aventine itself it doubtless followed the configuration of the hill; but its course from the S. point of the Aventine has been variously laid down. Hence the question arises whether it included the nameless height on which the churches of S. Sabina
and S. Sabina now stand. It seems probable that it must, at all events, have included a considerable portion of the whole, and that it proceeded along the valley, it would have been commanded by the hill; and indeed the most natural supposition is that it enclosed the whole, since the more extended line it would thus have described afforded room for the several gates which we find mentioned between the Porta Trigemina and the Porta Capena near the foot of the Caelian.

Among these we must, perhaps, assume a Porta Munigua or Menuita, which is twice mentioned by Paulinus (pp. 122, 147), and whose name, he says, was derived from an ara or sacellum of Minucius, when the Romans held to be a god. We hear nowhere else of such a Roman deity; but we learn from Pliny (xviii. 4) that a certain tribe of the people, named Minutius Augurinus, had a statue erected to him, by public subscription, beyond the Porta Trigemina, for having reduced the price of corn. This occurred at an early period, since the same story is narrated by Livy (iv. 13—16) B. C. 436, with the additional information that it was Minutius who procured the condemnation of the great corn monopoliser, Maecius, and that the statue alluded to was a gilt bull. It is possible therefore that the gate may have been named after him; and that from the extraordinary honours paid to him, he may have come in process of time to be vulgarly mistaken for a deity. If there is any truth in this view, the gate may be placed somewhere on the S. side of the Aventine.

In the mutilated fragment which we possess of Varro's description of the Roman gates (I. L. v. § 163, Muhn.) he closes it by mentioning three, which it is impossible to place anywhere except in the line of wall between the Aventine and Caelian. He had been speaking of a place inhabited by Eumius, who lived on the Aventine (Hieron. Chron. 134, vol. i. p. 369, Bonc.), and then mentions consecutively a Porta Naevia, Porta Radusculla, and Porta Lavernalis. He must therefore be enumerating the gates in the order from W. to E., since it would be impossible to find room for three more gates, besides those already mentioned, on the Aventine. The P. Naevia, therefore, probably lay in the valley between that hill and the adjoining height to the E. It could not have been situated on the Aventine itself, since the Basis Capitolina, mentioned in the 12th leges, or Piscina Publica, a vicus Porta Naevia, as well as another of Porta Blandulchana. But the exact position of the latter gate, as well as of the Porta Lavernalis, it is impossible to determine further than that they lay in the line of wall between the Aventine and Caelian.

After so much uncertainty it is refreshing to arrive at last at a gate whose site may be accurately fixed. The Porta Capena lay at the foot of the Caelian hill, at a short distance W. of the spot where the Via Latina diverged from the Via Appia. The latter road issued from the P. Capena, and the discovery of the first milestone upon it, in a vineyard a short distance outside of the modern Porta di S. Sebastiano, has enabled the topographer accurately to determine its site to be at a spot now marked by a post with the letters F. C. 300 yards beyond the Via S. Gregorio, and 1480 within the modern gate. That it was seated in the valley, appears from the fact that the liurus Herculeanus, probably a branch of the Aqua Marcia, passed over it; which, we are expressly told, lay too low to supply the Caelian hill. (Front. Ag. 18.) Hence Juvenal (iii. 11):—

"Substitit ad vetere arcus madidamque Capanam," where we learn from the Scholia that the gate, which in later times must have lain a good way within the town, was called "Arcus Stillerus." So Martial (iii. 47):—

"Capena grandi porta qua pluit gutta." A little way beyond this gate, on the Via Appia, between its points of separation from the Via Latina and the P. S. Scabinius, there still exists one of the most interesting of the Roman monuments—the tomb of the Scipios, the site of which is marked by a solitary cypress.

From the Porta Capena the wall must have ascended the Caelian hill, and skirted its southern side; but the exact line which it described in its progress towards the agger can only be conjectured. Becker (Handb. p. 167), following Iale and Bunsen, draws the line near the Ospedale di S. Giovanni, thus excluding that part of the hill on which the Lateran is situated, although, as Cauna observes (Indiziozione, p. 36), this is the highest part of the hill. There was perhaps a gate at the bottom of the present Piazza di Navicella, but we do not know its name; and the next gate respecting which there is any certainty is the Porta Caelimontana. Bunsen (Descr. p. 638) and Becker, in conformity with their line of wall, place it by the hospital of S. Giovanni, now approached by the Via S. Quattro Coronati, the ancient street called Caput Africce. The Porta Querquetulana, if it was really a distinct gate and not another name for the Caelimontana, must have stood a little to the N. of the latter, near the church of S. S. Pietro e Marcellino, in the valley which separates the Caelian from the Esquiline. This gate, which was also called Querquetulana, is several times mentioned, but without any more exact definition. (Plin. xvi. 15; Festus, p. 261.) The Caelian hill itself, as we have before remarked, was anciently called Querquetulana. From this point the wall must have run northwards in a tolerably direct line till it joined the southern extremity of the agger, where the Porta Esquilina was situated, between which and the Querquetulana there does not appear to have been any other gate. The Esquilina, like the others on the agger, is among the most certain of the Roman gates. We learn from Strabo (p. 327) that the Via Labicana proceeded from it; whilst at a little distance the Praenestia branched off from the Labicana. It must therefore have lain near the church of S. Vito and the still existing arch of Gallienus; but its exact site is connected with the question respecting the gates in the Aucellan wall which corresponded with it, and cannot therefore at present be determined. The site of the Porta Collina, the point from which we started, is determined by the fact mentioned by Strabo (Jb. p. 328) that both the Via Salaria and Via Nomentana started from it; and it must consequently have stood near the northern corner of the baths of Diocletian at the commencement of the present Via del Macao. We learn from Paulus Diaconus (p. 10) that this gate was also called Agonensis and Quirinalis. Agonus, as we have said, was the ancient name of the Quirinal hill.

The Porta Collina, then, and the Porta Esquilina were seated at the northern and southern extremities
of the agger. But besides these, Strabo (ll. p. 234) mentions another lying between them, the Porta Viminalis; which is also recorded by Festus (p. 376) and by Frontinus (Ag. 19). It must have lain behind the SE. angle of the baths of Diocletian, where an ancient road leads to the rampart, which, if preserved, would show to the Porta Clarenziana of the walls of Aurelian, just under the southern side of the Castra Praetoria. It is clear from the words of Strabo, in the passage just cited ("hodò melèò de tò χώρατι τρείς ετή τόλη διόμωνω τ' Οίλιμπιάδω λόφω"), that there were only three gates in the agger, though some topographers have contrived to find room for two or three more in this short space, the whole length of the agger being but 6 or 7 stadia (Strabo, ib. i. Dionys. ix. 68), or about \( \frac{3}{2} \) of a mile. Its breadth was 50 feet, and below it lay a ditch 100 feet broad and 30 feet deep. Remains of this immense work are still visible near the baths of Diocletian and in the grounds of the Villa Negroni, especially at the spot where the statue of Roma now stands.

**Survey under Vespasian and Circumference of the City.**—In the preceding account of the gates in the Servian wall we have enumerated twenty, including the Porta Praetoria. Some topographers have adopted a still greater number. When we consider that there were only nine or ten main roads leading out of ancient Rome, and that seven of these issued from the three gates Capena, Esquiline, and Colonna alone, it follows that five or six gates would have sufficed for the main entrances, and that the remainder must have been unimportant ones, destined only to afford the means of convenient communication with the surrounding country. Of those enumerated only the Caeciliain, Esquiline, Collatina, Capena, Trigemina, Carmentalis, and Batnena seem to have been of any great importance. Nevertheless it appears from a passage in Pliny (iii. 9) that in his time there must have been a great number of smaller ones, the origin and use of which we shall endeavour to account for presently. As the passage, though unfortunately somewhat obscure, is of considerable importance in Roman topography, we shall here quote it at length: "Urbem tres portas habebat Romulus reliquit, aut (ut plurimis traduituris credant) quater. Mena ejus egerat ambitus Imperatoribus Censoriusque Vespasiani anno contibuit dccxxviii pass. xhiii. cc. Complex mones septem, ipsa dividit in regiones quattuordecim, compitca Larian clxv. Ezdem spatio, mensura currente a millario in capite Romani fori statuto, ad singulas portas, quae sunt hodie numero triginta septem, ita ut duodecinam sexadrum numerantur, praeenterciupex x etervia septem, quae oxe deceminent, efficit passuum per directum xxxivcccxxxv. Ad extremam vero terminum castris Praetoribus ab eodem millario per vigesimam omnium viarum mensura colligit paulo amplius sexaginta millia passuum." Now there seems to be no reason for doubting the correctness of this account. Pliny could have had no reason for exaggeration, against which, in the account of the Roman gates, he carefully guards himself. Again, he seems to have taken the substance of it from the official report of a regular survey made in his own time and in the reign of Vespasian. The only road for suspicion therefore seems to be that his text may have been corrupted, and that instead of thirty-seven as the number of the gates we should insert some smaller one. But an examination of his figures does not tend to show that they are incorrect. The survey seems to have been made with a view to the three following objects: 1. To ascertain the actual circumference of the city, including all the suburbs which had spread beyond the walls of Servius. It is well known that moenia signifies the buildings of a city as well as the walls ("innum moenia amplectens est," Flor. i. 4, &c.), and therefore this phrase, which has sometimes caused embarrassment, need not detain us. Now the result of this first measurement gave 15'280 passus, or 133 Roman miles—a number to which there is nothing to object, as it very well agrees with the circumference of the subsequent Aurelian walls. 2. The second object seems to have been to ascertain the actual measure of the line of street within the old Servian wall. To take this measure of this proceeding we do not immediately recognise. It may have been adopted out of mere curiosity; or more probably it may have been connected with questions respecting certain privileges, or certain taxes, which varied according as a house was situated within or without the walls. Now the sum of the measurements of all these streets, when put together as if they had formed a straight line ("per directum"), amounted to 30'765 passus, or 30 Roman miles. Menna without hesitation makes the meaning of "per directum," though some critics hold it to mean that the distance from the millarium to these gates was measured in a straight line, as the crow flies, without taking into the calculation the windings of the streets. But in that case it would surely have been put earlier in the sentence—"mensura currente per directum ad singulas portas." This, however, would have been of little consequence except for the distinction drawn by Festus (p. 377), who thinks that the measurement proceeds on two different principles, namely per directum, or as the crow flies, from the millarium to the Servian gates, and, on the contrary, by all the windings of the streets from the same spot to the furthest buildings outside the walls. Such a method, as he observes, would afford no true ground of comparison, and therefore we can hardly think that it was adopted, or that such was Pliny's meaning. Becker was led to this conclusion because he thought that "per viros omnium viarum" stands contrasted with "per directum," whereas, in fact, this contrast does not seem necessarily to follow. By vinc here Pliny seems to mean all the roads leading out of the thirty-seven gates; and by "ad extremas tectorum per viros omnium viarum" is signified merely that the measure was further extended to the end of the streets which lined the commencements of these roads. Such appears to us to be the meaning of this certainly somewhat obscure passage. Pliny's account may be checked, roughly indeed, but still with a sufficiently fair approach to the correctness of his text. If a circumference of 133 miles yielded 70 miles of street, and if there were 30 miles of street within the Servian walls, then the circumference of the latter would be to the former as 3 to 7, and would measure rather more than 52 miles. Now this agrees pretty well with the accounts which we have of the size of the Servian city. Becker, following the account of Timotheus (i. 13), but without allowing for that part of the walls of Athens described as unguarded, with the whole circuit of which walls Dionysius (iv. 13, and ix. 68) compares those of ancient Rome, sets the latter down at 43 stadia, or 52 miles. On Noll's great plan of Rome they are given at a meas-
The entrance to Numa's regin, as we learn from Plutarch (De Fort. Rom. 10). Among the arches of aqueducts to which the name of gate was applied, many, perhaps be ranked that allud to by Martial (iv. 18):—

"Qua vicina pluit Vipsania porta columnis," &c.

Respecting the gates called Ferentina and Praenestina we have before offered a conjecture. [See p. 728.] The Porta Metta rests solely on a false reading of Plautus. (Cas. ii. 6. 2, Pseud. i. 3. 57.) On the other hand, a Porta Catullica seems to have really existed, which is mentioned by Paulus Diaconus (p. 45. cf. Fast. 28.) in connexion with certain sacrifices of red-coloured dogs. This must be the sacrifice allud to by Ovid (Fast. iv. 905), in which the entrails of a dog were offered were the flamen in the Lucus Roebiginus. It is also mentioned in the Fasti Praenestini, vii. Kal. Mai, which date agrees with Ovid's: "Feretina Rubigo Via Claudia, ad miliarium v., no roigico frumentis noceat." But this is at variance first, with Ovid, who was returning to Rome by the Via Nomentana, not the Via Claudia, and secondly, with itself, since the Via Claudia did not branch off from the Via Flaminia till the 10th milestone, and, consequently, no sacrifice could be performed on it at a distance of 5 miles from Rome. However this discrepancy is to be reconciled, it can hardly be supposed that one of the Roman gates derived its name from a triling rustic sacrifice; unless, indeed, it was a duplicate one, used chiefly with reference to sacred customs, as seems to have been sometimes the case, and in the present instance to denote the gate leading to the spot where the annual rite was performed. Paulus Diaconus also mentions (p. 37) a Porta Collatina, which he affirms to have been so called after the city of Collatia, near Rome. But when we reflect that both the Via Tiburtina and the Via Praenestina issued from the Porta Esquilina, and that a road to Collatia must have run between them, the impossibility of a substantive Porta Collatina is at once apparent. The Duo DECIM Portae are placed by Bunsen (Beochr. i. p. 633) in the wall of the Circus Maximus; but as it appears from Pliny (l. c.) that they stood on the ancient line of wall, and as we have shown that this did not make part of the wall of the circus, this could not have been their situation. We do not see the force of Plutarch's celebrated discovery that the Duo DECIM Portae must have been a place at Rome, because Julius Obsequens says that a mule brought forth there; which it might very well have done at one of the gates. Becker's opinion (Handh. p. 180) that it was an arch, or arches, of the Aqua Appia seems as unfounded as that of Bunsen (vide Prelter, Regiones, p. 193). It is mentioned by the Notitia in the 11th Region, and therefore probably stood somewhere near the Aventine; but its exact site cannot be determined. It seems probable, as Prelter remarks, that it may have derived its name from being a complex of twelve arched thoroughfresses like the ENEADVOS of the Pelasgians at Athens.

Transalbina Wall.—Aucus Marcius, as we have related, fortified the Janiculum, or hill on the right bank of the Tiber commanding the city. Some have concluded from Livy (i. 33): "Janiculum queaque adjectum, non inopia becerrum, sed ne quando ea arx hostium eset. Id non nume salum, sed etiam ob commoditatem eorum, ut portae Sublicio tun primum in Tiberi facta conjuncta urbis
The ninth century, also mentions 14 gates, and includes the Pinciana among them; but his account is not clear.

Unlike Servius, Aurelian did not consider the Tiber a sufficient protection; and his walls were extended along its banks from places opposite to the spots where the walls which he built from the Janiculum began on the further shore. The wall which skirted the Campus Martius is considered to have commenced not far from the Piazza Farnese, from remains of walls on the right bank, supposed to have belonged to those of the Janiculum; but all traces of walls on the left bank have vanished beneath the buildings of the lower town. It would appear that the walls on the right and left banks were connected by means of a bridge on the site of the present Ponte Sisto — which thus contributed to form part of the defences; since the arches being secured by means of chains drawn before them, or by other contrivances, would prevent an enemy from passing through them in boats into the interior of the city; and it is in this manner that Procopius describes Theodosius III warding off the attacks of the Goths (D. G. i. 19).

From this point, along the whole extent of the Campus Martius, and as far as the Porta Flaminia, the walls appear, with the exception of some small posterns mentioned by the Anonymous of Einsiedien to have had only one gate, which is repeatedly mentioned by Procopius under the name of Porta Aurelia (B. G. i. c. 19, 22, 28); though he seems to have been acquainted with its later name of Porta Ste Petri, by which it is called by the Anonymous (ib. iii. 36). It stood on the left bank, opposite to the entrance of the Pons Aelius (Ponte di S. Angelo), leading to the mansoalum of Halrian. The name of Aurelia is found only in Procopius, and is somewhat puzzling, since there was another gate of the same name in the Janiculum, spanning the Via Aurelia, which, however, is called by Procopius (Ib. i. 18) by its modern name of Pancrantiana; whilst on the other hand the Anonymous appears strangely enough to know it only by its ancient appellation of Aurelia. The gate by the bridge, of which no trace now remains, may possibly have derived its name from a Nova Via Aurelia (Guert, Inscr. ecclesi. viii.), which passed through it; but there is a sort of mystery hanging over it which is not easy to clear up (Becker, Handb. p. 196, and note).

The next gate, proceeding northwards, was the Porta Flaminia, which stood a little to the east of the present Porta del Popolo, erected by Pope Pius IV. in 1561. The ancient gate probably stood on the declivity of the Pincian (in χώρα κρημνίδα, Procop. B. G. i. 23), as the Goths did not attack it from its being difficult of access. Yet Anastasius (Vit. Gregor. II.) describes it as exposed to inundations of the Tiber; whence Nibby (Mura, sp. 304) conjectures that its site was altered between the time of Procopius and Anastasius, that is, between the sixth and ninth centuries. Nay, in a great inundation which happened towards the end of the eighth century, in the pontificate of Adrian I., the gate was carried away by the flood, which bore it as far as the arch of M. Aurelius, then called Tre Faccialette, and situated in the Via Flaminia, where the street called della l'AVE now runs into the Corso. (Ib.) The gate appears to have retained its ancient name of Flaminia as late as the 15th century; as appears from a life of Martin V. in Muratori (Script. Ital. t. iii. pt. ii. col.
When it obtained its present name cannot be determined; its ancient one was undoubtedly derived from the Via Flaminia, which it spanned. In the time of Procopius, and indeed long before, the road led to the east had bent outwards from the effects of the pressure of the Pincian hill, whence it was called murus francis or inclinatus, just as it is now called muro torto. (Procop. B. G. i. 23.)

The next gate, proceeding always to the right, was the Porta Pinciana, before mentioned, which was already walled up in the time of the Anonymous of Einsieden. It of course derived its name from the hill on which it stood. Belisarius had a wall from the Servian line, which came into its shapes on the Pincian hill, and extending from the Flaminian to the Praenestine. That he did not reckon the Pinciana as one of these seems probable, from the case with which, in the second passage referred to, he distinguishes it as a παράγων or minor gate. Supposing the closed gate near the Praetorian camp to have been of the same reason, we have just the five required, viz., Flaminia, Salaria, Nomentana, Tiburtina and Praenestina. (Porta S. Lorenzo and Porta Praenestina.)

On this supposition both these ancient ways (the Tiburtina and Praenestina) must have issued originally from the Esquiline gate of the Servian walls. Now we know positively from Strabo that the Via Praenestina did so, as did also a third road, the Via Labicana, which led to the town of that name, and afterwards rejoined the Via Latina at the station called Ad Pictas (v. p. 327). Strabo, on the other hand, does not mention from what gate the road to Tibur issued in his time. Niebuhr has therefore followed Fabretti and Pala in assuming that the later originally proceeded from the Porta Velia, which, as we have seen, stood in the middle of the ager of Servius, and that it passed through the walls of Aurelian by means of a gate now blocked up, but still extant, just at the angle where these walls join on to the Castra Praetoria.

Assuming this to have been the original Tiburtina, Niebuhr (followed by MM. Bunsen and Urlichs) considers the Porta S. Lorenzo to have been the Praenestina, and the Porta Maggiore to have been the Labicana; but that when the gate adjoining the Praetorian camp was blocked up, the road to Tivoli was transferred to the Porta S. Lorenzo, and that to Praeneste to the gate next in order, which thus acquired the name of Praenestina instead of its former one of Labicana. (Beschreibung, p. 657, seq.)

To this suggestion there appear to be two principal objections brought forward by M. Becker, neither of which M. Urlichs has answered. The first supposing the Via Tiburtina to have been so transferred, which taken alone might be probable enough, there is no apparent reason why the Via Praenestina should have been also shifted, instead of the two thenceforth issuing together from the same gate, and diverging immediately afterwards; and secondly, that there is no authority for the existence of such a gate called the Labicana at all. The passage of Strabo, already cited, concerning the Via Labicana, certainly seems to imply that that road in his time separated from the Praenestina immediately after leaving the Esquiline gate; but there is no improbability in the suggestion of M. Becker, that its course was altered at the time of the construction of the new walls, whether under Aurelian or Honorius, in order to avoid an unnecessary increase of the number of gates. Many such changes in the direction of the principal roads may have taken place at that time, of which we have no account, and on which it is impossible to speculate. Westphal, in his Romische Campagbe (p. 78), has adopted nearly the same view of the case: but he considers the Via Labicana to have originally had a gate assigned to it, which was afterwards walled up, and the road carried out of the same gate with the Via Praenestina. The only real difficulty in the ordinary view of the subject, supported by M. Becker, appears to
ROMA.

be that, if the Via Tiburtina always issued from the Porta S. Lorenzo, we have no road to assign to the now closed gate adjoining the Praetorian camp, nor yet to the Porta Valentiniana of the Servian walls, a circumstance certainly remarkable, as it seems unlikely that such an opening should have been made in the ager without absolute necessity. On the other hand, the absence of all mention of that gate prior to the time of Strabo would lead one to suspect that it was not one of the principal outlets of the city; and a passage from Ovid, quoted by M. Becker, certainly affords some presumption that the road from Tibur, in ancient times, actually entered the city by the Porta Esquilina (Fast. v. 684). This is, in fact, the most important, perhaps the only important, point of the question; for if the change in the names had already taken place as early as the time of Procopius, which Nibby himself seems disposed to acknowledge, it is hardly worth while to inquire whether the gates had borne the same appellations during the short interval from Honorius to Justinian" (Class. Mix. vol. iii. p. 369, seq.).

The Porta Tiburtina (S. Lorenzo) is built near an arch of the Aqua Marcia, Tepula, and Julia, which here flow over one another in three different canals. The arch of the gate corresponds with that of the aqueduct, but the latter is eneumed with rubbish, and therefore appears very low, whilst the gate is built on the rubbish itself. As the inscription on it appeared on several of the other gates, we shall here insert it: S.P.Q.R. Imp. DD. NN. invictissimae principibus Arendio et Honorio victoribus et triumphatoribus semper Augo. ob instauratos orbis ab alternum maros portas ac turrres egesta inimiciss produvibus et exigentiae V.C. et industria comitis et magistri utrinque militiae Fl. Stilichonis ad perpetuartem nominis eorum simulacrum in urbe constitutum curante Fl. Macrobius Longiniano V.C. Praef. C. Br. D. N. M. Q. eorum. In like manner the magnificent double arch of the Aqua Claudia and Anio Novus, which flow over it, was converted into the Porta Praenestina (Maggiore). The right arch, from the city side, is walled up, and concealed on the outside by the Honorian wall. Just beyond the gate is the curious tomb of Euryseas, the baker, sculptured with the instrument of his trade, which was brought to light in 1838, by the pulling down of a tower which had been built over it in the middle ages. Over the closed Honorian arch was the same inscription as over the Porta Tiburtina. On the aqueduct are three inscriptions, which name Claudius as its builder, and Vespasian and Titus as its restorers. The gate had several names in the middle ages.

Hence the wall follows for some distance the line of the Aqua Claudia, till it reaches its easternmost point; when, turning to the S. and W., and embracing the curve of what is commonly called the Amphitheatrum Castrense, it reaches the ancient Porta Asinaria, now replaced by the Porta di S. Giovanni, built a little to the E. of it in 1571, by Pope Gregory XIII. It derived its name from spanning the Via Asinaria (Fastus, p. 282, Mill.), and is frequently mentioned by Procopius. (B. G. i. 14, iii. 29, &c.) In the middle ages it was called Lateranensis from the neighbouring palace of the Lateran.

After this gate we find another mentioned, which has entirely vanished. The earliest notice of it appears in an epistle of Gregory the Great (ix. 69), by whom it is called Porta Metroniae; whilst by Martinus Polonus it is styled Porta Metronii or Metronii, and by the Anonymous, Metrovia. (Nibby, Mur. c. 365.) It was probably at or near the point where the Murranza (Aqua Crabra) now flows into the town. (Nibby, c. c.; Fiale, Porte Merid. p. 11.)

The two next gates were the Porta Latina and Porta Appia, standing over the roads of those names, which, as we have before said, diverged from one another at a little distance outside the Porta Capena, for which, therefore, these gates were substitutes. The Porta Latina is now walled up, and the road to Tusculum (Prasati) leads out of the Porta S. Giovanni. The Porta Appia, which still retained its name during the middle ages, but is now called Porta di S. Sebastiano, from the church situated outside of it, is one of the most considerable of the gates, from the height of its towers, though the arch is not of fine proportions. Nibby considers it to be posterior to the Gothic War, and of Byzantine architecture, from the Greek inscriptions and the Greek cross on the key-stone of the arch. (Mur. c. 370.) A little within it stands the so-called arch of Drusus. A little farther in the line of wall to the W. stands an arched gate of brick, ornamented with half columns, and having a heavy architrave. The Via Ardeatina (Fast. p. 282, Mill.) proceeded through it, which issued from the Porta Raudusculana of the Servian walls. (Nibby, p. 201, seq.) We do not find this gate named in any author, and it was probably walled up at a very early period. The last gate on this side is the Porta Ostiensis, now called Porta di S. Paolo, from the celebrated basilica about a mile outside of it, now in course of reconstruction in the most splendid manner. The ancient name is mentioned by Antoninus Marcellinus (xvii. 4), but that of S. Pauli appears as early as the sixth century. (Procop. B. G. iii. 36.) It had two arches, of which the second, though walled up, is still visible from the side of the town, though hidden from without by a tower built before it. Close to it is the pyramid, or tomb, of Cecutius, one of the few monuments of the Republic. It is built into the wall. From this point the walls run to the river, including Monte Testaccio, and then northwards along its
banks, till they reached the point opposite to the walls of the Janiculum. Of this last portion only a few fragments remain.

On the other side of the Tiber only a few traces of the ancient wall remain, which extended lower down the stream than the modern one. Not far from the river lay the Porta Portensis, which Urban VIII. destroyed in order to build the present Porta Portese. This gate, like the Ostiaemus and Praenestina, had two arches, and the same inscription as that over the Tiburtina. From this point the wall proceeded to the height of the Janiculum, where stood the Porta Aurelia, so named after the Via Aurelia (vota) which issued from it. We have already mentioned that its name (Porta di S. Pancrazio) was in use as early as the time of Procopius; yet the ancient one is found in the Anonymous of Einsiedeln, and even in the Libri de Mirabilibus. The walls then again descended in a NE. direction to the river, to the point opposite to that whence we commenced this description, or between the Fratres Palace and Ponte Sisto. It is singular that we do not find any gate mentioned in this portion of wall, and we can hardly conceive that there should have been no exit towards the Vatican. Yet neither Procopius (B. G. i. 19, 23) nor the writers of the middle ages recognise any. We find, indeed, a Transiberine gate mentioned by Spartianus (Socr. 19) as built by Septimius Severus, and named after him (Septimiana); but it is plain that this could not have been, originally at least, a city gate, as there were no walls at this part in the time of Severus. Becker conjectures (de Muribus, p. 129, Handb. p. 214) that it was an archway belonging to some building erected by Severus, and that it was subsequently built into the wall by Aurelius or Honorius; of the probability of which conjecture, seeing that it is never once mentioned by any author, the reader must judge.

III. THE CAPITOL.

In attempting to describe this prominent feature in the topography of Rome, we are arrested on the threshold by a dispute respecting it which has long prevailed and still continues to prevail, and upon which, before proceeding any further, it will be necessary to declare our opinion. We have before described the Capitoline hill as presenting three natural divisions, namely, two summits, one at its NE. and the other at its SW. extremity, with a depression between them, thus forming what is commonly called a saddle-back hill. Now the point in dispute is, which of these summits was the Capitol, and which the Arx? The unfortunate ambiguity with which these terms are used by the ancient writers, will, it is to be feared, prevent the possibility of ever arriving at any complete and satisfactory solution of the question. Hence the conflicting opinions which have prevailed upon the subject, and which have given rise to two different schools of topographers, generally characterised at present as the German and the Italian school. There is, indeed, a third class of writers, who hold that both the Capitol and Arx occupied the same, or SW. summit; but this evidently absurd theory has now so few adherents that it will not be necessary to examine it. The most conspicuous scholars of the German school are Niebuhr, and his followers Bunsen, Becker, Preller, and others; and these hold that the temple of Jupiter Capitolinus was seated on the SW. summit of the hill. The Italian view, which is directly contrary to this, was first brought into vogue by Nardini in the last century, and has since been held by most Italian scholars and topographers. It is not, however, the exclusively Italian opinion that it has been adopted by some distinguished German scholars, among whom may be named Götting, and Braun, the present accomplished Secretary of the Archaeological Institute at Rome.

Every attempt to determine this question must now rest almost exclusively on the interpretation of passages in ancient authors relating to the Capitoline hill, and the inferences to be drawn from them; and the decision must depend on the preponderance of probability on a comparison of these inferences. Hence the great importance of attending to a strict interpretation of the expressions used by the classical writers will be at once apparent; and we shall therefore preface the following inquiry by laying down a few general rules to guide our researches.

Preller, who, in an able paper published in Schneidewin's Philologia, vol. i., has taken a very moderate and candid view of the question, consoled himself and those who will hold the German line, by remarking that no passage can be produced from an ancient and trustworthy writer in which Capitolium is used as the name of the whole hill. But if the question turns on this point — and to a great extent it certainly does — such passages may be readily produced. To begin with Varro, who was both an ancient and a trustworthy writer. In a passage where he is expressly describing the hills of Rome, and which will therefore admit neither of misapprehension nor dispute, Varro says: "Septim- monium nominatum ob tot montibus, quonae postea urbis muris comprehendit. E quia Capitolium dictum, quod hic, quom fundamenta fuderatur aedici Jovis, caput humanum dicatur inventum. Hic mona ante Tarpeius dictus," &c. (L. L. v. § 41, Mill.) Here Capitolium can signify nothing but the Capitoline hill, just as Palatium in § 53 signifies the Palatine.

In like manner Tacitus, in his description of the Romanian pomposum before cited; "Huic rumanae Capitolii et Capito non a Bonnodo sed un Tito Titio additum urbi credideri," (Ann. xii. 24), where it would be absurd to restrict the meaning of Capitolium to the Capitol properly so called, for Tatius dwelt on the Arx. So Livy in his narrative of the exploit of Horatius Coelas: "Si transitum a tergo relinquissem, jam plus hostium in Palatino Capitolino, quam in Janiculo, fore?" (ii. 10), where its union with Palatium shows that the hill is meant; and the same historian, in describing Romulus consecrating the spolia opima to Jupiter Feretrius a couple of centuries before the Capitoline temple was founded, says, "in Capitolium ascendit" (i. 10). The Greek writers use το καπιταλιον in the same manner; "Ρώμην μὲν τον παλάτιον κατέχω — Τάτιοι δὲ το καπιταλιον. (Dionys. ii. 50.) Hence we deduce as a first general rule that the term Capitolum is sometimes used of the whole hill.

Secondly, it may be shown that the whole hill, when characterised generally as the Roman citadel, was also called Arx: "Atque ut ita munita arx circunjecta arduo et quasi circumciso saxo niteretur, ut etiam in illa tempestate horribili Gallici adventus in columnis atque intacta permanerit." (Cic. Rpf. ii. 6.) "Sp. Tarpeius Romanam præerat arch." (Liv. i. 11.) But there is no need to multiply examples on this head, which is plain enough.

But, thirdly, we must observe that though the terms Capitolium and Arx are thus used generally
to signify the whole hill, they are nevertheless frequently employed in a stricter sense to denote respectively one of its summits, or rather, the temple of Jupiter Capitolinus and the opposite summit; and in this manner they are often found mentioned as two separate localities opposed to one another: "De arce capta Capitolium occupato — nuntii veniant." (Liv. iii. 18.) "Est autem etiam aedes Vejovis Romae inter arcem et Capitolium." (Gell. N. A. v. 12.) On this point also it would be easy to multiply examples, if it were necessary.

The preceding passages, which have been purposely selected from prose writers, suffice to show how loosely the terms Arx and Capitolium were employed; and if we were to investigate the language of the poets, we should find the question still further embarrassed by the introduction of the ancient names of the hill, such as Mons Tarpeius, Rupes Tarpeia,
With these preliminary remarks we shall proceed to examine the question as to which summit was occupied by the Capitoline temple. And as several arguments have been adduced by Becker (Handbuch, pp. 387—395) in favour of the SW. summit, which he deems to be of such force and cogency as "completely to decide" the question, it will be necessary to examine them seriatim, before we proceed to state our own opinion. They are chiefly drawn from narratives of attempts to surprise or storm the Capitol, and the first on the list is the well-known story of Herdonius as related by Dionysius of Halicarnassus (x. 14): "Herdonius," says Becker, "lands by night at the spot where the Capitol lies, and where the hill is not the distance of a stadium from the river, and therefore manifestly opposite to its western point. He forces a passage through the Carmental gate, which lay on this side, ascends the height, and seizes the fortress (φρούριον). Hence he presses forwards still further to the neighbouring citadel, of which he also gains possession. This narrative alone suffices to decide the question, since the Capitol is expressly mentioned as being next to the river, and the Carmental gate near it: and since the land of Herdonius, after taking possession of the western height, proceeds to the adjoining citadel" (p. 388).

In this interpretation of the narrative some things are omitted which are necessary to the proper understanding of it, and others are inserted which are by no means to be found there. Dionysius does not say that Herdonius landed at the spot where the Capital lies, and where the hill is only a stade from the river, but that he landed at that part of Rome where the Capitoline hill is, at the distance of not quite a stade from the river. Secondly, Becker assumes that φρούριον is the Capitol, or, as he calls it, by begging the whole question, "the western height." But his greatest misrepresentation arises from omitting to state that Dionysius, as his text stands, describes the Carmental gate as left open in part, the gate of the Roman wall (πύλη τοῦ Καπιτολίου); whereas Becker's words ("er dringt durch das Carmentalisische Tier") would lead the reader to believe that the passage was forced by Herdonius. Now it has been shown that the Porta Carmentalis was one of the city gates; and it is impossible to believe that the Romans were so besetted, or rather in such a state of idocy, that, after building a huge stone wall round their city at great expense and trouble, they should leave one of their gates open, and that too without a guard upon it; thus rendering all their elaborate defences useless and abortive. We have said without a guard, because it appears from the narrative that the first obstacle encountered by Herdonius was the φρούριον, which according to Becker was the Capitol; so that he must have passed through the Vicus Jugarius, over the forum, and ascended the Clivus Capitolinus without interruption. It is evident, however, that Dionysius could not have intended the Carmental gate, since he makes it an entrance not to the city but to the Capitol (ἐγιατέων τῷ Καπιτολίῳ); and that he regarded it as seated upon an eminence, is plain from the expression that Herdonius made his men ascend through it (Ἀναβαίνοντες τὴν δύναμιν). The text of Dionysius is manifestly corrupt or interpolated; which further appears from the fact that when he was describing the real Carmental gate (i. 32), he used the adjective form Καρμεντικός (παρά τοῖς Καρμεντικοῖς τέις), whilst in the present instance he is made to use the form Καρμεντικός. Herdonius must have landed below the line of wall running from the Capitoline to the river, for, as the wall was not continued along its banks, he would have met with no obstruction. And this was evidently the reason why he brought down his men in boats; for if the Carmental gate had been always left open it would have been better for him to have marched overland, and thus to have avoided the protracted and hazardous operation of landing his men. It is clear, as Preller has pointed out (Schneidewin's Philologie i. p. 85, note), that Dionysius, or rather perhaps his transcribers or editors, has here confused the Porta Carmentalis with the Porta Pandana, which, as we have before seen, was seated on the Capitoline hill, and always left open, for there could hardly have been two gates of this description. The Porta Pandana, as we have already said, was still in existence in the time of Varro (L. L. v. § 42, Mill.), and was in fact the entrance to the ancient fort or castellum — the φρούριον of Dionysius — which guarded the approach to the Capitoline hill, of course on its E. side, or towards the forum, where alone it was accessible. Thus Solinus: "Idem (Herculis omittet) et montem Capitolium Saturnium nominatum, Castelli quoque, quod exciderat, portam Saturniam appollaverunt, quae postmodum Pandana vocitata est" (i. 15). We also learn from Festus, who mentions the same castrum, or fort, that it was situated in the lower part of the Clivus Capitolinus. "Saturni quoque dicenbrant, qui castrum in illo clivo Capitolino inclemente," (p. 322, Mill.). This, then, was the φρούριον first captured by Herdonius, and not, as Becker supposes, the Capitol: and hence, as that writer says, he pressed on to the western height, which, however, was not the Capitol but the Arx. When Dionysius says of the latter that it adjoined, or was connected with, the Capitolium, this was intended for his Greek readers, who would otherwise have supposed, from the fashion of their own cities, that the Arx or Acropolis formed a separate hill.

The story of Herdonius, then, instead of being "alone decisive," and which Becker (Warming, pp. 43, 44) called upon Braun and Preller to explain, before they ventured to say a word more on the subject, proves absolutely nothing at all; and we pass on to the next, that of Pompius Cominius and the Gauls. "The messenger climbs the rock at the spot nearest the river, by the Porta Carmentalis, where the Gauls, who had observed his footsteps, afterwards make the same attempt. It is from this spot that Manlius casts them down" (p. 389). This is a fair representation of the matter; but the question remains, when the messenger had climbed the rock was he in the Capitol or in the Arx? The passages quoted as decisive in favour of the former are the following: "İndec. (Cominius) quae proximum fuit a ripa, præ praeruptum ecque neglectum hostium custodiam saxum in Capitolium evavit." (Liv. x. 46.) "Galli, seu vestigio notato humano, seu sua sponte facta ad Carmentis saxorum adscendere ad Carmentis saxorum animum necesse — in summum evasere" (Liv. xii. 47). Now, it is plain, that in the former of these passages Livy means the Capitoline hill, and not the Capitol strictly so called; since, in regard to a small space, like the Capitol Proper, it would be a useless and absurd distinction, if it lay, and was known to lie, next the river, to say that Cominius mounted it "where it
was nearest to the river. ""Continuous in Capitolium erediti" is here equivalent to "Romulus in Capitolium descendit," in a passage before cited. (Liv. ii. 10.) Hence, to mark the spot more precisely, the historian inserts "ad Carmentis" in the following chapter. There is nothing in the other authorities cited in Becker's note (no. 750) which yields a conclusion either one way or the other. We might, with far superior justice, quote the following passage of Tacitus from the account given on another occasion, to prove that the attempt of the Gauls was on the Arx or citadel: "Atque ut ita munia Arx circumjacet arduo et quasi circumciso saxo niteretur, ut etiam in illa tempore herribili Gallici adventus incolumis atque intacta permanerint." (De R. p. ii. 6.) But, though we held that the attempt was really on the Arx, we are nevertheless of opinion that Cicero here uses the word only in its general sense, and thus as applicable to the whole hill, just as Livy uses Capitolium in the preceding passage. Hence, Mr. Burnaby (Class. Min. vol. iv. p. 430) and M. Proctor (l.c.) have justly regarded this narrative as affording no evidence at all, although they are adherents of the German theory. We may further observe, that the house of Manlius was on the Arx; and though this circumstance, taken by itself, presents nothing decisive, yet, in the case of so sudden a surprise, it adds probability to the view that the Arx was on the southern summit.

We now proceed to the next illustration, which is drawn from the account given by Tacitus of the attack of the Vitellians on the Capitol. Becker's interpretation of this passage is so full of errors, that we must follow him sentence by sentence, giving, first of all, the original description of Tacitus. It runs as follows: "Cito agmine forum et imminuita foro templi praecerteti erigit aciem per adversum collem usque ad primas Capitolinae arcis fores. Erant antiquitas porticus in lateri chivi, dextrae subeuntibus; in quorum tectum egressi saxo tectique Vitellianos obtulere. Necque illus manus nisi gladius armatus; et narraretur arma aut missilia talen longum videtur. Fines in prominentem porticum iecerent et sequentur ignem; ambusque Capitolii fores penetrassent, ni Sabinus revulsus undeque status, dea majora in ipso aditus vice muri obiectis. Tum diverso Capitolii aditus invadunt, justa lucem asyl, et qua Tarpeia rupestem gradum aditus aditus. Improvisa utragae vis: proprio atque acer com aris angustae. Nee sibi poterant scandentes per conjuncta asciiidea, quae, ut in multa pace, in altum edita solum Capitolii nequautum. Hilis ambigitur, ignem tectis oppugnatorum ineritrum, in obscuris, quae cerebris fung est, quo niteros ac progressos depresserunt. Ultra lapus ignis in porticus appasitas aedibus: max sustinentes fastigium aquillare vetere ligno traxerant flamman alturnatique. Sic Capitolium clausis foribus indecens et indireptum conflagrat." (Hist. iii. 71.)

The attack," says Becker, "is directed solely against the Capitol; that is, the height containing the temple. The latter is kept out, as to its summit, on the occasion." (p. 390). This is so far from being the case, that the words of Tacitus would rather show that the attack was directed against the Arx. The temple is represented as having been shut up, and neither attacked nor defended; "clausis foribus, indecens et indireptum conflagrat." Such a state of things is inconceivable, if, as Becker says, the attack was directed solely against the Capitol. That part of the hill was evidently deserted, and left to its fate; the besieged had concentrated themselves upon the Arx, which thus became the point of attack. By that unfortunate ambiguity in the use of the word Capitolium, which we have before pointed out, we find Tacitus representing the gates of the Capitolium as having been burnt ("ambustas que Capitolii fores") which, if Capitolium meant the same thing in the last sentence, would be a direct contradiction, as the gates are there represented as shut. But in the first passage he means the gates of the fortification which enclosed the whole summit of the hill; and in the second passage he means the gates of the temple. The meaning of Tacitus is also evident in another manner; for if the Vitellians were attacking the temple itself, and burning its gates, they must have already gained a footing on the height, and would consequently have had no occasion to seek access by other routes — by the steps of the Rupes Tarpeia, and by the Lucus Asynius. Becker's practice, Tacitus calls this (i.e. the height with the temple), "indifferently Capitolina Arx and Capitolium." This is quite a mistake. The Arx Capitolina may possibly mean the whole summit of the hill; but if it is to be restricted to one of the two eminences, it means the Arx proper rather than the Capitol. "The attacking party, it appears, first made a lodgment on the Clivus Capitolinus. Here the portico on the right points distinctly to the SW. height. Had the portico been to the right of a person ascending in the contrary direction, it would have been separated from the besieged by the street, who could not therefore have defended themselves from its roof." If we thought that this argument had any value we might adopt it as our own; for we also believe that the attack was directed against the SW. height, but with this difference, that the Arx was on this height, and not the Capitol. But, in fact, there was only one principal ascent or clivus,—that leading towards the western summit; and the only thing worth remarking in Becker's observations is that he should have thought there might be another Clivus Capitolinus leading in the opposite direction. We may remark, by the way, that the portico here mentioned was probably that erected by the great-grandson of Cn. Scipio. (Vell. Pat. ii. 3.) "As the attack is here fruitless, the Vitellians abandon it, and make another attack at two different approaches ("diversos aditus"); at the Locus Asynii, that is, on the side where at present the broad steps lead from the Palazzo dei Conservatori to Monte Caprino, and again where the Centum Gradus led to the Rupes Tarpeia. Whether these Centum Gradus are to be placed by the church of Sta Maria della Consolazione, or more westward, it is not necessary to determine here, since that they led to the Caffarelli height is undisputed. On the side of the asylum (Palazzo dei Conservatori) the danger was more pressing. Where the steps now lead to Monte Caprino, and on the whole side of the hill, were houses which reached its summit. These were set on fire, and the flames then caught the adjoining portico, and lastly the temple." Our chief objection to this account, is, its impossibility. If the Locus Asynii corresponded to the steps of the present Palazzo dei Conservatori, which is seated in the depression between the two summits, or present Piazza del Campidoglio, then the besiegers must have forced the passage of the Clivus Capitolinus, whereas Tacitus expressly says that they were repulsed. Being repulsed they must have retreated.
The precise spot of the Lucas Asyl'i cannot be indicated; but from Livy's description of it, it was evidently somewhere on the descent of the hill ("locum qui nume septus descendebantus inter duos locos est, atque aperta," Liv. xii. 45). It is probable (as Procopius supposes, De Aedificiis, i. p. 99) that the "aditus mixta lucum Asyli" was on the NE. side of the hill near the present arch of Severus. The Clivus Asyli is a fiction; there was only one clivus on the Capitoline.

We have only one more remark to make on this narrative. It is plain that the fire broke out near the Lucas Asyl'i, and then spreading from house to house, caught at last the front of the temple. This follows from Tacitus' account of the portico and the eagles which supported the fastigium or pediment, first catching fire. The back-front of the Capitoline temple was plain, apparently a mere wall; since Dionysius (iv. 61) does not say a single word about it, though he particularly describes the front as having a triple row of columns and the sides double rows. But as we know that the temple faced the south, such an accident could not have happened except it stood on the NE. height, or that of Arcaeli.

It may, therefore, by substituting Cafforelli for Arcaeli, retort the triumphant remark with which Becker closes his explanation of this passage: "To him, therefore, who would seek the temple of Jupiter on the height of Cafforelli, the description of Tacitus is in every respect inexplicable."

Becker's next argument in favour of the W. summit involves an equivocation. It is, "that the temple was built on that summit of the hill which bore the name of Mons Tarpeia." Now it is notorious — and as we have already established it, we need not repeat it here — that before the building of the Capitol the whole hill was called Mons Tarpeia. The passages cited by Becker in note 755 (Livy. v. 55; Dionys. iii. 69) mean nothing more than this; indeed, the latter expressly states it (δι' Ἀροφος τὸτε μὲν ἐκάλεσε Ταρπινῖον, ἀλλ' ἐν Καπιτῶλιο). Capitolium gradually became the name for the whole hill; but who can believe that the name of Tarpeia continued to be retained at that very portion of it where the Capitoline temple was built? The process was probably as follows: the northern height, on which the temple was built, was at first alone called Capitolium. Gradually its superior importance gave name to the whole hill; yet a particular portion, the most remote from the temple, retained the primitive name of Rupes Tarpeia. And thus Festus in a mutilated fragment, —

not however so mutilated but that the sense is plain — "Necorum fauces rum lumina [sum altera parte] Capitoli conjungi" (p. 343), where Müller remarks, "non multum a Urbs suplemento discedere licet.

Becker then proceeds to argue that the temple of Juno Moneta was built on the site of the house of M. Mautius Capitolinus, which was on the Arx (Livy. v. 47; Plut. Cam. 36; Dion Cass. Fy. 31, &c.); and we learn from Ovid (Fast. l. 637) that there were steps leading from the temple of Concord, to that of Juno Moneta. Now as the former temple was situated under the height of Aracelli, near the arch of Severus, this determines the question of the site of Juno Moneta and the Arx. Ovid's words are as follows:

"Candida, te niveo praeitis lux proxima templo
Qua fert sublimes alta Moneta gradus;
Nunc bene prospicit Latium, Concordia, turbae," &c.

This is very obscure; but we do not see how it can be inferred from this passage that there were steps from one temple to the other. We should rather take it to mean that the temple of Concord was placed close to that of Moneta, which latter was approached by a flight of lofty steps. Nor do we think it very difficult to point out what these steps were. The temple of Juno was on the Arx; that is, according to our view, on the SW. summit; and the lofty steps were no other than the Centum Gradus for ascending the Rupes Tarpeia, as described by Tacitus in the passage we have just been discussing. Had there been another flight of steps leading up to the top of the Capitoline hill, the Vitellians would certainly have preferred them to clambering over the tops of houses. But it will be objected that according to this view the temple of Concord is placed upon the Arx, for which there is no authority, instead of on the forum or clivus, for which there is authority. Now this is exactly the point at which we wish to arrive. There were several temples of Concord, but only two of any renown, namely, that dedicated by Furius Camillus, B. C. 366, and another dedicated by the consul Opinius after the sedition and death of Gracchus. Appian says that the latter temple was in the forum; & 

& δι' Βουλή καὶ οὖν Ὀμονοίας σίντων ἐν ἀγορᾷ προστάθηκε γέρων (B. C. 1. 26). But in ordinary language the clivus formed part of the forum; and it would be impossible to point out any place in the forum, strictly so called, which it could have occupied. It is undoubtedly the same temple alluded to by Varro in the following passage: "Socenam supra Graecostasim ubi aedibus Concordiae et basilica Opiniu" (L. L. v. p. 156, Mill.); from which we may infer that Opinius built at the same time a basilica, which adjoined the temple. Becker (Handb. p. 309) denied the existence of this basilica; but by the time he published his Warmann he had grown wiser, and quoted in the Appendix (p. 58) the following passage from Cicero (p. Sot. 67). "L. Opinius eximus monumentum celeberrimum in fora, secpulum desertissimum in littore Dyrrachinio est reliquum;" maintaining, however, that this passage related to Opinius' temple of Concord. But Uricius (Röm. Top. p. 26), after pointing out that the epithet celeberrimum, "very much frequented," suited better with a basilica than with a temple, produced
two ancient inscriptions from Marin’s Atti de’ Fratelli Arceti (p. 212); in which a basilica Opimia is recorded, and Becker, in his Antwurt (p. 33), confessing that he had overlooked these inscriptions, retracted his doubts, and acknowledged the existence of a basilica. According to Varro, then, the Arvii Concordiae and basilica of Opimia were close to the senaculum; and the situation between the Capitol and forum: “Unum (Senaculum) ubi nunc est codis Concordiae, inter Capitolium et Forum” (p. 337, Mill.). This description corresponds exactly with the site where the present remains of a temple of Concord are unanimously agreed to exist: remains, however, which are supposed to be those of the temple founded by Camillus, and not of that founded by Opimius. According to this supposition there must have been two temples of Concord on the forum. But if these remains belong to that of Camillus, who shall point out those of the temple erected by Opimius? Where was its site? What its history? When was it demolished, and its place either left vacant or occupied by another building? Appian, as we have seen, expressly says that the temple built by Opimius was in the forum, where is the evidence that the temple of Camillus was also in the forum? There is positively none. Plutarch, the only direct evidence as to its site, says no such thing, but only that a temple was erected on the Forum: ηρήθαντο της μιν Οπιμευς ιερὸ, διάπερ πέρα ὁ Καμιλλος, εις την αγοραν και εις την εκκλησιαν άπο τοις γεγονόσισι ιδρύασα (Camill. 42). Now ἀφορος means to view from a distance, and especially from a height. It is equivalent to the Latin prospecere, the very term used by Ovid in describing the same temple:—

"Nunc bene propepiscia Latiam, Concordiae, turbam.”

These expressions, then, like Ovid’s allusion to the “sublimes gradus” of Moneta, point to the Arch as the site of the temple. It is remarkable that Lucan (Phars. i. 192) employs the same word when describing the temple of Jupiter Tonans, erected by Augustus, also situated upon the Arch, or Hesper Tarpeia:

"—O magiae qui moenia propepiscia urbis Tarpeia de rupe Tonantis.”

This temple, indeed, has also been placed on the circus, on the authority of the pseudo-Victor, and against the express evidence of the best authorities. Thus an inscription in Gruter (Ixxii. No. 5), consisting of some lines addressed to Fortuna, likewise places the Jupiter Tonans on the Tarpeian rock:—

"Tu qua esto Tarpeio salis vicina Tonanti Votorum vindex semper Fortuna meorum,” &c.

Suetonius (Aug. c. 29 and 91), Pliny (xxxvi. 6) and the Mon. Agyrumum, place it “in Capitolio,” meaning the Capitoline hill. It has been distinctly inferred that it was on the circus, because Dion says that those who were going up to the great temple of Jupiter met with it first. —σημαντικες ανασεπαρες και τω Καταραϊω άνω της γορταιας (Liv. lxvi. 2), which they doubt would do, since the circus led first to the western height.

On these grounds, then, we are inclined to believe that the temple of Concord erected by Camillus stood on the Arch, and could not, therefore, have had any steps leading to the temple of Juno Moneta. The latter was likewise founded by Camillus, as we learn from Livy and Ovid:—

"Arce quomque in summa Janum templum Monetae Ex voto memorant facta, Camille, tuo; Aute domus Mamil fuerunt” (Fast. vi. 183); and thus these two great works of the dictator stood, as was natural, close together, just as the temple of Concord and the basilica subsequently erected by Opimius also adjoined one another or near the circus. It is no objection to this view that Pliny (hist. ii. 50) speaks of another small temple of Jupiter on the Arx, which had been vowed by the praetor Manlius in Gaul during a sedition of the soldiers. The vow had been almost overlooked, but after a lapse of two years it was recollected, and the temple erected in discharge of it. (L. xxii. 33.) It seems, therefore, to have been a small affair, and might very well have coexisted on the Arx with another and more splendid temple.

But to return to Becker’s arguments. The next proof adduced is Caligula’s bridge. “Caligula,” he says, as Bunen has remarked, “caused a bridge to be thrown from the Palatine hill over the temple of Augustus (and probably the Basilica Julia) to the Capitoline temple, which is altogether inconceivable if the latter was on the height of Araucoli, as in that case the bridge must have been conducted over the forum” (p. 393). But here Becker goes further than his author, who merely says that Caligula threw a bridge from the Palatine hill to the Capitol: “Sed gratias peccavit Caligula in monumentum Araucolium, &c.” But, if Becker’s view was right, we might by Caligula translate,—he erected a temple of Apollo in the palace.”

The next proof is that a large piece of rock fell down from the Capitol (“ex Capitolio”) into the Vicus Jugarius (Liv. xxx. 21); and as the Vicus Jugarius ran under the S. summit, this shows that the Capitoline temple was on it. But pieces of rock fell down from hills, not from buildings, and, therefore, Capitolium here only means the hill. In like manner when Livy says (xxxvii. 28), “subsecuti sunt quasi Aquilum in Capitolium (censoris locucionem),” it is plain that he must mean the hill; and consequently this passage is another proof of this use of the word. The Aquilum was in or by the Vicus Jugarius, and could not, therefore, have been on the Capitol properly so called, even if the latter had been on the SW. height. Becker wrongly translates this passage,—"a subtraction of the Capitol over the Aquilum” (p. 393). Then comes the passage respecting the statue of Jupiter being turned towards the east, that it might behold the forum and temple, on which Becker maintains to be impossible of a statue erected on the height of Araucoli. Those who have seen the ground will not be inclined to coincide in this opinion. The statue stood on a column (Dion Cass. xxxvii. 9; Cic. Div. i. 12; cf. 1st Cat. iii. 8), and most probably in front of the temple—it could hardly have been placed behind it; and, therefore, if the temple was on the S. height, the statue must have been at the extremity of it; a site which certainly would not afford a very good view of the forum. Next the direction
of the Clivus Capitolinus is added, which ran to the Western height, and must have led directly to the temple, whence it derived its name. But this is a complete begging of the question, and the clivus never probably derived its name from this hill. If the direction of the clivus, however, proves anything at all—and we are not disposed to lay much stress upon it—it rather proves the reverse of Becker's case. The clivus was a continuation of the Sacra Via, by which, as we shall have occasion to show when treating of that road, the augurs descended from the Arx after taking the auguries, and by which they carried up their new year's offerings to king Tattius, who lived upon the Arx; and hence the sacral name of the clivus itself was called Sacra-Via. (Varro, L. L. v. § 47, Milli.; Festus, p. 290, id.) Lastly, the confined height of Aventine would not have afforded sufficient room for the spacious temple of Jupiter, the Area Capitolina, where meetings of the people were held, and at the same time be able to display so many other temples and monuments. There is some degree of truth in this observation, so far at least as the Area Capitolina is concerned. But when we come to describe the temple of Jupiter, the complete construction of which is necessary to the complete understanding of the present question, though Becker has chosen to omit it, "as lying out of the plan of his book" (p 396), we shall endeavour to show how this objection may be obviated. Meanwhile, having now discussed all Becker's arguments in favour of the SW. summit as the site of the Capitoline temple, it will be more convenient shortly to review the whole question, and to adduce some reasons which have led us to a directly contrary conclusion. In doing this we do not presume to think, with Becker, that we have "completely decided" the question. It is one, indeed, that will not admit of complete demonstration; but we venture to hope that the balance of probability may be shown to predominate very considerably in favour of the NE. height. The greater part of Becker's arguments, as we trust that we have shown, prove nothing at all, while the remainder, or those which prove anything are turned against him. Becker must claim as our own the proof drawn from the storm of the Capitol by the Vetulians, as described by Tacitus, as well as that derived from Mons Tarpeius being the name of the SW. height, and that from the westerly direction of the Clivus Capitolinus. Another argument in favour of the NE. height may be drawn from Livy's account of the trial of Manius Capitolinus, to which we have already adverted when treating of the Porta Flumenta [supra, p. 721], and need not here repeat. To these we shall add a few more drawn from probability.

Tatius dwelt on the Arx, where the temple of Juno Moneta afterwards stood. (Plut. Rom. 29; Solinus, i. 21.) "This," says Becker (p. 388), "is the height of Aventine, and always retained its name of Arx after the Capitol was built, since certain sacred customs were attached to the place and apostelation." He is here alluding to the Arx being the auguracularum of which Festus says: "Auguracularium antiquum quam non arcus ascensus, quod ibi augures publice auspicerentur." (p. 18, where Miller observes; "non arcus ascens quom in aere fuisse arbitrav auguracularum"). The templem, then, marked out from the Arx, from which the city auspices were taken, was defined by a peculiar and

appropriate form of words, which is given by Varro, (L. L. vii. § 8, Milli.) It was bounded on the left hand and on the right by a distant tree; the tract between was the templum or teosum (country region) in which the courts were observed. The augur who inaugurated Numa led him to the Arx, seated him on a stone, with his face turned towards the South, and sat down on his left hand, capite velato, and with his liturns. Then, looking forwards over the city and country — "prospectu in urbe agrumque capto"— he marked out the temple from east to west, and determined in his mind the sign (signum) to be observed as far as ever his eyes could reach: "quo longissimo prospectum oculi ferrante." (Liv. x. 18; cf. Cic. de Off. iii. 16.) The great extent of the prospect required may be inferred from an anecdotc related by Valerius Maximus (viii. 2. § 1), where the augures are represented as ordering Claudius Centunalis to lower his lofty dwelling on the Caelian, because it interfered with their view from the Arx,—a passage, by the way, which shows that the augures were taken from the Arx till at all events a late period of the Republic. Now, supposing with Becker, that the Arx was on the NE. summit, what sort of prospect did the augures have? It is evident that a large portion of their view would have been intercepted by the huge temple of Jupiter Capitolinus. The SW. summit is the only portion of the hill which, in the words of Livy, would afford a noble prospect, "in urbe agrumque." It was doubtless this point to which the augur condictus Numa, and which remained over afterwards the place appointed for taking the augures. Prelier is of opinion that Augustus removed them to a place called the Augustorum on the Palatine. (Philologus, i. p. 92.) But the situation lay down for that building scarcely answers to our ideas of a place adapted for taking the augures, and it seems more probable that it was merely a place of assembly for the college of augurs.

Another argument that has been added in favour of the SW. summit being the Arx, is drawn from its proximity to the river, and from its rocky and precipitous nature, which made it proper for a citadel. But on this we are not inclined to lay any great stress.

Other arguments in favour of the Italian view may be drawn from the nature of the temple itself; but in order to understand them it will first be necessary to give a description of the building. The most complete account of the Temple Jovis Capitolini is that given by Dionysius (iv. 61), from which we learn that it stood upon a high basis or platform, 8 plethra, or 800 Greek feet square, which is nearly the same in English measure. This would give about 200 feet for each side of the temple, for the length exceeded the breadth only by about 15 feet. These are the dimensions of the original construction; and when it was burnt down a generation before the time of Dionysius,—that is, as we learn from Tacitus (Hist. iii. 72), in the consulship of L. Scipio and Norbanus (n. c. 83),—it was rebuilt upon the same foundation. The materials employed in the second construction were, however, of much richer description than those of the first. The front of the temple, which faced the south, had a portico consisting of three rows of columns, whilst on the flanks it had only two rows: and as the back front is not said to have had any portico, we may conclude that there was nothing on this side but a plain wall. The interior contained three cells
parallel to one another with common walls, the centre one being that of Juno, on each side those of Juno and Minerva. In Livy, however (vi. 4), Annu is represented as being in the same cella with Jupiter. But though the temple had three cells, it had but one *pseudion*, or pediment, and a single roof.

**TEMPLE OF JUPITER CAPITOLINUS.**

*(From a Coin of Vespasian.)*

Now the first thing that strikes us on reading this description is, that the front being so ornamented, and the back so very plain, the temple must have stood in a situation where the former was very conspicuous, whilst the latter was but little seen. Such a situation is afforded only by the NE. summit of the Capitol. On this site the front of the temple, being turned to the south, would not only be visible from the forum, but would also present its best aspect to those who had ascended the Capitol hill; whilst on the other hand, had it stood on the SW. summit, the front would not have been visible from the forum, and what is still worse, the temple would have presented only its made and unadorned back to those who approached it by the usual and most important ascent, the Clivus Capitolinus. Such a state of things, in violation of all the rules which commonly regulate the disposition of public buildings, is scarcely to be imagined.

We will now revert to Becker's objection respecting the *Area Capitolina*. It must be admitted that the dimensions of the temple would have allowed but little room for this area on the height of *Araceli*, especially as this must have contained other small temples and monuments, such as that of Jupiter Ferentins, &c. Yet the Area Capitolina, we know, was often the scene not only of public meetings but even of combats. There are very striking indications that this area was not confined to the height on which the temple stood, but that it occupied part at least of the extensive surface of lower ground lying between the two summits. One indication of this is the great height of the steps leading up to the vestibule of the temple, as shown by the story related by Livy of Annia, the ambassador of the Latins; who being rebuked by Manlius and the fathers for his insolence, rushed frantically from the vestibule, and falling down the steps, was either killed or rendered insensible (viii. 6). That there was a difference in the level of the Capitol may be seen from the account given by Paterculus of Scipio Nasica's address to the people in the solicitation of the Gracchi. Standing *spectacly* on the same lofty steps,—"ex superbo re porta Capitolinis munus gradibus insisten"

*Nasica invited by his eloquence the senators and knights to attack Gracchus, who was standing in the area below, with a large crowd of his adherents, and who was killed in attempting to escape down the Clivus Capitolinus.* The area must have been of considerable size to hold the *castrae* of Gracchus; and the same fact is shown by several other passages in the classics (Liv. xxv. 3, xlv. 36, &c.). Now all these circumstances suit much better with a temple on the NE. summit than with one on the opposite height. An area in front of the latter, however, being out of the way for public meetings, would not have afforded sufficient space for them; nor would it have presented the lofty steps before described, nor the ready means of escape down the clivus. The next question, then, is, are the reasons why we deem the NE. summit the more probable site of the Capitoline temple.

We have already mentioned that this famous temple was at least planned by the elder Tarquin; and according to some authors the foundation was completely laid by him (Dionys. iv. 59), and the building continued under Servius (Tac. Hist. iii. 72). However this may be, it is certain that it was not finished till the time of Tarquinius Superbus, who tasked the people to work at it (Liv. i. 56); but the tyrant was expelled before it could be dedicated, which honour was reserved for M. Horatius Pulvillus, one of the first two consuls of the Republic (Polyb. iii. 22; Liv. ii. 8; Plut. Popl. 14). When the foundations were first laid it was necessary to excavate the temples of other deities which stood upon the site destined for it; on which occasion Terminus and Juvencus, who had altars there, alone refused to move, and it became necessary to enclose their shrines within the temple; a happy omen for the future greatness of the city! (Liv. v. 54; Dionys. iii. 69.) It is a well-known legend that its name of Capitolium was derived from the finding of a human head in digging the foundation (Varr. L. L. v. § 41, Mill.; Plin. xxviii. 4, &c.). The image of the god, originally of clay, was made by Tarquinius Fregellae, and represented him in a sitting posture. The face was painted with vermillion, and the statue was probably clothed in a tunic palmata and toga picta, as the costume was borrowed by triumphant generals. On the aeretorium of the pediment stood a quadriga of earethware, whose porcine swelling in the furnace was also regarded as an omen of Rome's future greatness (Plin. xxviii. 4; Plut. Popl. 13). The brothers C. & Q. Ogulnius subsequently placed a bronze quadriga with a statue of Jupiter on the roof; but this probably did not supersede that of clay, to which so much ominous importance was attached. The same æsides also presented a bronze threshold, and consecrated some silver plate in Jupiter's cella (Liv. x. 23; cf. Plaut. Trin. i. 2. 46). By degrees the temple grew ex cessidirce rich. Camillus dedicated three golden *patera* out of the spoils taken from the Etruscans (Liv. vi. 4), and the dictator Cincinnatus placed in the temple a statue of Jupiter Imperator, which he had carried off from Praeneste (id. vi. 29). At length the pediment and columns became so encum bered with shields, ensigns, and other offerings that the censores M. Fulvius Nobilior and M. Aemilius Lepidus were compelled to rid the temple of these superfluous ornaments (id. xl. 51).

As we have before related, the original building lasted till the year B. C. 83, when it was burnt down in the civil wars of Sulla, according to Tacitus by design ("privata furtu;" Hist. ii. 72). Its restoration was undertaken by Sulla, and subsequently confided to Q. Lutatius Catulus, not without the opposition of Caesar, who wished to obliterate the name of Catulus from the temple, and to substitute
The Area Capitolina, as we have already seen, was frequently used for meetings or ceremonies; but besides these, regular comitia were frequently held upon it. (Liv. xxxv. 3, xxxiv. 54, xii. 16, xlv. 36; Plut. Paul. Aem. 30; App. B. C. i. 15, &c.) Here stood the CUBIA CALABRA, in which on the Calends the pontifices declared whether the Nones would fall on the fifth or the seventh day of the month. (Varr. L. L. vi. § 27; Müh.; Macrob. Sat. i. 15.) Here also was a CASA ROMULI, of which there were two, the other being in the 10th Region on the Palatine; though Becker (Hanob. p. 401 and note) denies the existence of the former in face of the express testimony of Macrobius (L. c.) Seneca (Contr. 9); Vitruvius (ii. 1); Martial (viii. 80); Canon (Narrat. 48); &c. (v. Preller in Schiedewin's Philologia, i. p. 83). It seems to have been a little hut or cottage, thatched with straw, commemorative of the lowly and pastoral life of the founder of Rome. The area had also rostra, which were mentioned by Cicero (ad Brut. 3).

Besides these, there were several temples and sacellae on the NE. summit. Among them was the small temple of JUPITER BERENICE, one of the most sacred in Rome, in which spolia opima were dedicated first by Romulus, then by Cassius, and lastly by Marcellus (Liv. i. 10; Plut. Marcell. 8; Dionys. ii. 34, &c.) The last writer, in whose time only the foundations remained, gives its dimensions at 10 feet by 5. It appears, however, to have been subsequently restored by Augustus. (Liv. iv. 20; Mon. August.) The temple of FIDES, which stood close to the great temple, was also very ancient, having been built by Numa, and afterwards restored by M. Aurelius Scaurus. (Liv. i. 21; Cic. N. D. ii. 23, Off. iii. 29, &c.) It was roomy enough for assemblies of the senate. (Val. Max. iii. 2. § 17; App. B. C. i. 16.) The two small temples of MENS and of VENUS ERYCINA stood close together, separated only by a trench. They had both been vowed after the battle at the Trasimene lake and were consecrated two years afterwards by Q. Fabius Maximus and T. Oenelius Crazam. (Liv. xxii. 10, xxiii. 51; Cic. N. D. ii. 23.) A temple of VENUS CAPITOLINA and VENUS VICTRIX are also mentioned, but it is not clear whether they were separate edifices. (Suet. Cal. 7, Gab. 18; Fest. Amil. VIII. Id. Oct.) We also hear of two temples of JUPITER (Liv. xxxv. 41), and a temple of ORS (xxxix. 22). It by no means follows, however, that all these temples were on the Capitol, properly so called, and some of them might have been on the other summit. Capitolium being used generally as the name of the hill. This seems to have been the case with the temple of FORTUNE, respecting which we have already cited an ancient inscription when discussing the site of the temples of Concord and Jupiter Terebinthus. It is perhaps the temple of Fortuna Primigenia mentioned by Flutarch (Fort. Rom. 10) as having been built by Servius on the Capitoline, and alluded to apparently by Clemens. (Prot. p. 31. p. 15. Syll.) The temple of HONOS AND VIRTUS, built by C. Marius, certainly could not have been on the northern eminence, since we learn from Festus (p. 34, Müh.) that he was compelled to build it low lest it should interfere with the prospect of the augurs, and he should thus be ordered to demolish it. Indeed Propertius (iv. 11. 45) mentions it as being on the Tarpeian rock, or southern summit:

"Poedaque Tarpeio conopia tendere saxo  
Jura dare et statuas inter et arma Mari."

Whence we discover another indication that the auguraculum could not possibly have been on the NE. height; for in that case, with the huge temple of Jupiter before it, there would have been little cause to quarrel with this bagatelle erected by Marius. It must have stood on a lower point of the hill.
hill than the augurs' forum, and probably near its

The building of it by Marius is testified

and from an inscription (Orell. 343) it appears to have been erected out of

Romulus, and as he deprecated its

Also, Cicero pointed out the temple erected by Augustus to Jupiter Capitoline, besides that in his forum, seems very doubtful, and is testified only by Dom Cassius (iv. 10). Domitian, to commemorate his preservation during the contest with the Vitellians, dedicated a sacellum to Jupiter Conservator, or the Preserver, in the Velabrum, on the site of the house of the Aedidna, or sacratium, in which he had taken refuge; and afterwards, when he had obtained the purple, a large temple to Jupiter Custos on the Capitoline, in which he was represented in the bosom of the god. (Tac. ii. 74; Suet. Dom. 5.) We also hear of a temple to Beneficence (Eoppoiia) erected by M. Aurelius. (Dom. xxxi. 34.)

But one of the most important temples on the SW, summit or Are was that of Juno Moneta, erected, as we have said, in pursuance of a vow made by Camillus on the spot where the house of M. Manlius Capitolinus had stood. (Liv. vii. 28.) The name of Moneta, however, seems to have been conferred upon the goddess some time after the dedication of the temple, since it was occasioned by a voice heard from it after an earthquake, advising (monens) that expiation should be made with a pregnant sow. (Cic. de Div. i. 45.) The temple was erected in B. C. 344. The Roman mint was subsequently established in it. (Liv. vi. 20; cf. Suidas, Monnpa.) It was rebuilt in B. C. 173. (Liv. xlii. 7.) Near it, as we have before endeavoured to establish, must be placed the temple of Concord erected by Camillus and restored by Tibers; as well as the other smaller temple to the same deity, of no great renown, dedicated during the Second Punic War, B. C. 217. (Liv. xxi. 35.)

Such were the principal temples which occupied the summit of the Capitoline hill. But there were also other smaller temples, besides a multitude of statues, sacella, monuments, and offerings. Among these was the temple of Vesta, which stood in the place called *inter duos lucos* between the Capitol and the Tarpeian height. As ari. Joyis Pistoris and aced. Veniers Calvux must also be reckoned among these (Liv. vii. 387; Laeant. i. 20.) Among the statues may be mentioned those of the Roman Kings in the temple of Fides (App. B. c. i. 16; Dom. xlii. 44), and on the hill the two colossal statues of Apollo and Jupiter. The former of these, which was 30 cubits high, was brought by M. Lucullus from Aegina in Pontus. The Jupiter was made of Sp. Carvius out of the armour and helmets of the conquering Samnites, and was of such a size that

it could be seen from the temple of Jupiter Latiaris on the Alban Mount. (Plin. xxxiv. 18.) It would be useless to run through the whole list of objects that might be made out. It will suffice to say that the area Capitolia was so crowded with the statues of illustrious men that Augustus was compelled to remove many of them into the Campus Martius. (Suet. Cal. 34.)

We know only of one profane building on the summit of the Capitoline hill—the Tabularium, or record office. We cannot tell the exact site of the original one: but it could not have stood far from the Capitoline temple, since it appears to have been burnt down together with the latter during the civil wars of Sulla. Polybius (iii. 26) mentions the earlier one, and its burning, alluded to by Cicero (N. D. iii. 30, pro Rabir. Perd. 3), seems to have been effected by a private hand, like that of the Capitol itself. (Tac. Hist. iii. 72.) When rebuilt by Q. Lutatius Catulus it occupied a large part of the eastern side of the depression between the two summits of the Capitoline, behind the temple of Concord, and much of it still exists under the Palazzo Senatorio. In the time of Poggio it was converted into a salt warehouse, but the inscription recording that it was built by Catulus, at his own expense (de suo) was still legible, though nearly eaten away by the saline moisture. (De Variet. Fort. lib. i. p. 8.)

This inscription, which was extant in the time of Nardini, is also given by him (Rom. Ant. ii. p. 300) and by Gruter (clxx. 6; cf. Orelli. 31), with slight variations, and shows that the edifice, as rebuilt by Catulus, must have lasted till the latest period of the Empire. It is often called aerarium in Latin authors. (Liv. iii. 69 &c.)

ARCH OF TABULARIUM.

We shall now proceed to consider some of the most remarkable spots on the hill and its dependencies. And first of the Asylum. Becker (Handb. p. 387) assumes that it occupied the whole depression between the two summits, and that this space, which by modern topographers has been called by the unclassical name of Intermonium, was called "inter duos lucos." But here his authorities do not bear him out. Whether the whole of this space formed the original asylum of Romulus, it is impossible to say; but it is quite certain that this was not the asylum of later times. It would appear from the description of Dionysius (ii. 15) that in its original state (νείρ τοῦτος, κ. τ. l.) the grove may have extended from one summit to the other; but it does not appear that it occupied the whole space. It was convenient for Becker to assume this, on account of his interpretation of the passage in Tacitus respecting the
assault of the Vitellians, where he makes them storm the SW. height from the grove of the asylum, which he places where the steps now lead up to the Palazzo de' Conservatori. But, first, it is impossible to suppose that in the time of Vitellius the whole of this large area was a grove. Such an account is inconsistent with the buildings which we know to have been erected on it, as the Tabularium, and also with the probable assumption which we have ventured to propose, that a considerable part of it was occupied by the Area Capitolina. But, secondly, the account of Tacitus, as we have already pointed out, is quite incompatible with Becker's view. The Vitellians, being repulsed near the summit of the Clivus, retreat downwards, and attempt two other ascents, one of which was by the Lucas Asylli. And this agrees with what we gather from Livy's description of the place: "Locum, qui nunc septus descendentalus inter duas lacos est, asylum apertum" (i. 8.) Whence we learn that the place called "inter duas lacos" contained the ancient asylum, the enclosure of which asylum was seen by those who descended the "inter duas lacos." Thirdly, the asylum must have been near the approach to it; and this, on Becker's own showing (Handb. p. 415), was under the NE. summit, namely, between the career and temple of Concord and behind the arch of Severus. This ascent has been erroneously called Clivus Asylli, as there was only one clivus on the Capitoline hill. But it is quite impossible that an ascent on this side of the hill could have led to a Lucas Asylli where the Palazzo de' Conservatori now stands. It was near the asylum, as we have seen, that the fire broke out which destroyed the temple of Jupiter Capitolinus; and the latter, consequently, must have been on the NE. summit. With respect to the asylum, we need only further remark, that it contained a small temple, but to what deity it was dedicated nobody could tell ( renewables είπ' τούτον κατακεκαμάξεται; ὅτι δὲ διὰ διών ἤ βαλον κατὰ ιχὺ σαφῆ εἰτέν, Dionysii, ii. 15); and he was therefore merely called the divinity of the asylum (Θέας Δωλάους, Plat. Rom. 9).

Another disputed point is the precise situation of the Rupes Tarpeia, or that part of the summit whence criminals were hurled. The prevalent opinion among the older topographers was that it was either at that part of the hill which overhangs the Ficculus Montonara, that is, at the extreme SW. point, or farther to the W., in a court in the Via di Tor de' Specchi, where a precipitous cliff, sufficiently high to cause death by a fall from it, bears at present the name of Rupe Tarpeia. That this was the true Tarpeian rock is still the prevalent opinion, and has been adopted by Becker. But Dureae de la Malle (Mémoire sur la Roche Tarpeienne, in the Mem. de l'Acad., 1819) has pointed out two passages in Dionysius which are totally incompatible with this site. In describing the execution of Cassius, that historian says that he was led to the precipice which overhangs the forum, and cast down from it in the view of all the people (τούτο τὸ τέλος τῆς δίκαιας λαυνυσης, ἀγανότεις οἱ ταμίαι τὸν άνθρα ἐπὶ τὸν ψηρείμενον τῆς ἁγορᾶς κρυμνων, ἀπάνων ὑπόγαλων, ἢθυμαν κατὰ τῆς πέτρας, viii. 78, cf. vii. 35, seq.). Now this could not have taken place on the side of the Tor de Specchi, which cannot be seen from the forum; and it is therefore assumed that the true Rupes Tarpeia must have been on the E. side, above S. Maria della Consolazione. The arguments adduced by Becker to controvert this assumption are not very convincing. He objects that the hill is much less precipitous here than on the other side. But this proves nothing with regard to its earlier state. Livy, as we have seen, records the fall of a vast mass of rock into the Vicus Jugarius. Such landslips must have been frequent in later times, and it is precisely where the rock was most precipitous that they would occur. Thus, Flavius Blondus (Inst. Rom. ii. 58) locates the fall in his own time of a piece as large as a house. Another objection advanced by Becker is that the criminal would have fallen into the Vicus Jugarius. This, however, is absurd; he would only have fallen at the back of the house. Nothing can be inferred from modern names, as that of a church now non-extant, designated as sub Tarpeo, as we have already shown that the whole S. summit was Mons Tarpeins. Becker's attempt to explain away the words ἀπάνων ὑπόγαλων is utterly futile. On the whole, it seems most probable that the rock was on the SE. side, not only from the express testimony of Dionysius, which it is difficult or impossible to set aside, but also from the inherent pro-

**Suggested Tarpeian Rock,**
hability that among people like the Romans a public execution would take place at a public and conspicuous spot. The Centum Grappus, or Hundred Steps, were probably near it; but their exact situa-

tion it is impossible to point out. The other objects on the Clivus and slopes of the hill will be described in the next section.

PLATE OF THE FORUM DURING THE REPUBLIC.

1. Basilica Opimia.
2. Aedes Concordiae.
3. Seminulum.
4. Vulcanal.
5. Graecostasis.
6. Curia.

22. Aedes Vesta.
23. Clivus Capitolinus.
24. Vicus Jugarius.
25. Vicus Tuscus.

IV. THE FORUM AND ITS ENVIRONS.

The forum, the great centre of Roman life and business, is so intimately connected with the Capitol that we are naturally led to treat of it next. Its original site was a deep hollow, extending from the eastern foot of the Capitoline hill to the spot where the Velia begins to ascend, by the remains of the temple of Antoninus and Faustina. At the time of the battle between the Romans and Sabines this ground was in its rude and natural state, partly swampy and partly overgrown with wood. (Dionys. ii. 50.) It could, however, have been neither a thick wood nor an absolute swamp, or the battle could not have taken place. After the alliance be-
tween the Sabines and Romans this spot formed a sort of neutral ground or common meeting-place, and was improved by cutting down the wood and filling up the swampy parts with earth. We must not, indeed, look for anything like a regular forum before the reign of Tarquinius Priscus; yet some of the principal lines which marked its subsequent ex-
tent had been trenched before that period. On the E. and W. these are marked by the nature of the ground; on the former by the ascent of the Velia, on the latter by the Capitoline hill. Its northern boundary was traced by the road called Sacra Via. It is only of late years, however, that these bound-
aries have been recognised. Among the earlier topo-

graphers views equally erroneous and discordant prevailed upon the subject; some of them extending the forum lengthways from the Capitoline hill to the summit of the Velia, where the arch of Titus now stands; whilst others, taking the space between the Capitoline and temple of Faustina to have been its breadth, drew its length in a southerly direction, so as to encroach upon the Velabrum. The latter theory was adopted by Nardini, and prevailed till very recently. Pilaio (Del Foro Romano, Boms, 1818, 1832) has the merit of having restored the correct general view of the forum, though his work is not always accurate in details. The proper limits of the forum were established by excavations made between the Capitol and Colosseum in 1827, and following years, when M. Fos saw opposite to the temple of Antoninus and Faustina, a piece of the pavement of the Sacra Via, similar to that which runs under the arch of Severus. (Bunsen, Le For. 
Rom. expliqué, p. 7.) A similar piece had been previously discovered during excavations made in the year 1742, before the church of S. Adriano, at the eastern corner of the Via Bonella, which Fico-
ni (Vestigio de Roma antica, p. 75) rightly con-

sidered to belong to the Sacra Via. A line pro-

longed through these two pieces towards the arch of 

Severus will therefore give the direction of the 

street, and the boundary of the forum on that side. 

The southern side was no less satisfactorily deter-

mined by the excavations made in 1835, when the 

Basilica Julia was discovered; and in front of its
steps another paved street, enclosing the area of the forum, which was distinguishable by its being paved with slabs of the ordinary silex. This street continued eastwards, past the ruin of the three columns or temple of Caster, as was shown by a similar piece of street pavement having been discovered in front of them. From this spot it must have proceeded eastwards, past the church of S. Maria Liberatrice, till it met that portion of the Sacra Via which ran in a southerly direction opposite the temple of Faustina (S. Lorenzo in Miranda), and formed the eastern boundary of the forum. Hence, according to the opinion now generally received, the forum presented an oblong or rather trapezoidal figure, 671 English feet in length, by 202 at its greatest breadth under the Capitol, and 117 at its eastern extremity. (Bunsen, *Les Forum de Rome*, p. 15.)

**THE FORUM IN ITS PRESENT STATE.**

Sacra Via.—The Sacra Via was thus intimately connected with the forum; and as it was both one of the most ancient and one of the most important streets of Rome, it will demand a particular description. Its origin is lost in obscurity. According to some accounts it must have been already in existence when the battle before Allia was fought, since it is said to have derived its name of the "Sacred Way" from the treaty concluded upon it between Romanus and Tatins. (Dionysius ii. 46; Festus, p. 230, Mull.) This, however, seems highly improbable; not only because the road could hardly have existed at so early a period, when the site of the forum itself was in so rude a state, but also because a public highway is not altogether the place in which we should expect a treaty of peace to be concluded. The name of the comitium has also been derived, perhaps with no greater probability, from the same event. It is more likely that the road took its origin at a rather later period, when the Sabine and Roman cities had become consolidated. Its name of Sacra Via seems to have been derived from the sacred purposes for which it was used. Thus we learn from Varro (i. 47, Mull.) that it began at the sacellum of the goddess Strenia, in the Carinae; that it proceeded thence as far as the arx, or citadel on the Capitoline hill; and that certain sacred offerings, namely, the white sheep or lamb (ovis idulis), which was sacrificed every ides to Jove (Ovid, *Fasti* i. 56; Macrobius, S. 1. 15; Paul. Diaec. p. 104, Mull.), were borne along it monthly to the arx. It was also the road by which the augurs descended from the arx when, after taking the auguries, they proceeded to inaugurate anything in the city below. It likewise appears that Titus Tatins instituted the custom that on every new year's day the augurs should bring him presents of verbena from the grove of Strenia, or Strenna, to his dwelling on the arx ("ab exortu poene urbis Martiae Streniarum usus adoluit, acceperit regis Tatii, qui verbenas felicis arboris ex laco Strennae anno novi auspiciis primos accept," Symm. *Epist.* x. 35). This custom seems to have been retained in later times in that known as the augurium salutis. (Cic. *Leg. ii.* 8; Tac. *Ann.* x. 25; Lucian, *Pseudol.* 8.) Hence perhaps the appellation of "sacra;" though the
whole extent of road was called Sacra Via only in sacerdotal language, between which and the common usage we have already had occasion to note a diversity when giving an account of the Servian gates. In common parlance only that portion of the road was called Sacra Via which formed the ascent of the Velia, from the forum to its summit ("Hujus Sacrae Viae pars haec sola vulgo nota quae est a foro eunti primero clivo," Varr. l. c.). Hence by the poets it is sometimes called "Sacra Clivus;" "Inde sacrum veneranda petes Palatia clivo." (Mart. i. 70. 5); and—

"— quandoque transt ferocios
Per sacrum clivum, inerita decorus
Frente, Nieambros." (Hor. Od. iv. 2. 34.)

compared with—

"Intactus aut Britannus ut descendenter
Sacra catenatus via." (Id. Epod. vii. 7.)

(Comp. Ambrosch. Studien und Andeut. p. 78, seq.)

The origin of the vulgar opinion is explained by Festus in the following passage: "Haec ne extatus quidem, ut vulgus opinatur, sacra appellanda est, a regia ad domum regis sacrificulorum, et est ei tempus ut sacrificulum Strenaeae, et eversus regis usque in aequum." (p. 290, Mull.) Whence it appears that only the part which lay between the Regia, or house of the pontifex maximus, and that of the rex sacrificius, was commonly regarded, and probably for that very reason, as "sacra." This passage, however, though it shows plainly enough that there must have been a space between these two residences, has caused some embarrassment en account of a passage in Dion Cassius (liv. 27), in which he says that Augustus presented the house of the rex sacrificius (του βασιλει του ειρην) to the Vestals because it adjourned their residence (μονταγιος ἄκρι), and as we know from Pliny (Ep. vii. 19) that the vestals dwelt close to the temple, it seems impossible, if Dion is right, that there should have been a street lying between the two places mentioned. But the matter is plain enough; though Becker (de Muris, pp. 30—35, Handb. pp. 226—237) writes several pages in far-fetched reasoning in order to arrive at a conclusion which already lies before us in a reading of the text of Dion for which there is actually MS. authority. Augustus was chosen pontifex maximus (αρχιερεας), not rex sacrificius, as Dion himself says in this passage. But the two offices were perfectly distinct ("Regem sacrificium creant. Id sacerdotalium pontificalium subjecserent," Liv. ii. 2). Augustus would hardly make a present of a house which did not belong to him, and therefore in Dion we must read, with some MSs., του βασιλει του ειρην, for ειρην: Dion thus, in order perhaps to convey a lively notion of the office to his Greek readers, designating the Roman pontifex maximus as "king of the priests," instead of using the ordinary Greek term αρχιερεας. The matter therefore lies thus. Varro says that in ordinary life only the clivus, or ascent from the forum to the Summa Sacra Via, obtained the name of Sacra Via. Festus repeats the same thing in a different manner: designating the space so called as lying between the Regia, or house of the pontifex maximus, and that of the rex sacrificius. Whence it follows that the latter must have been on the Summa Sacra Via. It can scarcely be doubted that before the time of Augustus the Regia was the residence of the pontifex maximus. The building appears to have existed till a late period of the Empire. It is mentioned by the younger Pliny (Ep. iv. 11) and by Plutarch (Qu. R. 97, Rom. 18) as extant in their time, and also probably by Herodian (i. 14) in his description of the burning of the temple of Peace under Commodus. After the expulsion of the kings, the rex sacrificius, who succeeded to their sacerdotal prerogatives, was probably presented with one of the royal residences, of which there were several in the neighbourhood of the Summa Sacra Via; that being the spot where Ancus Marcus, Tarquinius Priscus, and Tarquinius Superbus had dwelt. (Liv. i. 41; Solf. i. 23, 24; Plin. xxxiv. 13.) We cannot tell the exact direction in which the Sacra Via traversed the valley of the Colesium and ascended to the arch of Titus, nor by what name this part of the road was commonly called in the language of the people; but it probably kept along the base of the Velia. At its highest point, or Summa Sacra Via, and perhaps on the site afterwards occupied by the temple of Venus and Rome, there seems to have been anciently a market for the sale of fruit, and also probably of nick-nacks and toys. "Summa Sacra Via, ubi pont. venetae. (Varr. R. R. i. 2.)

Hence Ovid (A. A. ii. 265.):—

"Rure suburbano poteris tibi diure missa
Illis, vel in Sacra sim licet einta Via." (Sat. ii. 17. 11.)

Whilst the nick-nacks are thus mentioned by Propertius (iii. 17. 11.)—:

"Et modo paronis canJa flabellum superbae
Et manibus dura frigus habere pila,
Et cupit iraturn tales me poscere eburnos
Quaeque nintet Sacra villa dona Via."

The direction of the Sacra Via is indicated by Horace's description of his stroll: "Ibam forte Via Sacra," &c. (S. i. 9.) He is going down it towards the forum, having probably come from the villa of Maecenas, on the Esquiline, where he is interrupted by the eternal bore whom he has pilled over. The direction of his walk is indicated by his unavailing excuse that he is going to visit a sick friend over the Tiber (v. 17) and by the arrival at the temple of Venus, which the Sacra Via having been thus quitted and the forum left on the right. The two extremities of the street, as commonly known, are indicated in the following passage of Cicero: "Hoc tumen miror, cur tu haec potissimum iscrive, qui longissima a te absitut. Equidem, si quando ut fit, jactor in turbis, non illum accuso, qui est in Summa Sacra Via, cum ego ad Fabianum Fornicem impellor, sed eum qui in me ipsum incurrit atque incidit" (p. Planc. 7). The Forum Fabius, as it will hereafter be called, stood at the eastern extremity of the forum; and Cicero has made the most of his illustration by taking the whole length of the street. Beyond this point, where it traversed the N. side of the forum, we are at a loss to tell what its vulgar appellation may have been; and if we venture to suggest that it may have been called "Janus," this is merely a conjecture from Horace (Epist. i. 1. 54), where "haec Janus summus ab ipso" seems to suit better with a street — just as we should say, "all Lombard street" — than with two Janis, as is commonly interpreted, or than with a building containing several floors let out in counting houses. (Cf. Sat. ii. 3. 18.) This view is supported by the Schola on the first of these passages, where it is said:
ROMA.

"J anus autem hic platea dicitur, ubi mercatores et senatores sortis causa convenire solebant." In fact it was the Roman Change. The ascent from the forum to the summit of the Capitoline hill, where the Sacra Via terminated, was, we know, called Clivus Capitolinus. It only remains to notice Becker's dictum (de Muris, p. 23) that the name of this street should always be written Sacra Via, and not in reversed order Via Sacra. To the exceptions which he noted there himself, he adds some more in the Handbuch (p. 219, note), and another from Seneca (Controv. xxvii. p. 299, Bip.) in his Adlocutio; and Urlich's (Rom. Topogr. p. 8) includes the list. On the whole, it would seem that though Sacra Via is the more usual expression, the other cannot be regarded as anachronical.

Vicus Jugarius.—Of the name of the street which ran along the south side of the forum we are utterly ignorant; but from it issued two streets, which were among the most busy, and best known, in Rome. These were the Vicus Jugarius and Vicus Tuscius. We have before had occasion to mention that the former ran close under the Capitoline hill, from the forum to the Porta Carmentalis. It was thought to derive its name from an altar which stood in it to Juno, the presiding deity of wedlock. (Paul. Diaec. p. 104, Müll.) It does not appear to have contained any other sacred places in ancient times; but Augustus dedicated in it altars to Ceres and Ops Augusta. (Fast. Aedid. IV. Id. Aug.) At the top of the street, where it entered the forum, was the fountain called Lucus Servilius, which obtained a special notoriety during the proscriptions of Sulla, as it was here the condemned senators were exposed. (Cic. Rosc. Am. 32; Sosec. Prov. 3.) M. Agrippa adorned it with the effigy of a hydra. (Fastus, p. 290, Müll.) Between the Vicus Jugarius and Capitoline hill, and close to the foot of the latter, lay the Aequinuclium (Liv. xxxiv. 28.), said to have derived its name from occupying the site of the house of the demagogue, Sp. Maelius, which had been razed (Varr. L.L. v. 157, Müll.; Liv. iv. 16.). It served as a market-place, especially for the sale of lambs, which were in great request for sacrifices, and probably corresponded with the modern Via del Monte Torpese. (Cic. Div. ii. 17.)

Vicus Tuscius.—In the imperial times the Vicus Jugarius was bounded at its eastern extremity by the Basilica Julia; and on the further side of this building, again, lay the Vicus Tuscius. According to some authorities this street was founded in B. C. 507, being assigned to such of the Etruscans in the vanquished host of Aruns as had fled to Rome, and felt a desire to settle there (Liv. ii. 15; Dioys. v. 36); but we have before related, on the authority of Varro and Tacitus, that it was founded in the reign of Romulus. These conflicting statements may, perhaps, be reconciled, by considering the later settlement as a kind of second or subsidiary one. However this may be, it is with the topographical facts that we are here more particularly concerned, about which Doreysius communicates some interesting particulars. He describes the ground assigned to the Tuscius as a sort of hollow or gorge situated between the Palatine and Capitoline hills; and in length nearly 4 stadia, or half a Roman mile, from the forum to the Circus Maximus (v. 36). We must presume that this measurement included all the windings of the street; and even then it would seem rather exaggerated, as the whole NW. side of the Palatine hill does not exceed about 2 stadia. We must conclude that it was continued through the Velabrum to the circus. Its length as Canina observes (For. Rom. in. i. p. 67) is a proof that the forum must have extended from NW. to SE., and not from NE. to SW.; as in the latter case, the space for the street, already too short, would have been considerably curtailed. This street, probably from the habits of its primitive colonists, became the abode of fishmongers, fruit-sellers, bird-fanciers, silversmiths, and perfumers, and enjoyed but an indifferent reputation (" Tuscii turba impia viril," Hor. Sor. ii. 3. 29.) It was here, however, that the best silks in Rome were to be procured ("Neo nisi prima veltis de Tuscico sorca vico," Mart. ii. 27. 11). In fact, it seems to have been the great shopping street of Rome; and the Roman gentlemen, whose ladies, perhaps, sometimes induced them to spend more than what was agreeable there, vented their ill humour by abusing the tradesmen. According to the scholiast on the passage of Horace just cited, the street was also called Vicus Tararius. This appellation was doubtless derived from the frankincense and perfumes sold in it, whence the allusion in Horace (Ep. i. 1. 267):—

"Ne capsa porrectus aperta
Deferas in vienn vertendem tus ut odoris.
Et piper, et quicquid chartis amicitia inedita."

Being the road from the forum to the circus and Aventine, it was much used for festal processions. Thus it was the route of the Pontia Circensis, which proceeded from the Capitol over the forum, and by the Vicus Tuscius and Velabrum to the circus. (Dionys. vii. 72.) We have seen that the procession of the virgins passed through it from the temple of Apollo outside the Porta Carmentalis to that of Juno Regina on the Aventine. Yet notwithstanding these important and sacred uses, it is one of the charges brought by Cicero against Verres that he had caused it to be paved so villanously that he himself would not have ventured to ride over it (Verres, 298.) We go from this to the passage that a statue of Vertumnus, the national Etruscan deity, stood at the end of the street next the forum. Becker (Handb. p. 308) places him at the other extremity near the Velabrum. But all the evidence runs the other way; and the lines of Propertius (iv. 2. 5), who puts the following words into the god's mouth, are alone sufficient to decide the matter (Clara. Mus. vol. iv. p. 444):—

"Nec me tura juvant, nec templu lastor eburno
Romanum satis est posse videre forum."

Comitium.—Having thus described the streets which either encircled the forum or afforded outlets from it, we will now proceed to treat of the forum itself, and the objects situated upon and around it, and endeavour to present the reader with a picture of it as it existed under the Kings, during the Republic, and under the Empire. But here, as in the case of the Capitol, we are arrested in the outset by a difficult investigation. We know that a part of the forum called the comitium, was distinguished from the rest by being appropriated to more honourable uses; but what part of the forum it was has been the subject of much dispute. Some, like Canina, have considered it to be a space running parallel with the forum along its whole southern extent; whilst others, like Buceeon and Becker, have thought that it formed
a section of the area at its eastern extremity, and about one-third of the whole forum. An argument advanced by Becker himself (Handb. p. 278) seems decisive against both these views, namely, that we never hear any building on the S. side of the forum spoken of as being on the comitium. Yet in spite of this just remark, he ends by adopting the theory of Bunsen, according to which the comitium began at or near the ruin of the three columns and extended to the eastern extremity of the forum: and thus both the temple of Vesta and the Regia must have stood very close to it. The two chief reasons which seem to have led him to this conclusion are, the situation of the rostra, and that of the Tribunal Praetorius. Respecting the former, we shall have occasion to speak further on. The argument drawn from the latter, which is by far the more important one, we shall examine at once. It proceeds as follows (Handb. p. 280): "The original Tribunal Praetorius was on the comitium (Liv. vi. 15, xxix. 16; Gall. xx. 11, 47 (from the XII. Tables); Varro, L. L. v. 32, p. 154; Plaut. Pers., iii. 6. 11; Macrobi. Sat. ii. 12), which, however, is also mentioned as being merely on the forum. (Liv. xxxv. 40, 2, 44.) In this part of the forum was the Puteal Libonis or Scironium, and this is expressly mentioned as being near the Forum Fabius, the Atrium Vestae, the rostra, and lastly the aedes Divi Juli (Porphyry, ad Hor. Ep. i. 19. 8; Schol. Crut. 16. Id. ad Sat. ii. 6. 35; Fest. p. 333; Schol. ad Pers. Sat. iv. 49); consequently the comitium also must have been close to all these objects."

We presume that Becker's meaning in this passage is, that the first or original tribunal was on the comitium, and that it was afterwards moved into the forum. It could hardly have been both on the comitium and forum, though Becker seems to hint at such a possibility, by saying that it is "also mentioned as being merely on the forum;" and indeed there seems to be no physical impossibility in the way, since it is evident that the tribunal at first was merely a movable chair ("dictator — stipina et mulatidium, sella in comitio posta, viatorum ad M. Manilius praetor gessit," Liv. vi. 15). But if that was his meaning, the passages he cites in proof of it do not bear him out. In the first Livy merely says that a certain letter was carried through the forum to the tribunal of the praetor, the latter of course being on the comitium ("eae literae per forum ad tribunal praetoris latae," xxvii. 50). The other two passages cited contain nothing at all relative to the subject, nor can there be any doubt that in the early times of the Republic the comitium was the usual place on which the praetor took his seat. But that the tribunal was moved from the comitium to the forum is shown by the scholiasts on Horace whom Becker quotes. Thus Porphyrio says: "Puteal autem Libonis sedes praetoris fuit prece Auncum Fabianum, dictumque quod a Libone titule primum tribunal et subsellia locata sit." Primum here is not an adjective to be joined with tribunal — i. e. "that the first or original tribunal was placed there by Libo," but an adverb — "that the tribunal was first placed there by Libo." The former version would be nonsense, because Libo's tribunal could not possibly have been the first. Besides the meaning is unambiguously shown by the Schol. Crut. "puteal Libonis; tribunal: Quid autem ait Libonis, hunc sustitit, quod est primus tribunal in foro statuerit." If the authority of these scholiasts is suspicious as to the fact of this removal, though there are no apparent grounds for suspicion, yet Becker at all events is not in a condition to invalidate their testimony. He has quoted them to prove the situation of the puteal; and if they are good for that, they are also good to prove the removal of the tribunal. Yet with great inconsistency, he tacitly assumes that the tribunal had always stood in its original place, that is, on the comitium, and by the putule, contrary to the express evidence that the latter was on the forum. ("Puteal hunc erat in foro," Sch. Crut. ad Sat. ii. 6. 35.) Libo flourished about a century and a half before Christ. [See Dict. of Biogr. Vol. ii. p. 779.] Now all the examples cited by Becker in which the tribunal is alluded to as being on the comitium, are previous to this date. The first two in note 457 might be passed over, as they relate not to the praetor but to the dictator and consuls; nevertheless, they are both anterior to the time of Libo, the first belonging to the year n. c. 382 and the second to 204. The passage from Gellius "ad praetorem in comitium," being a quotation from the XII. Tables, is of course long prior to the same period. The passage in Varro (L. L. v. 32) of which Becker speaks derives the name of comitium from the practice of coming together there (coire) for the decision of suits, of course refers to the very origin of the place. A passage from Plautus can prove nothing, since he died nearly half a century before the change effected by Libo. The passage alluded to in Macrobius (ii. 12) must be in the quotation from the speech of C. Titius in favour of the Lex Fannia: "Ine ad comitium vadunt, ne item suam faciant; veniant in comitium tristies, &c." But the Lex Fannia was passed in n. c. 164 (Macrobi. ii. 13); or even if we pass it four years later, in n. c. 160, still before the probably date of Libo's alteration; who appears to have been tribune in n. c. 149. Thus the argument does not merely break down, but absolutely recoils against its inventor; for if, as the Schola Crutiana informs us, Libo moved the tribunal from the comitium to the forum, and placed it near the putule, then it is evident that this part of the area could not have been used for the comitium. The comitium, then, being neither on the south nor the east sides of the forum, we must try our fortune on the north and west, where it is to be hoped we shall be more successful. The only method which promises a satisfactory result is, to seek it with other objects with which we know it to have been connected. Now one of these is the Vulcana. We learn from Festus that the comitium stood beneath the Vulcana; in Vulcana, quod est supra Comitium (p. 290, Milli). In like manner Bursius describes the Vulcana as standing a little above the forum, using, of course, the latter word in a general sense for the whole area, including the comitium: και τα μεσοδόι ειναια εστάναι (vi. 50). Where εστάναι is not to be taken of a proper temple (vaos), but signifies merely an area consecrated to the gods, and having probably an altar. It was a rule that a temple of Vulcan (Vulcania) was set up in the comitium (Vestae, praetoribus); and thus in later times we find one in the Campus Martius ("tacent de caelo aedem in campo Vulcan", Liv. xxxiv. 10). That the Vulcana was merely an open space is manifest from its appellation of area, and from the accounts we read of rain falling upon it (Liv. xxix. 46, xl. 19). Of buildings beg
Hence, we are led to suppose that the comitium occupied a considerable part of the N. side of the forum; but its exact limits, from the want of satisfactory evidence, we are unable to define. It must have been a slightly elevated place, since we hear of its having steps; and its form was probably curvilinear, as Pliny (xxiv. 12) speaks of the statues of Pythagoras and Aeliusiades being at \( \textit{its horns} \) (\textit{in curiosum Comitii}); unless this merely alludes to the angle it may have formed at the corner of the forum. It has been sometimes erroneously regarded as having a roof; a mistake which seems to have arisen from a misinterpretation of a passage in Livy, in which that author says that in B. C. 208 the comitium was covered for the first time since Hannibal had been in Italy (\textit{C. Eo anno primum, ex quo Hannibali in Italiam venisset, comitium tectum esse, memorie proditur est}, xxvii. 36). Hence, it was thought, that from this time the comitium was covered with a permanent roof. But Pliny (\textit{de Foro Rom.}, p. 15, seq.) pointed out that in this manner there would be no sense in the words "for the first time since Hannibali in was in Italy," which indicate a repeated covering. The whole context shows that the historian is alluding to a revived celebration of the Roman games, in the usual fashion; and that the covering is nothing more than the \textit{rela} or canvas, which on such occasions was spread over the comitium, to shade the spectators who occupied it from the sun. That the comitium was an open place is evident from many circumstances. Thus, the prodigious rain, which so frequently falls in the narrative of Livy, is described as wetting it (Livy. xxxiv. 45; Jul. Obsequ. c. 103), and troops are represented as marching over it. It was here, also, that the famous Numinalis Arbor grew (Tac. Ann. xiii. 58), which seems to have been transplanted thither from the Falatine by some juggle of Attius Navius, the celebrated augur (Plin. xv. 20; ap. Sueton., \textit{Les Forum de Rom.} p. 45, seq.), though we can by no means accede to Suetonius' emendation of that passage.

The principal destination of the comitium was for holding the comitia curiata, and for hearing lawsuits (\textit{Comitium ab eo quod coibant eo, comitiis curiatis, et litium causa}, Var. L. L. v. § 155, Mull.), and it must, therefore, have been capable of containing a considerable number of persons. The comitia centuriata, on the other hand, were held in the Campus Martius; and the tributa on the forum proper. The curiata were, however, sometimes held on the Capitol before the Curia Calabra. The comitium was also originally the proper place for \textit{contiones}, or addresses delivered to the assembled people. All these customs caused it to be regarded as more honourable and important than the forum, which at first was nothing more than a mere market-place. Hence, we frequently find it spoken of as a more distinguished place than the forum; and seats upon it for viewing the games were assigned to persons of rank. Its distinction from the forum, as a place of honour for the magistrates, is clearly marked in the following passage of Livy, describing the alarm and confusion at Rome after the defeat at Trasimene: \textit{"Romae ad primum nutumium clades ejus cum ingenti terram ac tumultuum concursus in forum populi et factus. Matronae vagae per vias, quae repens clades adlata, quasque fortum exercitus exspect, obvisse conaculorum, et ad quos frequentes \textit{contiones} modo \textit{turbas in comitium et curium versus magistratae vocaret."} &c. (xxiii. 7). When not oc-
cupied by the magistrates it appears to have been open to the people. Thus, the senate being as-
sembled in the curia to hear the ambassadors of those made prisoners at the battle of Cannae, the
people are represented as filling the comitium;
"Ubi is finem fecit, extemplo ab ea turba, quae in
comitio erat, clamor fidelis est sublatus, manuque
ad coriun tendentes, &c." (Id. xxii. 60.) Being
the place for the contiones it of course had a sug-
gestum, or rostra, from which speeches were de-
ivered; but we shall have occasion to describe this
and other objects on and around the comitium and
forum when we arrive at them in their chronological
order.

It was not till after the preceding account of the
comitium had been committed to paper that the
writer of it met with the essay on the comitium by
Mommsen in the *Annali dell’ Instituto* (vol. xvi.),
to which reference has before been made. The writer
was glad to perceive that his general view of the
situation of the comitium had been anticipated,
although he is unable to concur with Mommsen
respecting some of the details; and the situation
of the Curia Hostilia, of the temple of Jansen, of the
Forum Caesaris, and some other objects. In re-
futing Becker’s views, Mommsen has used much the
same arguments, though not in such detail, as those
just adduced; but he has likewise thought it worth
while to refute an argument from a passage in
Herodian incidentally adduced by Becker in a note
(p. 332). As some persons, however, may be dis-
posed to attribute more weight to that argument
than we do ourselves, we shall here quote Mom-
msen’s refutation: "Minus etiam probat alterum,
quod á Becker, p. 332, n. 612, afferat, argumentum
desuntum ex narratione Herodiani, i. 9, Severum
in somnio vidisse Pertinacem equo vectum dia mévis

argumentis topographi Germani comitium eam
partem fors esse statuunt quae Velis subjacent..." (p. 289).

So much for the negative side of the question:
on the positive side Mommsen adduces (p. 299) an
argument which had not occurred to the writer of
the present article in proof of the position above
indicated for the comitium. It is drawn from the
Sacrum Cluacinae. That shrine, Mommsen argues,
stood by the Tabernae Novae, that is, near the arch of
Severus, as Becker has correctly shown (Handb.
p. 321) from Livy iii. 48; but he has done wrong
in rejecting the result that may be drawn from the
comparison of the two legends; first, that the
comitium was so called because Romulus and Tatius met
upon it after the battle (p. 273); second, that the Romans and Sabines cleansed them-

TELFPELE OF VESTA. (From a Coin.)

TELFPELE OF JANUS. (From a Coin.)

so that the statues on its was on the comitium. A fresh confirmation,
Mommsen continues, may be added to this discovery

of the truth. For that the Tabernae were on the
comitium, and not on the forum, as Becker sup-
poses, is pretty clearly shown by Dionysius (t…………

tis élaloi ékstatizómis politikas práxeis, ékivos
edósmhizes, érgasthrma te kai tois élloi
koumois perilafox, ii. 67).

We are not, however, disposed to lay any great
stress on this argument. We think, as we have
already said, that Varro’s etymology of the comitium,
from the political and legal business transacted
there rendering it a place of great resort, is a much
more probable one; since, as the forum itself did
not exist at the time when Romulus and Tatius met
after the battle, it is at least very unlikely that any
spot should afterwards have been marked out upon
it commemorative of that event. It is, nevertheless,
highly probable that the statue of Cluacina stood
on the comitium, but without any reference to these
traditions. We do not, however, think that the
Tabernae occupied the comitium. By áyouna Dion-
ysius means the whole forum, as may be inferred
from περιολατον.

The Forum under the Kings.—In the time of
Romulus, then, we must picture the forum to
ourselves as a bare, open space, having upon it
only the altar of Saturn at about the middle of its
western side, and the Vatican on its NW. side.

Under Numa Pomplinus it received a few improve-
ments. Besides the little temple of Janus, which

would stand far from the forum, but of which we
have already had occasion to speak, when treating
of the Porta Janalisa in the first part of this article,
Numa built near it his Regia, or palace, as well as
the celebrated temple of Vesta. Both these objects
stood very near together at the SE. extremity of
the forum. The *Aediles Vestae* was a round building
(Festus, p. 262; Plin. Nat., ii), but no temple in
the Roman sense of the word; since it had been
purposely left uninaugurated, because, being the
resort of the vestal virgins, it was not deemed right
that the senate should be at liberty to meet in it
(Serv. *Aen.* vii. 153). Its site may be inferred from
several passages in ancient authors. Thus we learn from Dionysius (ii. 66) that it was in the forum, and that the temple of the Dioscuri, whose site we shall point out further on, was subsequently built close to it (Id. vi. 13; Mart. i. 70. 2). It is also said to have been near the lake, or fontain, of Juturna. (Val. Max. i. 8. 1; Ov. F. i. 707.) All these circumstances indicate its site to have been near the present church of St. Maria Liberatrice; where, indeed the graves of twelve vernal virgins, with inscriptions, were discovered in the 16th century. (Aldroandus, Memor, n. 3; Lucio Fauno, Antich. di Roma, p. 206.) In all its subsequent restorations the original round form was retained, as symbolic of the earth, which Vesta represented (Ov. F. vi. 265). The temple itself did not immediately stand upon the forum, but lay somewhat back towards the Palatine; whilst the Regia, which lay in front, and a little to the E. of it, marked the boundary of the forum on that side. The latter, also called Atrium Vestae, and Atrium Regionum, though but a small building, was originally inhabited by Numa. (Ov. ib. 265; Pint. Num. 14, &c.) That it lay close to the forum is shown by the account of Caesar's body being burnt before it (App. B. C. ii. 148); and, indeed, Servius says expressly that it lay "in radicibus Palatii fuissebus Romani fori" (ad Aen. viii. 363). At the back of both the buildings must have been a sacred grove which ran towards the Palatine. It was from this grove that a voice was heard before the capture of the city by the Gauls, bidding the Romans repair their walls and gates. The admonition was neglected; but this impuity was subsequently expiated by building at the spot an altar or sacellum to Aius Locuciones. (Civ. Dis. i. 45.)

Tullus Hostilius, after the capture of Alba Longa, adored the forum with a curia or senate-house, which was called after him the Curia Hostillia, and continued almost down to the imperial times to be the most usual place for holding assemblies of the senate. (Varr. L. L. v. § 155, Mill; Liv. i. 30.) From the same spoils he also improved the comitium: "Fecitque idem et sepulcit magnis comitium et curiam" (Civ. Rep. ii. 17); whence we can hardly infer that he surrounded the comitium with a fence or wall, but more probably that he marked it off more distinctly from the forum by raising it higher, so as to be approachable by steps. The Curia Hostilia, which from its pre-emience is generally called simply curia, must have adjoined the eastern side of the Vulcano. Niebuhr (Beschr. vol. iii. p. 60) was the first who indicated that it must have stood on the N. side of the forum, by pointing out the following passage in Pliny, in which the method of observing noon from it is described:—

"Duodecem tabulis ortus tautum et occasus nominatur; post aliquot annos adjectus est meridies, accessus consulis id prornuntiant, cum curia inter rostra et graecostasiam prospecinset solm." (vii. 66.) Hence, since the sun at noon could be observed from it, it must have faced the south. If its front, however, was parallel with the northern line of the forum, as it appears to have been, it must have looked a little to the W. of S.; since that line does not run due E., but a few degrees to the S. of E. Hence the necessity, in order to observe the true meridian, of looking between the Graecostasium and the Graecostasiam at a period of course long after Tullus Hostilius, and when mid-day began to be observed in this manner — was a lofty substruction on the right or W. side of the curia; and the rostra were also an elevated object situated directly in its front. This appears from the passage in Varro just alluded to:—

"Aute hanc (curiam) rostra; quousque loci id vocabantur, quod ex hostibus capta exa sunt rostra, Sub dextra hayja (curiae) a comito locus substructus, ubi nationem subissent legati, qui ad senatum essent missi. Is graecostasiam appellat, a parte ut multa. Severum supra Graecostasiam, ubi aedis Concordiae et Basilica Opimia." (L. L. v. § 155, 156.) When Varro says that the Graecostasium was sub dextra curiae, he is of course looking towards the south, so that the Graecostasium was on his right. This appears from his going on to say that the sacenum lay above the Graecostasium, and towards the temple of Concord; which, as we have had occasion to mention, was seated on the side of the Capitoline hill. It further appears from this passage that the Graecostasium was a substruction, or elevated area (locus substructus) at the side of, or adjoining the comitum (comp. Plin. xxxii. 6); and must have projected in front of the curia. The relative situation of these objects, as here described, is further proved by Pliny's account of observing midday, with which alone it is consistent. For, as all these objects faced a little to the W. of S., it is only on the assumption that the Graecostasium lay to the W. of the curia, that the meridian sun could be observed with accuracy from any part of the latter between the Graecostasium and rostra.

A singular theory is advanced by Mommsen respecting the situation of the Curia Hostilia, which we cannot altogether pass over in silence. He is of opinion (l. c. p. 289, seq.) that it lay on the Capitoline hill, just above the temple of Concord, which he thinks was built up in front of it; and he thinks that is the reason why the curia was rebuilt on the forum by Sulla. His only authority for this view is the following passage in Livy:—

"(Censoris) et clivum Capitolium silice sternendum curaverunt et porticum ab acele Saturni in Capitolium ad Sacenum ac super id Curiam" (xii. 27). From these words, which are not very intelligible, Mommsen infers (p. 292) that a portico reached from the temple of Saturn to the sacenum, and thence to the curia above it, which stood on the Capitol on the spot afterwards occupied by the Tabularium (p. 292). But so many evident absurdities follow from this view, that Mommsen, had he given the subject adequate consideration, could hardly, we think, have adopted it. Had the curia stood behind the temple of Concord, the ground plan of which is still partly visible near the arch of Severus, it is quite impossible that, according to the account of Pliny, mid-day could have been observed from it between the rostra and Graecostasium, since it would have faced nearly to the east. Mommsen, indeed (p. 296), asserts the contrary, and makes the Curser Mumtins and arch of Titus lie almost due N. and S., as is also shown in his plan at the end of the volume. But the writer can affirm from his own observation that this is not the fact. To a person standing under the Capitol at the head of the forum, and opposite to the column of Phocas, the temple of Faustina bears due E. by the compass, and the arch of Titus a few degrees to the S. of E. To a person standing by the arch of Severus about the assumed site of the curia, the arch of Titus would of course bear a little more S. still. Something must be allowed for variation of the
Here the senaculum is represented, not as a place in which the senate assembled previously to deliberation, but as one in which it actually deliberated. It is impossible, however, that this could have been so. For in that case what would have been the use of the curia? in which the senate is constantly represented as assembling, except in cases where they held their sessions in some other temple? Besides we have no accounts of the senaculum being an inaugurated place, without which it would have been unlawful for the senate to deliberate in it. Nicostaurus therefore, who, from his name, seems to have been a Greek, probably confounded the senaculum with the curia, and other temples in which the senate assembled; and at all events his account cannot be set against the more probable one of Varro and Valerius Maximus. There is, however, one part in the account of Festus, which seems to set the matter in a different point of view. The words, "in quo solenne majestate rust. cum senatus deliberare," seem to point to the senaculum not as a place where the senators deliberated among themselves, but where they conferred with the magistrates; such magistrates we may suppose as were not entitled to enter the curia. Such were the tribunes of the people, who, during the deliberations of the senate, took their seats before the closed doors of the curia, yet as they had to examine and sign the decrees of the Fathers before they became laws, we may easily imagine that it was sometimes necessary for the tribunes and senators to confer together, and these conferences may have taken place at the senaculum ("Tribunis plebis intrare curiæ non licebat; ante falsas autem postibus subsellis, decreta patrum attentissima curâ examinarat; ut, si quâ ex eis improbabat, rata esse non sicerent.") Haque veteribus senatus consultus T. litera subscripta sollicitat; ex quo nota significatur, ita tribunes quoque censimente," Val. Max. ii. 2 § 7.) In this manner the senaculum would have answered two purposes: as places in which the senators met previously to assembling in the curia, and as a sort of neutral ground for conferences with the plebeian magistrates.

With regard to the precise situation of the senaculum belonging to the Curia Hostilia, we can hardly assume, with Mommsen, that it occupied the spot on which the temple of Concord was afterwards really built; nor do the words of Varro and Festus,—

"Senaculum ubi aedificium Condicionis"—"seem to require so very rigorous an interpretation. It is sufficient if it adjoined the temple; though it is not improbable that the latter may have encroached upon some part of its area. After the temple was erected there still appears to have been a large open space in front of it, part of the ancient senaculum, but which, their sessions in some other temple, is called "Area Condicionis." Its identity with the senaculum appears from its adjoining the Vulcan, like the latter: "In area Vuncti et Condicionis sanuinem pluit." (Liv. xl. 19.) "In area Vuncti per balbunum, in area Condicionis totidem diebus sanuinem pluit." (Jul. Obsq. 59.) The temple of Concord became a very usual place for assemblies of the senate, as appears from many passages in ancient authors. (Cic. Phil. ii. 7; Lampr. Alex. 8, 9.) From the area a flight of steps led up to the remainder of the temple: "(Equites Romanii) qui frequentissim in gradibus Condicionis steterunt." (Cic. Phil. viii. 8.) According to Macrobius the temple of Saturn also had a senaculum.
We have before remarked that a new architectural era began at Rome with the reign of Tarquinius Priscus; and if he had not been interrupted by wars, he would doubtless have carried out many of those grand schemes which he was destined only to project. He may almost be called the founder of the forum, since it was he who first surrounded it with private houses and shops. According to Varro (ap. Macrobi. § i. 8), he also founded the Temple of Saturn on the forum at the spot where the altar stood; though, according to another account, it was begun by Tullius Hostilius. At all events, it does not seem to have been dedicated before the expulsion of the kings (Macrobi. L. c.), and according to Livy (L. 21), in the consulship of Sempronius and Minucius, n. c. 497. According to Becker (Handl. p. 312) the ruin of the three columns under the Capitol are remains of it, and this, he asserts, is a most decided certainty, which can be denied only by persons who prefer their own opinion to historical sources, or wilfully shut their eyes. It appears to us, however, judging from these very historical sources, that there is a great deal more authority for the Italian view than for Becker's; according to which the temple of Saturn is the ruin of the eight columns, at the foot of the clivus. All the writers who speak of it mention it as being at the lower part of the hill, and beneath the clivus, while the three columns are a good way up, and above the clivus. Thus Servius (Aen. i. 115, viii. 319) says that the temple of Saturn was "ante clivum Capitolini;" and in the Oratio gentis Romanae (c. 3) it is said to be "sub clivo Capitolino." In like manner Varro (L. L. v. § 42, Müll.) places it "in fasciis (monita Saturni);" and Dionysius, πια τη ρης του λόφου, κατά την άνωθεν την

†ρος αγοράς φιέρων των Καπιτολίων (i. 34). Festus (p. 322, Müll.) describes the ara as having been "in imo clive Capitolino." Moreover, the milliariam aureum, which stood at the top of the forum (Flin. iii. 9) was under the temple of Saturn: "ad milliariam aureum, sub aedem Saturni" (Tac. H. i. 27); "sub aedem Saturni, ad milliariam aureum" (Suet. Otho. c. 6.) Further, the Monumentum Anycranaum mentions the Basilica Julia as "inter aedem Castorla et aedem Saturni." Now what has Becker got to oppose to this overwhelming mass of the very best evidence? His objections are, first, that Servius (Aen. ii. 116) mentions the temple of Saturn as being "justa Concordiae templum;" and though the eight columns are near the temple of Concord, yet they cannot, without awkwardness, be called "justa?" Secondly, the Notitia, proceeding from the Carcer Mamertinus, names the temples in the following order: Templum Concordiae et Saturni et Vespasiani et Titi. Now, as the three columns are next to the temple of Concord, it follows that they belong to the temple of Saturn. The whole force of the proof here adduced rests on the assumption that the Notitia mentions these buildings precisely in the order in which they actually occurred. But it is notorious that the authority of the Notitia in this respect cannot be at all depended on, and that objects are named in it in the most preposterous manner. We need no other witness to this fact than Becker himself, who says of this work, "Preterea cavendum est diligenter, ae, quutes phala sima tempa nominatur, cedem ea ordine justa fuisse arbitrerum." (De Muris, &c., p. 12, note.) But thirdly, Becker proceeds: "This argument obtains greater certainty from the inscriptions collected by the Anonymous of Ein- siedien. Fortunately, the entire inscriptions of all the three temples are preserved, which may be still partly read on the ruins. They run as follows: "Senatus populusque Romanus incendio consumptum restituit Divo Vespasiano Augusto, s. v. q. n. impp. Caes. Severus et Antoninus p. f. felic Aug. restituerunt. [s. v. q. n. aedem Concordiae vetustate collapsam in melorem faciem opere et cultu splendidore restituerunt.] Now as the whole of the first inscription, with the exception of the last three words, "Divo Vespasiano Augusta," are still to be read over the eight columns, and the letters estitiver, a fragment of "restituerunt" in the second inscrip-
The remains of the temple of Saturn, or the porch with the eight columns at the head of the forum, are in a rude and barbarous style of art, some of the columns being larger in diameter than others. Hence Canina infers that the restoration was a very late one, and probably subsequent to the removal of the seat of empire to Constantinople. From the most ancient times the temple of Saturn served as an aerarium, or state treasury, where the public money, the military insignia, and important documents were preserved (Liv. iii. 69; Plut. Q. R. 42; Macrobi. i. 8; Solin. i. 12, &c.). On account of its Greek origin sacrifices were performed at the altar of Saturn after the Greek rite, that is, capite aperto, instead of capite velato as among the Romans (Becker, l.c.).

Adjoining the temple of Saturn was a small cela or Aedes of Ops, which served as a bank for the public money. The Fasti Amilienini and Capranicon mention it as being "ad Forum," and "in Vico Jugario," which determines its position here (Calend. Amit. Dec.; Cal. Capran. Aug.). It is several times alluded to by Cicero: "Pecuniar umutin ad Opis maneret" (Phil. i. 7, cf. li. 14). Before the temple stood a statue of Silvanus and a sacred fig-tree, which the people considered for a long time as presiding over the local god (Varr. i. 7, 493, as its roots began to upset the statue (Plin. xv. 20). Behind the temple, in a small lane or Angiportus, and about midway up the ascent of the clivus, was the Porla STRECODARIA, leading to a place where the orifice from the temple of Vesra was deposited on the 15th of June every year (Varr. L. l. vi. § 32, Mill.; Festus, p. 344.) This custom seems to have been connected with the epithet of Stercutus applied to Saturn by the Romans, as the inventor of applying manure to the fields (Macrob. Sat. i. 7.) Close to the Ara Saturni there was a SACELLIUM DITIS, in which wax masks were suspended during the Saturnalia. (Jb. 11.)

But the most important alteration made by Tarquinius Priscus with regard to the forum was the causing of porticoes and shops to be erected around it (Liv. i. 35; Dionys. iii. 67). This gave the forum a fixed and unalterable shape. We may wonder at the smallness of its area when we reflect that this was the great centre of politics and business for the mistress of the world. But we must recollect that its bounds were thus fixed when she herself was not yet secure against the attempts of surrounding nations. As her power and population gradually increased various means were adopted for procuring more accommodation — first, by the erection of spacious basilicae, and at last, in the imperial times, by the construction of several new fora. But at first, the structures that arose upon the forum were rather of a useful than ornamental kind; and the tabernae of Tarquin consisted of butchers' shops, schools, and other places of a like description, as we learn from the story of Virginia. These TA BERNAE were distinguished by the names of Vetere and Norae, whence it seems probable that only the former were erected in the time of Tarquin. The two sides of the forum, lengthways, derived their names from them, one being called sub Veturibus, the other sub Noris. A passage in Cicero, where he compares these tabernae with the old and new Academies, enables us to determine their respective sites: "Ut it, qui sub Nova solem non ferunt, item illo cum est catastaret, veterum, ut Maximanorum, sic Academieorum umbra secutus est" (Acad. iv. 22). Hence it appears that the Norae, being exposed to the sun, must have been on the northern side of the forum,
Every year the people used to throw pieces of money into it, a sort of augurium salutis, or new year's gift for Augustus. (Suet. Aug. 57.) Close to it grew a fig-tree, a vine, and an olive, which had been fortuitously planted, and were sedulously cultivated by the people; and near them was an altar, dedicated to Vulcan, which was removed at the time of the fire at Caesar's funeral. (Plin. xv. 20; cf. Gruter, Insocr. lxi. 1, 2.) Servius Tullius probably carried on and completed the works begun by his predecessor around the forum, just as he finished the wall; but he does not appear to have undertaken anything original excepting the adding of a lower dungeon, called after him Tullianum, to the Mamertine prison. ("In hoc (cævere) pars qua se sub terra Tullianum, ideo quod additum a Tullio rege," Var. L. L. vi. § 151.) This remains to the present day, and still realises to the spectator the terrible description of Sallust (Cat. 55).

The Roman Ciceronii point out to the traveller the Scalaæ Geminae inside the Mamertine prison, where there are evident remains of an ancient staircase. But it appears from descriptions in ancient authors that they were situated in a path leading down from the Capitol towards the prison, and that they were visible from the forum. (Dion Cass. liii. 5; Valer. Max. vi. 9. § 13; Tac. Hist. ii. 74.)

Teases of this path were discovered in the 16th century (Luc. Fauno, Ant. di Roma, p. 92), and also not many years ago in excavating the ground by the arch of Severus.

It does not appear that any additions or improvements were made in the forum during the reign of Tarquinius Superbus.

The Forum during the Republic.—One of the earliest buildings erected near the forum in the republican times was the temple of Castor and Pollux. After the battle at lake Regillus, the Dioscuri, who had assisted the Romans in the fight, were seen refreshing themselves and their horses, all covered with dust and sweat, at the little fountain of Juturna, near the temple of Vesta. (Dionys. vi. 13; Val. Max. i. 8. § 1; Cic. N. D. ii. 2, &c.) A temple had been vowed to those deities during the Latin War by Postumius the dictator; and the spot where this apparition had been observed was chosen for its site. It was dedicated by the son of Postumius B. C. 484. (Liv. ii. 42.) It was not a temple of the largest size; but its conspicuous situation on the forum made it one of the best known in Rome. From the same circumstance the flight of steps leading up to it served as a kind of suggestum or rostra from which to address the people in the forum; a purpose to which it seems to have been sometimes applied by Caesar. (Dion Cass. xxxviii. 6; cf. Cic. p. Sest. 15; Appian, B. C. iii. 41.) The temple served for assemblies of the senate, and for judicial business. Its importance is thus described by Cicero: "In aede Caesaris, celeberrimo clarissimo monumento, quod templum in oculus quotidiano specta populi Romani est positum; quo saepissime senatus convocatur; quo maximarum rerum frequentissimae quotidianae advocations sunt." (in Verri. i. 49.) Though dedicated to the twin gods, the temple was commonly called only Aedes Castoris, as in the preceding passage: whence Bibilus, the colleague of Caesar in the aedileship, took occasion to compare himself to Pollux, who, though he shared the temple in common with his brother, was never once named. (Suet. Cæs. 10.) It was restored by
Metellus Dalmaticus (Cic. Nep. 46, et ibi Asut.) and afterwards rebuilt by Tiberius, and dedicated by his and Drusus's name, A.D. 6. (Suet. Tib. 20; Dion Cass. iv. 27.) Caligula connected it with his palace by breaking through the back wall, and took a foolish pleasure in exhibiting himself to be adored between the statues of the twin deities. (Suet. Cal. 22; Dion Cass. lix. 28.) It was restored to its former state by Claudius (Id. ix. 6). We learn from Dionysius that the Roman knights, to the number sometimes of 5000, in commemoration of the legend respecting the foundation of the temple, made an annual procession to it from the temple of Mars, outside of the Porta Capena. On this occasion, dressed in their state attire and crowned with olive, they traversed the city and proceeded over the forum to the temple (vi. 13). Its neighbourhood was somewhat contaminated by the offices of certain persons who trafficked in slaves of bad character, who might be found there in shools. (C. Num. moleste feram si mihi non reddiderit nomen aliquis ex his, qui ad Castoris negotiantur, neque mancipia ementes vendentesque, quorum tabernae pessonum servorum turba referentur sunt, Senec. de Sapient. 13; cf. Plaut. Cenc. iv. 1. 20.) The three elegant columns near the forum, under the Palatine, are most probably remains of this temple. We have seen in the preceding account that it stood close to the forum, as well as to the temple of Vesta, a position which precisely agrees with that of the three columns. None of the other various appropriations of this ruin will bear examination. Poggio (de Var. Fort. p. 22) absurdly considered these columns to be remains of Caligula's bridge. By the earlier Italian topographers they were regarded as belonging to the temple of Jupiter Stator; but it has been seen that this must have stood a good deal higher up on the Velia. Nardini thought they were remains of the comitium, and was followed by Nibby (Foro Rom. p. 60) and Burgess (Antiq. of Rome, i. p. 366). We have shown that the comitium was not at this side of the forum. Canina takes them to have belonged to the Curia Julia (Foro Rom. parte i. p. 132), which, however, as will appear in its proper place, could not have stood here. Bunsen (Les Fouis de Rome, p. 58) identifies them with a temple of Minerva, which, as he himself observes (p. 59), is a "dénomination entièrement nouvelle," and indeed, though new, not true. It arises from his confounding the Chalcidicum mentioned in the Monumentum Anycranum with the Atrium Minervae mentioned by the Notitia in the 8th Region. But we have already observed that the curia and Chalcidium, which adjoined it, would be quite misplaced here. The Curiorum, indeed, under the same Region, mentions besides the Atrium Minervae a Templum Castorum et Minervae, but this does not appear in the Notitia. Bunsen was more correct in his previous adoption of the opinion of Fca, that the columns belonged to the temple of Castor. (Bulliettio dell' Inst. 1833; cf. Bunbury in Class. Mus. iv. p. 19.)

The capture of the city by the Gauls, n. c. 390, which, as we have before said, inflicted so much injury that the Romans entertained serious thoughts of migrating to Veii, most of course have occasioned considerable damage in the vicinity of the forum. The Curia Hostilia, however, must have escaped, since Livy represents the senate as debating in it respecting this very matter (v. 55). Such shops and private houses as had been destroyed were probably restored in the fashion in which they had previously existed. It was now that the little temple to Ars Loquens, or Locutius, to which we have before alluded, was erected on the Nova Via, not far from the temple of Vesta (ib. 50). From this period the forum must have remained without any important alterations down to the time of M. Porcius Cato, when basilica first began to be erected. During this interval all that was done was to adorn it with statues and other ornaments, but all building was erected upon it; for the small ex voto temple to Concord, which appears to have been made of bronze, erected on the Vulcam by the noble C. Flavius, n. c. 303 (Id. ix. 46), can hardly come under that denomination. It was probably also during this period that the Gracostias,
have thrown a shadow towards the career in the evening.

Another celebrated monument of the same kind was the Diulian column, also called Columna Rostrata, from its having the beak of ships sculptured upon it. It was erected in honour of C. Duillus, who gained a great naval victory over the Cartaginians, B.C. 260. According to Servius (Georg. iii. v. 29) there were two of these columns, one on or near the rostra, the other in front of the circus. Pliny, indeed (xxxiv. 11), and Quickthorn (Inst. i. 7) speak of it as "in foro;" but forum is a generic name, including the comitium as a part, and therefore, as used by these authors, does not invalidate the more precise designation of Servius. The basis of this column was found at no great distances from the arch of Severus (Caesonia, Columnae Rostratae Inscript. Explicatio, p. 3, ap. Canina, Foro Rom. p. 301, note), a fact which confirms the position which we have assigned to the comitium and curia. The inscription in a fragmentary state is still preserved in the Palazzo de' Conservatori.

The erecting of columns in honour of military achievements came very early into use at Rome, and seems to have preceded the triumphal arch. The first monument of this sort appears to have been the column on the forum called the Columna Maenia, commemorating the victory gained by C. Maenius over the Latins, B.C. 386. (Liv. viii. 13.) Livy, indeed, in the passage cited says that the monument was an equestrian statue; whilst Pliny on the other hand (xxxiv. 11) states that it was a column, which is also mentioned by Cicero. (Sest. 58.) Niebuhr would reconcile both accounts by assuming that the statue was on a column. (Hist. vol. iii. p. 145.) Pliny in another place (vii. 60) says that the column afforded the means of determining the last hour of the day ("A columna Maenia adicarem inclinato sidere supremam pronuntiatum (accessum)"); but it is very difficult to see how a column standing on the forum could have thrown a shadow towards the career in the evening.

On the forum in front of the rostra stood the statue of Marsyas with uplifted hand, the emblem of civic liberty. (Serv. ad L. An. iv. 58; cf. Macrobi., Sat. iii. 12.) Here was the great resort of the caudicarii, and also of the Roman courtiers. Hence Martial (ii. 64. 8): —

"Ipsa potest fieri Marsysa caudicianis."

Horace (Sat. i. 6. 120) has converted the pointed finger of the Satyr into a sign of scorn and derision against an obnoxious individual: —

"—— opeundus Marsysa, qui se Vultum ferre negat Noviorum posse minoris."

It was here that Julia, the daughter of Augustus, held her infamous orgies, in company with the

3 e
viiest of the Roman prostitutes. (Senec, Ben. vi. 82; Plin. xxi. 6.) The account given by Servius of this statue has been the subject of much discussion, into which the limits of this article will not permit us to enter. The whole question has been exploded by Cozenz. (Savigny, Gesch. des Röm. Rechts, i. 52.)

Near the rostra were also the statues of the Three Nymphs (Plin. xxxiv. 11), which are apparently the same as the three Meosia or Maties, mentioned by Pausanias. (B. Goth. i. 25.) These also were at the head of the forum, towards the temple of Janus, a position which points to the same result as the Julia column with respect to the situation of the comitium.

Livy's description of a great fire which broke out about the forum b.c. 211 affords some topographical particulars: "Interruptit hos sermones nocte, quae pridie Quinquatrus futur, pluribus simul locis circa forum incendium ortum. Eodem tempore septem Tabernae, quae postea quinque, et argentaria, quae nume Novae appelabantur, arsere. Comprehensa postea privata aedificiis, neque enim tum basilicae erant: comprehensae Lautumiae, forumque piscatorium, et atrium regium. Adulis Vestae vocat décodex civilis. (Liv. xxv. 27.) As the fire, wilfully occasioned, broke out in several places, and as the Curia Hostilia does not seem to have been endangered, we may perhaps conclude that the Septem Tabernae here mentioned were on the S. side of the forum. The argentaria afterwards called Novae were undoubtedly on the N. side, and, for the reason just given, they perhaps lay to the E. of the curia, as the fire seems to have spread to the eastward. It was on the N. side that the greatest damage was done. The first fire spread first to the Lautumiae and Forum Piscatorium. The Septem Tabernae appear to have been the property of the state, as they were rebuilt by the censors at the public expense, together with the fish-market and Atrium Regium (\"Loca-\" verut indi reficienda quae circa forum incendio consumpta erant, septem tabernas, macellum, atrium regium,\" Id. ixxi. 11). This passage would seem to show that the reading \"quinque \"(tabernae) in that previously cited is corrupt. Marcus has observed that this codex has \"qua postera cum,\" which in others was contracted into \v, and thus taken for a numeral. (Becker, Handb. p. 297, notes.) Hence we may infer that the Veteres Tabernae on the S. side of the forum were seven in number, and from the word postea applied to them, whilst nume is used of the Novae, it might perhaps be inferred that the distinctive appellation of Veteres did not come into use till after this accident.

It also appears from this passage, that there were no basilicae at Rome at this period. It was not least afterwards, however, namely b.c. 184, that the first of these buildings was founded by M. Porcius Cato in his censorship, and called after him Basilica Porcia. In order to procure the requisites ground, Cato purchased the houses of Maenius and Titius in the Lautumiae, and four tabernae. (Liv. xxxix. 44.) Hence we may infer that the Lautumiae lay close at the back of the forum; which also appears from the circumstance that Maenius, when he sold his house, reserved for himself one of its columns, with a balcony on the top, in order that he and his posterity might be able to view it from the gladiatorial shows on the forum. (Ps. Ascon. ad Cir. Div. in Corcid. i. 6; cf. Schol. ad Hor. Sat. i. 3. 21.) This column must not be confounded with the monument called the Columna Maenia, which stood on the forum. The Basilica Porcia must have stood close to the curia, since it was destroyed by the same fire which consumed the latter, when the body of Clodius was burnt in it (Ascon. ad Cic. pro Mil. Arg. p. 84; Orelli); but it was to be rebuilt on the eastern side, as objects already described filled the space between the curia and the Capitoline hill. The Forum Piscatorium stood close behind it, since Plautus describes the unsavory odors from that market as driving away the frequenters of the basilica into the forum:\-

"Tam piscatoriae qui praebent pulposa piscis foeditis Qui advehuntur quadraginti crucianti cantorii Quorum odos subbasilicae omnes abigit in forum.\" (Capt. iv. 2. 53.)

In the time of Cicero, the tribunes of the people held their assemblies in the Basilica Porcia. (\"Vet. Cato Min. 5.\") After its destruction by fire at the funeral of Clodius it does not appear to have been rebuilt; at all events we do not find any further mention of it.

The state of the forum at this period is described in a remarkable passage of Plautus; in which, as he himself observed, he has drawn the different classes and qualities of the characters of the men who frequented them (Capt. iv. 1):\-

"Qui peccurum convenire voluit humo mitto in comitum;\" Qui mensace et gloriosum, apud Clucianae saecurn Ditia damnosos maritos sub basilica quaerere;\" Hicem erunt scortia excoleta, quotque stipulai solent;\" Symbolarum collatores apud Forum piscarium;\" in foro infimo boni homines atque dices ambulant;\" in medio propter canam, ibi ostentatores meri;\" Confidentes garrulique et malevoli supra lacum,\" Quic alteri de nihilu audacter dicunt contemptulum;\" Et qui ipsi sec habent; quod in se possit vere dicier. Sub Veteribus ibi sunt, quic dant quaecumque aequum florem;\" Pone aedem Castoris ibi sunt, subito quisquus cadat male;\" In Tusco Vico ibi sunt homines, qui ipsi se vident;

In Veixbro vel pistorum, vel lanunum, vel aracipicum, Vel qui ipsi vortant, vel qui alias ut vortentur praebent;\" [\"Ditis damnosos maritos apud Leucadian Oppiam\",\"

This is such a picture as Greene might have drawn of Paul's, or Ben Jonson of Moor Fields. The good men walking quietly by themselves in the obscurest part of the forum, whilst the flash gentlemen without a decurio in their purses, are staring conceivably in the middle; the gourmand gathering round the fish-market and clubbing for a dinner; the gentlemen near the Lucas Curtius, a regular set of scandal-mongers, so ready to speak of others, and so wholly unconscious that they live in glass-houses themselves; the perjured witness provoking about the comitium, like the man in West- minster Hall in former days, with a straw in his shoe; the tradesman in the Vicus Tuscus, whose spirit of trading is so inflamed that he would sell his very self; all these sketches from life present a picture of manners in "the good old times" of the Roman Republic, when Cato himself was censor, which shows that human nature is very much the same thing in all ages and countries. In a to-
what confirms what has been already said respecting the forum and its environs; except that the usurers sub Veteribus show that the bankers' shops were not confined to the N. side of the forum. What the canalis was in the middle of the forum is not clear, but it was perhaps a drain. The passage is, in some places, probably corrupt, as appears from the two elision lines respecting the mariti Ditis, the second of which is inexplicable, though they probably contain some allusion to the Sacellum Ditis which we have mentioned as adjoining the temple of Saturn. Mommsen, however (L. c. p. 297), would read "dites damnosos maritis," &c., taking these "dites" to be the rich usurers who resorted to the basilica and lent young men money for the purpose of corrupting city wives. But what has tended to throw doubts upon the whole passage is the mention of the basilica, since, according to the testimony of Cicero (Brut. 15), Plautus died in the very year of Cato's censorship. Yet the basilica is also alluded to in another passage of Plautus before quoted; so that we can hardly imagine that it must have existed in his lifetime. If we could place the basilica in Cato'sasminehip instead of his censorship, every difficulty would vanish; but for such a view we can produce no authority.

Mommsen (Ib, p. 301) has made an ingenious, and not improbable attempt to show, that Plautus, as becomes a good poet, has mentioned all these objects on the forum in the order in which they actually existed; whence he draws a confirmation of the view respecting the situation of the comitium. That part of the forum is mentioned first as being the most excellent. Then follows on the left the Sacrum Chaucinæ, the Basilica Porcia, and Forum Piscatorium, and the Forum Inquinum. Turning by the middle he names the canalis, and proceeds down the forum again on the right, or southern side. In the "malevoli supra lacum," the Lacus Servilius is alluded to at the top of the Vicus Jugariæ. Then we have the Veteres Tabernææ, the temple of Castor, the Vicus Tuscus, and Velabrum. The Basilica Porcia was soon followed by others. The next in the order of time was the Basilica Fulvia, founded in the censorship of M. Aemilius Lepidus, and M. Fulvius Nobilior, B.C. 179. This was also " post Argentariorum Novas" (Liv. xi. 31), and must therefore have been very close to the Basilica Porcia. From the two cusors it was as usually called Basilica Aemilia et Fulvia. (Varro. L. L. vi. § 4, Mill.) All the subsequent embellishments and restorations appear, however, to have proceeded from the Gens Aemilia. M. Aemilius Lepidus, consul with Q. Lutatius in B.C. 78, adorned it with bronze shields bearing the effigies of his ancestors. (Plin. xxxiv. 4.) It appears to have been entirely rebuilt by L. Aemilius Paulus, when sedile, B.C. 55. This seems to have been the restoration alluded to by Cicero (ad Att. iv. 16), from which passage — if the punctuation and text are correct, for it is almost a locus desperatus — it also appears that Paulus was at the same time constructing another new and magnificent basilica. Hence a difficulty arises respecting the situation of the latter, which we are unable to solve, since only one BASILICA PAULI is mentioned by ancient authors; and Plutarch (Curs. 29) says expressly that Paulus expended the large sum of money which he had received from Caesar as a bribe in building on the forum, in place of the Basilica Fulvia, a new one which bore his own name. (Cf. Appian, B. C. ii. 26.) It is certain at least that we must not assume with Becker (Itinera, p. 303) that the latter was but a poor affair in comparison with the new one because it was built with the ancient columns. It is plain that in the words "nihil gratius illo monumento, nihil gloriosius," Cicero is alluding to the restoration of the ancient basilica, since he goes on to mention it as one which used to be exulted by Atticus, which would not have been possible of a new building; and the employment of the ancient columns only added to its beauty. The building thus restored, however, was not destined to stand long. It seems to have been rebuilt less then twenty years afterwards by Paulus Aemilius Lepidus (Dion Cass. xlix. 42); and in about another twenty years this second restoration was destroyed by a fire. It was again rebuilt in the name of the same Paulus, but at the expense of Augustus and other friends (Id. liv. 24), and received further embellishments in the reign of Tiberius, A. D. 22. (Tac. Ann. iii. 72.) It was in this last phase that Pliny saw it when he admired its magnificence and its columns of Phrygian marble (xxxvi. 24).

ROMA.

BASILICA AEMILIA. (From a Coin.)

The third building of this kind was the BASILICA SEMPRONII, erected by T. Sempronius Graeculus in his censorship, B.C. 168. For this purpose he purchased the house of Nicio Africanus, together with some adjoining butchers' shops, behind the Tabernæ Veteres, and near the statue of Vertumnus, which, as we have said, stood near the forum at the end of the Vicus Tuscus. (Liv. xiv. 16.) This, therefore, was the first basilica erected on the S. side of the forum. We hear no further mention of it, and therefore it seems probable that it altogether disappeared, and that its site between the Vicus Tuscus and Vicus Jugarius was subsequently occupied in the imperial times by the Basilica Julia.

The LAUTUMIAE, of which we have had occasion to speak when treating of the Basilica Porcia, was not merely the name of a district near the forum, but also of a prison which appears to have been constructed during the Republican period. The Lautumiae are first mentioned after the Second Punic War, and it seems very probable, as Varro says (L. L. v. § 151, Mill.), that the name was derived from the prison at Syracuse; though we can hardly accept his second suggestion, that the etymology is to be traced at Rome, as well as in the Sicilian city, to the circumstance that stone quarries formerly existed at the spot. The older topographers, down to the time of Bunsen, assumed that Lautumiae was only another appellation for the Carcer Mamertinus, a misconception perhaps occasioned by the abruptness with which Varro (L. c.) passes from his account of the Tullianum to that of the Lautumiae. We read of the latter as a place for the custody of hostages and prisoners of war in Livy (xxxii. 26, xxxvii. 3); a purpose to which neither the size nor the dungeon-like con-
struction of the career would have adapted it. That the Lantunus was of considerable size may also be inferred from the circumstance that when the consular Q. Metellus Celer was imprisoned there by the tribune L. Flavins, Metellus attempted to assemble the senate in it. (Don Cass. xxxvii. 50.) Its distinctness from the Career Mantennius is also shown by Seneca (Contr. 27. p. 303, Bipton).

An important alteration in the arrangement of the forum, to which we have before alluded, was the removal of the Tribunal Praetorius from the comitium to the eastern end of the forum by the tribune L. Scribonius Libo, apparently in n. c. 149. It now stood near the Puteoli, a place so called from its being open at the top like a well, and consecrated in ancient times either from the whetstone of the anur Navius having been buried there, or from its having been struck by lightning. It was repaired and re-dedicated by Libo; whence it was afterwards called Puteal Libonis, and Puteal Scribonianum. After this period, its vicinity to the judgment-seat rendered it a noted object at Rome, and we find it frequently alluded to in the classics. (Hor. Ep. i. 19. 8, Sat. ii. 6. 35; Cic. p. 8. 5. 1.)

PUTEAL LIBONIS OR SCRIBONIANUM.

Note 8, &c.) The tribunal of the praetor urbanus seems, however, to have remained on the comitium. Besides these we also find a Tribunal Aeliaum mentioned on the forum, which seems to have stood near the temple of Castor (Cic. p. Sest. 13, in Plut. 5, p. Cluent. 34), and which, it is conjectured, was erected by the consul M. Aurelius Cotta n. c. 74. These tribunals were probably constructed of wood, and in such a manner that they might be removed on occasion, as for instance, when the whole area of the forum was required for gladiatorial shows or other purposes of the like kind; at least it appears that the tribunals were used for the purpose of making the fire in the curia when the body of Clo- dius was burnt in it. (Ascon. ad Cic. Mil. Arg. p. 34.)

In the year n. c. 121 the Temple of Concord was built by the consul L. Olimius on the Civaus Capitolinus just above the semicolumna (Var. L. L. v. § 156, Miiil.); but, as we have already had occasion to discuss the history of this temple when treating of the Capitol and of the semicolumna, we need not revert to it here. At the same time, or a little afterwards, he also erected the Basilica Opilia, which is mentioned by Varro in close connection with the temple of Concord, and must therefore have stood on its northern side, since on no other would there have been space for it. Of this basilica we hear but very little, and it seems not improbable that its name may have been afterwards changed to that of Basilica Argentaria, perhaps on account of the silversmiths and bankers' shops having been removed thither from the tabernae on the forum. That a Basilica Argentaria, about the origin of which nobody can give any account, existed just at this spot is certain, since it is mentioned by the Notitius, in the 8th Regn, when proceeding from the forum of Trajan, as follows: "Coherent sextum Vigilium, Basilican Argentarium, Templum Concordiae, Umbilicum Romae." The present Salita di Mar- forio, which runs close to this spot, was called in the middle ages "Consuus Arantenarii." It was the plan of buildings in this quarter, terminating, according to the Mevabilla (Monti. Dier. Ital. p. 293), with the temple of Vespasian, which, as we shall see in the sequel, stood next to the temple of Concord, bore the name of "Insula Argentaria" (Becker, Handb. p. 413, seq.).

In the same year the forum was adorned with the triumphal arch called Forinus Fabius or Fabianus, erected by Q. Fabius Allobrogicus in commemora- tion of his triumph over the Allobroges. This was one of the earliest, though not precisely the first, of this species of monuments at Rome, it having been preceded by the three arches erected by L. Stertinius after his Spanish victories, of which two were situated in the Forum Beatirum and one in the Circus Maximus. (Liv. xxxiii. 27.) We may here remark that forinix is the classical name for such arches; and that the term arcus, which, however, is used by Seneca of this very arch (Const. Sup. 1), did not come into general use till a later period. The situation of this arch is indicated by several passages in Roman authors. We have already cited one from Cicero (p. Pian. 7), and in another he says that Memmius, when coming down to the forum (that is, of course, down the Sacra Via), was accustomed to bow his head when passing through it ("Ita sibi ipsum magnum videri Mem- miurn, ut in forum descendens caput ad fornicem Fabii demitteret," de Orat. ii. 66). Its site is still more clearly marked by the Pseudo-Asconius (ad Cic. Verr. i. 7) as being close to the Regia, and by Porphyrio (ad Hor. Epist. i. 19. 8) as near the Puteal Libonis.

The few other works about the forum during the remainder of the Republican period were merely restorations or alterations. Sulla when dictator seems to have made some changes in the forum (Plin. xxxiv. 12), and in n. c. 51, after its destruction in the Civil riots, it was rebuilt by his son Faustinus. (Don Cass. 11. 50.) Caesar, however, caused it to be pulled down in n. c. 45, under pretense of having vowed a temple to Felicitas, but in reality to efface the name of Sulla. (Id. xiv. 5.) The reconstruction of the Basilica Fulvia, or rather the superseding of it by the Basilica Paulina, has been already mentioned. It now only remains to notice two other objects connected with the Republican Forum, the origin of which cannot be assigned to any definite period. These were the Schola Xanthia and the Janus. The former, which lay back considerably behind the temple of Saturn and near the top of the Cisaus Capitolinus, consisted of a row of arched chambers, of which three are still visible. They appear from inscrip- tions to have been the offices of the scribes, copists, and procurers of the nidiies, and seem to have been alluded to by Cicero. (Philipp. ii. 7. p. Sest. 12.) Another row was discovered in 1835. at the side of the temple of
The Forum under the Empire. — The important alterations made by Julius Caesar in the disposition of the forum were the foundation of its subsequent appearance under the Empire. These changes were not more capricious, but adaptations suited to the altered state of political society and to Caesar's own political views. But the dagger of the assassin terminated his life before they could be carried out, and most of them were left to be completed by his successor Augustus. One of the most important of these designs of Caesar's was the building of a new curia or senate-house, which was to bear his name. Such a building would be the badge of the senate's servitude and the symbol of his own despotic power. The former senate-house had been erected by one of the kings; the new one would be the gift of the first of the emperors. We have mentioned the destruction of the old curia by fire in the time of Sulla, and the rebuilding of it by his son, by this time, and by Julius Caesar caused to be pulled down under a pretense, never executed, of erecting on its site a temple of Felicitas. The curia founded by Pompey near his theatre in the Campus Martius — the building in which Caesar was assassinated — seems to have been that commonly used; and Ovid (Met. xvi. 801), in describing that event, calls it simply Curia:—

"— neque enim locus ullus in urbe
Ad facinus dirinique placet, nisi Curia, caelestium."

We may suppose that when Caesar attained to supreme power he was not well pleased to see the meetings of the senate held in a building dedicated by his great rival.

A new curia was voted a little before Caesar's death, but he did not live to find it; and the Monumentum Agrippaeum shows that it was both begun and completed by Octavius.

Respecting the site of the Curia Julia the most discordant opinions have prevailed. Yet if we accept the information of two writers who could not have been mistaken on such a subject, its position is not difficult to find. We learn from Pliny that it was erected on the comitium: "Idem (Augustus) in Curia queque quam in Comitio concecutavit, duas tabulas impressit partiti" (xxxv. 10); and this site is confirmed by Dion Cassius: "το Βουλευτήριον τὸ Ιουλίον, ἧν οὗτος κατα τῷ Κοινῷ αὐνομασίαν ἱκωδομών, ἐπερ ψήφισμα (xlvii. 19). It is impossible to find any other spot for it on the comitium than that where the old curia stood. Besides the author last quoted expressly informs us that in consequence of some prodigies that occurred in the year before Caesar's murder it had been resolved to rebuild the Curia Hostilia (καὶ διὰ τοῦτο τὸ τοιδεύτερον τὸ Όστιλον ἀνοικοδομήθη εὐφράσιο, B. xiv. 17.) At the time when this decree was made Caesar had himself pontifex maximus; it would have been a flagrant breach of religion to neglect a solemn vow of this description; and we cannot therefore accept Becker's assertion that this vow was never accomplished. (Handb. p. 331, note 608.) We cannot doubt that the curia erected by Augustus was in pursuance of this decree, for Caesar did not live even to begin it ("Curium et continens ei Chalcidicum — fecit," Mom. Anec); but though the senate-house was rebuilt, it was no longer named Hostilia, but, after its new founder, Julia. Now what has Becker got to oppose to all this weight of testimony? Simply a passage in Gellius, — which, however, he misapprehends, — in which it is said, on the authority of Varro, that the new curia had to be inaugurated, which would not have been the case had it stood on the ancient spot ("Tum adscriptum (Varro) de locis in quibus senatus consultum fieri jure posse, documine consuetudine, nisi in loco per augures constituui, quod tum adseri rem appellantur, senatusconsultum esse esse, et quod in loco consulter cesset, justum id non fuisse. Propretiae et in Curia Hostilia et in Pompeia, et post in Julia, cum profana ea loca fuisse, sententiae esse per augures constituui," xiv. 7. § 7.) But Becker has here taken only a half view of these augural rites. A temple could not be built without being first inaugurated, so neither could it be pulled down without being first exaugurated. This is evident from the accounts of the exauguration of the fames in order to make room for the temple of the Capitoline Jupiter. ("Ex, ut libera a castoris religiosius area esset tota Jovis templaque ejus, quod inaestuare exaugurare fane sancluque statutum, quae aliquot ibi a Tatio rege, consecuta inaugurataque postea fuerunt," Liv. i. 55, cf. v. 54; Dion. Halic. iii. 69.) When Caesar, therefore, pulled down the curia of Fustus he first had it exaugurated, by which the site again became a locus profanus, and would of course require a fresh inauguration when a new temple was erected upon it. The curia in use in the time of Tertullian (v. 1. 11) must have been the Curia Julia; and the following lines seem to show that it had risen on the site of the ancient one:

"Curia praetexta quae nunc nitet alta Senatus.
Polliosis labiis, rustica cora, Paris."
A further confirmation that the new curia stood on the ancient spot is found in the fact that down to the latest period of the Empire that spot continued to be the site of the senate-house. The first time that mention is made of the Curia Julia it is the design of Caligula ("Curia Concordiae") ut consules non in Curia, quia Julia vocabular, sed in Capitolium convocarent," Not. Cal. 60); and as we know that the curia was rebuilt by Domitian, the Julia must have been burnt down either in the fire of Nero, or more probably in that which occurred under Titus. It is not likely, as Becker supposes (Handb. p. 347), that Vespasian and Titus would have suffered an old and important building like the curia to lie in ashes whilst they were erecting their new amphithtein and baths. The new structure of Domitian, called Senatus in the later Latin ("Sehnummici et pro loco et pro hominibus," Gell. xvii. 7, 5), is mentioned by several authorities (Hieronym. an. 92. i. p. 443, ed. Rom.: Cassiod. Chron. ii. p. 197; Catal. Imp. It. p. 243.) The place of this senator is ascertained from its being close to the little temple of Janus Germanus, the index bellorum (Exx. bei des uen et (f. 110) et t) Plorit freto diem buloetmum, Procop. B. G. i. 25); and hence from its being called "Curia Pompeiana" (Vopix. Aurel. 41, Tacit. 3.) The same situation is confirmed by other writers. Thus Dion Cassius mentions that Didius Julianus, when he first entered the curia as emperor, sacrificed to the Janus which stood before the doors (lxixi. 13). In the same manner we find it mentioned in the Notitia in the viiiith Region. That it occupied the site of the ancient church of S. Martina, subsequently dedicated to and now known as S. Luca, is evident from the same inscription (Gruter, clxxx. 5) which formerly existed in the Ambie, or hemicycle, of S. Martina, showing that this hemicycle, which was afterwards built into the church, originally formed the Secretarium Senatus (Urichs, Rom. Top. p. 37, seq.; Preller, Regionen, p. 142.) The Janus temple seems to have been known in the middle ages under the appellation of templum futale, by which it is mentioned in the Mirabilia Urbis. ("Justa cum templum futale, in quo est mammularum inscriptio," i.e., S. Adrianus, ib.) In the same neighbourhood was a place called in the later ages "Ad Palmam," which also connects the senator with this spot, as being both near to that place and to the Arcus Severi. Thus Ammianus: "Deinde ingressus urbem Theodosiurn, venit ad Senatum, et ad Palamum populo aliquotum." Nec. (Exccept. de Odo. 66.) And in the Acta SS., Mai. vii. p. 12: "Ligaverunt ei manum a tergo et decollaverunt extra Capitolium et exterritum, annas longas et flagellos, et ecclesiam apud Palmam." (Cf. Anastas. 1. Sist. c. 45.) The appellation "ad Palmam" was derived from a statue of Claudius II. clothed in the tunica palmata, which stood here: "IIlIi totius orbis judicium in ostro posita est columna cum palmata statua superixa." (Trebl. Polio. Claud. c. 2.) We cannot doubt, therefore, that the curia or senatus built by Domitian was near the arch of Severus; which is indeed admitted by Becker himself (Handb. p. 350). But, from his having taken a wrong view of the situation of the comitium, he is compelled to maintain that this was altogether a new site for it; and hence his curia undergoes no fewer than three changes of situation, receiving a new almost every time that it was rebuilt, namely, first, on the N. side of his comitium, secondly on the S. side, and thirdly near the Arcus Severi, for which last site the evidence is too overwhelming to be rejected. We trust that our view is more consistent, in which the position of the curia house, as was most probable, appears to have always retained its original position. And this result we take to be no slight confirmation of the correctness of the site which we have assigned to the comitium. In their multitudinous variations, Bunsen and Becker are sore puzzled to find a place for their second curia—the Julia—on their comitium, to which the passages before cited from Fliny and Dion inevitably fix them. Bunsen's strange notions have been sufficiently refuted by Becker (Handb. p. 350), and we need not therefore examine them here. But though Becker has succeeded in overthrowing the hypothesis of his predecessor, he has not been able to establish one of his own in its place. In fact he gives it up. Thus he says (p. 335) that, in the absence of all adequate authority, he will not venture to fix the site of the curia; yet he thinks it probable that it may have stood where the three columns are, or if that will not answer, then it must be placed on the (etc.) Vince. But his complaint of the want of authorities is unfounded. He had correctly interpreted them, and placed the comitium in its right situation, and if he had given due credit to an author like Dion Cassius when he says (l.c.) that it was determined to rebuild the Curia Hostilia, he had not needed to go about seeking for impossible places on which to put his Curia Julia.

There are three other objects near the forum into which, from their close connection with the Basilica Julia, we must inquire at the same time. These are the CHALCIDEUM and the IMPERIAL GRESSICOMAS, and a TEMPLE OF MINERVA. We have already seen that the first of these buildings is recorded in the Monumentorum Anecyrum as erected by Augustus adjoining the curia; and the same edifice is also mentioned by Dion Cassius among the works of Augustus: το τε Αθηναίον και το Χαλκίδεον ψαμμομενίων, και το Βουλευτηρίων, το Τιφλίον, το είπ του πνύροι αυτών τον οιον ομοιόμον, καθ' εσφραγιν (ii. 22). But regarding what manner of thing the Chalcidicum was, and the state of the imperial gressicomas, there is a great diversity of opinion. It is one of those names which have never been sufficiently explained; but it was perhaps a sort of portico, or covered walk (deambulatorium), annexed to the curia. Bunsen, as we have mentioned when treating of the temple of Castor in the preceding section, considers the Ateeneum and Chalcidicum to have been identical; and as the Notitia mentions an Atrium Minervae in the 8th Region, and as a Minerva Chalcidica is recorded among the buildings of Domitian, he assumes that these were the same, and that the unincly ruin of the three columns, which has been so transmuted by the topographers, belonged to it. In all which we can only wonder at the uncritical spirit that could have suggested such an idea; for in the first place the Monumentorum Anecyrum very distinctly separates the aedes Minervae, built by Augustus, from the Chalcidicum, by mentioning it at a distance of five lines apart; secondly, the aedes Minervae is represented to be on the Aventine; where we find one mentioned in the Notitia (cf. Ov. Fast. vi. 728; Festus, c. Quinquatrus, p. 257, Mühl.), and consequently a long way from the curia and its adjoining Chalcidicum; thirdly, they are also mentioned separately by Dion Cassius in the passage...
before cited, whose text is not to be capriciously
misread with by reading, τὸ περὶ Αθηναίων τὸ και
ξανάλογοι διαγωγάς, in order to prop a theory
which cannot support itself. We need not, there-
fore, enter further into this view. That of Becker
(Hundb, p. 335) seems probable enough, that the
Chalcidicum warped the place of the semanum of
the curia, though we should be more inclined to
say that of the Gracecstasis, as the position of the
latter seems at all events to have been shifted about
this period. We learn from Pliny (xxxii. 6) that
in his time it no longer stood " supra Comitium
a place seems the latest period, and is mentioned in the Notitia
(Regia viii.) under the altered name of Gracec-
stadium, close to the Basilica Julia, though the
MS. vary with regard to the position. It had
probably, therefore, been removed before the time of
Pliny to the south side of the forum, and perhaps
at the time when the new curia and Chalcidicum
were built. If this was so, it would tend to prove
that the comitium did not extend across the whole
length of the forum. The Alternative Minervaean of the
Notitia must have been of a later period.
Another change in the disposition of the forum,
with reference to the politics of the times, which
was actually carried out by Caesar in his lifetime,
was the removal of the ancient rostra. The com-
itium, which may be called the aristocratic part of
the forum, had become in a great measure des-
serted. The popular business was now transacted
at the lower end of the forum; and Caesar, who
counted the mob, encouraged this arrangement. The
steps of the temple of Castor had been converted
into a sort of extempe rostra, whence the dem-
gogues harangued the people, and Caesar himself
had sometimes held forth from them. (Dion Cass.
xxxviii. 6; cf. Cic. p. Sect. 15; App. B. C. iii. 41.)
Dion Cassius expressly mentions that the rostra
were changed by Caesar (xiii. 49). The change is
also mentioned by Asconius: "Franc enim timere
rostra non e loco quo nunc sunt, sed ad Comitium
prope juncta Curia" (ad Cic. Mil. 5), where, by
this absolute and unqualified mention of the curia,
he must of course have meant the curia existente in
his time, which was the Julia; and this shows that
it stood on the ancient site of the Hostilia. Another
proof that the rostra were moved in Caesar's lif-
time may be derived from Livy (Epit. xxvii.):
"Caesaris corpus n e plebe ante Rostra crematum est."
For, as Appian (B. C. ii. 148) indicates the
place in another manner, and says that the burning
of the body took place before the Regia, it is plain
that the rostra mentioned in the Epitome just cited
must have been very near the Regia. But we have
seen that the ancient rostra were on the comitium,
at the other end of the forum. There are other
passages from which we may arrive at the exact
situation of the new rostra. Thus Suidous, in
his account of the funeral of Augustus, says that a
panegyric was pronounced upon him by Drusus
from the rostra under the Tabernae Veteres (" pro Rostra
sub Veteribus." Aug. 190; cf. Dion Cass. iv. 34).
It is doubtful whether, however, that the common
reading of this passage is " pro Rostris veteribus,"
that is, from the old rostra on the comitium; and we
shall see further on that the old rostra appear
to have existed after the erection of the new. It is
not, however, probable that they would be used on
this occasion, even if they were ever used at all;
and we see from Dion Cassius's account of the
funeral of Octavia, the sister of Augustus, that
Drusus also on that occasion pronounced a pane-
gyric from the new rostra, as those commonly used,
as we must conclude from Dion's statement
without any distinctive optate (τις τω δικαιως). Canina
(Foro Rom. p. 129) adopted the common
reading, with the omission of sub, because he
imagined that " sub Veteribus" must mean " under
some old building," instead of its being a designation
for the S. side of the forum. And Cicero, when
pronouncing one of his invectives against Antony
from the rostra, bids his audaces look to the left
at the old rostra and temple of Antony, which, as
appears from what Cicero says a little further on,
stood before the temple of Castor. (Phil. vi. 5.)
From a comparison of all these passages we may
state with precision that the new rostra were estab-
lished by Caesar on the SE. side of the forum,
between the temple of Castor and the Regia, a spot
which, as we have said, had previously become the
regular place for the contiones. But, as this spot was
on Becker's comitium,— his lower end of the forum
being the place where the actual temple of Antony,
which we have seen from what Becker says a few
years later, was erected, and he is therefore obliged to
place them a great deal higher up towards the Capitol,
and to the W. of the temple of Castor. As, how-
ever, in questions of this sort, one error always
begets another, he is thus puzzled to account for the
circumstance how Cicero, speaking from these
rostra, could allude to the statue of Antony as being on his left (Hundb, p. 337); and in order to
avoid this contradiction, asserts that Dion Cas-
sius was mistaken, in saying that the rostra were
removed in Caesar's lifetime. It must be the old
rostra, those on the (his) comitium, before which
Caesar's body was burnt, and then everything goes
right. Unfortunately, however, the testimony of
Dion is confirmed by the expressive silence of the
Monumentum Agrippae. That record, in
which Augustus so ostentatiously reccis his build-
ings, his repairs, and his alterations, says not a
word about the rostra. We have seen a little while
ago that Becker contradicts Dion respecting the
Curia Julia, and now he contradicts both that author
and the Monumentum Agrippae, and solely be-
cause he has adopted a wrong site for his comitium.
How shall we characterize a topographical system
which at every turn comes into collision with the best
authorities? On the other hand, if there is
any truth in the system we have adopted, all the
merit we can claim for it is derived from paying
due respect to these authorities, and implicitly fol-
lowing what they say, without presuming to set our
own opinion above their teaching. Before we quit
this subject it may be as well to say that, though
these new rostra of Caesar's became the ordinary sug-
gestum, or platform, for the orators, yet the old ones
do not appear to have been demolished. We have
been before from a passage in Trebillius Pollio, that
the old rostra ad Palma, or near the arch of
Severus, existed in the time of Claudius II.; and the
Notitia and Curiosum expressly mention three
rostra in the forum.
In a loss-relief on the arch of Constantine Canina
has correctly represented a recognition of this part
of the forum, with the buildings on the Campus
Capitolinus. Constantine is seen addressing
the people from a raised platform or suggestum, provided
with a balustrade, which is undoubtedly intended
for the ancient rostra. Canina is further of opinion
in the
that an elevated terrace, presenting the segment of a circle, which was excavated at this part of the forum some years ago, is the actual rostra (Indicazione, p. 270, ed. 1850, and his dissertation "Sui Rostrti del Foro Romano" in the Atti dell' Accademia Rom. di Archologia, vili. p. 107, seq.; cf. Becker, Handbucb, p. 359). It seems also to have been here that Augustus received the homage of Tiberius, when the latter was celebrating his German triumph; "Ajax priest in Capitolium fleeter, descendit e curru, seque praesidenti patri ad genua submissit." (Suet. Tib. 20.) The scene is represented on the large Vienna Cameo. (Eckhel, Pierre graeca, 1; Mongez, Iconogr. Rom. 19. vol. ii. p. 62.) If these inferences are just the ancient rostra would appear to have been used occasionally after the erection of the new ones.

The Statues of Sulla and Pompey, of which the former appears to have been a gift equestrian one, were re-erected near the new rostra, as they had formerly stood by the old ones. After the battle of Pharsalus they were both removed, but Caesar replaced them. Besides these there were two Statues of Caesar, and an equestrian Statue of Octavian. (Dion Cass. xili. 18. xilii. 49. xiv. 4; Suet. Cass. 75: App. B. C. i. 97.)

Caesar also began the large basilica on the S. side of the forum, called after him the Basilica Julia; but, like most of his other works, he left it to be finished by Augustus ("Forum Julianum et Basilicam qua fuit inter sedem Caesaris et aedem Saturni, coepit profugataque opera patre meo perfecit." Mau. Anniv.): Its situation is here so accurately fixed that it cannot possibly be mistaken, namely, between the temple of Saturn, which, as we have seen, stood at the head of the forum, and the temple of Castor, which lay near that of Vesta: and the Notitia indicates the same position; so that it must have been situated between the Vicus Jugarius and Vicus Tuscus. It has been seen before that this was the site of the ancient Basilica Sempronia, a building of which we hear no more during the imperial times; whence it seems probable that it was either pulled down by Caesar in order to erect his new basilica upon the site, or that it had previously gone to ruin.

And this is confirmed by the fact that, in the excavations made in 1780, it was ascertained that the basilica was erected upon another ancient foundation, which Canini erroneously supposes to have been that of the comitium. (Frolenhein, Exposé d'une Découverte faite dans le Forum Romanum. Strasbourg. 1796; Fea, Varia di Notizia e della Basilica Giulia ed alcuni Siti del Foro Romano, ap. Canina, Foro Romano, p. 118.) In some excavations made in 1835 near the column of Phocas, another proof of the sit of the basilica was discovered. It was the following fragment of an inscription, which taken by itself seems too mangled and imperfect to prove anything:

... A ... ASILICA ... ER REPARATAE ... SET ADIECTT

thus leaving no doubt that they were the same. (Bullettin d'Inst. Marz. 1835) Panvinius, whose work was written in 1538, as appears from the dedicatory epistle, says that the inscription was found "in taba ante in foro Romano propo columnam," that is, the column of Phocas. The basis on which it stood must therefore have been again covered with rubbish, till the inscription was re-discovered in its more imperfect form after a lapse of nearly three centuries. Augunias and Fronto were consul A.D. 199, and consequently in the reign of Septimius Severus, when the basilica appears to have been repaired.

Altogether, therefore, the site of the basilica may be considered as better ascertained than those of most of the imperfect monuments. It must have been bounded on the E. and W. by the basilica Sempronia, by the Vicus Tuscus and the Vicus Jugarius. It appears from the Monumenlum Augmen. that the original building, begun by Caesar, and completed by Augustus, was burnt down during the reign of the latter, and again rebuilt by him on a larger scale, with the design that it should be dedicated in the names of his grandsons Caius and Lucius ("Et eadem basilicam consumptam incendio amplato ejus solo sub titulo nominis filiwm[meorum] incheavi: et, si vivus non perfectissim, perfecti ab heredibus [nemiss]."") But, from a supplement of the same inscription recently discovered, it appears that Augustus lived to complete the work ("Opera fecta nova—forum Augustum, Basilicam Julianum," etc.; Franz, in Gerhard's Archioh. Zeit. No. ii. 1843). Nevertheless it seems to have been recently born the names of his grandsons: "Quadam etiam opera sub nomine aleno, neputum sedecet et uxoris sororique fecit: ut porticum basilicamarum Lucii et Caui, &c." (Suet. Aug. 29). The addition which Augustus mentions having made to the building ("amplato ejus solo") may probably have been the portico here mentioned. In A.D. 282 it was again destroyed by fire, and was rebuilt by Diocletian (Catal. Imp. Vien. p. 247, Rec.).

The Basilica Julia was chiefly used for the sittings of law-courts, and especially for the causeae centumvirae (Plin. Epist. v. 21. ii. 14.) Its immense size may be inferred from another passage in Pliny (vi. 33), from which we learn that 180 judges, divided into 4 concilia, or courts, with 4 separate tribunals, and numerous benches of advocates, besides a large concourse of spectators, both men and women, were accustomed to assemble here. The 4 tribunals are also mentioned by Quintilian (In. Or. xii. 5, 6).
The funeral of Caesar was also that of the Republic. After his death and apotheosis, first an Altar and then an Aedes Divi Iuli were erected to him, on the spot where his body had been burnt (H struggles in the Forum, where the temple by Augustus. But this has been the subject of a warm controversy. Bunsen placed the temple on the Velian ridge, so that its front adjoined the Sacred Way, where it crosses the eastern boundary of the Forum, whilst Becker (Hist. p. 336) placed it on the forum itself, so that its back adjoined the same road. The authorities are certainly in favour of the latter view; and there are difficulties raised by Urichs (Econ. Turr. p. 21, etc.) who came to the rescue of Bunsen's theory, arise from the mistake shared alike by all the disputants, that this end of the forum was the comitium. Urichs might have seen that this was not so from a passage in a very early work (p. 22) from the Fasti Amborumini, XV. Kal. Sept. showing that the temple stood on the Forum ("Divi Julii the Forum") is, however, not to be taken as being on the forum, instead of on the comitium as Urichs himself suggests. Becker, however, wishes to attribute this error to an unfortunate appeal to the fasti consulares. This, however, does not detract from the point raised by the example of the Temple of Vesta, which Becker confounds with it (p. 344) appears to have been a different thing, as the Notitia mentions both of them separately under Regio VIII. The piece of column excavated near the arch of Severus must have belonged to this temple, or to some other monument, not to the millarium, which appears from the Notitia and Curatorium to have retained till a later period its original position near the temple of Jupiter at the head of the forum. We also read of a Forum Augustor triumphal arch erected on the forum in honour of Augustus, but its position is nowhere accurately defined; though from some Scholia on Virgil (Aen. viii. 606) edited by Mai, it is supposed to have been near the temple of Julius (Can. Foro Rom. p. 139 note.)
The Arch of Titus, another triumphal arch, dedicated to Tiberius, was erected at the foot of the Clivus Capitolinus near the temple of Saturn, in commemoration of the recovery of the Roman standards lost with the army of Varus. (Tac. Ann. ii. 41.) Tiberius also restored the temple of Castor in the name of himself and of his brother Drusus, as well as the temple of Concord, as we have before had occasion to remark.

Under the following emperors down to the time of Domitian we do not read of any alterations on the forum. The fire of Nero seems to have chiefly destroyed its lower part, where the temple of Vesta and the Regia lay; the upper portion and the Capitol appear to have escaped. The Curia Julia was probably burnt down in the fire which occurred in the reign of Titus; at all events it was certainly rebuilt by Domitian. The celebrated statue of Victory, consecrated in the curia by Augustus, appears, however, to have escaped, since Dion Cassius expressly says that it existed in his time, and we find it mentioned even later. (Suet. Aug. 100; Dion Cass. li. 22; Herodian, v. 5.) It was this statue, or more correctly perhaps the altar which stood before it, that occasioned so warm a contention between the Christian and heathen parties in the senate in the time of Theodosius and Valentinian II., the former being led by Ambrose, the latter by Symmachus, the prefect of the urbs. (Symmach. Epist. x. 61; cf. Ambros. Epist. ad calamem Symm. ed. Par. i. p. 740, ii. pp. 473, 482; Gibbon, Decline and Fall, vol. iii. p. 409, seq., ed. Smith.) Ambrose is said to have obtained its removal; though this, perhaps, relates only to the altar, since the statue is mentioned by Claudian as still existing in the time of Honorius. (De VI. Cons. Hon. v. 597;)

"Adfuit ipsa saebris ales Victoria templis Romanae tutela tegae: quae divite penna Patricii reverendafove saecuria coeptis."

Domitian had a peculiar predilection for two deities, Janus and Minerva. He erected so many archways all over the city that an ancient pasquinade, in the form of a Greek pun, was found inscribed upon one of them: "Janus arcusque cum quadrigos et insignibus triumphorum per Regiones urbis tantos ac tot extruxit ut culdum Graecae inscriptions ad itpòn." (Suet. Dom. 13; cf. Dion Cass. viii. 1.) Among other temples of Minerva he is said by some authorities to have erected one on the forum between those of Vesta and Castor. (Becker, Handb. p. 336.) But there seems to have been hardly room for one at this spot; and, as we have before remarked, the Notitia does not mention it. Domitian also built, in honour of his father and brother, the Temple of Vespasian and Titus, next to the temple of Concord. The three columns on the Clivus Capitolinus most probably belong to it. The opinion that the eight Ionic columns are remains of this temple has been already discussed.

Such was the state of the forum when the colossal equestrian statue of Domitian was erected on it near the Lacinium Curtius. Status (Silvæ i. 1) has written a small poem on this statue, and his description of it affords many interesting topographical particulars, which fully confirm what has been already said respecting the arrangement of the forum:

"Quae superimposito moles geminata coloasc
Stat Latiun complexa fœrum? sedone peractum..."

ROMA.

Fluxit opus? Sicelius an conformata caminis
Edigies, lassum Steropem Brontenque reliquit?
Par operi sedes. Hinc obvia limina pandit,
Qui tessus bellis, adsacetum munere prolis,
Primus hic castis ostendit in aethera divis.

At laterum passos hinc Julia testa tenetur
Hinc bellifère sublimis regis Pauli.

Terpa pater blandegio visid Concordia vultu.
Ipse autem puro celsum caput aeque septas
Templa superfugies, et prospectare videres
An nova contemptus surgent palatia flammis
Pulcrus; an tacita vigilet face Troïcis ignis
Atque exploratas jam landet Vesta ministras," &c.

The statue, therefore, must have faced the east, with the head slightly inclined to the right, so as to behold the temple of Vesta and the Palatine. Directly in front of it rose the temple of Divus Julius; on the right was the Basilica Julia, on the left the Basilica Aemilia; whilst behind, in close juxtaposition, were the temples of Concord and of Vespasian and Titus. The site of the statue near the Lacus Curtius is indicated in the poem (v. 75, seq.).

The next important monument erected on the forum after the time of Domitian appears to have been the Temple of Antoninus and Faustina, considerable remains of which still exist before and in the walls of the modern church of S. Lorenzo in Miranda. It stood at the eastern extremity of the N. side of the forum. These remains, which are now sunk deep in the earth, consist of the preannum or vestibule, composed of eight columns of cipollino marble supporting an architrave, also part of the cella, built of square blocks of piperino. The architrave is ornamented with arabesque candelabra and griffins. On the front the inscription is still legible:—

DIVO. ANTONINO. ET
DIVAE. FAUSTINAE. EX. S. C.

TEMPLE OF ANTONINUS AND FAUSTINA.

But as a temple was decreed both to Antoninus Pius and his wife, the elder Faustina (Capitol. Anton. P. c. 6, 13), and to the younger Faustina, their daughter (ib. c. 26), and as divine honours were also rendered after his death to M. Aurelius Antoninus, the husband of the latter, it becomes doubtful to which pair the temple is to be referred (Xiby, Foro Rom. p. 183). It seems, however, most probable that it was dedicated to Antoninus Pius and the elder Faustina. It is stated by Pirro Ligorio (ap. Canina, Foro Rom. p. 192) that in the excavations made here in 1547, the basis of a
statue was discovered with an inscription purporting that it was erected by the guild of bakers to Antoninus Pius. In the time of Palladio the temple was a great deal more perfect than it is at present, and had an atrium in front, in the middle of which stood the bronze equestrian statue of M. Aurelius, which now adorns the Capitol. (Architectura, lib. iv. c. 9.)

The inscription in Gruter (viii. 6) probably belonged to the pedestal of this statue. It was found in the Sacra Via in 1562. Some difficulty, however, arises with regard to this account, since from various other sources we learn that the statue stood for a long while before the church of St. John Lateran. From Palladio’s account of the court, or court, it would appear that the building lay some distance back from the Sacra Via.

In the reign of Commodus a destructive fire, which lasted several days, occasioned much damage in the neighbourhood of the forum, and destroyed among other things the temple of Vesta. (Herodian, i. 14.) According to Dion Cassius the same fire extended to the Palatine and consumed almost all the records of the empire (lxxxi. 24). It was on the same occasion that the shop of Galen, which stood on the Sacra Via, was burnt down, and also the Palatine Library, as he himself assures us. (De Compos. Medicum, i. c. 1.)

This damage seems to have been repaired by Septimius Severus, the munificent restorer of the Roman buildings, who with a rare generosity commonly refrained from inscribing his own name upon them, and left their honours to the rightful founders ("Romae omnes aedibus publicis, quae vito temporum labebantur, instauravit: maquis propo suo nomine inscriptis, servavit tamen ubique titulis cohortantium," Spart. Serc. c. ult.). Of the original monuments erected by that emperor the principal one was the Augustus Severi or triumphal arch, which still exists in good preservation at the top of the Roman forum. The inscription informs us that it was dedicated to Severus, as well as to his two sons, Caracalla and Geta, in his third consulate and the 11th year of his reign, consequently in A. D. 203. Between the temple of Concord and the arch, the church of SS. Sergio e Bacco was built in the middle ages, with its tower resting upon the arch. It appears from a medal of Caracalla that a chariot with six horses and persons within it stood on the summit of the arch, and other persons on horseback at the sides, supposed to be the emperor’s sons. It was erected partly in front of the temple of Concord, so as in some degree to conceal the view of that building, and thus to dis-

ARCH OF SEPTIMIUS SEVERUS.
121, Blanch; "in ecclesia vero beatorum Cosmae et Damiani in tribus Fatis," &c. Id. V. Hadr. ib. p. 234.) Hence perhaps the name of templum fidei applied to the temple of Jesus.

The last object which we shall have to describe on the forum is the COLUMN OF PHOECAS. Whilst the glorious monuments of Julius and Augustus, the founders of the empire, have vanished, this pillar, erected in the year 608 by Smaragdus, exarch of Ravenna, to one of the nearest and most hateful of their successors, still rears its head to testify the low abys by which Rome had fallen. It appears from the inscription, which will be found in Camina (Foro Rom. p. 213) and Bunsen (Beschr. vol. iii. p. 271), that a gift statute of Phoecas stood upon the summit. The name of Phoecas has been erased from this column, probably by Heraclius; but the date sufficiently shows that it must have been dedicated to him. Previously to the discovery of this inscription, which happened in 1813, it was thought that the column belonged to some building; and indeed it was probably taken from one, as the workmanship is much superior to what could have been executed in the time of Phoecas. Byron alludes to it as the "pavement column with a buried base." In the excavations made in 1816, at the expense of the duchess of Devonshire, the pedestal was discovered to be placed on a raised basis with steps of very inferior workmanship. (Murray's Handbook of Rome, p. 62.) It may be remarked that this column proves the forum to have been in its ancient state, and unencumbered with rubbish, at the commencement of the 7th century. Between this pillar and the steps of the Basilica Julia are three large bases intended for statues.

V. THE IMPERIAL FORA.

Forum Julium.—As Rome increased in size, its small forum was no longer capable of accommodating the multitudes that resorted to it on mercantile or legal business; and we have seen that attempts were early made to afford increased accommodation by erecting various basilicas around it. Under the Empire, when Rome had attained to enormous greatness, other fora were erected besides, and several of these fora were constructed by various emperors; as the Forum Caesars or Julium, the Forum Augusti, the Forum Nervae or Transitorium, and lastly the Forum Traiani. The political business, however, was still confined to the ancient forum, and the principal use of the new fora was as courts of justice. Probably another design of them was that they should be splendid monuments of their founders. In most cases they did not so much assume the aspect of a forum as that of a temple within an enclosed space. In this view of the Forum of Trajan the only one that possessed a basilica. From this characteristic of them, even the magnificent temple of Peace, erected by Vespasian without any design of its being appropriated to the purposes of a forum, obtained in after times the names of Forum Vespasiani and Forum Pacis. The first foundation of this kind was that of Caesar, enclosing a Temple of Venus Genitrix, which he had vowed before the breaking out of the Civil War. After the battle of Pharsalus the whole plan of it was arranged. It was dedicated after his triumph in B.C. 45, before it was finished, and indeed so hastily that it was necessary to substitute a plaster model for the statue of Venus, which afterwards occupied the cella of the temple. (Plin. xxxv. 45.) Caesar did not live to see it completed, and it was finished by Augustus, as we learn from the Monumentum Augustum. We are told by Appian (B. C. ii. 192) that the temple was surrounded with an open space, or "aedilicum," and that it was not destined for traffic but for the transaction of legal business. As it stood in the very heart of the city Caesar was compelled to lay out immense sums in purchasing the area for it, which above is said to have cost him "super h. s. millies," or about 900,000,000 sterling. (Suet. Caes. 26; Plin. xxxvi. 24.) Yet it was smaller than the ancient forum, which now, in contradistinction to that of Caesar, obtained the name of Forum Magnum. (Dion Cass. lxxxii. 22.)

No vestige of the Forum Julium has survived to modern times, and very various opinions have been entertained with regard to its exact site; although most topographers have agreed in placing it behind the N. side of the Forum Romanum, but on sites varying along its whole extent. Nardini was the first who pointed to its correct situation behind the church of Sta. Martina, but it was reserved for Camina to advance the proof.

We must here refer to a letter of Cicero's (Ad Att. iv. 16), which we had occasion to quote when speaking of the restoration of the Basilica Aemilia under the forum of the Republic. It has an important passage with regard to the situation of the Forum Julium, but unfortunately so obscurely worded as to have proved quite a crux to the interpreters. It appears to have been written in B. C. 54, and runs as follows: "Paulinus in medio caeret basilicae Juno naea tenuit liedem antiquis columnis; iliam autem quantum locutus factur magis frequentaret: Quid quiser? nihil gratiae ilium monumentum. Stillicidios. Itaque Caesarii amici (me dioco et Oppium, dicurapura licet) in monumentum illud, quod tu tollere ludibus soberas, ut forum laxeramus et usque ad atriurn Libertatis expliceramus, contemporanei sexcenties h. s. Cum privatis non poterat transigere minor peccna. Efficientius rem gloriosissimam: nam in Campo Martio septa tributis comitibus marmoreae sunt: et tecta facturae ex eis haud minus erit magnitudo," &c. If only these words Becker has given two different interpretations. He first imagined (Handb. p. 362, seq.) that Cicero was speaking only of two buildings: the Basilica Aemilia, which Paulinus was restoring, and a new basilica, which the same person was building with Caesar's money, and which was afterwards named the Basilica Julia. But before he had finished his work he altered his mind, and at p. 460 pronounces his opinion that Cicero was speaking of no fewer than four different edifices: 1st, the Basilica Paulina ("Paulinus—Columnum"); 2nd, the Basilica Julia ("Hilariani—gloriosius"); 3rd, the Forum Julium ("Itaque—peccna"); 4th, the Septa Julia ("Efficientius," &c.). With all these views, except the second, we are inclined to agree; but we do not think it probable that Paulinus would be constructing two basilicas at the same time; nor do we perceive how a new one only then in progress could have been a monument that Atticus had been accustomed to praise. The chief beauty of the basilica of Paulinus was derived from its columns ("Nonae inter magnificam dicam basilicam Pauli columnas Phrygianam michabem," Plin. xxxvi. 24. s. 1); and though it had undergone two or three subsequent restorations before the time of Pliny, we are nevertheless inclined to think that the columns praised by him were the very same.
which Atticus had so often admired. However this may be, we see through the obscurity of Cicero’s letter, the rough sketch of a magnificent design of Caesar’s, which had not yet been perfectly matured. The whole space from the back of the Basilica Aemilia as far as the Septa Julia in the Campus Martius was to be thrown open; and perhaps even the excavation of the extremity of the Quirinal, ultimately executed by Trajan, may have been comprised in the plan. Cicero is evidently half ashamed of this vast outlay in favour of Caesar, and seeks to excuse it with Atticus by leading him to infer that it will place his favourite monument in a better point of view. When Cicero wrote the plan was evidently in a crude and incipient state. The first pretence put forth was probably a mere extension of the Forum Romanum; but when Caesar a few years later attained supreme power the new foundation became the Forum Julium. In his position some caution was requisite in these affairs. Thus the curia of Fanlus was pulled down under pretence of erecting on its site a temple of Felicitas—a compliment to the boasted good fortune of the city; but in his haste Cicero forgot its fate. But indeed of it rose the Curia Julia. The discrepancy in the names mentioned by Cicero and Suetonius probably arose from the circumstance that as the work proceeded it was found necessary to buy more houses. If this buying up of private houses was not for the Forum Julium, for what purpose could it possibly have been? The Curia Julia stood on the site of the Curia Hostilia, the Basilica Julia on that of the Scangona, and we know of no other buildings designed by Caesar about the forum. With regard to the situation of the ATRIUM LIBERTATIS, to which Cicero says the forum was to be extended, we are inclined to look for it, with Becker, on that projection of the Quirinal which was subsequently cut away in order to make room for the forum of Trajan. The words of Livy, “Censores extemplo in atrium Libertatis excemerunt” (xiii. 16), seem to point to a height. A fragment of the Capitoline plan, bearing the inscription LIBERTATIS, seems to be rightly referred by Canina to the Basilica Ulpia. (Foro Rom. p. 185; cf. Becker, Antevert. op. p. 29.) Now, if our conjecture respecting the site of the Atrium Libertatis is correct, it would have been occupied by the forum of Trajan and its appurtenances; and it therefore appears probable that the Atrium was comprehended in the Basilica Ulpia. Nor is this a mere unfounded guess, since it appears from some lines of Sidonius Apollinaris (Epig. 2), that in his time the Basilica Ulpia was the place where slaves received their manumission. And that the old Atrium Libertatis was devoted to manumission and other business respecting slaves appears from several passages of ancient authors. Thus Livy: “Postremo co descensum est, ut ea quattuor urbium tribunis nemum polam in Atrio Libertatis secturturn, in quam omnes, qui servitutem servivisse, confugere” (xvi. 15). And Cicero: “Sed quaeestiones urgent Makomen, quae sunt habita munice in Atrio Libertatis: Quibusnam su servit?&” (Xsc. (Mil. 22). Lastly, it may be mentioned that the following fragment of an inscription was found near the church of S. Martino, and therefore near this spot:

SERNATVS. POPVLVSQVE ROMANVS.

LIBERTAT.

(Conina, Foro Rom. p. 391.)

The preceding letter of Cicero’s points to the Forum Julium as closely adjoining the Basilica Aemilia, and there are other circumstances that may be adduced in proof of the same site. Ovid (Fast. i. 258) alludes to the temple of Janus. Both between two fora, and these must have been the Forum Romanum and the Forum Caesarian. Pliny’s story (xvi. 86) of the lotus-tree on the Vulcanal, the roots of which penetrated to the forum of Caesar, whatever may be its absolute truth, must at all events have possessed sufficient probability to be not actually incredible; and there is no situation for Caesar’s forum which tallies with that story better than that here assigned to it with relation to the site of the temple of Janus. Furthermore, as established on the pages of our Vulcans need not have been distant more than about 30 yards from the Forum Julium; that of Becker lies at about five times that distance from it, and would render Pliny’s account utterly improbable.

Palladio mentions that in his time considerable remains of a temple were discovered behind the place where the structure of Murficio then stood, near the church of S. Martino, which, from the cornice being adorned with sculpture of dolphins and tridents, he took to be one dedicated to Neptune. But we have no accounts of a temple of Neptune in this neighbourhood, and these emblems would also suit the sea-born goddess, it seems probable that the remains belonged to the temple of Venus Genitrix. This is still more strikingly confirmed by Palladio’s account of its style of architecture, which was preëxist, as we know that of Venus to have been. (Archit. lib. iv. 31; comp. Vitruv. iii. 23.)

We can hardly doubt, therefore, that the forum of Caesar lay on this spot, as is indicated by so many various circumstances. The only objection that has been urged against it is the following passage of Servius, which places the ARGILETUM, a district which undoubtedly adjoined the Forum Julium, in quite a different part of the town: “Sunt quinque bellæ portæ—Sacrarium hoc Numa Pompilius fecerat circa innum Argiletam iuxta theatrum Marcelli, quod fuit in duobus brevisissimis templis. Duobus autem popum Janum bifrontem. Postea capitis Falisciæ templo, inventum est simulacrum Umbrae, quod Numa institutum est ad forum Transitorium et quattuor portarum innum templum est institutum” (ad Virg. Aen. vii. 607). That the Argiletum adjoined the forum of Caesar is evident from the following epigram of Martial’s (i. 117. 8):—

“Quod quaeris propius petas libetic
Arxi nempe soleas subire letum;
Contra Caesarian est forum taberna
Scipii posuit, lucé et inde totis
Omnes ut ina perleges poetas.
Hinc me pete, no roges Atreutum,
Hinc domum manus geris tabere.”

Hence, if Servius is right, the forum of Caesar could not have been where we have placed it, but on the S. side of the Capitoline hill; and this opinion has found some defenders (Mommsen, Annali dell’ Instit. vol. xvi. p. 311, seq.). We trust, however, that the situation of the small temple of Janus, the index bellæ portae, has been clearly established by what we have said in the former part of this article. Servius is evidently confounding this little temple with the larger one near the theatre of Marcellus; and indeed the whole passage is a heap of trash. For how can we connect such remote events as the
taking of Falisc, or rather Falerii, and the erection of a Janus Quadrifrons on the Forum Transitorium, which did not exist till many centuries afterwards? Livy also indicates the Janus-temple of Numas as being in the Arretium ("Janum ad Infinum Ar- retium indicem pauci bellaque secti," i. 19); whence we must conclude that it was a district lying on the N. side of the forum. We do not think, however, with Becker (Handb. p. 361), that any proof can be drawn from the words of Virgil (Aen. viii. 345, seq.), where, with a poetical license, the various places are evidently mentioned without regard to their order. But how far the district called Arretium may have been encroached upon by the imperial fora it is impossible to say.

The forum of Caesar must have been very splendid. Before the temple of Venus stood a statue of the celebrated horse which would suffer nobody but Caesar to mount it, and whose foot-feet are said to have resembled those of a human being (Suet. Caes. 61; Plin. viii. 64). The temple was adorned with pictures by the best Greek artists, and enriched with many precious offerings (Plin. vii. 38, ix. 57, xxxvii. 5, &c.). It was one of the three fora devoted to legal business, the other two being the Forum Romanum and Augusti:—

"Caesus, inquis, agam Ciceron disertus ipso Atque erit in triplici par uniti nemo horis." (Mart. iii. 38. 2.)

Whether it was ever used for assemblies of the senate seems doubtful; at all events the passage cited by Becker (Handb. p. 360) from Tacitus (Ann. xvi. 27) proves nothing, as the word curia there seems to point to the Curia Julia. Of the subsequent history of the Forum Caesaris but little is known. It appears to have escaped the fire of Nero; but it is mentioned among the buildings restored by Diocletian after the fire under Carinus ("Opera publica arae- runt Senators, Forum, Caesaris patrimonium, Basilicam Julianam et Gratianum, "Catal. Imp. Viciu, where, according to Piller, Reg. p. 143, we must read "Forum Caesaris, Atrium Minervae." It is mentioned in the Orcho Romanæ, in the year 1143, but may then have been a ruin.

Forum Augusti.—This forum was constructed for the express purpose of affording more accommodation for judicial business, which had now increased to such an extent that the Forum Romanum and Forum Juliaan did not suffice for it. It included in its area a "Temple of Marcus U1tor, vowed by Augustus in the civil war in which he had undertaken to avenge his father's death:

This temple was appointed to be the place where the senate should consult about wars and triumphs, where provinces cum imperio should be conferred, and where victorious generals should deposit the insignia of their triumphs (Suet. Aug. 29). The forum was constructed on a smaller scale than Augustus had intended, because he could not obtain the consent of some neighbouring householders to part with their property (ib. 56). It was opened for business before the temple was finished, which was dedicated n. c. 1 (ib. 29; Vell Pat. ii. 100). The forum extended on each side of the temple in a semicircular

shape (Palladio, Archit. iv.), with porticos, in which Augustus erected the statues of the most eminent Roman generals. On each side of the temple were subsequently erected triumphal arches in honour of Germanicus and Drusus, with their statues (Tac. Ann. ii. 64). The temple is said to have been splendid (Plin. xxxvi. 54), and was adorned, as well as the forum, with many works of art (ib. vii. 53, xxxiv. 18, xxxv. 10; Ov. Fast. v. 555, &c.). The Sali were accustomed to banquet here; and an anecdote is recorded of the emperor Claudius, that once when he was sitting in judgment in this forum, he was so attracted by the savoury odour of the dinner preparing for these priests, that he quitted the tribunal and joined their party. (Suet. Claud. 33.) This anecdote has partly served to identify the site of the temple, an inscription having been discovered on one of the remaining walls in which the Sali and their Manuiones are mentioned (Canina, Foro Rom. p. 150).

The remains of three of the columns, with their entablature, of the temple of Mars Ultor are still to be seen near the place called the Arco de' Pantani. It must therefore have adjoined the back of the Forum Caesaris. These three columns, which are tall and handsome, are of the Corinthian order. All we know respecting the history of the Forum Augusti is that it was restored by Hadrian (Spart. Hadr. 19). The church of S. Basilio was probably built on the site of the temple (Ordo Rom. 1143; Mobil. Mus. Ital. ii. p. 143).
In the middle ages this Janus-temple appears to have borne the name of Noah's Ark.

In the time of Pope Paul V. considerable remains existed of the prœmos, or vestibule of this temple of Minerva, consisting of several columns with their entablature, with the following inscription: IMP. NERVA. CAEASAR. AVG. PONT. MAX. TRIB. POT. II. IMP. II. TRICIUS. (Catina, Foro Rom. p. 171.) Paul took these columns to adorn his fountain, the Acqua Paola, on the Janiculum. In the Via Sistina the portico still remains of the wall of peperino which formed the enclosure of the forum, together with two large Corinthian columns half buried in the earth, now called the Columnaceae. Their entablature is covered with mutilated reliefs, and over them is an Attic, with a figure of Minerva, also in relief. The situation of the forum of Nerva, and the remains of it existing in his time, are described by Palladio (Architettura, lib. iv.), also by Da Pérac (tom. vi.), who observes, that it was then the most complete ruin of a forum in Rome. The Columnaceae are represented by Gannucci, Antichità di Roma, p. 55; Desgodetz, p. 159, seq.; Overbeke, p. 39. There is a good description of the fora of Augustus and Nerva by Niebuhr in the Beschreibung Roms, vol. iii. p. 275.

Forum Trajanii. Thus between the Capitoline and Palatine hills, the Velian ridge and the ascent of the Quirinal, the valley was almost filled with a splendid series of public places, which we might imagine could hardly be surpassed. Yet it was reserved for the other forum, still more magnificent than any of the preceding ones, for the construction of which the Quirinal itself was forced to yield up part of its mass. Previously to the time of Trajan that hill was connected with the Capitoline by a sort of isthmus, or slender neck; the narrow and uneven defile between them was covered with private houses, and traversed only by a single road of communication between the forum and Campus Martius. But on the western side of this defile lay one of the handsomest quarters of Rome, containing the Septa Julia, the Flaminian circus, the theatres of Balbus, Pompey, and Marcellus, together with those temples and porticoes which so much excited the admiration of Strabo, and which he has described in a passage quoted in the former part of this article. The design of the forum of Trajan was, therefore, to connect this quarter of the town with the imperial fora in a manner not unworthy of the magnificent structures on either side of it. This gigantic work, a portion of which still remains, though the greater part has disappeared under the united influences of time and barbarism, is supposed to have been projected, and even begun, by Domitian. (Aur. Viet. Cas. 13; Hieron. i. p. 443, Rome; Cassiod. Chron. h. p. 197.) It was, however, executed by Trajan, with the assistance of the celebrated architect Apollodorus of Damascus. (Dion Cass. lxx. 4.) But no ancient author has left us a satisfactory description of it, and we are obliged to make out the plan, as best we may, from what we can trace of the remains; a task somewhat aided by the excavations made by the French when they had possession of Rome at the commencement of the present century. (See Tournon, Etudes Statist. Rome, tom. ii. p. 253, pl. 28, 29; Foa, Notizie degli scavi dell'Architettura Flavio e nel Foro Traiano, Rom. 1813; Bunsen, Les Forum de Rome, 2nd part., p. 24, seq.) This immense work consisted of the following parts:

1. The forum, properly so called, a large open area immediately adjoining the NW. sides of the fora of Caesar and Augustus, and filling the whole space between the Capitoline and Quirinal, much of the latter hill, indeed, and some of the former, having been cut away in order to make room for it. This part, which was called the area or atrium fori (Tibull. xii. 24; Amm. Marc. xvi. 10), contained, in the middle, an equestrian statue of Trajan, and was adorned with many other statues. The SW. and NE. sides of this square, where the ground has been cut away from the hills, was occupied with semi-circular buildings. There are still large remains of that under the Quirinal, which are vulgarly called the baths of Paulus Aemilius. The lower part of this edifice, which has only been laid open within the last few years, consists of quadrangular niches, which probably served as little shops; above them was a vaulted portico, with rooms and staircases leading to the upper floors. Piranesi and other topographers conjectured that there was another similar building on the side of the Capitol, at the place called the Chiare d'Oro; but Cassius was the first to demonstrate its existence in his Indicazione Topografica. Along the front of each of the crests thus formed there seems to have been a portico, which gave the forum its proper rectangular form. The forum was thus divided into three parts, through both the exterior ones of which there was a road for carriages, as appears from traces of pavement; whilst the square, or middle division was paved with flag-stones. In the middle of the NE. side seems to have been a triumphal arch, vestiges of which were discovered in the time of Flaminto Vacea (Memorie, no. 40), forming the principal entrance on the side of the imperial fora.

Forum Trajani. 2. Next to the forum on the NW. side is the Basilica Ulpia, which extended across it lengthways, and thus served to form one of its sides. The basilica was called Ulpia from Trajan's family name. The plan of the middle part is now laid entirely open. It seems to have been divided internally by four rows of columns, thus forming five aisles, with circular absides or chalcidica at each end. During the ex-
On the NW. side of the basilica stood, and still stands, the Column of Trajan, the finest monument of the kind in the world. This column was intended to answer two purposes: to serve as a sepulchre for Trajan, and to indicate by its height the depth of soil excavated in order to make room for the forum and its buildings. The latter object is expressed by the inscription, which runs as follows:

SENATVS POPVLVSQVE ROMANVS
IMP. CAESARI DIVI NERVAE F. NERVAE
TRAIANO AVG. GERM. DACICO PONTIF.
MANNRO. TRIB. POT. XVII. IMP. V. COS. VII. P. P.
AD DECLARANDVM QVANTAE ALTITUDES
MONS ET LOCVS TANTO [IS OPERI] BVS SIT

(Cf. Aur. Vict. Epit. 13; Dion Cass. lxxxii. 16.)

The height of the column, including the pedestal, is 127½ English feet. The diameter at the base is between 12 and 13 feet, and rather more than a foot less at the top. The shaft consists of 19 cylindrical pieces of white marble, in which steps are cut for ascending the interior. On the top was a statue of Trajan, now replaced by that of St. Peter, erected by Pope Sixtus V. When the tomb beneath was opened by the same pontiff, in 1585, it was discovered to be empty.

The column runs a spiral band of admirable reliefs, representing the wars of Trajan against Decidius, and containing no fewer than 2500 human figures. The height of the reliefs at the bottom is 2 feet, increasing to nearly double that size at the top; thus doing away with the natural effect of distance, and presenting the figures to the spectator of the same size throughout. The best descriptions of this magnificent column will be found in Fabretti, De Columna Trajana, Rome, 1690, with plates by Pietro Santi Bartoli; Piranesi, Trofeo, o sia magnifica Colonna Cocolide, &c., with large folio drawings; De Rossi, Colonna Trajana designata.

The column stood in an open space of no great extent, being 66 feet long and 56 broad. This space was bounded on its two sides by porticoes with double columns. In the NW. side of the ba-

silica, on either side of the column, were two libraries, the Bibliotheca Graeca and Latina, as indicated by Sidonius:

"Cum meis poni statum perennem
Nerva Trajanus titulis videre
Inter auctores nitrusque fixam
Bibliothecae."—(ix. Epigr. 16.)

* It is remarkable, however, that the library is called by A. Gallus, "Bibliotheca templi Trajani" (ca. 17).
3. There are evident traces that Trajan's forum extended still farther to the NW., though it is doubtful whether this extension was owing to Trajan himself or to Hadrian. Excavations in this direction have brought to light enormous granite pillars belonging probably to the temple which Hadrian dedicated to Trajan (Curt. Hist. 19), and which is mentioned in the Notitia in conjunction with the column. This is further confirmed by some inscriptions bearing the name of Hadrian which have been discovered in this quarter. (Bunsen, Les Forum Romains, ii de partie, p. 35.) Thus the space occupied by these noble structures extended from the fora of Caesar and Augustus almost to the Via Lata, or to the modern Piazza degli Apostoli.

How long the forum of Trajan existed is uncertain. The Anonymous of Einsiedeln mentions it in the way from Porta Nomentana to the Forum Romanum. In the Mirabilia it seems to be spoken of as a thing that has disappeared.

VI. THE PALATINE AND VELIA.

After the Capitol and forum, the Palatine hill is undoubtedly the most interesting spot at Rome, both from its having been the cradle of the eternal city, and also the seat of its matured power—the residence of the emperors when those emperors ruled the world; or, in the words of Tacitus, "ipsa imperii nix" (Hist. iv. 79).—a circumstance from which it has given name to the residences of subsequent princes. (Dion Cass. iii. 16.) In treating of the topography of this region, and indeed of that of the remainder of the city, we shall not endeavour to observe a chronological order, as was desirable in treating of the forum, in order that the reader might gain a clear idea of its appearance in the various periods of Roman history; but shall follow the most convenient method without regard to the dates of the different objects mentioned. We have already described the situation and height of the hill. The latter, however, cannot be very accurately given, as the soil is covered to a great depth with rubbish, the remains of those magnificent edifices which once adorned it. On the site of the Circus Maximus, indeed, in the Vigna del Collegio Inglese, these ruins assume something of a more definite form; but the gigantic arches and terraces at that part, though they may still excite our wonder, are not sufficiently perfect to enable us to trace any plan of the buildings which they once formed. However, they must all have been subsequent to the time of Nero; since the ravages of the fire under that emperor were particularly destructive on the Palatine hill. Hence the chief topographical interest attaches to the desecrations of the hill, which present more facilities for ascertaining spots connected with and sanctified by the early traditions of the city,—of which several have already been discussed, as the Porta Romana and Clivus Victorine, the Porta Magjoni, the Curiae Vetriciae, &c.

We have already seen that the declivity towards the Capitoline hill was called Germinalis or Cermalus; but though in ancient times this was regarded as a separate hill, the reason is not clear, since it by no means presents any distinct features, like the Velia. Here was the Lutwerk, according to tradition a grotto sacred to Pan ever since the time of the Arcadians (Dionysius, i. 32, 79), and near it the Ficus Rumanus, or sacred fig-tree, under which Romulus and Remus were discovered suckled by the wolf. It is difficult to determine the exact spot of the Lupercal. Evander points it out to Acneas as lying "gelida sub rupe" (Virg. Aen. viii. 343), and Dionysius (l. c.) describes it as on the road (Kata tìn òdon) leading to the Circus Maximus; and his authority is preferable to that of Sosius, who describes it as in " Circulo" (ad Aen. viii. 90). Its most probable site therefore is at the western angle of the hill, towards the circus. Its situation is in some degree connected with that of the Casa Romuli. The description of the 10th Regio, or Palatine, in the Notitia begins at the Casa Romuli, and proceeding round the base of the hill to the N. and E. ends, in coming from the circus, with the Lupercal; whence it is plain that the Casa Romuli must have stood a little to the N. of it. Plutarch notices the Casa Romuli, which was also called Togurium Faustuli, in the following manner: "Pacalos de (feci) parà òulon Kepmuon Bapom Kali; f'xpt, oútou di eini peri tìn òdon tìn tòv òrò tòv metan eis òpì τòv òpì (Rom. 20). Here the expression Kali; f'xpt is puzzling, as an equivalent name does not occur in any Latin author. Properly xpt signifies the sea-shore, and cannot therefore be applied to the banks of the Tiber; nor, in prose at least, to an inland bank. Hence Pliiler is inclined to think that it is merely Plutarch's awkward translation of the Roman name for a place called Pulena Rupes, which obtained this appellation after the Lupercal had been restored by Augustus and adorned with architectural elevations. (Regiones, p. 181.) But Plutarch was sure the names of his own languages, though he may not have been a very profound Latin scholar, yet as he lived some time in Rome and occupied himself with studying the history and manners of the people, we may perhaps give him credit for knowing the difference between Rupes and litts. It seems more probable therefore that the Roman
name of the place alluded to was *Pulcrem Littae* than *Pulcera Rupeum* (though unfortunately we do not find it mentioned in any Latin author), and that, like the Casa Romuli and Lepus, it was a traditionally

According to that story, we must recollect that the Tiber had overflowed its banks and formed a lake here, and that the cradle was washed ashore at the foot of the Palatine; whence the name *littae*, which is frequently used of the shores of a lake, might without impropriety be applied to this spot.

The *Bauchi* or steps mentioned by Plutarch in the preceding passage were of course a more recent work, but their date cannot be fixed. *Propertius* (v. 1. 9) seems to allude to them in the following passage as existing even in the time of Romulus and Rому:

"Qua gradibus domus ista Romi se sustulit olim
Unus erat fratrurn maxima regna focus."

But though we can hardly imagine their existence at that time, yet the passage at all events suffices to prove the existence of the steps in the time of Augustus. Becker, however, will by no means allow this. (*Handb. p. 420* and note.) Plutarch goes on to say that in the neighbourhood of the Casa Romuli stood the cherry-tree said to have sprung from the lance hurled by Romulus from the Aventine to the Palatine; and that the tree withered and died from the roots having been injured when Caius Caesar (Caligula) caused the steps to be made there. (Γαλίνον τοῦ Καισαρού, ὧς φασίν, τὰς ἀνάβασιν ἐπεκκεχολοντο καὶ τῶν γεγυμένων περιποίησιν τὰ πλησίον, ἑλάθηναι αἱ μία κακωθείσαι πατάτασι, καὶ τῷ φύτῳ ἐμαραθύνθη.) Hence Becker draws the conclusion that this was the origin of the steps, and that they did not exist before the time of Caligula. But this is by no means a necessary consequence from Plutarch's words, since *epi-skeuēs* often signifies to repair or make better. We find the same steps mentioned by Solinus under the name of Scale Caci: "Ad supercilium scalaram Caci habet terminum (Roma Quadrata), ubi tugurium fuit Faustuli. Illi Romulus missivat," *Cc.* (i. 18). It cannot be doubted that these are the same steps mentioned by Propertius and Plutarch. Gerhard proposed to *emend* this passage by reading Caci for Caci; an emendation of which Becker of course approved, as it suits his view that the steps did not exist before the time of Caligula. But unfortunately he was not aware of a passage in Diodorus Siculus which also mentions these steps in a manner confirmatory of the account of Solinus and Propertius; τῷ τοῦ Καίσαρον ἐν τῷ Παλατίῳ καταπλάθεσις ἐστὶν ἔχοντα διέλθειν κλίμακα τὴν ὀρυμαίαν ἀπ’ ἑκάτων Καίσαρ (iv. 21). And as Diodorus wrote in the age of Augustus, the existence of the steps before the time of Caligula is thus proved.

An *Aedes Romuli* is also mentioned on the German in the sacred books of the Argives quoted by Varro (L. L. v. § 54, Milli), but it is not found in any other authority, and hence it may appear doubtful whether it is not the same as the Casa Romuli. The round church of S. Trocchio on the W. side of the Palatine has frequently been identified with this Aedes Romuli, and it is very probable that it was built over the remains of some ancient temple; but it is too far from the circus to have been the Casa Romuli, which lay more towards S. Anastasia. Besides the Casa seems to have been nothing more than a little thatched hut; of which, as we have seen, there appears to have been a duplicate on the Capitol.

In the dehth of any more accurate information we cannot fix the situation, as old as any of the stories of Roman antiquity more precisely than may be gathered from the preceding general indications. M. Valerius Messalla and C. Cassius Longinus, who were censors in n. c. 154, projected, and even began, a theatre at this spot, which was to extend from the Lupercal on the Germinus towards the Palatine. But this scheme was opposed by the rigid morality of Scipio Nasica, and all the works were put up to auction and sold. (Vell. Pat. i. 15; Val. Max. ii. 4. § 2; Appian, *B. C.* i. 28.) The Lupercal is mentioned in the *Monumenta Acerranea*, as re-constructed by Augustus, under which Evans thinks that the ancient one must have been destroyed when this theatre was commenced. (*Indicazione Topogra.* p. 460, 1850.) The Casa Romuli is represented by Fabius Pictor, as translated by Dionysius of Halicarnassus (i. 79), to have been carefully preserved in his time, by the damage occasioned by age or tempests being made good according to the ancient pattern. Whether the building mentioned in the *Notitia* was still the same it is impossible to say.

We have already noticed, when treating of the city of Romulus, the *Sanctuary of Vesta*, which probably was sacred to Juno and the *Clivus Victoriae* on the NW. slope of the Palatine. At or near this spot an *Aedes Matri Deum* was erected n. c. 191, to contain the image of the Mater idea, which Scipio Nasica had brought from Asia thirteen years before. (Liv. xxxvi. 35; Cic. *Hor. R.* 12.) It must have been to the N. of the Casa Romuli, since it is mentioned after it in the *Notitia*, when proceeding in that direction, yet at some distance from the N. point of the hill, between which and the temple the Domus Tiberiana must have intervened. It is recorded as having been twice burnt down; once in B. C. 110, when it was rebuilt by Metellus (Jul. Obs. 99), and again in A. D. 2, in the same fire which destroyed the palace of Augustus, by whom it was restored. (Val. Max. i. 8. § 11; Dion Cass. iv. 12; *Mon. Ancyr.*.) It must also have been destroyed in the configuration under Nero, and again rebuilt. Becker (*Handb.* p. 421) observes that its front must have faced the E., as the statue of the Magna Mater Idaea is described by Dion Cassins as looking that way (xiv. 49). But this, writes one of the scholars; and we fancy that there is some reason to believe, from a passage in Martial, that the temple was a round one, and could not therefore be properly said to face any way. In this passage two temples are mentioned (i. 70. 9):—

"Flecte visas hac qua madidi sunt tecta Lyaei
Et Cybeles picto statu Corybante tholus."

Becker observes (p. 422) that the age and situation of the temples here mentioned cannot be determined, as they occur nowhere else; and this seems to be true of the temple of Kocheus; but there appears to be no reason why the *Tholius Cybeles*, which Becker writes *Torus*, without any apparent meaning,—may not have been the Aedes Matris Deorum before referred to. To the description of the road to the house of Precolus given in this epigram suits the situation of this temple; and the house itself is mentioned as "nec propriam Pl aqueus anat." Now, the temple of Apollo, built by Augustus, lay close to that of the Idaean Mater, as we shall see presently; and,
indeed, they are mentioned in one breath in the Notitia. ("Aedem Matris Deum et Apolloinis Hath-
nessi.") That Thisus Cybeles may have been the
temple which once occupied the site of the
present circular church of St. Teodoro before re-
to, we can only offer a conjecture; its situation, at
least, admirably corresponds with that of the temple
of the Idæan Mother.

We find a temple of this deity, as well as one of
Juventas mentioned in the Monumentum Anony-
num (tab. iv. l. 8) as erected by Augustus on the
Palatine. The first of these may, however, have
been only a restoration of the ancient temple. We
can hardly conclude from the word feci that it was an
easily new and separate structure; since we find
the same word used in that record with relation to
other edifices which were among the most ancient in
Rome, and of which it is not likely that there
should have been duplicates; such as the temple of
Jupiter Feretrius on the Capitol, that of Quirinius,
that of Juno Regina on the Aventine, and others.
In these cases it seems probable that the edifices
were in such a ruinous state from long neglect that
Augustus found it necessary to rebuild them from
their foundations; which would justify the use of
the word feci instead of refactor, but hardly the regarding
of them as entirely new temples. The great care used
by Augustus in restoring the ancient temples is
alluded to by Horace (Od. iii. 6). The temple of
Juventas may possibly have been new; at all events
it could hardly have been the one dedicated by
C. Licinius Lucullus about the same time as that of
the Mater Magna Idæa, since the former was in
the Circus Maximus. (Liv. xxxvi. 56; cf. Cic.
Buc. 18, ad Att. i. 18.)

While the Pentépylon may have been which is
mentioned in the Notitia between the temple of
Apollo and the palace of Augustus, it is difficult to
say, except that it was probably a building with five
gates. Preller (Regionen, p. 183) cites a passage
from an anonymous describer of the Antiquities of
Constantinople in Bardini (Imp. Orient. i. p. 21),
in which a building in that city called Tetrapylon,
which was used for depositing and bewilding the
corpse of the emperor, or of that of any member of
his family, is mentioned; and as this building is
said to have been imitated from one at Rome, Preller
thinks it highly probable that the Pentépylon in
question may have afforded the model, and been used
for a similar purpose.

Of the temples of Jupiter Victron and Jupifer
Station — the former near the Nova Via and Porta
Magnois, the latter farther off towards the Sacra Via
we have already spoken when describing the Ro-
muneian city; besides which there seems to have been
a temple of Jupiter Propogatos, probably of the
time of the Antonines, known only from an
inscription. (Gruter, cec. 2; Orell. 42; Canina,
Indicaciones, p. 463.) We have also had occasion to
mention the Cimiæ Vèteres and the sacellum of
Fortuna Respiences. Other ancient buildings and
shrines on the Palatine, the sites of which
cannot be exactly determined, were the Corna
Salutum (Palatineum), where the ancilia and the
litus Romuli were preserved, probably not far
from the temple of Vesta (Bionys. ii. 70; Cic.
Div. i. 17; Gruter, Inscr. chërii. 5; Orell. 2244);
a funum, or Ara Ferris (Cic. Leg. ii. 11: Val.
Max. ii. 5. § 6; Pinn. ii. 5), an ancient sacellum
of the Dea Vestalica, the appeasing deity of
communal quarrels (Val. Max. ii. 1. § 6); and an

Atque arcam circum steterant armenta Myronis Quattor artifices, vivida signa, boves.

Tum medium clare surgentem marmoreum templum Et patriae Phoebi carius Orty

In quo Solis erat supra fastigis currus Et valvae Libyce nobile dentic apus.

Altera dejectos Parnassi vertice Gallos Altera morebat funera Tantalisiis.

Decide inter matrem deus atque inter sororem Pythius in longa carmina veste sonat."

Hence we learn that the columns of the portico were of African marble, and between them stood statues of the fifty daughters of Danaus (cf. Ovid. Amor. ii. 2, 4.) According to Aaron, fifty equestriana statues of the sons of Danaus also stood in the open space. (Schol. ad Pers. ii. 56.) The temple itself was of solid white marble from Luna (Corraro), (Serv. Virg. Aen. v. 720.) The statue alluded to by Propertius as "Phoebi pulchrior ipso" was that of Augustus himself, which represented him in the dress and attitude of Apollo. (Schol. Curs. ad Hor. Ep. i. 3, 17; Serv. ad Virg. Ec. iv. 15.) In the library was also a colossal bronze statue of Apollo, 50 feet in height (Plin. xxxiv. 18), as well as many precious works of art. (Ib. xxxiv. 8, xxxvii. 5, &c.) The Sibylline books were preserved in the temple (Suet. Aug. 31; Aman, Marc, xxiii. 3) before which was the spacious place called the Aarea Apollinis. From all these notices we may gather some idea of the splendour of this celebrated temple; but its exact site, as well as that of the Palace of Augustus, is nowhere clearly intimated. From several passages, however, which have been cited when discussing the situation of the Porta Magnoeum, we may infer pretty accurately that the latter must have stood at the NE. side of the Palatine, between the arch of Titus and the temple of Vesta. (S. Maria Liberatrice.) It appears from a passage in Ovid ("Inde temere pari," &c., Trist. iii. i. 59), that the temple must have lain some way beyond the palace, and there seems to be no reason why we may not place it near S. Teodoro, though it stood perhaps on the summit of the hill. This seems to be the spot indicated in the Notitia. The temple is there called "aedes Apollinis Thammites" an epithet not easily explained, notwithstanding the attempt of A. Toller (Regiones, p. 182); although there can be no doubt that the temple built by Augustus is meant.

In the same document a Domus Tiberiana, or palace of Tiberius, is mentioned as distinct from that of Augustus; a house, indeed, which he probably inherited, as he was born on the Palatine. (Suet. Tiber. Suet. Tiber. 5.) In his youth, when he lived in a quiet, retired manner, he first inhabited the house of Pompey in the Campus, and afterwards that of Macenas on the Esquiline (1b. 15); but when he became the Emperor, it is most probable that he resided on the Palatine, till the seclusion of its inhabitants by the fire of Caprean. The Domus Tiberiana must have stood near the NW. corner of the Palatine, since it is described as affording an exit into the Velabrum ("per Tiberianam domum in Velabrum," Tac. Hist. i. 27.) Suetonius, speaking of the same departure of Otho, that he hastened out at the back of the palace ("præcipit et a postica parte Palatii," Otho. 6); from which passages it would appear that the two palaces were connected together, that of Augustus being the more expensive towards the forum, whilst that of Tiberius formed the back front. It was from the latter that Vitellius surveyed the storming of the Capitol. (Suet. Vit. 15.) At a later period of the Empire we find a Bibliotheca mentioned in the palace of Tiberius, which had probably superseded the Palatine Library, as the latter is no longer mentioned. (A. Gall. xiii. 19; Vopisc. Prob. 2.) All these buildings must, of course, have been destroyed in the fire of Nero; but we must assume that, after they were rebuilt, the Domus Augusti et Tiberii still continued to be distinguished, as they are mentioned as separate buildings in the Notitia: and indeed Josephus expressly says that the different parts of the complex of buildings forming the imperial palace were named after their respective founders. (Ant. Jud. xix. 1. § 15.)

On or near the Palatine we must also place the temple Augusti — one of the only two public works which Tiberius undertook at Rome, the other being the scene of the theatre of Pompey. Even this he did not live to finish, but left them to be completed and dedicated by Caligula. (Tac. Ann. vi. 45; Suet. Tib. 47, Col. 21.) The circumstance of Caligula using this temple as a sort of pier for his bridge to the Capitol makes it doubtful whether it could have stood on the Palatine hill. (Suet. Vib. 22.) Yet Pliny (xiii. 42) alludes to it as "in Palatii templum," and if it was not exactly on the summit of the hill, it could not have been very far from it. Becker conjectures that the bridge of Caligula passed over the Basilica Julia; but the only proof is, that Caligula was accustomed to fling money to the people from the roof of the basilica, which he might have ascended without a bridge. (Suet. Col. 37, Jos. Ant. Jud. xix. 1. § 11.) The bridge, perhaps, did not stand very long. Caligula seems to have made extensive alterations in the imperial palace, though we cannot trace the a accurately. ("Bi visidum urbum totan cinqui dominus principum Caii et Neronis," Plin. xxxvi. 24, s. 5.) We have already mentioned that he connected the temple of Castor with it. Yet in his time there must have been still some private dwellings on the NE. side of the Palatine, as Pliny mentions that the lots belonging to the house of Crassus at that spot lasted till the fire of Nero. (Ib. xvii. 1.) The enormous buildings of the last-named emperor probably engulfed the whole of the Palatine at all events we hear no more of private houses there after the commencement of his reign. We have already adverted to Nero's two palaces. The first of these, or Domus Transitoria, with its gardens, though not finished in the same style of splendour
as its successor, the domus aurea, seems to have occupied as large an extent of ground, and to have reached from the Palatine to the gardens of Maecenas and the agger of Servius on the Esquiline. (Suet. Nero, 31; Tac. Ann. xvi. 39.) The AFRICA DOMUS was a specimen of insane extravagance. Its atrium or vestibule was placed on the Velia, on the spot where the temple of Venus and Rome afterwards stood, and in it rose the colossal STATUE OF NERO, 120 feet high, the base of which is still visible at the NW. side of the Colosseum. We may gain an idea of the vastness of this residence by comparing the prose description of Suetonius with the poetical one of Martial, when we shall see that the latter has not abused the privilege of his calling. (Suet. Nero, 31; Mart. de Spect. 2.) It was never perfectly finished, and Vespasian, as we have said, restored the ground to the public. We know but little of the arrangement of the buildings on the Palatine itself under Nero, except that the different parts appear to have retained their former names. Domitian added much to the palace, now again confined to this hill, and fitted it up in a style of extraordinary magnificence; but, though we frequently hear of single parts, such as baths, diaetae, a portico called Scilia, a dining-room dignified with the appellation of Coenatio Jovis, &c., yet we are nowhere presented with a clear idea of it as a whole (cf. Plut. Popul. 15; Plin. xxxv. 5, s. 38; Capit. Pert. 11; Mart. viii. 36; Stat. Silv. iii. 4, 47, iv. 2, 18, &c.) The anxiety and terror of the tyrant are strikingly depicted in the anecdote told by Suetonius (Dom. 14), that he caused the walls of the portico in which he was accustomed to walk to be covered with the stone, or crystallised gypsum, called phengites, in order that he might be able to see what was going on behind his back. It is uncertain where the AIOKAEA, or gardens of Adonis, lay, in which Domitian received Apollonius of Tyana, and which are marked on a fragment of the Capitoline plan (Bellori, tab. xi.) Of the history of the palace little more is known. Several accounts mention the domus aurea as having been burnt down in the reign of TRAJAN (Oros. vii. 12; Hieron. an. 105, p. 447, Rome.), and the palace which succeeded it appears to have been also destroyed by fire in the reign of Commodus (Dion Cass. lxxii. 24; Herodian, i. 14.)

At the southern extremity of the Palatine, Septimius Severus built the SEPTIZONIUM, considerable remains of which existed till the end of the

16th century, when Pope Sixtus V. caused the pillars to be carried off to the Vatican. Representations of these ruins will be found in Du Pérac (tau. 19) and Gannucci (Antichità di Roma, p. 83. Speculum Rom. Magnificentiae, t. 45). The name of the building, which, however, is very variously written in the MSS. of different authors, is by some supposed to have been derived from its form, by others from the circumstance of seven roads meeting at this spot. It seems not improbable that a similar place existed before the time of Severus, since Suetonius mentions that Titus was born near the Septizonium (c. 2); though topographers, but without any adequate grounds, have assigned this to the 3rd Region. It has been suggested that the name of the building had seven rows of columns, one above another, but this notion seems to be without foundation, as the ruins never exhibited traces of more than three rows. The tomb of Severus must not be confounded with it, which, as we learn from Spartianus, was on the Via Appia, and built so as to resemble the Septizonium. The same author informs us (Sec. 24) that the design of Severus was to make the Septizonium an atrium of the palace, so that it should be the first object to strike the eyes of those coming from Africa, his native country. But the true nature and destination of the building remain enigmatical.

We know of no other alterations in the palace except some slight ones under the emperors Elagabalus and Alexander Severus. The former consecrated there the TEMPLE OF HELIODAGBES (Lampr. Helig. 3; Herodian, v. 5), and opened a public bath, also destined apparently as a place of licentiousness (Lampr. 1b. 8). Of the buildings of Alexander Severus we hear only of a diaeta, erected in honour of his mother Julia Mamamae, and commonly called "ad Mamamam" (Id. Al. Sec. 26). These diaetae were small isolated buildings, commonly in parks, and somewhat resembled a modern Roman casino or pavilion (Plin. Ep. ii. 17, v. 6). It is also related of both these emperors that they caused the streets of the Palatine to be paved with porphyry and verde antico (Lampr. Hal. 24, Al. Sec. 25.) The Palatium was probably inhabited by Maxentius during his short reign, after which we hear no more of it. That emperor is said to have founded baths there. (Catal. Imp. Vienna. i. ii. p. 248, Rome.)

The VICTORIA GERMANICANA, the only object recorded in the Notitia between the Septizonium and the Lupercal, and which must therefore have stood on the side next the circus, was probably one of those numerous monuments erected either in honour of Germanicus, of which Tacitus speaks (Ann. ii. 83), or else to Caracalla, who likewise bore the name of Germanicus (Peller, Regionum, p. 187).

We have already treated generally of the Velia and Sacra Via, and of some of the principal objects connected with them, as well as of the Nova Via under the Palatine. The NOVA VIA was not a very important road, and we have little more to add respecting it. It seems to have begun at the Porta Mugionis, where, like the Sacra Via, at the same spot, it was called Summa Nova Via (Solin, i. 1). From this place it ran almost parallel with the Sacra Via, and between it and the hill, as far as its northern point, where it turned to the S., and still continued to run along the base of the Palatine as far at least as the Porta Romana (near S. Giorgio in Velabro). Some, indeed, carry it on as far as the Circus Maximus (Canina, Indic. Top. p. 331); a view which does not
seem to be supported by any authority. The lower part of it, both on the side of the forum and of the Velabrum, was called Infinis Nova Via. (Varro, v. § 45, Müll.) Ovid describes it as touching the forum ("Qua Nova Romano nunc Via juncta foro est,"); Fast. vi. 389); whence we must conclude that not only the open space itself, but also the ground around it on which the temples and basilicae stood, was included under the appellation of forum. A road appears, however, to have led from the Nova Via to the forum between the temples of Vesta and Castor, as is shown by remains of pavement discovered there; and this may have been the junctio alluded to by Ovid, by which his words would seem to have been comparatively recent. The Lictor Vestae must have lain behind the Nova Via, towards the Palatine, and indeed on the very slope of the hill, as appears from the following passages: "Exaudita vox est inuoc Vestae, qui a Patalli radice in Novam Viam devexus est" (Cic. Div. i. 45); "M. Caecidius de plebe mantivalti tribunia, se in Nova Via, ubi nunc sacellum est supra aedem Vestae vocem metits silentio audiesse clariorum humana" (Liv. v. 32). The sacellum here alluded to was that of Alae Litternae. (Cic. L. c. and ii. 32.) It is described by Varro (op. Gell. xvi. 17) as "in infima Nova Via"; whence we must conclude that it was in the part near the forum that Caecidian heard the voice. Though called Nova, the road must have been of high antiquity, since Livy mentions that Tarquinius lived in it (i. 47); and perhaps it received its name from its newness in comparison with the Via Sacra.

Before we proceed to describe the monuments on the VELIA, we must observe that some writers, and especially the Italian school of topographers (Canina, Foro Rom. p. 60, seqq., Indici Top. p. 462), do not allow that the Veia consisted of that height which lies between the Palatine, the Esquiline, and the eastern side of the forum, but confine the appellation to the northern angle of the Palatine, which, it is contended, like the Germaetus, was in ancient times considered as distinct from the remainder of the hill. Caecidian, indeed, first applied the name of Veia to the ridge in question (Hist. i. p. 390, Eng. trans.), in which view he was of course followed by Bunsen (Beschr. iii. p. 81). One of the chief arguments adduced against it is the account given of the house of Valerius Publicola. Valerius is said to have begun building a house on the same spot where Tullus Hostilius had previously dwelt (Cic. Rep. ii. 31); and the residence of Tullus Hostilius again is recorded to have been on the Velia, on the spot afterwards occupied by the Aedes Demum Penatium (Varro, op. l. c. 363). Aulus Hostilius in Veia, ubi postea Deum Penatium aedes facta est, Solin. i. 22.) Now Bunsen (ib. p. 85), and after him Becker (de Muris, p. 43, Handb. p. 249), hold that the Aedes Demum Penatium here alluded to was that mentioned by Dionysius Halicarnassensis (i. 68) as standing in the short cut which led from the forum to the Carinae, in the district called Pirelaeae. The MSS. vary in the spelling of this name; but we think with Becker that the Veia, or rather "Sub Veia," is meant, as Concinus has translated the word; and Cassonanum (ad Mon. August.) reads Odalaeamen. But, whatever the name may be entertained on that point, the other part of the description of Dionysius, namely, that the temple stood in the short cut between the forum and the Carinae, sufficiently indicates the locality; and we are of opinion, with Becker, that Bunsen arrived at a very probable conclusion in identifying this temple with the present circular vestibule of the church of SS. Cosma e Damiano. Yet, if we assume with those writers that this was the only temple of the Penates on the Velia, and consequently the spot on which the house of Publicola stood in fact, it confest that we see considerable force in the objection of Caesara, that such a situation does not correspond with the descriptions given by Cicero, Livy, and other writers. All those descriptions convey the idea that Publicola's house stood on a somewhat considerable, though not very great, elevation. Thus Dionysius characterises the spot as λόφων υπερίκημιν τῆς ἄφρατος ἄθροιν ἑπικούς καὶ περιτόμων ἐκλεκτόνως (v. 19). And Cicero says of the house: "Quod in excelsiore loco coepisset aedificare" (Rep. ii. 31). A still more decisive passage is that of Livy: "Aedificavit in summa Velia" (ii. 7). For how can that spot be called the top of the Velia, which was evidently at the bottom, and, according to Becker's own showing, in a district called sub Velia? His attempts to evade these difficulties are feeble and unsatisfactory (de Muris, p. 45). Yet they are not incapable of solution, without abandoning Niebuhr's theory respecting the Velia, which we hold to be the true one. There were in fact two temples of the Penates on the Velia, namely, that identified by Bunsen with SS. Cosma e Damiano, and another in Summa Velia, (as Livy says; which latter occupied the site of the residence of Tullus Hostilius, and of the subsequent one of Valerius Publicola. Thus Solinus: "Tullus Hostilius in Velia (habitabat), ubi postea Deum Penatium aedes facta est" (i. 22). We cannot determine the length of this postes; but it was most probably after the time of Publicola, and perhaps a great deal later. But the other temple was certainly older, as it is mentioned in the sacred books of the Argives (op. Varro, L. L. v. § 54: "In Veia apud aedem Deum Penatium"); and thus it is plain that there must have been two temples. One in the Summa Velia is the Sacrum Laronum mentioned in Tacitus, in describing the pomerium of Romulus (Ann. xii. 24); and this is another proof that there were two temples; for it is impossible to imagine that the pomerium could have extended so far to the N. as the church of SS. Cosma e Damiano. The situation of this sacellum would answer all the requirements of the passages before cited. For there is still a very considerable rise from the forum to the arch of Titus, near which the sacellum must have stood, which rise was of course much more marked when the forum was in its original state, or some 20 feet below its present level. Indeed the northern angle of the Palatine, which Caesara supposes to have been the Velia, does not present any great difference of height: and thus the objections which he justly urges against the aedes near the temple of Faustina do not apply to one on the site that we have indicated. Besides it appears to us an insuperable objection to Caesara's view that he admits the spot near the temple of Faustina to have been called Sub Velia, though it is separated by a considerable space, and by the intervening height, from the N. angle of the Palatine. The Asennius (ad Cic. Piso. 22) of a house of P. Valerius, "sub Velia, ubi nunc aedis Victoricae est," is too confused and imperfect to draw any satisfactory conclusion from it. By all other authorities the
Aedes Victoriae is said to be not at the foot of the Velia, but on the summit of the Palatine.

But there is another argument brought forwards by Canina against the height in question being the Velia. He observes that the area on which the temple of Venus and Rome stands is divided from the Palatine by the Saecra Via, and hence could not have belonged to the Velia; since the Sacra Via, and all the places on the opposite (northern) side of it, were comprehended in the 1st Region of Servius, or the Suburana, whilst the Palatine, including the Velia, were contained in the 4th Region (Judenau, Topogr. p. 402, cf. Forno Rom., p. 61). Now if this were so, it would certainly be a fatal objection to Niebuhr’s view; but we do not think that any such thing can be inferred from Varro’s words. In describing the 1st Region, in which a place called Ceroliensis was included, he says, “Ceroliensis a Carinorum junctn dietus Carinia, poste Corelia, quod hic oritur caput Sacrae Viae ab Subranea sacello,” &c. (J. L. v. § 47). The passage is obscure, but we do not see how it can be inferred from it that the Saecra Via formed the boundary between the 4th Servian Region & Varro seems rather to be explaining the origin of the name Coroelia, which he connects with the Saecra Via, but in a manner which we cannot understand. The Saecra Via traversed the highest part of the ridge, and thus on Canina’s own showing must have included some part of it in the 4th Region, making a division where no natural one is apparent, which is not at all probable. Besides, if this height was not called Velia, what other name can be found for it? And it is not at all likely that an eminence of this sort, which is sufficiently marked, and lies in the very heart of the city, should have been without a name.

Assuming the Velia, therefore, to have been that Rising ground which lies between the valley of the forum on the one hand, and that of the Colosseum on the other, we shall proceed to describe its monuments. The Aedes Penatium, before referred to as standing on the declivity of the ridge, or Sub Velia, and described by Dionysius (i. 68), seems to have been one of the most venerable antiquity. In it were preserved the images of the household gods said to have been brought from Troy, having upon them the inscription D€NA2, which has given rise to so much controversy. Now, in these cases, whether it is a scribe’s error for D€NA2, that is D€NA2 = D€NA2, whether it should have been D€S MAGNIS (Dis Magnis), &c. &c. (See Ammian, Ind. Topogr. p. 231, seq.; Clausen, Aeneas u. die Penaten, ii. p. 624, n. 1116; Hertzberg, de Dis Rom. Patriae, lib. ii. c. 18.) We shall here follow our usual rule, and give Dionysius credit for understanding what he was writing about, as there does not appear to be any grave objection to doing so; and as he immediately adds, after citing the above epigraph, that it referred to the Penates (D€NA2 xtegraffoun xousoou, diplou- seon x o Pe- or), we shall assume that this was really the temple of the Trojan household gods. The Italian writers regard it as the temple of Remus.

We do not find any large buildings mentioned upon the Velia till the time of Nero, who, as we have seen, occupied it with the vestibule of his palace. A considerable part of it had perhaps been a market previously. Close to its NW. foot, immediately behind the Aedes Penatium just indicated, Vespasian, after his triumph over Jerusalem, built his celebrated TEMPLE OF PEACE, to which we have already had occasion to allude, when describing the imperial fora.

( Joseph. B. J. vii. 5, § 7; Suet. Vesp. 9; Dion Cass. lxxvi. 15.) It stood in an enclosed space, much like the temple of Venus Genitrix in Caesar’s forum, or that of Mars Ultor in the forum of Augustus; and hence, though not designed like them as a place for legal business, it was nevertheless sometimes called Forum Pacis. The temple was built with the greatest splendor, and adorned with precious works of art from Nero’s palace, as well as with the costly spoils brought from the temple of Jerusalem, which made it one of the richest and most magnificent sanctuaries that the world ever beheld. (Joseph. l.c.; Plin. xxxiv. 4, 84, xxxvi. 24; Herod. i. 14.) Hence its attributes of peace, and notoriety gave it a new name to the 4th Region, in which it stood, which was previously called “Sacra Via,” but now obtained the name of “Templum Pacis.” The exact site of this temple was long a subject of dispute, the older topographers maintaining that the remains of the three vast arches a little to the E. of the spot just described, and now universally allowed to belong to the basilica of Constantine, were remnants of it. Piranesi raised some doubts on the point, but Nibby was the first who assigned to these two monuments their true position (Cicero Rom., p. 189, seq.); and his views have been further developed and confirmed by Canina. (Ind. Topogr. p. 131, seq.) As Becker has also adopted the same conclusion, it will not be necessary to state the grounds which led to it, as they would occupy considerable space; and we shall therefore refer those readers who desire more information on the subject to the works just mentioned. Annexed to the temple was a library, in which the learned were accustomed to meet for the purposes of study and literary intercourse. (A. Gell. v. 21, avi. 8.) The temple was burnt about a little before the death of Commodus. (Dion Cass. li. 24; Herod. i. 14; Galeo, de Comp. Med. i. 1.) It does not appear to have been restored, but the ruins still remained undisturbed, and the spot is several times mentioned in later writers under the name of Forum Pacis, or Forum Vespasiani (Amm. Marc. xvi. 10;Procop. B. G. iv. 21; Symm. Ep. x. 78; Catal. Inscriptionum p. 243.)

The three arches just alluded to as standing near the temple of Peace, and apparently at the commencement of a road branching off from the Sacra Via, belonged, as is almost universally admitted, to the BASILICA CONSTANTINI, erected in honor of the Emperor Constantine, after his death in the name of Constantine. Their architecture has all the characteristics of a basilica, and could not possibly have been adapted to a temple. (Canina, Indic. Topogr. p. 124.) The first notice which we find of this building is in Aurelius Victor (Caesar, 40, 26), who mentions it as having been erected by Maxentius; and this account is confirmed by an accident which happened in 1828, when on the falling in of a portion of an arch a coin bearing the name of Maxentius was discovered in the masonry. (Becker, ii. 298.) In the Cat. Inscriptionum p. 243, it is mentioned as occupying the site of the horrea piperataria, or spice warehouses of Domitian (“horrea piperataria ubi modo est Basilica Constantianiana et Forum Vespasianum”). These spice warehouses must have been the same that are related by Dion Cassius (lxxxi. 24) to have first caught the flames when the temple of Peace was burnt, A. D. 192, and are described as τάξις ἰσοθεῖς τοις τε ἀραβίων καὶ τῶν ἀργυρίων φορτίων; whence, as the fire spread towards the Palatine, it may be presumed that they stood on the site of the basilica.
Between the basilica of Constantine and the Colosseum, and consequently on the eastern side of the Velian height, Hadrian built the splendid Temple of Roma and Venus, commonly called at a later period Templo Urbis, considerable remains of which still exist behind the convent of S. Francesca Romana. In the middle ages it was called Templo Concordiae et Pietatis (Mirabilia Rom. in Effemerid. Letter. i. p. 385); the older topographers gave it various names, and Xandini was the first to designate it correctly. The remains exhibit the plan of a double temple, or one having two cellae, the semicircular tribunes of which are joined together back to back, so that one cella faced the Capitol and the other the Colosseum; whence the description of Prudentius (Contr. Symm. i. 214):—

"Atque Urbis Venerisque pari se culmine tollunt

Templa, simul geninis addentur turæ debus."

The cella facing the Colosseum is still visible, but the other is enclosed in the cloisters of S. Francesca. In them were colossal statues of the goddesses in a sitting posture. Hadrian is related to have planned this temple himself, and to have been so offended with the free-spoken criticisms of the great architect Apollodorus upon it that he caused him to be put to death. (Dion Cass. lxix. 4.) Apollodorus is related to have particularly criticized the extravagant size of the two goddesses, who he said were too large to quit their seats and walk out of the temple, had they been so minded. The temple was of the style technically called pseudo-diptero decastilos, that is, having only one row of ten columns, but at the same distance from the cella as if there had been two rows. With its porticoes it occupied the whole space between the Sacra Via and the street which ran past the front of the Basilica Constantini. For a more detailed description of it see Nibby, Foro Romano, p. 269, seq., and Canina, Edifizj di Roma, classe ii. A ground plan, and elevations and sections of it as restored, will be found in Burgess, Antiquities and Topography of Rome, i. pp. 268, 280. Servius (ad Aen. ii. 227) speaks of snakes on the statue of Roma similar to those on that of Minerva. From some coins of Antoninus Pius the temple appears to have been restored by that emperor. Silver statues were erected in it to M. Aurelius and Faustina, as well as an altar on which it was customary for brides to offer sacrifice after their marriage. (Dion Cass. lxxi. 31.) It was partly burnt down in the reign of Maxentius, but restored by that emperor.

The Arch of Titus, to which from its conspicuous position we have so frequently had occasion to allude, stood close to the SW. angle of this temple, spanning the Sacra Via at the very summit of the Velian ridge. Its beautiful reliefs, which are unfortunately in a bad state of preservation, represent the Jewish triumphs of Titus. The arch could not have been completed and dedicated till after the death of that emperor, since he is called Divus in the inscription on the side of the Colosseum, whilst a relief in the middle of the vault represents his apotheosis. It has undergone a good deal of restoration of a very indifferent kind, especially on the side which faces the forum. During the middle ages it was called Septem Lucernae and Arcus Septem Lucernarum, as we see from the Aen. We shall here mention two other monuments which, though strictly speaking they do not belong to the Palatine, yet stand in such close proximity to it that they may be conveniently treated of in this place. These are the Arch of Constantine and the Meta Sudans. The former, which stands at the NE. corner of the Palatine, and spans the road now called l’ via di S. Gregorio, between that hill and the Capitol, was erected, as the inscription testifies, in honour of Constantine’s victory over Maxentius. It is adorned with superb reliefs relating to the history of Trajan, taken apparently from some arch or other monument of that emperor. They contrast strangely with the tasteless and ill-executed sculptures belonging to the time of Constantine himself, which are inserted at the lower part of the arch. This monument is in a much better state of preservation than the arch of Titus, a circumstance which may perhaps be ascribed to the respect entertained for the memory of the first Christian emperor. For detailed descriptions and drawings of this arch see Niebuhr (Beschr. iii. p. 314, seq.), Canina (Edifizj Antichi, classe xii.), Overbeke (Restes de l’ An. Rome, ii. t. 8, 9), Piranesi (Ant. Rom. i.).

The Meta Sudans, so called from its resemblance to the metae of the circus, was a fountain erected by Domitian, remains of which are still to be seen.
between the arch of Constantine and the Colosseum. (Hieron, p. 443, Bonc.; Cassiod. Chron. ii. p. 198.) It stands in the middle of a large circular basin, which was discovered in the last excavations at that spot, as well as traces of the conduit which conveyed the water. A meta sudans is mentioned in Seneca (Ep. 56), whence we might infer that the one now existing superseded an earlier one (v. Beschor. iii. 312, seq.; Caunia, Indic. p. 119).

ARCH OF CONSTANTINE.

VII. THE AVENTINE.

We have already adverted to the anomalous character of this hill, and how it was regarded with suspicion in the early times of Rome, as ill-omened. Yet there were several famous spots upon it, having traditions connected with them as old or older than those relating to the Palatine, as well as several renowned and antique temples. One of the oldest of these legendary monuments was the Altar of Evander, which stood at the foot of the hill near the Porta Trigemina. (Dionys. i. 32.) Not far from it, near the Salinae, was the Cave of Cacus, a name which a part of the hill near the river still retains. (Solinus, i. 8; cf. Virg. Aen. viii. 190, seq.; Ovid, Fast. i. 551, seq.) Here also was the altar said to have been dedicated by Hercules, after he had found the cattle, to Jupiter Inventor. (Dionys. i. 39.) A spot on the summit of the hill, called Remoria, or Remuria, preserved the memory of the sacrifices taken by Remus. (Paul. Dia. p. 276; Dionys. i. 85, seq.) Niebuhr, however, assumes another hill beyond the basilica of St. Paolo, and consequently far outside the walls of Aurelian, to have been the place called Remoria, destined by Remus for the building of his city. (Hist. i. p. 223, seq. and note 618.) Other spots connected with very ancient traditions, though subsequent to the foundation of the city, were the Arvalibus and the Lauretum. The Arvalibus, or Arvaliustrium, at first indicated only a festival, in which the soldiers, armed with ascelli, performed certain military sports and sacrifices; but the name was subsequently applied to the place where it was celebrated. (Varr. L. L. v. § 153; vi. § 22, Mill.; Liv. xxvii. 37; Plut. Rom. 23.) Plutarch (l. c.) says that king Titus was buried here; but the Lauretum, so named from its grove of laurels, is also designated as his place of sepulture. (Varr. L. L. v. § 152; Plut. xv. § 40; Dionys. iii. 43; Festus, p. 360.) There was a distinction between the Lauretum Majus and Minus (Cal. Capr. id. Aug.); and the Basis Capitolina mentions a Vicus Loretii Majoris and another Loretii Minoris. The same document also records a Vicus Arvaliustri. Numa dedicated an altar to Jupiter Eligius on the Aventine. (Varr. L. L. vi. § 54; Liv. i. 20; cf. Ov. F. iii. 295, seq.) and the Calendars indicate a sacrifice to be performed there to Consus (Fast. Capr. vii. 11. Col. Seq.; Fast. Amitt. Pr. Id. Dec.); but this is probably the same deity whose altar we have mentioned in the Circens Maximus.

The Temple of Diana, built by Servius Tullius as the common sanctuary of the cities belonging to the Latin League, with money contributed by them, conferred more importance on the Aventine (Varr. L. L. v. § 43; Liv. i. 45; Dionys. iv. 26.) This union has been compared with, and is said to have been suggested by, that of the Ionians for building the Artemision, or temple of Diana, at Ephesus. It has been justly observed that Rome's supremacy was tacitly acknowledged by the building of the temple on one of the Roman hills (Liv. i. c.; Val. Max. vii. 3, 8.) Dionysius informs us that he saw in this temple the original stele or pillar containing the Foedus Latinum, as well as that on which the Lex Iulia was engraved. It appears, from Martial (vi. 64, 12), to have been situated on that side of the Aventine which faced the Circes Maximi, and hence it may have stood, as marked in Bunsen's plan, at or near the church of St. Priscus (cf. Canina, Indicazione, p. 552.) We may further observe that Martial calls the Aventine "Collis Diana," from this temple (vii. 73, xii. 18, 3.) We learn from Suetonius that it was rebuilt by L. Cornelius, in the reign of Augustus (Aug. 29). That emperor does not appear to have done anything to it himself, as it is not mentioned in the Monumentum Augustanum.

Another famous temple on the Aventine was that of JUNO ROMA, built by Camillus after the conquest of Veii, from which city the wooden statue of the goddess was carried off, and consecrated here; but the temple was not dedicated by Camillus till four years after his victory (Liv. v. 22, seq.; Val. Max. i. 8. § 3.) Hence, probably, the reason why "expressa simulacra," or images of cypress, were subsequently dedicated to this deity (Liv. xxvii. 37; Jul. Obs. 105); although a bronze statue appears to have been previously erected to her. (Liv. xxi. 62.) We have already seen from the description of the procession of the virgins in Livy (xxvii. 37) that the
temple was approached by the Clivus Publicius, which ascent lay at the northern extremity of the Aventine, near the Porta Trigemina; but its situation cannot be accurately inferred from this circumstance. The Clivus Publicius, made, or rather perhaps widened and paved, by the ædiles L. and M. Publicii Malleoli, was the main road leading up the hill. (Festus, p. 228; Var. L. L. v. 8. 158.) Gauma places the temple near the church of S. Sabina, where there are traces of some ancient building (Indicazione, p. 536). This is one of the temples mentioned as having been rebuilt by Augustus (Mon. Anecr. tab. iv.)

From the document last quoted it would appear that there was a Temple of Jupiter on the Aventine; and its existence is also testified by the Fasti Aviti- terini (Id. Aug. Vell. Jo. Di. in Aventino.; but we do not find it mentioned in any other. The passage just quoted likewise points probably to a temple or of Vortumus, which the Fasti Capriconian mention as being in the Loretum Major. The Temple of Minerva, also mentioned in the Mon. Anecrurum as having been repaired by Augustus, is better known, and seems to have been in existence at all events as early as the Second Punic War, since on account of some verses which Livius Andronicus had written to be sung in celebration of the better success of the war, this temple was appointed as a place in which tocribes, as it appears poets were then called, and actors should meet to offer gifts in honour of Livius. (Festus, p. 333.) From an imperfect inscription (Gruter, xxxix. 5.) it would appear that the temple was near the Armiustrum, and indeed it is named in conjunction with it in the Notitia.

There was a part of the Aventine called "SAXUM, or "SAXUM SACRUM" (Cic. Dom. 53.), on which Remus was related to have stood when he took the auguries, which must therefore be considered as identical with, or rather perhaps as the highest and most conspicuous part of, the place called Berenius, and consequently on the very summit of the hill. Hence Ovid (Fast. v. 148, seq.):—

"icita intera Diva canenda Bonas est.
Est moles nativa, loco res nonima fest.
Appellat Saxum; pars bona montis ea est.
On this spot was erected a Temple of the Bona Dea, as Ovid proceeds to say "leniter acclivi juge.
From the expression jugum, we may conclude that it lay above the middle of the hill; but Hadrian removed it ("Aedem Bonae Deae transtulit," Spart. IIadur. 19), and placed it under the hill; whence it subsequently obtained the name of Templum Bonae Deae Sub saxaeae, and now stood in the 12th Region, or L'isca Publica, where it is mentioned in the Notitia, probably under the SE. side of the Aventine. For a legend of Hercules, connected with the rites of the Bona Dea, see Propertius (v. 9) and Macrobius (Sat. l. 12.)

Besides these we find a Temple of LUNAE and one of Libertas mentioned on the Aventine. The former of these is not to be confused with the temple of Diana, as Bunsen has done (Beschri. iii. p. 412), since we find it mentioned as a substantive temple in several authors. (Liv. xi. 2; Aur. Vict. Vitr. Ill. 65; Fast. Praen. Prád. Kal. Apr. "Lunae in Aven- tiia." Antist. we find, under Id. Aug., "Dianae in Aven-
tine.") It probably stood on the side next the circus. The Temple of Libertas was founded by

T. Sambonius Gracchus, the father of the conqueror of Beneventum; the latter caused a picture representing his victory to be placed in the temple. (Liv. xxiv. 16.) Some difficulty has been occasioned by the manner in which the restoration of this temple by Augustus is mentioned in the Monimentum Anucrurum, namely, "Aedes Minervae et Junonis Regiae et Jovis Libertatis in Aventino (fecei)" (tab. iv. l. 6.) In the Greek translation of this record, discovered in the temple at Anycra, and communicated by Hamilton (Researches in Asia Min. ii. n. 102), the words "Jovis Libertatis" are rendered Δόξα Εὐερδεπιού, whence Franz assumed that the Latin text was corrupt, and that we ought to read "Jovis Liberatoris." (Gerhard's Archäologie, Zetting, no. ii. p. 25.) But there is no mention of any such temple at Rome, though Jupiter was certainly worshipped there under the title of Liberator (see the section on the Circens Maximus); whilst the existence of a temple of Libertas on the Aven-
tine is attested not only by the passage just cited from Livy, but also by Paulus Diaconus. ("Liber-
tatis templum in Aventino fuisset constructum," p. 121.) Hence it seems most probable that the Greek translation is erroneous, and that the reading "Jovis Libertatis" is really correct, the copia being omitted, as is sometimes the case; for ex-

ample, in the instance "Honoris Virtutis," for Honoris et Virtutis, &c. And thus, in like man-
ner, we find a temple of Jupiter Libertas indi-
cated in inscriptions belonging to municipal towns of Italy (v. Orell. Inschr. no. 1249, 1282; et. Becker, Handb. Nachträge, p. 721; Zumpt, Mon. Anecr. Commentar. p. 69.) Another ques-
tion concerning this Templum Libertatis, namely, whether there was an Atrium Libertatis con-
ected with it, has occasioned much discussion. The Atrium Libertatis mentioned by Cicero (ad Att. iv. 16), the situation of which we have examined in a preceding section, could not possibly have been on the Aventine; yet the existence of a second one adjoining the temple of Libertas on that hill has been sometimes maintained, chiefly from Martial (xi. 3.) The question turns on the point whether the words "Domus alta Kemi," in that epigram, necessarily mean the Aventine; for our own part we think they do not. The question, however, is some-
what long; and they who would examine it more minutely may refer to Becker (Handb. p. 458, seq.; Uriichs, Röm. Topogr. p. 31, seq.; Becker, Antwort, p. 25, seq.; Canina, Indicazione, p. 536, seq.; Uriichs, Antwort, p. 5, seq.)

As the Basii Capitolinae names among the Vici of the 13th Region, a VÍCUS FIDDI and a VÍCUS FON-
tuæ DEIDAE, we may perhaps assume that there were temples to those deities on or near the Aven-
tine; but nothing further is known respecting them. The Notitia mentions on the Aventine, "THERMAE SURIANAR ET DECIMAE.

The former of these baths seem to have been built by Trajan, and dedicated in the name of his friend Licinius Sura, to whom he was partly indebted for the empire. ("Hic ob hono-

rem Surae, eunuchus studio imperium arripuerat, lavacra condidit," Aur. Vict. Epit. 13; cf. Dion Cass. lxxvii. 15; Spart. Adr. 2, seq.) The dwelling of Sura was on that side of the Aventine which faced the Circens Maximus, and probably, as we have said, near the temple of Diana:

"Quoque vidit proprius Magni certamina Cirne
Laudat Aventinæ vicinam Sura Dianæ." (Mart. vi. 64. 12.)
ROMA.

Whence we may perhaps conclude that the baths also were near the same spot (v. Prollr, Regionen, p. 200; Camina, Index, p. 533, seq.), where they seem to be indicated by the Capitoline plan (Bollori, tav. 4) and by traces of ruins. The baths of Decius are mentioned by Eutropius (ix. 4). Near the same spot appears to have been the House of Trajan before he became emperor, designated in the Notitia as Privata Trajani, in which neighbourhood an inscription relating to a Donus Ulpianus was found. (Gruter, xxv. 1; Orell, 45.) The Monte Testaccio itself is an artificial hill of potsherds, 153ft. high according to Conti, and about one-third of a mile in circumference. Its origin is enveloped in mystery. According to the vulgar legend it was composed of the fragments of vessels in which the subject nations brought their tribute. A more plausible opinion was that this was the quarter of the potters, and that the hill rose from the pieces spoiled in the process of making them; but this notion was refuted by the discovery of a tomb, during the excavation of some caves in the interior to serve as wine-cells. (Beschri, iii. p. 434.) The whole district round the hill is strewed to a depth of 15 or 20 feet with the same sort of rubbish; the Porta Ostiensis, built by Honorius, stands on this factitious soil, which is thus proved to have existed at the beginning of the fifth century; but its origin will never, perhaps, be explained.

The last object we need mention here is the Forum Boarium, or Bakers' Market. So named apparently not because they were, or sold their wares here, but because this was the place in which they bought their corn. We may remark that it was just opposite this point, under the Janiculum, that the corn-mills lay. (Prollr, Regionen, p. 205.)

VIII. THE VELABRUM, FORUM BOARIUM, AND CIRCUS MAXIMUS.

Between the Palatine, the Aventine, and the Tiber, the level ground was occupied by two districts called the Velabrum and the Forum Boarium, whilst the valley between the two hills themselves was the site of the Circus Maximus. It will be the object of the present section to describe these districts and the monuments which they contained. They were comprehended in the 11th Region of Augustus, called "Circus Maximus," of which the Velabrum formed the boundary on the N., where it joined the 8th Region, or "Forum Romanum."

All accounts conspire in representing the Velabrum as a marsh, or lake, at the time when Rome was founded, whence we may conclude that it could not have been built upon till the ground had been thoroughly drained by the construction of the Cloaca Maxima. Thus Titubus (ii. 33. 33): —

"At qua Velabri regio patet, ire solebat
Exiguus pulsa per raves linter aqua."

(Cf. Varr. L. L. vi. 43, seq. Mill.; Prop. v. 9, 5; Ov. Fast. vi. 399, &c.) Its situation between the Vicus Tuscius and Forum Boarium is ascertained from the descriptions of the route taken by triumphal and festal processions. (Liv. xxvii. 37; Ov. l. c.; Plut. Rom. v. &c.) Its breadth, that is, its extension between the Vicus Tuscius and the Forum Boarium, cannot be accurately determined, but seems not to have been very great. Its termination on the S. was by the Arcus Argentarius, close to the modern church of S. Giorgio in Velabro, which marked the entrance into the Forum Boarium. This site of the Velabrum is also proved by testimonies which connect it with the Nova Via, the Porta Romana, and the sepulchre of Acca Larentia. (Varr. L. L. vi. § 24, Mill.; cf. Cic. ad Brut. 15; Macrobr. S. i. 10.) It is uncertain whether the Sacellum Volupiae, which also lay on the Nova Via, should be assigned to the Velabrum or to the Palatine. (Varr. 1b. v. § 164; Macrobr. Ib.)
There was also a Velabrum Minus, which it is natural to suppose was not far distant from the Velabrum Majus. Varro says that there was in the Velabrum Minus a lake or pond formed from a hot spring called Lactolae, near the temple of Janus Geminus (ib. § 156); and Paulus Diaconus (p. 118) describes the Latins as being "lucus extra urbem." Hence it would seem that the Janus Geminus alluded to by Varro, must have been the temple near the Porta Carmentalis; but both the spring and the lake had vanished in the time of Varro, and were no longer anything but matters of antiquity.

The Arcus Argentarius already mentioned as standing near the church of S. Giorgio in Velabro appears, from the inscription, to have been erected by the Negotiatores and Argentarii of the Forum Boarium in honour of Septimius Severus and his family. (Gruter, ccxxv. 2; Orell. 913.) Properly speaking, it is no arch, the lintel being horizontal instead of vaulted. It is covered with ill-executed sculptures. Close to it stands the large square building called the Janus Quadrifrons, vaulted in the interior, and having a large archway in each front. The building had an upper story, which is said to have been used for mercantile purposes. The architecture belongs to a declining period of art, and the arch seems to have been constructed with fragments of other buildings, as shown by the inverted bas-reliefs on some of the pieces. (Roesch, iii. p. 339.) The Notitia closes the description of Regio xi. by mentioning an "Arcus Constantini," which cannot, of course, refer to the triumphal arch on the other side of the Palatine. The conjecture of Bunsen, therefore (Roesch, Anth. iii. p. 663), does not seem improbable, that this Janus was meant; and from its style of architecture it might very well belong to the time of Constantine.

The Forum Boarium, one of the largest and most celebrated places in Rome, appears to have extended from the Velabrum as far as the ascent to the Aventine, and to have included in breadth the whole space between the Palatine and Circus Maximus on the E. and the Tiber on the W. Thus it must not be conceived as a regular forum or market surrounded with walls or porticoes, but as a large irregular space determined either by natural boundaries or by those of other districts. Its connection with the river on the one side and the circus on the other is attested by the following lines of Ovid (Fast. vi. 477):

"Pontibus et Magno juncta est celerrimae Circo Area qua posito de bove nomen habet."

Its name has been variously derived. The referring of it to the cattle of Hercules is a mere poetical legend (Prop. v. 9. 17. seq.); and the derivation of it from the statue of a bronze bull captured at Aegina and erected in this place, though apparently more plausible, is equally destitute of foundation, since the name is incomestably much older than the Macedonian War. (Plin. xxxiv. 5; Ov. l. c.; Tac. Ann. xii. 24.) It seems, therefore, most probable, as Varro says (L. L. v. § 146; cf. Paul. Diaec. p. 30), that it derived its name from the use to which it was put, namely, from being the ancient cattle-market; and it would appear from the inscription on the Arcus Argentaritus before alluded to that this traffic still subsisted in the third century. The Forum Boarium was rich in temples and monuments of the ancient times. Amongst the most famous were those of Hercules, Fortuna, and Mater Matuta; but unfortunately the positions of them are not very precisely indicated. There seems to have been more than one Temple of Hercules in this district, since the notices which we meet with on the subject cannot possibly be all referred to the same temple. The most ancient and important one must have been that connected with the Magna Ara Herculis, which tradition represented as having been founded by Evander. ("Et magna ara famunque, quae praestant Hercall Aras Evander sacra vetur," Tac. Ann. 37. 41; cf. Ib. xii. 24; Solin. i. 10.) This appears to have been the Hercules styled triumphalis, whose statue, during the celebration of triumphs, was clothed in the costume of a triumphant general; since a passage in Pline connects it with that consecrated by Evander. ("Hercules ab Evandro sacra tur produst, in Foro Boario, qui triumphalis vocatur atque per triumphos vestitatur habitu triumphali," xxxiv. 16.) It was probably this temple of Hercules into which it was said that neither dogs nor flies could find admittance (ib. xiv. 41; Solin. i. 10), and which was adorned with a painting by Pacuvius the poet (Plin. xxxvii. 7). A Round Temple of Hercules also in the Forum Boarium, seems to have been distinct from this, since Livy (x. 23) applies apparently the epithet "rotundula" to it, in order to distinguish it from the other. ("Insignem supplicationem fecit certamen in sacello Pudicitiae Patriconis, quae in Foro Borio est ad aedem rotundam Herculis, inter matronas orutum.") Caninia (Indicazione, p. 338) assumes from this passage that the temple to which it refers must have been in existence at the time of the contests alluded to, namely, n. c. 287; but this, though a probable inference, is by no means an absolutely necessary one, since Livy may be merely indicating the locality as it existed in his own time. The former of these temples, or that of Hercules Triumphalis, seems to be the one mentioned by Macrobius (Sat. iii. 6) under the name of Hercules Victor; and it appears from the same passage that there was another with the same appellation, though probably of less importance, at the Porta Trigemina. Besides these we hear of a "Herculis Invictus" by the Circus Maximus (Fast. Annu.; Prid. Id. Aug.), and of another at the same place "in aedibus Pompeii Magni" (Plin. xxxiv. 8. 57), which seems to refer to some Aedes Herculis built or restored by Pompey, though we hear nothing more of any such temple. Hence there would appear to have been three or four temples of Hercules in the Forum Boarium. The conjecture of Becker seems not improbable that the remains of a round temple now existing at the church of S. Maria del Sols, commonly supposed to have belonged to a

TEMPLE OF HERCULES.
could not have been the same as that with which Canina identifies it, which, as Livy expressly says, was "extra urbem" (Carmentalem (xxxv. 7)). The site of the temple of Fortuna Virilis cannot be determined, and Bunsen (l. c.) denies that there was any such temple: but it seems probable from the passage of Ovid referred to above that there was one, or at all events an altar; and Plutarch (Quaest. Rom. 74) mentions a Τέχνης Ἀρπαγώς ἱερόν. On the other hand, there seem to have been fewer than three temples of Fortuna on the right bank of the Tiber. First, that built by Servius Tullius, described by Varro as "extra Urbem secundum Tiberim." Second, another built close that of Servius by the consul Sp. Carvilius Maximus (n. c. 293): "De reliqua nec aedem Fortis Fortunae de manubis fociendam locavit, prope aedem ejus Deae ab orae Servi tulli dedicatam." (Livy. x. 46.) Third, another dedicated under Tiberius (a. D. 16) near the Tiber in the gardens of Caesar, and hence, of course, on the right bank of the river: "Aulis Fortis Fortunae, Tiberin juxtapa, in hortis quos Caesar dictator populo Romano legaverat." (Tac. Ann. ii. 41.) That the Horti Caesares were on the right bank of the Tiber we know from Horace (S. i. 9. 18) and Plutarch, (Brut. 20.) The temple built by Servius must also have been on the right bank, as it seems to be referred to in the following passage of Dionysius: "For Fortuna est cujus dixim festum coluit qui sine arte aliqua vivunt: hujus aedes trans Tiberim est" (ad Terent. Phorm. v. 6. 1.) The same thing may be inferred from the Fasti Amulevini: "Forti Fortunae Transtiber. ad Militiar. Prim. et Sextum." (IV. I. Kal. Jul.) The temple in the gardens of Caesar seems here to be alluded to as at the distance of one mile from the city, whilst that of Servius, and the neighbouring one erected by Carvilius appear to have been at a distance of six miles. But this need not excite our suspicion. There are other instances of temples lying at a considerable distance from Rome, as that of Fortuna Muliebris at the fourth milestone on the Via Latina. (Fast. v. 542: cf. Val. Max. i. 8. § 4, v. 2. § 1; Liv. ii. 40. &c.) It would appear, too, to have been some way down the river, as it was customary to repair thither in boats, and to employ the time of the voyage in drinking (Fast. vi. 777:)-

"Pars pedes, pars etiam celeri decruntur cymba"

Nec pudgeat potos inde redire domum.

Forte coronatae juvenum convivia linctres
Multaque per medias vias libantur aquas.

We have entered at more length into this subject than its importance may perhaps seem to demand, because the elegant remains of the temple now forming the Armenian church of S. Maria Egiziaca cannot fail to attract the notice of every admirer of classical antiquity that visits Rome. We trust we have shown that it could not possibly have been the temple of Fortuna Virilis, as assumed by Canina and others. The assumption that the neighbouring round temple was that of Mater Matuta may perhaps be considered as disproved at the same time. The only grounds for that assumption seem to be its vicinity to the supposed temple of Fortuna Virilis. Livy's description (xxxiii. 27) of the two triumphal arches erected in the Forum Boarium before the two temples appearing to indicate that they lay close together.

With regard to the probability of this little church
having been the temple of Pudicitia Patricia, it might be objected that there was in fact no such temple, and that we are to assume only a statue with an altar (Sachse, Gesch. d. S. Rom. i. p. 365). Yet, as Becker remarks (Handb. p. 480, note 100), Livy himself (x. 29) not only calls it a sacerdum, a name often applied to small temples, but even in the same chapter designates it as a templum (“Quam se Virginia, et patriciam et pudicum in Patriciae Pudicetiae templum ingressum vero gloriaretur”); and Propertius (ii. 6. 25) also uses the same appellation with regard to it. On the other hand some have fixed on S. Maria in Comenida as the site of this temple, but with little appearance of probability. Becker seeks in the church just named the temple of Fortuna built by Servius Tullius in the Forum Boarium. The church appears to have been erected on the remains of a considerable temple, of which eight columns are still perceptible, built into the walls. This opinion may be as probable as any other on the subject; but as on the one hand, from our utter ignorance of the site of the temple, we are unable to refute it, so on the other we must confess that Becker’s long and laboured argument on the subject is far from being convincing (Handb. p. 481, seq.). The site of the Temple of Mater Matuta is equally uncertain. All that we know about it is that it was founded by Servius Tullius, and restored by Camillus after the conquest of Veii (Liv. v. 17), and that it lay somewhere on the Forum Boarium (Ovid, Fast. vi. 471). If we were inclined to conjecture, we should place both it and the temple of Fortuna near the northern boundary of that forum; as Livy’s description of the ravages occasioned by the fire in that quarter seems to indicate that they lay at no great distance within the Porta Carmentalis (xxiv. 47, xxv. 7). The later history of both these temples is unknown.

In the Forum Boarium, near the mouth of the Cloaca Maxima, was also the place called Dolioa, mentioned in the former part of this article as regarded with religious awe on account of some sacred relics having been buried there, either during the attack of the Gaurs, or at a still more ancient period. (Liv. v. 40; Varr. L.L. v. § 157, Mill.) When the Tiber is low, the mouth of the Cloaca Maxima may be seen from the newly erected iron bridge connecting the Ponte Rotto with the left bank. The place called Ad Rusta Gallica where it is said that the bodies of the Gauls were burnt who died during or after the siege of the Capitol, has also been assumed to have been in this neighbourhood because it is mentioned by Varro (Ib.) between the Aequinimilum and the Dolioa (cf. Liv. v. 48, xxii. 14). But such an assumption is altogether arbitrary, as Varro follows no topographical order in naming places. Lastly, we shall mention two objects named in the Notitia, which seem to have stood on the Forum Boarium. These are the Apollo Coelisvex, and the Hercules Olivarics, apparently two of those statues which Augustus dedicated in the different Vicus. Becker (Handb. p. 493) places them in the Velabrum, and thinks that the epithet of Olivarics was derived from the oil-market, which was established in the Velabrum (Plant. Capt. iii. 1. 29), but it seems more probable that it denoted the crown of olive worn by Hercules as Victor (Pfeller, Regionen, p. 194). The Forum Boarium was especially devoted to the worship of Hercules, whence it seems probable that his statue stood there; besides both that and the Apollo are mentioned in the Notitia in coming from the Porta Trigemina, before the Velabrum.

Before we quit the Forum Boarium we must advert to a barbarous custom of which it appears to have been the scene even to a late period of Roman history. Livy relates that after the battle of Cannae a Gallic man and woman and a Greek man and woman were, in accordance with the commands of the Sibylline books, buried alive in a stone sepulchre constructed in the middle of the Forum Boarium, and that this was not the first time that this barbarous and un-Roman custom had been practised (xxii. 57). Dion Cassius adverts to the same instance in the time of Fabius Maximus Verrucosus (Fr. Taces. 12), and Pliny mentions another which had occurred even in his own time (“Boario vero in foro Graecorum Graecamque defossas, aut aliarum gentium, cum quibus tum res esset, etiam nostra aetas vidit,” xxviii. 3; cf. Phl. Q. R. 83). It may also be remarked that the first exhibition
A comparison of this passage with Livy, "aedes Mercurii dedicata est Iudibus Muinis" (ii. 21), shows that the same ancient sanctuary is alluded to, the dedication of which caused a dispute between the consuls, B. C. 495 (Ib. c. 27). We next find mentioned in the Notitia an Aedes Mathis Decum, and another of Jovis Aenobotii, for which we should probably read "Liberatorius." The Magna Mater was one of the Circensian divinities. Her image was exhibited on the spina (Tert. Spec. 8), and it would appear that she had also a temple in the vicinage. Of a temple of Jupiter Liberator we know nothing further, though Jove was certainly worshipped at Rome under that name (Tac. Ann. xvi. 64, xvi. 35), and games celebrated in his honour in the month of October. (Calend. Vindob. ap. Preller, Reg. p. 192.)

Next to these an Aedes Diis Patris is named in the Notitia, but does not appear in the Curium. Some writers would identify Dispar with Semmanus, quasi Summanus Maniun (v. Gruter, MXV. 7; Mart. Capell. i. 161); but there was a great difference of opinion respecting this old Sabine god, and even the Romans themselves could not tell precisely who he was. Thus Ovid (Fast. vi. 725):—

"Reddita, quisquis est, Summano templum feruntur
Tunc cum Romanis, Pyrrhe, timidendus eras."

The temple to him here alluded to was, however, certainly near the Circus Maximus, since Pliny mentions some annual sacrifices of dogs as made "inter aedem Juventatis et Summani" (xix. 4); and that the Temple of Juventas was at the Circus Maximus we learn from Livy: "Juventatis aedem in Circo Maximo C. Lucinianus Lucullus triplici dedicavit" (xxxvii. 36): cf. Calend. Amerit. XII. Kol. Jul. 4: "Summano ad Circ. Max. 7."
The temple of Summanus, therefore, must have been dedicated during the war with Pyrrhus, and that of Juventas in B. C. 192.

Close to the W. extremity of the circus, and towering as it were over the carreces, from its being built apparently on the slope of the Aventine (impot aenariis hauemus tâ sub seies, Dionys. vi. 94), stood a famous Temple of Ceris, dedicated also to Liber and Libera. Thus Tactius, relating the dedication of the temple by Tiberius, it having been restored by Augustus, says: "Libero, Libernique et Cereiri, juxta Circus Maximum, quam A. Postumius dian. tocovet (dedicavit)" (Ann. ii. 49). It is mentioned by other writers as "ad Circum Maximum"; whence Canina's identification of it with the church of S. Maria in Cosmedin seems improbable (Indice).
Hence it was probably the same ancient sanctuary, called "Minervium" in the sacred books of the Argives, which lay on the northern declivity of the Caelian towards the Tabernula ("Circa Minerviam aqua et Caelio monte ibi in Tabernum est," Varr. L. L. v. § 47), and probably near the modern street Via della Navecella.

The most considerable building known on the Caelian in later times was the Temple of Divus Claudius, begun by Agrippina, destroyed by Nero, and restored by Vespasian. (Suet. Tosp. 9; Aur. Vict. Caez. 9.) The determination of its site depends on the question how far Nero conducted the Aqua Claudia along the Caelius, since we learn from Frontinus that the arches of that aqueduct terminated at the temple in question. (Front. Ap. 20, 76.) These Arcus Neromiani (also called Caelimontani, Gruter, Inscr. clxxviii. 3) extend along the ridge of the narrow hill, supposed to be the Caeliolus, from the Porta Maggiore to the Sauta Scala opposite the Lateran, where they are interrupted by the piazza and buildings belonging to that basilica. They recommence, however, on the other side in the Via di S. Stefano Rotondo, and proceed with a small gap as far as that church. There are further traces of them on the W. side of the arch of Dolabella; and the opinion of Canina seems probable enough, that they terminated near the garden of the convent of SS. Giovanni e Paolo, and that the remains of a huge substruction at this spot belonged to the temple of Claudius. (Indicez. p. 73, seq.) Canina is further of opinion that the Aqua Claudia was distributed a little beyond this spot, and that one of the uses to which it was applied by Nero was to replenish his lake, which occupied the site of the Flavian amphitheatre. Others, however, are of opinion that the aqueduct did not proceed beyond the church of S. Stefano Rotondo, and therefore that the temple of Claudius stood near that spot, or that the church may even have been built on its foundations. But there are no sufficient grounds for arriving at any satisfactory conclusion on these points, and altogether the view of Canina is perhaps the more probable one.

The Arch of Dolabella, just alluded to, appears from the inscription on it to have been erected in the consublish of Dolabella and Silanus, A. D. 10. Its destination has been the subject of various conjectures. Some have imagined it to be a restoration of the Porta Caelfimontana; but this can hardly be the case, since, if the Servian wall had run in this direction, half of the Caelian hill would have been shut out of the city. On the other hand, its appearance excludes the notion of a triumphal arch; and it could not originally have formed part of an aqueduct, since it was erected previously to the construction of the Aqua Claudia. It seems most probable therefore that it was designed as an entrance to some public place; but there are appearances that Nero subsequently conducted his aqueduct over it. (Canina, Indicez. p. 77.) The road which led up to it from the Via di S. Gregorio seems in ancient times to have been called Clivus Scavius. It is mentioned under that name in the Epitelles of S. Gregory (vii. 13), and the Anonymous Emsielienis calls it Clivus Tauri, which is probably a scribe's error.

Next to the temple of Claudius, the Notitia mentions a Macellum Magnum, probably the market recorded by Dion Cassius as founded by Nero (τὸν άγορὰν τῶν σφίν, τὸ μακέλλον ἀναπαύσιν, κα-
The Castra Peregrina recorded in the Notitia are not mentioned by any author except Ammianus Marcellinus, who relates that Chnodamar, when conquered by Julian, was conducted to and died in this camp on the Caelian (xvi. 12, extr.) The name, however, occurs in inscriptions, and sometimes in connection with a temple of Jupiter Redux, as in that found in the church of S. Maria in Domnica (Gruter, xxii. 3; Orb. 1236). These inscriptions also mention a Principe Peregrinorum, the nature of whose office we are unacquainted with; but it seems probable that he was the commander of the foreign troops stationed in this camp. Near the same church were found several little marble ships, apparently votive offerings, and one which stood a long while before it gave to the church and to the surrounding place the name of detta Navicella.

An ILSM, or temple of Isis, is mentioned by Treb. Pollio (XXX. Tyr. 25) on the Caelian, but it occurs nowhere else. It was probably one of the many temples erected to this goddess by Caracalla (Lampr. Cesar. 9). The spring called the Aqua Mercell on recorded by Ovid near the Porta Capena (Fasti, v. 673) was rediscovered by M. Fea in 1828, in the vigna of the Padrini Camaldolenses of S. Gregorio. On the Caelian was also the Campus Martialis in which the Eupiria were held in March, in case the Campus Martius was overflown (Ovid, Fast. v. 673; Paul. Dia. p. 161). Its situation rests chiefly on conjecture; but it was probably near the Lateran; where the neighbouring church of S. Gregorio, now S. Maria Immaculata, was called in the middle ages “in Campo Martio” (Caenia, Indicazioni, p. 84).

In the Imperial times the Caelian was the residence of many distinguished Romans; and it is here that Martial places the “limina potentiuram” (xii. 8). We have already had occasion to allude to the House of Claudius Centumalis on this hill, which was of such an extraordinary height that the augurs commanded him to lower it; but this was during the Republic. Under the Empire we may mention the House of Manilia, a Roman knight of Portine, and praefectus fabrum of Caesar in his Gallic wars, the splendour of which is described by Piny (xiii. 7), and impounded by Catullus (xii. 4). Here also was the House of Annia Verus, the grandfather of Marcus Aurelius, in which that emperor was educated, situated near the house of the Laterani (Jul. Capitol. M. Ant. 1). It appears to have been surrounded with curvae; and according to the Italian writer Vaceca (Memor. 18) the noble eques-

- trian statue of Marcus Aurelius which now adorns the Capitol was discovered in a vineyard near the Scala Saeclorum. The same hill were the Aedes Victi-

- lianae where Commodus sought refuge from the uneasy thoughts which tormented him in the palace, but where he could not escape the snare of the assassin (Lampr. Comm. 16; Jul. Capitol. Port. 5). But the most remarkable of all these residences was the Palast of the Laterani, characterized by Juvenal (x. 18) as the “ egregious Lateranorum aedes,” the residence of the consul Plautus Lateranus, whose participation in Piso’s conspiracy against Nero cost him his life (Tac. Ann. xii. 49, 60). After this event the palace of the Laterani seems to have been confiscated, and to have become imperial property, since we find Septimius Severus presenting it to his friend Lateranus, probably a descendant of the family to which it had once belonged (Aur. Vict. Epit. 20).

- Subsequently, however, it appears to have been in the possession of the emperor Constantine, who erected upon its site the celebrated basilica which still bears the name of the Lateran, and presented it to the bishop of Rome (Niccbp. vii. 49). The identity of the spot is proved by several inscriptions found there, as well as by the discovery of chambers and baths in making the facade of the modern basilica (Veniui, Roma. Ant. p. 1, 2; Venuti, Roma. 11. 5). The Domus Philippa mentioned in the Notitia was probably the private house of the emperor of that name. Lastly, we may mention that on the Caelian was the House of Symmachus, the strenuous defender of paganism in the reign of Valentinian (Symm. Epit. iii. 12, 88, vii. 18, 19).

- There are a few other objects on the Caelian mentioned in the Notitia, some of which, however, hardly admit of explanation. Such is the Arium or Antium Cyclops, respecting which we cannot say whether it was a cavern, or an area surrounded with portices. Whatever it was it seems to have stood on the S. side of the hill, since the vicus Ab Cyclops in the 1st Region, or Porta Capena, was probably named after it (Preller, Reg. p. 119). The Caput Africac of the Notitia, which likewise appears in several inscriptions (Orell. 2685, 2934, 2935), is thought to have been a street in the neighbourhood of the Colosseum, since the Anonymous Eismoldienses mentions it between the Meta Sudans and the church of SS. Quattro Coronati; whence it is held to have corresponded with the modern street which bears the name of that church (Nibby, Mura di Roma, p. 173, note 140; Umbre, Roma. Topogr. p. 101).

- Becker observes (Handb. p. 508), that the name does not appear in any earlier writer, and connects it with some building founded by Septimius Severus, in order to strike his countrymen, the Africans, who arrived at Rome by the Via Appia; though, as Umbre observes, they must have gone rather out of their way “to be imposed upon.” Varro mentions a Vicus Africac on the Esquiline, so named because the African hostages in the Punic War were said to have been detained there (“Exquisit vicus Africus, quod ibi obsides ex Africa bello Punico dicitur custodia.” L. L. v. § 139). Hence it is very probable, as Umbre remarks (Indicazioni, p. 91), that the head, or beginning, of this street stood at the spot indicated by the Anonymous, namely, near the Colosseum, whence it ran up in the direction of the Esquiline, although Becker (Handb. p. 560) denies that the Caput Africac had any connection with the Vicus Africac. The Altor Sancta is inexplicable.
The Lupus Matutinus et Gallicus (or Dacicus), the Spoliarium, Sanitarium, and Armamentarium, were evidently gladiatorial schools with their apparatuses, situated apparently on the northern side of the Caesian, not far from the amphitheatre. Officers attached to these institutions are frequently mentioned in inscriptions. The Spoliarium and Armamentarium speak for themselves. The Sanitarium is a word that does not occur elsewhere, and is thought by Preller to denote a hospital (cæsarea) where the wounded gladiators were received. For a further account of these institutions see Preller, Regimen, pp. 120—122. Lastly, the Mica Aurea appears from an epigram of Martial's to have been a banqueting room of Domitian's (ii. 59):—

"Mica vocor; quid sim cernee; coenaet parva.\nEx me Caesarum prosperis, ecce, thalamum."

It is also mentioned, along with the Meta Sudans, as built by Domitian in the Chronica Regia Coloniae, in Eaccard's Corpus Historiarum (vol. i. p. 745.)

X. The District to the S. of the Caesian.

To the S. of the Caesian lies a somewhat hilly district, bounded on the W. by the Aventine, and comprehending the 1st and 12th Regions of Augustus, or those called Porta Capena and Piscina Publica. The latter of these is decidedly the least important district of Rome, but the former presents several objects of considerable interest. Of the Porta Capena itself we have already treated. In its immediate vicinity stood the double Temple of Cacus and Virtus, vowed by Marcellus in his Gallic wars, but not erected till after his conquest of Syracuse. It was the first intention of Marcellus that both the deities should be under the same roof; and, indeed, the temple seems to have been a mere restitution of an ancient one dedicated to Honos by Q. Fabius Verrucosus many years before. (Cic. N. D. ii. 23.) But when Marcellus was about to dedicate it, and to introduce the statue of another deity within the sanctuary, the pontifices interposed, and forbade him to do so, on the ground that the processus, or expiration of any pious vow on the site, as was thought, would be difficult to perform. (Liv. xxvii. 25.) Hence, Marcellus was constrained to add another temple of Virtus, and to erect statues of the deities "separatis aedibus;" but though the work was pressed on in haste, he did not live to dedicate them. (Liv. i. c.; Val. Max. i. l. § 8) Nevertheless, we frequently find the temple mentioned in the singular number, as if it had formed only one building ("ad aedem Honoris atque Virtutis," Cic. Verr. iv. 54; cf. Ascon. ad Cic. in Pia, 19; also the Notitia et Curiosus.) Hence, perhaps, the most natural explanation is that it consisted of two cellae under the same roof, like the temple of Venus and Rome, a form which agrees with the description of Synnachus:—"Majores nostri—aedes Honori ac Virtutii gemella facie jactant currum." (Epist. i. 21.) The temple was adored with the spoils of Grecian art brought by Marcellus from Syracuse; an instance noted and condemned by Livy as the first of that kind of spoilation, which he observes was subsequently inflicted upon the Roman temples themselves, and especially upon this very temple of Marcellus; for, in Livy's time, few of the monuments of those, which had previously rendered it an object of attraction to all strangers who visited Rome (xxv. 40, cf. xxxiv. 4.), they probably disappeared during the Civil Wars, in which the Roman temples seem to have suffered both from neglect and spoliation; for in the time of Cicero the Syracusan spoils still existed in the temple (in Verr. iv. 54). It appears to have been burnt in the fire of Nero, since it is mentioned as having been restored by Vespasian. (Flin. xxxv. 37.)

According to Aurelius Victor (Vitr. III. 32) the annual procession of the Roman knights to the temple of Castor started from this temple of Honos and Virtus, whereas Dionysius (xi. 13) names the temple of Mars as the starting-place. Becker (Handb. p. 311) regards the discrepancy between these accounts as tending to prove the correctness of his assumption that the temples must have lain close together. That one of the accounts is erroneous is a more probable conclusion, and it is a certain one that it is fallacious to draw any topographical deductions from such very shadowy premises. The true site of the Temple of Mars has been ascertained as satisfactorily as that of any of the monuments which do not actually speak for themselves; such, we mean, as the Colosseum, Trajan's column, the Pantheon, and others of the like description. There can be no doubt that the temple of Mars, instead of being close to the Porta Capena, or at S. Sisto, as Becker places it (Handb. p. 513), lay on the Via Appia, at the distance of about 1½ miles from that gate. The proofs are overwhelming. In the first place an inscription, still preserved in the Vatican, recording the leveling of the Clivus Mars, was found in the Vigna Nari, outside of the Porta Appia (the modern S. Sebastiano). Secondly, another inscription, in the Palazzo Barberini, recorded by Fabretti (Inscr. p. 724, no. 443), Marini (Protr. Arr. p. 8), and testifies that Salvia Marcella gave a piece of ground to the Collegium of Arcesilaus and Hygia for a small temple, close to the temple of Mars, between the first and second milestone on the Via Appia, on the left-hand side in going from the city. Thirdly, both the Notitia and Curiosus place the Aedes Marsi at the extremity of the first legio, close to the Flumen Almonus. The Appia flows outside the Porta Appia, near the Vigna Nari:—

"Est locus ante urbem, qua primum nascitur ingens Appia, quaque Itale genitus Aline Cybele.\nToni, et Idasem jam nec reminiscitur annos."

(Stat. Silv. v. i. 222.)

A brook now flows between the Porta S. Sebastiano and the church of Domine quo vade, which, with great probability, has been identified with the Alno. (Chalc. Ital. Ant. p. 178; Weitzel, Röm. Campagna, p. 17.) Fourthly, the same locality is indicated by several documents of the middle ages. Thus, in the Acts of the Martyrs:—"Tunc B. Stephanius ducatus a mulitibus foras murus Appiae portae ad T. Martis" (Act of S. Stephanius and S. Julius). "Dianones duexuent in circum Martis ante templum et ibidem decollatus est" (Act of S. Sixtus). And the Mirabilia (in Mostfaucon, Décr. Ital. p. 283):—

"Hae sunt loca qua vienimuntur in passionibus sanctorum foris portam Appiam, ubi beatus Syrus decollatus fuit, et ubi Dominus apparuit Petro, Domine quo vade. Hui templum Martis, inter portam, arces Syraeae." Now, the passages in the classics which relate to the subject do not run counter to these indications, but, on the contrary,
tend to confirm them. Appian (B. C. iii. 41) mentions a temple of Mars 15 stadia distant from the city, which would answer pretty nearly to the distance of between 1 and 2 miles given in the inscription quoted. Ovid says (Fasti, vi. 191): —

"Lux eadem Marti festa est; quem proxim vacant
Appustum tecta Porta Capena vae;"

The word prospicet denotes a long view; and as the temple of Mars stood on a hill, as is evident from the Clivus Martis, it might easily be visible at the distance of a mile or two. The words of Statius ("qua primum mortuar," &c.) must be corrupt, being both topographical and contrary to fact. The paxing of the road from the Porta Capena to the temple would not have been worth twice recording by Livy, had it lain only at a distance of some 300 yards (s. 23, xxxvii. 28). The only way in which Becker can escape from the legitimate conclusion is by assuming two temples of Mars in this quarter; in which few, we suspect, will be inclined to follow him, and which may be regarded as equivalent to a confession of defeat. (Becker, Hanlob, p. 511, seq.; Ancor, p. 63, seq.; Urlich, Rom. Topogr. p. 105, seq.; Preller, Regionen, p. 116, seq.; Canina, Indicaciones, p. 56, seq.)

Close to the Porta Capena and the temple of Honos et Virts lay the VALLEY OF EGERIA with the LUCUS AND AEDES CAMEEUM, the traditional spot where Numa sought inspiration and wisdom from the nymph Egeria. (Liv. i. 21; Plut. Num. 13.) In the time of Juvenal, whose description of the spot is a locus classicus for its topography, the grove and temple had been profaned and let out to the Jews: —

"Substitit ad veteres arcas madidumque Capennam
Hic ait nocturna Numa constituebat amicac.
Nunc sacri fontis nemus et delubra locantur
Judaeis, quorum ephorna foemumque supellex.
Omnis enim populo mecedo pendere jussa est
Arte, eaque his mendacis silentia Camena.
In vallem Egeriae descendimus et spemnaciu
Dissimiles veris. Quanto praestantius esse
Nunus aquae: viridi si margine clauderet
undas
Herba, nec ingenium violent murmur topham."

(Sot. iii. 10, seq.)

It is surprising how Becker could doubt that there was an Aedes Camenarum here, since it is not only alluded to in the preceding passage, but also expressly mentioned by Pliny (xxxiv. 10.) The modern Ciceroni point out to the traveller as the valley of Egeria a pretty retired spot some distance outside of the Porta S. Sebastian, in the valley called La Caffarella, near which are the remains of a little temple, called by some the temple of Honos et Virtus, by others a temple of Bacchus, with a grove said to be sacred to the latter deity. But though at present our imagination would more gladly fix on this spot as the scene of the conferences between Numa and his nymph, and though respectable authorities are not wanting in favour of this view (Venuitt, Descr. di Rom. ii. p. 18; Guattani, Rom. Descr. ii. p. 45), yet the preceding passages, to which may be added Symmachus ("Sed enim proper eam (aedes Honoris et Virtutis) Camenarum religio sacro fonti adventurit," Epist. i. 21) and the Notitia, which places the temple of the Camene

close to that of Honour and Valour, are too decisive to allow us to do so; and we must therefore assume the valley of Egeria to have been that near the church of S. Sisto, opposite to the baths of Caracalla. The little fountain pointed out as that of Egeria in the valley Caffarella, is perhaps the remains of a nymphaeum. Here was probably a sanctuary of the Almo, which waters the valley.

Near the temple of Mars, since it is mentioned in the Notitia in conjunction with it, lay the TEMPLE OF TEMPESTAS, built by L. Cornelius Scipio, the victor of Alesia, in commemoration of the escape of the Roman fleet from shipwreck off the island of Corsica, as appears from the inscription on his tomb. The temple and the occasion of its foundation are alluded to by Ovid (Fasti, vi. 193) in the following lines:

"Te quoque, Tempestas, meritus delubra fata
Cum pene est Coris Colls aquis aquae."

But at the Temple of MINERVA, also mentioned at the same time with that of Mars, we know nothing more. Near the last was preserved the LAPIs MANALIS, a large cylindrical stone so called from manare, "to flow," because during seasons of drought it was carried in procession into the city, for the sake of procuring rain. (Paul. Diae, p. 128; Varri. ap. Non. x.v. p. 375, Geil.)

Close to the Porta Capena, and probably outside of it, lay one of the three SENACULA mentioned by Festus; but the only time at which we find meetings of the senate recorded there is during the year following the battle of Canna, when they appear to have been regularly held at this place. (Liv. xiii. 32.) During the same period the tribunal of the praetor was erected at the PISCINA PUBLICA. This last object, which seems to have been a swimming-place for the people in the Republican times (Festus, p. 213), gave name to the 12th Regio, which adjoined the 1st, or that of Porta Capena, on the W. (Amm. Marc. xvii. 4: cf. Cic. ad Quint, Fr. iii. 7.)

The pond had, however, vanished in the time of Festus, and its exact situation cannot be determined. There are several other objects in this district in the like predicament, such as the LACUS PROMETHEI, the BALNEUM TIBERI, and others mentioned in the Notitia. The Thermae Communitae and Severianae will be considered under the section which treats of the thermae. The MUTATORII CAESARIS, perhaps a kind of imperial villa (Preller, Reg. p. 115), appears to have been situated near the modern church of S. Balbano. (Montefusco, ap. Urlich, Rom. Topogr. p. 112.) The three TRIUMPHAL ARCHES OF TRAJAN, VERUS, AND DRUSUS, mentioned by the Notitia in the 1 Regio, probably spanned the Via Appia in the space between the temple of Mars and the Porta Capena. The arch still existing just within the Porta S. Sebastian is generally thought to be that of Drusus, the father of the emperor Claudius. ("Pratera Senatus, inter alia complura, marmoreum arcum cum tropaeis via Appia decravit (Drusus)," Suet. Claud. 1.)

For many miles the tombs of distinguished Romans skirt both sides of the Via Appia; and these remains are perhaps better calculated than any other object to impress the stranger with an adequate idea of Rome's former greatness. For the most part, however, they lie beyond the bounds of the present subject, and we shall therefore content ourselves
with mentioning a few which were contained within the actual boundaries of the city. They appear to have commenced immediately outside the Porta Capena ("In egressum porta Capena, cum Catilini, Scribonium, Serviliorum, Metellorum sepulcrum, vidisse, miseror putas illos?" Cic. Tusc. i. 7); and hence many of them were included in the larger circuit of the walls of Aurelian. The tomb of Horatius, slain by the hand of her victorious brother, seems to have been situated just outside the gate. (Liv. i. 26.) Fortunately the most interesting of those mentioned by Cicero—the Tomb of the Scipios—is still in existence. It was discovered in 1780 in the Vigna Sasai, on the left-hand side of the Via Appia, a little beyond the spot where the Via Latina branches off from it, and about 400 paces within the Porta S. Sebastiano. Its entrance is marked by a single tall cypress tree. In Livy's time the tomb was still adorned with three statues, said to be those of Publius and Lucius Scipio, and of the poet Ennius, who was interred in the sepulchre of his patrons. (Hieron. Chron. p. 379, Ronc.) It was here that the sarcophagus of L. Scipio Barbatus, consul in B C. 298, now preserved in the Vatican, was discovered, together with several monumental stones with inscriptions relating to other members of the family, or to their connections and freedmen. The originals were carried off to the Vatican and copies inserted in their stead. The most remarkable of these inscriptions are that of Scipio Barbatus; of his son Lucius Cornelius Scipio, the conqueror of Carthage, consul in B C. 259; of Publius Scipio, son of Africanus Major, whose feebly state of health is alluded to by Cicero (Cato Maj. 11), and whose touching epitaph shows that he died young; of L. Cornelius Scipio, grandson of the conqueror of Spain, gathered to his fathers at the early age of 20; and of another of the same name, the son of Asiaticus, who died aged 33, whose title to honour is summed up in the laconic words, "Pater regem Antoniolum subiect." A complete account of this tomb will be found in Visconti (Mon. degli Scipioni, Rom. 1785) and in the Beschreibung Roms (vol. iii. p. 612, seq.), where the various epitaphs are given.

Also on the left-hand side of the Via Appia in going from the Porta Capena was the Mausoleum of Septimus Severus, which he caused to be erected for himself in his lifetime, in imitation of his Septizonium, but probably on a reduced scale. (Spart. 7.) In the same neighbourhood are some of those COLUMBARIA, or subterranean chambers, which formed the common resting-places for the ashes of persons of a lower condition. One of these, not far from the tomb of the Scipios, is said to contain the remains of the couriers and domestics of the Caesars, from Julius to Nero. Among others there is an inscription to M. Valerius Orticus, with a bust. The walls, as well as a large pier in the middle, are hollowed throughout with vaulted recesses like large pigeon-holes,—whence the name,—in which are contained the ashes of the dead. The Mausoleum of Caecilia Metella, which stands on the Via Appia, about 2 miles outside the Porta S. Sebastiano, though it does not properly belong to our subject, demands, from the magnificence of its construction, as well as from Byron's well-known lines (Childe Harold, canto iv.), a passing word of notice here. The remaining part of the district, or that forming the 12th Regio, and lying to the W. of the Via Appia, does not present many monuments of interest. The most striking one, the Thermae Antoniniæ, or baths of Caracalla, will be spoken of under its proper head. We have already treated of the Bona Dea Subsaxanea and of the Isium. Close to the baths just mentioned Caracalla built the street called Nova Via, reckoned one of the handsomest in Rome. (Spart. Caroc. 2: Aur. Vict. Cæs. 21.) Respecting the Fortuna Mammosa, we know nothing more than that the Basilica Capitolina mentions a street of the same name in this neighbourhood. In the later period of the Empire this district appears to have contained several splendid palaces, as the Septem Domus Parthorum, the.
DOMUS CILONIS, and DOMUS CORNIFICIUM. The Domus Parthorium and Cilonis seem to have been some of those palaces erected by Septimius Severus, and presented to his friends. (Aur. Vict. Epit. 20.) Cilon is probably the same person mentioned by Dom (llxxvii. 4), Spartan (Carac. 3), and in the Digest (l. 12. 1, and 15. 4.) The Parthi seem to have been Parthian nobles, whom Severus brought with him to Rome, and of whose luxurious habits Tertullian has drawn a characteristic picture. (De Hab. Mal. 7.) The PRIVATA ADRIANI and the DOMUS CORNIFICIUM (Corinica) mentioned in the Notitia, lay doubtless close together. The former must have been the private residence of Hadrian, where M. Antoninus dwelt after his adoption by that emperor. (Jul. Capit. M. Anton. 5.) M. Antoninus had a younger sister named Anna Corinica, to whom the house bearing her name doubtless belonged. (ib. c. 1; Preller, Regionen, p. 198.)

XI. THE ESQUILENE AND ITS NEIGHBOURHOOD.

The Esquiline (Esquiline, or in a more ancient form Esquilinum) was originally covered with a thick wood, of which, in the time of Varro, the only remains were a few sacred groves of inconsiderable extent, the rest of the hill having been cleared and covered with buildings. (Varr. L. L. v. § 49, Mill.) Yet the derivation of the name of the hill from usqueculum seems to have been unknown to antiquity, and is a mere conjecture of Miller's (ad loc.); the ancient etymology being derived either from crusculum regis, because Servius Tullius had fixed his abode there, or from crusculum, because the hill was first cleared and settled by that king. (Varr. l. c.; Ov. Fast. iii. 245.)

We have already described the Esquiline as throwing out two tongues or projections, called respectively, in the more ancient times of Rome, OPTIUM and CISPIS. Their relative situation is indicated in the following passage of Festus: "Optium autem appellatus est, ut ait Varro rerum humanarum L. v. viii. ab Opta Optia Tuscudano, qui cum passus Tuoluminum missus ad Romanum petivit, dum Tullus Hostius Vero appinguaret, similem in Camius et ibi castum habuerat. Similitudinem a Laevio Cispio Anagnino, qui eum de causis eum partem Esquiliarum, qua jactat ad vicum Patricium versus, in qua regione est aedis Mefitis, tuitus est." (p. 348, Mill.) Hence we learn that the Cispium was that projection which adjoined the Vices Patricii, and must consequently have been the northern one, since the Vicus Patricius is known to have corresponded with the modern streets called Via Urbana and Via di S. Pudenziana, which traverse the valley lying between the Viminal and the Esquiline. The following passage of Paulus Diaconus shows that the Vices Patricii must have lain in a valley: "Vici Patricii vicus Romanus dictus est, quod ibi patricii habitatuentur, juvete Servio Tullio, ut si quid milisurur adversus ipsam, ex locis superioribus opprimeretur." (p. 221, Mill.) And its identity with the modern streets just mentioned appears from Anastasius (Vita P. l.): "Hic ex rogata beatae Prassedis dedicavit ecclesiam thermas Novatii in vico Patricii in honorem sororis sua sanctae Potentiniana." (p. 14.) This church of S. Pudenziana still exists in the street of the same name. It is also mentioned by the Anonymous of Einsiedlen, in whose time most of the streets still bore their ancient names, as being "in vico Patricii." That the Cispium was the smaller and more northerly tongue likewise appears from the sacred books of the Argives (ap. Varr. L. L. v. § 50), which, in proceeding northwards from the Caecilian, first name the Oppius, which had four sacra or chapels, and then the Cispium, which, being the smaller hill, had only two, namely, the Lucas Postelius and the Aedes Junonis Luciniae.

From the passage of Festus just quoted, it appears that part of Mons Oppius bore the name of CARINAE; and this appellation continued to exist when the names Oppius and Cispium had fallen out of use and been superseded by the general name of Esquilinum. Yet it is one of the contested points of Roman toponomy whether the Carinae formed part of the hill. The Italians still cling to the ancient opinion that under that name was comprehended the low ground from the Forum Transitorium to the Colosseum. Becker (Hinath. p. 522, seq.) partly adopted this view, but at the same time...
extended the district so as to embrace the western extremity of the Oppius; whilst Urichs, on the contrary, confined the Carinae entirely to that hill. (Beschr. vol. iii. part ii. p. 119, seq.) That the Italian view is, at all events, partly erroneous, can hardly admit of a question. Besides the preceding passage of Festus, which clearly identifies the Carinae as part of the Oppius, there are no other places in ancient writers which show that a portion at least of the district so called lay on a height. Thus Dionysius, speaking of the Tigidium Sororium, says that it was situated in the lane which led down from the Carinae to the Vicus Cyrius (ētī δ' ἐν τῷ σταύρῳ τῷ φόρῳ ἀπὸ Καρίας κατά τοῖς έπί τούς Κυρίας ἐρμοῖς σταύρωσι, iii. 22.) Again Varro (L. L. v. § 48), in describing the Subura or valley at the foot of the Oppius, says that it lay "sub muro terre Carinarum;" obviously indicating that the latter place was on a height. Becker, indeed, maintains that walls of earth or augers were used in fortification only where the ground was level. But a wall on a height was certainly the usual mode of fortification in ancient Italy; and, as Mr. Burnbury justly remarks (Class. Mus. vol. v. p. 222), the peculiar appellation of "murus terrens" clearly distinguishes this wall from a common agger. Nor, as the Subura lay behind the gulf between the Esquiline and Quirinal, is it easy to see how any murus terrens in the district of the Carinae could have been so situated as to overlook the Subura, except upon the hill. The following words of Varro (l.c.) are even perhaps still more conclusive. He identifies the Subura with the Pagus Successanus,—the ancient name of Subura being Succensa, by an interchange of b and c,—and holds it was thus named "quo succurrer Carinam:" where, whatever we may think of his etymology, it is plain that he regarded the Carinae as a height. It may be added that the western part of the Oppius, where the church of S. Pietro in Vincoli now stands, bore the name of le Carre as late as the 16th century. (And. Fulvius, de urbris Romae Antiquae ii. 26; Granger, Roman Names, 4th ed., i. 28.) It cannot therefore be doubted that the Carinae occupied the extremity of the Oppius; but how far that district extended eastwards cannot be said. It is a more difficult question to determine whether part of the valley lying at the western foot of the hill also bore the name of Carinae. Its solution is connected with another question respecting the site of the Temple of Tellus. We know that this temple—which was a considerable one, since assemblies of the senate were sometimes held in it—lay in the Carinae, and that it was built on the site of the Campus of Cassius, which was consecrated and pulled down when that demagogue was convicted of a design to make himself sovereign of Rome. (Liv. ii. 41; Val. Max. vi. 3 § 1; Plin. xxxiv. 14.) That event took place B.C. 485; but the temple does not seem to have been built till B.C. 269. Its site is further determined by notices respecting the house of Pompey, which subsequently came into the possession of M. Antony, the situation of which is well known to have been in the Carinae, and at the same time close to the temple of Tellus: "Ducuit (Leu- nae) in Carinam, ad Telluris aedem, in quae regina Pompeiana fortasse fuerat." (Suet. Gai. vi. 56; cf. Id. Tib. 15; Vell. Pat. ii. 77; Aur. Vict. Vitr. iii. 84; Dion Cass. xlvii. 38.) And Servius says expressly, though in some respects unintelligibly, "Carinae sunt acediae facta in Carinarum medum, quae erant circa templum Telluris." (ad Aen. viii. 361.) There is nothing in the preceding passages to exclude the possibility of the Templum Telluris having been on the summit of the hill; since it is not necessary to assume with Urichs that it stood on its very edge (Rom. Topogr. p. 117); in which case, as there was sufficient room, its back front must have been turned towards the road leading up to it from the valley, and the area have lain before it on the summit of the hill—a disposition which does not appear very probable. Yet there are some other circumstances tending to the inference that the temple was situated in the valley. Dionysius mentions it as being, not in the Carinae, but on the road leading to the Carinae (κατά τὴν έπί τούς Κυρίας φόρων δίσευ, viii. 79.) A curious view, taken by Urichs (L.c.) of the construction of ἐως in this passage is one of the reasons which led him to place the temple on the hill. He thinks that it must necessarily mean "up to;" but it might just as well be said that it means "down to," in a passage quoted a little while ago from the same author respecting the situation of the Carinae and the Vicus Cyrius. In both cases it simply means "to." It will be perceived that Dionysius is here at variance with the authorities before quoted respecting the site of the temple. If the appellation of Carinae extended over some part of the adjacent valley it is possible that Dionysius, as a foreigner, might have been unaware of that fact, and have attached the name only to the more striking part of the district which lay on the hill. And there is a passage in Varro, a very obscure one indeed, from which it might be inferred that part of the Ceroleis, which seems to have been the name of the valley between the Caelian, the Esquiline, and the Velian ridge, had likewise borne the name of Carinae ("Ceroleis a Carinarum junctu dictus Carinae, postea Cerolia, quod hic erat caput Sacrae Vini," L.L. v. § 47.). These passages would seem to indicate that the temple of Tellus lay in the valley between S. Maria de' Monti and the Tor de' Conti, where indeed we find traces of the name; since the churches of S. Sabatino and of S. Pantaleone, the latter of which still exists near the Via del Colosseo, bore in the middle ages the epithet of "in Tellure." Passages are also adduced from the Acts of the Martyrs to show that the temple of Tellus stood opposite in that of Pallas in the Forum Transitorium. ("Clementianus praecipt ei caput amputari ante templum in Tellure, corporisque ejus projicte ante Palladis aedem in locum supradictum," Act. S. Girondi.) Hence it seems not improbable that the district of the Carinae, in which the temple undoubtedly stood, may have extended over a considerable part of the valley; but the passages relating to the subject are far from being decisive; and the question is one of that kind in which much may be said on both sides.

Two striking legends of early Roman history are connected with the Esquiline and its vicinity: that of the murder of Servius Tullius by his inhuman daughter, and that of the Tigillum Sororium, or typical yoke, by passing under which Horatius expiated the murder of his sister. We have before related that Servius Tullius resided on the Esquiline, and that he was the first to clear that hill and make it habitable. It was on his return to his residence on it, after his ejection from the curia by his son-in-law, Tarquinius Superbus, that he was murdered by the hirelings of that usurper. Livy's account of the
These objects are enumerated strictly in the order in which they actually followed one another. But we have already shown from Becker himself that this is by no means always the case, and it is evidently not so in the present instance; since, after mentioning the Tigillum Sororium, he winds up with the modern Via del Colosseo (Antworth, p. 78); although in that case, having arrived at the same spot where the Subura, the order of the catalogue leaves no spot and proceeds onwards to the Colosseum, and then again at the end of the list reverts to the Subura. The chief objection to placing the Vicus Cyrius under this side of the Oppius is, as Mr. Bunbury observes (Class. Mus. vol. v. p. 227), that it would thus seem to interfere with the Subura. But this objection is not urged either by Becker or Urlichs; and indeed the Subura, like the Velabrum, seems to have been a district rather than a street, so that we may conceive the Vicus Cyrius to have run through it.

The position of the Tigillum Sororium is determined by what has been already said; namely, in a narrow street leading down from the Caiariae to the Vicus Cyrius. It seems to have been a wooden beam erected across the street. As it is mentioned in the Notitia, this monument, connected with one of Rome's early legacies, must have existed down to the 5th century; and indeed Livy (i. 26) informs us that it was constantly repaired at the public expense. We learn from Dionysius (iii. 22) and Festus (p. 297, Mill.) that on each side of it stood an altar, one to Juno Sororia, the other to Janus Curialthus.

Having had occasion to mention the Subura, it may be as well to describe that celebrated locality before proceeding further with the topography of the Esquiline. We have already seen from Varro that it was one of the most ancient districts in Rome; and its importance may be inferred from its having given name to the 1st Servian Region. We have also alluded to a passage in the same author (L. L. v. § 48, Mill.) which shows it to have been originally a distinct village, called Succusus or Pagus Succusus, lying under the Caiariae. Varro adds, that the name still continued to the C. instead of a B; a statement which is confirmed by the fact that in inscriptions the Tribus Suburana is always denoted by the abridged form TIB. SCC.

(Cf. Festus, s. v. Subura, p. 309, Mill.; Quintil, Just. Or. i. 7. § 29; Mommsen, Die Rom. Tribus, p. 79, seq.) A piazzza or place under the church of S. Pietro in Vincoli still bears the name of Subura; and the church of S. Agata over the Via de Serpent is situated at the eastern foot of the Quirinal hill, where in the middle ages the name of "in Suburra" or "super Subura." Hence it seems probable that the Subura occupied the whole of the valley formed by the extremities of the Quirinal, Viminal, and Esquiline, and must consequently have been, not a street but, a region of some extent; as indeed we find it called by Gregory the Great in the 6th century ("in regione urbis illa quae Suburrah dicitur," Dial. iii. c. 30). But that it extended westward as far as the Forum Tauritorium, a supposition which seems to rest solely on the order of the names in the 4th Region of the Notitia, we can hardly conceive. We have shown that the district between the back of the imperial fora and the western extremity of the Esquiline hill would have formed part of the Caiariae; but it can hardly have been called both Caiariae and Subura. The latter seems to have properly begun at the point where the Quirinalis approaches the extremity of the and Oppus;
this seems to have been the spot called by Martial the primae faveus of the Subura (ii. 17):—

"Tomrrix Suburae faoeus sedet primis,
Crenita pentend qua flagella tortorum
Arigque letum multus obisid autor."

Juvenal (v. 106) represents the Cloaca Maxima as penetrating to the middle of the Subura, and this fact was established by excavations made in the year 1743. (Ficoroni, *Vestigia di Roma*, ap. Bubbary, *Clas. Mag.*, vol. v. p. 219.)

From its situation between the imperial fora and the eastern hills, the Subura must have been one of the most frequented thoroughfares in Rome; and hence we are not surprised to find many allusions to its dirt and noise. It was the peculiar aversion of Juvenal,—a man, indeed, of many aversions ("Ego vel Prochyttam praepone Suburam," *Sat.* iii. 5); a trait in his friend's character which had not escaped the notice of Martial (xii. 18):—

"Dum tu forsitan inquietus eras
Clamosa, Juvenalis, in Suburau."

The epithet clamava here probably refers to the cries of itinerant charmen: for we learn from other passages in Martial that the Subura was the chief place in which he used to market (viii. 31, x. 94, &c.; cf. *Juv.* xi. 136, seq.) It appears also to have been the abode of prostitutes (vi. 66; comp. Hor. *Epod.* v. 58). It was therefore what is commonly called a low neighbourhood; though some distinguished families seem to have resided in it, even Caesar himself in his early life (Suet. *Caes.* 46), and in the time of Martial, L. Arruntius Stellae *anno 94).* The Suburanenses, or inhabitants of the Subura, kept up to a late period some of the ancient customs which probably belonged to them when they formed a distinct village; especially an annual contest with the Sacravienses, or inhabitants of the Sacra Via, for the head of the horse sacrificed to Mars in the Campus Martius every October. If the Suburanenses gained the victory they fixed the head on a tower in the Subura called Terras Mamillia, whilst the Sacravienses, if successful, fixed it on the Regia. ( *Festus*, s. v. *October Egnat. P. 178, Milli; Paul. *Dist.* p. 131.)

Throughout the time of the Republic the Esquiline appears to have been by no means a favourite or fashionable place of residence. Part of it was occupied by the CAMPUS ESQUILINUS, a place used as a burying-ground, principally for the very lowest class of persons, such as paupers and slaves; whose bodies seem to have been frequently cast out and left to rot here without any covering of earth. But under the Empire, and especially the later period of it, many palaces were erected on the Esquiline. Maecenas was the first to improve it, and converting this field of death, and probably also part of the surrounding neighbourhood,—the pauper burial-ground itself appears to have been only 1000 feet long by 300 deep,—into an agreeable park or garden. Horace (S. i. 8. 14) mentions the laying out of these celebrated Horti Maecenatis:—

"Nane licet Esquilii habitare saburibus atque
Aggere in aperi spatia, quod modo tristes
Albis informem spectabant ossibus agrum."

It appears from these lines that the Campus Esquilinus adjoined the agger of Servius Tullius, which, by the making of these gardens, was converted into a cheerful promenade, from which people were no longer driven by the disgusting spectacle of mouldering bones. The Campus Esquilinus being a cemetery, must of course have been on the outside of the agger, since it was not lawful to bury within the pomerium; and Varro (L. L. v. § 25) mentions it as "ultra Exquilinas," by which he must mean the Servian Region so called, which was bounded by the agger. Its situation is also determined by a passage in Strabo (v. 4, p. 297), where the Via Fabricae, which issued from the Esquiline gate at the southern extremity of the agger, is said to leave the campus on the left. It appears to have also been the place of execution for slaves and ignoble criminals (Suet. *Cl. Claud.* 25; *Tac. Ann.* ii. 32. xv. 60; Plaut. *Milt.* ii. 4. 6, ed. Ritschl.). There does not seem to be any authority for Becker's assumption that the whole of the Esquiline outside of the Servian walls was called Campus Esquilibus (Haindl, p. 554), nor that after the laying out of the gardens of Maecenas the ancient place of execution was transferred to the Sessorium, near S. Croce in Gerusaleme. Part of the campus was the field given, as the scholar on Horace says, by some person as a burying-place. The Sessorium mentioned in the *Excerpta Valesiana de Odoacre* (69) was a palace; and though Theodoric ordered a traitor to be beheaded there it can hardly have been the ordinary place of execution for common malefactors. Besides the Sessorium mentioned by the scholars on Horace (*Epod.* v. 100, *Sat.* i. 8. 11) was close to the Esquiline gate, a full mile from S. Croce, and seems, therefore, to have been another name for the Campus Esquilibus, if the scholars are right in calling it Sessorium. The executions recorded in the passages before quoted from Suetonius and Tacitus took place long after the gardens of Maecenas were made; yet when Tacitus uses the words "extra Portam Esquiliminam," there can be no doubt that he means *just without the gate*. It would be a wrong conception of the Horti Maecenatis to imagine that they resembled a private garden, or even a gentleman's park. They were a common place of recreation for the Roman populace. Thus Juvenal describes the agger as the usual resort of fortune-tellers. (S. vi. 588.) We see from the description of Horace that not even all the tombs had been removed. Candidus comes there to perform her incantations and evoke the *mones of the dead*; at sight of which infernal rites the moon hides herself behind the sepulchres (v. 35):—

"...Lunamque robustem,
Ne foret his testim, post magna latere sepulcra."

Such a place, therefore, might still have been used for executions; though, doubtless, bodies were no longer exposed there, as they had formerly been. These "magna sepulcrar" would also indicate that some even of the better classes were buried here; and the same thing appears from Cicero. ( *Phil.* i. 7.)

The Horti Maecenatis probably extended within the agger towards the baths of Titus, and it was in this part that the HOUSE OF MAECENAS seems to have been situated. Close to these baths, and on the NE. side, others, built by Tranjan, existed in ancient times, although all traces of them have now vanished. They have sometimes been confounded with those of Titus; but there can be no doubt that they were distinct and separate foundations. Thus the *Notitia* mentions in the 3rd Region the "Thermae Titianae et Tranjanae;" and their distinction is also shown
by the inscription of Ursus Tegatus: *thermus
trianam thermis agrimia et tittii*, &c.
Gruter, dextxxvi. 1). The site of the baths of
Trajan, close to the church of S. Martino, may be
determined from another inscription found near that
church, in the pontificate of Paul III., which records
some improvements made in them; as well as from
a notice by Anastasius, in his Life of Symmachus
(p. 88, Blanck.), stating that the church alluded to
was erected "juxta Thermas Traianas." It is a very
common opinion that the house of Macenas occupied
part of the site of the baths of Titus, and this opinion
is as probable as any other. It was a very lofty
building. Horace describes it as a "molem propin-quin
nubibus arduis" (Od. iii. 20. 10), and from its
situation and height must no doubt have commanded
a view of Titub and its neighbourhood; though we
do not draw that conclusion from the immediately
preceding lines, where we think the far better reading
is, "Ut semper adum Tibur," &c., the semper belong-
ing to "ubum," and not to "contemplare" (cf. Tate's
Horace, Prol. Diss. p. 24). We have before related
how Nero beheld the fire of Rome from the house of
Macenas. Suetonius, in his account of that scene,
calls the house "turris Macenatiana" (Xero, 38),
by which, perhaps, we are not to understand a tower,
properly so called, but a lofty superstructure of several
stories over the lower part of the house (Becker,
Charidles, i. p. 195). Macenas bequeathed his house
and gardens to Augustus; and Titubus lived
there after his return from Rhodes, and before he
succeeded to the empire (Suet. Tib. 15). The
subsequent history of the house is unknown; but, as
we have said, it may probably have been included
in the baths of Titus.

Close to the gardens of Macenas lay the Horti
Lamiani (Phil. Jud. vol. ii. p. 597, Mang.), belonging
perhaps, to the Avitus Lamia celebrated by Horace
(Od. i. 26, &c.). We learn from Valerius Maximus
(iv. 4. 8) that the ancient family of the Aelli dwelt
where the monument of Marius afterwards stood;
whence it seems probable that the Horti Lamiani
may have lain on the E. of those of Macenas, to-
wards the church of St. Bibiana. It was here that
the body of Caligula was first hastily buried, which
was afterwards burnt and reinterred by his sisters
(Suet. Cal. 59).

There appear to have been several more gardens
between the Porta Esquiline and the modern Porta
Maggiore; as the Horti Pallantiani, founded ap-
parently by Pallus, the powerful freedman of Claudius
(Tac. Ann. xii. 29; Suet. Claud. 28; Plin. Ep. viii. 6)
and which, from several passages of Frontinus (Af.
19, sept.), appear to have been situated between
P. Magnus, the Roman monument, and the church
of St. Bibiana. Frontinus also mentions (Aq. 68)
certain Horti Epaphroditiani, perhaps belonging to
Epaphroditus, the liberthus of Nero, who assisted in
putting that emperor to death (Suet. Ner. 49, Dom.
14; Tac. Ann. xxv. 55); as also some Horti Tor-
quatiani (c. 5), apparently in the same neighbour-
hood. The Campus Viminalis sub Aggree of the
Notitia was probably an exercise ground for the
Pompeian troops on the outside of the agger near
the Porta Viminalis. Hence the eastern ridge of
the Viminal and Esquiline beyond the Servian walls
must have been very open and airy.

The Esquiline derives more interest from its having
seen the residence of several distinguished poets and
authors than the most splendid palaces could have
conferred upon it. Virgil dwelt upon the Esquiline,
close to the gardens of his patron Macenas. Whether
Horace also had a house there cannot be said; but
he was certainly a frequent guest with Macenas;
he loved to saunter on "the sunny agger," and he
was at last buried there, amidst the monuments of his
munificent benefactor at the extremity of the hill. (Suet. F. Hor.
26). Propertius himself informs us that his abode
was on the Esquiline (iii. (iv.). 23. 23); where also
dwelt the younger Pliny, apparently in the house
formerly belonging to the poet Pedo Albinovanus
(Plin. Ep. iii. 21; Mart. x. 19). Its precise situa-
tion will be examined a little further on, when treating
of the Lucus Orpheus.

The Esquiline and its neighbourhood did not
contain many temples of note. That of Tellus,
already mentioned, was the most important one;
the rest seem for the most part to have been more
remarkable for antiquity than for size or beauty.
We have already adverted to the ancient sacraria
mentioned here by Varro (L. L. v. 49, seq.); as the
Lucus and Sacellum of Jupiter Fagutals, on the southern
side of the Oppius; the Lucus Esquili-
us, probably near the Esquiline gate; a Lucus
Poletillus; a Lucus Muttitus, with an aedes, lying
near the Vicus Patricius (Festus, s. v. Septimontio,
p. 351, Mill.); and a Lucus of Juno Lucina,
where, according to Piny (v. 65), a temple was
built to that goddess, p. c. 374; although it would
appear from Dionysius (iv. 15) that there must have
been one there previously in the time of Servius Tu-
lius. An inscription relating to this temple was
found in 1770, in digging the foundations of the
monastery delle Poiolette, in the road which sepa-
rated the Oppius and Cipus. We learn from Ovid
(Fast. ii. 435) that the grove lay beneath the
Esquiline; but as it appears from Varro that the
temple stood on the Cipus, whilst the stone with
the inscription in question was found on the side of
the Oppius: it is probable that it may have rolled
down from the monastery of the Filippine on the
opposite height (Nibby, Roma nel Anno 1838, p. 670;
Urlich, Rom. Top. p. 120; Canina, Indag. p. 151).

The Sacellum Esquilianum, when first es-
began, probably lay on the S. side of the Carinae,
next the Colosseum. It seems not improbable that
the Lucus Veneris Libitiae may also have been
situated on the Esquiline, on account of the neigh-
bourhood of the Campus Equulinus; but there are
no authorities by which its site can be satisfactorily
determined. It was the great magazine for funeral
panephemera (cf. Dionys. iv. 15; Festus, s. v. Rustica
Vinula, p. 265; Plut. Q. R. 23). On the
Esquiline were also Altars of Mala Fortuna and of
Febris, the latter close to the Marian monument
(Cic. N. D. iii. 25; Plut. ii. 5; Val. Max. ii. 5, § 6).
We may likewise mention a Temple of Fortuna
Resplendent (Plut. Fort. R. 10), of Fortuna Seia
288; Plin. xxxvi. 46), and one of Diana in the
Vicus Patricius, from which men were excluded (Plut.
Q. R. 3). The Hercules Victor or Hercules
Sullanicus of the Notitia was perhaps only a statue.
We shall close this list by mentioning a Temple of
Stes Vetus, near the Horti Pallantiani, several
times alluded to by Frontinus; of Isis Patrica,
probably at the in Vicus Patricius; and of Minerva
Medica, commonly identified with the ruins of a
large circular building in a vineyard near the Porta
Maggiore. This building here, in the middle ages,
the name of Le Galaze, whence Canina is of opinion
that it was the place where the emperor Gallienus.
LANA

was accustomed to divert himself with his court. (Treb. Pollic. Gall. Don, c. 17.) The temple of Minerva Medica mentioned in the Notitia may probably have stood in the neighbourhood; but the building in question seems too large to be identified with it.

Among the profane monuments of this district we have had occasion to mention once or twice an object called the Trophies of Mithras. Valerius Maximus relates that Mithras erected two trophies (vi, 5, § 14); and that these must have been on the Esquiline appears from a passage of the same author (ii, 5, § 6), quoted a little while ago respecting the site of the altar of Febris. A building which stands at the junction of the Via di S. Bibiana and Via di P. Maggiore a little way outside the ancient Porta Esquilina bore during the middle ages the name of Templum Marii, or Cinbrum, and was adorned with those sculptured trophies which were removed in the pontificate of Sixtus V. to the balustrade of the Piazza del Campidoglio, where they still remain. (Ordo Rom. cit. 1113, ap. Mahili. Mus. Ital. ii. p. 141; Poggio, de Var. Fort. p. 8, ed. Par. 1723.)

There can be no doubt, however, that the building so called was no temple, but the castellum of an aqueduct, and is in all probability the object mentioned in the Notitia as the Nymphaeum Divi Alessandri. It must have been one of the principal castella of the Aqua Julia, and from the trophies which stood in the neighbourhood having been applied to its adornment it was mistaken in a later age for a temple erected by Maris. (Canina, Indexe. p. 156, seq.; Preller, Regionen, p. 131.)

Between this Nymphaeum and the Porta Esquilina stands the Arcus Gallieni, which must have spanned the ancient Via Praenestina. It is a simple arch of travertine, and we learn from the inscription upon it, which is still legible, that it was erected by a certain M. Aurelius Victor in honour of the emperor Gallienus and his consort Salonina. Originally there were smaller arches on each side of it (Spec. Rom. Magn. tab. 24), but at present only the middle one remains.

Close to this arch and between it and the basilica of S. Maria Maggiore, lay the Forum Esquillium and Macellum Livanicum. This position of the macellum is certain. The basilica just named was built "juxta Macellum Liviae." (Anastas. V. Liberii and V. Sist. III.) That it was close to the arch of Gallienus appears from the Ordo Romanus. ("Intrans sub arcum (Gallieni) ubi dicitur Macellum Livanum (Livanianum) progradaturi ad templum Marii quod dicitur Cinbrum," Ann. 1145, p. 141.) And the church of S. Vito close to the arch was designated as "in Macellio." (An. Felivis, Ant. i. ii. c. 6.) But it is a more difficult question to determine whether the Forum Esquillium and Macellum Livanicum were distinct objects or one and the same. We know that the Forum Esquillium was in existence in B. C. 88, since it is mentioned by Appian (B. C. i. 58) as the scene of the struggle between Maris and Sulla. Hence Sibyl (Roma nell' Anno 1838, tom. ii. p. 25), assuming that the macellum and forum were identical, regarded it as founded by M. Livius Salinator, who was censor with Cladius Nero, B. C. 204. But this view is unsupported by any authority, and it is probable that the forum had two appellations; whence it seems most likely that the macellum was quite a distinct but adjoining market

founded by Augustus, and named after his consort Livia. (Preller, Regionen, p. 131.)

There was also a Porticus Liviae somewhere on the Esquiline, named in the Notitia in the 3rd Region after the baths of Titus. It was a quadrangular porticus (εἴρηστης), built by Augustus, B. C. 14, on the site of the house of Vedius Pollio, which he had inherited. (Dion Cass. liv. 23.) As the same author (iv. 8) calls it a τερμάτωμα, we may conclude that it contained the Temple of Concord mentioned by Ovid. (Fast. vi. 633.) It is alluded to by Strabo (v. p. 236), and by both the Pliny. (xiv. 3; Ep. i. 5; cf. Becker, Handb. p. 542, Ante. p. 78.) We also read of a Porticus Livia, built in honour of Cains and Lucins Caesar (Dion Cass. iv. 27, as enanced by Merckel ad Voc. Fast. p. xxii.), but its situation cannot be determined.

Near the church of S. Croce in Gerusalemme, towards the side of the Porta Maggiore, lie the ruins of a large building already alluded to, which in the middle ages bore the name of Sessorium. We have remarked that in the Excerpta Valesiani at the end of Ammianus Marcellinus it is called a palace ("in palatio, quod appellatur Sessorium," de Odoac. 69). It is identified by a passage in Anastasius stating that the church of S. Croce was erected there. (Vit. Silvest. p. 43, Blanch.)

Also near the same church, but on the other side of it, and built into the wall of Aurelian, are the remains of a considerable amphitheatre which are usually identified as the Amphitheatrum Castricense of the Notitia. Becker, however (Handb. p. 552, seq.), denies this identity, his chief objection being the great space which the 5th Region must have occupied if this building was included in it, and holds that the true Amphitheatrum Castricense must have been near the Castra Praetoria. There are, however, no traces of the remains of an amphitheatre in that direction, and Becker acknowledges (Handb. p. 558) that he is unable to give any name to that of S. Croce. But there could not have been many structures of this description in Rome, and on the whole it seems more probable to conclude with Preller (Regionen, p. 132) that the one in question was the Castricense; especially as we know from Procopius (B. G. i. 22, seq.) that there was a vivarium, or place for keeping wild beasts used in the spars of the amphitheatre, close to the Via Praenestina.

In the valley under this amphitheatre were the Gardens and Circus of Elagabalus (Lampr. Helv. 14, 23), where the obelisk was found which now stands on the promenade of the Pincian (Ligorio, Sii Cerchi, p. 3; Canina, Indice. p. 178). Just outside the Porta Maggiore is the curious Monument of Euryaces the baker, which has been spoken of above, p. 760.

The remaining monuments in the district under consideration are few and unimportant. The Apollo Sandaliarius mentioned in the Notitia in the 4th Region was one of those statues which Augustus erected in the different Vicus. (Suet. Aug. 57.) We have said that the temple of Fortuna Seo stood in the Vicus Sandaliarius; and as this temple was included in the domain of the golden house of Nero (Plin. xxxvi. 46) we may conclude that it was in or near the Circus of Antoninus (Handb. p. 558). The Colosseum will be described in a separate section. The 3rd Region, in which it was situated, must doubtless have contained a splendid Temple of
Isis and Serapis, from which the region derived its name, but the history of the temple is unknown.

The same remark applies to the Moneta mentioned in this region, which seems to have been the imperial mint. (Pleth. Leg. p. 124.) It is mentioned in inscriptions of the time of Trajan.

(Marini, Atti, vol. p. 488.) The *Sumnum Choragicum* is inexplicable. The *Lacus Pastorum* or *Pastoris* was a fountain near the Colosseum, as appears from the *Acta Sanctorum* (*in Euseb.*). The *Donus Bruttii Praesentes* probably lay on the Esquiline. Marcus Aurelius assailed Commodus with the daughter of Bruttus Praesens. (Capit. M. Anton. Pl. c. 27.) *A Porticus Claudia* stood at the extremity of Nero's golden house, but far from the colossus of that emperor:

"Claudia diffusa ubi porticus explicavit umbra
Ultima pars aulae deficientis era." (Mart. de Spec. 2.)

It is mentioned by the Anonymous Einsiedlensis and in the *Mirabilia* under the name of "Palatinum Claudia," between the Colosseum and S. Pietro in Vincoli. The *Ludus Magnus* was a gladiatorial school apparently near the Vía di S. Giovanni. (Canina, Indice p. 108.) The *Schola Questorum et Capitolorum* or *Capitulum* seems to have been an office for the scribes or clerks of the questors, as the *Schola Xanthia* on the Capitoline was for those of the curule aediles. The *Capitulares* were those officers who had charge of the capites or capitae, that is, the bowls with handles used in sacrifices (Varr. L. L. v. § 121); but where this schola may have been cannot be said. The *Castrum Misenum* were the city station for what we may call the marines, or soldiers attached to the fleet and naval station at Misenum, established by Augustus. (Tac. Ann. iv. 5; Suet. Aug. 49.) This camp appears to have been situated near the church of S. Vito and *Via Merulana*, where also there was an aedicularis of Neptune. (Canina, Indice, p. 110.) The *Balneum Daphnides*, perhaps alluded to by Martial (III. 5. 6.), was probably near the Subura and Carinae. Lastly the *Lacus Orpheus, or fountain of Orpheus, seems to have lain near the church of S. Lucia, which bore the epithet *Orfei*, or, as the *Apochromata* calls it, in *Orthea*. It is described in the *Bones of Martial*, in which he desires Thalia to carry his book to *Píny* (x. 19. 4, seq.).

"I. perfer, brevis est labor peracut
Altum vincerem tramite Suburane.
Illic Orpheus putrem videtis
Ubi vertice lubricum theatri,
Mirantesque feras avernum regis
Raptum quae Phryga pertulit Tomanti.
Illic parva tu domus Pedonis
Caleta est asplicae minore penma."

From this description it would appear that the fountain was in a circular basin—for such seems to be the meaning of *aulum theatrum," because a statue of Orpheus playing on the lyre stood high in the midst of the basin, wet and shining with spray and surrounded by the fascinated beasts as an audience. (Becker, *Roumb. p. 559, note.*) The situation of the fountain near the church mentioned is very clearly indicated in these lines. As Martial lived on the southern extremity of the Quirinal the way from his house to that spot would of course lie through the Subura. At the top of the street lead­ing through it, which, as we have seen, must have been the Vicus Cyprium, a short but steep ascent brought the pedestrian to the top of the Esquiline, where the first object that met his eyes was the fountain in question. The locality is identified by another poem of Martial's addressed to Paulus, who also lived on the Esquiline (v. 22. 4):—

"Alta Suburanii vincenda est semita clivi
Et unquam sice sorrida saxa gradu;"

where we must not take Clivus Suburanus to be the name of a road, like Clivus Capitolinus, Publicius, &c., but merely a synonymous appelleative with what Martial calls "aliius trames" in the other poem. It may be further observed that this situation of the fountain agrees with the order of the *Notitia*, where it is named immediately before the Macellum Liviaeum. Close to it lay the small house formerly inhabited by Pelo Albinius, and in Martial's time the residence of his friend the younger Píny.

XII. THE COLLES, OR THE VIMINAL, QUIRINAL, AND PINCIAN HILLS.

We have already remarked that the three northernmost hills of Rome were called *Colles*, in contradistinction to the others, which were called *Montes*. Only two of the former, the *Viminal and Quirinal*, were enclosed within the walls of Servius Tullius, and considered as properly belonging to the city; but part of the *Pincian* was included within the walls of Aurelian.

The *Colles Viminalis*, the smallest of the three hills, is separated from the Esquiline by the valley through which ran the Vicus Patricius, and by a hollow running towards the rampart of Servius. On the other side, towards the Quirinal, is another valley, which divides it from that hill, at present traversed by the streets called *Vía de' Serpenti* and *Vía di S. Vitale*. The most northern part of the valley, through which the latter street runs, was the ancient *Vallis Quirini* (Juv. ii. 133). The hill derived its name from the osiers with which it was anciently covered ("dictum a vimine collum," Id. iii. 71); and upon it was an *Altar of Jupiter Viminalis*, answering to the Jupiter Fugitans of the Esquiline. (Varr. L. L. v. § 51; Fest. p. 373.)

The *Viminal* was never a district of much importance, and seems to have been chiefly inhabited by the lower classes. The only remarkable building which we find recorded on it is the splendid *Palaestra of C. Aquilus* (Plin. v. 2. 2), the existence of some baths of Agrippina upon it rests only on traditions of the middle ages. The baths of Duoletian, which lay on the ridge which united the Viminal and Quirinal, will be described in the section on the thermae. The *Sacellum of Narnia* lay without the Porta Viminalis. (Paul. Duc. p. 163.)

After the *Painitine and Capitoline hills, the Quiri­nals* was the most ancient quarter of the city. As the seat of the Sabine part of the population of Rome, it acquired importance in the period of its early history, which however it did not retain when the two nations had become thoroughly amalgamated. The *Quirinal* is separated from the *Pincian* on the N. by a deep valley; its western side is skirted by the Campus Martius; the innermost part is formed by the *Viminal* and the *Vallis Quirini* which has already described. The street which ran
through this last valley was called Vicus Longus, as we learn from the Anonymous of Einsiedlen, who mentions the church of S. Vitalis as situated "in vico lupgo." We find its name recorded in Livy (x. 23), and Valerius Maximus (iii. 5. § 6). Of the different ancient divisions of the Colis Quirinallis and of the origin of its name, we have already spoken in the former part of this article.

The Quirinal abounded in ancient fane and temples. One of the earliest foundations of this sort was the Temple of Quirinus, erected by Numa to Remus after his apotheosis. The first practical notice that we find of it is, however, in n. c. 435, when Livy (iv. 21) records a meeting of the senate in it; a fact which shows that it must have been a considerable building. A new one was dedicated, probably on the same spot, by L. Papirius Cursor, n. c. 292. (Livy x. 46; Plin. vii. 60.) This structure appears to have been burnt in n. c. 48, and we do not hear of its re-erection till n. c. 15, when Augustus rebuilt it, as recorded in the Monumentum Agurramus, and by Dion Cassius (liv. 19). Yet in the interval between these dates we find it alluded to as still existing (Id. xiii. 45; Cic. ad Att. xiii. 28), whence we may conclude that it had been only partially destroyed. Dion (liv. 19) describes the new structure of Augustus as having 76 columns, equalising the years which he had lived. Hence, it appears to have been the same building as that added by Vitruvius (ii. 2. 7) as an example of the dippetra octastylis; for that kind of temple had a double row of columns all round; namely, two rows of 8 each at the front and back; and, without counting the outside ones of these over again, two rows of 11 each at the sides (32 + 44 = 76). This noble portico appears to have been the same alluded to by Martial as the resort of the idlers of the vicinity (ix. 1. 9). Topographers are universally agreed that it was situated on the height over S. Vitale in the neighbourhood of S. Andrea del Noviziato. (Becker, Handb. p. 573; Urichs, Beschr. iii. 2, 366; Catinia, Indice, p. 185.) There appears to have been also a Sacellum Quirinalis near the Porta Collina.

All the more interesting traditions respecting the Quirinal belong to the reign of Numa. One of the residences of that Sabine monarch was situated on this hill (Plut. Num. 14; Solin. i. 21), where he also founded a citadel, or capitol; and where his successor Tullus Hostilius, in pursuance of a vow made in the Sabine War, repeated, as it were in duplicate, Numa's peculiar institution of the Sabine worship (Livy i. 27; Dionys. ii. 70). All these things show very clearly the distinction between the Roman and Sabine cities during the reigns of the first monarchs. On the Quirinal, the Sabines were attached to the worship of Quirinus, as, in the Romulan city, they were to that of Mars ("Quid de ancilis vestris, Mars Gratidive, tueque Quirine pater (loquar)" Liv. v. 52); and the priests were called, by way of distinction, Sali Agonenses, or Collini, from the name of the hill ("In ibis Saliiorn quorum cognomen Agonensium," Varr. L. l. vi. § 14; cf. Dionys. L. c., where, however, he erroneously speaks of a Aedes Korasion.)

Next to the temple of Quirinus, proceeding in a westerly direction, as may be inferred from the order in which the objects are mentioned in the Curiosum (the Notitia somewhat differs), stood a Statue of Marismus; and then, after an interval occupied in later times by the baths of Constantine,—the site of the present Palazzo Rosspiglioni,—followed the Vetus Capitolium, or citadel of Numa. Whether Mamuris was another name for Marmor, the Sabine god of war, of which, according to Varro (L. l. v. § 73), the Roman name of Mars was only a corruption, or whether it was the name of the reputed maker of the aneki (Paul. Disc. p. 151, Mill.), matters but little; the statue is equally connected with the ancient Sabin rites, and therefore one of the most venerable objects in the city. We find a Clivus Mamurri mentioned in the middle ages in the neighbourhood of S. Vitale (Anastas. V. Inon. i. p. 64, Blanch.), which no doubt took its name from this statue, whence we may infer that it stood near the temple of Quirinus; since the church of S. Vitale and that of S. Andrea, where the temple stood, are close together.

We have remarked in the former part of this article that the ancient Capitol of Numa probably stood on the height of Magnumpopoli. It contained, like the Palatine before it and the Capitoline subsequently, a temple to the three divinities, Jupiter, Juno, and Minerva, as we learn from Varro:—"Clivos proximus a Flora susus versus Capitolium vetus, quod ibi sanctum Jovis, Janonis, Minervae; et id antiquus quan aedilis, quae in Capitolio facta" (L. L. v. § 158). Its site may be determined by that of another ancient sanctuary, the Temple of Flora.

In the order of the Carus assault and Nothilia that temple stands between the Capitolium Vetus and the temple (or temples) of Salus and Scaprio. The temple of Salus must undoubtedly have been situated near the Porta Salutaris, which, as we have before remarked, took its name from that sanctuary; and we must consequently seek for the temple of Flora on the W. side of the Quirinal, or that which faced towards the Campus Martius. That it stood on this side is confirmed by what Martial says respecting the situation of his house, which, as we learn from one of his epigrams, lay near the temple of Flora (v. 22. 2):—

"Sed Tiburtine sum proximus accole pilae
Qua videt antiquam rustica Flora Jovem."

(Cf. vi. 27.) From which we also learn that the temple of Flora could not have been very far from that of Jupiter in Numa's Capitol; as indeed likewise appears from the passage of Varro before quoted, with the addition that it must have lain on a lower part of the hill. But as Martial's house is thus shown to have been near the temple of Flora, so also that it was on the W. side of the hill appears from another epigram (i. 108. 2):——

"At mea Vipsanam spectant conuenacu laurus
Factus in hac ego sum jam regio senex."

It can hardly be doubted that this passage contains an allusion to some laurel trees growing near the Porticus Vipsania, erected, as will appear in a subsequent section, near the Via Latina by Agrippa, whose family name was Vipsanis. This portico is plainly alluded to in another passage of Martial (iv. 18), under the name of Vipsanice Columnae. There is nothing surprising in Martial's indicating a locality by certain trees. In ancient Rome trees were noted objects, and classics considered a source of public attention, as we have already seen with regard to several that grew in or about the forum. Two laurel trees grew before the imperial palace (Tert. Apol. 35); and in front of the temple of Quirinus...
just described were two sacred myrtles, which were
characterised by distinctive appellations as patricia
and plebeia. But, to have faced the Porticus Vip-
sania, Martius’s house must not only have been
situated on the western side of the Quirinal, but also
towards its southern extremity; which likewise
appears from what has been said in the preceding
section respecting that route from it to that of his
friend Pliny being through the Subura and Vicus
Cypros; for this would have been a roundabout
way had Martius dwelt towards the northern part of
the hill.

All these circumstances tend to show that Numia’s
Capitol must have stood on the spot before indicated,
and the temple of Flora a little to the N. of it. The
part of the hill which it occupied was probably that
called LATIARI in the Argive fragments. The
part styled COLLIS SALUTARIS must have been
that near the gate of the same name, derived from
the ancient SACELLUM OF SALUS, which stood near
it; in place of which a regular TEMPLE OF SALUS
was dedicated by C. Junius Bubuleus, B.C. 203
(Liv. i. 43, x. 1), and adorned with paintings by
Fabius Pictor. These were still to be seen in the
time of Pliny, when the temple was destroyed by
fire in the reign of Claudius (xxxv. 7; cf. Val.
Max. viii. 14. § 6).

Ciceró’s friend Atticus lived close to the temple
of Salus (—tuae vicinae Salutis, ad Att. iv. 1), and
at the same time near that of Quirinus: “Certe non
langea a tuis aedibus inambulabat post excccssum
num Romulus Proculo Julio dixerit, se deum esse
et Quirum: vecari, templumque sitæ decidendi in
e loco jussisse.” (De Leg. i. 1.) The vicinity of the
temples is likewise indicated in another passage rela-
ting to a statue of Caesar, which had been erected
in that of Quirinus: “De Caesare vicino scripsens
ad te, qua cognomam ex tuis litteris; eum quovos
Quirino mala quam Saluti” (ad Att. xii. 45).

Hence the sites of the two temples in question are
still further established. For as that of Salus lay
on the N. side of the hill, near the Porta Salutaris,
and that of Quirinus some 200 yards to the S. of it,
at the church of S. Andrea, so we may assume that
the house of Atticus lay between the two, and he
would thus be a close neighbour to both.

Another ancient sacraiment on the Quirinal was
that of SEMO SANCUS OR DIES FIDUS. We
have shown, when treating of the Servian gates, that
the Porta Sanquallis took its name from this sacellum;
and Livy (viii. 20) describes it as facing the temple
of Quirinus. Hence it must have stood on or near the
site of the PALAZZO QUIRINALE, between the temple
of Salus and that of Flora. It had a perforated roof,
for the deity loved the open air, whence its title of
Dios; and some thought that no cash by this god
should be sworn under a roof. (Varr. L. L. ii. §
66.) Sansus was an old Sabine deity, and his
temple at Rome appears to have been founded by
Tatius. (Or. Fast. vi. 213; Prop. v. 9. 74; Ter-
tull. ad Nat. ii. 9.) Its antiquity is attested by the
circumstance that the distaff and sandals of Tana-
quill, the wife of Tarquinus Priscus, are recorded to
have been preserved in it, and are said to have
been in existence down to the time of Augustus.
(Plin. viii. 74; Plut. Q. R. 30.) It appears to
have been rebuilt by Tarquinus Superbus, but its
dedication was reserved for SP. Postumnus. (Broun.
i. 60.) The part of the hill where it stood must
have been the COLLINE MACELLAR of the Argive
fragments. (Varr. v. § 52.)

There were several TEMPLES OF FORTUNA on
the Quirinal, but they do not seem to have been of
much importance; and the notices respecting them
are very obscure. Vitruvius (iii. 2) mentions three
which stood close together at the Porta Collina,
belonging perhaps to those alluded to by Ovid under
the name of FORTUNA PuBILCA (Fast. iv. 375, v.
728), or to Livy, who mentions a temple of FORTU-
NA FRONDAE on this hill (xxxv. 59). There was
also an ALTAR OF FORTUNA in the Vicus
Longus. (Plut. Fast. Rom. 10.)

In the street just named stood also a SACELLUM
PUPTICIAE PLEBIEA, founded by Virginius, the
daughter of Aulus, after the quarrel between the
matrons in that of Pudicitia Patricia alluded to in
a former section (Livy. x. 23). Outside of the
Porta Collina was a temple of VENUS EURYCA,
near which the Ludi Apollinares were held when
the circus had been overflowed by the Tiber. (Livy.
xxx. 38; Appian, B. C. i. 93.) Of the TEMPLE OF
SERRAPIS, mentioned in the Notitia along with
that of Salus, nothing further is known, except that
from the fragment of an inscription found near the
church of S. Agn年产值la Subura, where possibly the
temple may have stood, it may be inferred that it
was dedicated by Caracalla. (Gruter, lxxxv. 6;
Preller, Reg. p. 124.)

These are all the ascertained temples that lay on
the Quirinal; for it is a disputed point whether we
are to place on this hill the splendid TEMPLE OR
SOL, erected by Aurelian. (Aur. Vict. Caes. 28;
Eutrop. ix. 13 (9); Vopisc. Aure1.) Altogether,
however, the most probable conclusion is that it
stood there, and Becker’s objections admit of an easy
answer (Handb. p. 387, seq.). By those who as-
sume it to have been on the Quirinal it is commonly
identified with the remains of a very large building,
on the declivity of the hill, in the Colonna gardens,
on which spot a large Mithraic stone was discovered
with the inscription “Soli Invicto.” (Vignoli, de
Colonna Antoniniana, p. 174.) This position
may be very well reconciled with all the ancient
accounts respecting the temple. Becker objects
that it is mentioned in the Notitia in the 7th Re-
region (Via Lata). But this Region adjoined the
western side of the Quirinal, and the temple of
Sun may have been recorded in it, just as many
buildings on the declivity of the Aventine are em-
umerated in the 11th Region, or Circus Maximus.
In the Catalogus Imperatorum Vienae, (ii. p. 246,
Rom.) it is said of Aurelian, “Templum Solis et
Castra in Campo Agripae dedicavit; and it will
appear in the next section that the Campus Agrip-
pae must have been situated under this part of the
Quirinal. Becker assumes from the description
given by Vopiscus of his ride with Tiberianus, the
conversation during which was the occasion of his
writing the life of Aurelian, that the temple in
question could not have been so near the Palatine
as the spot indicated: “Ibi quam animus a causis
acque a negotiis publicis solutus ac libere vacaret,
seremonem multum a Palatio usque ad hortos Val-
rianos instituit, et in ipso praecipue de vita prin-
cipum. Quumque ad templum Solis venisset ubi
Aureliano princeps consecraret quod ipse nomin
bili um ex eius origine sanctifique deduxerat, quaevisii,” etc. Vopisc. Aurel. 1). We do not know where
the Horti Valerianai lay; they might possibly,
as assumed by Preller, have been identical with those
of Lucullus on the Pincian, subsequently in the pos-
session of Valerius Antias (Tit. Ann. xi. 1),
though these continued to be in general the name of Lucullus. But Becker interprets the passage wrongly when he thinks that the temple of Sol lay beyond these gardens: on the contrary, the passing that temple gave rise to the conversation, which lasted till Vopiscus and his friend arrived at the Porta Valeria, wherever these may have been; and if they were on the Pincian, the temple of Sol, in the locality indicated, would have been on the road to them from the Palatium. Lastly, we may observe that the Quirinal had, in very early times, been devoted to the worship of Sol, who was a Sabine deity (Varro, L. L. v. § 74); and there was a Praetinae Solis in the neighbourhood of the temple of Quirinus. (Quint. Inst. Or. i. 7; Fast. Capr. Id. Aug.; cf. Urichs, Beschr. iii. 2, p. 386; Catina, Indice, p. 210, seq.; Preller, Regionen, p. 137.) Such were the sanctuaries of the Quirinal. The ancient topographers, who are followed by the modern Italians, have assigned two circi to this quarter: the Circus Florae near the temple of the same name, and the Circus Sallustii in the gardens of Sallust, between the Quirinal and Pincian. The former has certainly been invented by misconstruing an inscription relating to the games of Florus in the Circus Maximus. (Becker, Handb. p. 673.) It is more doubtful whether a Circus Sallustii may not have existed. We have seen from a passage of Livy that the Ludi Apollinares were performed outside the Porta Collina when the overflow of the Tiber prevented their performance in the usual place; and, according to Catina (Indice, p. 199), traces of a circus are still visible in that locality. But none is mentioned in the catalogues of the Regions, nor does it occur in any ancient author.

The Horti Sallustiani, however, undoubtedly lay in the valley between the Quirinal and Pincian, but their exact extent cannot be determined. They were formed by Sallust the historian with the money which he had extorted in Numidia. (Dion Cass. xliii, 9.) The house of Sallust lay near to the (subsequent) Porta Salaria, as we learn from Procopius, who relates that it was burnt in the storm of the city by Aharic, and that its half-consumed remains still existed in his time. (B. V. i. 2.)

The Anonymous of Einsiedeln mentions the other places (CIRCUS HORTULARUM, REX, and the older toponymographers record that the neighbourhood continued to be called Salustriolum or Sallustium even in their days. (Andr. Fulvius, de Urb. Ant. p. 140; Luc. Fazio, Ant. di R. iv. 10, p. 120.) Becker (Handb. p. 585) raises a difficulty about the situation of these gardens from a passage in Tacitus (Hist. iii. 82), which, however, presents no difficulty if rightly understood. The Flavian troops which had perpetrated to the gardens of Sallust on their left were those which marched on the Flaminian, not the Salarian, way, just as Nero is described as finding his way back to these gardens from the same road. (Tac. Ann. xiii. 49.)

The Horti Sallustiani subsequently became imperial property, though in what manner is unknown. The first notice which we find of them as such occurs under Nero in the passage just cited from Tacitus. Several emperors are described as residing in them, as Vespasian, Nerva, and Aurelian. (Dion Cass. lxi. 10; Vopisc. Aen. 49; Hieron. p. 445, Bonc.)

Also close to the Porta Collina, but inside and to the right of it, lay the Campus Sceleratus, immediately under the agger. The spot obtained its name from being the place where Vestal Virgins convicted of unchastity were buried alive; for even in this frightful punishment they retained their privilege of being interred within the walls. Dionysius attributes the introduction of this mode of execution to Tarquinius Priscus; and, according to Livy, the first example of its application was in the case of Minucia, n. c. 348. Dionysius, however, calls the first vestal who suffered Minucia. (Dionys. ii, 67, iii. 67; Liv. viii. 13; Plut. Ann. 10.)

The emperors appear to have shared with the vestals the privilege of intramural interment, although they did not always avail themselves of it. Indeed, according to Hieronymus (vol. i. p. 449, Bonc.), Trajan was the only emperor buried within the walls; but this statement is certainly erroneous, since Domitian erected a magnificent mausoleum for the Flavian family somewhere between the gardens of Sallust and the spot subsequently occupied by the baths of Diocletian. It is the object mentioned under the name of "Gens Flavia" in the Notitia, and is alluded to in several epigrams of Martial, in one of which he designates it: as being near his own dwelling (v. 64, 5):—

"Tum vicina jubent nos vivere Mausole,
Quum docent ipsose posse perire deos."

(Cf. ix. 2 and 35; Stat. Silv. iv. 3. 18.) It was commonly called templum gentis Flaviae, as appears from Suetonius (Dom. 17); but the same passage shows it to have been a sepulchre also, since the ashes of Julia, the daughter of Titus, as well as those of Domitian himself, were deposited in it. (Cf. Becker, de Meru, &c. p. 69.) It was erected on the site of the house in which Domitian was born, designated as being ad Mailem Flavium (Suet. Dom. 1); which name occurs again in the Notitia, and could not, therefore, have been applied to the whole Region, as Preller supposes (Regionen, p. 69), but must have denoted some particular spot, perhaps a vicus, called after a pomegranate tree that grew there. We have already adverted to the importance attached to trees growing within the city.

The only other object that remains to be noticed on the Quirinal is the Praetorian Camp, since the baths of Diocletian will be described under the proper heading. We have related in the former part of this article that the Castra Praetoria were established in the reign of Tiberius outside the Porta Collina, to the eastward of the agger. They were arranged after the usual model of a Roman camp, and were enclosed within a brick wall, of which there are still some remains. (Camina, Indice, p. 194.) They were included within the wall of Aurelian, which preserved their outline. We need only add that the 6th region of Augustus, of which the Esquiline formed the principal part, was called Alta Semita, from a road which ran along the whole back of the hill, answering to the modern Strada di Porta Pia.

The Pincian Hill presents but few objects of importance. Its earlier name was Collis Hortorum, or Hortulorum, derived from the gardens which covered it; and it was not till a late period of the empire that it obtained the name of Mons Pincius, from a magnificent palace of the Pincian family which stood upon it. (Urichs, Beschr. vol. iii. part. ii. p. 572; Rom. Top. p. 186.)

This Domus Pinciana is rendered interesting from
its having been the residence of Belisarius during his defence of Rome. It is the same building men- tioned under the name of παλάτιον. (Procop. B. G. ii. 8, 9; Anastasins, V. Silver, pp. 104, 106, Blank.) The part of the hill included within the later city was bounded by the wall of Aurelian, by which valley the Pincian, the Qurinal, and by the Campus Martius on the west.

The most famous place on the Pincian was the Gardens of Lucullus. Their situation is de- termined by a passage in Frontinus, from which we learn that the arches of the Aqua Virgo begun un- der them. (Ap. 2.) This must have been in the station of the Aqua. Most of these arches are still in existence from that spot to the Fontana di Trevi. (Canina, Indic. p. 335.) The early history of these gardens is obscure. They were probably formed by a Lucullus, and subsequently came into the pos- session of Valerius Asiaticus, by whom they were so much improved that Messalina's desire of pos- sessing them caused the death of Valerius. (Tac. Ann. xi. 1, 32, 37.) They appear to have been also called after him " Horti Asiatici" (Becker, Handb. p. 511), and it is possible, as we have said before, that they may sometimes have borne the name of "Horti Valerianii." They were the scene of Messa- lina's infamous marriage with Silius (Juvi. s. xi. 334) and of her death by the order of Claudius. (Tac. Ann. xi. 37.) The gardens remained in the possession of the imperial family, and were reckoned the finest they had. (Plut. Lucull. 39.) The fa- mily of the Domitii, to which Nero belonged, had previously possessed property, or at all events a sequestrum, on the Pincian; and it was here that the ashes of that emperor were deposited. (Suet. Nero. 50.) Popular tradition places it on that part of the hill which overhangs the church of S. Maria del Popolo near the gate of the same name.

XIII. THE CAMPUS MARTIUS, CIRCUS FLA- MINIUS, AND VIA LATA.

The whole plain which lies between the Pincian, Quirinal, and Capitoline hills on the E. and the Tiber on the W., — on which the principal part of modern Rome stands, — may be designated generally by the name of CAMPUS MARTIUS, though strictly speaking it was divided into three separate dis- tricts. It is narrow at the northern part be- tween the Pincian and the river, but afterwards expands to a considerable breadth by the winding of the Tiber. It is terminated by the approach of the latter to the Capitoline hill, between which and the stream a part of the Servian wall forming its southern boundary anted. It was cut through its whole length by a straight road, very nearly corresponding with the modern Corso, run- ning from the Porta Flaminia to the foot of the Cap- itol. The southern part of the district lying be- tween this road and the hills formed, under the name of Via Lata, the 7th of the Augustan Regions; but how far it extended to the N. cannot be de- termined. From its northern boundary, wherever it may have been, to the Porta Flaminia and beyond that gate, the road before described was called Via Flaminia. The southern portion of the Campus Martius lying between the same road and the Tiber, as far N. as the modern Piazza Navona and Piazza Colonna, constituted the 9th Region of Augustus, under the name of CIRCUS FLAMINIANUS. In the earlier times all this district between the

hills and the river was private property, and was applied to agricultural purposes. We have already related in the former part of this article how the expulsion of the Tarquins, the Campus Martius was assigned, or rather perhaps restored, to the public use. But the southern portion of the plain appears still to have belonged to private owners. The most considerable of these possessions was the PRATA FLAMINIA, or CAMPUS FLAMINIANUS, which, however, must soon have become public property, since we find that assemblies of the people were held here under the decurions. (Liv. iii. 54.) Among these private estates must have been the AGGR CATI, in which was a fountain whence the stream of the Tiber issued. The Campus Martius has formed the southern boundary of the proper Campus Martius ("Petronia annis est in Tiberin perfusum, quam magistratus auspiciato transactum cum Campo quid agere volunt," Fest. p. 250; cf. Paul. Duc. p. 45); also the CAMPUS TIBERINUS, the property of the vestal Taracia, or Sufetula, which she presented to the people. (Plin. xxxiv. 11.)

We shall begin the description of this district from its southern side; that is, from the Servian wall between the Capitoline hill and the Tiber. Immediately before the Porta Capitoline lies the forum Oltorium. It was, as its name implies, the vegetable market. (Var. L. L. v. § 146.) The Elephas Herraurius, or bronze statue of an elephant, which stood near the boundary of the 8th Region (v. Notitia) has by some topographers been connected with this forum, merely, it would seem, from the epithet herbaarior; but the wall must have made here a decided separation between the 8th and 9th Regions. There were several temples in the Forum Oltorium, as those of Pse, of Juno Sospita, of Pietas, and of Janus. The TEMPLE OF SPES was founded by M. Atilius Calatinus in the First Punic War. (Tac. Ann. ii. 49; Cic. N. D. ii. 23; Liv. xxxi. 62.) It was destroyed in the great fire which devastated this neighbourhood during the Second Punic War (Liv. xxiv. 47), and though soon rebuilt, was again burnt down in B. C. 30; after which the restored temple was dedicated by Ger- manicus. (Tac. L. c.) The Temple of Juno was consecrated by C. Cornelius Cethegus in B. C. 195. There is a confusion in Livy between the names of Sospita and Matta applied to this deity (xxxii. 30, xxxiv. 33); and it is difficult to decide which epithet may be the correct one. The Temple of Pietas is connected with the well-known legend of the Roman daughter who nourished her father (or mother) when in prison with the milk of her breast, and is said to have re- sided on the spot where the temple was erected. (Festus, p. 209; Val. Max. ii. 3, § 3.) It was dedicated in B. C. 180 by the son of M. Atilius Glabrio, in pursuance of a vow made by his father, on the day when he engaged king Antiochus at Thermopylae. (Liv. xl. 34.) It was pulled down in order to make room for the theatre of Marcellus. (Plin. vi. 26.) There appears, however, to have been another temple of Pietas in the Circus Flaminus itself. (Jul. Obs. 114.) Close by was the Temple of Janus, to which we have already ad- verted in the former part of this article. The greater portion of the Forum Oltorium must have been en- grossed by the THEATRE OF MARCELLUS, of which we shall speak in another section; and it may therefore be doubted whether it continued to serve the purposes of a market when the theatre was
erected. On the Forum Olitorium also stood the Columna Lactaria, so called because children were provided with milk at that spot. (Paul. Diaec. p. 118.) The supposition that there was likewise a Forum Piscarium in this neighbourhood rests only on a doubtful reading in Varro. (Liv. ii. 4 § 14.)

The Circus Flaminius began at an early period to be occupied with temples and other public buildings. One of the most ancient and renowned of the former was the Temple of Apollo. The site appears to have been sacred to that deity from very early times, and was called Apollinaria, probably from some altar which stood there. (Liv. iii. 63.) The temple was dedicated in B.C. 430, in consequence of a vow made with the view of averting a pestilence. (Liv. iv. 25, 29.) It remained down to the time of Augustus the only temple of Apollo at Rome, and must have been of considerable size, since the senate frequently assembled in it. It lay between the Forum Olitorium and Circus Flaminius, or, according to Pliny's designation, which amounts to the same thing, close to the Porticus Octaviae. (Ascon. ad Cic. in Tog. Cand. p. 90; Orelli; Plin. xxxvi. 5. § 34.)

Another celebrated and important temple was the Aedes Bellonae, since it was the chief place for assemblies of the senate when it was necessary for them to meet outside of the pomerium as, for instance, when generals cum imperio were soliciting them for a triumph, for the reception of foreign ambassadors whom it was not advisable to admit into the city, and other similar occasions. Close to it was one of the three Senacula mentioned by Festus (p. 347). The temple of Bellona is said to have been built in pursuance of a vow made by Appius Claudius Caecus, in the battle against the Etruscans, B.C. 297 (Liv. x. 9); but according to Pliny (xxxv. 3) it was built by Appius Claudius Regillensis two centuries earlier, who placed the images of his forefathers in it, B.C. 494; in which case the vow of Appius Claudius Caecus must have been accomplished by restoring the former temple. In front of the temple lay a small area, on which stood the Columna Bellica, so called because it was the spot whence the Fetialis threw a lance in the ceremony of declaring war. When the war with Pyrrhus broke out this custom could not be observed in the usual manner by throwing the lance into the enemy's country; therefore, a captured soldier of Pyrrhus's was made to buy a piece of ground near the temple, which symbolised the territory of the enemy; and into this the lance was flung on all subsequent occasions of declaring war against a people whose country lay beyond the sea. (Serv. ad Aen. ix. 53.) This custom was observed as late as the time of Marcus Aurelius. (Don Cass. Ixxi. 33.) There are two points in dispute about this temple; first, whether the area containing the Columna Bellica stood before or behind it; and secondly, whether the temple itself stood at the eastern or western end of the Circus Flaminius; which latter question also concerns the site of the temple of Hercules Custos, as will be seen from the following lines of Ovid (Fast. vi. 206):

"Prespicit a templo summum brevis area Circum; Est ibi non parvae parva columna notae. Hinc soli auxilium matres, bellicos praebentes, In regem et gentes quum placet arma capi. Altera pars Circi custode sub Hercule tuta est Quod deus Euboico carmine munere habet."
THE VICINITY OF THE TEMPLE AND PORTICO IS INDICATED IN MARITL (V. 49. 8).

It is supposed that the THEATRUM BALDI lay close to the western side of this portico, and, a little farther on, opposite the temple, among the trees, in the circuit, but rather to the north of it, the THEATRUM POMPEII, of which latter there are still some remains at the Palazzo Pio. Pompey’s theatre must have lain close to the boundary between the Campus Martius and Circus Flaminius since Pliny mentions that a colossal statue of Jupiter, erected by the emperor Claudius in the Campus, was called Pompeianus from its vicinity to the theatre (Talis in campo Martio Jupiter a Divo Claudio Caesar diectus, qui vocatur Pompeianus a vicinitate, v. 24. 15). The same thing might also be inferred from Cicero (Quid enim loci natura afferre potest, ut in portico Pompei potius quam in Campo ambiitenum, de Fato, 4.) Hence it would appear that the boundary of the two districts, after proceeding along the northern side of the Circus Flaminius, took a north-western direction towards the river. The PORTICUS POMPEII adjoined the scene of his theatre, and afforded a shelter to the spectators in the event of bad weather. (Vitr. v. 9.) But what conferred the greatest interest in this group of buildings was the CURA POMPEII, a large hall or hexaedra in the portico itself, sometimes used for the representation of plays as well as for assemblies of the senate. It was here that Caesar was assassinated, at the base of Pompey’s statue; an event which caused it to be regarded as a locus sceleratus, and to be walled up in consequence. (Cic. Div. ii. 9; Dom. Cass. xlvii. 15. 52; Suet. Cass. 50. 88; Plut. Brut. 14. Cass. 66. &c.) The statue of Pompey, however, was first taken out by order of Augustus, and placed under a marble arch at Janus, opposite the portico. (Suet. Aug. 31.) It is a question whether the portico named HECATOSTYLLON, from its having a hundred columns, was only another name for the portico of Pompey, or quite a distinct building. It is sometimes mentioned in a manner which would seem to intimate that it was identical with the Porticus Pompeii. Thus both are said to have had groves of plane-trees (Prop. ii. 32. 11), and to have been consumed in one and the same fire. (Hieron. Chron. p. 475. Runc.) The following lines of Martial, however, appear to show that there were separate, and adjoining buildings. (ii. 14. 4.)

Inde picta centum pendentia tecta columnis; suile Pompei demum museaque duplex

From these lines, and from two fragments of the Capitoline Plan, Camina has correctly inferred that there were two distinct porticoes, and that the Hecatostylon adjoined the N. side of that of Pompey. (Indic. p. 573.) Pompey also built a private dwelling-house near his theatre, in addition to the house which he possessed in the Carinae. The former of these seems to have been situated in some gardens.

(Plut. Pompey 40. 44.) We find other Horti Pompeii mentioned with the epithet of superiores, probably from their lying on the Pincian hill. (Ascon. ad Cic. Mil. Arg. p. 37, and v. 25, p. 60, Orell.)

Near the theatre of Pompey was also the Porticus Octavia, which, as we have said, must be carefully distinguished from the Porticus Octaviae. It was a double portico originally erected by Cn. Octavius after his triumph over Perseus. It was likewise called CORINTHIA, from its columns being adorned with bronze capitals. (Plin. xxxiv. 7; Vell. Pat. ii. 1; Fest. p. 178.) Augustus rebuilt it, but dedicated it again in the name of its founder. Also near the theatre was the TRICHIPLUS ARCH of VICTORY, erected by Claudius. (Suet. Claud. 11.)

Other temples in the district of the Circus Flaminius, besides those already enumerated, were a TEMPLE OF DANA, and another of JUNO REGINA, — different from that of JUNO in the Porticus Octaviae,—both dedicated by M. Aurelius Lepidus, n. c. 179. (Liv. xl. 52.) An AEDES FORTUNAE EQUESTRIE vowed by Q. Fulvius Flaccus in a battle against the Cilicians, b. c. 176. (Liv. xl. 40, 44, xil. 3, 10.) It stood near the theatre of Pompey in the time of Vitruvius (iii. 3. § 2, Schn.), but seems to have disappeared before that of Tacitus. (Ann. iii. 71.) A Temple of Mars, founded by D. Junius Brutus Callaicus (Plin. xxxvi. 5. s. 28); one of Neptune, cited as "delubrum Cn. Domitii" (Ibid.; Gruter. Inscr. cccxxiv. 5); one of Castor and Pollux (Vitruv. iv. 8. 4); and probably also one of Vulcan. (Fast. Capram. X. Kal. Sept.) Some of these last, however, were perhaps mere sacelli in the vicinity.

A few profane objects will close the list of public buildings in this quarter. The STABULA IV. FACTIONUM of the Notitia must have been the stables in which the horses of the four factions or colours of the circus, albina, prasina, rosea, and veneta, were kept. Domitian added two more colours, the saurata and purpurea, and another reading of the Curatorium mentions six stables, whilst the Notitia — certainly erroneously — names eight; but it seems most probable that there were only four. (Preller, Regionum, p. 167.) Some of the emperors paid great attention to these stables. Tacitus represents Vitellius as building some (Hist. ii. 94); and Caligula was constantly dining and spending his time in the stables of the Green Faction. (Suet. Cal. 55.) The four in question were probably situated under the Capitol, near the carrens of the Circus Flaminus. Between the Porticus Philippae and the theatre of Balbus lay two PORTICUS MINTICAE, styled respectively VETUS and FRUMENTARIA, both built by Minucius who was consul in b. c. 111. (Vell. Pat. ii. 8.) The Frumentaria appears to have been the place in which the tesserae were distributed to those entitled to share the public gifts of corn. (Appul. de Mund. extr. p. 74. 14, Eim.; cf. Cic. Phil. ii. 34; Lampr. Comm. 16.) The CRYPTO BALDI mentioned in the Notitia was probably a peculiar species of portico, and most likely attached to the theatre of Balbus. A crypto differed from a portico by having one of its sides walled, and by being covered with a roof, in which were windows. (Uriculis, Beschr. vol. iii. pt. ii. p. 62.)

Such were the public buildings in the district called Circus Flaminius; immediately to the N. of which lay the CAMPUS MARTIUS, sometimes called merely Campus. The purposes to which this plain
The part of the Campus the side of which may be said to be "pressed upon" by the stream of the Tiber, is that lying between *Piazza Navona* and the bridge of *S. Angelo*, where the ground forms an angle. It was doubtless here that in ancient times the ‘equus’ was the bathing-place of the Roman youth. (Hor. Od. iii. 725; Comp. Cic. pro Ceol. 15.)

Some writers have assumed that this spot was regarded as forming a distinct division called *Camus Minor*, whilst the remainder of the plain was called *Camus Major*. (Preller, Regionem, p. 160; Urichs, Rom. Marsfeld, p. 19; Canina, Indice, pp. 354, 412.) But this division does not appear to rest on adequate authority. It is derived from a passage in Catullus: "Te campo quasi vis ivit, minore." (l. iv. 31); and from another in Strabo, quoted in the former part of this article, where, in describing the Campus Martius, he speaks of another field, or plain, near it (παρεις δ' εστι το θεον τυστω και έλλο πεδιον, και στωλε και θαλαι, κ. τ. λ.). But, as Becker observes (Handb. p. 599), Strabo has already described the Campus Martius as the usual place for gymnastic exercises, and therefore his *elleo peidon* cannot be the part of it just described. It seems most probable that he meant the Campus Flamininus, which still retained its ancient name, though for the most part covered with the porticoes and other buildings that we here have, and the tiber-fields and Goodman's Fields in the heart of London.

The Campus Minor of Catullus may have been the Campus Martialis on the Caelian; or, as Preller observes, the punctuation may be:

"Te campo quasi vis ivit, minore Te in circulo."

The ancient *boci religiosi* on the Campus Martius were the following:— *The Palus Caperae, or Caprae*, where Romulius is said to have disappeared during the holding of an assembly of the people: its situation is unknown; but it does not seem probable, as Preller suggests (Regionem, p. 137), that its site may have been marked by the *Aedcula Caparia*, mentioned in the *Notitia* in the 7th Region, and that it may consequently have lain somewhere under the Quirinal. (Liv. i. 16; Ost. Fast. ii. 489, &c.) A place called *Tarentum*, or *Terentum*, which appears to have been volcanic (campus ignifer), with a subterranean *Aeum Divus Patris et Proserpinae*, where the ludi sacros were performed. The legend of Valesius and his children, and an account of the institution of the games, will be found in the *Dictionary of Antiquities*, p. 716. We are here only concerned for the situation of the place, which is very variously assigned by different writers. Urichs placed it in the Forum Boarium, which, however, must be wrong, as it was undoubtedly in the Campus Martius (Val. Max. ii. 4. § 5; Festus, p. 329), though at one extremity of it. (Zos. ii. 4.) Hence Becker placed it near the mausoleum of Augustus, being led to this conclusion by the Sibylline oracle recorded by Zoisius (loc.):—

"Ρζζαν εν πολι θωρα Θωμραοι έπλεον θωρ ὅπω τι στευνας."

Becker refers the word στευνας in this passage to *πολι*, and hence selects the northern part of the Campus for the site of Tarentum, as being the narrowest. But it may equally well refer to θωρ; and the narrowest part of the Tiber in its course through the Campus Martius—taking that appellation in its more extended sense—is where it is divided by the Insula Tiberina. Other passages adduced are undecisive, as those of Ovid (Fast. i. 501) and Seneca (de Morte Claudi, 13); and we are therefore though Preller (Regionem, Anhang, p. 241) pronounces against Becker’s site, we must leave the question undetermined.

The *Aeum Martis*, near which, when the *comitia* were ended the newly-elected consuls took their seats in curule chairs, was probably the earliest holy place dedicated to the god on the Campus which bore his name. We have already observed, when treating of the Porta Fontinalis, that it must have been near that gate, and that it was perhaps erected by Numa. There was also an *Aedes Martis* on the Campus, probably at the spot where the *equus* was celebrated. (Dion Cass. lvi. 24; Ost. Fast. ii. 855.) It seems to have been a distinct temple from that already mentioned in the Circus Flaminius. The site of the Temple of the *Lares Prerarini*, dedicated by the censor M. Aemilius Lepidus, n. c. 179, in puritanza of a vow made by L. Aemilius Regillus after his naval victory over the fleet of Antiochus, cannot be determined (Liv. xi. 52; Macro. Sat. i. 10); but it may probably have stood, as Preller conjectures, near the Navalia. The *Aedes Juturnae*, built by Q. Lutatius Catulus towards the end of the Republic, stood near the arches of the Aqua Virgo, and consequently near the Septa. (Serv. ad Aen. xii. 139; Ost. Fast. i. 463; Cic. pro Cluent. 36.)

Such was the Campus Martius down to the imperial times; when the great works undertaken there by Julius Caesar and Augustus gave it quite a new appearance. But, before we proceed to describe these, we must say a few words respecting the *Navalia*, or government dockyards. The older topographers placed them under the Aventine, from confusing them with the Emporium or commercial docks. Piale first pointed out the incorrectness of this view; but erred himself in placing the Navalia on the opposite bank of the Tiber, from his ignorance of certain passages which determine them to have been in the Campus Martius. These passages, which were first adduced by Becker (de Maris, &c. p. 96, Handb. p. 159), are the following:— "Saepe unica imperii populi Romani, L. Quinctius, trans Tiberim contra eum ipsum locum, ubi nunc Navalia sunt, quattuor luminum celebrat agrum, quae prata Quintia vocantur." (Liv. iii. 26.) This passage shows the Navalia to have been on the left bank of the Tiber, opposite some fields called porta Quinctia, and the following one from Piny fixes the situation
of these fields in the district called Vaticanus: “Aranti quator sua jugera in Vaticano, quae prata Quiniecia appellatur, Cincinnati viator attulit dicaturam” (xvii. 4). Théy the Navalia were in the Campus Martius may also be inferred from Livy (xlv. 42): “Naves regiae capitae de Macedonibus insitusae ante magnitudinem in Campo Martio sublactae sunt”; and from Plutarch’s account of the return of the younger Cato from Cyprus, in which he relates that although the magistrates and senate, as well as a great part of the Roman population, were ranged along both banks of the Tiber in order to greet him, yet he did not stop the course of his vessels till he arrived at the Navalia (Cat. Min. 39); a circumstance which shows that this arsenal must have lain towards the upper part of the stream’s course through the city. Hence, though we cannot define the boundary between the Janiculum and the Vatican, nor consequently the exact situation of the Prata Quiniecia, yet the site fixed upon by Becker for the Navalia, namely, between the Pircean Neronian and Porta di Ripetta, seems sufficiently probable. Preller is disposed to place them rather lower down the stream, but without any adequate reason (Regionen, Anh. p. 242).

It was Caesar who began the great changes in the Campus Martius to which we have before alluded. He had at one time meditated the gigantic plan of diverting the course of the Tiber from the Milvian bridge to the Vatican hill, by which the Ager Vaticanus would have been converted into a new Campus Martius, and the ancient one appropriated to building; but this project was never carried into execution. (Cic. ad Att. xiii. 33.) The only building which he really began in the Campus was the Septa Julia. It has been said, when treating of the Porta Flumentana, that a spot near the Circus Flamininus was appropriated to the holding of the Comitia Centuriae. In early times it was enclosed with a rude kind of fence or boundary, probably of hortula; whence, from its resemblance to a sheep-fold, it obtained the name of Ovile, and subsequently of Septa. (Livy xxvi. 22; Juv. vi. 528; Serv. ad Virg. Ec. i. 34.) For this simple and primitive fence Caesar substituted a marble building (Septa marmorea), which was so arranged as to form a portico a mile square, and to be connected with the Villa Publica. (Cic. ad Att. iv. 16.) It was probably not much advanced at the time of Caesar’s assassination: since we find that it was continued by the triumvirs Lepidus, and finally dedicated by Agrippa (Dion Cass. xiii. 23); but whether it was completed on the magnificent plan described by Cicero cannot be said. Its situation may be determined by a passage in Frontinus, in which he says that the arches of the Aquis Virgo ended in the Campus Martius in front of the Septa. (Ag. 22.) These arches, which, as we have seen before, began under the gardens of Lucullus on the Pincian, were connected to the baths of Agrippa. Donati mentions that remains of them were discovered in his time in front of the church of S. Ignazio (near the Collegio Romano). (De Urb. R. iii. 18.) This coincides with remains of the portico of the Septa existing under the Palazzo Buon and church of S. Maria in Via Lata in the Corso (Canina, Indice. 400); and we may therefore conclude that the Septa Julia stood at this spot. The portico must have enclosed a large open space where the assemblies were held, and in which gladiatorial shows, and on one occasion even a nautmachia, were exhibited. (Suet. Aug. 43, Cal. 18, Ner. 12; Dion Cass. iv. 8, lx. 10.) There was of course a suggestion or rostra, for haranguing the people. (Dion Cass. iii. 1.) The Septa were destroyed in the great fire under Titus (Dion Cass. iv. 24.), but must have been restored, since, in the time of Domitian, when they had lost their political importance, they appear to have been used as a market, in which the most valuable objects were exposed for sale. (Murt. ix. 60.) They appear to have undergone a subsequent restoration under Hadrian. (Spart. Hadr. 19.)

The Villa Publica adjoined the Septa Julia, and must have been on its S. side, since it is described by Varro (R. R. iii. 2) as being “in Campo Martio externo,” and must consequently have lain between the Septa and the Circus Flamininus, near the Palazzo di Venezia. The original one was an ancient and simple building, and is mentioned by Livy (iv. 22) as early as the year B. C. 436. It was used by the consuls for the liverying of troops, and by the censors for taking the census (Varr. i. c.); also for the reception of foreign ambassadors whom it was not thought advisable to admit into the city, and of Roman generals before they obtained permission to enter the gates in triumph (Liv. xxx. 21, xxxii. 24. Soc.). It was the scene of the massacre of the four Marian legions by Sulla (Val. Max. ix. 2; 4; Liv. Epit. xinxvii.; Strab. v. 249.). A passage in Lucan respecting this horrible transaction confirms the position of the Villa Publica close to the Septa (g. 196):—

“Tunc flus Hesperiae, Latii jam sola juvenus
Concidit et miserae maculavit Ovilia Romae.”

And another passage in Plutarch shows that it must have adjoined the Circus Flaminius on the other side (Om m111 alla et toutous et 111 lUllw toûs περιγενέσεις εἰς Εκκλησίαν ἀπόφασην παρά τον ιπποδρόμου, ἐκάλε τὴν σφηκηντ ἐν τῷ τῆς Ἑρων τερε, Sull. 30.). Seneca (de Clem. i. 12) likewise mentions the assembling of the senate in the neighbouring temple of Belona, where the cries of the massacred soldiers were heard; and this circumstance would rather lead us to suppose that the temple in question was situated at the eastern end, or towards the corner, of the Circus Flaminius, since the Septa and Villa Publica must have lain towards that end of it nearest to the Capitol. The simple building described by Varro must have been that rebuilt in the censorship of S. Aquius Paetus and C. Cornelius Cethegus, B. C. 194. Caesar could hardly have done anything to it, since a coin of C. Fontius Capito, consul B. C. 33, testifies that the latter either restored or rebuilt it.

The name of M. Vipsanius Agrippa, the son-in-law of Augustus, is connected with the principal changes and the most important buildings in the Campus Martius. The latter consisted of the Pantheon, the Thermae, a portico, and the large structure called the Diribatorium. The Campus Agrippae and its buildings will be described when we come to treat of that part of the district under consideration called Via Lata.

The Pantheon of Agrippa, which is still in so good a state of preservation that it serves for public worship, is one of the finest monuments of ancient Rome. An inscription on the frieze of the portico testifies that it was erected by Agrippa in his third consulate; whilst another below records repairs by the emperors Septimius Severus and Caracalla. From
of Pantheon because it contained the images of many gods (iii. 27), which, however, seem to have been those of the deities mythically connected with the Julian race, and among them that of Caesar himself. The temple is circular, and its magnificent portico with triple row of columns, though perhaps not quite in harmony with the main building, cannot fail to excite the admiration of the beholder. It owes its excellent state of preservation partly to the solidity of its construction, partly to its having been consecrated as a Christian church as early as the reign of Pius, under the title of S. Maria ad Martyres, or della Rotonda. To the lover of the fine arts it is doubly interesting from containing the tomb of Raphael. Some architects have thought that it was not originally intended for a temple, but as part of the baths; a notion, however, that is refuted by passages in ancient writers, where it is styled templum (Plin. xxxvi. 5. s. 38; Macrobr. Sat. ii. 13). The Pantheon stood in the centre of the Campus Martius, taking that name in its widest sense. The Thermes, of which only a few unimportant remains exist, adjoined it on the S., and must have extended near the Neronastery. The Diurnatorium was a large building destined, according to Becker (Handb. p. 638), to the examination of the voting tablets used in the comitia, in order to determine the result of elections, and must therefore have been situated near the Septa. It seems to have been left unfinished at Agrippa's death, and was dedicated by Augustus, B. C. 7. Its vast unsupported roof was one of the wonders of Rome, and, when destroyed in the fire of Titus, could not be replaced. (Dion Cass. iv. 8; Plin. xvi. 40.) In hot weather Caligula sometimes converted it into a theatre (Dion Cass. lxx. 7). The portico which Agrippa erected in the Campus Martius appears to have been called Porticus Agononarium, from its being adorned with a picture of the Argonauts, and was erected in commemoration of Agrippa's naval victories (Dion Cass. liii. 27; Mart. iii. 20. 11). Becker (Handb. p. 637) contends that this was the same building called Basilica Neptuni by Spartan (Hadcr. 19), and Poetases argus by Dion Cassius (xvi. 24). But a basilica is not equivalent to a portico, nor can we imagine that Dion would have used the term Poetases argus of a portico; whence it seems more probable, as assumed by Canina (Indic. p. 406) and other topographers, that Agrippa also erected a Temple of Neptune, which was connected with, or probably surrounded by the portico. Nardini and Canina—the latter from recent researches—are of opinion that the eleven columns now existing in the front of the Dogana di Terra in the Piazza di Pietra, near the Antonine column, belonged to this temple. Of a Porticus Melægi mentioned in the Notitia in connection with that of the Argononarium, we know nothing further.

Augustus also erected a few monuments on the Campus Martius. Among them was the Solarium Augusti, an obelisk which now stands on Monte Citorio, which served as a gigantic gnomon, and, on an immense marble flooring that surrounded it, exhibited not only the hours, but also the increase and decrease of the days (Plin. xxxvi. 13). In the northern part of the Campus, between the Via Flaminia and the Tiber, he caused to be constructed during his lifetime that superb Mausoleum, a description of which by Strabo has already been cited in the former part of this article. This district had for some time previously served as a burying place for the most distinguished persons. Among others buried near this spot were Sulla, Caesar together with his aunt and daughter, and the two consuls Hirtius and Pansa, who fell at Mutina. Several members of the family of Augustus had been entombed in the mausoleum before the ashes of Augustus himself were deposited within it; as Marcellus, Agrippa, Octavia, and Drusus (Dion Cass. liii. 30; Virg. Aen. vi. 873, seq.; Ov. Conts. Ed. Lec. 67). By the time of Hadrian it was completely filled; which caused him to build a new one on the opposite side of the river (Dion Cass. lxix. 23). There are still considerable remains of the monument of Augustus. The area on which the sepulchre of the Caesars stood is now converted into a sort of amphitheatre for spectacles of the lowest description: sic transit gloria mundi. It is doubtful whether a third building of Augustus called Porticus ad Nationes, or xiv. Nationes, stood in the Campus Martius or in the Circus Flaminius. It appears to have been near the theatre of Pompey, and contained statues representing different nations (Plin. xxxvi. 5. s. 4; Serv. ad Aen. viii. 721.)

Near the Mausoleum appears to have been a portico called Via Tecta, the origin of which is un-
known. Its situation near the place assigned is determined by the following passage in Seneca's Apocolocyntosis: "Iucet illi (Claudio) manum Tithylinga decoctam tribut, ille a situ quod ne quis enem possit agnosceare, per Campus Martium; et inter Tiberim et Viam Tectam descendit ad inferos" (p. 389, Bip.). If this descent to the infernal regions was at the subterranean altar of Pluto and Proserpine before mentioned, it would go far to fix the situation of the Tarentum in the northern part of the Campus; but this, though certain, is not certain. For instance, the Amphitheatra is mentioned once or twice by Martial (iii. 5, viii. 75).

Among the other monuments relating to Augustus in the Campus Martius, was an Ara Paris, dedicated by Augustus on his return from Germany, B.c. 13. (Dion Cass. liv. 25; Ov. Fast. iii. 882; Fast. Præn. III. Kal. Feb.) The Ara Fortunae Redux, was another similar altar (Dion Cass. liv. 19); but there is nothing to prove that it was on the Campus Martius.

In the reign of Augustus, Statilus Taurus erected an Amphitheatre on the Campus,—the first built of stone at Rome; but its situation cannot be determined. (Dion Cass. lii. 23; Suet. Aug. 29.)

A long interval ensued after the reign of Augustus before any new public buildings were erected on the Campus Martius. Caligula began, indeed, a large amphitheatre near the Septa, but Claudius caused it to be pulled down. Nero erected, close to the baths of Agrippa, the Thermæ Neroneae, which seem to have been subsequently enlarged by Alexander Severus, and to have obtained the name of Thermæ Alexandrineae. The damage occasioned in this district by the fire of Nero cannot be stated, since all that we certainly know is that the amphitheatre of Statilus Taurus was destroyed in it (Dion Cass. lixi. 18). The fire under Titus was considerably more destructive in this quarter (Ibid. lixi. 24); but the damage appears to have been made good by Domitian. Among the buildings restored by him on this occasion we find the Temples of Isis and Serapis mentioned; but we have no accounts respecting their foundation. Their site may, however, be fixed between the Septa Julia and the baths of Agrippa, near the modern church of S. Maria sopra Minerva. Thus Juvenal (vi. 527):—

"A Mercur portabit aquas, ut sparcat in aedem

Isidis, antiquo quae proxima surgit Ovili."

(Cf. Joseph. B. Jud. vii. 5, § 4.) It was near the spot indicated that the celebrated group of the Nile was discovered which now adorns the Vatican (Braun, Museums of Rome, p. 160), together with several other Egyptian objects (Flaminius Varus, Mem. nos. 20, 27; Bartoli, Mem. no. 112, &c.). Alexander Severus devoted much attention to these temples (Lampr. A. Scr. 26), and they must have existed till a late period, since they are enumerated in the Notitia. Domitian also restored a temple of Minerva which stood near the same spot, the Minerva Chalcidica of Cassiodorus (Chron. sub Domit.) and of the Notitia. (Motter Diar. Ital. p. 292). It must have been the temple originally founded by Pompey in commemoration of his eastern victories, the inscription which is recorded by Pliny (vii. 27). It was from this temple that the church of S. Maria vasta mentioned derived its epitaph of sopra Minerva; and it seems to have been near this spot that the celebrated statue of the Greciniani Pallas, now in the Braccio Nuovo of the Vatican, was discovered; though according to other, but less probable, accounts, it was found in the circular temple near the Porta Maggiore (Braun, Museums, &c. p. 154). Some topographers assume that the temple built by Pompey was a different one from the above, with the barbarous title of Minerva Campensis, but in the same neighbourhood; which does not seem probable (Carina, Indicae, p. 405).

Domitian also founded in the Campus Martius an Odeum and a Stadium (Suet. Dom. 5), which will be described in the proper sections. The situation of the former cannot be determined. The Stadium, in all probability, occupied the site of the Piazza Nova, the form of which shows that it must have been a circus. The name of Naronus is a corruption of Agone, and important remains of this Stadium
were in existence in the time of the Anonymous of Einsiedlen (Preller, Regiones, p. 171). The assumption that this place was occupied by a stadium built by Alexander Severus—in which case that of Domitian must be sought in some other part of the Campus—rests only on traditions of the middle ages (Canina, Indice, p. 392).

Trajan is said to have built a theatre in the Campus Martius, which, however, was destroyed by Hadrian. (Spart. Hist., 8.) The same emperor probably erected what is called in the Notitia the Basilica Marciapae (Marcianae), which was probably a temple in honour of his sister, Marciana. The Antonines appear to have adorned this quarter with many buildings. The Basilica Matildes (Matidae) was perhaps erected by Antoninus Pius, and consecrated to Matidia, the wife of Hadrian; as well as the Hadrianum, or temple to Hadrian himself, also mentioned in the Notitia. (Preller, p. 175.) The Tempulum Antonini and Columna Cochlis were the temple and pillar erected in honour of M. Aurelius Antoninus. (Capitol, M. Ant. 18; Aur. Vict. Epit. 16.) All these buildings stood near together in the vicinity of the Piazza Colonae, on which the column (Columna Antoniana) still exists. For a long while this column was thought to be that of Antoninus Pius, and was even declared to be such in the inscription placed on the pedestal during the pontificate of Sextus V. But the sculptures on the column were subsequently perceived to relate to the history of Antonine the philosopher; and this view was confirmed not only by the few remaining words of the original inscription, but also by another inscription found in the neighbouring Piazza di Monte Citorio, regarding a permission granted to a certain Aedulus, a freedman of Septimius Severus and Caracalla, to erect a small house in the neighbourhood of the column, as curator of it. This inscription, which is now preserved in the corridor of the Vatican, twice mentions the column as being that "Divi Marcii." (Canina, Indice, p. 417, seq.) The column is an imitation of that of Trajan, but not in so pure a style of art. Both derive their name of cochleis from the spiral staircase (cochlea, σιχλαία) in the interior of the two. (Isisil. Orig. xvi, 2, 38.) The Columna Antonina Pia was a large pillar of red granite, erected to

still preserved in the garden of the Vatican. (Canina, Indice, p. 419.) The sculptures on the pedestal represent the Apotheosis of Antoninus Pius and Faustina.

The Thermae Commodianae and Alexanderine will be treated of in the sections following the baths. After the time of Alexander Severus we find but few new buildings mentioned in this district. Gordian III. is said to have entertained the design of building an enormous portico under the Pincian hill, but it does not appear that it was ever executed. (Capitol. Gord. III. c. 82.) Respecting the Porticus Flaminia, see the article Porticus M. Lucilius. Some porticoes near the Pons Aelius, which appear to have borne the name of Maximae, were terminated by the Triumphal Arch of Gratian, Valentinian, and Theodosius; the inscription on which will be found in the Anonymous of Einsiedlen, and in Gruter (chxxi. 1). Claudius, who was prefect of the city under Valentinian I., erected a portico near the baths of Agrippa, which he called Porticus Boni Eventus, after a neighbouring temple with the same name (Amm. Mar. xix. 6. § 19); but with regard to this temple we have no information.

We shall now proceed to that part of the district under consideration comprised in the 7th Region of Augustus, and subsequently called Via Latina, from the road which bounded its western side, and which formed the southern limit of the Vicus Flamininus. The most important topographical question connected with this district is the situation of the Campus Agrippae, and the buildings connected with it. We have already shown from the situation of Martius's house, as well as from the probable site of the temple of Sol, that the Campus Agrippae must have lain under the western side of the Quirinal, and not under the Pincian, where Becker places it. It is probable, too, that it lay on a line with the Pantheon and thermae of Agrippa, although divided from them by the Via Latina; and hence Canina correctly describes it as facing the Septa (Indice, p. 215.), whilst Uricchi and Preller, in like manner, place it between the Piazza degli Apostoli and the Fontana Trevi. (Besch. vol. iii. pt. iii. p. 112; Regiones, p. 138.) The Campus Agrippae contained gardens, porticoes, and places for gymnastic exercises, and was, in short, a kind of Campus Martius in miniature. It was also a favourite lounge and promenade. (A. Gell. xiv. 5.) It appears from a passage in Dion Cassius, that the Campus was not finished before Agrippa's death, and that it was opened to the public by Augustus (Liv. 8.) It contained a Porticus Poliae, so named after Agrippa's sister Polla or Pola; which is probably the same as that alluded to by Martial, in some passages before quoted, under the name of Vipsania. The latter name seems to be corrupted in the Notitia into Porticus Gysianio. Becker (Hamburg, p. 506) would identify the Porticus Pollae with the Porticus Europae, but they seem to be different structures. (Uricchi, Rom. Topogr. p. 139.) The latter, which derived its name from a picture of the rape of Europa, is frequently mentioned by Martial (ii. 14.iii. 20. xi. 1). Its situation cannot be determined; but most topographers place it in the Campus Martius, among the other buildings of Agrippa. (Canina, Indice, p. 400; Uricchi, Rom. Marsfeld, p. 116.) It appears from the Notitia that the Campus Agrippae contained Castrea, which, from the Catalogus Imperator. Vienna. (1. ii. p. 246, Ronc.) appear to have been dedicated by Aurelian; but the Porticus Vipsania served as a

PEDESTAL OF COLUMN OF ANTONIUS PIUS.
sort of barracks as early as the time of Gallus. (Tac. H. i. 31; Plut. Galb. 25.)

Several objects mentioned in this district are doubtful as to site, and even as to meaning, and are not important enough to demand investigation. It contained TRIUMPHAL ARCHES OF CLAUDIUS AND M. AURELIUS. The latter subsisted in a tolerably perfect state near the Piazza Farnia in the Corso, till the year 1662, when pope Alexander VII. caused it to be pulled down. Its relics still adorn the staircase of the Palazzo de’ Conservatori. (Canina, Indice, p. 220.)

ARCH OF AURELIUS.

We shall conclude this section with noticing a very humble but very useful object, the FORUM SCARUM. Bacon was an article of great consumption at Rome. It was distributed, as well as bread, among the people, and its annual consumption in the time of Valentinian III. was estimated at 3,628,000 pounds. (Gibbon, Decline and Fall, vol. iv. p. 55, ed. Smith.) The custom of distributing it had been introduced by Aurelian. (Vopisc. Aurel. 25.) A country in which hogs-flesh is the cheapest meat betrays a low state of farming. The swine still abounds in Italy; but in ancient times the Roman market was principally supplied from the forests of Lucania. The market was important enough to have its special triemne, and the “pigmens of the eternal city” (“Porcinarii Ubis aeternae”) were considered such a useful body that peculiar privileges were granted to them. (Cod. xi. tit. 16: Not. Digest. Part. Occ. p. 16; Gruter, Inscri. col. xxxiv. 4.) The market is alluded to in a sort of proverbial manner by Philostratus (Φησι τη καλη κουσα φονη την δωπη τεν σων άργου, Heroioc. p. 283, 19, ed. Kayser). It is supposed to have stood near the present church of S. Croce dei Lucalesi, which was substituted for that of S. Nicola in Porcellibus. (Canina, Indice, p. 209; Peller, Regionen, p. 139.)

XIV. THE TRANSIBERINE DISTRICT.

Although the district beyond the Tiber formed one of the 14 Regions of Augustus, and although part of it may perhaps have been enclosed with a wall as early as the time of Ancus Marcius, it was certainly included in that of Aurelian, yet, while it was considered a part of Rome, it never belonged to the Urbs, properly so called. The distinction between Roma and Urbs was at least as old as the time of Augustus, and was thus laid down by Alfenus Varus: “Ut Alfenus ait, Urbs est Roma, qua muro cingetur; Roma est etiam, qua continuas aedificia essent.” (Digest. l. tit. 16.1.87.) This circumstance rather tends to strengthen Niebuhr’s opinion that Ancus Marcius only built a citadel on the Janiculum, without any walls extending to the river. [See above, Part II. Sect. I. sub fin.] The district in question is naturally divided into three parts, the Mons Janiculum (or Janiculum), the Mons Vaticanus—each with their respective plains towards the river,—and the Insula Tiberina. We shall begin with the last.

We have already mentioned the legend respecting the formation of the INSULA TIBERINA through the corn belonging to the Tarquins being thrown into the river. In the year b. c. 291 the island became sacred to Asculapius. In consequence of a pestilence an embassy was despatched to Epidauros to bring back to Rome the image of that deity; but instead of the statue came a snake, into which it was perfectly known that the god himself had entered. As the vessel was passing the Tiberine island the snake swam ashore and hid itself there; in consequence of which a TEMPLE OF ASCULAPUS was built upon it, and the island ever afterwards bore the name of the god. (Liv. Epit. xi. 0v. Met. xv. 739; Val. Max. i. 8 § 2; Dionys. v. 13; Sect. Claud. 25.) Sick persons resorted to this temple for a cure; but it does not appear that there was any hospital near it, as was the case at Epidauros. There is no classical authority for the fact that the sides of the island were afterwards walled round in the shape of a ship, with the prow against the current, typifying the vessel which brought the deity; but it is said that vestiges of this substruction are still visible. (Canina, Indice, p. 574.) The island also contained a TEMPLE OF JUPITER and a TEMPLE OF FAUNS, both dedicated in b. c. 193. (Liv. xxxiii. 42, xxxiv. 58.) The temple of Jupiter appears to have adjoined that of Asculapius. (Liv. Fast. ii. 329.) It has been concluded, from the following verses of Ovid, that the temple of Fauns must have stood on the upper part of the island (Fast. ii. 193):

“Ibidus agris est fumant altaria Fauni
Hic, ubi discreus insula rumpat aquas;”

but this, though a probable, is not a necessary inference. SEXI SANSUS, or Deus Fidius, seems also to have had a sacellum here, as well as TIBERINUS, as the river-god is called in the Indigitamenta, or religious books. (Fast. Amit. vi. Id. Dec.) By a curious error the early Christian writers confounded the Tiberine deity with Simon Magnus, and thought that he was worshiped on the island. (Just. Mart. Apol. 2; Euseb. H. Eccl. ii. 12.) After the building of the two bridges which connected the island on either side with the shore, it seems to have obtained the name of “INTER DUOS Pontes” (Plut. Popl. 8); and this part of the river was long famous for the delicious pike caught in it; which owed their flavour apparently to the rich feeding afforded by the proximity of the banks. (Plut. Popl. 8; Macrob. Sat. ii. 12.) In the Acta Martyrum the island is repeatedly styled Insula Lyceanica; it is at present called Isola di S. Bartolommeo, from the church and convent of that name.

The JANICULUM begins at that point opposite the Campus Martius where the Tiber reaches farthest
to the W., whence it stretches in a southerly direction to a point opposite the Aventine. The masculine form of the name (Janiculum), though employed as a substantive by some modern writers, seems to rest on no classical authority, and can only be allowed as an adjective form with mens or colleas. (Becker, Handb. p. 653.) The name Janiculum is usually derived from Janus, who is said to have had an arx or citadel here. (Ov. Fast. i. 245;Macroh. Sat. i. 7.) As the ridge runs in a tolerably straight line nearly due S. from the point where it commences, the curve described by the Tiber towards the E. leaves a considerable plain between the river and the hill, which attains its greatest breadth at the point opposite to the Forum Boarium. This was the original Regio Transiberina. It appears to have been covered with buildings long before the time of Augustus, and was principally inhabited by the lower classes, especially fishermen, tanners, and the like, though it contained some celebrated gardens. Hence the Luco Pictorius were held in this quarter. (Ov. Fast. vi. 237; Fest. pp. 210, 238.) It was the ancient Glotus, or Jewish quarter, which now lies opposite to it. (Philo, de Virt. ii. p. 568, Manegy.)

The Regio Transiberina contained but few temples or other public buildings. Of the temple of Fortuna we have already spoken when discussing the question respecting that of Pudicitia Patrica (supra, p. 814). Of other loci religiosi in this quarter little more is known than the name. Such was the Lucus Feroniae, mentioned in the narratives of the death of C. Gracchus. (Ann. Vict. III. 65; Plut. C. Gracch. 17.) Cicero connected this grove with the Eunudes, or Furies (Var. Deor. iii. 18); but there is no account of those Attic deities having been naturalized at Rome, and we should rather infer from Varro that the grove was consecrated to some ancient indigenous goddess. (J. L. vi. § 19, Mill.) It was a universal tradition that Numa was buried in the Janiculum (Dionys. ii. 76; Plut. Num. 22; Val. Max. i. § 12.) Cicero, in a corrupt passage, places his tomb "hand procul a Fonti Arati." (de Font. Aris) (de Leg. ii. 22); but of such a deity or altar we have no further account. We also find a Campus Lucus Cornelianus mentioned by Paulus Diaconus (p. 64, Mill.) as "trans Tiberinum;" but though the names of these goddesses are also found in an inscription (Gutter, III. xxv. 14.), what they were cannot be told. Lastly, as the Basis Capitoldina records a Vicus Larum Ruralium in this district, we may conclude that they had a sacredum here.

Among the profane places trans Tiberinum were the Mucia Prata and the field called Codeta. The former—the land given to Mucius Scaevola by the Senate as a reward of his valour (Liv. ii. 12)—may, however, have lain beyond the district now under consideration, and probably farther down the Tiber. The Codeta, or Ager Codetanus, was so named from a plant that grew there resembling a horse's tail (coda) (Paul. Dial. pp. 38 and 58, Mill.), —no doubt the Equisetis, or Equisetum palustre of Linnaeus. ("Invisa et equisetis est, a simulidentem equinae setae," Plin. xvi. 67. s. 4.) There seems to have been a Codeta Major and a Minor, since Suetonius relates that Caesar exhibited a naval combat in the latter, where he had formed a lake ("in minere Codeta defosso lacu," Cass. xii. 39). Don Cassius, on the other hand, represents this nauaucha as taking place in the Campus Martius (xiii. 23). Becker (Handb. p. 656, note) would reconcile these divergent accounts by assuming that the Codeta Minor lay in the Campus Martius, and the Codeta Major opposite to it, on the other side of the Tiber. (Cf. Friller, Regiones, p. 218.) But there seem to be some grave objections to this assumption. It is not probable that two places bearing the same name should have been on different sides of the river, nor that there should have been a marshy district, as the Codeta evidently was, in the Campus Martius, in the time of Caesar. Besides, had the latter contained a place called Codeta Minor,—which must have been of considerable size to afford room for the exhibition of a naval combat,—we should surely have heard of it from some other source. Becker adduces, in proof of his view, another passage from Suetonius (Ib. c. 44), from which it appears that Caesar contemplated building a magnificent temple of Mars. on the site of the lake, after causing it to be filled up; a project, however, which does not seem to have been carried into execution. Becker assumes that this temple must of course have been in the Campus Martius; though on what grounds does not appear, as we have already seen that there was a temple of Mars a long way outside the Porta Capena, besides a subsequent one in the forum of Augustus. We are, therefore, of opinion, that the word Apoie, in Dion Cassius, must be a mistake either of his own, or of his copyists, and that the Campus Codetanus of the Notitia must have lain rather below the city, on the right bank of the Tiber. (Cf. Camina, Indic. p. 566, seq.) The Notitia mentions a Campus Brittanus in connection with the Campus Codetanus, but what it was cannot be said. Some have conjectured that it was called after the Bruttii, who were employed at Rome as public servants. (Paul. Diaec. p. 31.)

Near the same spot must have been the Horti Caesaris, which Caesar bequeathed to the Roman people. (Suet. Cees. 83; Tac. Ann. ii. 41; Cic. Phil. ii. 42.) According to Horace, they must have lain at some distance:—

"Trans Tiberinum longe cultit is, popre Caesaris hortos." (Sat. i. 9. 18.)

And it may be inferred from the situation of the Temple of Fortuna, which we have already discussed (supra, p. 814), that they must have been at about a mile's distance from the Porta Portensis. (Fast. Amit. VII. Kol. Jul.) It seems probable that they were connected with the Nemus Caesarum, where Augustus exhibited a nauaucha, and where a grove or garden was afterwards laid out. ("Nemus proelii spectaculam populo dedet trans Tiberinum opemque neci nume nunc Caesarum," Mon. Anegy.) This would rather tend to confirm the view that the coseta was in this neighbourhood. In Tacitus (Ann. xii. 56: "Ut quondam Augustus structo sis Tiberinum stagno") we are therefore probably to read usis for cias, which ancient form seems to have been retained in designating the Transiberine district ("Decubatur cias Tiberinum et usis Tiberinum," Aur. Gall. xii. 13; cf. Vari. L.L. v. § 83, Mill.; Pompon. Dig. i. lit. 2. 1. 2. § 31.) The Nemus Caesarum seems to have been so called from Caio and Lucius Caesar. (Dion Cass. L. 25.) We are not told if it was that part of the site of the lake excavated for the nauaucha, but was planted round it as we learn from Tacitus (— apud
Sparta. Hadri. 19.) Among the ancient notices of it the most important is that of Pausanias. (B. G. i. 22. p. 106. ed. Bonn.) A complete story of it is given by Bunsen (Beschr. vol. ii. p. 404, seq.), and descriptions will be found in all the guide-books. Hadrian's mausoleum was the tomb of the following emperors and their families, certainly till the time of Commodus, and perhaps till that of Caracalla (v. Becker Handh. note 1430). It was built in the Horre Domitiae (Capitol. Ant. P. 5), if we are to understand the word collocavit in that passage of an actual entombment, and not of a lying-in-state.

MOLE OF HADRIAN RESTORED.

Severus founded some baths in this district (Spart. Sept. Ser. 19; cf. Becker, de Muris, p. 127) and the arch called Porta Septimiana; and it likewise appears that he purchased some large gardens before his departure into Germany. (Spart. Ib. c. 4.) The Lectecarii were either sedan-chairmen, or men employed to carry biers, and their castra means nothing more than a station for them, just as we hear of the Castra Tabellariorum, Victuariarum, &c. (Peller, Regionen, p. 218.)

The Mucii or Collis Vaticanus rises a little to the NW. of the Moni Janiculae, from which it is separated only by a narrow valley, now Valle d'Ieferno. The origin of the name of this district, at present the most famous in Rome, cannot be determined. The most common derivation is that from a story that the Romans gained possession of it from the Etruscans through an oracular response ("Vatam respondo expibus Etres," Paul. Disc. p. 379.) We have already remarked that there is no ground for Niebuhr's assumption respecting the existence here of an Etruscan city called Vatima or Vaticana [see p. 724. This district belonged still less than the Janiculum to the city, and was not even included in the walls of Aurelian. It was noted for its unhealthy air (Tac. ii. ii. 93), its unfruitful soil (Cic. de Leg. Agr. ii. 35), and its excusable wine, ("Vaticana bibis, bibis venenum," Mart. vi. 92. 93; cf. x. 45.) In the Republican times the story so beautifully told by Livy (iii 26) of the great dictator L. Quinctius Cincinnatus who was saluted dictator here whilst cultivating his farm of four acres, the Praeta Quinctia, lends the only interest to the scene, whether it may belong to the romance of history or not. There were no buildings in this quarter before the time of the emperors, and almost the only one of any note in all antiquity was a sepulchre—the Mausoleum or Moles Hadriani, now the Castello di S. Angelo. (Dion Cass. lxxxix. 23;
The gardens of the Domitian family are frequently mentioned in inscriptions; and those who are curious respecting their history will find a long account of them in Preller's Regionen (p. 207, seq.). They appear to have existed under the same name in the time of Aurelian. (Vopisc. Aurel. 49.) In the same district were also the Horti Achippiniae. These came into the possession of her son, Caligula, who built a circus in them, afterwards called the Circus Nero. It will be treated of in another section; and we shall only mention here that this was the place in which the Christians, having previously been wrapped in the tunica modesta or picata, were burnt, to serve as torches for the midnight games. (Tac. Ann. xv. 44.) Both the gardens mentioned came into the possession of Nero, and may therefore have also been called Horti Neronis. (Tac. Ib. and c. 39.)

These gardens having been burnt, the abata and rusnata—that is, winter and summer; but these distinctions of colours and factions do not seem to have been known till the time of the Empire, Joannes Lydus (de Mens. iv. 25, Beck.) states the original number of the factions to have been three, the rusnata, albeta and prosina; and this seems to agree with the following passage in Cicero—if, indeed, it is to be interpreted strictly, and is anything more than a fortuitous coincidence: “Necque enim in quadrigis cum secundum numeraverim, aut tertium, qui vix e carceribus exierit, cum palmae jam primus acciperit.” (Brut. 47.) However this may be, we know that in the early part of the Empire there were four colours, though by whom the fourth, or albeta, was added, cannot be said. Domitian added two more the aurata and purpura (Suet. Dom. 7.), but these do not seem to have come into customary use. The usual missura, or start, consisted of four chariots, as we learn from Virgil with the note of Servius:—

"Centum quadrigulos agitabo ad fluminum cursus" (Georg. iii. 18);

where the commentator remarks from Varro:—"Id est, unus dei exhibebi circenses ludos, qui, ut Varro dicit in libris de genti p-puli Romani, olim xxx. missus ibant." It appears probable that the carceres were twice the number of the chariots which started, in order to afford egress to those which had finished the course, whilst fresh charioteers were waiting in those which were closed to begin a new course (v. Becker, de Mari., p. 87). Thus in the Lyons mosaic eight carceres are represented; but in the Circus Maximus, after the increase of the factions to six, there were probably twelve carceres; and such also appears to have been the number in the circus on the Via Appia (Cassiod. Disc. vi. 54.). The Circus Maximus seems to have remained in a very rude and imperfect state till the time of Julius Caesar. He increased it by adding to both its extremities; and its size when thus enlarged appears to have been 3 stadia in length and 1 in breadth. Caesar also surrounded it with a canal, called Euphras, in order to protect the spectators from the fury of the elephants; but this was filled up by Nero and converted into seats for the equites, whose increased numbers probably required more accommodation. (Suet. Cæs. 39, Plin. vii. 35, Cæs. 1.) The description of the circus by Dionysius (iii. 68) is the clearest and longest we possess, but the measurements which he gives differ from those of Pliny, as he makes it 3] stadia long and 4 pletira, or 3½ of a stade, broad. But perhaps these authorities may be reconciled by assuming that one took the inner and the other the outer circumference. The reader will find a lengthened examination of these different measures in Canina's Indicazione Topografica, p. 491, seq. In Caesar's circus it was only the lower rows of seats that were built of stone; the upper rows were of wood, which accounts for the repeated fires that happened there. The first of these occurred in n. c. 31, a little before the battle of Actium, and destroyed a considerable
part of the building. (Dion Cass. l. 10.) Augustus rebuilt the Palatina, or place on which the images of the gods were laid, and erected the first obelisk between the metri. (Mon. Ancyr.; Suet. Aug. 45; Plin. xxxvi. 14. s. 5.) The side toward Rome was Augustus who had a long way to go to the sea, and at the place of Tiberius. ( Tac. Ann. v. 45.) Claudius much improved the appearance of the circus by substituting marble corridors for those of tufa, and metre of gilt bronze for the previous ones of wood. He also appropriated certain seats to the senators. (Suet. Claud. 21.) We have seen that the fire of Nero broke out in the circus, whereas it is natural to conclude that it must have been completely destroyed. Yet it must have been soon restored, since Nero caused his ridiculous triumphal procession to pass through it, and hung his triumphal wreaths round the wall of Augus. (Dion Cass. iv. 21.) The effects of another fire under Domitian were repaired with the stone from his namnachos, and it was now, perhaps, that 12 corridors were first erected. (Suet. Dom. 5, 7.) We read of another restoration on a still more magnificent scale by Trajan. (Dion Cass. viii. 7.) During the celebration of the Ludi Apollinares in the reign of Antoninus Pius, some of the rows of seats fell in and killed a large number of persons. (Capitol. Anton. P. 9; Catal. Imper.Tienn. ii. p. 244.) We know but little more of the history of the Circus Maximus. Constantine the Great appears to have made some improvements (Agr. Vict. Cass. 40. § 27), and we hear of the games being celebrated there as late as the 6th century. (Cassiod. Var. viii. 51.)

The circus was used for other games besides the chariot races, as the Ludus Trojic, Certamen Gymnicae, Venatio, Ludi Apollinares, &c. The number of persons it was capable of accommodating is variously stated. Pliny (xxxvi. 24. s. 1) states it at 260,000. One codex of the Notitia mentions 485,000, another 385,000; the latter number is probably the more correct. (Preller, Region. vii. 191.) The circus seems to have been enlarged after the conquest of Trajan.

The Circus Flaminius was founded in B.C. 220 by the consent of that name. (Liv. Epit. xx.; Cass. chron. p. 178.) We have but few notices respecting this circus, which lay under the Capitoline, with its corridors towards the hill, and its circular end towards the river. The Ludi Plebeii, and those called Taurici, were celebrated here (Val. Max. i. 7. § 4; Varr. L. L. v. § 134), and Augustus afforded in it the spectacle of a crocodile chase. (Dion Cass. iv. 10.) It also served for meetings of the people, which had previously been held in the Prisca Flaminia. (Liv. xxvii. 21. Cic. ad Att. i. 14.) We find no mention of the circus Flaminius after the first century of our era; and in the early part of the 9th century it had been so completely forgotten that the Anonymous of Einsiedeln mistook the Piazza Navona for it. Yet remains of it are said to have existed till the 16th century, at the church of S. Caterina de' Farnali and the Palazzo Mattei. (And. Fulvio, Ant. Urb. lib. iv. p. 254; Lucio Fumo, Ant. di Roma, iv. 23, p. 138.)

What is sometimes called by modern topographers the Circus Agonalis, occupied, as we have said, the site of the Piazza Navona. But the Agonalis were certainly not celebrated with circuses, games, and there are good reasons for doubting whether this was a circus at all. Its form, however, shows that it was a place of the same kind, and hence Becker's conjecture seems not improbable (Handh. p. 670), that it was the stadium founded by Domitian. The Greek foot-races had been introduced at Rome long before the time of Domitian. Both Caesar and Augustus had founded the Campus Martius (Suet. Cas. 29; Dion Cass. liii. 1), and Domitian seems to have constructed a more permanent one. (Suet. Dom. 5; Cassiod. Chron. t. ii. p. 197.) We are not indeed told that it was in the Campus Martius, but this is the most probable place for it; and the Notitia after mentioning the three theatres and the Odeum in the 9th Region names the Stadium. It is also mentioned in conjunction with the Odeum by Annuinianus Marcellinus (xvi. 10. § 14). It is discriminated from the cirri by Lamprinus: "Omnis de circo, de theatro, de studio—meretrixes collegit." (Heliog. 26.) In the middle ages it seems to have been called "Circus Alexandrinus," an appellation doubtless derived from the neighbouring thermas of Alexander Severus. By the Anonymous Einsiedelius it was confounded, as we have said, with the Circus Flaminius.

Putting this on one side, therefore, the third circus, properly so called, founded at Rome, would be that which Caligula built in the gardens of his mother Agrippina in the Vatican. (Plin. xvi. 40, xxxvi. 11; Suet. Claud. 21.) From him the place subsequently obtained the name of Calanum (Dion Cass. lix. 14), by which we find it mentioned in the Notitia. (Reg. xiv.) This circus was also used by Nero, whence it commonly obtained the name of Circus Neronis. (Plin. L. c.; Suet. Ner. 22; Tac. Ann. xiv. 14.) In the middle ages it was called Palatium Neronis. Some writers assume another circus in this neighbourhood, which Canina (Iudic. p. 590) calls Circus Hadriani, just at the back of the mansoleum of that emperor; but this seems hardly probable. (Cf. Urichs, in Class. Mus. vol. iii. p. 202.) The chief passage on which this assumption is founded is Propocius, de Bell. Goth. ii. 1 (Preller, Region. v. 215). A fourth circus was that of Maxentius about two miles on the Via Appia, near the tomb of Cecilia Metella. It used to be commonly attributed to Caracalla; but an inscription dug up in 1825 mentions Romulus, the son of Maxentius (Orell. Iusser. 1069); and this agrees with the Catalogus Imperatorum Viciennis, which describes the building of a circus to Maxentius (ii. p. 248, Rome.). This building is in a tolerable state of preservation; the spina is entire, and great part of the external walls remains; so that the spectator can here gain a clear idea of the arrangements of an ancient circus.

A complete description of it has been published by Rev. Richard Burgess (London, Murray, 1828).

The fifth and last of the circuses at Rome, which can be assumed with certainty, is the Circus Helenopolitanus, which lay near the Amphitheatrum Castrense, outside the walls of Aurelian. (Urichs, Rom. Topogr. p. 126, seq.; Becker, Antw. p. 81.) We have already said that the existence of a Circus Flamicus in the 6th Region, is a mere invention; and that of a Circus Nallustis, in the same district, rests on no satisfactory authority.

Although theatrical entertainments were introduced at Rome at an early period, the city possessed no permanent theatre before the Theatreum Pompeii, built in the second consobrini of Pompey, B. C. 55. (Vell. Pat. ii. 48; Plut. Pompeii. 52.)
visually to this period, plays were performed in wooden theatres, erected for the occasion. Some of these temporary buildings were constructed with extravagant magnificence, especially that of M. Aemilius Scaurus in B.c. 59, a description of which is given by Pliny (xxxvi. 24. s. 7). An attempt, to which we have before alluded, was indeed made by the censor Cassius, B.c. 154, to erect a stone theatre near the Lupercal, which was defeated by the rigid morality of Scipio Nasica (Vell. Pat. i. 15; Val. Max. ii. 4. § 2; Liv. Epit. xviii.; Oros. iv. 21). A good deal of this old Roman feeling remained in the time of Pompey; and in order to overcome, or rather to evade it, he dedicated a temple to Venus Victrix on the summit of his theatre, to which the rows of seats appeared to form an ascent (Tac. Ann. xiv. 20; Tert. de Spect. 10; Plin. viii. 7). Cellius places the dedication of the theatre in the third consulship of Pompey, which is at variance with the other authorities (N. A. x. 1). We have spoken of its situation in a preceding section, and shall refer the reader who desires any further information on this head to Canina (Itinerae, p. 585, seq.), who has bestowed much labour in investigating the remains of this building. There is great discrepancy in the accounts of the number of spectators which this theatre was capable of accommodating. According to Pliny, in whose MSS. there are no variations, it held 40,000 persons (xxxvi. 24. s. 7); and the account of Tacitus of the visit of the German ambassadors seems to indicate a large number ("Intravere Pompei theatrum, quo magnitudinem populi viserent," Ann. xiii. 54). Yet one of the codices of the Notitia assigns to it only 22,888 seats, and the Curiosus still fewer, or 17,590. It was called theatrum lapidarium, or marmoreum, from the material of which it was built; which, however, did not suffice to protect it from the ravages of fire. The scena was destroyed in the reign of Tiberius, and re-dedicated by Claudius (Tac. Ann. iii. 72; Dion Cass. ix. 6). The theatre was burnt in the fire under Titus, and again in the reign of Philip; but it must have been re-erected on both occasions, as it is mentioned by Ammianus Marcellinus among the objects most worthy of notice in his account of the visit of Constantius II. (xvi. 10). We learn from the Catalogue Imperatorum, that it had been repaired by Diocletian and Maximian; and it was also the object of the care of Theodoric (Cassiod. Var. iv. 51).

The Theatre of Baldus, dedicated in B.C. 12 (Suet. Aug. 29; Dion Cass. liv. 25), was a building of much less importance, and but few accounts have been preserved of it; yet it must have lasted till a late period, as it is recorded in the Notitia. According to the Curiosus it accommodated 11,600 persons; whilst the MSS. of the Notitia mention 11,510 and 8000. The Theatre of Marcellus was begun by Caesar (Dion Cass. xiii. 49), and dedicated by Augustus, B.C. 12, to the memory of his nephew, Marcellus. (Mom. Anecr.; Suet. Aug. 29; Dion Cass. liv. 26.) We have already mentioned its situation in the Forum Olimbarium, but considerable remains of it are still to be seen in the Piazza Montanara. Its arches are now occupied by dirty workshops. It does not seem to have enjoyed so much celebrity as Pompey's theatre. According to the Curiosus it was capable of accommodating 20,000 spectators. The scene was restored by Vespanius (Suet. Vesp. 19); and Lampridius mentions that Alexander Severus contemplated a renovation of the theatre (Alex. 44.).

Proque tribus resonant termae theatrum foris.

Some of the MSS. of the Notitia mention four theatres, including, of course, the Odeum, which was a roofed theatre, intended for musical performances. According to the most trustworthy accounts, it was built by Domitian, to be used in the musical contests of the Capitoline games which he instituted (Suet. Dom. 4; Cassiod. Chron. p. 197, Rom.); and when Dion Cassius (Ixxi. 4) ascribes it to Trajan, we may perhaps assume that it was finished or perfected by him. Nero appears to have first introduced musical contests (Tac. Ann. xiv. 20), but the theatre in which they were held was probably a temporary one. The Odeum was capable of holding 10,000 or 12,000 persons. It is mentioned by Ammianus Marcellinus (xvi. 10).

The Amphitheatre of Stilillus Taurus was the first permanent building of that kind erected at Rome. After the chariot races, the gladiatorial combats were the most popular spectacle of the Romans; yet it was long before any peculiar building was appropriated to them. We have already related that the first gladiators were exhibited in the Forum Boarium in B.C. 264; and subsequently these combats took place either in the circus or in the Forum Romanum; yet neither of these places was well adapted for such an exhibition. The former was
inconvenient, from its great length, and the *metae* and *opinae* were in the way; whilst the latter, besides its moral unsuitableness for such a spectacle, became by degrees so crowded with monuments as to leave but little space for the evolutions of the combatants. The first temporary amphitheatre was the wonderful one built of wood by Caesar's partisan, C. Scribonius Curio. It consisted of two separate theatres, which, after dramatic entertainments had been given in them, were turned round, with their audiences, by means of hinges or pivots, and formed an amphitheatre (Plin. xxxvi. 24. s. 8). Caesar himself afterwards erected a wooden amphitheatre (Dion Cass. xliii. 22); but that of Statilius Taurus was the first built of stone, and continued to be the only one down to the time of Vespasian. We have mentioned that it was in the Campus Martius. It was dedicated in the fourth consulship of Augustus, B.C. 30. (Dion Cass. li. 23; Suet. Aug. 29.) The amphitheatre erected by Nero in the Campus Martius was a temporary one of wood. (Suet. Nero, 12.) The amphitheatre of Taurus, which does not appear to have been very magnificent (Dion Cass. lx. 10), was probably destroyed in the fire of Nero; at all events we hear no more of it after that event. The Amphitheatrum Flavium, erected by Vespasian, appears to have been originally designed by Augustus. (Suet. Vesp. 9.) It stood on the site previously occupied by the lake of Nero, between the Velia and the Esquiline. (Mart. Spect. 2. 5,) and was capable of containing 87,000 persons. (Notitia, Reg. iii.) A complete description of this magnificent building will be found in the Dictionary of Antiquities, and need not be reiterated here. It was not completely finished till the reign of Domitian; though Titus dedicated it in the year 80. (Suet. Tit. 7; Aur. Vict. Caes. 9. 7.) In the reign of Macrinus it was so much damaged by a fire, occasioned by lightning, that it was necessary to exhibit the *gladiatores* and *venationes* for several years in the Stadium. (Dion Cass. lxxviii. 25.) The restoration was undertaken by Elagabalus, and completed by Alexander Severus. (Launp. Itcl. 17, Alex. 24.) It suffered a similar calamity under Decius (Ieron. Chron. p. 473); but the damage was again made good, and *venationes*, or combats with wild beasts, were exhibited in it as late as the 6th century. In the middle ages it was converted into a fortress; and at a later period a great part of it was destroyed by the
Romans themselves, in order to build the Cancel
teria and the Palazzo Farnese with the materials.
Enough, however, is still left to render it one of the
most striking and important monuments of imperial
Rome. Its name of Colosseum, first mentioned by

ELEVATION OF

under the form Colosseus, was either derived from
the vast size of the building, or, more probably,
from the colossus of Nero, which stood close to it.
(See Nibby, Dell' Anfiteatro Flavio, in the Ap-
pendix to Nardini, i. p. 238, which contains the
best history of the building down to modern times.)
Of the Amphitheatrum Castrense, near S. Croce,
we have already spoken [p. 827].

XVI. THE SPEAKER'S, OR BATHS.

We, of course, propose to speak here only of those
large public institutions which were open either
genus or for a mere trifle to all, and of which the
first were the Thermæ Agrippæ, near his Pan-
theon. The thermæ must not be regarded as mere
baths, or places for bathing. They likewise con-
tained gymnasia, or places for gymnastic exercises;
heæværa, or rooms for the disputations of philo-
osophers; as well as apartments for the delivery of lec-
tures, &c. The thermæ of Agrippa do not seem to
have been so splendid as some of the subsequent ones;
yet, though they suffered in the fire under Titus,
they were preserved till a late period, and are men-
tioned more than once by Martial (iii. 20. 15, 36. 6).
The Thermæ Neronianæ were erected by Nero
very near to those of Agrippa (Tac. Ann. xiv. 47;
Suet. Nero, 12). After their restoration by Alex-
ander Severus, who appears, however, to have also
enlarged them (Lampri. Alex. 23), they obtained the
name of Thermae Alexandrianae (Cassiod. Chron.
vol. ii. p. 194, Romc.). They must have lain be-

tween the Piazza Navona and the Pantheon, as they
are three mentioned by the Anonymous of Eusid-iden
betwixt the latter building and the Circus
Flaminus, which was the name he applied to the
Piazza Navona. Hence the probability that the place
just named was the Stadion of Nero. The
Thermæ Neronianæ are frequently mentioned in
a way that indicates considerable splendour (Mart. ii.
38. 8, vii. 34. 5; Stat. Silv. i. 5. 62); but their
name was obliterated by that of the Thermæ Alex-
andriniæ, by which they appear in the Notitia.

The third baths erected at Rome were the
Thermæ Titii, on the Esquiline, near the Flavi-
ian amphitheatre. (Mart. Spect. 2). There are
still considerable remains of these baths; but
the plan of them is difficult to make out, from their
having been erected on the site of a large previous
building. Canina's account of them is the best
(vide Memorie Romane di Antichità, vol. ii. p. 119,
Indice. p. 101). The site on which they stand was
perhaps previously occupied by the golden house of
Nero. Near them stand the Thermæ Trajani,
which Canina has correctly distinguished from those
of Titus (Fleiler, Regionen, p. 126; Becker, Handb.
p. 687). They are named in the Notitia as distinct,
and also in the Chroniclers, who however, singularly
enough, place the building of both in the reign of
Domitian. (Cassiod. Chron. vol. ii. p. 197, Romc.;
Hieron. vol. i. p. 443.) The baths of Titus had
been run up very expeditiously ('velocis muneris,'
Mart. Spect. 2; "thermis juxta easter, extractis,"
Suet. Tit. 7), and might consequently soon stand in
need of restorations; and it seems not improbable,
as Becker suggests (Handb. p. 687), that Trajan,
whilst he repaired these, also built his own at the
side of them, before he had yet arrived at the im-
perial dignity. Cassiodorus (I. c.) expressly mentions
the year 90. Those actually built by Trajan must
have been the smaller ones lying to the NE. of those
of Titus, since Anastasius mentions the church of
S. Martino de' Monti as being built "juxta thermas
Trajanæm" (Vit. Sylvauchi, p. 88, Blanch.).
His object in building them may have been to separate
the baths of the sexes; for the men and women had
hitherto bathed promiscuously; and thus the Catal.
reliquæ in Termis Trajanis laverunt."

The emperor Commodus, or rather his freedman
Cleander in his name, is related to have built
some baths (Lampr. Comm. 17; Herod. i. 12); and
we find the Thermæ Commodianæ set down in the 1st Region in the Notitia; whilst, by
the Anonymous of Eusidien, on the contrary, they
are three or four times mentioned as close to the
Rotunda. Their history is altogether obscure and
impenetrable. The Thermæ Severianæ are
also recorded in the Notitia in the 1st Region in
connection with the Commodianæ. They are men-
tioned by Lampriudius (Seecr. 19); but no traces of
them remain.

The Thermæ Antoninianæ or Caracallæ
present the most perfect remains of any of the
Roman baths, and from their vastness cannot fail
to strike the spectator with astonishment. The
large ball was regarded in antiquity as inimitable.
(Spart. Carac. 9, Secer. 21.) They were dedicated
by Caracalla; butEsbacabalus commenced the out-
portions, which were finished by Alexander Severus.
(Lampr. Hel. 17, Alex. 23.) They are situated
under the church of S. Balbina, on the right of the
Via Appia.

But the largest of all the baths at Rome were the
Thermæ Diocletianæ. Unfortunately they are
in such a ruined state that their plan cannot be
 traced so perfectly as that of the baths of Car-
calla, though enough remains to indicate their vast
extent. They are situated on the inside of the
apery of Servius, between the ancient Porta Collina
and Porta Viminalis. Vopiscus mentions them in
connection with the Bibliotheca Ulpia, which they
contained (Prob. 2). These were followed by the
Thermæ Constantiniæ, the last erected at Rome. They are mentioned by Aurelius Victor as an "opus caeteris haurd malto dispersum" (Coes. 40, 27). In the time of Du Péray, there were still some vestiges of them on the Quirinal, on the site of the present Palazzo Rospigliosi; but they have now entirely disappeared. At one time the colossal figures on Monte Cavallo stood near these baths, till Sextus V. caused them to be placed before the Quirinal palace. Tradition connects them with the Equitii Taruntiæ Regia Armeniorum, mentioned in the Notitiæ in the 7th Region; in which case they would belong to the time of Nero. On the other hand they claim to be the works of Phidias and Praxiteles; but there is no means of decided this matter.

Besides the baths here enumerated, the Notitiæ and Curiosum mention, in the 13th Region, but under mutilated forms, certain Thermæ Sublinae et Declinae, to which we have already alluded in the 5th Section. They do not, however, seem to have been of much importance, and their history is unknown.

XVII. The Bridges.

Rome possessed eight or nine bridges; but the accounts of them are so very imperfect that there are not above two or three the history of which can be satisfactorily ascertained. The Pons Subli- cius, the oldest and one of the most frequently mentioned of all the Roman bridges, is precisely that whose site is most doubtful. It was built of wood, as its name imports, by Ancus Marcius, in order to connect the Janiculum, which he had fortified, with the city. (Liv. i. 33; Dionys. iii. 43.) It was considered of such religious importance that it was under the special care of the pontifices (Varr. L. L. v. § 83), and was repaired from time to time, even down to the reign of Antoninus Pius. (Capitol. Aut. P. 8.) Nay that it must have existed in the time of Constantine is evident, not only from its being mentioned in the Notitiæ, but also from the fact of a bridge at Constantinople being named after it, no doubt to perpetuate in that city the remembrance of its sacred character. (Deacr. Const. Reg. xiv.) Yet the greatest difference of opinion prevails with regard to its situation; and as this question also involves another respecting the site of the Pons Aeolicus, we shall examine them both together.

The other. An inference might perhaps be drawn from a passage in Seneca, compared with another in Plautus, in favour of the bridge being outside of the Porta Trigemina: "In Sublincum Pontem me transfer et inter egentes me adduxit: non ideo tamen me despiciat, quod in illorum numero consistea, qui manum ad stipem peragunt." (Sen. de V. Beat. 25.)

As the Pons Sublincus is here shown to have been the haunt of beggars, so Plautus intimates that their station was beyond the P. Trigemina (Capt. i. 1. 22):

"Ire extra Portum Trigeminam ad sacrum licet;"

When the Tiber is low the piles of a bridge are still visible that existed just outside of the Porta Trigemina, near the Porta di Ripa Grande (Canina, Indicac. p. 557); and the Italian topographers, as well as Bunae, have assumed them to be the re-
mains of the Sublician bridge; whilst Becker, in his
De Muris, held them to belong to the Pons Aemilius.
That writer in the treatise alluded to (p. 78, seq.) made three assertions respecting the Aemilian bridge: (1) That it was not the same as the Sublician; (2) that it stood where the Sublician is commonly placed, i.e. just below the Porta Trigemina; (3) that it was distinct from the Pons Lapideus, or Lepidi. But in his Handbuch, published only in the following year, he rejected all these assertions except the first.

According to the most probable view of this intricate and much disputed question at which we can arrive, the matter appears to us to have stood as follows: the Pons Sublicius was outside of the Porta Trigemina, at the place where remains of a bridge still exist. The reasons for arriving at this conclusion have been stated at the beginning of this discussion. Another bridge, of stone, also called Sublicius, was erected close to it to serve the purposes of traffic; but the wooden one was still preserved as a venerable and sacred relic, and as indispensable in certain ancient religious ceremonies, such as the precipitating from it the two dozen men of straw. But the stone bridge had also another name, that of Lapideus, by way of distinction from the wooden bridge.

Becker is of opinion that the notion of Aethicus, or Julius Orator, that Pons Lapideus was only a vulgar error for Pons Lepidi, is a "false etuditionis conjectura," and we think so too. We do not believe that the bridge ever bore the name of Lepidius. We may see from the account given of the wooden bridge by Dionysius, that, though preserved in his time, it was useless for all practical purposes (iii. 45).

We may be sure that the pontifices would not have taken upon themselves the repairs of a bridge subject to the wear and tear of daily traffic. Ovid (Fast. v. 622) adverts to its existence, and to the sacred purposes to which it was applied:

"Tunc quoque priscorum virgo simulacra virerum
Mittere roboreo scirpea ponte solet."

The coexistence of the two bridges, the genuine wooden Sublician, and its stone substitute, is shown in the following passage of Plutarch: οὐ γὰρ ἔμεινα, ἀλλ' ἐπάφατον ἑκείνης Ῥώμαιοι τὴν καταλώσα τῆς ξύλινης γεφύρας... Η δὲ λαθύνη πολλὰς ὑπερον ἐξαιρότατη χρώσις ὑπ’ Αἰμίλλου ταμιεύστος. (Nam. 9.) Still more decisive is the testimony of Servius: "Cum per Sublicium pontem, huc est lignaeum, qui modo lapideus dicitur, transire conueratur (Porstia)" (ad Aen. viii. 646). There must certainly have been a strong and practicable bridge at an early period at this place, for the heavy traffic occasioned by the neighbourhood of the Emporium; but when it was first erected cannot be said. The words of Plutarch, ὑπ’ Αἰμίλλου ταμιεύστος, are obscure, and perhaps corrupt; but at all events we must not confound this notice with that in Livy respecting the building of the Pons Aemilius; the piles of which were laid in the censorship of M. Aemilius Lepidus and M. Fulvius Nobilior, b.c. 179, and the arches completed some years afterwards, when P. Scipio Africanus and L. Mummius were censors (xl. 51). There is no proof that the Ponte Rosso is the Pons Aemilius; but Becker, in his second view, and Canini assume that it was; and this view is as probable as any other.

There were several bridges at Rome before the Pons Aemilius was built, since Livy (xxxv. 21) mentions that two were carried away by the stream in B.C. 193; and these could hardly have been all, or he would undoubtedly have said so. The Insula Tiberina, was, in very early times, connected with each shore by two bridges, and hence obtained the name of Inter Duos Pontes. (Plut. Topl. 8; Macrob. Sat. ii. 12.) That nearest the city (now Pons Quattro Capi) was the Pons Fabricius, so named from its founder, or probably its restorer.

L. Fabricius, as appears from the inscription on it, and from Dion Cassius (xxxvii. 45). It was the favourite resort of suicides:

"— justa sapientem pascer e barbam
Atque a Fabricio non tristem ponte reverti."

(Hor. S. ii. 3. 36.)

The bridge on the farther side of the island (now Ponte S. Bartolommeo) is commonly called Pons Cestius, and appears to have borne that name in

---

INSULA TIBERINA, WITH THE PONS FABRICIUS AND PONS CESTIUS.

VOL. II.
the middle ages. In the inscription, however, which is still extant upon it, it is called Pons Gratianus, and its restoration by Valentinein, Valens, and Gratian is commemorated (Canina, Indice, p. 576 et al. Annu. Mag. xxvii. 3: Szym. Epist. v. 76, x. 45).

Besides these bridges we find four others recorded in the summary of the Notitia, namely, the Aelius, Aurelius, Probi, and Milvius. The last of these lay two miles N. of Rome, at the point where the Flaminian Way crossed the Tiber, and has been already described in this dictionary. [Pons Milvius.] The Pons Aelius (now Ponte S. Angelo) was built by Hadrian when he founded his mausoleum, to which it directly leads (Spart. Rude, 19; 4). In the time of the Anonymous of Einsiedeln, who has preserved the inscription, it was called Pons S. Petri. But before the time of Hadrian there was a bridge which connected the district of the Vatican with the city near the gardens of Caligula and Nero, remains of which still exist near S. Spirito. This is probably the bridge which is called in the Mirobilia "Pons Neronianus," and by the ancient topographers "Pons Vaticanius." The Pons Triumphalis has also been sometimes identified with this bridge; but Procopius, who is followed by Bunsen, places the Porta Triumphalis above the Aelian bridge; and it is said that there are still remains of one of the piles near Tor di Nona. But in the time of Preissinus these had disappeared, and the Pons Aurelius formed the only communication between the city and the Vatican district.

The Pons Aurelius was most probably the present Ponte Sisto, leading to the Janiculum and the Porta Aurelia. It appears to have been called Pons Antoninus in the middle ages. What the Pons Prium may have been is impossible to say. Becker assigns the name to the bridge by the Porta Trigemina, but merely because, having denied that to be the Sublicius, he has nowhere else to place it. Canina, on the contrary (Indice, p. 609), places it where we have placed the Pons Aurelius.

XVIII. AQUEDUCTS.

In the time of Frontinus there were at Rome nine principal aqueducts, viz., the Appia, Anio Vetus, Marcia, Tepula, Julia, Virgo, Aliaetina, Claudia, Anio Novus; and two subsidiary ones, the Augusta and Rivers Herculeus, (Epist. 4.) Between the time of Frontinus and that of Preissinus the number had considerably increased, since the latter historian relates that the Goths destroyed 14 aqueducts that were without the walls. (B. G. i. 19.)

The Notitia enumerates 19, viz. the Trajana, Anicia, Attica, Marcia, Claudia, Herculea, Ceretala, Julia, Augustus, Appia Aurelia, Cirinina, Aurelia, Damanta, Virgo, Tepula, Severiana, Antonianina, Alexandria. To enter into a complete history of all these would almost require a separate treatise; and we shall therefore confine ourselves to a statement of the more important particulars concerning them, referring those readers who are desirous of more information on the subject to the Dictionary of Antiquities, art. Aqueducts.

The Aqua Appia was, as we have already related, the first aqueduct conferred on Rome by the care of the censor Appius Claudius Caecus, after which it was named. It commenced on the Via Praenestina, between the 7th and 8th milestone, and extended to the Salaria, near the Porta Trigemina. The whole of it was underground, with the exception of sixty passus conducted on arches from the Porta Capena. Its water began to be distributed at the innus CEvus Publicus, near the Porta Trigemina. (Front. Ag. 5.)

The Anio Vetus was commenced by the censor M. Curius Dentatus in n. 273, and completed by M. Fulvius Flaccus. (Ib. 6: Anq. Vir. F. Ill. 33.) It began above Tibur, and was 43 miles long; but only 221 passus, or less than a quarter of a mile, was above ground. It entered the city a little N. of Porta Maggiore.

The Aqua Marcia, one of the noblest of the Roman aqueducts, was built by Q. Marcus Roxanus, a.p. 576; it was the purviewance of a commission of the senate, n. 144. It began near the Via Valeria at a distance of 36 miles from Rome; but its whole length was nearly 62 miles, of which 6935 passus were on arches. Respecting its source, see the article FUCINUS LAT. [Vol. I. p. 918.] It was lofty enough to supply the Mons Capitolinus. Augustus added another source to it, lying at the distance of nearly a mile, and this duct was called after him, Aqua AVGUSTA, but was not reckoned as a separate aqueduct. (Frontin. Ag. 12; Plin. xxxi. 24; Strab. v. p. 240.)

The Aqua TiUSA, or Aqua SEA, was commenced by the consensus of the Roman Senate, and was built by the consuls C. Cestius Capito, and L. Cassius Longinus, n. c. 127. Its source was 2 miles to the right of the 10th milestone on the Via Latina. The preceding aqueduct was united by Agrippa with the Aqua JUlia, which began 2 miles farther down; and they flowed together as far as the Pisicina on the Via Latina. From this point they were conducted in separate channels in conjunction with the Aqua Marcia, so that the Aqua Julia was in the uppermost canal, the Marcia in the lowest, and the Tepula in the middle. (Front. Ag. 8, 9, 19.) Remains of these three aqueducts are still to be seen at the Porta S. Lorenzo and Porta Maggiore.

The Aqua Virgo was also conducted to Rome by Agrippa in order to supply his baths. According to Frontinus (Ag. 10) its name was derived from its source having been pointed out by a young maiden, but other explanations are given. (Plin. xxxi. 25; Cassiel. Var. vii. 6.) It commenced in a marshy district at the 8th milestone on the Via Collatina, and was conducted by a very circuitous route, and mostly underground, to the Pincian hill; whence, as we have before mentioned, it was continued to the Campus Martius on arches which have remained to this day. The Aqua Virgo is the only aqueduct on the left bank of the Tiber which is still in some degree serviceable, and supplies the Fontana Trevi.

The Aqua Aliaetina belonged to the Transiberine Region. It was constructed by Augustus, and had its source in the Lacus Aliaetina (now Lago di Martignano), lying 64 miles to the right of the 14th milestone on the Via Claudia. Its water was bad, and only fit for watering gardens and such like purposes. (Front. 11.)

The Aqua Claudia was begun by Caligula, and dedicated by Claudius, n. d. 50. This and the Anio Novus were the most gigantic of all the Roman aqueducts. The Claudia was derived from two abundant sources, called Caerus and Curitius, near the 38th milestone of the Via Sublashensis, and in its course was augmented by another spring, the Albidus. Its water was particularly pure, and the best after that of the Marcia.

The Anio Novus began 4 miles lower down the Via Sublashensis than the preceding, and was the
longest and most lofty of all the aqueducts, being 58,740 passes, or nearly 59 miles, long, and its arches were occasionally 109 feet high. (Front. 15.) This also was completed by the emperor Claudius, as appears from the inscription upon its remains over the Porta Maggiore; where both enter the city on the same arch, the Anio Novus flowing over the Claudia. Hence it was conducted over the Caelian hill on the Arcus Neroantii or Cardinufii, which terminated, as we have already said, near the temple of Claudius.

As Procopius mentions fourteen aqueducts, five new ones must have been added between the time of Frontinus and that of this historian; but respecting only two we have any certain information. The first of these is probably the Aqua Trajana, which we find recorded upon coins of Trajan, and which is also mentioned in the Acta Martyr. S. Anton. The water was taken from the neighbourhood of the Laciui Sabatini (Logio di Baccianese), and, being conducted to the height of the Janiculam, served to turn the mills under that hill. (Procop. B. G. 5. 19.) This canal still serves to convey the Acqua Paola, which, however, has been spilt by water taken from the lake. It was also called Cimina.

The Aqua Alexandrina was constructed by the emperor Alexander Severus for the use of his baths. (Lamp. prid. Alex. 25.) Originally it was the same as that now called Acqua Felice, but conducted at a lower level.

The Aqua Severiana is supposed to have been made by the emperor Septimius Severus for the use of his baths in the 1st Region; but there is no evidence to establish its execution.

The Aqua Antoniniana was probably executed by Caracalla for the service of his great baths in the 12th Region; but this also is unsupported by any satisfactory proofs. (Canina, Indice, p. 620.) The names and history of a few other aqueducts which we sometimes find mentioned are too obscure to require notice here.

It does not belong to this subject to notice the Roman Viae, an account of which will be found under that head.

**SOURCES AND LITERATURE OF ROMAN TOPOGRAPHY.**

With the exception of existing monuments, the chief and most authentic sources for the topography of Rome are the passages of ancient authors in which different localities are alluded to or described. Inscriptions also are a valuable source of information. By far the most important of these is the Monumentum Ancarianum, or copy of the record left by Augustus of his actions; an account of which is given elsewhere. [Vol. I. p. 134.] To what is there said we need only add that the best and most useful edition of this document is that published at Berlin with the emendations of Franz, and a commentary by A. W. Zumpt (1843, 4to. pp. 120). Another valuable inscription, though not nearly so important as the one just mentioned, is that called the Basii Capitolina (Gruen, ccl.), containing the names of the Vici of 5 Regions (the 1st, 10th, 12th, 13th, and 14th), whose curatores and vicomagni created a monument to Hadrian. It will be found at the end of Becker's Handbuch, vol. i. We may also mention among sources of this description the fragments of Calendars which have been found in various places, and which are frequently useful by marking the sites of temples where certain sacrifices were performed. For the most part the original marbles of these fragments have disappeared, and the inscriptions on them are consequently only extant in MS. copies. One of the most ancient monuments of this kind is the Fasti Maffeiurn or Calendarium Maffeiunum, so called from its having been preserved in the Palazzo Maffei. With a few lacunae, it contains all the twelve months; but what little information that is to be found in it, besides the principal festivals, relates chiefly to Augustus. The next in importance is the Fasti Praenestini, discovered at Praeneste (Palestrina) in 1774. Verrius Flaccus, the celebrated gram- marian, arranged and annotated it, caused it to be cut in marble, and erected it in the forum at Prae- neste. (Suet. Ill. Gramm. c. 17.) Only four or five months are extant, and those in an imperfect state. The Calendarium Amiensinurn was discovered at Amiens in 1703, and contains the months from May to December, but not entire. The calendar called Fasti Capranicorum, so named from its having formerly been preserved in the Aqua Capranica, contains August and September complete. Other calendars of the same sort are the Antialtimur, Vetusum, &c. Another lapidary document, but unfortunately in so imperfect a state that it often serves rather to puzzle than to instruct, is the Capitoline Plan. This is a large plan of Rome cut upon marble tablets, and apparently of the age of Septimius Severus, though with subsequent additions. It was discovered by the architect Giovanni Antonio Desi, in the pontificate of Pius IV., under the church of SS. Cosmo e Damiano; where, broken into many pieces, it was used as a covering of the walls. It came into the possession of Cardinal Farnese, but was put away in a lumber room and forgotten for more than a century. Being rediscovered, it was published in 1673, in 20 plates, by Giovanni Pietro Bellori, librarian to Queen Christine; and subsequently at the end of the 4th volume of the Thesaurus of Graevius. The original fragments were carried to Naples with the other property of the Farnese family, and were subsequently given by the king of Naples to Pope Benedict XIV. In 1742 Benedict presented them to the Capitoline Museum at Rome, where they now appear on the wall of the staircase; but several of the pieces had been lost, for which copies, after the designs of Bellori and marked with a star, were substituted. On these fragments the plans of some ancient buildings may be made out, but it is very seldom that their topographical connection can be traced.

Amongst the literary records relating to Roman topography, the first place must be assigned to the Notitia. The full title of this work is: Notitia Dignitatum, orinatis, et ordinis, et in Partibus Ori- entali et Occidentali; and it is a statistical view of the Roman empire, of which the description of Rome forms only a small portion or appendix. It cannot be later than the reign of Constantine, since no Christian church is mentioned in it, and indeed no building later than that emperor; nor, on the other hand, can it be earlier, since numerous buildings of the 3rd century, and even some of Constantine's, are named in it. The design of it seems to have been, to name the principal buildings or other objects which marked the boundaries of the different Regions; but we are not to assume that the buildings are always named in the order in which they occurred, which is far from being the case. This
catalogue has come down to us in various shapes. One of the simplest and most genuine seems to be that entitled *Chronicon Urbs Romae Regionum XIII. cum Brevariais suis*, the MS. of which is in the Vatican. Some of the other MSS. of the *Notitia* seem to have been interpolated. The spelling and grammar betray a late and barbarous age, but it is impossible that the work can have been composed at the time when the MS. was written.

Besides these there are two catalogues of the so-called *Regionam Publicis Victor* and *Sexstus Rufus*, which till a very recent period were regarded as genuine, and formed the chief basis of the works of the Italian topographers. It is now, however, universally allowed that they are compilations of a very late date, and that even the names of the writers of them are forgeries. It would be too long to enter in this place into the reasons which have led to this conclusion; and those readers who are desirous of more information will find a full and clear statement of the matter in a paper of Mr. Burnaby in the *Classical Museum* (vol. iii. p. 373, seq.).

The only other authorities on Roman topography that can be called original are a few notices by travellers and others in the middle ages. One of the principal of these is a collection of inscriptions, and of routes to the chief churches in Rome, discovered by Mabillon in the monastery of Einsiedlen, whence the author is commonly cited as the *Anonymus Einsiedlenensis*. The work appears to belong to the age of Charlemagne, and is at all events older than the Lombar city, or the middle of the 9th century. It was published in the 4th vol. of Mabillon's *Anecdotae*; but since more correctly, according to the arrangement of Gustav Heindel, in the *Archiv für Philologie und Pädagogik*, vol. v. p. 115, seq. In the Routes the principal objects on the right and left are mentioned, though often lying at a considerable distance.

The treatise called the *Mihabilia Romae*, prefixed to the *Chronicon Romualdi Salviani* in a MS. preserved in the Vatican, and belonging apparently to the 12th century, seems to have been the first attempt at a regular description of ancient Rome. It was compiled from statistical notices, narratives in the *Acta Martyrum*, and popular legends. It appears, with variations, in the *Libri Censuum* of Cecconis, and in many subsequent manuscripts, and was printed as early as the 16th century. It will be found in Montfaucon, *Diction. Ital. p. 283*, seq., and in Nibby's *Eftenorali Letterarie*, Rome, 1820, with notes. A work ascribed to Marinus POLONES, belonging probably to the latter part of the 13th century, seems to have been chiefly founded on the *Mihabilia*. Accounts of some of the gates of Rome will be found in William of Malines's work *DeGradis Region Anglorum* (book iv.).

The Florentine FOCHIO, who flourished in the 13th century, paid great attention to Roman antiquities. His description of Rome, as it existed in his time, is a mere sketch, but elegant, scholarly, and touching. It is contained in the first book of his work entitled *De Varietate Fortunae Urbis Romae*, and will be found in Salengro, *Nov. Thesaur. Ant. Rom.* vol. i. p. 501. A separate edition of his work was also published in Paris, 1723.

The traveller KYRACUS, called from his native town Anconitanus, who accompanied the emperor Sigismund, passed a few days in Rome during the time that Poggio was also there, which he spent in collecting inscriptions, and noting down some remarks. His work, entitled *Kyriaci Anconitani Itinerarium*, was published at Florence in 1742.

The traveller CENSUUM, called from his native town Anconitanus, who accompanied the emperor Sigismund, passed a few days in Rome during the time that Poggio was also there, which he spent in collecting inscriptions, and noting down some remarks. His work, entitled *Kyriaci Anconitani Itinerarium*, was published at Florence in 1742.

VICTOR.

George Fabricius, of Chemnitz, author of *Antiquitatum Libri II.*, Basle, 1550, accused Panvinius of stealing from him; but if such was the case, he greatly improved what he purloined. Jean Jacques Boissard, of Besançon, published at Frankfort in 1597 a *Topographia Romana Urbis*, which is not of much value; but the sketches in his collection of inscriptions have preserved the aspect of many things that have now disappeared. The next work of any note is the *Roma vetus et Recessus dei Jessuit Alex. Donatus of Siena, in which particular attention was paid to the illustration of Roman topography by passages in ancient authors. It was published at Rome, 1638, 4to, and also in the *Theaurus* of Graevius, vol. iii. But this production was soon obscured by the more celebrated work of Faminiano Nardini, the *Roma Antica*, which marks an epoch in Roman Topography, and long enjoyed a paramount authority. So late as the year 1818, Hobhouse characterized Nardini as "to this day the most serviceable conductor." (Hist. Illustrations of Childe Harold, p. 54.) Yet, in many respects, he was an incompetent guide. He knew no Greek; he took the works of the pseudo-Bernardines for the foundation of his book; and it is even affirmed that, though he lived in Rome, he had never visited many of the buildings which he describes. (Bunsen, Vorrede zur Beschreibung, p. xxxiv.) His work was published at Rome, 1668, 4to; but the best edition of it is the 4th, edited by Nibby, Rome, 1818, 4 vols. 8vo. There is a Latin translation of it in Graevius, vol. iv. In 1680, Raphael Fabretti, of Urbino, secretary to Cardinal Ottoboni, published a valuable work, *De Aquaeuctiis*, which will also be found in the same volume of Graevius.

Towards the end of the 17th century two learned French Benedictines, Mabillon and Montaunois, rendered much service to Roman topography. Mabillon first published the *Anonymus Einsiedelensis in his Anecdeta* (vol. iv. p. 50, seq.); Montaunois, who spent two years and a half in Rome (1699—1700), inserted in his *Duirium Italicum* a description of the city divided into twenty days. The 20th chapter contains a copy of the *Micrabili*. In 1687 Otios Borrichius published a topographical sketch of Rome, according to the Regions. It is in the 4th volume of Graevius the illustration of the Marius Ridolphi Venuti, entitled *Accurata et succinta Descripzioue Topographica delle Antichita di Roma* (Roma, 1763, 2 vols. 4to.), is a book of more pretensions. Venuti took most of his work from Nardini and Piranesi, and the new matter that he added is generally erroneous. The 4th edition by Stefano Pale, Rome, 1824, is the best. Francesco Ficoroni's *Vestigia et Rarita di Roma Antica* (Roma, 1744, 4to.) is not a very satisfactory performance. The most useful portions of it have been inserted in the *Miscellanea di Pea* (part i. pp. 118—178). The work of our countryman Andrew Langdon, *Remarks on the Antiquities of Rome and itsEnvirons* (London, 1797, 4to.), was, in its day, a book of some authority. Many valuable observations on Roman topography are scattered in the works of the learned Gaetano Marini, and especially in his *Atti de' Fratelli Arevi*; but he treated the subject only incidentally. The same remark applies to Visconti. The *Roma descrita ed illustrata* (Roma, 1806, 2 vol. 4to.), of the Abbate Guaiani is the parent of most of the modern guide books. Antonio Nibby has published several useful works on Roman topography, which, if sometimes deficient in accurate scholarship, display nevertheless considerable acuteness and knowledge of the subject. His principal works are, *Del Foro Romano, della Via Sacra*, etc., Roma, 1819, 8vo.; *Le Mura di Roma, disegnate da Sir W. Gell, illustr. da A. Nibby*, Roma, 1820; and his *Roma Antica*, published in 1838. Sir Wm. Gell's *Topography of Rome and its Vicinity* (2nd Edit., revised and enlarged by Banbury, London, 1846) contains some useful information. The *Miscellanea filologica, critica ed antiquaria* (Rome, 1790), and the *Boletin Descrizione di Roma* (Rome, 1820, 3 vols. 8vo.), by Carlo Fea, are useful works. Hobhouse's *Historical Illustrations of Childe Harold, with Dissertations on the Ruins of Rome* (London, 2nd ed. 1818, 8vo.) are chiefly valuable for their account of the gradual destruction of the city. The works of two other Englishmen are now out of date viz. *Edward Burton's Description of the Antiquities of Rome* (Oxf. 1821; London, 1828, 2 vols. 8vo.); and the Rev. Richard Burgess's *Topography and Antiquities of Rome* (London, 1831, 2 vols. 8vo.). *Forster's Italy* is of little service in any respect. Schuchl's *Geographica und Beschreibung der alten Stadt Rom* (Hanover, 1824—1828, 2 vols. 8vo.), though still in some respects a useful production, must now be regarded as superseded by more recent works.

We are now arrived at the *Beschreibung der Stadt Rom*, with which may be said to commence the modern epoch of Roman topography. This work was projected in 1817 by some German literati then reading at Rome, among whom were the present Chevalier Bunsen, and Ernst Platner, Edward Gerhard and Wilhelm Eitell. They were joined by the celebrated historian R. G. Niebuhr, who undertook the superintendence of the ancient part; for the scheme of the book embraced a complete description of the modern city, with all its treasures of art, besides an account of ancient Rome. It is, however, of course only with the latter that we are here concerned, which was undertaken by Niebuhr, Bunsen, and subsequently L. Urlichs. Niebuhr's connection with the work was not of long duration, and only a few of the descriptions are from his hand, which form the most valuable portion of the book. The views of the German scholars threaten a complete revolution in Roman topography. They seemed to have come to Rome with the express design of overturning the paper city, as their ancestors many centuries before had subverted the stone one. In extent and accuracy of erudition they were far superior to their Italian antagonists; but this advantage is often more than counterbalanced by that want of sober and critical good sense which so frequently mars the productions of German scholars. They have succeeded in throwing doubt upon a great deal, but have established very little in its place. To Piale, and not established the true situation of the forum, which may be considered as the most important step in the modern topography of Rome. The German views respecting the Capitol, the comitium, and several other important points, have found many followers; but to the writer of the present article they appear for the most part not to be proved; and he has endeavoured in the preceding pages to give his reasons for that opinion.

It cannot be denied, however, that the appearance of the *Beschreibung* did great service to the cause of Roman topography, by awakening a sharper and more extended spirit of inquiry. The first volume 313
appeared at Stuttgart in 1829, the last in 1842.

As a literary production—we are speaking of course of the ancient parts—it is of little service to the scholar. The descriptions are verbose, and the ancient ones being intermingled with the modern have to be sought through a voluminous work. A still graver defect is the almost entire absence, especially in the earlier volumes, of all citation of authorities.

At this period in the history of Roman topography W.A. Becker, paid a short visit to Rome. Becker took up the subject of his researches as a point of national honour; and in his first tract, De Romane Literis. Mvris atque Portis (Leipzig, 1842), devoted two pages of the preface to an attack upon Canina, whom he suspected of the grave offence of a want of due reverence for German scholarship. But with an inborn pugnacity his weapons were also turned against his own countrymen. Amid a little faint praise, the labours of Bunsen and Urlichs were censured as incomplete and unsatisfactory. In the following year (1845) Becker published the first volume of his Handbuch der Römischen Alterthümer, containing a view of the topography of Rome. A review of his work by L. Preller, which appeared in the Neue Jenaische Allgemeine Literatur-Zeitung, though written with candour and moderation, seems to have stung Becker into fury. He answered it in a pamphlet entitled Die Römische Topographie in Rom, eine Warnung (Leipzig, 1844), in which he accused Preller of having taken up the cudgels in favour of Canina, though that gentleman is a moderate adherent of the German school of topographers. Nothing can exceed the arrogant tone of this pamphlet, due very largely of which is owing to its appearance, the author answered by Urlichs in his Römische Topographie in Leipzig (Stuttgart, 1845), in which, though Becker well deserved castigation, the author adopted too much of the virulent and personal tone of his adversary. The controversy was brought to a close by a reply and rejoinder, both written with equal bitterness; but the dispute has served to throw light on some questions of Roman topography. In a purely literary point of view, Becker's Handbuch must be allowed to be a very useful production. His views are arranged and stated with great clearness, and the constant citation of authorities at the bottom of the page is very convenient to the student. The writer of this article feels himself bound to acknowledge that it would not have been possible for him to have prepared it without the assistance of Becker's work. Nevertheless he is of opinion that many of Becker's views on the most important points of Roman topography are entirely erroneous, and that they have gained acceptance only from the extraordinary confidence with which they are asserted and the display of learning by which they are supported. Amongst other German topographers we need only mention here L. Preller, who has done good service by some able papers and by his useful work on the Regions of Augustus (Die Regionen der Stadt Rom, Jena, 1846, 8vo.). We may add that the English reader will find a succinct and able sketch of the views of the German school, and particularly of Becker, in a series of very valuable papers by Mr. Bunbury, published in the Classical Museum (vols. iii. iv. and v.).

We shall close this list with the names of two modern Italian topographers. Between the years 1820 and 1835, Stefano Piale published some very useful discussions on various points of Roman topography, among which the following may be particularly mentioned: Delle Porte settentrionali del Recinto di Servio; Delle Porte orientali, delle meridionali, e di quelle del Monte Aventino della stessa cinta; Della grandezza di Roma al tempo di Plinio; Del Foro Romano; Delle Mura Aureliane; e degli antichi Arsenali dati Narnia, &c. But at the head of the modern Italian school must be placed the Commentatore, Luigi Canina. Canina has a real enthusiasm for his subject, which, from his profession, he regards from an architectural rather than a philological point of view; and thus, combined with the advantages of a residence at Rome, goes far to compensate the absence of the profound, but often unwieldy, erudition of the Germans. The later editions of his works have been freed from some of the errors which disfigured the early ones, and contain much useful information, but unmixed sometimes with erroneous views; a defect, however, which in a greater or less degree must be the lot of all who approach the very extensive and very important subject of Roman topography. Canina's principal works are the Indicazione topografica di Roma antica, 4th ed. Rome, 1850, 8vo.; Del Foro Romano e sue Adjacenze, 2nd ed. 1845; and especially his magnificent work in four largefolio volumes entitled Gli Edifici di Roma antica, with views, plans, and restorations.

It now only remains to notice some of the principal maps and other illustrations of Rome. The Florentine San Gallo, who flourished in the 15th century, drew several of the most remarkable monuments. The sketches and plans of Antonio Labacco, executed at the beginning of the 16th century, are very valuable, and were already mentioned in works; Raphael designed, or thought of designing, a plan of the restored city. This plan, if ever executed, is no longer in existence; but a description of it will be found in a letter addressed by Castiglione to Pope Leo X. (Published in the works of Castiglione, Padua, 1733. There is a translation of it in the Beschreibung, vol. i. p. 266, seq.) Serlio of Bologna, architect to Francis I., gave many plans and sketches of ancient Roman buildings in the 3rd book of his work on architecture (Venice, 1544, fol.), to which, however, he added restorations. Lemmi of Bologna's great plan of Rome as it was in 1551, was most important for Roman topography. It was drawn on wood in 24 plates; but unfortunately all that now remains of it is an imperfect copy in the Barberini palace. Pirro Ligorio and Bernado Gaunucci published several views in Rome about the middle of the 16th century. In 1570 appeared the great work of Palladio, Libri IV. dell'Architettura, &c. (Venice, fol.), in the 4th book of which are several plans of ancient temples; but the collection is not so rich as that of Serlio. Scamozzi Dizover sopra le Antichità di Roma (Venice, 1582, fol.) contains some good views, but the letter-press is insignificant. In 1574 Fulvius Uranus assisted the Parisian architect Du Pérac in drawing up a plan of the restored city, which was published in several sheets by Giacomo Lauro. It is erroneous, incomplete, and of little service. Of much more value are the views of ancient monuments published by Du Pérac in 1573, and republished by Lossi in 1773. In the time of Du Pérac several monuments were in existence which have now disappeared, as the forum of Nerva, the Septizonium, and the trophies of Marius. The sketches of Pietro Santi Bartoli, first published in 1741, are clever but full of mannerism.
ROMATINUS. Antoine Desgodets, sent to Rome by Colbert, published at Paris in 1682 his work in folio, entitled *Les Epitaphes aniques de Rome meursus et dessinees*. The measurements are very correct, and the work indispensable to those who would thoroughly study Roman architecture. Noll's great plan of Rome, the first that can be called an accurate one, appeared in 1748. In 1784 Piranesi published his splendid work the *Antichita Romane* (Rome, 4 vols. fol.), containing the principal ruins. It was continued by his son, Francesco Piranesi. The work of Mich. d'Overbeke, *Les vestes de l'ancienne Rome* (La Haye, 1673-2 vols. Large fol.), is also of great value. In 1822 appeared the *Antichita Romane* of Luigi Rossini (Rome, 1822, large fol.). To the plans and restorations of Canina in his *Edifici* we have already alluded. His large map of Rome represents of course his peculiar views, but will be found useful and valuable. Further information on the literature of Roman topography will be found in an excellent preface to the *Beschreibungen* by the Chevalier Runsen.

[† H. ‡ D.]

COIN OF ROME.

ROMATINUS. [Concordia.]

ROMECHIUM, a place on the E. coast of the Brutian peninsula, mentioned only by Ovid, in his description of the voyage of the Epiphanian serpent to Rome (Ovid. *Met.* xx. 705). The geography of the passage is by no means very precise: but according to local topographers the name of Romechi is still retained by a place on the sea-coast near Roccella, about 12 miles N. of the ruins of Locri (Romanelli, vol. i. p. 156. Quattrorniani, *Not. ad Burtii Calabr.* iii. 12.)

ROMULA, a place in Upper Pannonia, on the road leading from Aemona along the river Savus to Sirmium. (*It. Ant.* p. 274; *Tab. Peut.*). It is perhaps the modern Carlstadt, the capital of Croatia.

[R. S.]

ROMULA. [Dacia, p. 744, h.]

ROMULEA (Romulia, Stephan. B.: Bisacceria), a city of Samnium, mentioned by Livy (xv. 17), as being taken by the Roman consul P. Decius, or according to others by Fabius, in the Third Samnite War, b. c. 297. It is described as being a large and opulent place; but seems to have afterwards fallen into decay, as the name is not noticed by any other writer, except Stephano of Byzantium, and is not found in any of the geographers. But the Itineraries mention a station Sub Romula, which they place on the Appian Way, 21 miles beyond Aequilum, and 22 miles from the Pons Aculi (Itin. *Ant.* p. 120). Both these stations being known, we may fix Romula, which evidently occupied a hill above the road, on the site of the modern town of Bisaccia, where various ancient remains have been discovered. (Romanelli, vol. ii. p. 348; Cluver. *Ital.* p. 1204. Pratelli, *Vita Appia,* iv. 5.)

[† H. ‡ B.]

ROSICLAMUM (Rossano), a town of Bruttium, situated on a hill about 2 miles from the sea-coast, on the gulf of Tarentum, and 12 miles from the mouth of the Garthias. The name is not found in the geographers, or mentioned by any earlier writer; but it is found in the Itinerary of Antoninus, which places it 12 miles from Tauri, and is noticed by Procopius during the Gothic wars as a strong fortress, and one of the most important strongholds in this part of Italy. (*Itin. Ant.* p. 114; *Procop. B. G.* iii. 30.) It was taken by Totila in A.D. 548, but continued throughout the middle ages to be a place of importance, and is still one of the most considerable towns in this part of Calabria. [† E. B. ‡ J.]

ROSTRUM NEMAVIAE, a place in the central part of Vindelicia, on the river Virdo. (*It. Ant. Ap. p. 237; 239.*)

ROTEMAGUS (Rotomagus), in Gallia Lugdunensis, is mentioned by Toltmy (ii. 8. § 8) as the capital of the Veneliocians, as the name is written in some editions. (*Vell. Aquae.*). In the Table the name is written Rattemagus, with the mark which indicates a capital town; and in the Antonine Itin. it occurs in the corrected form Latomagus on the road which runs from a place called Carecimium. Armianus (xv. 11) speaks of it in the plural number Rotomagi. There are said to be coins with the legend Rataemacies.

RATEMAGUS is Rotomagus, on the north side of the Seine, and the capital of the department of Seine Inferieure. The old Gallic name was shortened to Rotomun or Rotomun, and then to Roten, as Rotomus has been shortened to Roone. The situation of Roten probably made it a town of some importance under the Roman Empire, but very few Roman remains have been found in Roten. Some Roman tombs have been mentioned. [† G. L.]

ROXOLANI (Paraolani), a people belonging to the Sarmatian stock, who first appear in history about a century before Christ, when they were found occupying the steps between the Dniwer and the Don. (Strab. ii. p. 214. vii. pp. 294, 306, 307, 309; Plin. iv. 12; *Ptol. iii.* 5. §§ 19, 24, 25.) Afterwards some of them made their footing in Dacia and behind the Carpathians. Strabo (vii. p. 306) has told the story of the defeat of the Roxolani and their leader Tarius by Diophantus, the general of Mathriates, and takes the opportunity of describing some of their manners which resembled those of the Sarmatian stock to which they belonged. Tacitus (Hist. i. 79) mentions another defeat of this people, when making an inroad into Moesia during the short lease of Olbius. From the inscription (Orelli, *Inscr.* 750) which records the honours paid to Plautius Silvanus, it appears that they were also defeated by him. Hadrian, who kept his frontier quiet by subsiding the needy tribes, when they complained about the payment came to terms with their king (Spartian, *Hadr.* 6) — probably the Rasparasamus of the inscription (Orelli, *Inscr.* 833). When the general rising broke out among the Sarmatian, German and Scythian tribes from the Rhine to the Tanais in the reign of M. Antonius, the Roxolani were included in the number. (Jul. Capit. M. Anton. 22.) With the inroads of the Goths the name of the Roxolani almost disappears. They probably were partly exterminated, and partly united with the kindred tribes of the Alani, and shared the general fate when the Huns poured down from the interior of Asia, crossed the Don, and oppressed the Alani, and, later, with the help of these, the Ostro-Goths.

It has been assumed that the name of the RHAOLANI (Paraolano, *Ptol.* iii. 5. § 24) is not different from that of the Roxolani, who, according to
Schafarik (Svor. Alt. vol. i. p. 542), received their appellation from the Sarmatian "Raca,"—perhaps the Tylca or some other river in their settlements.

RUADITAE. [Markham, p. 278, a.]

It is probable that Raca, a city of Apulia, situated on the branch of the Apulian Way between Canusia and Butuntuim, and about 10 miles distant from the sea-coast. It is mentioned by Iliacis, as one of the places where Marcellus and his companions slept on the journey from Rome to Brandusium. (Hor. Sat. l. 5. 94.) The distance from Canusium is given as 23 miles in the Antonine Itinerary, and $30$ in the Jerusalem Itinerary, which is the more correct, the direct distance on the map being above 28 miles. (Inn. Ant. p. 116; Hin. Hier. p. 610.) Neither Strabo nor Pliny notices the existence of Raba, but the inhabitants are mentioned under the name of Rubustinus by Pliny, among the municipal towns of Apulia, and the "Rubustins Agor" is enumerated in the Liber Columarian among the "Citivates Apulicae." (Plin. iii. 11. s. 16; Lib. Colon. p. 262.) An inscription also attests the municipal rank of Rubi in the reign of the younger Gordian. (Monu. Inscr. R. N. 624.) The singular ethnic form given by Pliny is confirmed by the evidence of coins which have the name PVA2E STOCK at full. These coins show also that Rubi must have received a considerable amount of Greek influence and cultivation; and this is still more strongly confirmed by the discoveries which have been recently made by excavations there of numerous works of Greek art in bronze and terra cotta, as well as of vast numbers of painted vases, of great variety and beauty. These, however, like all the others found in Apulia and Lucania, are of inferior execution, and show a declining state of art as compared with those of Nola or Veliki. All these objects have been discovered in tombs, and in some instances the walls of the tombs themselves have been found covered with paintings. (Romoniti, vol. ii. p. 172; Bollett. dell' Inst. Arch. 1829, p. 175. 1834, pp. 36. 164. 229. &c.) The modern town of Rave is still a considerable place, with an episcopal see. [E. H. B.]

**COIN OF RUBI.**

RUBICON (Poliscaw), a small river on the E. coast of Italy, flowing into the Adriatic sea, a few miles N. of Ariminum. It was a trifling stream, one of the least considerable of the numerous rivers that in this part of Italy have their rise in the Apennines, and discharge their waters into the Adriatic; but it derived some importance from its having formed the boundary between Umbria, or the part of the Gaulish territory included in that province, and Cisalpine Gaul, properly so called. Hence, when the limits of Italy were considered to extend only to the frontiers of Cisalpine Gaul, the Rubicon became on this side the northern boundary of Italy. (Strab. v. p. 217; Plin. iii. 13. s. 20; Lucan. i. 215.) This was the state of things at the outbreak of the Civil War between Caesar and Pompey; Cisalpine Gaul was included in the government of the former, and the Rubicon was therefore the limit of his province; it was this which rendered the passage of this trifling stream so momentous an event, for it was, in fact, the declaration of war. Caesar himself makes no mention of its passage, and it is difficult to believe that he would have set out on his march from Ravenna without being fully prepared to advance to Ariminum; but the well-known story of his halt on Rubicon, his hesitations and final decision, is related in detail by Suetonius and Plutarch, as well as by Lucan, and has given a proverbial celebrity to the name of the Rubicon. (Suet. Ces. 31; Plut. Ces. 32; Appian, B. C. ii. 35; Lucan, i. 185, 213—227.) The river is alluded to by Cicero a few years later as the frontier of Gaul; and M. Antonius was ordered by a decree of the senate to withdraw his army across the Rubicon, as a proof that he abandoned his designs on the Gaulish province. (Circ. Phil. vi. 3.) Strabo still reckons the Rubicon the limit between Gallia Cisalpina and Umbria; but this seems to have been altered in the division of Italy by Augustus; and though Pliny alludes to the Rubicon as "quondam finis Italic," he includes Ariminum and its territory as far as the river Cistumus, in the 8th Region or Gallia Cispadana. (Plin. i. l.; Ptol. iii. § 23.) Its name, however, was not forgotten; it is still found in the Tabula, which places it 12 miles from Ariminum (Tab. Pent.), and is mentioned by Sidonius Apollinaris. (Ep. i. 5.) But in the middle ages all trace of it seems to have been lost; even the Geographer of Ravenna does not notice it, notwithstanding its proximity to his native city.

In modern times the identification of this celebrated stream has been the subject of much controversy, and cannot yet be considered as fully determined. But the question lies within very narrow compass. We know with certainty that the Rubicon was intermediate between Ariminum and Ravenna, and between the rivers Susis (Savio), which flowed some miles S. of the latter, and the Ariminum or Marecchia, which was immediately to the N. of the former city. Between these two rivers only two streams now enter the Adriatic, within a very short distance of each other. The modern course of these streams is called the Luso or Rubicon, a considerable stream, which crosses the high-road from Rimini to Ravenna about 10 miles from the former city. A short distance further N. the same road crosses a stream now called Fiumicino, which is formed by the united waters of three small streams or torrents, the most considerable of which is the Passetto (the uppermost of the three); the other two are the Rigosa or Rigone, called also, according to some writers, the Riveone, and the Plano, called also the Fiumicino. These names are those attested by the best old maps as well as modern ones, especially by the Atlas of Magini, published in 1620, and in accordance with the statements of the earliest writers on Italian topography, Flavio Biondo and Leandro Alberti. Cluverius, however, calls the northernmost stream the Riveone, and the one next to it the Passetto. This point is, however, of little importance, if it be certain that the two streams always united their waters as they do at the present day before reaching the sea. The question really lies between the Luso and the Fiumicino, the latter being the outlet both of the Riveone and the Passetto. A papal bull, issued in 1756, pronounced in favour of the Luso, which has, in consequence, been since commonly termed the Rubicon, and is still called by the peasants on its banks II Rubicon. But it is evident that such an authority has no real
Rubrae.

The name of Rubone, applied to one of the three branches of the Fiumicino, would be of more value, if it were certain that this name had not been distorted by antiquarians to suit their own purposes. But it appears that old maps and books write the name Rigoa. Two arguments, however, may be considered as almost decisive in favour of the Fiumicino as compared with the Lusus: 1st. The distance given in the Tables of 12 miles from Ariminum, coincides exactly with the distance of the Fiumicino from that city, as stated by Cluverus, who examined the question on the spot; and 2ndly, the redness of the gravel in the bed of the stream, from which it was supposed to have derived its name, and which is distinctly alluded to by Sidonius Apollinaris, as well as by Lucan (Sidon. Ep. i. 8; Lucan, i. 214), was remarked by Cluverus as a character of the Fiumicino, which was wholly wanting in the Lusus. The circumstance which has been relied on by some authors, that the latter river is a more considerable and rapid stream than the other, and would therefore consti- tute a better frontier, is certainly of no value, for Lucan distinctly speaks of the Rubicon as a tri- fling stream, with little water in it except when swollen by the winter rains.

The arguments in favour of the Fiumicino or Pissutello (if we retain the name of the principal of its three confluent) thus appear decidedly to pre-ponderate; but the question still requires a careful examination on the spot, for the statements of Cluverus, though derived from personal observation, do not agree well with the modern maps, and it is not improbable that the petty streams in question may have undergone considerable changes since his time: still more probable is it that such changes may have taken place since the time of Caesar. (Cluver. Ital. pp. 296 — 299; Biondi Flavii Italia Illustrata, p. 343; Alberti, Descrizione d Italia, p. 246; Magini, Carta di Romagna; Mannert, Geographie von Italien, vol. i. p. 234; Murray's Handbook for Central Italy, p. 104. The older dissertations on the subject will be found in Graevius and Bur- man's Thesaurus, vol. vii. part 2.)

Rubrae and AD RUBRAS, a town in His- pania Baetica, now Cabra de Rubras. (It. Anc. p. 430.)

Rubresus Lacus. [Atax.]

Rubricata (Rubricata, Tol. ii. § 74), an inland city of the Laetiati in the NE. part of Hispania Tarraconensis, on the river Rubricatus; according to Reichard, Olesa. [T. H. D.]

Rubricatus or - UM (Rubricatoros, Tol. ii. § 18), a river of Hispania Tarraconensis flowing into the Mare Internum a little W. of Barcino, the modern Llobregat. (Mela, ii. 6. § 5; Plin. iii. 3. s. 4.)

Rubricatus in Numidia. [Altaur.]

Rubrum Mare, or ERYTHRAEUM MARE (§ Hebr. 33-34, Herod. 1. 180, 202, ii. 8, 158, 159, iv. 39; Polyb. v. 42. § 12, ix. 43. § 2; Strab. i. pp. 32, 53, 50, 56, xvi. 775, 779, xvii. pp. 804, 815, Pomp. Mela, iii. § 8; Plin. vi. 2. s. 7). The sea called Erythra in Herodotus has a wide extension, including the Indian Ocean, and its two gulfs the Red Sea and the Persian Gulf [PERSEUS SINUS], which latter he does not seem to have con- sidered as a gulf, but as part of a continuous sea- line; when the Red Sea specifically is meant it bears the name of Arabicus Sinus [ARABICUS].

The thick, wall-like masses of coral which form the shores or fringing reefs of the cleft by which the waters of the Indian Ocean advance through the straits of Bab-el-Mandeb, with their red and purple hues, were no doubt the original source of the name. Thus also in Hebrew (Exod. x. 19, xiii. 18; Is. xvi. 7, 9, 22) it was called "yam syaph," or the "weedy sea," from the coraline forests lying below the surface of the water. Ramases Miamomeun (Sose- tris) was the first (from 1388 to 1322, B. C.) — so said the priests — who with long ships subjected to his dominion the dwellers on the coast of the Erythraean, until at length sailing onwards, he arrived at a sea so shallow as to be no longer navigable. Diodorus (i. 55, 56; comp. Herod. ii. 102) asserts that this conqueror advanced in India beyond the Ganges, while Strabo (xvi. p. 760) speaks of a mental pillar of Sosestris near the strait of Deive or Bab-el-Mandeb. It appears that the Persian Gulf had been opened out to Phoenician navigation as three places were found there which bore similar names, and these names of Phoenicia, Tylus or Tyryan, Arabus, and Dora (Strab. xvi. pp. 766, 784, comp. i. p. 42), in which were temples resembling those of Phoenicia (comp. Kenrick, Phoenicia, p. 48). The expeditions of Hiris and Soloavanus, the joint undertakings of the Tyrians and Israelites, sailed from Ezion Geber through the straits of Bab- el-Mandeb to Ophir, one locality of which may be fixed in the basin of the Erythraean or Indian Ocean [OPHIRE]. The Lagid kings of Egypt availed themselves with great success of the channel by which nature brought the traffic and intercourse of the Indian Ocean, within a few miles of the coast of the Interior Sea. Their vessels visited the whole western peninsula of India from the gulf of Bary- gaza, Guzerat, and Cambay, along the coasts of Malabar to the Brahminical sanctuaries of Cape Comorin, and to the great island of Taprobane or Ceylon. Nearchus and the companions of Alex- ander were not ignorant of the existence of the periodical winds or monsoons which favour the navigation between the E. coast of Africa, and the N. and W. coasts of India. From the further know- ledge acquired by navigators of this remarkable local direction of the wind, they were afterwards emboldened to sail from Oecus with the straits of Bab- el-Mandeb and hold a direct course along the open sea to Muziris, the great mart on the Malabar coast (S. of Mangalore), to which internal traffic brought articles of commerce from the E. coast of the Indian peninsula, and even gold from the remote Chryse. The Roman empire in its greatest extent on its E. limit reached only to the meridian of the Persian Gulf, but Strabo (i. p. 14, ii. p. 118, xvi. p. 761, xvii. pp. 798, 815) saw in Egypt with surprise the number of ships which sailed from Myra Hornos to India. From the Zend and Sans- crit words which have been preserved in the geographical nomenclature of Ptolemy, his tabular geography remains an historic monument of the commercial relations between the West and the most distant regions of Southern and Central Asia. At the same time Ptolemy (iv. 9, vii. 3. § 5) did not give up the tale of the "unknown southern land," connecting Parnass with Cattigara and Thimae (Sinaram Metropolis), and therefore joined E. Africa with the land of Tsin or China. This isthmus-hypothesis, derived from views which may be traced back to Hipparchus and Marinus of Tyre, in which however, Ptolemy did not make the Indian Ocean a Mediterranean sea. About half a century later than Ptolemy a minute, and as it ap-
pears a very faithful, account of the coast was given in the Periplus of the Erythraean Sea (a work erroneously attributed to Arrian, and probably not anterior to Septimius Severus and his son Caracalla) (comp. Cooley, Claudius Ptolemy and the Nile, p. 56). By long wars with Persia, the Aegyptian and Syrian population, cut off from their ordinary communication with Persia and India, were supplied by the channel which the shores of the Persian Gulf and the Red Sea afforded; and in the reign of Justinian this commerce was very important. After the disturbances caused by the wars of Heraclius and Chosroes, the Arabs or Saracens placed upon the confines of Syria, Aegypt, and Persia, had the greatest portion of the rich trade with Aethiopia, S. Africa, and India thrown into their hands. From the middle of the ninth century the Arab population of the Hejaz maintained commercial relations with the northern countries of Europe and with Madagascar, with E. Africa, India, and China, diffusing their language, their coins, and the Indian system of numbers. But from the time that the Kaliph Al-Mansur closed the canal connecting the Red Sea with the Nile, the important line of communication between the commerce of Aegypt and India and the E. coast of S. Africa has never been restored. For all that concerns the data furnished by the ancient writers to the geographer of the Erythraean sea the Atlas appended by Miller to his Geographi Graeci Minores (Paris, 1855) should be consulted. He has brought together the positions of Agatharchides, Artemidorus, Pliny, Ptolemy, and the Pseudo-Arian, and compared them with the recent surveys made by Morebey, Carless, and others. [E. B. J.]

RUCCONIUM. [DACTI, p. 744, b.]

RUSSIUM. [REVESZIO.]

RUFINA'A (Ρουφίνα), Ptolemy (i.9 § 17) names Neomagnus [Novomagnus, No. 2.] and Rufiniana as the two towns of the Nemètes, a people on the Rhine in Gallia Belgica. If we place Rufiniana with D'Anville and others at Rugia in Upper Bavaria, near the mouth of the Inn, we must admit that Ptolemy has made a great mistake, for Rugia is within the territory of the Bavarii. But D'Anville observes that it is not more extraordinary to find Rufiniana mis-placed in Ptolemy than to find him place Argentoratum in the territory of the Vangiones. [G. L.]

RUFRAE, a town of the Samnites on the borders of Campania, mentioned by Virgil (Aen. vii. 739) in a manner that would lead us to suppose it situated in Campania, or at least in the neighbourhood of that country; while Silus Italicus distinctly includes it among the cities of the Samnites (vii. 563), and Libani, who mentions Rufrae in his commentary on the Commentaries of Pomp. Mela, in the same place, among the zones taken from the Satnites at the commencement of the Second Samnite War, b. c. 326. (Liv. vii. 25.) None of these passages afford any clue to its position, which cannot be determined; though it must certainly be sought for in the region above indicated. The sites suggested by Rumanelli (vol. ii. p. 463) and other local topographers are mere conjectures. [E. B. B.]

RUFRIUM, [RUFRAE.]

RUGI, RUGI (Ῥουγιον or Ῥουγιον), an important people in the north of Germany, occupying a considerable part of the east of the Baltic. (Thuc. G. r. 43.) Their country extended from the river Vinus in the west to the Vestula in the east, and was surrounded in the west by the Sideni, in the south by the Helverones, and in the east by the Seri, who were probably a Sarmatian tribe. Strabo does not mention them, and Ptolemy (ii. 11 § 14) speaks of a tribe called the Rugi, who are probably the same as the Rugii. After their first appearance in Tacitus, a long time passes away during which they are not noticed, until they suddenly reappear during the wars of Attila, when they play a conspicuous part. (Sidon. Apoll. Paneg. ad Avit. 319; Paul. Dia. de Gest. Rom. p. 534, ed. Erasm.) After the death of Attila, they appear on the north side of the Danube in Austria and Upper Hungary, and the country inhabited by them was now called Rugia, and formed a separate kingdom. (Procop. Bell. Goth. ii. 14, iii. 2; Paul. Dia. Longob. i. 19.) But while in this latter country no trace of their name is now left, their name is still preserved in their original home on the Baltic, in the island of Rugen, and in the town of Regenwalde, and perhaps also in Rosi or Regenwalde. (Comp. Latham on Tac. t. c., and Ptolemy p. xix., who strangely believes that the Rugi of Tacitus dwell on the Gulf of Riga.) [L. S.]

RUGIUM (Ῥουγίου), a town in the north of Germany on the coast of the Baltic (Ptol. ii. 11 § 27), the site of which seems to correspond exactly with that of the modern Regenwalde, on the river Rega, though others seek it elsewhere. (Wilhelm, Germanica, p. 273.)

RUNCATAE (Ῥούνκαται), an Alpine tribe in the north of the modern Switzerland between the Oenus and Danubius. (Ptol. ii. 13 § 1.) In the inscription of the Alpine trophy quoted by Pliny (iii. 24) they are called Rucinates. [L. S.]

RURA (Ῥοῦρα), a river of Western Germany, which flows into the Rhine from the east near the town of Duisburg. (Geogr. Rav. iv. 24.)

RURADA (Ῥουράδα), a place in Hispam Baetica, the name of which appears only upon coins, the present Kata near Baeza. (Fl ores, Epigr. iv. p. 98.)

RUSADIR (Ῥουσάδηρ), a town in the same region as Tarquinia, situated near Metulla, which is said to have been called from the town of Tarquinia (Ptol. iv. 1 § 12). It is represented by the "baradero" of Melilla, or Spanish penal fortress, on the height formed between C. Tris Forcas and the Miilia. [E. B. J.]

RUSAZUS. [MAELADINIA, p. 298, b.]

RUSCINO (Ῥουσκίνον, Ρούσκινον), a city of the Volsci Tectosages in Gallia Narbonensis. (Ptol. ii. 10 § 9.) When Hannibal entered Gallia by the Pyrenees, he came to Hibers (Ehre), and thence marched past Ruscino (Liv. xxii. 24). Ruscino stood on a spur of the same name (Ptol. Strab., i. 5.) "There was a lake near Ruscino, and a swampy place a little above the sea full of salt and containing mussels (μυτρίας), which are dug out; for if a man digs two or three feet, and drives a trident into the muddy water, he may spear the fish, which is of considerable size; and it feeds on the mud like the eels." (Strab. iv. p. 152.) Polybius (xxxiv. 10, ed. Becke) has the same about the river and the fish, which, however, he says, feed on the plant agrustis. (Athen. viii. p. 372.) The low tract which was divided by the Ruscino is the Cyneticum Litus of Avienus (Ptol. iii. 456). [L. S.]

"post Pyreneum jugam, Jacent arenae littoria Cyrenict, Ense late salut ans Roschimus."
Mela (ii. 5) names the place a Coloniso, and so the title appears on coins, col. RUS. leg. VI. Pilay calls it "Opplum Latinorum." It seems to have been a Colony Latina.

The name is incorrectly written Ruscione in the Antonine Itin. and in the Table. It is placed between Combusta [Comusta] and Hilberis, and it is represented by Castel-Rousillon or the Tour de Rousillon on the Tet, the ancient Ruscino, a short distance from Perpignan, the capital of the French department of the Pyrénées Orientales. Perpignan lies on the high-road from France into Spain, and there is no other great road in this part of the Pyrenees.

Ruscino is named Rousciola in middle age documents, and from this name the modern name Rousillon is derived. Rousillon was a province of the ante-revolutionary history of France, and it corresponds to the modern department of Pyrénées Orientales.

The river Ruscino or Ruscius is the Telis of Mela (ii. 5), the Tet; and we may probably conclude that the name of Telis is Telis Tettis in the Pyrenees, and flows past Perpignan into the Mediterranean, after a course of about 70 miles. Sometimes it brings down a great quantity of water from the mountains. [G. L.]

RUSELLAE (Pouowelaia; Eth. Rusellians : Roselle), an ancient and important city of Etruria, situated about 14 miles from the sea, and 3 from the right bank of the river Umbra (Unbro). In common with several of the ancient Etruscan cities, we have very little information concerning its early history, though there is no doubt of its great antiquity and of its having been at a very early period a powerful and important city. There is every probability that it was one of the twelve which formed the Etruscan League (Müller, Etruskur, vol. i. p. 346). The first mention of it in history is during the reign of Tarquinius Priscus, when it united with Clusium, Aretrium, Volaterræ, and Vetulonia, in declaring war against the Roman king, apart from the rest of the confederacy,—a sufficient proof that it was at that time an independent and sovereign state. ( Dionys. iii. 51.) From this time we hear no more of it until the Romans had carried their arms beyond the Ciusnian forest, when, in B.C. 301, the dictator M. Valerius Marcellus carried his arms, apparently for the first time, into the territory of the Rusellae, and defeated the combined forces of the Etruscans who were opposed to him. (Liv. x. 4. 5.) A few years later, in B.C. 294, the consul L. Postumius Megellus not only had the city and the territory of Rusellae, but took the city itself by storm, taking more than 2000 of the inhabitants alive (Id. x. 37). No other mention of it occurs during the period of Etruscan independence; but during the Second Punic War the Ruselliani are mentioned among the "populi Etruriae" who came forward with voluntary supplies to equip the fleet of Scipio (B.C. 205), and furnished him with timber and corn (Id. xxviii. 45). It is evident that at this time Rusellae was still one of the principal cities of Etruria. We find no subsequent notice of it under the Roman Republic, but it was one of the places selected by Augustus to receive a colony (Plin. iii. 5. s. 8; Zumpt, de Colon. p. 347); notwithstanding which it seems to have fallen into decay; and though the name is mentioned by Ptolemy (ii. 1. § 48) we meet with no later notice of it in ancient times. It did not, however, altogether cease to exist till a much later period, as it retained its episcopal see down to the twelfth century, when it was transferred to the neighbouring town of Grosseto. (Repetti, Dia. Top. vol. ii. pp. 526, 822.)

The site of Rusellae is now wholly desolate and overgrown with thickets, which render it very difficult of access. But the plan may be distinctly traced, and the line of the ancient walls may be followed in detached fragments throughout their entire circuit. It stood on the flat top of a hill of considerable elevation, about 6 miles from the modern city of Grosseto, overlooking the broad valley of the Ombrone and the level plain of the Maremma, which extends from thence to the sea. The walls follow the outline of the hill, and enclose a space of about 2 miles in circuit. They are constructed of very rude and massive stones, in some places with an approach to horizontal structure, similar to that at Volterra and Populonia; but in other parts they lose all traces of regularity, and present (according to Mr. Dennie) a strong resemblance to the rudest and most irregular style of Cyclopian construction, as exemplified in the walls of Tyrins in Argolis. (Dennie's Etruria, vol. ii. pp. 248, 249.) The sites of six gates may be traced; but there are no indications of the manner in which the gateway itself was formed. Within the walls are some fragments of rectangular masonry and some vaults of Roman construction. It is remarkable that no traces of the necropolis—so often the most interesting remnant of an Etruscan city—have yet been discovered at Rusellae. But the site is so wild and so little visited, that no excavations have been carried on there. (Dennis, l. c. p. 254.)

About 2 miles from the ruins, and 4 from Grosseto, are some hot-springs, now called I Bagni di Roselle. On a hill immediately above them are the mediaeval ruins of a town or city called Moscona, which have been often mistaken for those of Rusellae. (Dennis, l. c.)

RUSGUN'IA (Itin. Ant.; Pouow'dvov, Plut. iv. 2. § 6), a town of Mauretania, and a colony, which lay 15 M. P. to the E. of Icosium. Its ruins have been found near Cape Matafa or Temenulce (Barth, Wanderungen, p. 53). For an account of these, see Ausländ, 1897, No. 144.

RUSICADE (Plut. iv. 2; Mela, i. 7. § 1; Poset'na±a, Plut. iv. 3. § 3; Rusicade, Itin. Ant., Pent. Tab.), the harbour of Cirta in Numidia, and a Roman colony, at the mouth of the small river Thapsus (Vil. Soq. de Flum. p. 19: U. Saffon), and probably therefore identical with the Thapsa (Ovéia), a harbour-town, of Scylax (p. 50). Its site is near Stora; and the modern town of Philippine, the Rás-Siladu of the Arabs, is made in part of the materials of the old Rusicade (Barth, Wanderungen, p. 66).

RUSIDA VA. (Dacia, p. 744, b.)

RUSPE (Pent. Tab.; Póères al. Póweis, Plut. iv. 3. § 10), a town of Numidia between Achalla and Usilla, near the Caput Vadorum (Corippus, Jo.hann. i. 366; C. Kâbudîah), and the see of Fujiensis, well-known in the Pelagian controversy; he was expelled from it by the Vandal Thrasimund. Barth (Wanderungen, p. 177) found remains at Schéboa. [E. B. J.]

RUSUNITUM (Pouow'dwov, Strab. xvi. p. 831; Rusipina, Auct. B. Afr. 6; Plut. v. 3; Pent. Tab.), a town of Africa Prope, where Caesar defeated Scipio, and which he afterwards made his position while waiting for reinforcements. It is probably the
same place as the Thermæ of the Coast-boarder (Stadium, § 114, ed. Müller), near the ruins of Lepcis Parva. [E. B. J.]

RUSTICANA. ('Povstixana, Ptol. ii. 5. § 7), a city in the Vettianus in Lucania, on the right bank of the Tarnus. Variously identified with Cornubia and Gallatea. (It. Ant. b. 433.) [T. H. D.]

RUSSCURRIUM, RUSSCURIUM (Pliny v. 1; It. Ant.; 'Povstixanam, Ptol. iv. 2. § 8), a town of Mauretania, which Claudius made a municipium (Plin. l. c.), but which was afterwards a colony (Itin. Ant.). Barth (Wanderungen, p. 60) has identified it with the landing-place Delphi in Algeria, where there is good anchorage. [E. B. J.]

RUTI'NEI ('Povstyn), and Povstyn in Podeny (ii. 7. § 21), who places them in Gallia Aquitania. Pliny (iv. 19) says that the Ruteni border on the Narbonensis Province; and Strabo (iv. p. 194) places them and the Gabalae or Gabali next to the Narbonenses. Their country was the old province of Rouergue, which extended from the Cévennes, its eastern boundary, about 90 miles in a western direction. The chief town was Rhodes. The modern department of Arveyron comprehends a large part of the Rouergue. There were silver mines in the country of the Ruteni and their neighbours the Gabali [Gabali], and the flux of this country was good.

The Arverni and Ruteni were defeated by Q. Fabius Maximus, b.c. 121, but their country was not reduced to the form of a Roman province (Caes. B. G. i. 43). In Caesar's time part of the Ruteni were included in the Province under the name of Ruteni Provinciales (B. G. vii. 5. 7). Verlingetorix in b.c. 52 sent Lucertius of the Caduci into the country of the Ruteni to bring them over to the Gallic confederation, which he did. Caesar, in order to protect the Province on this side, placed troops in the country of the Ruteni Provinciales, and among the Galles Arverni and Tolosates. Pliny, who enumerates the Ruteni among the people of Aquitania, also mentions Ruteni in the Narbonensis (Gallia, 22), that he may use the term Senonians [Saxonii, Dunum]. The Ruteni Provinciales of course were nearer to the Tectosages than the other Ruteni, and we may perhaps place them in that part of the departments of Aveyron and Tarn which is south of the Tarn (Tarn). It may be conjectured that part of the Ruteni were added to the Province, either after the defeat of the Ruteni by Maximus, or after the conquest of Toulouse by Caesar (ibid. 106.) [G.L.]

RUTULI. [RIGH.]

RUTUBA (Roya), a river of Liguria, which rises in the Maritime Alps, near the Col de Tende, and flows into the sea at Vintimilla (Al卑num Intemellum). Its name is found in Pliny (iii. 5. 8. 7), who places it apparently to the W. of Albium Intemellum, whereas it really flows on the E. side of that town; Lucan also notices it among the streams which flow from the Apenines (ii. 422), and gives it the epithet of "cavum," from its flowing through a deep bed or ravine. From the mention of the Tiber just after, some writers have supposed that he must mean another river of the name; but there is no reason to expect such strict geographical order from a poet, and the mention of the Marra a few lines lower down sufficiently shows that none such is intended. Vahlen Septimer (p. 47) who makes the Rutuba fall into the Tiber, has obviously misunderstood the passage of Lucan. [E. H. B.]

RUTUBIS (Polyb. ap. Plut. v. 1; 'Povstynis, Pltol. iv. 5. § 1), a part of Mauretania, which must be identified with the low rocky point of Mazagan. The town situated upon this was the last possessed by the Portuguese in Morocco, and was abandoned by them in 1769. (Jackson, Morocco, p. 104; Journal of Travels, v. 101.)

RUTULI (Povstynov), a people of ancient Italy, who, according to a tradition generally received in later times, were settled at a very early period in a part of Latium, adjoining the sea-coast, their capital city being Ardea. The prominent part that they and their king Turnus bear in the legendary history of Arcas and the Trojan settlement, especially in the form in which this has been worked up by Virgil, has given great celebrity to their name, but they appear to have been, in fact, even according to these very traditions, a small and unimportant people. Their king Turnus himself is represented as dependent on Latins; and it is certain that in the historical period Ardea was one of the cities of the Latin League (Dionys. v. 61), while the name of the Rutuli had become merged in that of the Latin people. Not long before this indeed Livy represents the Rutuli as a still existing people, and the arms of Tarquinii Superbus as directed against them when he proceeded to attack Ardea, just before his expedition. (Livy. i. 56. 57.) According to this narrative Ardea was not taken, but we learn from much better authority (the treaty between Rome and Carthage preserved by Polybius, iii. 227) that it had fallen under the power of the Romans before the close of the monarchy, and it is possible that the extinction of the Rutuli as an independent people may date from this period. The only other mention of the Rutuli which can be called historical is that their name is found in the list given by Cato (ap. Friscianiv. 4. p. 629) of the cities that took part in the foundation of the celebrated temple of Diana at Aricia, a list in all probability founded upon some ancient record; and it is remarkable that they here figure as distinct from the Ardeates. There were some obscure traditions in antiquity that represented Ardea as the capital of the Arcs (on Nimbus), but they have been generally disposed of by modern critics, and these are regarded by Niebuhr as tending to prove that the Rutuli were a Pelasgic race. (Niebuhr, vol. i. p. 34, vol. ii. p. 21.) Schweger, on the other hand considers them as connected with the Etruscans, and probably a relic of the period when that people had extended their dominion throughout Latium and Campania. This theory finds some support in the name of Rutuli, which may probably be connected with Tyrrhenus, as well as in the union which the legend represents as subsisting between Turnus and the Etruscan king Menenius. (Schweger, Rom. Gesch. vol. i. pp. 310, 311.) But the whole subject is so mixed up with fable and poetical invention, that it is impossible to feel confidence in any such conjectures. [E. H. B.]

RUTUMICUM (It. Ant. p. 469), apparently a town of the Cornavi in the W. part of Britannia Romana. Camden (p. 651) identifies it with Icetum in Shropshire, Horsley (p. 418) with Wen. [T. H. D.]

RUTU'TIAE. (Povstynov, Vol. ii. 3. § 27; in the Tab. Peut. and Not. Imp. Rituape; in the Itin. Ant. Rituape, also Portus Rutupinis and Portus Rutuipis: Adj. Rituipius, Luc. Phars. vi. 67, Juvi. iv. 141,) to the coast on the 1st coast of Britannia Prima, now Richborough in Kent. Rituape and Portus Rutupinis were probably distinct, the former being the city, the latter its harbour at some little distance. The harbour was probably
RYSIADIUM.

Stoner, not Sandwich; which latter town seems to have sprung up under the Saxons, after Rutupiae had fallen into decay, and was indeed probably built with materials taken from it. According to Camden (p. 244) the etymology of the name of Rutupiae is analogous to that of Sandwich, being derived from the British Rhylfasfeth, signifying "sandy bottoms"; a derivation which seems much more probable than that from the Rutæni, a people who occupied the district in France, now called La Rochelle. The territory around the town was styled Rutupinæ Ager (Anson, Parent. xviii. 8) and the coast Rutupinæ Littus (Luc. l.c.). The latter was celebrated for its oysters, as the coast near Margate and Reculver is to the present day. Large beds of oyster-shells have been found in the neighbourhood, at a depth of from 4 to 6 feet under ground. The port is undoubtedly that mentioned by Tacitus (Agric. 38), under the erroneous name of Truenturis Portus, as occupied by the fleet of Agricola. It was a safe harbour, and the usual and most convenient one for the passage between France and England. Ptolemy (iv. 8. 6) The principal Roman remains at Richborough are those of a castrum and of an amphitheatre. The walls of the former present an extensive ruin, and on the N. side are in some places from 20 to 30 feet in height. Fragments of sculptured marbles found within their circuit show that the fortification must have contained some handsome buildings. The foundation walls of the amphitheatre were excavated in 1849, and are the first remains of a walled building of that description discovered in England. There is a good description of Richborough, as it existed in the time of Henry VIII., in Leland's Itinerary (vol. vii. p. 128, ed. Hearne). Leland mentions that many Roman coins were found there, which still continues to be the case. Other Roman antiquities of various descriptions have been discovered, as pottery, fibulae, ornaments, knives, tools, &c. Rutupiae was under the jurisdiction of the Corne litoris Saxonici, and was the station of the Legio Ida Augusta. (Notitia, c. 52.) A complete account of its remains will be found in Reach Smith's Antiquities of Richborough (T. H. D.).

RYSIADIUM (Ῥυσιαδίου ὕπος, Ptol. iv. 6. 8), "a mountain of interior Libya, from which flows the Stachere (Gambia), making near it the lake Closia; the middle of the mountain (or lake?) 17° E. long, 11° N. lat." (Ptol. l.c.) This mountain terminated in the headland also called Rysiadion (Ῥυσιαδίου ἄκρον), the position of which is fixed by Ptolemy (iv. 6. 6) at 8° 30' E. long., and 11° 30' N. lat. We assume, with Rennell and Leake, that Arsinarium is C. Verde, a conjecture which can be made with more confidence because it is found that Ptolemy's difference of longitude between Arsinarium and Cartaghe is very nearly correct,—according to that assumption this promontory must be looked for to the N. of the mouth of the Gambia. The mountain and lake must be assigned to that elevated region in which the Senegal and the Gambia take their rise, forming an appendage to the central highlands of Africa from which it projects northwards, like a vast promontory, into the Great Sahara. (E. B. J.)

SABA.

SABA, SABAED or Σαβαία: Eth. Σάβανα, fem. Σάβαία), were respectively the principal city and nation in Yemen, or Arabia Felix. [ARABIA.] Ancient geographers differ considerably as to the extent of territory occupied by the Sabaeans, Eratosthenes designating it to a much larger area than Ptolemy. The difference may perhaps be reconciled by examining their respective accounts.

Our knowledge of the Sabaeans is derived from three sources: the Hebrew Scriptures, the Greek historians and geographers, and the Roman poets and encyclopedists, Pliny, Sabinus, &c. The Arabian geographers, also, threw some light upon this ancient and far-extending race.

1. In the Hebrew genealogies (Genesis, x. 6, xxv. 3) the Sabaeans are described as the descendants of Cush, the son of Ham. This descent was probably not so much from a single stem, as from several branches of Hamite origin; and as the tribes of the Sabaeans were numerous, some of them have may proceeded immediately from Cush, and others from later progenitors of the same stock. Thus one tribe descended from Saba, the son of Cush, another from Jokshan, Abraham's son by Keturah; a third from Sheba, the son of Raamah—the Peum of the LXX. (Compare Psalm xxxii. 10; Isaiah, xliv. 14: Ezekiel, xxvii. 22, 23, xxxvii. 13.) The most material point in this pedigree is the fact of the pure Semitic blood of the Sabaeans. The Hebrew prophets agree in celebrating the stature and noble bearing, the enterprise and wealth of this nation, therein concurring with the expression of Agatharchides, who describes the Sabaeans as having ῥα ἀϊματα ἀξολογώτατα. Their occupations appear to have been various, as would be the case with a nation so widely extended ("Sabaei ... ad utraque maria portrecti," Plin. vi. 28. s. 32); for there is no doubt that in the south they were actively engaged in commerce, while in the north, on the borders of Khurea, they retained the predatory habits of nomades. (Job. ii. 15.) The "Queen of the South," Recha from Sabae, who was attracted to Palestine by the fame of Solomon, was probably an Arabian sovereign. It may be observed that Yemen and Saba have nearly the same import, each signifying the right hand; for a person turning his face to the rising sun has the south on his right, and thus Saba or Yemen, which was long regarded as the southern limit of the habitable zone, is the left-hand, or southern land. (Cleop. Herod. iii. 107—113; Forster's Geogr. of Arabia, vol. i. pp. 24—38.) A river Saba, in Carmamia (Meda, iii. 8. § 4), and a chain of mountains Saba, at the entrance of the Persian Gulf (Arrian. Periplus M. Ephed. 475 μεγάστα Λυγμένα Σαβα; comp. Ptol. vi. 7. § 23), apparently indicate an extension of the Sabaeans beyond Arabia Proper. That they reached to the eastern shore of the Red Sea is rendered probable by the circumstance that a city named Sabu or Sabe stood there, about 36 miles S. of Podina, in lat. 14° N. (Ptol. vi. 7. § 38, v. 22. § 14.)

2. The first Greek writer who mentions the Sabaeans by name is Eratosthenes. His account, however, represents a more recent condition of this nation than is described by Artemidorus, or by Agatharchides, who is Synchrobus, or pre-eminent authority in his narrative of the Sabaeans. On the other hand, Diodorus Siculus professes to have compiled his
accounts of them from the historical books of the Egyptian kings, which he consulted in the American Library. (Diod. iii. 38, 40.) There can be little question that Herodotus, although he does not name the Sabaeans, describes them in various passages, when speaking of the Arabsians, the southernmost people of the earth. (Herod. ii. 86, iii. 107–113.) The commerce of Yemena with Phoenicia and Assyry under the Pharaohs would render the name of the Sabaeans familiar in all the havens of the Red Sea and the eastern Mediterranean. The Egyptians imported spices largely, since they employed them in embalming the dead; and the Phoenicians required them for the Syrian markets, since perfumes have in all ages been both favourite luxuries and among the most popular medicines of the East. At the time when Plutemy wrote (in the second century A.D.) their trade with Syria and Assyry, as the carriers of the silks and spices so much in request at Rome, brought the Sabaeans within ken of the scientific geographer and of the learned generally.

3. Accordingly, we meet in the Roman poets with numerous, although vague, allusions to the wealth and luxury of the Sabaeans. "Molles," "divites," "beati," are the epithets commonly applied to them. (See Catull. xi. 5; Propert. ii. 10, 16, vi. 29, 17, iii. 13, 8; Virgil, Georg. i. 57, ii. 150, Aenid, i. 416; Horace, Carm. i. 29, ii. 12, 24; 7th Epist. i. 6, 7, 6; 7th, Statius, Silv. iv. 8, 1; Senec. Herac. Oct. v. 57.) The expedition of Archus Gallus, indeed (b.c. 241), may have tended to bring Southern Arabia more immediately under the notice of the Romans. But their knowledge was at best very limited, and rested less on facts than on rumours of Sabaean opulence and luxury. Pliny and the geographers are rather better informed, but even they had very erroneous conceptions of the physical or commercial character of this nation. Not until the passage to India by the Cape had been discovered was Saba or Yemena really explored by Europeans.

Assuming, then, that the Sabaeans were a widely-spread race, extending from the Persian Gulf to the Red Sea, and running up to the borders of the desert in the Arabian peninsula, we proceed to examine the grounds of their reputation for excessive opulence and luxury. A portion of their wealth was undoubtedly native; they supplied Assyry and Syria from the remotest periods with frankincense and aromatics; and since the soil of Yemena is highly productive, they took in exchange, not the corn or wine of their neighbours, but the precious metals. But aromatics were by no means the capital source of their wealth. The Sabaeans possessed for many centuries the key of Indian commerce, and were the intermediate agents between Aegypt and Syria, as these countries were in turn the Indian agents for Europe. During the Pharaonic eras of Assyry, no attempt was made to disturb the monopoly of the Sabaeans in this traffic. Plutemy Philadelphia (b.c. 274) was the first Egyptian sovereign who discerned the value of the Red Sea and its harbours to his kingdom. He established his Indian emporium at Myos-Hormus or Arsinoe, and under his successors Berenice, which was connected with Coptos on the Nile by a canal, shared the profits of this remunerative trade. But even then the Sabaeans lost a small portion only of their former exclusive advantage. They were not longer the carriers of Indian exports to Assyry, but they were still the importers of them from India itself. The Egyptian fleets proceeded no further than the haven of Salbutha or Marib; while the Sabaeans, long prior even to the voyage of Nearchus (b.c. 330), ventured across the ocean with the monsoon to Ceylon and the Malabar coast. Their vessels were of larger build than the ordinary merchant-men of the Greeks, and their mariners were more skilful and intrepid than the Greeks, who, it is recorded, shrank back with terror from the Indian Ocean. The track of the Sabaean navigators lay along the coast of Gressos, since Nearchus found along its shores many Arabic names of places, and at Posenna engaged a pilot acquainted with those seas. In proportion as luxury increased in the Syro-Macedonian cities (and their extravagance in the article of perfumes alone is recorded by Athenaeus, xii.), and subsequently in Rome, the Indian trade became more valuable to the Sabaeans. It was computed in the third century of the Empire, that, for every pound of silk brought to Italy, a pound of silver or even gold was sent to Arabia; and the computation might fairly be extended to the aromatics employed so lavishly by the Romans at their banquet and funerals. (Comp. Petronius, c. 64, with Plutarch, Sulla, c. 38.)

There were two avenues of this traffic, one overland by Petra and the Elanitic gulf, the other up the Red Sea to Arsinoe, the Ptolemaic canal, and Alexandria. We may therefore fairly ascribe the extraordinary wealth of the Sabaeans to their long monopoly of the Indian trade. Their country, however, was itself highly productive, and doubtless, from the general character of the Arabian peninsula, its southern extremity was densely populated. The Sabaeans are described by the Hebrew, the Greek, and the Arabian writers as a numerous people, of lofty stature, implying abundance of the means of life; and the recurrence of the name of Saba throughout the entire region between the Red Sea and Carmania shows that they were populous and powerful enough to send out colonies. The general barrenness of the northern and central districts of Arabia drove the population down to the south. The highlands were thinly inhabited, the fertile valleys, watered by the plenty of water and water; the air is temperate, the animals are numerous (the horses of Yemena are strong and serviceable), and the fruits delicious. With such abundance at home the Sabaeans were enabled to devote themselves to trade with undivided energy and success.

Nothing more strikingly displays the ignorance of the ancient geographers as regards Saba than their descriptions of the opulence of the country. Their narratives are equally pompous and extravagant. According to Agatharchides and Diidorus, the oolour of the spices-woods was so potent that the inhabitants of Yemena, contented with the odious perfumes by the ill odours of burnt goats' hair and asphaltite. The decorations of their houses, their furniture, and even their domestic utensils were of gold and silver; they drank from vases blazing with gems; they used cinnamon chips for firewood; and no king could compete in luxury with the merchant-princes of the Sabaeans. We have only to remember the real or imputed sumptuousness of a few of the Dutch and English East India Companies' merchants in the 18th century, while the trade of the East was in a few hands, in order to appreciate the worth of these descriptions by Agatharchides and Diidorus.

The delusions of the ancients were first dis-
pelled by the traveler Niebuhr. (Decription de l'Arabie, p. 125.) He asserts, and he has not been contradicted, that Yemen neither produces now, nor ever could have produced, gold; but that, in the district of Saude, it has iron-mines,—a fact unnoticed by earlier describers,—which were worked when he visited the country. He states, moreover, that the native frankincense is of a very ordinary quality, Sabaea yielding only the species called Līkān, while the better sorts of that gum are imported from Sumatra, Suma, and Java. The distance from which the superior kinds of myrrh, frankincense, card, and cassia were fetched, probably gave rise to the strange tales related about the danger of gathering them from the trees, with which the Sabaeans regaled the Egyptian and Greek merchants, and through them the Greek geographers also. One cause of danger alone is likely to have been truly reported: the spice-woods were the abode of venomous reptiles; one of which, apparently a purple cobra, was aggressive, and, springing on intruders, inflicted an incurable wound. The ancients, however, seem to have believed that cinnamon was brought to Arabia by large birds, which build their nests of its chips, and that the ledum was combed from the beards of he-goats.

The Sabaeans were governed by a king. (Dion Cass. liii. 29.) One inexcusable condition of the royal office was, that he should never quit his palace; found beyond its precincts, it was allowable to stone him to death. The rule which governed the succession to the throne was singular. A certain number of noble families possessed equal claims to the crown; and the first child (females were eligible) born after an accession was presumptive heir to the reigning monarch. This seclusion of the king, and the strange mode of electing him, seem to indicate a sacerdotal influence, similar to that which regulates the choice of the Grand Lama and the homage paid to him by the Thibetians.

The precise boundaries of Sabaea it is impossible to ascertain. The area we have presumed is comprised within the Arabian Sea W., the Persian Gulf E., the Indian Ocean S., and an irregular line skirting the Desert, and running up in a narrow point to Idumea N.

For principal divisions of the Sabaeans see the articles on Arabia; Adramítæ; Menæa.

The decline of the Sabaeans seems to have proceeded from two causes: (1) the more direct intercourse of the Aegypto-Greeks with India, and (2) the rivalry of the powerful tribe of the Homeritae, who subjugated them. In the account of their eastern traffic, and of the characteristics of their land, we have traced the features of the race. Compared with the Arabs of the Desert, the Sabaeans were a highly civilised nation, under a regular government, and, as a mercantile community, jealous of the rights of property. The author of the Periplius remarks upon similar security among the Adramitae; the interests of the merchant had curbed and softened the natural ferocity of the Arab. This also, according to Niebuhr (Descrip. de l'Arabie, p. 315), is still observable in Yemen, in comparison with the inland provinces of Hejiz, and Neged. [W. B. D.]

SABA. Three cities of this name are distinguished by ancient geographers: the name indeed was a common appellation of towns, and signified head of the province, or of its lesser divisions. (Comp. Plin. vi. 28. s. 32.)

(1). (Σαβα, Steph. B. s. v. Σαβα, Agatharch. ap. Phot. p. 53), was the chief city of the Sabaeans. It is described by Diosorus (iii. 46) as situated upon a lofty wooded hill, and within two days' journey of the frankincense country. The position of Saba is, however, quite uncertain: Marnert (Geogr. der Griech. u. Kön. vol. vi. p. i. 66) places it at the modern Saude: other geographers identify it with Meveh [Mahan]; and again Sabatha, both from its site in the interior and its commercial importance, seems to have a good title to be considered as Saba (Σαβα) of Agatharchides, or Sheba, the capital of the Sabæans.

2. (Σαβα, Plin. vi. 7. §§ 38, 42; Plin. vi. 23. s. 34), was also seated in the interior of the Sabæan territory, 26 miles N.E. of Aden. Niebuhr (Descrip. de l'Arabie, vol. ii. p. 60) identifies it with the modern Sauba.

3. (Σαβα, Strab. xvii. p. 771; Σαβα, Plin. iv. 7. § 8), on the western shore of the Red Sea, was the capital city of the Sabaeans, and its harbour was the Salacterum Os (Σαβατραυον αρησα), Strab. xvii. p. 770. The position of Sauba, like that of so many Aethiopian races and cities, is very uncertain: some geographers place it at the head of the Arabian gulf (Heren, Histor. Researches, vol. i. p. 333); others carry it up as high as the bay of Aden, lat. 15° N. Bruce (Travels, vol. iii. p. 144) identifies the modern Asab with the Sabae, and places it between the tropics and the Abyssinian highlands. Combes and Tamisier (Voyages, vol. i. p. 89) consider the island Massacone to have a better claim: while Lord Valentia (Travels, vol. ii. p. 47) finds Sabae at Port Mornington. But although neither ancient geographers nor modern travellers are agreed concerning the site of the Aethiopian Sabæa, they accord in placing it on the sea-coast of the Kingdom or island of Meroe, and between the Siuns Avatites and the bay of Aden, i.e. between the 12th and 15th degrees of N. latitude. On the opposite shore were seated the Sabaeans of Arabia, and as there was much intercourse between the populations of the opposite sides of the Red Sea, the Aethiopian Sabæans may have been a colony from Arabia. Both races are described as lofty in stature and opulent (Psalm lxixii.; 1 Kings. x. 1; Isaiah. xlv. 14), and this description will apply equally to the Sabaeans who dwelt in the spice country of Arabia, and to those who enjoyed almost a monopoly of the Libyan spice-trade, and were not far removed from the gold-mines and the emerald and topaz- quarries of the Aegyptian and Aethiopian mountains. The remarkable personal beauty of the Sabaeans is confirmed by the monuments of Upper Nubia, and was probably reported to the Greek geographers by the slave-dealers, to whom height and noble features would be a recommendation. The Sabaeans, at least in earlier periods, may be regarded as one of the principal tribes of the Aethiopian kingdom of Meroe. [Meroë.] Josephus (Antiq. ii. § 5) affirms that the Queen of Sheba or Saba came from this region, and that it bore the name of Saba before it was known by that of Meroe. There seems also some affinity between the word Saba and the name or title of the kings of the Aethiopians, Saba-co. [W. B. D.]

SABADIÆAE. (Σαβαδηαεαι νησών, Plin. vii. 2. § 28), three islands, mentioned by Ptolemy, in the neighbourhood of the Aera Chersonesus in India extra Gangem. From the great resemblance of the name, it is not unlikely that he has confounded it with that of the island of Labadius (or Sabadus), now Javeo, which he mentions in his next section. [BA- RADIUS.]

[V.]}
SABAGKENA, a town in Lesser Armenia, is mentioned only by Ptolemy (v. 7, § 10) as belonging to the province of Cappadocia (v. 7, § 60). [L. S.]

SABALINGII (Saba'lyngii), a German tribe, placed by Ptolemy (ii. 11, § 11) above the Saxae in the Cumbrian peninsula, the modern Schleswig. In the absence of all further information about them, it has been inferred, from the mere resemblance of name, that they dwelt in and about the place called Sobyholo in the island of Laland. [L. S.]

SABARIA (Savapria), an important town in the north of Upper Pannonia, was situated in a plain between the river Arhabo and the Deserta Bolorum, on the road from Carnuntum to Poetorum. The town, which seems to have been an ancient settlement of the Boii, derived its importance partly from the fertility of the plain in which it was situated, and partly from the fact that it formed a kind of central point at which several roads met. The emperor Claudius raised it to the rank of a Roman colony, whence it received the surname of Claudia. (Plin. iii. 27; Ptol. ii. 15, § 4.) In this town Septimius Severus was proclaimed Augustus (Aurel. Vict. Epit. 19), and the emperor Valentinian resided there some time. (Ann. Marc. xxx. 5.) Owing to this and other circumstances, the town rose to a high degree of prosperity during the latter periods of the Roman Empire, and its ancient greatness is still attested by its numerous remains of temples and aqueducts. Many statues, inscriptions, and coins also have been found at Stein am Anger, which is now the modern name, or, as the Hungarians call it, Szombathely. (It. Ant. pp. 233, 261, 262, 434; Orelli, Inscription. n. 200 and 1759; Schloawiner, Antiquitates Sabaricae, p. 43; Muchar, Noricum, i. p. 167.) [L. S.]

SABARICUS SINUS. [Indicus Oceanus.] SABA'TA or SABBATA (Plin. vi. 27. s. 31), a town of Assyria, probably the same place as the Saba'adi of Zosimus (ii. 23), which that writer describes as 30 stadia from the ancient Seleucia. It is also mentioned by Abulfeda (p. 253) under the name of Sabath.

SABBATHA VADA. [Vada Sabatia.] SABBATINA LACUS (Saba'tana lacus, Strab.: Lago di Bracciano), one of the most considerable of the lakes of Etruria, which, as Strabo observes, was the most southerly of them, and consequently the nearest to Rome and to the sea. (Strab. v. p. 226.) It is, like most of the other lakes in the same region, formed in the crater of an extinct volcano, and has consequently a very regular basin-like form, with a circuit of about 20 miles, and is surrounded on all sides by a ridge of hills rising to great elevation. It is probable that it derived its name from a town of the name of Sabata, which stood on its shores, but the name is not found in the geographers, and the only positive evidence of its existence is its mention in the Tabula as a station on the Via Claudia. (Tab. Pent.) The lake itself is called Sabatha by Strabo, and Sabata by Festus, from whom we learn that it gave name to the Sabatine tribe of the Roman citizens, one of those which was formed out of the new citizens added to the state in B.C. 387. (Liv. vi. 4.) For list of Sabata, see pp. 342, 343.) Silius Italicus speaks of the "Sabatia stagna" in the plural (viii. 482), probably including under the name the much smaller lake in the same neighbourhood called the Lacus Abietinus or Lago di Martignano. The same tradition was reported of this lake as of the Ciminian, and of many others, that there was a city swallowed up by it, the remains of which could still occasionally be seen at the bottom of its clear waters. (Socian, de Mir. Pont. 41, where we should certainly read "Zastrum" for "Zastorum." It abounded in fish and wild-fowl, and was even stocked artificially with fish of various kinds by the luxurious Romans of late times. (Colonnell, viii. 16.)

The Tabula places Sabata at the distance of 36 miles from Rome, but this number is much beyond the truth. The true distance is probably 27 miles, which would coincide with a site near the W. extremity of the lake about a mile beyond the modern town of Bracciano, where there are some ruins of Roman date, probably belonging to a villa (Tab. Pent., Holsten. Not. ad Cluver. p. 44; Westphal, Rom. Kampagnen, pp. 156, 158.) The town of Bracciano, which now gives name to the lake, dates only from the middle ages and probably does not occupy an ancient site. [E. H. B.]

SABATUS. 1. (Sabato), a river of Samnium, in the country of the Hirpini, and one of the tributaries of the Calor (Calore), with which it unites under the walls of Beneventum. [Calor.] The name of the river is not found in any ancient author, but Livy mentions the Sabatini among the Campanians who were punished for their defection to Hannibal in the Second Punic War. (Liv. xxi. 33, 34.) These may mean generally the people of the valley of Sabatus, that may have been supposed by Cluver, a town of the same name on the banks of the river. (Cluver. Ital. p. 1199.)

2. (Svento), a river of Bruttium, on the W. coast of the peninsula, flowing into the sea between Amantea and Cupo Sutero. Its name is known only from the Itineraries, from which we learn that it was crossed by the high-road to Rhenum 18 miles S. of Consentina (Cosenza), a distance which, combined with the name, clearly identifies it with the modern Svento. (Rin. Ant. pp. 105, 110.) It is generally identified by geographers with the Oicinarus of Lycophron, on the banks of which the Greek city of Terina was situated; but this assumption rests on no sufficient grounds. [Terina.] [E. H. B.]

SABBATA or SABBATIA. [Vada Sabatia.]

SABBATHA (Saba'tha, Ptol. vi. 7, § 38; Sabatha, Plin. vi. 28. s. 32), was the capital of the Adramitei, a Sabean tribe inhabiting the S. coast of Arabia Felix (lat. 14° N.). [Adramitei.] Its inhabitants are called Sabathaee by Festus Avienus (Inscr. Orb. Terr. v. 1136). Sabatha was seated far inland, on the coast of a navigable river (Priam's) — an inland circumstance in that region, where the surface of the land in their course is salken and seldom navigable. (Vopis. Mar. Eryth. p. 15.) It really contained sixty temples within its walls, Sabatha must have ranked second to none of the cities of Arabia. Its monopoly of the Indian trade doubtless rendered it a wealthy and important place. At no other haven on the coast were the spices, gums, and silks of India permitted to be landed; if exposed to sale elsewhere, they were confiscated, and their vendors punished with death. They were conveyed up the river to Sabatha in boats made of leather, strained over wooden frames. One gate alone — probably for the convenience of detecting fraud — of Sabatha was assigned to this branch of commerce; and after the bales had been examined, the goods were not handed over to their owners until a tithe had been deducted for a deity named Saba (Salia dominus), and also a portion for the king.
Geographers attempt to identify Sabitha with Ma- 
rianis (March), but the proofs of their identity are 
unsatisfactory; and it may even be questioned whether 
Sabitha be not an elongated form of Sabia, a 
common appellation for cities in Arabia Felix. The 
Kabārava of Strabo (xvi. p. 768) is sup-
posed by his translator Groskurd (vol. iii. p. 287) 
to be an error for Σαβιάραν, and the latter to be a 
form of Sabitha. [See MARIANA, Vol. II. p. 
274]

SAFINI (Σαβιαρίη), a people of Central Italy, 
who inhabited the rugged mountain country on the 
west of the central chain of the Apennines, from 
the sources of the Nar and Velinus to the neighbourhood 
of Rome, and from thence southwards as far as the 
Tiber and the Anio. They were bounded on the N. 
and W. by the Umbrians and Etruscans, on the NE. 
by Picenum, from which they were separated by the 
main ridge of the Apennines; on the E. by the 
Veii, the Marsi and Aequians, and on the S. by 
Latium. Their country thus formed a narrow strip, 
extending about 85 miles in length from the lofty 
group of the Apennines above Nursia, in which the 
Nar takes its rise, and thence to the junction of the 
Tiber and Anio, within a few miles of Rome. The southern limit of the Sabines 
had, however, undergone many changes; in Pliny's 
time it was fixed as above stated, the Anio being 
generally received as the boundary between them 
and Latium; hence Pliny reckons Fidenae and No-
mentum Sabine cities, though there is good ground 
for assigning them both in earlier times to the 
Latins, and Postumy again includes them both in 
Latium. Strabo, on the other hand, describes the 
Sabine territory as extending as far as Nomentum, 
by which he probably meant the conquered 
(Monti della Sabina), the latter city; while Erotum, which was only about 3 miles 
N. of Nomentum, seems to have been universally 
considered as a Sabine city. (Strab. v. p. 228; Plin. 
iii. 5. s. 9, 12. s. 17; Ptol. iii. 1. § 62.) In like 
manner Pliny includes the important city of Tibur 
among the Sabines, though it was certainly 
commonly reckoned a Latin city, and never appears in 
the early history of Rome in connection with the 
Sabines. The fact appears to be, that the frontier 
between the Sabines and Latins was in early times 
constantly fluctuating, as the Sabines on the one 
hand were pressing south from the N., and the 
other were driven back in their turn by the arms of the 
Romans and Latins. But on the division of 
Italy into regions by Augustus, the Anio was esta-
blished as the boundary of the First Region, and for 
this reason was considered by Pliny as the limit 
also between the Latins and Sabines. (Plin. l. c.) 
It is remarkable that no name for the country is 
found in ancient writers, standing in the same re-
lation to that of the people which Samnium does to 
Sammites, Latium to Latins, &c.: it is called only 
"the land of the Sabines" (Samnium ager, or Sa-
binus ager, Liv. i. 96, ii. 16, &c.; Tac. Hist. iii. 78), 
and Roman writers would say "in Sabini versari, in 
Sabitos proficisci," &c. The Greeks indeed used Σάβιρι 
for the name of the country (Strab. v. pp. 219, 
228, &c.; Steph. Byz. s. v.), which is called to 
the present day by the Roman peasantry La Sabina, 
but we do not find any corresponding form in Latin authors. 
All ancient authors agree in representing the 
Sabines as one of the most ancient races of Italy, 
and as constituting one of the elements of the Roman 
people, at the same time that they were the pro-
genitors of the far more numerous races which had 
spread themselves to the E. and S., under the names of 
Picentes, Peligni, and Samnitians, the last of whom 
had in their turn become the parents of the Frentani, 
the Lucanians, Apulians and Bruttians. The minor 
tribes of the Marsi, Marrucini and Vestini, were also 
in all probability of Sabine origin, though we have 
no distinct testimony to this effect [MARS]. These 
various races are often comprehended by modern 
writers under the general name of Sabellian, which 
is convenient as an ethnic designation; but there is 
no ancient authority for this use of the word, which 
was first introduced by Niehrlich (vol. i. p. 91). Pliny 
indeed in one passage says that the Sammites were 
also called Sabellii (Plin. iii. 12. s. 17), and this is 
confirmed by Strabo (v. p. 250). Sabellus is found 
also in Livy and other Latin writers, as an adjective 
form for Samnite, though never for the name of the 
nation (Liv. viii. 1, x. 19); but it is frequently also 
used, especially by the poets, simply as an equivalent 
for the adjective Sabine. (Verg. G. ii. 167, Aen. 
vi. 665; Hor. Carm. iii. 6. 57; Juv. iii. 169.) 

But notwithstanding the important position of the 
Sabines in regard to the early history and ethnography 
of Italy, we have very little information as to 
their own origin or affinities. Strabo calls them a 
very ancient race and autochthons (v. p. 228), 
which may be understood as meaning that there 
was no account of their immigration or origin which he 
considered worthy of credit. He distinctly rejects 
as a fiction the notion that they or their Samnite 
descendants were of Laconian origin (ib. p. 250); 
an idea which was very probably suggested only by 
fancied resemblances in their manners and institutions 
to those of Sparta (Dionys. ii. 49). But this 
notion, though not countenanced by any historian of 
authority, was taken up by the Roman poets, who 
frequently allude to the Laconian descent of the 
Sabines (Ovid. Fast. i. 260, iii. 250; Sil. Ital. 
ii. 8, viii. 142, &c.), and adopted also by some prose 
vi. 638). A much more important statement is 
that preserved to us by Dionysius on the authority of 
Zenodotus of Trence, which represents the Sabines 
as an offshoot of the Umbrian race (Dionys. ii. 49). 
The authority of Zenodotus is indeed in itself not 
worth much, and his statement as reported to 
is somewhat confused; but many authorities would 
lead us to the same conclusion, that the Sabines and 
Umbrians were closely cognate races, and branches 
of the same original stock. We learn from the 
Euboean tables that Saneus, the tutelary divinity of 
the Sabine nation, was an object of especial worship 
with the Umbrians also; the same documents prove 
that various other points of the Sabine religion, 
which are spoken of as peculiar to that nation, 
were in fact common to the Umbrians also (Kienez, 
PhiloL Abhandl. p. 80). Unfortunately the Sabine 
language, which would have thrown much light upon 
the subject, is totally lost; not a single inscription 
has been preserved to us; but even the few words 
recorded by ancient writers, though many of them, 
as would naturally be the case in such a selection, 
words peculiar to the Sabines, yet are abundantly 
sufficient to show that there could be no essential 
difference between the language of the Sabines and 
their neighbours, the Umbrians on the one side, and 
the Ostans on the other (Kienez, l. c.; Donaldson, 
Varro vonnaeus. p. 8). The general similarity between 
their dialect and that of the Oscon was probably the 
cause that they adopted with facility in the more 
subdued regions of Italy, which they had conquered,
the language of their Oscan subjects; indeed all the extant inscriptions in that language may be considered as Sabellian-Oscan, and have probably received some influence from the language of the conquerors, though we have no means of estimating its amount. The original Sabines appear to have early lost the use of their own language, and adopted the general use of Latin; which, considering the rugged and secluded character of their country, and their primitive habits of life, could hardly have been the case, had the two languages been radically distinct.

On the whole, therefore, we may fairly conclude that the Sabines were only a branch of the same great family with the Oscans, Latins, and Umbrians, but apparently most closely related to the last of these. Their name is generally derived from that of Sabas, who is represented as a son of Sancus, the chief tutelary divinity of the nation. (Cato, ap. Dionys. ii. 49; Sall. Iul. viii. 422; Serv. ad Aen. viii. 638.) But another etymology given by ancient writers derives it from their religious habits and devotion to the worship of the gods. (Varr. ap. Fest. p. 343; Plin. iii. 12. s. 17.) This last derivation in fact comes to much the same thing with the preceding one, for the name of Sabas (obviously a mythological personage) is itself connected with the Greek σάβαν, and with the word "sacrum" found in the Eugenian tables in the sense of venerable or holy. Indeed it is with the Latin "sanctus," "sanctae," &c. (Doddridge, &c.)

The original abode of the Sabines was, according to Cato, in the upper valley of the Aternum, about Amiurum, at the foot of the loftiest group of the Apennines. We cannot indeed understand literally, at least as applying to the whole nation, his assertion (as quoted by Dionysaus) that they proceeded from a village called Testrini, near Amiurum (Cato, ap. Dionys. i. 14, ii. 49); though this may have been true of the particular band or clan which invaded and occupied Eate. But there is no reason to doubt the general fact that the Sabines, at the earliest period when their name appears in history, occupied the lofty mountain group in question with its adjacent valleys, which, from the peculiar configuration of this part of the Apennines, would afford natural and convenient outlets to their migrations in all directions. [APENNINES.] The sending forth of these migrations, or national colonies, as they may be called, was connected with an ancient custom which, though not unknown to the other nations of Italy, seems to have been more peculiarly characteristic of the Sabines—the Ver Sacrum or "sacred spring." This consisted of dedicating, by a solemn vow, usually in time of pressure from war or taxation, all the produce of the ensuing year, to some deity; Manna or Mars seems to have been the one commonly selected. The cattle born in that year were accordingly sacrificed to the divinity chosen, while the children were allowed to grow up to man's estate, and were then sent forth in a holy to find for themselves new places of abode beyond the limits of their native country. (Strab. v. p. 230; Fest. s. v. Mamurton, p. 158; Suetonii, p. 321, Ver Sacrum, p. 379; Seston, ap. Nor. p. 522; Varr. R. R. iii. 16. § 29; Liv. xxv. 9. 10.) Such colonies were related by tradition to have given origin to the nations of the Picires, the Samnites, and the Hirpini, and in accordance with the notion of their consecration to Mars they were reported to have been guided by a woodpecker or a wolf, the animals peculiarly connected with that deity. (Strab. v. pp. 240, 250; Fest. pp. 106, 212.) We have no statements of the period at which these successive emigrations towards the E. and S. took place; all that we know is that the early history in which to which they gave rise will be found in the respective articles, and we shall here content ourselves with tracing that of the Sabines themselves, or the people to whom that appellation continued to be confined by the Romans.

These, when they first emerged from their upland valleys into the neighbourhood of Reate, found that city, as well as the surrounding territory, in the possession of a people whom Dionysaus calls Aborigines, and who, finding themselves unable to withstand the pressure of the Sabines, withdrew, after the capture of their capital city of Latina, towards the lower valley of the Tiber, where they settled themselves in Latium, and finally became one of the constituent elements of the Latin people. (Cato, ap. Dionys. i. 14, ii. 48. 49.) [ABORIGINES; LATUM.] Meanwhile the sabines, after they had firmly established themselves in the possession of Reate and its neighbourhood, gradually pressed on towards the S. and W., and occupied the whole of the hilly and rugged country which extends from Reate to the plain of the Tiber, and from the neighbourhood of Orvietum to that of Tiber (Tivoli). (Dionys. ii. 49.) The conquest and-when the formation of this extensive tract was probably the work of a long time, but at the first dawn of history we find the Sabines already established on the left bank of the Tiber down to within a few miles of its confluence with the Anio; and at a period little subsequent to the foundation of Rome, they pressed on their advanced posts still further, and established themselves on the Quirinal hill, at the very gates of the rising city. The history of the Sabines under Titus Tatius, of the wars of that king with Romulus, and of the settlement of the Sabines at Rome upon equal terms with the Latin inhabitants, so that the two became gradually blended into one people, has been so mixed up with fables and distorted by poetical and mythological legends, that we may well despair of recovering the truth, or extracting the real history from the maze of various and discordant traditions; but it does not the less represent a real series of events. It is an unquestionable historical fact that a large part of the population of the city was of Sabine origin, and the settlement of that people on the Quirinal is attested by numerous local traditions, which there is certainly no reason to doubt. (Schwegler, Rom. Gesch. vol. i. pp. 243, 478, &c.)

We cannot attempt here to discuss the various theories that have been suggested with a view to explain the real nature of the Sabine invasion, and the origin of the legends connected with them. One of the most plausible of these is that which supposes Rome to have been really conquered by the Sabines, and that it was only by a subsequent struggle that the Latin settlers on the Palatine attained an equality of rights. (Ilene, Researches into the History of the Roman Constitution, p. 44, &c.; Schwegler, vol. i. pp. 491—493.) It cannot be denied that this view has much to recommend it, and explains the many obscure events in the early history, but it can be scarcely regarded as based on such an amount of evidence as would entitle it to be received as a historical fact.

The Sabine influence struck deep into the character of the Roman people; but its effect was especially prominent in its bearing on their sacred
rites, and on their sacretotal as well as religious institutions. This is in entire accordance with the character given of the Sabines by Varro and Pliny; and it is no wonder therefore that the traditions of the Romans generally ascribed to Numa, the first king, the whole, or far the greater part, of the religious institutions of their country, in the same manner as they did the military and political ones to his predecessor Romulus. Numa, indeed, became to a great extent the representative, or rather the impersonation of the Sabine element of the Roman people; at the same time that he was so generally regarded as the founder of all religious rites and institutions, that it became customary to ascribe to him even those which were certainly not of Sabine origin, but belonged to the Latins or were derived from Alba. (Ambrosch, Studien, pp. 141—148; Schweger, R. G. vol. i. pp. 543, 554.) Throughout these earliest traditions concerning the relations of the Sabines with Rome, Cures is the city that appears to have taken the most prominent part. Tatius himself was king of Cures (Dionys. ii. 36); and it was thither also that the patricians sent, after the interregnum, to seek out the wise and pacific Numa. (Liv. i. 18; Dionys. ii. 58.) A still more striking proof of the connection of the Roman Sabines with Cures was found in the name of Quirites, which came to be eventually applied to the whole Roman people, and which was commonly considered as immediately derived from that of Cures. (Liv. i. 13; Varr. L. L. vi. 68; Dionys. ii. 46; Strab. v. p. 228.) But this etymology is, to say the least, extremely doubtful; it is far more probable that the name of Quirites was derived from "quris," a spear, and meant merely "spearmen" or "warriors," just as Quirins was the "spear-god," or god of war, closely connected, though not identical with, Manners or Mars. It is certain also that this superiority of Cures, if it ever really existed, ceased at a very early period. No subsequent allusion to it is found in Roman history, and the city itself was in historical times a very inconsiderable place. [CURES.] The close union thus established between the Romans and the Sabines who had settled themselves on the Quirinal did not secure the rising city from hostilities with the rest of the nation. Already in the reign of Tullius Hostilius, the successor of Numa, we find that monarch engaged in hostilities with the Sabines, whose territory he invaded. The decisive battle is said to have taken place at a forest called Silva Malitiosa, the site of which is unknown. (Liv. i. 30; Dionys. iii. 32, 33.) During the reign of Ancus Marcius, who is represented as himself of Sabine descent (he was a grandson of Numa), no hostilities with the Sabines occur; but his successor Tarquinius Priscus was engaged in a war with that people which appears to have been of a formidable description. The Sabines, according to Livy, began hostilities by crossing the Anio; and after their final defeat we are told that they were deprived of Colatia and the adjoining territory. (Liv. i. 36—38; Dionys. iii. 55—66.) Cicero also speaks of Tarquinius Priscus as repulsing the Sabines from the very walls of the city. (Cic. de leg. i. 70.) We therefore have no doubt that they had at this time extended their power to the right bank of the Anio, and made themselves masters of a considerable part of the territory which had previously belonged to the Latins. From this time no further mention of them occurs in the history of Rome till after the expulsion of the kings; but in n. c. 504, after the repulse of Porsenna, a Sabine war again broke out, and from this time that people appears almost as frequently among the enemies of Rome, as the Veientes or the Volscians. But the renewal of hostilities was marked by an incident which exercised a permanent effect on Roman history. The whole of one clan of the Sabines, headed by a leader named Atta Caianus, dissenting from the policy of their countrymen, migrated in a body to Rome, where they were welcomed as citizens, and gave rise to the powerful family and tribe of the Claudii. (Liv. ii. 16; Dionys. v. 40; Varr. Aen. vii. 708; Tac. Ann. xi. 24; Appian, Rom. i. Fr. 11.) It is unnecessary to recapitulate in detail the accounts of the petty wars with the Sabines in the early ages of the Republic, which present few features of historical interest. They are of much the same general character as those with the Veientes and the Volscians, but for some reason or other seem to have been a much less favourable subject for popular legend and national vanity, and therefore afford few of those striking incidents and romantic episodes with which the others have been adorned. Livy indeed disposes of them for the most part in a very summary manner; but they are related in considerable detail by Dionysius. One thing, however, is evident, that neither the power nor the spirit of the Sabines had been broken; as they are represented in n. c. 459, as carrying their ranks to the very gates of Rome; and even in n. c. 449, when the decisive victory of M. Horatius was followed by the capture of the Sabine camp, we are told that it was found full of booty, obtained by the plunder of the Roman territories. (Liv. ii. 16, 18, &c., iii. 26, 30, 38, 61—63; Dionys. v. 37—47, vi. 31, &c.) On this, as on several other occasions, Eretum appears as the frontier town of the Sabines, where they established their head-quarters, and from whence they made incursions into the Roman territory.

There is nothing in the accounts transmitted to us of this victory of M. Horatius over the Sabines to distinguish it from numerous other instances of similar successes, but it seems to have been of really importance; at least it was followed by the remarkable result that the wars with the Sabines, which for more than fifty years had been of such perpetual recurrence, ceased altogether from this time, and for more than a century and a half the name of the Sabines is scarcely mentioned in history. The circumstance is the more remarkable, because during a great part of this interval the Romans were engaged in a fierce contest with the Samnites, the descendants of the Sabines, but who do not appear to have maintained any kind of political relation with their progenitors. Of the terms of the peace which subsisted between the Sabines and Romans during this period we have no account. Niebuhr's conjecture that they enjoyed the rights of soverignty with the Romans (vol. ii. p. 447) is certainly without foundation; and they appear to have maintained a position of simple neutrality. We are equally at a loss to understand what should have induced them at length suddenly to depart from this policy, but in the year n. c. 290 we find the Sabines once more in arms against Rome. They were, however, easily vanquished. The consul M. Curius Dentatus, who had already put an end to the Third Samnite War, next turned his arms against the Sabines, and reduced them to submission in the course of a single campaign. (Liv. Epit. xi.; Vict. Tit. iii. 33; Oros. iii. 22; Flor. i. 15.) They were severely punished for their defection; great numbers of pri-
The last occasion on which the name of the Sabines as a people is found in history is during the Second Punic War, when they came forward in a body to furnish volunteers to the army of Scipio (Livy, iv. 45.) After their incorporation with the Roman state, we scarcely meet with any separate notice of them, though they continued to be regarded as among the bravest and hardiest of the subjects of Rome. Hence Cicero calls them " flores Italicae ac robur rei publicae." (Pro Ligur. 11.)

Under the Empire their name did not even continue to be used as a territorial designation. Their territory was included in the Fourth Region by Augustus. (Plin. iii. 12. s. 17.) It was subsequently reckoned a part of the province of Valeria, and is included with the rest of that province under the appellation of Praeneste in the Liber Coloniarum. (Lib. Col. pp. 273. 257. a.v. P. Dier. Hist. Long. ii. 20; Mommsen, ad Lib. Cot. p. 212.) But though the name of the Sabines thus disappeared from official usage, it still continued in current popular use. Indeed it was not likely that a people so attached to ancient usages, and so primitive in their habits, would readily lose or abandon their old appellation. Hence it is almost the only instance in which the ancient name of a district or region of Italy has been transmitted without alteration to the present day; the province of La Sabina is a part of the two provinces to which the States of the Church are divided, and is comprised within very nearly the same limits as it was in the days of Strabo. (Rampoldi, Diz. Corog. d'Italia, s. v.)

The country of the Sabines was, as already mentioned, for the most part of a rugged and mountainous character; even at the present day it is calculated that above two-thirds of it are incapable of any kind of cultivation. But the valleys are fertile, and even luxuriant; and the sides of the hills, and lower slopes of the mountains, are well adapted for the growth both of vines and olives. The northernmost tract of their territory, including the upper valleys of the Nera and Velinus, especially the neighbourhood of Nursia, was indeed a cold and bleak highland country, shut in on all sides by some of the highest ranges of the Apennines; and the whole broad tract which extends from the group of the Monte Velino, S.E. of Reate, to the front of the mountain ranges that border the Campagna of Rome, is little more than a mass of broken and rugged mountains, of inferior elevation to the more central ranges of the Apennines, but still far from incomparable. The Monte Grano (the Mons Lucretii of Horace), which rises directly from the plain of the Campagna, attains to an elevation of 4285 English feet above the sea. But the isolated mountain called Monte Terminillo near Lemessa, N.E. of Rieti, which forms a conspicuous object in the view from Rome, rises to a height of above 7000 feet, while the Monte Vettore, S.E. of Rieti, on the confines of the Sabines and the Vestini, is not less than 8180 feet in height. The whole of the ridge, also which separates the Sabines from Ficium is one of the most elevated of the Apennines. The Monti della Sibilla, in which the Nestor takes its rise, attain the height of 7200 feet, while the Monte Vettore and Pizzo di Soro, which form the continuation of the same chain towards the Gran Sasso, rise to a still greater elevation. There can be no doubt that these lofty and rugged groups of mountains are those designated by the ancients as the Mons Fiscellus, Tetrica (= Tetrica horrentes repes," Virg. Aen. vii. 713), and Sextilis; but we are unable to identify with any certainty the particular mountains to which these names were applied. The more westerly part of the Sabine territory slopes gradually from the lofty ranges of these central Apennines towards the valley of the Tiber, and though always hilly is still a fertile and productive country, similar to the part of Umbria, which it adjoins. The lower valley of the Velinus about Reate was also celebrated for its fertility, and even at the present day is deservedly reckoned one of the most beautiful districts in Italy.

The physical character of the land of the Sabines evidently exercised a strong influence upon the character and manners of the people. Highlanders and mountaineers are seen to be more brave, hardy, and frugal, and the Sabines seem to have possessed all these qualities in so high a degree that they became, as it were, the types of them among the Romans. Cicero calls them " severissimi homines Sabini," and Livy speaks of the "disciplina tetrica ac acristis veterum Sabinarum." (Cic. in Latin. 15, pro Ligur. 11; Liv. i. 18.) Cato also described the severe and frugal mode of life of the early Romans as inherited from the Sabines (op. Serv. ad Aen. viii. 638). Their frugal manners and moral purity continued indeed, even under the Roman government, to be an adjective of the nation, and are often introduced by the poets of the Empire as a contrast to the luxuries and dissoluteness of the capital. (Hor. Carm. iii. 6. 38. — 44. Epod. 2. 41, Epist. ii. 1. 25; Propert. iii. 24. 47; Juv. iii. 169.) With these qualities were combined, as is not unfrequently found among secluded mountaineers, an earnest piety and strong religious feeling, together with a strenuous attachment to the religious usages and forms of worship which had been transmitted to them by their ancestors. The religion of the Sabines does not appear to have differed essentially from that of the other neighbouring nations of Italy; but they had several peculiar divinities, or at least divinities unknown to the Latins or Etruscans, though some of them seem to have been common to the Umbrians also. At the head of these stood Salus, called also Semo Sancus, who was the tutelary divinity of the nation, and the reputed father of their mythical progenitor, or eponymous hero Sabus. He was considered as the peculiar guardian of oaths, and was thence generally identified by the Romans with Dus Fidius; while others, for less obvious reasons, identified him with
The Sabini, as we are told, dwelt principally in villages, and even their towns in the earliest times were unwalled. (Strab. v. 228; Dionys. ii. 49.) This is one of the points in which they were thought to resemble the Lacedaemonians (Plut. Rom. 16); though it probably arose merely from their simplicity of manners, and their retaining unchanged the habits of primitive mountaineers. In accordance with this statement we find very few towns mentioned in their territory; and even of these Reate appears to have been the only one that was ever a place of much importance. Interroclea, about 14 miles higher up the valley of the Velinus (the name of which is still preserved in Antarroco), seems never to have been a municipal town; and it is probable that the whole upper valley of the Velinus was, municipally speaking, included in the territory of Reate, as we know was the case with the lower valley also, down to the falls of the river, which formed the limit of the territory of the Sabines on this side; Interamna, as well as Narnia and Orciubum, being included in Umbria. Falacrum, the birthplace of Vespasian, situated near the sources of the Velinus, was certainly a mere village; as was also Forum Tavulurnum, situated in the cross valley which led from Interroco to Anterumnus, and formed the line of the road between the valley of the Velinus and that of the Aternus. Amihernum itself, though situated in the valley of the Aternus, so that it would seem to have more naturally belonged to the Vestini, was certainly a Sabine city (Plin. iii. 12. s. 17; Strab. v. p. 228), and was probably, next to Reate, the most considerable that they possessed. Nursia, in the upper valley of the Nar, was the chief town of the surrounding district, but was never a place of much importance. The lower country of the Sabines, between Reate and Rome, seems to have contained several small towns, which were of municipal rank, though said by Strabo to be little more than villages. Among these were Forum Novum, the site of which may be fixed at Vescorío, on the banks of the Iume, and Forum Decli, the situation of which is wholly unknown. Both these were, as the names show, Roman towns, and not ancient Sabine cities; the former appears to have replaced the Sabine Casperia, which was probably situated at Aspra, in the same neighbourhood. On the other hand Cures, the supposed metropolis of the Sabines that had settled at Rome, was only a small town, which was of municipal rank, though not a place of much importance. The same was the case with Erutum, which was, as already observed, the last of the strictly Sabine towns in proceeding towards Rome; though Pliny includes Nomentum and Fidenae also among the Sabines. Besides these there were two towns of the name of Trebula, both of which must probably be placed in the southern part of the land of the Sabines. Of these Trebula Mutusca (the Mutusae of Virgil, Aen. vii. 711) is represented by Monte Leone, about 13 miles S. of Rieti, and on the right of the Salaria Way; while Trebula Sefernae may perhaps be placed at S. Antonio near Strumone, in the hills W. of Rieti. Lastly, Verna, in the valley of the Anio, 4 miles above Tibur, still called Vcunaro, would appear to have been certainly a Sabine town; the whole valley of the Digesta (Liceo), with its villages of Mandula, Digesta, and Farnum Vacuane (the well-known neighbourhood of Horace's Sabine farm), being included among its dependencies. [Digesta.] The territory of the Sabines was traversed throughout its whole extent by the Salarian Way, which was from an early period one of the great highways of Italy. This proceeded from Rome to
direct to Reate, and thence ascended the valley of the Velinus by Intercrea and Falarchium, from whence it crossed the ridge of the Apennines into the valley of the Truentus in Piacenum, and thus descended, to Asculum and the Adriatic. The stations between Rome and Reate were Eretum, which may be fixed at Grotta Marozza, and Vicus Novus, the site of which is marked by the Osteria Nova, or Osteria dei Massaccio, 32 miles from Rome. (Westphal, Rom, Komp. p. 128.) [VIA SABINENS.

Notwithstanding its mountainous character the Sabine territory was far from being poor. Its productions consisted chiefly of oil and wine, which, though not of first-rate quality, were abundant, and supplied a great part of the quantity used by the lower classes at Rome. (Hor. Carm. i. 9, 7, 20. i. Juv. iii. 85.) The Sabine hills produced also in abundance the plant which was thence known as Sabina herba (still called Saurin), which was used by the natives for incense, before the more costly frankincense was introduced from the East. (Plin. xvi. 20 s. 33, xxiv. 11. s. 61; Virg. Col. 402; Ovid. Fast. i. 342.) The neighbourhood of Reate was also famous for its breds of mules and horses; and the mountains afforded excellent pasturage for sheep. The wilder and more inaccessible summits of the Apennines were said still to be frequented by wild goats, an animal long since extinct throughout the continent of Italy. (Var. R. B. ii. 1, § 5, 3. § 3.)

SABIS (Σαβίσ), a small river of Carmainia, which is mentioned by Mela in connection with two other small streams, the Andanis and Coros (iii. 8). It is also noticed by Piny, who places it in the neighbourhood of Harmuna (Ornay, v. 23. s. 27). Ptolemy speaks of a town in Carmainia of the same name with this river (vi. 8. § 14). [V.]

SABINUS (Σαβίνος), a river of Belgica, which joins the Mea (Μῆα) at Chartorol. Caesar (i. c. 57) marched against the Nervii and their confederates from the south, and he found the enemy posted on the north side of the Sabis (B. G. ii. 16). In this battle the Belgae were defeated with great slaughter. [Nervii.]

SABLONES, in Gallia Belgica, is placed by the Antonine Itin. on a road from Colonia Trajana (Kells) to Julianum (Julieres) and Colonia Agrrippinae (Cologne). Sablones is supposed to be a place named Int-Sandt near Ströten, a town on the river Nipa, a branch of the Meuse. But see Mediolani in Gallia, No. 3. [G. L.]

SÀBOOT (Σαβίου, al. Σαβίου, Plut. iii. 5. § 20), a people of European Sarmatia, who from the termination "-boc," "-bank," so often occurring in Russian and Polish local names, must be looked for in the basin of the river Soi, one of the largest affluents of the Vistula, and which drains a greater part of Galicia. (Schafarik, Slav. Ant. vol. i. p. 296.)

SABORA, a place in Hispania Baetica, in the mountains above Malaga, near Canes, known only from inscriptions. (Carter, Travels, p. 252; Ubert, vol. ii. pt. i. p. 360.) [T. H. D.]

SABOTAE, a people who dwelt according to Curtius, in the southern part of the Pangith, in the neighbourhood of the Insula Pattalene (ix. 8. § 4). They are mentioned in connection with the Prusti as forming part of the realm of Musceans. (Arrian, Anat. v. 15; Dipl. xvi. 102.) [V.]

SABRATA (Σαβράτα, Plut. iv. 3. § 41; Plin. v. 4. s. 3; Solin. 37; Itin. Anton.; Pent. Tab.; Sabrâbê, Procop. de Aed. vi. 4; Sabrâbê, Stadiants, §§ 99, 100), a Phoenician town (Sil. Ital. iii. 256) on the coast of N. Africa between the Syrtis. The name, which is Phoenician and occurs on coins (Mowers, Die Phöniz. vol. ii. p. 491), received the Græcised form ABRISTONUM; for although Pliny (l. c.) distinguishes the two towns they are undoubtedly the same places. It became afterwards a Roman colony, and was the birthplace of Flavia Domitilla, the first wife of Vespasian, and mother of Titus and Domitian. (Sueton. Vesp. 3.) Justinian fortified it (Procop. l. c.), and it remained during the middle ages one of the most frequented markets upon this coast, to which the natives of central Africa brought their grain; (comp. Ibn Abd al-Hakem, Jornalique, 1844, vol. ii. p. 535.) Barth (Wanderungen, p. 277) has given an account of the extensive ruins of Sabrata, which he found to the W. of Tripoli, at Tripoli Vecchio, or Soarda-esch-Sokhurka, lat. 32° 49', long. 12° 26'. (Smyth, Mediterraneum, p. 456.)

SABRINA (called by Ptolemy Sabrâna, ii. 3. § 3; probably also the Syrva of the Geog. R. v. 31), a river on the W. coast of Britanni Remana, which falls into the sea near the jetola. Its mouth formed an estuary of the same name. (Comp. Tac. Ann. xiii. 31.) [T. H. D.]

SABUS, a fortified place in Armenia Minor, at the foot of Antitaurus. (It. Ant. p. 209; Not. Imp. c. 27.) In the Peuting. Table it is called Saba. [L. S.]

SACAE. [Scythia.]

SACALA (τὰ Σακάλα), a desert spot on the seashore of Gedrosia which was visited by the fleet of Nearchus (Arrian, Ind. c. 22). It is not satisfactorily identified with any modern place. (Vincent, Voyage of Nearchus, i. p. 202.) [V.]

SACÂNAI. [Sarmatia.]

SACAPÈNE. [Sasagene.]

SACASÈNE. [Σακασατσεν.] SACASÈNE. [Σακασσατς], Strab. ii. p. 73. xi. pp. 509, 511, 529: (Th. Sasassani, Plin. vi. 11), a province of Armenia, on the borders of Gugarene, which it separated from the valley of the Araxes, and which extended to the river Cyrus. St. Martin (M. s.m. Armenia, vol. i. pp. 143, 209, 210) identifies it with the Armenian province of Sourî, which was governed up to the 12th century by a race of princes who traced their descent to Haig, first king of Armenia, and who in the 9th century had political relations with the Byzantine court. (Cost. Porph. de Caecern. Aut, Byz. vol. iii. p. 397.) The SAKAPÈNE of Ptolemy (v. 13. § 9) appears to be the same as this province. [E. B. j.]

SACASTÈNE. [Σακαστσατσ], a district of the interior of Drangana, which was occupied by the Sacs or Scythians, who appear to have descended through the Punjob, and to have settled there. (Isisb, Man. Parth. c. 18.) According to Isidore, it bore also the name of Parthacene. It has been supposed that the modern name of this country, Scassata or Stisnian, is derived from Sacasta (Walb, Vorder u. Mittel-Asien, p. 569; comp. Bitter, viii. p. 120). Four towns, Baida, Min, Palaceni, and Sigal, are mentioned in it: of these, Min may
be compared with Min-nagah, a town on the Indus belonging to the same people. (Arrian, Peripl. Mar. Erdg. § 38.) [MINNAGARA.] [V.]

SACCASENA, a place in Capadocia, probably in the neighbourhood of the modern Urgub or Urup. (It. Ant. p. 296.) [L. S.]

SACCOPODES (Σακκοπόδες), according to Strabo, a name given to the people of Adiabene in Assyria (xvi. p. 745). There has been a great dispute among learned men as to this name, which does not appear to be a genuine one. Bochart has suggested Sancopodes (Σακκόποδες). On the whole, however, it would seem that the emendation of this name is the best, who write Σακκοπόδες. (Grockard, ad Strab. vol. iii. p. 225.) [V.]

SACER MONS (σάρημπορσ) was the name given to a hill about 3 miles from Rome, across the Anio and on the right of the Via Nomentana. It is mentioned only on occasion of the two secessions of the plebeians from Rome: the first of which, in n. c. 494, was terminated by the dexterity of Menenius Agrippa, and gave occasion to the election of the first tribunes of the people. (Liv. ii. 32; Dionys. vi. 45; Appian, B. C. i. 1.) In memory of this treaty and the "Lex Sacra" which was passed there, a confit on it, an altar was erected on the spot, which thenceforth always bore the name of "the Sacred Mount." (Dionys. vi. 90; Appian, L. C.) The second occasion was during the Decemvirate; when the plebeians, who had at first seceded only to the Aventine, on finding that this produced no effect, withdrew to the Sacred Mount (Liv. iii. 52). Cicero, on the contrary, represents the secession on this occasion as taking place first to the Sacred Mount, and then to the Aventine (Cic. de R. P. ii. 37). Hardly any spot in the neighbourhood of Rome, not marked by any existing ruins, so clearly identified by the descriptions of ancient writers as the Sacer Mons. Both Livy and Cicero concur in placing it 3 miles from Rome, across the Anio; and the former expressly tells us that the plebeians, on the second occasion, proceeded thither by the Via Nomentana, which was then called Ficanalesis (Liv. ii. 32, ii. 52; Cic. Brut. 14, pro Cornel. ap. Ascon. p. 76). Now the third mile along the Via Nomentana brings us to a point just across the Anio; and on the right of the road at this point is a hill overlooking the river, in some degree isolated from the Platæa beyond, with which it is, however, closely connected, while its front towards the valley of the Anio is steep and almost precipitous.

On its E. side flows a small stream, descending from the Casale dei Pazzi (apparently the one known in ancient times as the Rius Ulmanus): so that the position is one of considerable strength, especially on the side towards Rome. The site is now uninhabited, and designated by no peculiar appellation. (Nibby, Dintorni di Roma, vol. iii. pp. 54, 55.) [E. H. B.]

SACHALITAE (Σαχαλίται). a people upon the S. coast of Arabia Felix (Pol. vi. 7. §§ 11, 24, 25); and upon the bay called after them SACHALITES (Σαχαλίτες κόπας). Respecting the position of this bay there was a difference of opinion among the ancient geographers, Marinus placing it towards the west, and Ptolemy towards the east, of the promontory Syagrus (Ras Fortak). (Ptol. i. 17. § 2; comp. vi. 7. §§ 11, 46.) Marcianus (p. 23) agrees with Ptolemy; and says that the bay extended from this promontory to the month of the Persian gulf (comp. Steph. B. s. v. Σαχαλίτες κόπας). Arrian (Peripl. Mar. Erdg. p. 17. § 29) on the other hand agrees with Marinus, and places the bay between Canes and the promontory Syagrus. (See C. Miller, ad Arrian, l. c.)

SACIILI or SACILI MARTIALIUM (Plin. iii. i. 3; called by Ptolemy Σακιλιά, ii. 4. § 11), a town of the Turduli in Hispam Baetica, at a place near Perahad, now called Alcoracum. (Morales, Antig. p. 96; Florez, Esp. Sojor. p. 147.) [T. H. D.]

SACORA (Σάκορα), a town in the interior of Paphionagonia, is mentioned only by Ptolemy (v. 4. § 6). [L. S.]

SACRANIA, the name given by a tradition, probably of very ancient date, to a conquering people or tribe which invaded Latium at a period long before the historical age. Festus represents them as proceeding from Reate, and expelling the Saculi from the Septimontium, where Rome afterwards stood. He tells us that their name was derived from their being the off-spring of a "ver sacrum." (Fest. s. v. Sacrani, p. 921.) It hence appears probable that the Sacraoi of Jason were identical in language with the people called Aborigines by Dionysius (i. 16) [ABORIGINES], or were at least one clan or tribe of that people. But it is very doubtful whether the name was ever really used as a national appellation. Virgil indeed alludes to the Sacraoi as among the inhabitants of Latium in the days of Aeneas (Sacraeae aeris, Aen. vii. 796), but apparently as a small and obscure tribe. Servius in his commentary on the passage gives different explanations of the name, all varying from one another, and from that given by Festus, which is the most distinct statement we have upon the subject. In another passage (ad Aen. xi. 317) Servius distinguishes the Sacraoi from the Aborigines, but little value can be attached to his statements on such subjects. [E. H. B.]

SACRARIUM [Σακραριον].

SACRIPORTUS (δι Ιερος λαών, Appian, B. C. i. 87), a place in Latium, between Signia and Praeneste, celebrated as the scene of the decisive battle between Sulla and the younger Marins, in which the latter was totally defeated, and compelled to take refuge within the walls of Praeneste, B. C. i. 82. (Livy. Epit. lxxvii.; Appian, B. C. i. 87; Vell. Pat. ii. 26. 28; Flor. iii. 21. § 23; Vitr. V. II. 68. 75; Lukan. ii. 134.) The scene of the battle is universally described as "apud Sacripientem," but with no more precise distinction of the locality. The name of Sacripientus does not occur upon any other occasion, and we do not know what was the meaning of the name, whether it was a village or small town, or merely a spot so designated. But its locality may be approximately fixed by the accounts of the battle: this is described by Appian as taking place near Praeneste, and by Pintarch (Soll. 28) as near Signia.

We learn moreover from Appian that Sulla, having besieged and taken Setia, the younger Marins, who had in vain endeavoured to relieve it, retreated step by step before him until he arrived in the neighbourhood of Praeneste, when he halted at Sacripientus, and gave battle to his pursuers. It is therefore evident that it must have been situated in the plain below Praeneste, between that city and Signia, and probably not far from the opening between the Alban hills and the Sabine mountains, through which must have lain the line of retreat of Marins.
but it is impossible to fix the site with more precision.

[SACRUM PR. 1. (<(v) epov oiparipop, Strab. iii. p. 157), the SW. extremity of Lucania; according to Strabo (i. c.), the most W. point, not only of Europe, but of the known world; the present Cape St. Vincent. Strabo adds that the surrounding district was called in Latin "Canusae." Strabo also says that the geographer Artemidorus, who had been there, compared the promontory with the bow of a ship, and said that there were three small islands there; which, however, are not mentioned by any other writer, nor do they now exist. (Cf. Mela, ii. 1; Plin. iv. 22. s. 35. &c.)

2. (<(v) epov oiparirpo, Ptol. ii. 2. § 6) the SE. point of Hibernia, now Carnsore Point. [T. H. B.]

SACRUM PR. (<(v) epov oiparipor, Ptol. iii. 5. § 8), the western point of the ACHILLES BAY.

SACRUM PR., a promontory of Lycia upon the borders of Pamphylia, opposite the Chelidonea Insulae, whence the promontory is called by Livy Chelidonium Promontor. [For details, see Vol. i. p. 606. b.]

SADACORO (Sa&haron;pa), a town of Cappadocia, situated on the great road from Coropassus and Garsabara to Mazaca. (Strab. xiv. p. 663.) [L. S.]

SADAME (Itin. Ant. p. 230; in Geog. Rav. 4. 6, written Sannamina), a town in the NE. part of Thrace, on the road from Hadrianopolis to Develiss, its distance from the latter, according to the Itinerary, being 13,000 paces. This would give us its site the present town of Karnarch, situated near the source of a small river which runs through a narrow valley and falls into the Black Sea at Cape Zaitam. But according to Reischard it was in the neighbourhood of Omor-Falbi, which is perhaps the Sarchen of Vougaourt.

[S. J.]

SADO (Sa&daron;), a small river of the Aures Cevennes, which fell into the Bay of Bengal (Ptol. vii. 2. § 3). It has been supposed by Forbiger to be the same as the present Sondowey. Ptolomy mentions also in the same locality a town called Sada, which was, in all probability, on or near the river.

[S. V.]

SAPPINUM or SEPPINUM (the name is variously written both in MSS. and even inscriptions, but Saepinum is probably the most correct form: Sae- piror, Ptol.: Eth. Saeipina: Altia near Sepino), a city of Samnium, in the country of the Pentri, on the E. slope of the great group of the Monte Matese, and near the sources of the Tamaro (Tamarus). It seems to have been in early times one of the chief towns of the Samnites, or rather one of the few which they possessed of the name. From its position in the heart of their country it was or is, at any rate, an important town.

[S. V.]

SAETABIS, SAETABICULA (Sæta&bricia, Ptol. ii. 6. s. 62, a town of the Cenobiti in Hispania Tarraconensis, probably the present Alcoi in Valenciana. (Labore, Itin. i. p. 266.)

[S. T.]

SAETABIS, SETABIS, or SAETAE (Sæta&bria, Strab. iii. p. 160), a town of the Cenobiti in Hispania Tarraconensis. It was a Roman municipium in the jurisdiction of Cartaghe (Murat. Inscr. ii. p. 1183. 6), and had the surname of Augustarum. (Ptol, iii. 3. s. 4.) It lay upon an eminence (Sil. Ital. iii. 372) to the S. of the Suro, and was famed for its flax and linen manufacture. (Plin. x. 2. s. 1; Catull. xii. 14, &c.) Now Natbira. (Cf. Loboide, Itin. i. p. 266; Marca, Hisp. ii. p. 116.)

[S. T.]

SAETABIS (Sæta&bria, Ptol. ii. 6. § 14), a river S. of the Sacro in the territory of the Cenobiti, on the E. coast of Hispania Tarraconensis. Most probably the Alcor. (Heber, vol. i. p. 294.)

[S. T.]

SAETAE. [Sætæ.]
SAGALLUS

SAGALLUS (Σαγαλλος: Eth. Σαγαλλαις or Σαγαλλαιην), an important town and fortress near the north-western frontier of Pisidia, or, as Strabo (xii. p. 569) less correctly states, of Isauria, while Polyenius (v. 3. § 6) erroneously mentions it among the towns of Lydia. (Comp. Steph. B. s. v.) Alexander the Great took the town by assault, having previously defeated its brave Pisidian inhabitants, who met the aggressor drawn up on a hill outside their town. (Arrian, Anab. i. 28.) Livy (xxvii. 15), in his account of the expedition of Cn. Manlius, describes Sagallus as situated in a fertile plain, abounding in every species of produce; he likewise characterises its inhabitants as the bravest of the Pisidians, and the town itself as most strongly fortified. Manlius did not take it, but by ravaging its territory compelled the Sagallians to come to terms, to pay a contribution of 50 talents, 20,000 medimni of wheat, and the same quantity of barley. Strabo states that it was one of the chief towns of Pisidia, and that after passing under the dominion of Amyntas, tetrarch of Lycania and Galatia, it became part of the Roman province. He adds that it was only one day's march from Apamea, whereas we learn from Arrian that Alexander was five days on the road between the two towns; but the detention of the latter was not occasioned by the length of the road but by other circumstances, so that Strabo's account is not opposed to that of Arrian. (Comp. Polyb. xxii. 19; Plin. v. 24.) The town is mentioned also by Hierocles (p. 693), in the Ecclesiastical Notices, and the Acts of Councils, from which it appears to have been an episcopal see.

The traveller Lucas (Trois Voyages, i. p. 181, and Second Voyage, i. c. 34) was the first that reported the existence of extensive ruins at a place called Aiglason, and the resemblance of its site the learned man led him to identify these ruins with the site of the ancient Sagallus. This conjecture has since been fully confirmed by Arundell (A Visit to the Seven Churches, p. 132, fol.), who describes these ruins as situated on the long terrace of a lofty mountain, rising above the village of Aiglason, and consisting chiefly of massy walls, heaps of sculptured stones, and innumerable sepulchral vaults in the almost perpendicular side of the mountain. A little lower down the terrace are considerable remains of a large building, and a large paved oblong area, full of fluted columns, pedestals, &c., about 240 feet long; a portico nearly 300 feet long and 27 wide; and beyond this some magnificent remains either of a temple or a gymnasium. Above these rises a steep hill with a few remains on the top, which was probably the acropolis. There is also a large theatre in a fine state of preservation. Inscriptions with the words Σαγαλλασιων παλαι leave no doubt as to these noble ruins belonging to the ancient town of Sagallus. (Comp. Hamilton, Researches, vol. i. p. 486, fol.; Fellows, Asia Minor, p. 164, fol. 

SAGANUS (Σαγανός, Marcian, Periphi, p. 21, ed. Hudson), a small river on the coast of Carmania, about 200 stadia from Harmania. It is mentioned also by Polyenius (vi. § 8, 4), and Pliny (vi. 25). It is probably the same stream which is called by Aemilius Marcellinus, Saganius (xii. 6). Vincent thinks that it may be represented by a small river which flows into the Persian Gulf, near Garamon. (Voy. of Nearchus, vol. i. p. 370). [V.]

SAGAPOLA (Σαγαπόλα or Σαγάπολα βρος, Ptol. iv. 6. §§ 8, 14, 16, 17), a mountain of Interior Libya, from which flows the Sabus, the portion of which is fixed by Ptolemy (i. c.) 13° E. long., 22° N. lat. It may be assumed that the divergent which Ptolemy describes as ascending to this mountain from the Niger is one of the tributaries which flow into the Diobila or Quorra, from the highlands to the N. of that river (comp. Journ. Geog. Soc. vol. ii. p. 13.) [E. B. J.]

SAGARANGAEI. [Sagaranlii.]

SAGARIS, a river of European Sarmatia (Ov. ex Pont. iv. 1047), which has been assumed, from the name, to have discharged itself into the SNUS SAGARIUS. (Plin. iv. 26.) [E. B. J.]

SAGARTIL. [Persian.]

SAGIDA (Σαγίδα or Σαγιδα, Ptol. vii. i. § 71), a metropolis of Central India, which is perhaps the same as the present Shajpet, near the sources of the river Sonae. [V.]

SAGRAS (ὁ Σάγρας, Strab. vi. p. 261), a river of Bruttium, on the E. coast of the peninsula, to the S. of Caulonia, between that city and Locri. It is celebrated in history for the great battle fought on its banks, in which an army of 130,000 Crotonians is said to have been totally defeated by 10,000 Locrians; an event regarded as so extraordinary that it passed into a kind of proverb for something that appeared incredible, though true. (Αλήθεια τῶν άντι Σάγρας, Suid. s. v.; Strab. vi. p. 261; Cie. de N. D. iii. 5; Justin. rx. 3; Plin. iii. 10. s. 15.) The victory was ascribed by the Locrians to the direct intervention of the Dioscuri, to whom they in consequence erected altars on the banks of the river, which were apparently still extant in the time of Strabo. It was added that the news of the victory was miraculously conveyed to the Greeks assembled at Olympia the same day that the battle was fought. (Strab. i. c.; Cie. de N. D. ii. 2.) But notwithstanding the celebrity thus attached to it, the date and occasion of the battle are very uncertain; and the circumstances connected with it by Strabo and Justin would lead to opposite conclusions. [Crotropa.]

The date assigned by Heyne is B. C. 560, while Strabo certainly seems to imply that it took place after the fall of Sybaris in B. C. 510. (Grotes Greece, vol. iv. p. 552, note.) But whatever uncertainty prevailed concerning the battle, it seems certain that the Sagras itself was a well known stream in the days of Strabo and Pliny, both of whom concur in placing it to the N. of Locri and S. of Caulonia, and as the latter city was a colony and perhaps a dependency of Crotone, it is probable that the battle would be fought between it and Locri. Unfortunately the site of Caulonia cannot be determined [Caulonia], and we are therefore quite at a loss which of the small streams flowing into the sea between Locri and the Punta di Stilo should be identified with the celebrated Sagras. The Aalaro has been generally fixed upon by local writers, but has really no better claim than any other. (Romanelli, vol. i. p. 161; Swinburne's Travels, vol. i. p. 340.) [E. H. B.]

SAGRUS (Σάγρος: Sangro), one of the most considerable of the rivers of Samnia, which has its sources in the lofty group of the Apennines S. of the Lago di Fucino, and has a course of above 70 miles from thence to the Adriatic. It flows at first in a SE. direction, passes under the walls of Auffidea as well as of the modern Castel di Sangro, and in this part of its course flows through a broad and level, but upland valley, bounded on both sides by lofty
mountains. After passing Andes it turns abruptly to the NE., and pursues this course till it reaches the sea. In the lower part of its course it enters the territory of the Frentani, which it traverses in its whole breadth, flowing into the sea between Histonium and Ortona. Strabo indeed represents it as forming the boundary between the Frentani and the Peligni, but this is certainly a mistake, as the Peligni did not in fact descend to the sea-coast at all, and Ortona, one of the chief towns of the Frentani, was situated to the N. of the Sagrus. (Strab. v. p. 242; Pol. iii. 1. § 19; where the name is erroneously written Saurus.) The upper valley of the Sagrus, with its adjoining mountains, was the terri- tory of the Sunnite tribe of the Caraceni. (Pol. iii. 1. § 66.)

[SAGUNTIA. 1. (Σαγοντια, Pol. ii. 4. § 13.), a town in the SW. part of Hispania Baetica. (Liv. xxxiv. 12; Plin. iii. i. 3.) Now Nigoria or Gignoria, NW. from Medina Sidonia, where there are many ruins. (Morales, Antig. p. 87; Florch, Exp. Supr. x. p. 47.) A fragment of the Arean, in Hispania Tarraconensis, SW. from Bilbilis. It was in the jurisdiction of Clancia, on the road from Emerita to Caesaraugusta, and was the scene of a battle between Sertorius and Metellus. (Plut. Sert. 21; App. B. C. i. 110.) The name is written Seguntia in the Röm. Ant. pp. 436 and 438, and in the Geogr. Rav. iv. 43; but must not be confounded with that of a town of the Celtiberi. Now Seguntia on the Hucarz. (Florch, Exp. Supr. viii. p. 18; Morales, Antig. p. 87.)

[SAGUNTUM (Σαγοντος, Pol. ii. 6. § 63), and called SEGUNTUS (Meila. ii. 6; Σαγοντας, Steph. B. s. v.), a town of the Eletani or Sosetani in Hispania Tarraconensis, seated on an eminence on the banks of the river Pallantias, between Sueco and Tarraco, and not far from the sea. Strabo (iii. p. 159) erroneously places it near the mouth of the Ibuns, though it lies near 100 miles to the SW. of it. The same author states that it was founded by Greeks from Zacynthus; and we find that Stephanus calls it Σακτακα and Σακυκαν. Livy adds that the founders were mixed with Etrusci from Adea (Liv. xxii. 7); whence we sometimes find the city called Aemona Seguntus. (Sil. Ital. B. 29.) Another tradition ascribes its foundation to Hercules. (Ag. 263, 505.) Seguntum lay in a very fertile district (Polyb. xvii. 2), and attained to great wealth by means of its commerce. It was the immediate cause of the Second Punic War, from its being besieged by Hannibal when it was in the alliance of the Romans. The siege is memor- able in history. The town was taken, after a desperate resistance, in B.C. 218, and all the adult males put to the sword; but how long the siege lasted is uncertain. (Liv. xxii. 14, 15; cf. Sil. Ital. i. 271, seq.) Eight years afterwards Seguntum was recovered by the Romans. The Carthaginians had partly destroyed it, and had used it as a place for the custody of their hostages. (Polyb. iii. 98; Liv. xxiv. 42.) The city was restored by the Romans and made a Roman colony. (Liv. xxviii. 39; Plin. iii. 3. 4.) Seguntum was famous for its manufacture of earthenware cups (calices Seguntuni) (Plin. xxxiv. 12. s. 46; Mart. iv. 46, xiv. 108), and the fire crown in the neighbourhood were considered very fine. (Plin. xv. 18. 8. 19.) Its site is now occupied by the town of Murcia, which derives its name from the ancient fortifications (muri veteres). But little now remains of the ruins, the materials having been unsparedly used by the inhabitants for the purpose of building. “The great temple of Diana stood where the convent of La Trinidad now does. Here are let in some six Roman inscriptions relating to the families of Sergia and others. At the back is a water-course, with portions of the walls of the Circus Maximus. In the suburb Don Salvador, a moasic pavement of Bacchus was discovered in 1743, which soon afterwards was let go to ruin, like that of Italia. The famous theatre is placed on the slope above the town, to which the orchestra is turned; it was much destroyed by Suchet, who used the stones to strengthen the castle, whose long lines of wall and tower rise grandly above; the general form of the theatre is, however, easily to be made out. . . . The local arrangements are such as are common to Roman theatres, and resemble those of Merida. They have been measured and described by Dean Marti; Ponz, iv. 292, in the Exp. Supr. viii. 151.” (Ford’s Handbook for Spain, p. 206.) For the coins of Seguntum see Ponz, iv. p. 560; Monnet, i. p. 49, Suppt. i. p. 98. The coin-encir- cing coin of Seguntum contains on the obverse the head of Tiberius, and on the reverse the prow of a ship. [T. H. D.]

[SAGUTE SINUS (Polyb. ap. Plin. v. 1), a gulf on the W. coast of Mauretania, S. of the river Lixus, which must be identified with the EMORICES SINUS. The Phoenician word "Sacharrat" signifies "Emporia," and by an elision not uncommon among the Africans assumed the form under which it appears in Polybios. (Movers, Die Philon. vol. ii. p. 541.)

[SAGYLIUM (Σαγυλιον), a castle situated on a steep rock in the interior of Pontus, which was one of the strongholds of the Pontian kings. (Strab. xii. pp. 560, 561.)

[SALIS (Σαλης, Herod. ii. 28. 59, 152, 169; Strab. xvii. p. 802; Steph. B. s. v.; Mela. i. 9. § 9; Plin. v. 10. § 11; Euth. Σαλης, fam. Σαλης), the capital of the Saitic Nome in the Delta, and occasionally of Lower Assyrt also, stood, in lat. 31° 4' N., on the right bank of the Canopic arm of the Nile. The site of the ancient city is determined not only by the appellation of the modern town of Saal al-Hadjar, which occupies a portion of its area, but also by mounds of ruin corres-pending in extent to the im- portance of Sais at least under the later Pharaohs. The city was artificially raised high above the level of the Delta to be out of the reach of the inundations of the Nile, and served as a landmark to all who ascended the arms of the river from the Mediterranean to Memphis. Its ruins have been very imperfectly explored, yet traces have been found of the lake on which the mysteries of Isis were performed, as well as of the temple of Neith (Athene) and the necropolis of the Saitic kings. The wall of
unburnt brick which surrounded the principal buildings of the city was 70 feet thick, and probably there was at least 100 feet high. It enclosed an area 2325 feet in length by 1960 in breadth. Beyond this enclosure were also two large cemeteries, one for the citizens generally, and the other reserved for the nobles and priests of the higher orders. In one respect the Saite differed from the other Egyptians in their practice of interment. They buried their kings within the precincts of their temples. The tomb of Amasis attracted the attention of Herodotus (ii. 169), and Psmuetichus, the conqueror and successor of that monarch, was also buried within the walls of the temple of Neith.

Saïs was one of the principal cities of Egypt: its principal deities were Neith, who gave oracles there, and Isis. The mysteries of the latter were celebrated annually with unusual pomp on the evening of the Feast of Lamps. Herodotus terms this festival (ii. 59) the third of the great feasts in the Egyptian calendar. It was held by night, and every one intending to be present at the sacrifices was required to light a number of lamps in the open air around his house. The lamps were small censers filled with salt and oil, on which a wick floated, and which continued to burn all night. At what season of the year the feast of burning lamps was celebrated Herodotus knew, but he deemed it wrong to tell (ii. 62); it was, however, probably at either the vernal or autumnal equinox, since it apparently had reference to one of the capital revolutions in the solar course. An inscription in the temple of Neith declared her to be the Mother of the Sun. (Plutarch, Is. et Osir, p. 334, ed. Wyttenbach; Proclus, in Timaeum, p. 30.) It ran thus: "I am the thing that has been, and that are, and that will be; no one has uncovered my skirts; the fruit which I brought forth became the Sun." It is probable, accordingly, that the kindling of the lamps referred to Neith as the author of light. On the same night apparently were performed what the Aegyptians designated the "Mysteries of Isis." Saïs was one of the supposed places of the interment of Osiris, for that is evidently the deity whom Herodotus will not name (ii. 171) when he says that there is a burial-place of him at Saïs in the temple of Athene. The mysteries were symbolical representations of the sufferings of Osiris, especially his disembowlement by Typhon. They were exhibited on the lake behind the temple of Neith. Portions of the lake may be still discerned near the hamlet of Saït-el-Hadjar.

Saïs was alternately a provincial city of the first order and the capital of Lower Egypt. These changes in its rank were probably the result of political revolutions in the Delta. The name and city are said by Manetho to have derived their appellation from Saïtes, a king of the xviiith dynasty. The xxiith dynasty was that of Bocchoris of Saïs. The xxiith dynasty contained nine Saite kings; and of the xxiith Amyrtaeus the Saïte is the only monarch: with him expired the Saïte dynasty, b. c. 408.

Bocchoris the Wise, the son of Tephaucus (Diodor. i. 45, § 2, 79, § 1), the Technites of Plutarch (Is. et Osir, p. 354; comp. Athen. x. p. 418; Aelian, H. A. xi. 11), and the Aegyptian Pékhr, was remarkable as a judge and legislator, and introduced, according to Diodorus, some important amendments into the commercial laws of Saïs. He was put to death by burning after revolting from Sabaco the Aethiopian. During the Aethiopian dynasty Saïs seems to have retained its independence. The period of its greatest prosperity was between b. c. 697—524, under its nine native kings. The strength of Aegypt generally was derived from its southern to its northern provinces. Of the Saite monarchs of Aegypt Psmuetichus and Amasis were the most powerful. Psmuetichus maintained himself on the throne by his Greek mercenaries. He established at Saïs the class of interpreters, caused his own sons to be educated in Greek learning, and encouraged the resort of Greeks to his capital. The intercourse between Saïs and Athens especially was promoted by their worshipping the same deity—Neith-Athena; and hence there sprung up, although in a much later age, the opinion that Cercops the Saïte led a colony to Athens. The establishment of the Greeks at Cyrene was indirectly fatal to the Saite dynasty. Uaphris, Apries, or Hophra, was defeated by the Cyrenians, b. c. 569; and his discontented troops raised their commander Amasis of Sais to the throne. He adored Saïs with many stately buildings, and enlarged or decorated the temple of Neith; for he erected in front of it precincts, which for their height and magnitude, and the quality of the stones employed, surpassed all similar structures in Egypt. The stones were hewn from the quarries of Edfu and transported from Memphis, and thence were brought also the colossal figures and androphiexes that adorned the Dromos. To Saïs Amasis transported from Elephantine a monolithical shrine of granite, which Herodotus especially admired (ii. 175). Though the ordinary passage from Elephantine to Saïs was performed in twenty days, three years were employed in conveying this colossal mass. It was, however, never erected, and when Herodotus visited Egypt was still lying on the ground in front of the temple. It measured, according to the historian, 30 feet in height, 12 feet in depth from front to back, and in breadth 21 feet. After the death of Amasis, Saïs sank into comparative obscurity, and does not seem to have enjoyed the favour of the Persian, Macedonian, or Roman masters of Aegypt.

Saïs indeed was more conspicuous as a seat of commerce and learning, and of Greek culture generally, than as the seat of government. Nearchus, one of its kings, had left a name for his learning (Austen. Epitgram. 409), and his writings on astronomy are cited by Piny (ii. 23 s. 21). Pythagoras of Samos visited Saïs in the reign of Amasis (comp. Plut. xxxvi. 9, s. 14); and Solon the Athenian conversed with Sonchis, a Saïte priest, about the same time (Plut. Solon, 26; Herod. ii. 177; Clinton, Fast. Hellen, vol. ii. p. 9). At Saïs, if we may credit Plato (Timaeus, iii. p. 25), Solon heard the legend of Atlantis, and of the ancient glories of Athens some thousand years prior to Phoroneus and Niobe and Deucalion's flood. The priests of Saïs appear to have been anxious to ingratiate themselves with the Athenians by discovering resemblances between Attic and Aegyptian institutions. Thus Diodorus (i. 28), copying from earlier narratives, says that the citizens of Saïs, like those of Athens were divided into eunapids, or priest-nobles; eunapi, land-owners liable to military service; and craftsmen or retail traders. He adds that in each city the upper town was called Attu. The Greek population of Saïs was governed, according to Manetho, by their own laws and magistrates, and had a separate quarter of the city assigned to them. So strong indeed was the Hellenic element in Saïs that
it was doubted whether the Saites colonised Attica, or the Athenians Sais; and Diodorus says inconsistently, in one passage, that Sais sent a colony to Athens (i. 28. § 4), and in another (v. 57. § 45) that it was itself founded by Athenians. The principal value of these statements consists in their establishing the Graeco-Egyptian character of the Saites.

The ruins of Sais consist of vast heaps of brick, mingled with fragments of granite and Syenite marble. Of its numerous structures the position of only one can be surmised. The lake of Sa-el-Haouja, which is still traceable, was at the back of the temple of Nebra; but it remains for future travellers to determine the sites of the other sacred or civil structures of Sais. (Champollion, l'Egypte, vol. ii. p. 219; El. Lettres, 50—53; Wilkinson, Mod. Egypt and Thebes.)

SALA (Σάλα). 1. A river in Germany, between which and the Rhine, according to Strabo (vii. p. 291), Drusus Germanicus lost his life. That the river was on the east of the Rhine is implied also in the account which Livy (Epit. 140) and Dion Cassius give of its occurrence; and it has therefore been conjectured with some probability that the Sala is the same river as the modern river Salo, a tributary of the Ello, commonly called the Thuringian Salo: though others regard the Sala as identical with the Yssel.

2. A river of Germany, alluded to by Tacitus (Ann. xii. 57), who, without mentioning its name, calls it “numen gigas” sae fœcundum. It formed the boundary between the country of the Chatti and Hermunduri and near its banks were great salt-works, about which these two tribes were perpetually involved in war. From this circumstance it is clear that the river alluded to by Tacitus is none other but the Saale in Franconia, a tributary of the Main or Main; and that the salt-springs are, in all probability, those of the modern town of Kissingen.

3. A town in Upper Franconia, on the road from Sabaria to Portovium (Ptol. ii. 15. § 4; It. Ant. p. 262, where it is called Salle; Geogr. Rav. iv. 19, where it is called Sala). Some identify the place with the town Saldate Egersack, and others with Lucir on the river Salza. (Comp. Muchar, Vorzuma, p. i. 261.)

4. A town in the south-western part of Pthirgia, on the frontiers of Caria and Pisidia, on the north-west of Cibyra. (Ptol. v. 2. § 26.)

5. A town in the north-western part of Armenia Minor, on the eastern slope of Mount Moschos. (Ptol. v. 13. § 10.)

[S. L.]

SALACHAIA (Σαλαχαία), a town of Cappadocia, in the district Garsauritis. (Ptol. v. 6. § 14; Tab. Peut., where it is called Salsbeina.)

[SALAMANCA. [Salamanca.]

SALAMAMIENAI, a town in Coele-Syria in the district Chalybiontis (It. Anton. p. 197; Not. Imp.), which Reland (Pabstc. i. p. 217) identifies with Salamanca (Σαλαμανκας) in the Not. Leonis Imp., and with Salamante in Ambibeda (Tab. Syr. p. 105). It is said still to bear the name Salmen. (Richter, Wallfahrten, p. 238.)

SALAMIS (Σαλαμίς, Aesch. Pers. 880; Scyl. p. 41; Ptol. v. 14. § 3, viii. 20. § 5; Stadtnam. §§ 288, 289; Pomp. Mela, ii. 7, 5; Plin. v. 35; Horat. Car. i. 729; Σαλαμί, Enstat ad II. ii. 558; Σαλατίς, Malula, Chron. xii. p. 313, ed. Bonn: Θουλ. Σαλαμίν, Böckh, Iscr. nos. 2625, 2638, 2639), a city on the E coast of Cyprus, 18 M. F. from Tremonithis, and 24 M. F. from Chytiri. (Pent. Tav. 1.)

Legend assigns its foundation to the Aeacid Teneur, whose fortunes formed the subject of a tragedy by Sophocles, called Τενεωρ, and of one with a similar title by Paucrius. (Cic. de Orat. i. 58, ii. 46.) The people of Salamis showed the tomb of the archeus Teneur (Aristot. Anthologia, i. 8, 112), and the reigning princes at the time of the Ionic revolt were Greeks of the Teucrid men "Gens," although one of them bore the Phoenician name of Sironus (Hiram). (Herod. v. 104.) In the 6th century B.C. Salamis was already an important town, and in alliance with the Battalic princes of Cyrene, though the king Evdoch refused to assist in reinstate Avsiklus Ill. upon the throne. (Herod. iv. 162.) The descendant of this Evdoch — the despot Gorgas — was unwilling to join in the Ionic revolt, but his brother Onesilus shat him out of the gates, and taking the command of the united forces of Salamis and the other cities, flew to arms. The battle which crushed the independence of Cyprus was fought under the walls of Salamis, which was compelled to submit to its former lord, Gorgas. (Herod. v. 103, 104, 108, 110.) Afterward it was besieged by Anaxicrates, the successor of Cimon, but when the convention was made with the Persians the Athenians did not press the siege. (Diod. xii. 13.) After the peace of Antalcidas the Persians had to struggle for ten years with all their forces against the indefatigable and gentle Evagoras. Isocrates composed a paeangy of this prince addressed to his son Nicceles, which, with every allowance for its partiality, gives an interesting picture of the struggle which the Hellenic Evagoras waged against the Phoenician and Oriental influence under which Salamis and Cyprus had languished. (Comp. Grote, Hist. of Greece, vol. x. c. xxv.)
Evagoras with his son Pytagoras was assassinated by a eunuch, slave of Nicocreon (Aristot. Pol. v. 8, § 10; Diodor. xiv. 47; Theopomp. Fr. iii. ed. Diodo), and was succeeded by another son of the name of Nicocles. The Graeco-Asyrgian fleet under his brother was utterly defeated off the harbour of Salamis in a sea-fight, the greatest in all antiquity, by Demetrias Poliorcetes, c. 306. (Diodor. xxi. 45—53.) The famous courteous Lamia formed a part of the body of Demetrius, over whom she soon obtained an unbounded influence. Finally, Salamis came into the hands of Ptolemy. (Plut. Demetr. 35; Polyena. Strateg. 5.) Under the Roman Empire the Jews were numerous in Salamis (Acts, xiii. 6), where they had more than one synagogue. The farming of the copper mines of the island to Hored (Joseph. Antiq. xx. 14. § 5) may have swelled the numbers who were attracted by the advantages of its harbour and trade, especially its manufactures of embroidered stuffs. (Athien. ii. p. 48.) In the memorable revolt of the Jews in the reign of Trajan this populous city became a desert. (Milman, Hist. of the Jews, vol. iii. pp. 111, 112.) Its demolition was completed by an earthquake; but it was rebuilt by a Christian emperor, from whom it was named Constantia. It was then the metropolis of the island. Epiphanius, the chronicler of the heretical sects, was bishop of Constantia in A.D. 367. In the reign of Heraclius the new town was destroyed by the Saracens.

The ground lies low in the neighbourhood of Salamis, and the town was situated on a height of the coast to the N. of the river Pedasus. This low land is the largest plain—Salaminia—in Cyprus, stretching inward between the two mountain ranges to the very heart of the country where the modern Turkish capital—Nicosia—is situated. In the Life and Epistles of St. Paul, by Coneybear and Howson (vol. i. p. 169), will be found a plan of the harbour and ruins of Salamis, from the survey made by Captain Gravina. For coins of Salamis, see Eckhel, vol. iii. p. 87. [E. B. J.]

SALAMIS (Σαλαμίς, -ίνος: Eth. and Adj. Σαλαμίνος, Salaminius; Adj. Σαλαμίνας, Salaminicus; Κυθρῆς), an island lying between the western coast of Attica and the eastern coast of Megaris, and forming the southern boundary of the bay of Eleusis. It is separated from the coasts both of Attica and of Megaris by only a narrow channel. Its form is that of an irregular semicircle towards the west, with many small indentations along the coast. Its greatest length, from N. to S., is about 10 miles, and its width, in its broadest part, from E. to W., is a little more. Its length is correctly given by Strabo (ix. p. 393) as from 70 to 80 stadia. In ancient times it is said to have been called Pituyassa (Πιτυύσσα), from the pines which grew there, and also SIRAS (Σιράς) and CYCHREA (Κυχρεία), from the names of two heroes, Sirus and Cythereus. The former was a native hero, and the latter a seer, who came from Dodona to Athens, and perished along with Erechtheus in fighting against Eumolpus. (Sims ix. p. 393; Philochor. Diog. Lib. 17.) The latter name was perpetuated in the island, for Aeceleus (Paus. 570) speaks of the άκται Κυχρείαι, and Stephanus B. mentions a Κυχρείαι πάγος. The island is said to have obtained the name of Salamis from the mother of Cythereus, who was also a daughter of Asopus. (Paus. i. 35. § 2.) It was colonised at an early period by the Aeacidae of Aegina. Telamon, the son of Aeacus, fled thither after the murder of his half-brother Phocus, and became sovereign of the island. (Paus. i. 35. § 1.) His son Mesarion carried the Greeks with 12 Salaminian ships to the Trojan War. (Hom. Il. ii. 557.) Salamis continued to be an independent state till about the beginning of the 40th Olympiad (n. c. 620), when a dispute arose for its possession between the Athenians and Megarians. After a long struggle, it first fell into the hands of the Megarians, but was subsequently taken possession of by the Athenians through a stratagem of Solon. (Plut. Sol. 8. 9; Paus. i. 40. § 5.) Both parties appealed to the arbitration of Sparta. The Athenians supported their claims by a line in the island, which represents Ajax ranging his ships with those of the Athenians (Il. ii. 558), but this verse was suspected to have been an interpolation of Solon or Pausanias; and the Megarians cited another version of the line. The Athenians, moreover, asserted that the island had been made over to them by Phileas and Eurycles, sons of the Telamoman Ajax, when they took up their own residence in Attica. These arguments were considered sufficient, and Salamis was adjudged to the Athenians. (Plut. Sol. 10; Strab. ix. p. 394.) It now became an Athenian deme, was incorporated with Attica till the times of Macedonian supremacy. In b.c. 318, the inhabitants voluntarily received a Macedonian garrison, after having only a short time before successfully resisted Cassander. (Diod. xviii. 69; Polyena. Strat. iv. 11. § 2; Paus. i. 35. § 2.) It continued in the hands of the Macedonians till b. c. 323, when the Athenians, by the assistance of Aretus, purchased it from the Macedonians together with Munychia and Sunium. Thereupon the Salaminians were expelled from the island, and their lands divided among Athenian cleruchs. (Plut. Aret. 34; Paus. ii. § 8; Böckh, Inscr. vol. i. p. 148, seq.) From that time Salamis probably continued to be a dependency of Athens, like Aegina and Oropea; since the grammarians never call it ἄμφος, which it had been originally, but generally a πᾶλιν.

The old city of Salamis, the residence of the Telamoman Ajax, stood upon the southern side of the island towards Aegina (Strab. ix. p. 393), and is identified by Leake with the remains of some Hellenic walls upon the south-western coast near a small port, where is the only rivulet in the island, perhaps answering to the Bocarias or Bocallas of Strabo (ix. p. 394: Leake, Demi, p. 169). The Bocarias is also mentioned by Lycophron (431). In another passage, Strabo (ix. p. 424) indeed speaks of a river Cephasius in Salamis; but as it occurs only in an enumeration of various rivers of this name, and immediately follows the Athenian Cephasius without any mention being made of the Eleusinian Cephasius, we ought probably to read with Leake ελευσινίος instead of ελαιοεύς.

When Salamis became an Athenian deme, a new city was built on the head of a bay upon the eastern side of the island, and opposite the Attic coast. In the time of Pausanias this city also had fallen into decay. There remained, however, a ruined agora and a temple of Ajax, containing a statue of the hero in ehoikey also a temple of Artemis, the trophy erected in honour of the victory gained over the Persians, and a temple of Cythereus. (Paus. i. 35. § 3, 36. § 1.) Pausanias has not mentioned the
SALAMIS.

The monument of Sciradion (Σκυράδιον) was the name of the western promontory of Salamis, and distant only three miles from Nisaea, the port of Megara. On this peninsula there was a fortress of the same name. In the attempt which the Peloponnesians made in B.C. 429 to surprise Piraeus, they first sailed from Nisaea to the promontory of Bu derogum, and surprised the fortress; but after overrunning the island, they retreated without venturing to attack Piraeus. (Thuc. ii. 93, 94, iii. 51; Dial. xii. 49; Strab. xi. p. 446; Steph. B. s. v. Bu derogum.)

Salamis is chiefly memorable on account of the great battle fought off its coast, in which the Persian fleet of Xerxes was defeated by the Greeks, B.C. 480. The details of this battle are given in every history of Greece, and need not be repeated here. The battle took place in the strait between the western part of the island and the coast of Attica, and the position of the contending forces is

MAP OF SALAMIS.

1. Athenian ships.

SALANIANA.

shown in the annexed plan. The Grecian fleet was drawn up in the small bay in front of the town of Salamis, and the Persian fleet opposite to them on the coast of Attica. The battle was witnessed by Xerxes from the Attic coast, who had erected for himself a lofty throne on one of the projecting declivities of Mt. Aegaleos. Colonel Leake has discussed at length all the particulars of the battle, but Mr. Blakeney has controverted many of his views, following the authority of Aeschylus in preference to that of Herodotus. In opposition to Col. Leake and all preceding authorities, Mr. Blakeney supposes, that though the hostile fleets occupied in the afternoon before the battle the position delineated in the plan annexed, yet that on the morning of the battle the Greeks were drawn up across the southern entrance of the strait, between the Cape of St. Barbara and the Attic coast, and that the Persians were in the open sea to the south. Into the discussion of this question our limits prevent us from entering; and we must refer our readers for particulars to the essays of those writers quoted at the close of this article. There is, however, one difficulty which must not be passed over in silence. Herodotus says (viii. 76) that on the night before the battle, the Persian ships stationed about Ceos and Cynosura moved up, and beset the whole strait as far as Munchia. The only known places of those names are the island of Ceos, distant more than 40 geographical miles from Salamis, and the promontory of Cynosura, immediately N. of the bay of Marathon, and distant more than 60 geographical miles from Salamis. Both of those places, and more especially Cynosura, seem to be too distant to render the movement practicable in the time required. Accordingly many modern scholars apply the names Ceos and Cynosura to two promontories, the southernmost and south-easternmost of the island of Salamis, and they are so called in Kiepert's maps. But there is no authority whatever for giving those names to two promontories in the island; and it is evident from the narrative, as Mr. Grote has observed, that the names of Ceos and Cynosura must belong to some points in Attica, not in Salamis. Mr. Grote does not attempt to indicate the position of those places; but Mr. Blakeney maintains that Ceos and Cynosura are respectively the well-known island and cape, and that the real difficulty is occasioned, not by their distance, but by the erroneous notion conceived by Herodotus of the operations of the Persian fleet. (Leake, Demi of Attica, p. 166, seq., and Appendix II. On the Battle of Salamis; Blakeney, Excerpts on Herodotus, viii. 76, vol. ii. p. 400, seq.; Grote, Hist. of Greece, vol. v. p. 171, seq.)

COIN OF SALAMIS.

SALANIANA, a town of the Callatici Bracarii in Gallaecia (Itin. Ant. p. 427.) Variously identified with Cela Nola, Moguntum, and Portela de Abade. (T. H. D.)

SALAPIA (Salaia: Fth. Zalarinao, Salapias: Sapi), one of the most considerable cities of Apulia, situated on the coast of the Adriatic, but separated from the open sea by an intervening lagoon, or salt-water lake, which was known in ancient times as the Salapina Palus (Lucan, v. 377; Vib. Sev. p. 26), and is still called the Lago di Salpi. This lagoon has now only an artificial outlet to the sea through the bank of sand which separates them; but it is probable that in ancient times its communications were more free, as Salapia was certainly a considerable sea-port and in Scrob's time served as the port both of Arpi and Casusmus (Strab. vi. p. 284). At an earlier period it was an independent city, and apparently a place of considerable importance. Tradition ascribed its foundation, as well as that of the neighbouring cities of Casusmus and Arpi, to Dionysus (Vitr. i. 4. § 12); or, according to others, to a Rhodian colony under Elipias (Id. ib.; Strab. xiv. p. 634).* There is no trace of its having received a Greek colony in historical times, though, in common with many other cities of the Daunian Apulians, it seems to have imbued a large amount of Hellenic influence. This was probably derived from the Tarantines, and did not date from a very early period.

The name of Salapia is not mentioned in history till the Second Punic War, in which it bears a considerable part. It was evidently one of the cities of Apulia which revolted to Hannibal after the battle of Cannae (Liv. xxii. 61); and a few years after we find it still in his possession. It was apparently a place of strength, on which account he collected there great magazines of corn, and established his winter quarters there in B.C. 214. (Id. xxiv. 20.) It remained in his hands after the fall of Arpi in the following year (Id. xxv. 47); but in B.C. 210 it was betrayed into the power of Marcellus by Blasius, one of its citizens, who had been for some time the leader of the Roman party in the place, and the Numidian garrison was put to the sword. (Id. xxvi. 88; Appian, Annib. 45—47.) Its loss seems to have been a great blow to the power of Hannibal in this part of Italy; and after the death of Marcellus, B.C. 208, he made an attempt to recover possession of it by stratagem; but the fraud was discovered, and the Carthaginian troops were repulsed with loss. (Liv. xxviii. 1, 28; Appian, Annib. 51.) No subsequent mention of it is found till the Social War, in the second year of which, when the tide of fortune was beginning to turn in favour of Rome, it was taken by the Roman praetor C. Cosconius, and burnt to the ground (Appian, B. C. i. 51). After this time it appears to have fallen into a state of decay, and suffered severely from malaria in consequence of the exhalations of the neighbouring lagoon. Vitruvius tells us, that at length the inhabitants applied to M. Hostilini, who caused them to remove to a more healthy situation, about 4 miles from the former site, and nearer the sea, while he at the same time opened fresh communications between the lagoon and the sea (Vitr. i. 4. § 12). We have no clue to the time at which this change took place, but it could hardly have been till after the town had fallen into a declining condition. Cicero, indeed, alludes to Salapia as in his day notorious for its pestilential climate (de Leg. Agr. ii. 27); but this may be understood as relating to its territory rather than the actual town. Vitruvius is the only author who notices the change of site; but if his account can be depended

* Lycophron, on the other hand, seems to assign it a Trojan origin; though the passage, as usual, is somewhat obscure. (Lycophr. Alex. 1129.)
upon, the Salapia mentioned by Pliny and Ptolemy as well as Strabo, must have been the new town, and not the original city of the name. (Strab. vi. p. 284; Plin. iii. 12. s. 17; Ptol. iii. 1. § 16.) The Liber Columbarum also speaks of it as a colony adjoining the sea-coast, which doubtless refers to the new town of the name. This does not, however, seem to have ever risen into a place of much importance, and the name subsequently disappears altogether.

Extensive ruins of Salapia are still visible on the southern shore of the Lago di Salpi, in a tract of country now almost wholly desolate. They evidently belong to a city of considerable size and importance, and must therefore be those of the ancient Apulian city. This is further confirmed by the circumstance that the coins of Salapia, which of course belong to the period of its independence, are frequently found on the spot. (Swinnerton’s Travels, vol. i. p. 81.) The site of the Roman town founded by M. Hostilius is said to be indicated by some remains on the seashore, near the Torre di Salpi. (Romanelli, vol. ii. p. 201.)

The lagune still called the Lago di Salpi is about 12 miles in length by about 2 in breadth. At its eastern extremity, where it communicates with the sea by an artificial cut, are extensive salt-works, which are considered to be the representatives of those noticed in the Itineraries under the name of Salapia. It is by no means certain (though not improbable) that these ancient salt-works occupied the same site as the modern ones; and the distances given in the Itineraries along this line of coast, being in any case corrupt and confused, afford no clue to their identification. (Hin. Ant. p. 314; Tab. Peut.) It is probable that the name of Salapia itself is connected with sal, the lagune having always been well adapted for the collection of salt.

The coins of Salapia, as well as those of Arpi and Canusium, have Greek legends, and indicate the strong influence of Greek art and civilisation, though apparently at a late period, none of them being of an archaic style. The magistrates’ names which occur on them (ΔΑΣΟΣ, ΠΤΑΛΟΣ, &c.) are, on the contrary, clearly of native origin. (Mommsen, U. J. D. pp. 82, 83.)

**COIN OF SALAPIA.**

**SALAPIA.** 1. (Σαλάπια. Ptol. ii. 6. § 61), a town of the Bastiani, in the SE. part of Hispania Tarraconensis. According to Pliny it was a Roman colony. (Colonia Salariciensis, l. i. 3. s. 4.) Ubert (ii. pt. i. p. 407) identifies it with Sebiode, between Ubeda and Linaco.

2. A town of the Oretani, in the same neighbourhood. (Ptol. ii. 6. § 59.)

**SALAS. [SALASI.]**

**SALASSI** (Salinga), one of the most powerful of the Alpine tribes in the N. of Italy, who occupied the great valley of the Duria or Dora Baltea, now called the Val d'Asco, from the plains of the Po to the foot of the Graian and Pennine Alps. Their country is correctly described by Strabo as a deep and narrow valley, shut in on both sides by very lofty mountains. (Strab. iv. p. 205.) This valley, which extends above 60 miles in length from its entrance to Arona to its head among the very highest ranges of the Alps, must always have been one of the natural inlets into the heart of those mountains: hence the two passes at its head, now called the Great and Little St. Bernard, seem to have been frequented from a very early period. If we may trust to Livy, it was by the former of these passes, or the Pennine Alps, that the Boii and Ligones crossed when they first migrated into the plains of the N. of Italy. (Livy, v. 35.) It was the same pass by which Hannibal was commonly supposed in the days of Livy to have crossed these mountains, while Cornelius Nepos represented him as passing the Little St. Bernard, an opinion commonly adopted by modern writers, though still subject to grave doubts. One of the most serious of these arises from the character of the Salassi themselves, who are uniformly described as among the fiercest and most warlike of the Alpine tribes, and of inveterate predatory habits, so that it is difficult to believe they would have allowed an army like that of Hannibal to traverse their country without opposition, and without apparently molesting. (See Arnold’s Rome, vol. iii. p. 481.)

The Salassi are commonly reckoned a Gaulish people, yet there are reasons which render it more probable that they were in fact, like their neighbours the Taurini, a Ligurian race. The Ligurians indeed seem, at a very early period, to have spread themselves along the whole of the western chain of the Alps, and the Gaulish tribes which occupied the plains of the Po have passed through their country. But the ethnical relations of all these Alpine races are very obscure. No mention of the Salassi is found in history till n. c. 143, when they were attacked without provocation by the consul Appius Claudius, who was, however, punished for his aggression, being defeated with the loss of 5000 men. But he soon repaired this disaster, and having in his turn slain 5000 of the mountaineers, claimed the honour of a triumph. (Dion Cass. Fr. 79; Liv. Epit. lii.; Oros. v. 4.) From this time they appear to have frequently been engaged in hostilities with Rome, and though nominally tributary to the republic, they were continually breaking out into revolt, and ravaging the plains of their neighbourhood, or plundering the Roman convoys, and harassing their troops as they marched through their country. As early as n. c. 100 a Roman colony was established at Evoredia (Ivrea), at the mouth of the valley (Vell. Pat. i. 15), with the view of keeping them in check, but it suffered severely from their incursions. Even at a much later period the Salassi plundered the baggages of the dictator Caesar when marching through their country, and compelled Decimus Brutus, on his way into Gaul after the battle of Mutina, to purchase a passage with a large sum of money. (Strab. iv. p. 205.) In n. c. 35 they appear to have broken out afresh into revolt, and for some time were able to defy the efforts of Antonius Vetus; but the next year they were re-duced by an expedition by Valerius Verrens (Dion Cass. xix. 34, 38; Appian, Illyr. 17.) Still, however, their subjection was imperfect, till in n. c. 25 Terentius Varro was sent against them, who having compelled the whole nation to lay down their arms, sold them without distinction as slaves. The number of captives thus sold is said to have amounted to
36,000 persons, of whom 8000 were men of military age. The tribe of the Salassi being thus extirpated, a Roman colony was settled at Praetoria Augusta (Aosta), and a highroad made through the valley. (Dion Cass. liii. 25; Strab. iv. p. 205; Liv. Epit. cxxxv.) The name of the Salassi, however, still remains, and is recognised as a geographical distinction both by Pliny and Ptolemy, but no subsequent trace of them is found as an independent tribe. (Plin. iii. 17. s. 91; Prot. iii. 1. § 34.)

One of the main causes of the disputes between the Salassi and Romans had arisen from the gold-washings which were found in the valley, and which are said to have been extremely productive. These were worked by the Salassi themselves before the Roman invasion; but the Romans seem to have early taken possession of them, and they were farmed out with the other revenues of the state to the publicans. But these were, as might be expected, involved in constant quarrels with the neighbouring barbarians, who sometimes cut off their supplies of water, at other times attacked them with more open violence. (Strab. iv. p. 205; Dion Cass. Fr. 79.)

The line of road through the country of the Salassi, and the passes which led from Augusta Praetoria over the Pennine and Granis Alpes, are described in the article Alps [Vol. i. p. 110]. [E. H. B.]

Salassii. [Mauretania, Vol. ii. p. 288, etc.]

SALATABAEE (Σαλαταπάθη, Ptol. vi. 11. § 6), a tribe of the Bactrians who lived along the banks of the Ouxus. Forbiger suspects that they are the same as the Saraparei, noticed by Pliny (vi. 16. s. 18). [V.]

SALATHUS (Σαλαθός, Ptol. iv. 6. § 5), a river on the W. coast of Africa, with a town of the same name. This river, which took its rise in Mt. Mandrus, is represented by one of the Wadys, which flows into the sea in the district occupied by the ancient Autoleos, on the coast to the N. of Cape Mirth. [E. B. J.]

SALABRIS, a town on the coast of Hispania Tarraconensis, mentioned in the Ora Marit. of Avienus (v. 518). [T. H. D.]

SALDA, a town in the south of Lower Pannonia, on the southern bank of the Savus, and on the great highroad from Siscia to Sirmium. (Tob. Pteut.; Geogr. ev. iv. 19, where it is called Sisdum.) It is very probably the same as the town of Salis (Σαλίς) mentioned by Ptolemy (ii. 16. § 8). The site is commonly believed to be occupied by one of the modern Scutaris. [L. S.]

SALDAE (Σαλδαί, Strab. xvii. p. 531; Ptol. iv. 2. § 9, vili. 13. § 9; Plin. v. 1; Iun. Anton.; Ptout. Tob.), a town on the coast of Mauretania Caesariensis, with a spacious harbour, which was in earlier times the boundary between the dominions of Juba and those of the Romans. (Strab. l.c.) Under Augustus it became a Roman "colonia." (Plin. l.c.) In later times it was the W. limit of Mauretania Sitifensis, against Mauretania Caesariensis in its more contracted sense. It is identified with Bujajchah, the flourishing city of the Kullipah, taken by Pedro Navaro, the general of Ferdinand the Catholic, after two famous battles, a. D. 1510 (comp. Prescott's Ferdinand and Isabella, vol. ii. p. 457), or the C. Bongie of the French province. (Bart., Wanderungen, p. 62.) [E. B. J.]

SALDAFA, a town of Moesia (Theophyl. Hist. B. i. 18, which was ravaged by the Avars in their wars with the emperor Maurice (Le Beau, Bas Empire, vol. x. pp. 248, 369). Schafarik (Slav. Alta. vol. ii. p. 158) has fixed the site at the ruins Dilicbrick upon the Danube. [E. B. J.]

SALDUBA. 1. A small river in the territory of the Tarbali in Hispania Baetica, probably the same called Σαλδοβα, (with var. lect. by Ptolemy (ii. 4. § 7). Now Rio Verde.

2. A town at the mouth of the preceding river (Σαλδοβα, Ptol. ii. 4. § 11), of no great importance (Mela. ii. 6; Plin. iii. 1. s. 3), near the present Moruei. [T. H. D.]

CASAERARUGUSTA. [T. H. D.]

SALER, a town on the S. coast of Thrace, near the W. mouth of the Helaurus, and nearly equidistant from Zone and Dorisca. It is mentioned by Herodotus (vii. 59) as a Samothracian colony. [J. E.]

SALEM. [Jerusalem.]

SALENI, a people of Hispania Tarraconensis, probably in Cantabria, mentioned by Mela (iii. 1). They are perhaps the same as the Σαλανος of Ptolemy (ii. 6. § 34). [T. H. D.]

SALENTI or SALENTINI (both forms seem to rest on good authority), (Σαλεντινοι), a people of Southern Italy, who inhabited a part of the peninsula which forms the Sc. extremity, or as it is very often called the heel, of Italy. Their territory was thus included in the region known to the Greeks by the name of Istypa, as well as in the district called by the Romans Calabria. Strabo remarks that the peninsula in question, which he considered as bounded by a line drawn across from Tarentum to Brundismium, was variously called Mes- sapia, Istypa, Calabria, and Salentina; but that some writers established a distinction between these. (Strab. vi. p. 282.) There seems no doubt that the names were frequently applied irregularly and vaguely, but that there were in fact two distinct tribes or races inhabiting the peninsula, the Salentines and the Calabrians (Strab. vi. p. 277), of whom the latter were commonly known to the Greeks as the Messapians [Calabria] both were, however, in all probability kindred races belonging to the great family of the Pelasgian stock. Tradition represented the Salentines as of Cretan origin, and, according to the habitual form of such legends, ascribed them to a Cretan colony under Idaenetus after the Trojan War. (Strab. vi. p. 282; Virg. Aen. iii. 400; Fest. x. v. Salentinae, p. 329; Varr. ap. Prob. ad Virg. Eccl. vi. 31.) They appear to have inhabited the southern part of the peninsula, extending from its southern extremity (the Capo di Lecce), which was thence frequently called the Salentine promontory ("Salentina Promontorum," Mol. ii. 4. § 8; Ptol. iii. 1. § 13), to the neighbourhood of Tarentum. But we have no means of distinguishing accurately the limits of the two tribes, or the particular towns which belonged to each.

The name of the Salentines does not seem to have been familiarly known to the Greeks, at least in early times: as we do not hear of their name in any of the wars with the Tarentines, though from their position they must have been one of the tribes that early came into collision with the rising colony.

They were probably known under the general appellation of Iapygians, or confounded with their neighbours the Messapians. On the contrary, as soon as their name appears in Roman history, it is in a wider and more general sense in which it is limited by the geographers. Livy speaks of the Salentina as acceding to the Samnite alliance in B.C. 306, when the consul L. Volumnius was sent into their country, who defeated them in several battles, and took some of their towns. (Liv. ix. 42.) It is almost impossible to believe that the Romans
SALENTINI.

had as early as this pushed their arms into the Iapygian peninsula, and it is probable that the Salentines are here confounded with the Peucetians, with whom, according to some accounts, they were closely connected. (Plin. iii. 11. s. 16.) But the name is used with still greater laxity shortly after, when Livy speaks of Thrace as " urbem in Sallentinam " (x. 2), if at least, as there seems little doubt, the place there meant is the well-known city of Thurin in Lucania [THURIN].

The name of the Salentines does not again occur in history till the Fourth Samnite War, when they joined the confederacy formed by the Samnites and Tarentines against Rome; and shared in their defeat by the consul L. Aemilius Barbaul in b. c. 261, as we find that general celebrating a triumph over the Tarentines, Samnites, and Salentines. (Fast. Capit. ann. 473.) For some time after this the appearance of Pyrrhus in Italy drew off the attention of the Romans from their fierce adversaries, but when that monarch had finally withdrawn from Italy, and Tarentum itself had fallen into the hands of the Romans, they were left at leisure to turn their arms against the few tribes that still maintained their independence. In b. c. 267 war was declared against the Salentines, and both consuls were employed in their subjugation. It was not likely that they could offer much resistance, yet their final conquest was not completed till the following year, when both cities were burned and destroyed, one of them named "Messapia Salentinus." (Fast. Capit.; Zonar. viii. 7; Liv. Epit. xv; Florus, i. 20; Eutrop. ii. 17.) All the Roman writers on this occasion mention the Salentines alone; the Triumphal Fasti, however, record the name of the Messapians in conjunction with them, and it is certain that both nations were included both in the war and the conquest, for Brundusium, which is called by Florus "caput reginis," and the occupation of which was evidently the main object of the war (Zonar. l. c.), seems to have been at that period certainly a Messapian city. The Salentines are again mentioned as revolted to Hannibal during the Second Punic War (b. c. 213), but seem to have been again reduced to subjection without difficulty. (Liv. xxv. 1, xxvii. 36, 41.) From this time their name disappears from history, and is not even found among the nations of Italy that took up arms in the Social War. But the "Sallentini aeger" continued to be a recognised term, and the people are spoken of by Pliny and Strabo as distinct from their neighbours the Calabri. (Strab. vi. p. 277; Plin. iii. ii. 16; Ptol. iii. 1. § 13; Mol. ii. 4; Cic. pro Rosc. Am. 46.) The "regio Salentina" is even mentioned as a distinct portion of Calabria as late as the time of the Lombards. (P. Diac. Hist. Lang. ii. 21.)

The physical character and topography of the country of the Salentina are given in the article ALACRIA. The following towns are assigned by Pliny to the Salentines, as distinguished from the Calabrians, strictly so called: ALETUM, BASTA, NELIETUM, UCHENUM, and VERETUM. All these are situated in the extreme southern end of the Iapygian peninsula. The list given by Ptolemy nearly agrees with that of Pliny; but he adds Iuniae, which was considerably further north, and is reckoned on good authority a Calabrian city [RHUDAIRE]. The place he calls Banata is probably the Basta of Pliny. To these inland towns may probably be added the seaports of CALYMNOS, CASTRUM MINERVAE, and perhaps HYDRAELUM also, though the last seems to have early received a Greek colony. But it is probable that at an earlier period the territory of the Salentines was considerably more extensive. Stephannus of Byzantium speaks of a city of the name of Sallentia, from which was derived the name of the Salentines, but no mention of this is found in any other writer, and it is probably a mere mistake. [E. H. B.]

SALEUM (Σάλευμ) or SALERNUM (Σάλερνο), a city of Campania, but situated in the territory of the Ficenzienses, on the north coast of the gulf of Posidiania, which now derives from it the name of the Gulf of Salerno. We have no account of its origin or early history; it has been supposed that it was like the neighbouring Marcina a Tyrrhenian or Pelasgic settlement [MARCSNA]; but there is no authority for this, and its name is never mentioned in history previous to the settlement of a Roman colony there. But when this was first decreed (in b. c. 157, it was not actually founded till b. c. 194), Livy speaks of the place as Castrum Salerni, whence we may infer that there was at least a fortress previously existing there (Livy xxxiii. 29, xxxiv. 45; Vell. Pat. i. 14: Strab. v. p. 231.) The Roman colony was established, as we are expressly told by Strabo, for the purpose of holding the Picentines in check; that people having actively espoused the cause of Hannibal during the Second Punic War (Strab. l. c.) Their town of Picentium being destroyed, Salernum became the chief town of the district; but it does not appear to have risen to any great importance. In the Social War it was taken by the Samnite general C. Papius (Appian, B. C. i. 42); but this is the only occasion on which its name is mentioned in history. Horace alludes to it as having a mild climate, on which account it had apparently been recommended to him for his health (Hor. Ep. i. 15. 1.) It continued to be a municipal town of some consideration under the Roman Empire, and as we learn from inscriptions retained the title of a Colonia (Plin. iii. 5. s. 9; Ptol. iii. 1. § 7; Itin. Ant.; Tab. Pent.; Mommsen, Inser. R. N. pp. 9—12.) But it was not till after the Lombard conquest that it became one of the most flourishing cities in this part of Italy; so that it is associated by Paulus Diaconus with Caprea and Neapolis among the "epoebatissime urbes" of Campania (P. Diac. Hist. Lang. ii. 17). It retained this consideration down to a late period of the middle ages, and was especially renowned for its school of medicine, which, under the name of Schola Salernitana, was long the most celebrated in Europe. But it seems certain that this was derived from the Arabs in the 10th or 11th century, and was not transmitted from more ancient times. Salerno is still the see of an archbishop, with a population of about 12,000 inhabitants, though greatly fallen from its medieval grandeur.

The ancient city, as we learn from Strabo (v. p. 231), stood on a hill at some distance from the sea, and this is confirmed by local writers, who state that many ancient remains have been found on the hill which rises at the back of the modern city, but no ruins are now extant. (Romullo, vol. iii. p. 612.) From the foot of this hill a level and marshy plain extends without interruption to the mouth of the Silurus, the whole of which seems to have been included in the municipal territory of Salernum, asLucan speaks of the Silurus as skirting that cultivated lands of the city (Lucan, ii. 425). The distance from Salerno itself to the mouth of the
SALETIO.

The name occurs in the Not. Imp., in the Antonine Itin. and in the Table. Ammianus (xvi. 2) names it Salico: "Argentum, Brocagum, Tabernas, Salisoneum, &c." The Itin. places Salicio between Argentoratum (S. Salis) and Tabernerum, and the Table places it between Tabernane and Brocagum (Burmann), which is north of Strassburg. The numbers are not correct in the Itin.; but there is no doubt that the place is Setz near the Rhine. A diploma of Otho the Great names it "Salico in Elissazium," in Elas or Alacce. (D'Anville, Notice, &c.) [G. L.]

SALIGANUS (Sālagiones; Liv. uses the Gr. acc. Saligane.) a town upon the eastern coast of Bosotia, and between Chalcis and Anthedon, is said to have derived its name from a Bosotian, who served as pilot to the Persian fleet of Xerxes, and was put to death upon suspicion of treachery, because no outlet appeared to the channel of the Euripus; but the Persian commander, having found out his mistake, erected a monument on the spot, where the town was afterwards built. (Strab. ix. p. 403; Demearch. Stat. Graec. p. 19; Steph. B. s. v.) Saligano was considered an important place from its commanding the north-westerly entrance to the Euphrates (Diod. xix. 77; Liv. xxxix. 37, 46, 51.) The remains of the town stand directly under the highest summit of Mount Messapia, in the angle where the plain terminates, and upon the side of a small port. The citadel occupied a height rising from the shore, 90 yards in length, and about 50 broad, and having a flat summit sloping from the SE. towards the sea. There are remains of walls on the crest of the summit, and on the SE. side of the height. (Leake, Northern Greece, vol. ii. p. 267.)

SAILI (Sāli, Itul. iii. 5. § 22), a people of Eastern Sarmatia, whom Schaafirik (Stor. Alt. vol. i. p. 302) places on the river Salius in the Baltic province of Livonia. [E. B. J.]

SALIA, a river in the territory of the Astures, on the N. coast of Hispania Tarraconensis. (Mela, iii. 1.) Now the Sella. [T. H. D.]

SALIA, a branch of the Moesa (Moesias) distinguished by Venant. Fortun. (iii. 12, 5), which must be the Selle (Fobiger, vol. iii. p. 126). The Selle joins the Mosel at Metz. [G. L.]

SALICA (Sālīca, Itul. ii. 6. § 59), a town of the Oretiæ in Hispania Tarraconensis. [T. H. D.]

SALICE. [Tzphorane.]

SALICES (AD), a place in Moesa which the Antonine Itinerary places not far from the mouths of the Danube at 43 M. P. from Halyartis, and 62 M. P. from Tomi. The low and marshy meadows which surrounded it were the scene of the sanguinary battle between the great Frigidern and the legions of Valens. (Amm. Marc. xxxi. 7. § 5; Gibbon, c. xxvi.; Le Beau, Des Empires, iv. p. 112; Greenwood, Hist. of the Germans, p. 328.) [E. B. J.]

SALIENTIS (Saliuentis, Itul. Ant. p. 425), a place in Gallaecia, on the road from Bracara to Asturica; variously identified with Cabielas and Oriha in (T. H. D.).

SALINAE, in Gallia, the chief town of the Suertri or Suvetri (Itul. iii. 1. § 42), a people in the Province E. of the Rhone. An inscription in Sop, "Deo civitatis Salini," is said to belong to this place; and another inscription has been found at Lucerano near the sources of the Pogoiene: "C. Julio Valentin J. F. Fabr. vi. viro civitatis Saliniensi. . . . Alpium maritimarum patrono optimo." Some place Salini at Castellum in the diocese of Senex in the Maritime Alps, where there are salt-springs, and where Sopin's inscription is said to have been found. D'Anville places it at Seclunae in the diocese of Frejus, near Faventia (Pognone); and he observes that all the old towns of this country preserve their names. (D'Anville, Notice, &c.; Ubert, Galliana, p. 438.) [G. L.]

SALI'NÆ (Sālīnae, Itul. ii. 3. § 21), a town of the Catuvelenos or Capceli, towards the E. coast of Britannia Romania. Camden (p. 339) identifies it with Salody or Sandybe, near Puttom in Bedfordsire; others have sought it in the S. part of Lincolnshire. [T. H. D.]

SALI'NÆ (Sālīnae, Itul. ii. 3. § 7; Fest. Tajb.; Geog. Rav. iv. 7.), a town of Dacia identified with Tharace, on the Araragus in Transylvania, where there are Roman remains. (Comp. Paget, Hungary and Transylvania, vol. ii. p. 239.) [E. B. J.]

SALINSNE. [MAURETANIA, Vol. ii. p. 299, a.]

SALIN'NEM (Sālīnum), a place on the right bank of the Danube, a little below Aquincum, on the road from this town to Mursa in Lower Pannonia. (Itul. ii. 16. § 4; It. Ant. p. 245, where it is called Vetus Salina.) On the Fest. Table we find in that spot the corrupt name Vetalesium. Its site must have been in the neighbourhood of the modern Hunsauce.

SALIOCANUS. [SALIOCANES.]

SALIOCLITAt, in Gallia, is placed by the Antonine Itin. on the road from Gerardum (Olerose) to Letetilia (Paris). It is Sucat, a little south of Etampes, on the Juine, a branch of the Seine. The Itin. makes the distance the same from Genabaum, and Letetilia, which we must take to be La Cité de Paris; but there is an error in the Itin., as D'Anville shows, in the distance from Salioclita to Letetilia, and he proposes to correct it. [G. L.]

SALISSO, in north Gallia, is placed by the Antonine Itin. on a road from Augusta Trevirorum (Trier) to Bingium (Bingen). The places reckoned from Augusta are Bandobrica xvii., Salissus xxii, Bingium xxiii. This Bandobrica is not the place described under the article BANDOBRIA (Bopp.). Two Gallic leagues exceeds the usual distance from Trier to Bingen considerably. The site of Saliso is uncertain. [G. L.]

SALLAECUS (Sālaecus, Itul. ii. 5. § 8), a town in the S. of Lusitania. [T. H. D.]

SALIENCI. [SALENTINI.]

SALLUNTIUM. [DALLMATIA.]

SALMI'NICA (Sālaminica, Itul. ii. 5. § 9), in the Itin. Ant. called Salamitice; in Polyaeus Strat. viii. 48, Sālaminic, an important town of the Vetones in Lusitania, on the S. bank of the Duras, on the road from Emerita to Caesargangusta. It is incontestably identical with the 'Esimatia of Polybius (iii. 14), and the Hermadica or Hemiadica of Livy (xxii. 5; cf. Nonius, Hesp. c. 38). It is the celebrated modern town of Salamanca, where the piers of a bridge of twenty-seven arches over the Tormes, built by Trajan, are still in existence. (Cf. Minano, Diccio. vii. p. 492; Florez, Esp. Topog. vii. p. 267.)

SALMONA, a branch of the Moesa (Mosel).

"Nec fastiditae Salmonae usurps fluores," (Aussimins, Mosel. 366.)

The Salmona is the Salme, which flows into the Mosel, near the village of Neuengen. [G. L.]
have accomplished without much difficulty. (Anab. l.c.)

SALO, a tributary of the Ierus in Celtiberia, which flowed past the town of Biblis (whence Justin, xii. 3, calls the river itself Biblis), and entered the Ierbera at Alarobia. (Mart. i. 49, x. 50, 103, iv. 55.) Now the Xalon.

[II. H. D.]

SALODURUM, in Gallia, is placed in the Antonine Itin. x. from Petinesca [Petinesca], and the distance from Salodurum to Augusta Laurorum (August near Balsc) is xxii. Salodurum is Solothurn, as the Germans call it, or Solute, and though the distance between Balsc and Solothurn is somewhat less than that in the Itins., this may be owing to the passage over the hills which separate the cantons of Balsc and Solothurn. It is said that there are Roman remains at Solute, and an inscription of the year B.C. 219, "Vico Saloete," has been found there. Salodurum is one of the towns of the Helvetii with a Celtic termination (davr). Clever conjectured that Polomy's Ganodorum [GANODURUM] might be Salodurum. (D'Anville, Notice, &c.; Utter, Gallien.)

[II. G.]

SALOE (Σαλόη, Paus. vii. 24, § 7), or SOLAE (Pline. v. 31), a small lake of Lydia, at the foot of Mount Sipylos, on the site of Tantalis or Sybylos, the ancient capital of Maesia, which had probably perished during an earthquake. (Strab. i. 58, xii. p. 579.) The lake was surrounded by a marsh; and the Phrygians, which flowed into it as a brook, issued at the other side as a river of some importance.

[L. S.]

SALOMACUM or SALAMOCUM, is placed by the Antonine Itin. on a road from Aquae Tarbelliciae (Augsburg) to Caprylianis (Brugges). Salomacum is the next place on the road to Burdigala and xviii. distant. The distance and the name Salae show that Sales is Salomacum.

[II. G.]

SALONA, SALONAE (Σαλώνα, Salona; this latter is the more usual form, as found in Inscriptions, Orelli, Inscr. nos. 502, 3833, 1495; and on coins, Basche, vol. iv. pt. i. p. 1557; Eth. Σαλώνης, Σαλώνεις), a town and harbour of Dalmatia, which still bears its ancient name, situated on the SE. corner of the gulf into which the Adriatic breaks (Can. d. Castelli), on the N. of the river Iader (il Giadro). Lucan's description (viii. 104) —

"qua maris Adriaci longas ferit unda Salonas"

Et tepidum in molles Zephyros excurrunt Iader" — agrees with its oblong form, still traceable in the ruins, and with the course of the river. Though the public buildings and houses of ancient Salona have been destroyed, enough remains of the wall to show the size, as well as position, of the city; and the arch of the bridge proves that the course of the river is unchanged. The city consisted of two parts, the eastern and the western; the latter stands on rather higher ground, sloping towards the N., along which wall on that side is built. Little is known of Salona before the time of Julius Caesar; after the fall of Daminium it became the chief town of Dalmatia, and the head-quarters of L. Carullus Metellus. (Mart. i. 117.) Apianus, Illyric. i. 3. It was besieged a second time, and opened its gates to Cn. Coecusius, n. c. 78. (Entrop. vi. 4; Oros. v. 23.) When the Pompeian fleet swept the Illyrian gulf from Corcyra to Salona, M. Octavius, who commanded a squadron for Pompeius, was compelled to retreat with loss from before this stronghold of
Salona.

Caesar's. (Caes. B. C. iii. 9.) The prefigurative Ga- 
numus, after being cooped up for months in the 
fortress, died here. (Aue. E. Alex. 43; Dion Cass. 
xxiii. 12.) In b. c. 39 Asinius Pollio defeated the 
Partheni, who had espoused the cause of Brutus and 
Cassius, and took Salona, in commemoration of 
which his son Asinius Boreus bore the "agnomen" 
Salaminis (Comp. Virg. Bucol. viii. 7; Hor. Carm. i. 11. 
14—16.) From the time it received a colony it 
was looked upon as the great bulwark of the Roman 
power on that side the Auratic, and was distin-
guished for its loyalty, as was shown in the siege 
which was maintained against Bato the native leader, 
A.D. 6. All the great Roman roads to Dalmatia met at 
this point, and when the country was divided into three 
"conventus," or assise towns, as many as 382 
"decuriae" were convened to it. (Plin. iii. 26.) 

Under the earlier emperors the town was embell-
ished with many public buildings, the number of 
which was greatly increased by Diocletian, who, 
according to Porphyrogenitus (de Ada. imp. 29), 
completely rebuilt the city. No great change has 
been made for nearly two centuries after the death 
of that emperor; but if we are to believe Porphy-
rogenitus (l. c.) the "long Salona" attains to 

half the size of Constantinople. 

In A. D. 481 Sal-

onae was taken by Odovacer, king of the Heruli, but 

was recovered from the Goths by the Gepid prince 

Mundus, the general of Justinian. Tolita occupied 
it for a time. Little is known of these sieges, except 

that it was partially destroyed. (Procop. B. G. i. 
5, 7, 17, &c.) It soon recovered from these disasters; 

and it was from Salona that Belisarius in 544, 

and Narses in 552, set out to rescue Italy from 

Tolita and the Goths. (Comp. Gibbon, c. xili.) 

The Avars invaded Dalmatia in 639, and, advancing 

upon Salona, pillaged and burnt the town, which 

from that time has been deserted and in ruins. 

(Const. Porph. l. c.) The town possessed a dock-

yard, which, from Strabo's (vii. p. 315) account, 

seems to have been the only one deserving that 

name on the Dalmatian coast. The present state 

of the place offers many illustrations of past events; 

the following works tend very fully upon the 

remains of the fortifications and other ruins; Wil-

kinson, Dalmatia, vol. i. pp. 151—164; Neiebaur, 

Die Nord-Serben, pp. 151—164; Lanza, Antiche 

Lapide Salomicane inedita, Zara, 1850; F. Carrara, 

Topografia e Storia di Salona, Trieste, 1850. 

The fame of Salona must partly rest upon its neigh-

borhood having been chosen by Diocletian as the 

place of his retirement. That emperor, after his 

resignation, spent the last nine years of his life in 

the seclusion of the palace which has given its name to 

Spalato. Spalato, often erroneously called Spoa-

latro, in Illyric Split, is a corrupted form of Salomae 

Palatum or S. Palatium. The building of the 

palace, within the precincts of which the greater 

part of the modern town is constructed, occupied 

twelve years. The stone, which was very little 

inferior to marble itself, was brought from the 

quarries of Tragurium. After the death of Di-

ocletian, but little is known of the palace or its 

occupants. Part of it was kept by the magistrates 

of Salona, as a state palace; and part was occupied 

by the "Gynaeicum," or cloth manufactory, in 

which women only were employed,—whence the 

name. It was tainted by the phantom emperors 

of the West, Glycerius and Julius Nepos, the latter 

of whom was found murdered when Salona was 

captured by the Avars, the houseless citizens fled to

the massive structure of the palace for shelter: the 

settlement swelled by the arrival of their country-

men became a homogeneous mass of people called 

ASPALLATHUM, and paid an annual tribute of 2,00 

pieces of gold to the Eastern emperors. (Const. 

Porph. l. c.) 

The palace is nearly a square, terminated at 

the four corners by a quadrangular tower. Accor-

ding to the latest and most accurate investigations, 

the superficial content, including the towers, 

occupies a space of a little more than eight acres. 

(Wilkinson, Dalmatia, vol. i. pp. 116, 118; Neie-

baur, Die Sud-Staaten, pp. 134—151.) The en-

tire building was composed of two principal sec-

tions, of which the one to the S. contained two 

temues,—one dedicated to Jupiter the other to 

Aesculapius—and the private rooms of the 

emperor. Two streets intersected each other at right 

angles, nearly in the centre of it; the principal one 

led from the Porta Aurea, the main entrance on 

the N. front, to a spacious court before the vestibule; 

the other ran in a direct line from the W. to the 

gate, and crossed the main street just below the 

court. What remains is not enough to explain the 

distribution of the various parts of the interior. 

By a comparison of what existed in his time with 

the precepts of Vitruvius, Adams (Antiquities of 

Diocletian's Palace, 1764) has composed his inges-

tious restoration of the palace. (Comp. Gibbon, 

c. xiii.) All the gates, except the Porta Argeenta, 

were defended by two octagonal towers; the principal 

or "golden gate" still remains nearly perfect. The 

temple of Jupiter is now the "Duomo," and that of 

Aesculapius is a baptistery dedicated to St. John. 

Diocletian's palace marks an era;—columnar was 

so combined with arched architecture, that the 

arches were at first made to rest upon the enta-

blature, and afterwards were even forced imme-

diately to spring from the abacus, in violation of 

the law of statics, which requires undiminished and 

angular pillars under the arch; at length the enta-

blature itself took the form of an arch. (Muller, 

Ancient Art, §193.) But although this archi-

tecture offends against the rules of good taste, yet 

these remains may serve to show how directly the 

Saracens and Christian architects borrowed from 

Roman models many of the characteristics which 

have been looked upon as the creation of their own 

imagination. (Comp. Hope, Architecture, vol. i. 

Hist. viii.; Freeman, Hist. Brit. civ., p. 152.) A plan 

of the palace of Diocletian, taken from Adams, 

will be found in Fergusson's Handbook of Architec-

ture, vol. i. p. 356, accompanied by an account of 

the general arrangements of the building. [E.B.] 

Salp'esa, a Roman municipium in Hisp. Baetica, 

Se of Hispalis, at the ruined Faciolaeasar, 

between Ufera and Corunna. (Florez, Esp. Sagra-

ix. p. 17; Mionnet, Suppl. i. p. 44.) [T. H.D.] 

Salpinum (Eth. Salpinas), an ancient city of 

etura, mentioned only by Livy (v. 31, 32), who 

speaks of the Salpinates as assisting the Volscians 

in their war against Rome in B.C. 389. It is clear 

from the manner in which they are here spoken of 

that they were an independent people, with a con-

siderable territory and a fortified city; and the 

manner in which they are associated with the powerful 

Volscians would lead to the inference that they also 

must have been a people of considerable power. 

Yet no subsequent mention of their name is found, 

and all trace of their city is destroyed. [T. H. d.]
modern Ὀργίτω, the name of which is evidently a corruption of Urbis Vetus, the term used by Paulus Diaconus in the seventh century (P. Dian. iv. 33): there is, therefore, little doubt that the site was one of a more ancient Etruscan city: and its proximity to Volsciini renders it probable enough that it may have been Salpium. But no reliance can be placed upon any such conclusion. (Nebhur, vol. ii. p. 493.)

SALSAS, or SALSA, a river of Carnumia, noticed by Pline (vi. 25). Beichard imagines that this is the same stream as that called by Marcian, Cathraps (p. 21, ed. Hudson), and by Ptolemy, Aroas or Cathraps (vi. 8, § 4): and he identifies it with the modern Shur: but this seems very doubtful. [V.]

SALSULAE, in Gallia. Mela (ii. 5) describes the Salianae Foens as not sending forth fresh water, but water saltier than the sea. He places the Foens south of the lake Rubrenus, and near the shore which he calls Locate (LUCIATE). Salianae is in the Antonine Itin. on the road from Narbo to the Pyrennes. Salsulae is Salus or Salpes, where there is a salt-spring. Near the Foens, says Mela, is a plain very green with fine and slender reeds, under which is water. This is the place, he says, where fish are got by striking down with a prong or something of the sort; and this is the origin of the fablus told by the Greeks and some Romans about fishes being dug out of the ground. He alludes to Polybius (xxiv. 10). [Resonus.]

SALSUM FLUMEN, a tributary of the Baetis in Hispania Baetica, between Attagula and Attobus. (Hirtius, B. A. c. 7, 8) Variously identified with the Gualatogus and Salado. [T. H. D.]

SALUS. [Stachir.]

SALTATES (Σαλτάται), Strab. iii. p. 144, according to Strabo a people of Spain celebrated for their woolen manufacture. But we must probably read in this passage Σαλτατέραι. [T. H. D.]

SALTICHI, a town of the Celitberi in Hispania Tarraconensis. (Itin. Ant. p. 447.) Variously identified with Jorquero and S Maria del Campo. [T. H. D.]

SALTIGA (Σαλτίγα), Ptol. ii. 6, § 61), a town of the Brittanii in Hispania Tarraconensis. [T. H. D.]

SALTOPYRGUS. [Teglicium.]

SALVANUS (Salven), a town in Raetia, on the river Athesis, in the north of Tridentum, is mentioned only by Paulus Diaconus. (Hist. Langob. iii. 22.)

SALUTARIS PHYRGIA. [Phrygia, p. 625.]

SALVA (Σαλβα), a town in the north-eastern extremity of Lower Pannonia, on the right bank of the Danube. (Ptol. ii. 16, § 4; Itin. Ant. pp. 266, 267.) According to the Notitia Imperii, where it is called Salva, it contained a garrison of a body of horse-men. The site of this place cannot be ascertained with certainty. [L. S.]

SALYES (Σάλειος), SALYI, SALUVII, or SALIVES (Steph. Byz. s. c.), a Ligurian people in Gallia. There are other variations in the writing of the word. The early Greeks gave the name of Ligyes to these Salves; and their territory, which was in the possession of the Massalians, when Strabo wrote, was originally called Ligyste. (Strab. iv. p. 203,) The geographer means to say that the old Greeks were not acquainted with the name of Salies, but only with the name of the nation to which they belonged. Livy (v. 34) speaks of the Plebeians who founded Massilia being attacked by the Salies, for in his time the name Salies was familiar to the Romans.

SALYES.

Strabo speaks of the Salies in his description of the Alps. He makes their country extend from Antipolis to Massilia, and even a little further. They occupied the hilly country which lies inland and some parts of the coast, where they were mingled with the Greeks (iv. p. 203). They extended west as far as the Rhone. The Salies had also the north country of Massilia as far as the Draceta (Durastu), a distance of 500 stadia; but on crossing the Draceta at Cabellio or Caballio (Cavallion) a man would be in the country of the Cavares (Strab. iv. p. 185), which extended from the Draceta to the Isara (Isere). [Cavares.] Strabo adds that the Salies occupy both plains and the mountains above the plains. In this passage (Ov. νύμ Σάλεως έν αντίφως) Grosseuf (Transl. Strab. vol. i. p. 318) has altered Σάλεως into Kaöapa, and so he has spoiled the meaning. Ukert has defended the true reading, though he has not correctly explained έν αντίφως. The Salies occupied the wide plains east of Tarascon and Arles, one of the best parts of the country between the Durastu and the Mediterranean; and so Strabo could correctly say that the Volsci Tectosages who reach to the Rhone had the Salies extending along their border and opposite to them on the other side of the river, and the Cavares opposite to them (north of the Durastu). The Salies are sometimes distinguished from the Ligures, as when Strabo (iv. p. 178) speaks of the coast which the Massalians possess and the Salies as far as the Ligyes to the ports towards Italy and the river Varus, the boundary of the Narbonites (Provincia Narbonensis) and Italy. Livy also (xxvi. 26) speaks of P. Cornelius Scipio sailing along the coast of Etruria and of the Ligures, and then the coast of the Salies till he came to Massilia. This shows that the Ligurians of Gallia, or the country west of the Var, became known to the Romans by the name of Salies. Strabo's remark that these Salies, whom the early Greeks named Ligures, were called Celtoigyes by the later Greeks, may explain how Livy or his Epitomiser has called the Salies both Ligurians ("Transalpino Ligures," Ep. 47) and Galli (Epit. 60). They were a mixed race of Galli and Ligures.

The Salies were a warlike people. They had both infantry and cavalry, distributed into ten tribes. They were the last of the Transalpine nations which the Romans subdued. (Florus, iii. 2.) The Romans fought for a long time with the Ligurians east of the Var, and with the Salies west of it, for these people being in possession of the sea-coast closed against the Romans the way into Spain. They plundered both by sea and land, and were so formidable that the road through their land was hardly safe for a large army. After eighty years of fighting the Romans with difficulty succeeded in getting a road of 12 stadia in width allowed for the free passage of those who went on the public service. (Livy (xxxii. 10) tells us that in the Second Punic War the Insuls, Cenomani, and Boii stirred up the Salies and other Ligurians to join them; and all together under Hamilcar attacked Placentia. There is no ground, as Ukert remarks, to alter the reading "Salyes," for we see no reason why the Salies as well as other Ligurians or mixed Ligurians should not also be divisions of the Salies; and the Cispaline Galli dared the attacks and the encroachment of the Romans. The alliance with
SAMAICA.

Massilia first brought the Romans into the country of the Salyes; and in B.C. 154 the Oxibii and Deciates, or Deciates, who were threatening Massilia, were defeated by the consul Q. Opimius. The Salyes or Salluvii are not named on this occasion by the historians, and the Deciates and Oxibii, who were certainly Ligurians, may have been two smaller tribes included under the general name of Salyes or Salluvii. [Deciates; Oxibii]. The consul M. Fulvius Flaccus in B.C. 125 defeated the Salyes, and in B.C. 123 the consul C. Sextius Calvinus completed the subjugation of this people, and founded Aquae Sextiae (Aix) in their territory.

Ptolemy (ii. 10. § 15) enumerates Tarascon, Glenum, Arelatum (Arelate) Colonia, Aquae Sextiae Colonia, and Eragnium as the towns of the Salyes, Tarascon, Glenum (St. Remi), Arelate, and Eragnium [Exagnium] all lie west of Aquae Sextiae (Aix) and of Marseilles; and we may conclude that the country of the Salyes is the western half of the tract between the Var and the Rhone, and between the Durance and the Mediterranean.

The tribes east of the Salyes, the Albici, Swetri, Nerusi, Oxibii, and Deciates, and there may be some others [Comm.).], were perhaps sometimes included under the name of the more powerful nation of the Salyes; but Strabo's statement does not appear to be strictly correct, when he makes the Salyes extend along the coast to Antipolis. The coast immediately west of the Var belonged to the Deciates and Oxibii. Pline says "Ligurium celebrerrimi ultra Alpes, Salluvii, Deciates, Oxibii" (ii. 5): the three tribes of Transalpine Ligures whose names occur in the history of the Roman conquest of this country.

In Pline's list of the Coloniae in the interior of Narbonnesia east of the Rhone there is "Aquae Sextiae Salluviorum," and we may conclude that the head-quarters of the Salyes or Salluvii were in the plain country above Aix, and thence to Arles. Owing to their proximity to the Greeks of Massilia they would be the first of the Ligures or the mixed Gauli and Ligurioti who felt the effect of Greek civilisation, and there can be no doubt that their race was cessed by Greek blood. Possessing the town of Arelate, at the head of the delta of the Rhone, they would have in their hands the navigation of the lower part of the river. The history of this brave and unfortunate people is swallowed up in the blood-stained annals of Rome; and the race was probably nearly extinguished by the consul Calvinus selling them after his conquest. [G. L.]

SAMAICA (Σαμαίη, Ptol. iii. 11. § 9), is described by Ptolemy as a στρατηγια of Thrace, on the borders of Macedonia and the Aegaean. [J. B.]

SAMACHONTITIS LACUS (Σαμαχοντίτιτις Λίμνη Ν. Σαμαχοντίτιτς), the name given by Josephus to the small lake of the Upper Jordan, called in Scripture the "waters of Meron," where Joshua routed the army of Jabim, king of Hazor, which city, according to Josephus, was situated above the lake. (Comp. Josh. xi. 5, 7, and Judges, iv. with Josephus, Ant. v. 5. § 1.) He elsewhere describes the lake as 60 stadia long by 30 broad, extending its marshes to a place called Daphne, which Rabel is probably right in altering to Dane, l. e. Dan, as Josephus immediately identifies it with the temple of the Golden Calf. (Joseph. B. J. iv. 1. § 1; Read. Palaeot. p. 263.) He nowhere, which is nowhere found, has been variously derived, but the most probable etymology would connect it with sense in which the Hebrew name Merom = aque superiores, deriving the word from the Arabic "samaca," alta fuit. (Roland, l. c. p. 262.) It is singular that no other notices occur of this lake in sacred or in other writings. Its modern name is Rahr-el-Hulch. Pococke writes: "Josephus says the lake was 7 miles long, but it is not above 2 miles broad, except at the north end, where it may be about 4. The waters are muddy and esteemed wholesome, having something of the nature of a morass." (Observations on Palæstina, vol. ii. p. 73.) Dr. Robinson "estimated its length at about 2 hours, or from 4 to 5 geographical miles; its breadth at the northern end is probably not less than 4 miles." It had the appearance almost of a triangle, the northern part being far the broadest; "or rather the map gives it to some degree the shape of a pear." (Bibl. Res. vol. iii. pp. 329, 340, Biblioth. Sacro. vol. i. p. 12; Stanley, Sinai and Palestine, p. 383, n. 1.) [G. W.]

SAMAMYCH. [SYRIA].

SAMIARA. [EUBDES; SAMAKOBHRAJ.]

SAMIARIA (Σαμαίρια, LXX., Joseph; χώρα Σαμαίρία, Σαμαίρια, Ptol.). The district has been already described in general, under PALASTINA (p. 518), where also the notice of Josephus has been cited (p. 532). It remains to add a few words concerning its extent, its special characteristics, and its place in classical geography. It lay, according to Josephus, "between Judaea and Galilee (comp. St. John, iv. 4), extending from a village called Ginea in the great plain (Esdraelon) to the toparhy of Acrabatta." Ginea there can be no difficulty in identifying with the modern Jenin, at the southern extremity of the plain, on the road from Nablus to Nazareth. The toparhy of Acrabatta, mentioned also by Pline, is difficult to define: but it certainly lay between Nablus and Jericho, and therefore probably east of the toparhy of Gophna and in the same parallel of latitude. (Eusebius, Onomast. x. v. Ἀκράβατα; Roland, Palaeot. p. 192.) The northern boundary of Samaria is well defined by a continuous line of hills, which, commencing with Mount Carmel on the W., runs first in a S.W. direction and then almost due E. to the valley of the Jordan, bounding the great plain of Esdraelon on the S. Its southern boundary is not so distinctly marked, but was probably confinable with the northern limits of the tribe of Benjamin. It contained the tribe of Ephraim, and the half of Manasseh on this side Jordan, and, if it be extended as far E. as Jordan, included also some part of Issachar, that skirted these two tribes on the E. Pline (v. 13) reckons to Samaria the towns Neapolis, formerly called Mamortha, Schaste, and Gamala, which last is certainly erroneous. [G. M.]. Ptolemy names Neapolis and Thena (Θηνα, v. 16. § 5), which last is evidently identical with Thams, (Σάμαρια), and still existing in a village named Thena, 10 miles E. of Neapolis, on the descent to the Jordan. St. Jerome notes that the most precious oil was produced in Samaria (in Hierom, cap. xii.), and its fertility is attested by Josephus. [G. W.]

SAMARIA, SEBASTE (Σαμάρια, Σεβάστη), the Hebrew Shammon, the capital city of the kingdom of Israel, and the royal residence from the time of the division of Israel (Cir. c. 925), in which time it is said that "he bought the hill Samaria of Shemer for two talents of silver, and built on the hill, and called the name of the city which he built after the name of Shemer, owner of the hill, Samaria" (Heb. Shemeron). (1 Kings, xvi. 24.) Mr. Stanley thinks 3. b. 4.

SAMBULOS. [Bagistanus Mons.] SAMBUS (Σαμβος), a small river which forms one of the tributaries of the Jamna. It is mentioned by Arius in his list of Indian rivers (Fed. c. 4.). [V.]

SAME or SAMOS (Σάμος; Eth. Σάμωτος; Σαμος), the most ancient city in Cephallenia, which is also the name of this island in the poems of Homer. [Cephallenia.] The city stood upon the eastern coast, and upon the channel separating Cephallenia and Ithaca. (Strab. x. p. 455.) Along with the other Cephalenian towns it joined the Athenian alliance in B.C. 431. (Thuc. ii. 30.) When M. Fulvius passed over into Cephallenia in B.C. 189, Samos at first submitted to the Romans along with the other towns of the island; but it shortly afterwards revolted, and was not taken till after a siege of four months, when all the inhabitants were sold as slaves. (Liv. xxxviii. 28, 29.) It appears from Livy's narrative that Same had two citadels, of which the smaller was called Cystis; the larger he designates simply as the major arx. In the time of Strabo there existed only a few vestiges of the ancient city. (Strab. L. e.; comp. Plin. iv. 12. s. 19.)

Same has given its name to the modern town of Samos, and to the bay upon which it stands. Its position and the remains of the ancient city are described by Leake. It stood at the northern extremity of a wide valley, which borders the bay, and which is overlooked to the southward by the lofty summit of Mount Aeonus (Elato). It was built upon the north-western face of a precipitous height, which rises from the shore at the northern end of the modern town. "The ruins and vestiges of the ancient walls show that the city occupied the two summits, an intermediate hollow, and their slope as far as the sea." On the northern of the two summits are the ruins of an acropolis, which seems to have been the major arx mentioned by Livy. On the southern height there is a monastery, on one side of which are some remains of a Hellenic wall, and which seems to be the site of the Cyatis, or smaller citadel. There are considerable remains of the town walls. The whole circuit of the city was barely two miles. (Leake, Northern Greece, vol. iii. p. 55.)

COIN OF SAME.

SAMNIA. [SAMICUM.] SAMICUM (Σαμίκων; Eth. Σαμικετει), a town of Triphyllia in Elis, situated near the coast about half-way between the mouths of the Alpheus and the Neda, and a little north of the Anigrus. It stood upon a projecting spur of a lofty mountain, which here approaches so near the coast as to leave only a narrow pass. From its situation commanding this pass, it is probable that a city existed here from the earliest times; and it was therefore identified with the Arene of Homer (II. ii. 591, xi. 723), which the poet places near the mouth of the Minyas, a river supposed to be the same as the Anigros [Arene.] According to Strabo the city was originally called SAMOS (Σαμος), from its being situated upon a hill, because this word formerly signified "heights." Samnicus was at first the name of the fortress, and the same name was also given to the surrounding plain. (Strab. viii. pp. 346, 347; Paus. v. 5. § 3.) Pausanias speaks (v. 6. § 1) of a city SAMIA (Σαμια), which he apparently distinguishes from Samnicum; but Samnicum is the only place mentioned in history [see Some Remarks under MACISTUS.] Samnicum was occupied by the Actian Lysaperephon against the Arcadians, and was taken by Philip, p. c. 219. (Paus. v. 6. § 1; Polyb. iv. 77, 80.) The ruins of Samnicum are found at Khtaijia (written Xαιτης), which is only the name of the guarded pass. The ruined walls are 6 feet thick, and about 1½ mile in circumference. They are of the second order of Hellenic masonry, and are evidently of great antiquity. The towers towards the sea belong to a later age.

Near Samnicum upon the coast was a celebrated temple of the Samian Poseidon, surrounded by a grove of wild olives. It was the centre of the religious worship of the six Triphyllian cities, all of whom contributed to its support. It was under the superintendence of Macistus, the most powerful of the Triphyllian cities. (Strab. viii. pp. 344, 346, 347.) In a corrupt passage of Strabo (p. 344) this temple is said to be 100 stadia equidistant from Liepeum and the Antius (τον 'Αντίου); for the latter name we ought to read Alpheus and not Anigros, as some editors have done.

In the neighbourhood of Samnicum there were celebrated medicinal springs, which were said to cure cutaneous diseases. Of the two lagoons which now stretch along the coast, the larger, which extends as far as the mouth of the Alpheus, begins at the northern foot of the hill upon which Samnicum stands; the southern extends along the precipitous sides of the hill, which were called in antiquity the Achaean rocks. (Strab. viii. p. 347.) The river Augeiros flows into the latter of these lagoons, and from thence flows out into the sea. The lagoon is deep, being fed with subterraneous sources; in summer it is said to be very fetid, and the air extremely unwholesome. Strabo relates that the waters of the lake were fecund, and its fish not eatable, which he attributes to the Centaura washing their wounds in the Anigros. Pausanias mentions the same circumstances; and both writers describe the efficacy of the water in curing cutaneous diseases. There were two caves, one sacred to the Nymphs Anigrides (Αυγηρίδες, Paus.; Αυγηρηδείς, Strab.), and the other to the Atlanteis; the former was the more important, and is alone mentioned by Pausanias. It was in the cave of the Anigrides that the persons who were going to use the waters first offered up their prayers to the Nymphs. (Strab. viii. p. 346, seq.; Paus. v. 5. §§ 7—11.) These two caves are still visible in the rocks; but they are now accessible only by a boat, as they are immediately above the surface of the lake. General Gordon, who visited these caverns in 1832, found in one of them water distilling from the rock, and bringing with it a pure yellow sulphur. (Leake, Morea, vol. i. p. 54, seq., Peloponnesiaca. p. 106; Boblaye, Recherches, d.c., p. 133, seq.; Curtius, Peloponesos, vol. ii. p. 75, seq.)

SAMIANTHUS. [Σαμιαντός], a town in the Argia, on the western edge of the Argive plain, which was taken by Agis, when he marched from Phlius into the territory of Arcos in B.C. 418. (Thuc. v. 58.) Its position is uncertain. Leake, who supposes Agis to have marched over Mt. Lyreum and the adjoining hills, places it at Kutzopodi (Morea,
SAMNIA.

SAMNIA. [SAMNIA.]  
SAMNIA (γε Σαμνίας, Pol., Strab.; Eth. SAMNIS, pl. SAMNITI, ΣΑΜΝΙΤΙΑΣ, ΣΑΜΝΙΤΩΝ, Pol., Strab., &c.; ΣΑΜΝΙΤΙΑ, Pol.), one of the principal regions or districts of Central Italy. The name was sometimes used in a more extensive, sometimes in a more restricted, sense, the Samnites being a numerous and powerful people, who consisted of several distinct tribes, while they had founded other tribes in their immediate vicinity, who were sometimes included under the same appellation, though they did not properly form a part of the nation. But Samnium proper, according to the more usual sense of the name (exclusive of the Frentani, but including the Hirpini), was a wholly inland district, bounded on the N. by the Marsi, Peligni, and Frentani, on the E. by Apulia, on the S. by Lucania, and on the SW. and W. by Campania and Latium.

I. General Description.

The territory thus limited was almost wholly mountainous, being filled up with the great mountain masses and ramifications of the Apennines, which in this part of their course have lost even more than elsewhere the character of a regular chain or range, and consist of an irregular and broken mass, the configuration of which it is not very easy to understand. But as the whole topography of Samnium depends upon the formation and arrangement of these mountain groups, it will be necessary to examine them somewhat in detail.

1. In the northern part of the district, adjoining the Marsi and Peligni, was a broken and irregular mass of mountains, containing the sources of the Sagrus (Sangro), and extending on both sides of the valley of that river, as far as the frontiers of the Frentani. This was the land of the Caraceni, the most northerly of the Samnite tribes, whose chief city was Anifrena, in the valley of the Sagrus, about 5 miles above Castel di Sangro, now the chief town of the district.

2. The valley of the Sagrus was separated by a mountain pass of considerable elevation from the valley of the Vulturnus, a river which is commonly considered as belonging to Campania, but its sources, as well as the upper part of its course, and the valleys of all its earliest tributaries, were comprised in Samnium. Ascernia, situated on one of these tributaries, was the principal town in this part of the country, while Venafrum, about 15 miles lower down the valley, was already reckoned to belong to Campania. This portion of Samnium was one of the richest and most fertile, and least mountainous of the whole country. From its proximity to Latium and Campania, the valley of the Vulturnus was one of the quarters which was most accessible to the Roman arms, and served as one of the highroads into the enemy's country.

3. From Ascernia a pass, which was probably used from very early times, and was traversed by a road in the days of the Roman Empire, led to Bovianum in the valley of the Tifernus. This city was situated in the very heart of the Samnite country, surrounded on all sides by lofty mountains. Of these the most important is that on the SW., the Monte Mathaeo, at the present day one of the most celebrated of the Apenines, but for which no ancient name has been preserved. The name of Mons Tifernus may indeed have been applied to the whole group; but it is more probable that it was confined, as that of Monte Biferno is at the present day, to one of the offshoots or minor summits of the Matuse, in which the actual sources of the Tifernus were situated. The name of Matuse is given to an extensive group or mass of mountains filling up the whole space between Bovano (Bovinum) and the valley of the Vulturnus, so that it sends down its ramifications and underfalls quite to the valley of that river, whence they sweep round by the valley of the Color, and thence by Morvone and Mount Ventosus, to the sources of the Taburnus. Its highest summit, the Monte Miletto, SW. of Bo- 

4. N. of Bovano the mountains are less elevated, and have apparently no conspicuous (or at least no celebrated) summits; but the whole tract, from Bovano to the frontier of the Frentani, is filled up with a mass of rugged mountains, extending from Asmone and the valley of the Sangro to the neighbourhood of Campobasso. This mountain tract is traversed by the steep and narrow valleys of the Trigno (Trinunus) and Biferno (Tifernus), which carry off the waters of the central chain, but without affording any convenient means of communication.

The mountain tracts extending on all sides of Bovi-
nianum constituted the country of the 

5. S. of the Matuse, and separated from it by the valley of the Color (Calore), is the group of the Mons Tarchies, still called Monte Tarchies, resembling the Matuse in character, but of inferior elevation as well as extent. It formed, together with the adjoining valleys, the land of the Caumini, apparently one of the smallest of the Samnite tribes, and the celebrated pass of the Caumini Forks was situated at its foot. Closely connected with Mount Taburnus, and in a manner dependent on it, though separated from it by the narrow valley of the Iscerno, is a long ridge which extends from Arpius to near Capan. It is of very inferior elevation, but rises boldly and steeply from the plain of Campania, of which it seems to form the natural boundary. The extremity of this ridge nearest to Capan is the Mons Tifata, so celebrated in the campaigns of Hannibal, from which he so long looked down upon the plains of Campania.

6. At the eastern foot of Mons Taburnus was situated Beneventum, the chief town of the Hirtii, and which, from its peculiar position, was in a manner the key of the whole district inhabited by that people. It stood in a plain or broad valley formed by the junction of the Color with its tributaries the Salatius and Taburnus, so that considerable valleys opened up from it in all directions into the mountains. The Color itself is not only the most considerable of the tributaries of the Vulturnus, but at the point of its junction with that river, about 20 miles below
SAMNII II.
SAMNII
891

Beneventum, is little if at all inferior to it in magnitude and volume of waters. The Calor itself rises in the lofty group of mountains between S. Angelo dei Lombardi and Eboli. This group, which is sometimes designated as Monte Itrpine, and is the most elevated in this part of the Apennines, sends down its waters to the N. in the Calor and its tributary the Sabatus; while on the E. it gives rise to the Aufidus, which flows into the Adriatic sea, after traversing more than two-thirds of the breadth of Italy; and on the W. the Sabinus flows by a much shorter course into the Gulf of Salerno. From this point, which forms a kind of knot in the main chain of the Apennines, the mountains sweep round in a semicircle to the NE. and N. till they reach the head waters of the Tamarus, and adjoin the mountains already described in the neighbourhood of Bojano and Campobasso. In this part of its course the main chain sends down the streams of the Ljta and the Muscano on the W. to swell the waters of the Calore, while on the E. it gives rise to the Cercalus or Cervaro, a stream flowing into the Adriatic. 7. From the Monte Itrpine towards the E. the whole of the upper valley of the Aufidus was included in Saminium, though the lower part of its course lay through Apulia. The exact limit cannot be fixed,—the confines of the Hirpini towards Apulia on the one side, and Lucania on the other, being, like the boundaries of Samnium in general, almost wholly arbitrary, and marked by any natural limit. It may be considered, indeed, that in general the mountain country belonged to Samnium, and the lower falls or hills to Apulia; but it is evident that such a distinction is itself often arbitrary and uncertain. In like manner, the rugged mountain chain which extends along the right bank of the Aufidus appears to have been included in Saminium; but the line of demarcation between this and Lucania cannot be determined with accuracy. On the other hand, the detached volcanic mass of Mons Vultur, with the adjacent city of Venusia, was certainly not considered to belong to Saminium.

II. HISTORY.

All ancient writers agree in representing the Samnites as a people of Sabine origin, and not the earliest occupants of the country they inhabited when they first appear in history, but as having migrated thither at a comparatively late period. (Varr. L. L. v. 29; Appian, Samn. Pr. c. 4: 5; Strab. v. p. 250: Fest. c. n. Samnites, p. 320: A. Gall. xi. 1.) This account of their origin is strongly confirmed by the evidence of their name; the Greek form of which, Zawrii, evidently contains the same root as that of Sabini (Sae-nite or Sef-nite, and Sub-ini or Sub-fit); and there is reason to believe that they themselves used a name still more closely identical. For the Oscan form "Sanini," found on some of the denarii struck by the Italian allies during the Social War, cannot refer to the Sabines usually so called as the people was long before incorporated with the Romans, and is, in all probability, the Oscan name of the Samnites. (Mommsen, Unter Ital., Dialecte, p. 293; Friedländler, Oskische Münzen, p. 78.) The adjective form Sabellus was also used indiscriminately by the Romans as applied to the Sabines and the Samnites. [SADENI.]

The Samnite emigration was, according to Strabo (v. p. 250), one of those sent forth in pursuance of a vow, or what was called a "ver sacrum." It was, as usual, under the special protection of Mars, and was supposed to have been guided by a bull. (Strab. L. c.) It is probable from this statement that the emigrants could not have been numerous, and that they established themselves in Saminium rather as conquerors than settlers. The previously existing population was apparently Oscan. Strabo tells us that they established themselves in the land of the Oscan (L. c.); and this explains the circumstance that throughout the Samnite territory the language spoken was Oscan. (Liv. x. 26.) But the Oscan themselves were undoubtedly a conquest people, with the Sabines [ITALIA]; and whatever may have been the circumstances of the conquest (concerning which we have no information), it seems certain that at an early period both branches of the population had completely coalesced into one people under the name of the Samnites.

The period at which the first emigration of the Samnites took place is wholly unknown; but it is probable that they had not been long in possession of their mountainous and inland abodes before they began to feel the necessity of extending their dominion over the more fertile regions that surrounded them. Their first movements for this purpose were probably those by which they occupied the hilly but fertile tract of the Frenani on the shores of the Adriatic, and the land of the Hirpini on the S. Both these nations are generally admitted to be of Samnite origin. The Freniani, indeed, were sometimes reckoned to belong to the Samnite nation, though they appear to have had no political union with them [FRENTANI]: the Hirpini, on the contrary, were generally regarded as one of the component parts of the Samnite nation; but they appear to have been originally a separate colony, and the story told by Strabo and others of their deriving their name from the wolf that had been their leader, evidently points to their having been the result of a separate and subsequent migration. (Strab. v. p. 250: Serv. of Aen. xi. 785.) The period of this is, however, as uncertain as that of the first settlement of the other Samnites; it is not till they began to spread themselves still further both towards the S. and W., and press upon their neighbours in Lucania and Campania, that the light of history begins to dawn upon their movements. Even then their chronology is not clearly fixed; but the conquest and occupation of Campania may be placed from about B. C. 440 to B. C. 420, and was certainly completed by the last of these dates. [CAMPANIA.] That of Lucania must probably be placed somewhat later; but whatever were the causes which were at this time urging the movements of the Sabellian tribes towards the S., they seem to have continued steadily in operation; and within less than half a century (B. C. 410-360) the Samnites spread themselves through the whole of Lucania, and almost to the southern extremity of Italy. [LU- CANIA.] The subsequent fortunes of these conquering races, and their contests with the cities of Magna Graecia, do not belong to our present subject, for the Lucanians seem to have early broken off all political connection with their parent nation, the Samnites, just as the latter had done with their Sabine ancestors. This laxity in their political ties, and want of a common bond of union, seems to have been in great measure characteristic of the Sabellian races, and was one of the causes which undoubtedly paved the way for their final subjugation under the Roman yoke. But the Samnites seem to have retained possession, down to a much later period, of
th. tract of country from the Silarus to the Sarnus, which was subsequently occupied by the Picentini. (Sylys, p. 3, § 11; Niebuhr, vol. i. p. 94.) They certainly were still in possession of this district in the Second Samnite War; and it is probable that it was not till the close of their long struggles with Rome that it was wrested from them. The Sabellian masters transplanted, like a colony of Picentines, and thus finally cut off the Samnites from the sea. On the side of Apulia the progress of the Samnites was less definite; and it does not appear that they established themselves in the permanent possession of any part of that country, though they were certainly pressing hard upon its frontier cities; and it was probably the sense of this and the fear of the Samnite arms that induced the Apulians early to court the alliance of Rome. [Apulia.]

The Samnite nation, when it first appears in Roman history, seems to have consisted of four different tribes or cantons. Of these the PENTRH and the HIRPIRI were much the most powerful; so much so indeed that it is difficult to understand how such petty tribes as the CARACENCI and CAUDINI could rank on terms of equality with them. The FRENTANI are frequently considered as forming a fifth canton; but though that people was certainly of Samnite race, and (by Livy, vii. 10, 2) have been regarded by Severo as forming an integral part of the Samnite nation, as he describes the Samnites as occupying a considerable part of the coast of the Adriatic (Peripl. p. 5, § 15), they seem to have already ceased to form a part of their political body at the time when they first came into contact with Rome. [Frentani.] We have no account of the nature and character of the political constitution that bound together these different tribes. It seems to have been a mere federal league, the bonds of which were drawn closer by the forces of the whole confederacy, with the title of Embratur, the Sabellian form corresponding to the Latin Imperator. (Liv. ix. 1; Niebuhr, vol. i. p. 107.) But we find no mention, even on occasions of the greatest emergency, of any regular council or deliberative assembly to direct the policy of the nation; and the story told by Livy of the manner in which Herennius Pomius was enrolled in regard to the fate of the Roman army at the battle of Vulturnus, it seems to negative the supposition that any such body could have existed. (Liv. ix. 3; see also viii. 39.)

The first mention of the Samnites in Roman history, is in B. C. 354, when we are told that they concluded a treaty of alliance with the republic, the progress of whose arms was already beginning to attract their attention (Liv. vii. 19; Diod. vii. 43). It is probable that the Samnites, who were already masters of Ascrium and the upper valley of Plebe. Vulturnus, were at this time pushing forward their arms down the course of that valley, and across the mountain country from thence to the Liris, then occupied by the Volscians, Aurnuncans, and other tribes, of Ausonian or Ocean origin. It was not long before these onward movements brought them into collision with the Romans, notwithstanding their recent alliance. Among the minor tribes in this part of Italy were the Siliunci, who, though situated on the very borders of Campania, had hitherto preserved their independence, and were not included in the Campanian people (Siliunci). This petty people having been assaulted by the Samnites, upon what cause or pretext we know not, and finding themselves unable to cope with such powerful neighbours, invoked the assistance of the Siliunci. The latter, notwithstanding their connection with the Samnites, readily espoused the cause of the Siliunci, but it was only to bring the danger upon their own heads, for the Samnites now turned their arms against the Campanians, and, after occupying with a strong force the ridge of Mount Titata, which immediately overlooks Capua, they descended into the plain, defeated the Campanians in a pitched battle at the very gates of Capua, and shut them up within the walls of the city (Liv. vii. 29). In this extremity the Campanians in their turn applied for assistance to Rome, and the senate, after some hesitation on account of their recent alliance with the Samnites, granted it (76, 30, 31). Thus began the First Samnite War (B.C. 343), the commencement of that long struggle which was eventually to decide whether the supremacy of Italy was to rest with the Romans or the Samnites.

This first contest was, however, of short duration. In the first campaign the two consuls M. Valerius Corvinus and A. Cornelius Cossus gained two decisive victories; the one at the foot of Mount Gaurs, the other near Satriula. The first of these, as Niebuhr observes (viii. 32), was certainly not disastrous for the Romans; for it was the first trial of arms between the two rival nations, and might be taken as a sort of omen of the ultimate issue of the contest. A third battle near Sessa, where the remains of the army that had been defeated at Mount Gaurs, after having been reinforced, again attacked Valerius, terminated in an equally decisive victory of the Romans; and both consuls triumphed over the Samnites (Liv. vii. 32—38; Fast. Capit.). The next year the military operations of the Romans were checked by a mutiny of their own army, of which the commons at Rome took advantage; and the city was divided by dissensions. These causes, as well as the increasing dissatisfaction of the Latins, naturally disposed the Romans to peace, and a treaty was concluded with the Samnites in the following year, B. C. 341. The account which represents that people as humiliated and suing for peace, is sufficiently refuted by the fact that the Romans abandoned the Siliunci to their fate, and left the Samnites free to carry out their vengeance against that unfortunate people (Liv. viii. 1, 2).

The peace which terminated the First Samnite War renewed the alliance previously existing between the Romans and the Samnites. In consequence of this the latter took part in the great war with the Latins and Campanians, which almost immediately followed, not as the enemies, but as the allies, of Rome; and the Roman armies were thus enabled to reach Campania by the circuitous route through the country over which the Latins had no direct communication, the valley of the Vulturnus (Liv. viii. 6). During the fifteen years that followed, down to the renewal of the contest between Rome and Samnium, the course of events was almost uniformly favourable to the former power. The successful termination of the war with the Latins and Campanians, and the consolidation of the Roman power in both those countries had added greatly to the strength of the republic; and the latter had followed up this advantage by the reduction of several of the smaller independent tribes in the same neighbourhood—the Ausones, Siliunci, and the Preruminari, who appear on this occasion as independent of, and separate from, the
SAMNIIUM. 893

other Volscians [PRINCIPIUM]. But the power of the Volscians seems to have been by this time very much broken up; and it was apparently during this interval that the Samnites on their side carried on successful hostilities against that people, and wrested from them or destroyed the cities of Sora and Fregellae in the valley of the Liris, while they threatened Fabrateria with the same fate (Liv. viii. 19, 23, x. 1). This movement, however, gave umbrage to the Romans, while the Samnites on their side could not view with indifference the reduction of the Sidicini, and it was evident that a fresh rupture between the two nations could not be long delayed (Id. viii. 17, 19). The attention of the Samnites was, however, drawn off for a time by the danger that threatened them from another quarter, and they joined with their kinmen the Lucanians to oppose the arms of Alexander, King of Epirus, who was advancing from Paestum into the heart of the country. Both Samnites and Lucanians were defeated by him in a pitched battle; but he subsequently turned his arms towards the south, and his death in n. c. 326 relieved the Samnites from all apprehension in that quarter. (Liv. viii. 17, 24.)

The same year (n. c. 326) witnessed the outbreak of the Second Samnite War. The immediate occasion of this was the assistance furnished by the Samnites to the Greek cities of Paepoleis and Neapolis, against which the Romans had declared war, when the Samnites and Nolan (who were at this time in alliance with Samnium) threw into their cities a strong body of auxiliaries as a garrison. They did not, however, avert the fall of Paepoleis; while Neapolis escaped a similar fate, only by expounding the alliance of Rome, to which it ever after steadily adhered (Liv. viii. 22—26). The Romans had about the same time secured a more important alliance in another quarter; the Lucanians and Apulians, with whom, as Livy remarks, the republic had previously had no relations, either friendly or hostile, now concluded an alliance with Rome (Lb. 23). The Lucanians indeed were soon persuaded by the Tarentines to abandon it again (Lb. 27), but the Apulians continued steadfast; and though it is evident that the whole nation was not united, and that many of the chief towns took part with the Samnites, while others continued to side with Rome, yet such a division must have had the greatest consequences. Hence throughout the war we find the contest divided into two portions, the Romans on the one side being engaged with the Samnites on the frontiers of Campania, and in the valley of the Vulturnus, from whence they gradually pushed on into the heart of Samnium; and on the other carrying on the war in Apulia, in support of their allies in that country, against the hostile cities supported by the Samnites. It is evident that the Frentani must have at this time already separated themselves from the Samnite alliance; otherwise it would have been impossible for the Romans to march their armies, as we find them repeatedly doing, along the coast of the Adriatic into Apulia. (Liv. ix. 2, 13.)

The first operations of the war were unimportant; the Romans conquered some small towns in the valley of the Vulturnus (Liv. viii. 25); and we are told that Q. Fabius and L. Papirius gained repeated victories over the Samnites, so that they even stood for peace, but obtained only a truce for a year, and, without observing even this, resumed the contest with increased forces. (Ib. 50, 36, 37.) It is evident therefore that no real impression had been made upon their power. Nor did the victory of A. Correlius Arvina in the following year (n. c. 322), though it again induced them to sue for peace without success, produce any permanent effect; for the very next year (n. c. 321) the Samnites under the command of C. Pontius were not only able to take the field with a large army, but inflicted on the Romans one of the severest blows they had ever sustained in the celebrated pala of the Campanian Forks. [CAUDIM.] There can be little doubt that the circumstances and character of that disaster are greatly disguised in the accounts transmitted to us; but, whatever may have been its true nature, it is certain that it caused no material interruption of the Roman arms, and that, after repudiating the treaty or capitulation concluded by the consuls, the Romans renewed the contest with undiminished vigour. It is impossible here to follow in detail the operations of the succeeding campaigns, which were continued for seventeen years with many fluctuations of fortune. The disaster at Caudium shook the faith of many of the Roman allies, and was followed by the defection even of their own colonies of Samnium, Fregellae, and Sora. Some years later (n. c. 315) the capture of Saticula by the Romans and of Ptoia by the Samnites shows that both armies were still engaged on the very frontiers of Samnium; while the advance of the Samnites to the pass of Lantulae, and the victory which they there a second time obtained over the Romans (Liv. ix. 22, 23; Diss. xix. 72), once more gave a shock to the power of the latter, and for a moment endangered their supremacy in Campania. But they speedily recovered the advantage, and the victory gained by them at a place called Cimna (of uncertain site) decided the submission of the revolted Campanians. (Liv. ix. 27; Diss. xix. 76.) Their arms had meanwhile been successful in Apulia, and had ultimately effected the reduction of the whole province, so that in n. c. 316 the consul Q. Aemilius Barbula was able to carry the war into Lucania, where he took the town of Neronium. (Liv. ix. 20.)

The decisive victory of the consuls of n. c. 314 had also for the first time opened the way into the heart of Samnium, and they laid siege to Boeumium, the capital of the Pentri. The next year was marked by the fall of Atria and Calatia (Cajaeia); and it seemed probable that the war was at length drawing to a close in favour of the Romans, when the outbreak of a fresh war with the Etruscans in n. c. 311 divided the attention of that people, and, by occupying a large part of their forces in another quarter, opened a powerful diversion in favour of the Samnites. To these additional enemies were added the Umbrians as well as the Marsi and Peligni; yet the Romans not only made head against all these nations, but at the same time carried their victorious arms into the heart of Samnium, Boeumium, the capital city of the Pentri, was twice taken and plundered, once in 311 by C. Junius, and again in 305 by T. Manius. At the same time Sora and Arpinum were finally added to the Roman dominion. These successive defeats at length compelled the Samnites to sue for peace, which was granted them in n. c. 504; but on what terms is very uncertain. It seems impossible to believe that the Romans, as asserted by Livy, should have restored them their ancient treaty of alliance, and it is probable that they in some form consented to acknowledge the supremacy of Rome. (Liv. ix. 45; Dionys. Exc. p. 3231; Niebuhr, vol. iii. p. 269.)
The peace thus concluded was of short duration. Little more than five years elapsed between the close of the Second Samnite War and the commencement of the Third. It might well have been thought that, after a struggle of more than twenty years’ duration, the resources of the Samnites, if not their spirit, would have been exhausted; but they seem to have been actively engaged, even before the actual outbreak of hostilities, in organising a fresh coalition against Rome. A new and formidable auxiliary had appeared in a large body of Gauls, which had recently crossed the Alps, and, uniting with their countrymen the Samnites threatened the Romans from the N. Rome was at this time engaged in war with the Etruscans and Umbrians, and the Etruscans hastened to secure the services of the Gauls. Meanwhile the Samnites, deeming the attention of the Romans sufficiently engaged elsewhere, attacked their neighbours the Lucanians, probably with the view of restoring the power in that country of the party favourable to the Samnite alliance. The opposite party, however, called in the Romans to their assistance, who declared war against the Samnites, and thus began the Third Samnite War, b.c. 298. (Liv. x. 11.) The contest had now assumed larger dimensions; the Samnites concluded a league with the Etruscans, Umbrians, and Gauls, and for several successive campaigns the operations in Samnium were subordinate to those in the valley of the Tiber. But the territory of Samnium itself was at the same time ravaged by the Roman generals in so systematic a manner, that it is clear they had obtained a decided superiority in the field; and though the Samnites on one occasion retaliated by laying waste the Campanian and Falernian plains, they were soon again driven back to their mountain fastnesses. (Liv. x. 15, 17, 20.) At length, in b.c. 295, the great battle of Sentinum, in which the united forces of the Gauls and Samnites were totally defeated by the Roman consul Q. Fabius, decided the fortune of the war. Gellius Epaminthus, the Samnite general, who had been the main organiser of the confederacy, was slain, and the league itself virtually broken up. (Liv. x. 27—30.) Nevertheless the Samnites continued to carry on the war with unabated energy; and in b.c. 293 they raised a fresh army of 40,000 men, levied with solemn sacred rites, and arrayed in a peculiar garb. These circumstances sufficiently prove the importance which they attached to this campaign, yet its result was not more successful than those which had preceded it, and the Samnite armies were again defeated by the consuls L. Papinius Cursor and Sp. Carvilius in two successive battles near Aquilona and Corninum. (Liv. x. 38—45.) The operations of the subsequent campaigns are imperfectly known to us, from the loss of the books of Livy in which they were related: but the next year (b.c. 292) C. Ponsius, the victor of the Gauline Forks, reappears, after a long interval, at the head of the Samnites again; he defeated Q. Fabius, but was in his turn defeated in a far more decisive engagement, in which it is said that 20,000 Samnites were slain, and 4000 taken prisoners, including C. Ponsius himself, who was left in triumph by Fabius, and then put to death. (Oros. iii. 22; Liv. Epit. x.) It is probable that this battle gave the final blow to the Samnite power, yet their resistance was still prolonged for two years more; and it was not till b.c. 290 that they consented to lay down their arms and sue for peace. Even in that year the consuls M. C. Catulus and Quintus Fabius could still earn the honour of a triumph, and the same of having put an end to the Samnite wars after they had lasted for more than fifty years. (Liv. Epit. x.; Entrop. ii. 9.)

The conclusion of the Third Samnite War is regarded by some of the Roman historians as the close of the struggle between Rome and Samnium, and not without reason, for though the name of the Fourth Samnite War is given by modern writers to the war that broke out after B.c. 282, the Samnites on that occasion certainly figure rather as auxiliaries than as allies, however, joined the league which was formed at the instigation of the Tarentines against Rome; and bore a part in all the subsequent operations of the war. They seem indeed to have at first looked with jealousy or suspicion upon the proceedings of Pyrrhus; and it was not till after the battle of Heraclea that they sent their contingent to his support. (Plut. Pyrrh. 17.) But in the great battle at Asculum the following year (b.c. 278) the Samnites bore an important part, and seem to have sustained their ancient reputation for valour. (Dioys. xx. Fr. Didot.) The departure of Pyrrhus for Sicily shortly after, and his final defeat by M. C. Catulus at Beneventum after his return (b.c. 274), left the Samnites and their allies to bear the whole brunt of the war, and they were wholly unable to contend with the power of Rome. We know nothing in detail of these last campaigns: we learn only that in b.c. 272, just before the fall of Tarentum, the Samnites, as well as their allies the Lucanians and Bruttians, made their final and absolute submission; and the consuls Sp. Carvilius celebrated the last of the long series of triumphs over the Samnites. (Zonar. viii. 6; Liv. Epit. xiv.; Fast. Capit.) A fresh revolt indeed broke out in the N. of Samnium three years afterwards, among the petty tribe of the Cara- centi, but was speedily suppressed, before it had attained any more formidable character. (Zonar. viii. 7; Dioys. xx. 9, Fr. Mil.) We have no account of the terms on which the Samnites were received to submission by the Romans, or of their condition as subjects of the republic. But there can be no doubt that the policy of the dominant people was to break up as much as possible their national organisation and all bonds of union between them. At the same time two colonies were established as fortresses to keep them in check: one at Beneventum, in the country of the Hirpini (b.c. 265), and the other at Asceria, in the valley of the Vulturinius (b.c. 264). All these precedents, however, did not suffice to secure the fidelity of the Samnites during the Second Punic War. After the battle of Cannae (b.c. 216), the Hirpini were among the first to declare themselves in favour of Hannibal, and their example is said to have been followed by all the Samnites, except the Petrini. (Liv. xxii. 61.) It is singular that this tribe, long the most powerful and warlike of all, should have thus held aloof; but the statement of Livy is confirmed by the subsequent course of the war, during which the Petrinius never seem to have taken any part, while the land of the Hirpini, and the southern portions of Samnium bordering on Lucania, were frequently the scene of hostilities. But the Roman colonies Asceria and Beneventum never fell into the hands of the Carthaginians; and the latter was through a great part of the war held by one of the Roman generals, as a post of the utmost military importance. In b.c. 214 and again in b.c. 212,
the land of the Hirpinii was still in the hands of the Carthaginians, and became the scene of the operations of Hannibal's lieutenant Hamo against Sempronius Gracchus. It was not till b. c. 209 that, Hannibal having been finally compelled to relinquish his hold upon Central Italy, the Hirpinii (and appa\nent to the Volsci) submitted to Sulla, renewed their submission to Rome, (Liv. xvii. 15.)

From this time we hear no more of the Sammites in history till the great outbreak of the Italian nations, commonly known as the Social War, b. c. 90, in which they once more took a prominent part. They were not indeed among the first to take up arms, but quickly followed the example of the Picentes and Marsi; and so important an element did they constitute of the confederation, that of the two consuls chosen as the leaders of the allies, one was a Samnite, Caius Papius Matibus. (Diod. xxxvii. 2. p. 539.) Besides Papius, several of the most distinguished of the Italian generals, Marius Egnatius, Pontius Teleminius, and Trebatius, were also of Samnite origin; and after the fall of Corfinium, the seat of government and head-quarters of the allies was transferred to the Samnite town of Bovianum, and from thence subsequently to Asculum. The Sammites indeed suffered severely in the second campaign of the war, being attacked by Sulla, who defeated Papius Matibus, took Acclumium and Bovianum by assault, and reduced the Hirpinii to submission. The other Sammitii, however, still held out, and an army which had thrown itself into Nola was able to prolong its resistance against all the efforts of Sulla. Hence at the end of the second year of the war (b. c. 89), when all the other nations of Italy had successively submitted and been admitted to the Roman franchise, the Sammites and Lucanians were still unsubdued, and maintained a kind of guerrilla warfare in their mountains, while the strong fortress of Nola enabled them still to maintain their footing in Campania. (Vell. Pat. ii. 17; Liv. Epit. lxxiv; Diod. xxxvii. 2. p. 510; Appian, B. C. i. 53.)

In this state of things the civil war which broke out between Sulla and Marius altered the nature of the contest. The Sammites warmly espoused the Marian cause, from a natural feeling of enmity towards Sulla, from whose arms they had recently suffered so severely; and so important was the share they took in the struggle that ensued after the return of Sulla to Italy (b. c. 83), that they in some measure imparted to what was otherwise a mere civil war, the character of a national contest. A large number of them served in the army of the younger Marius, which was defeated by Sulla at Sacripontus (Appian, B. C. i. 87); and shortly afterwards an army, composed principally of Sammites and Lucanians, under the command of C. Pontius Teleminius, made a desperate attempt to relieve Praeneste by marching suddenly upon Rome. They were met by the army of Sulla at the very gates of the city, and the battle at the Colline gate (Nov. i. b. c. 82), though it terminated in the complete victory of Sulla, was long remembered as one of the greatest dangers to which Rome had ever been exposed. (Vell. Pat. ii. 27; Appian, B. C. i. 93; Plat. Strat. v. 14.) After this the other revolted Sammites also, who had fallen in the field, and Sulla displayed his implacable hatred towards the Sammites by putting to the sword, without mercy, 8000 prisoners who had been taken in the battle. (Appian, l. c.; Strab. v. 249; Plut. Sull. 30.) He had already put to death all the Sammites whom he had taken prisoners at the battle of Sacripontus, alleging that they were the eternal enemies of the Roman name; and he now followed up this declaration by a systematic devastation of their country, carried on with the express purpose of extirpating the whole nation. (Strab. l. c.) It can hardly be believed that he fully carried out this sanguinary resolution, but we learn from Strabo that more than thirty years after the outbreak of the war was still in a state of attested desolation,—many of what had once been flourishing cities being reduced to the condition of mere villages, while others had altogether ceased to exist. (Strab. l. c.)

Nor is it probable that the province ever really recovered from this state of depression. The rhetorical expressions of Florus point to its being in his day still in a state of almost complete desolation. (Flor. i. 16. § 8.) Some attempts seem indeed to have been made under the Roman Empire to reanimate its population with fresh colonists, especially by Nero, who founded colonies at Stephium, Telestis, and Asculum (Lib. Colon. pp. 259, 260, &c.), but none of these attained to any great prosperity, and the whole region seems to have been very thinly populated and given up chiefly to pasturage. Beneventum alone retained its importance, and continued to be a flourishing city throughout the period of the Roman Empire. In the division of Italy under Augustus the land of the Hirpinii was separated from the rest of Samnium, and was placed in the Second Region with Aquila and Calabria, while the rest of the Sammites were included in the Fourth Region, together with the Subiaco, Frontenti, Peligni, &c. (Plin. iii. 11. s. 16, 12. s. 17.) At a later period this district was broken up, and Samnium with the land of the Frontenti constituted a separate province. This is the arrangement which we find in the Notitia, and it was probably introduced at an earlier period, as the Liber Coloniarum in one part gives under a separate head the " Civitates Regionis Samnii," including under that name the towns of the Peligni, as well as the Frontenti. (Notit. Dign. ii. pp. 9, 10; Lib. Colon. p. 259.) In another part of the same document, which is undoubtedly derived from different sources, the Samnite towns are classed under the head of Campania; but this union, if it ever really subsisted, could have been but of very brief duration. The "Provincia Samnii" is repeatedly mentioned in inscriptions of the 4th century, and was governed by an officer styled "Praetor." (Monumess, Die Lib. Col. p. 206.) The same appellation continued in use after the fall of the Roman Empire, and the name of Samnium as a separate province is found both in Cassiodorus and Paulus Diaconus. (Cassiod. Var. xi. 56; P. Diacon Hist. Lang. i. 260.) The only towns in it that retained any consideration in the time of the last writer were Aufidiwm, Asculum, and Beneventum. The last of these cities became under the Lombards the capital of an independent and powerful duchy, which long survived the fall of the Lombard kingdom in the N. of Italy. But in the revolutions of the middle ages all trace of the name and ancient limits of Samnium was lost. At the pre-cut day the name of Samnium is indeed given to a province of the kingdom of Naples, but this is only a designation, recently restored, to the district, which had previously been called the Contado di Molise.

This and the adjoining province of the Principato Ultra comprise the greater part of the ancient Samnium; but the modern boundaries have no reference to the ancient divisions, and a considerable portion
of the Samnite territory is included in the Terra di Lavoro, while a corner in the NW. is assigned to the Abruzzi.

Of the national character of the Sammites we learn little more than that they were extremely brave and warlike, and had inherited to a great degree the frugal and simple habits of their ancestors the Sabines. We find also indications that they retained the strong religious or superstitious feelings of the Sabines, of which a striking instance is given by Livy in the rites and ceremonies with which they consecrated the troops that they levied in B.C. 293. (Livy. x. 38.) But they had almost ceased to exist as a nation in the days of the Latin poets and writers that are preserved to us; and hence we cannot wonder that their name is seldom alluded to. They are said to have dwelt for the most part, like the Sabines, in open villages; but it is evident, from the accounts of their earliest wars with the Romans, that they possessed towns, and some of them, at least, strongly fortified. This is confirmed by the remains of walls of a very ancient style of construction, which are still preserved at Ascerania and Bovianum, and still more remarkably at Aulideia. (Abeken, Mittel Italien, pp. 142, 148.) But from the very nature of their country the Sammites must always, have been, to a great extent, a rude and pastoral people, and had probably received on the low ajnte of cultivation, through their intercourse with the Campanians and Apulians.

III. Topography.

The rivers of the Samnite territory have been already noticed in connection with the mountain chains and groups in which they take their rise. From the purely inland character of the region, none of these rivers, with the exception of the Calore and its tributaries, belong wholly to Samnium, but traverse the territories of other nations before they reach the sea. Thus the Sagrus and Trinunus, after quitting the mountains of Samnium, flow through the land of the Frentani to the Adriatic; the Tifernus separates the territory of that people from Apulia, while the Fronto and the Audius traverse the plains of Apulia. On the other side of the central chain the Volturati, with its affluent the Calore, and the tributaries of the latter, the Salabatu and Taponus, carry down the waters of the Apennines of Samnium, which flow to the Tyrrhenian sea.

The topography of Samnium is the most obscure and confused of any part of Italy. The reason of this is obvious. From the continued wars which had devastated the country; and the state of desolation to which it was reduced in the time of the geographers, only a few towns had survived, at least such a number to be discriminated worthy of notice by them; and many of the names mentioned by Livy and other authors during the early wars of the Romans with the Samnites never reappear at a later period. It is indeed probable that some of these were scarcely towns in the stricter sense of the term, but merely fortified villages or strongholds, in which the inhabitants collected their cattle and property in time of war. Those which are mentioned by the geographers as still existing under the Roman Empire, or the site of which is clearly indicated, may be briefly enumerated. AUSSENIA, in the upper valley of the Sacrus, is the only town that can be assigned with any certainty to the Caraceni. In the upper valley of the Volturati, which bordered on that of the Volturni in Campania. At the northern foot of the Monte Matese was BOVIANUM; and in the mountain tract between it and the Frentani was TREVENTUM or TREVENTIUM (Trinento). SE. of Bovianum lay SAEPINUM, the ruins of which are still visible near Sepino; and at the southern foot of the Monte Matese, in the valley of the Calore, was AL响应 AE in the NW. of this, in the valley of the Volturati, and at the foot of the Matese in that direction. In the country of the Hirpini were BENVEENTUM, the capital of the whole district; ACEDNUM, near MIRABELLA, about 15 miles to the SW.; EQUUS TUTICUS, near the frontier of Apulia; AQUILONIA, at LOCEBOMA, on the same frontier; ABELLINUM, near the frontiers of Campania: and COMPESA, near the sources of the Aufidus, bordering on Lucania, so that it is assigned by Prokleas to that country. On the borders of Campania, between Beneventum and the plains, were CAUDINI, apparently once the capital of the Caudine tribe; and SATUULA, the precise site of which has not been determined, but which must have been situated in the neighbourhood of Mount Tifata. The Samnite CALATIA, on the other hand, was situated N. of the Volturati, at ORIZZO; and COMPETERIA, also a Samnite city, was in the same neighbourhood. The group of hills on the right bank of the Volturati, extending from that river towards the Via Latina, must therefore have been included in Samnium; but Teatin and Cales, situated on that highroad, were certainly both of them Campanian towns. It is probable, however, that in early times the limits between Campania and Samnium were subject to many fluctuations; and Strabo seems to regard them as imperfectly fixed even in his day. (Strab. v. p. 249.)

Of the minor towns of Samnium, or those which are mentioned only in history, may be noticed: DURONIA (Livy. x. 39), identified, but on very slight grounds, with Civita Vecchia, N. of BOJANO; MURGANTIA (Livy. x. 17), supposed to be Basileia, on the frontiers of Apulia, near the sources of the Fronto (Fortore); ROMULIA, on the frontiers of Apulia, between Aculum and Aquilini; TREVUM, in the same neighbourhood, still called Tresico; PLESSIA, near Sta. Apulea dei Gotti, on the frontiers of Campania and Latium; both of them mentioned by Livy (viii. 25) in connection with Alliaese, and probably situated in the neighbourhood of that city; COMINUM (Livy. x. 39, 44), of very uncertain site; AQUILONIA (Livy. li. c.), also of uncertain site, but which must be distinguished from the city of the same name in the country of the Hirpini; MARONEA, noticed by Livy in the Second Punic War, when it was recovered by Marius, in B.C. 210 (Livy. xxvii. 1); MELAKE, Fulvius, and Aequilum, all of which are noticed only on one occasion (Livy. xxiv. 20), and the sites of which are wholly undetermined. * To these must be added Clavia, Cinetia, Volana, Palumbium, and Herculanum, all of them mentioned as towns taken from the Samnites (Livy. x. 31, x. 13, 45), but of which nothing more is known; Imbrinum (Livy. viii. 30), where Fabius gained a victory over the Samnites in B.C. 292; Cuma, which is repre-

* It has been thought unnecessary to repeat in those and other similar cases the modern sites assigned by Italian or German toponographers, where these rest on no other foundation than mere conjecture.
SAMONIUM.

sent by Diodorus as the scene of the decisive victory in B.C. 314 (Diod. xii. 76), and several places of which the names are found only in Virgil and Silius Italicus. Faus. Ant. 42, 3, and Ramill. (Virg. Aen. vii. 739; Sil. Ital. viii. 564), which seem to have been situated on the borders of Campania, so that it is doubtful to which country they are to be assigned. The minor towns of the Hirpini have been already discussed in that article; Panna, or Panna, a name found in Strabo (v. p. 250) as that of a place still existing in his time, is probably corrupt, but we are wholly at a loss what to substitute. On the other hand, inscriptions attest the existence under the Roman Empire of a town called Juvavium, or, more correctly, Juvanum, of municipal rank, which is not mentioned by any of the geographers, but is probably the one meant by the Liber Colonarum, which notices the "Islamus ager" among the "civitates Samunii." (Lib. Cod. p. 260). It was probably situated in the neighbourhood of Sta Maria di Palazza, a few miles N. of the Sagrus, and on the very outskirts of the Marcellus. (Mommsen, Inscrip. R. N. p. 271).

Tifernum is a very doubtful (Tiferenus); and that of a city of the name of Samminum, though adopted by many local writers (Romanelli, vol. ii. p. 490), certainly rests on no adequate authority.

Samminium was traversed in ancient times by several lines of highway. One of these, following nearly the same line with the modern road from Naples to Aquila, proceeded up the valley of the Vulturnus from Venafrum to Ascerina, thence crossed the mountain ridge to Albanena in the valley of the Sagrus, and from thence again over another mountain pass to Salmo in the land of the Peligni. Another branch led from Ascherina to Bovianum, and from thence to Equus Taticus, where it joined the Via Appia or Trajana. A third followed the valley of the Vulturnus from Ascerina to Alliae, and thence by Telesia to Beneventum. There seems also to have been a cross line from the latter place to Spesinnum to Bovianum. (Itin. Ant. p. 102; Tom. Post.) But these different lines are very confusedly laid down in the Tabula, and the distances given are often either corrupt or erroneous. The course of the Via Appia, and its branch called the Via Trajana, through the land of the Hirpini, has been already noticed in that article. [See also VIA APPIA.]

SALONIUM, SAMMONIUM, SALMONIUM, SALONE, PROMEN. (Σαλονιανος, Σαλομονιανος, Strab. ii. p. 106, x. p. 474, 475, 478, 489; Salomonianus, Acts, xxvii. 7; comp. Ptol. iii. 15. § 5; Pompon, Mela, ii. § 12; Plin. iv. 20, 21; Stadi. pom. 318; Euth. Salomonianus, Salomonius, Apoll. Rhod. iv. 1693; Dionys. Per. 110; Inscrip. ap. Boch., Corpus, vol. ii. p. 409), the E. promontory of Crete, to which the seamen of the Alexandrian vessel which conveyed Paul to Rome, thinking they could pursue their voyage under the lee of the island, ran down. (Acts, l.c.). Much difference of opinion has been entertained relative to the identification of this celebrated forland, the position of which would seem to be incontrovertibly ascertained by the existence of the modern name C. Salomon. (Comp. Hick, Kreta, vol. i. p. 427.) But though the name is certainly in favour of this site, the state-ments of the ancients as to its position, and of the seven islets or rocks which surround it, determine conclusively that it must be C. S. Sidero. It is true that by the recent Admiralty survey it is not quite so far to the E. as C. Salomon (the difference is, however, only a few seconds of longitude); but by its extreme extension from the mainland it would be more correctly considered as the principal promontory at the end of the island, and known as the "E. foreland." (Comp. Museum of Class. Antiquities, vol. ii. p. 302.)

Samos or SAMUS (Σαμος; Fth. and Adj. Σαμους, Samius, Samois, Σαμωνις in the language of the modern Greeks, who call the island Samo, Σαμος; the Turks call it Samum Adasst), a large island in that part of the Aegean which is called the Icarian sea, and the most important of the Sporades next after Rhodes. The name denotes a height, especially by the sea-shore. (See Coast. Porphyrog. de Them. 16. p. 41, ed. Bonn.) Hence Samothracia, or the Thracian Samos, which is said by Pausanias (vii. 4. § 3) to have been colonised and named by certain fugitives from the Icarian Samos,—and Sane, one of the names of Cephalonia, which is inversely connected with it by one of Strabo's conjectures (x. p. 457). How applicable is the idea of elevation to the island before us may be seen in the narratives and views given by Dr. Clarke (Travels, vol. ii. p. 192, vol. iii. p. 366), who uses the strongest language in describing the conspicuous height of Samos above the surrounding islands.

The following earlier names of Samos are mentioned by Pliny (v. 37) and other writers,—Parthenia, Anthusmus, Melamphylus, Drynsa and Cyparissia. Some of these have evidently arisen from the physical characteristics of the island. Samos was, and is, well wooded. It is intersected from E. to W. by a chain of mountains, which is in fact a continuation of the range of Mycale, being separated from it only by the narrow channel, hardly a mile in breadth, which the Turks call the Little Bogaz. Here was fought the decisive victory against the Persians, b. c. 479. The Great Bogaz, which is nearly 10 miles in breadth, separates the other extremity of Samos from the comparatively low island of Icaria. The length of Samos, from E. to W., is about 25 miles. Its breadth is very variable. Strabo reckons the circuit at 600 stadia, Pliny at 87 miles, though he says that Sidonius makes it 100. These differences may be readily accounted for by omitting or including Port Vathy, which is a wild-looking bay, though a very serviceable harbour, on the north. Here the modern capital is situated: but in ancient times the bay of Vathy seems to have been comparatively deserted—perhaps, as Tournefort suggests, because it was peculiarly exposed to pirates, who infested the straits and bays of an island which lay in the route of commerce between the Byzantine and Egypt. What Tournefort tells us of his travels through Samos gives us the idea of a very rugged, though picturesque and productive, island. (Possibly the Palinous and Panoromus of Samos, mentioned by Livy, xxxvii. 11, may have been in the bay of Vathy.) The highest point, Mount Kerka, the ancient Ceretum (Strab. x. p. 488), which is nearly always covered with snow, and reaches the height of 4725 English feet, is towards the west. A ridge, which branches off in a south-easterly direction from the main range, and ends in the promontory of Poseidium, opposite Mycale, was called Ampelus, which name seems also to have been given to the whole mountain-system (Strab. xiv. p. 637). The westernmost extremity of the island, opposite the ancient city of Kameiros, was called Kameirothum. Here the cliffs are very bare and lofty. A landslip, which has taken place in
this part of the island, has probably given rise to the name by which it is now called (Σαμοθράκη).

The position of Samos was nearly opposite the boundary-line of Caria and Lonia; and its early traditions connect it, first with Carians and Leleges, and then with Ionians. The first Ionian colony is said to have consisted of settlers from Epidauros, who were expelled from there by the Argives. However this may be, we find Samos at an early period in the position of a powerful member of the Ionian confederacy. At this time it was highly distinguished in maritime enterprise and the science of navigation. Thucydides tells us (i. 13) that the Samians were among the first to make advances in naval construction, and that for this purpose they availed themselves of the services of Aemeinicles the Corinthian shipbuilder. The story of Pinyi (vii. 57), that either they or Pericles the Athenian first constructed transports for the conveyance of horses, though less entitled to literal acceptance, is well worthy of mention; and Samos will always be famous for the voyage of her citizen Colonus, who, "not without divine direction" (Herod. iv. 152), first penetrated through the Pillars of Hercules into the Ocean, and thus not only opened out new fields of commercial enterprise, but enlarged the geographical ideas of the Greeks by making them for the first time familiar with the phenomenon of the tides.

Under the despot Polycrates, Samos was in fact the greatest Greek maritime power. This famous man, about ten years after the taking of Salamis by Cyrus, held Samos in a position of proud independence, when Lesbos and Chios had submitted to the Persians. He had 1000 bowmen in his pay; he possessed 100 ships of war, and made considerable conquests both among the islands and the mainland. He fought successfully against the Milesians and Lesbians, and made a treaty with Amasis, king of Egypt. Whether we are to take the story in the poetical form in which it is presented to us by Herodotus, or to attribute the change to the more probable motive of self-interest, this treaty was broken off for an alliance with Cambyses. In connection with this monarch's expedition to the Nile, some Samian malcontents were so treacherously treated by Polycrates, that they sought and obtained assistance from Greece. A joint force of Macedonians and Corinthians besieged Polycrates in Samos for forty days; but in this struggle he was successful. At last his own capricity, acted on by the fraud of Orestes, a neighbouring satrap, brought him to a wretched death on the mainland. The time which succeeded was full of crime and calamity for Samos. In the end, Sylene, the brother of Polycrates (with whose association with Cambyses is the subject of another romantic story in Herodotus), invaded with a Persian army on Samos, and became a tyrannical despot; but not till his native island had been so depopulated as to give rise to the proverb Σημάνιτας Σαμοθράκης. For details see the lives of Polycrates and Sylene in the Dict. of Biography. It was at this period that Pythogoras, who was a native of Samos, left the island to travel in a few countries, being partly urged to leave his home according to Plutarch, Placit. i. 3) through discontent under the government of Polycrates, who, however, was a patron of literature, and had Athene in many years at his court. For the chronology of this period see Clinton, Fast. Hell. vol. ii. note B. pp. 230—232.

Samos was now Persian. It was from Samos that Datis sailed to Marathon, taking Naxos on his way. But the destruction of the Persians did not last long. When their fleet was gathered at Samos again, after the battle of Salamis, to the number of 400 sail, it was in a great measure the urgency of Samian envoys which induced the commanders of the Greek fleet at Delos to go across to the eastern side of the Aegean. Then followed that battle in the strait, which completed the liberation of the Greeks.

In the maritime confederacy which was organised soon afterwards under Athenian rule, Samos seems to have been the most powerful of the three islands which were exempted from paying tribute. It was at the instance of her citizens that the common treasure was removed from Delos to Athens. But this friendship with Athens was turned into bitter enmity in consequence of a conflict with Miletus about the territory of Priene. Samos openly revolted; and a large force was despatched from Athens against it under the command of ten generals, two of whom were Sphocles and Pericles. The latter pronounced in the Ceramicus the funeral oration over those who had fallen in the war which, after a resistance of nine months, reduced Samos to complete submission.

From 439 to 412 Samos remained without fortifications and without a fleet. But about this latter date it became the hinge upon which all the concluding events of the Peloponnesian War really turned. The first movements towards the establishment of an oligarchy at Athens began at Samos through the intrigues of Alcibiades; and yet this island was practically the home of the Athenian democracy during the struggle which ensued. It was at Samos that Alcibiades rejoined his fellow-citizens; and from Samos that he finally sailed for the Peloponnes in 407. Even till after the battle of Arginusae Samos was, more than any other place, the headquarters and base of operations for the Athenian fleet.

Our notices of the island now become more fragmentary. After the death of Alexander the Great it was for a time subject to the kings of Egypt. (Polyb. v. 35.) Subsequently, it took the part of Antiochus the Great in his war with Rome. It also acted with Mitridates against Rome; but was finally united with the province of Asia n. c. 84. After the battle of Actium, Augustus passed the winter there. Under the Roman emperors it was on the whole a place of no great importance, though it had the honour of being a free state. (Plin. v. 37.) This privilege was taken away under Vespasian. (Suet. Vesp. I.) In the division of the Empire contained in the Syeneccus we find it placed with Rhodes, Cos, Chios, &c., in the Province of the Islands. In the later division into themes, it seems to be again raised to a distinguished position. It gave its name to a separate theme, which included a large portion of the mainland, and was divided into the two forms of Ephesus and Adramyttium, the governor having his residence (ομοσπονδία) at Smyrna; and this arrangement is spoken of in such a way (Const. Porphyro. de Them. i. c.) as distinctly to connect it with the ancient renown of Samos.

It would be difficult to follow the fortunes of Samos through the middle ages. (See Finlay's History of the Byzantine and Greek Empires, vol. ii. p. 112.) There are some points of considerable interest in its modern history. In 1550, after being sacked by the Ottomans, it was given by Selim to the Capitan Paolina Ochiali, who introduced colonists
from various other places; whence the names of the modern villages in the island, *Melitellon, Albaniticor, *and *Vourdotos, (V. 375, 600) giving the names to the islands at the entrance of the bay of Smyrna). Samos was much injured by the ravages of Moreti in. Tournefort's time the largest part of the island was the property of ecclesiastics; and the number of convents and monasteries was considerable. He reckoned the population to be 12,000; now it is estimated at 50,000, nearly the whole being Christian. Samos performed a distinguished part in the War of Independence. The Turks often attempted to effect this: of the defences constructed by the Samiotes are still visible on the shore; and the Greek fleet watched no point more carefully than this important island. On the 17th of August, 1824, a curious repetition of the battle of Mycale took place. Formidable preparations for a descent on the island were made by Tahir-Pacha, who had 20,000 land-troops encamped on the promontory of Mycale. Canaris set fire to a frigate near Cape Trogillium, and in the confusion which followed the troops fled, and Tahir-Pacha sailed away. At this time the Logothete Lycurgus was *ταγόρος of the island "in the true classical sense of the word," as is observed by Ross, who describes the castle built by Lycurgus on the ruins of a mediaeval fort, adding that he was then (1841) residing with the rank of Colonel at Athens, and that he was well remembered and much regretted in Samos. This island was assigned to Turkey by the treaty which fixed the limits of modern Greece; but it continued to make struggles for its independence. Since 1835 it has formed a separate Beyliik under a Phanariot Greek named Stephen Vogorides, who resides in Constantinople with the title of "Prince of Samos," and sends a governor as his deputy. Besides other rights, the island has a separate flag exhibiting the white Greek cross on a blue ground, with a narrow red stripe to denote dependence on the Porte. It does not appear, however, that this government of Greeks by a Greek for the Sultan is conducive to contentment. The present inhabitants of this fruitful island are said to be more esteemed for their industry than for their honesty. They export silk, wool, wine, oil, and fruits. If the word *Simmaet is derived from this place, it is probable that silk has been an object of its industry for a considerable time. Pliny (xiii. 34) mentions pomegranates among its fruits. At the present day the beans of the carob-tree are exported to Russia, where a cheap spirit for the common people is made from them. We might suppose from the name of Mount Apsius, that the wine of the island was celebrated in the ancient world; but such a conclusion would be in direct contradiction to the words of Strabo, who notices it as a remarkable fact, that though the wine of the surrounding islands and of the neighboring parts of the mainland was excellent, that of Samos was inferior. Its grapes, however, under the name of *σαμικην, *ωραμικην, *ωρακηλιδα, *ωρακηλιδη, are commended by Athenaeus (xiv. p. 653; see Poll. Oros. mast. vi. 11), and now they are one of the most valued parts of its produce. Ross saw these grapes (σαμικην) drying in large quantities in the sun; and other authorities speak highly of the Mahsey or sweet muscato wine exported in large quantities from Samos. Its marble is abundant; but it has a greater tendency to split into small fragments than that of Pentelicus or Paros. A stone found in the island is used for polishing gold. He also mentions in several places (l.c., also xxviii. 55, 77, xxxi. 46, xxv. 18, 53) the various medicinal properties of its earth. The Samian earthenware was in high repute at Rome ("Samia etiamenum in æcedentis Iandantur," Plin. xxxvi. 46), and the name has been traditionally given by modern writers to the "red lustreous pottery" made by the Romans themselves for domestic use. (See Maryatt's *Pottery and Porcelain, London 1850, pp. 286, 290.) For the natural Flora and Fauna of the island we must be content to refer to Tournefort, who says, among other facts, that bees sometimes swim across it from Mycale, which Chandler describes as a mountain infested with wild beasts. The woody flanks of *Mount Kerkin still supply materials for shipbuilding. It is said in Athenaenus (l.c.) that the roses and fruits of Samos came to perfection twice a year; and Strabo informs us that its general fruitfulness was such as to give rise to the proverb *φεος και *ἀριστευν *γαλα. The archaeological interest of Samos is almost entirely concentrated in that plain on the S., which contained the sanctuary of Hera at one extremity and the ancient city on the other. This plain is terminated at the SW. by a promontory, which from its white cliffs is called *ἀγωρα καθα by the Greeks, but which received from the Genoese the name of Cape Colonna, in consequence of the single column of the Heraenion which remains standing in its immediate neighbourhood. Virgil tells us (Aen. i. 16), that Samos was at least second in the affections of Juno; and her temple and worship contributed much to the fame and affluence of Samos for many centuries. Herodotus says that the temple was the largest he had seen. It was of the Ionic order; in form it was decastyle dipteral, in dimensions 346 feet by 189. (See Loke, Asia Minor, p. 348.) It was never entirely finished. At least, the fluting of the columns was left, like the foliage on parts of our cathedrals, incomplete. The original architect was Hieron, a Samian. The temple was burnt by the Persians. After its restoration it was plundered by pirates in the Mithridatic War, then by Verres, and then by M. Antony. He took to Rome three statues attributed to Myron; of these Augustus restored the Athenian and Hercules, and retained the Zeus to decorate the Capitol. The image of the goddess was made of wood, and was supposed to be the work of Smiles, a contemporary of Daedalus. In Strabo's time the temple, with its chapel, was a complete picture gallery, and the hypaethral portion was full of statues. (See Orig. c. Cels. 4.) In the time of Tacitus, this sanctuary had the rights of asylum. (Ann. iv. 14.) When Pausanias was there, the people pointed out to him the shrub of Agrus Castus, under the shade of which, on the banks of the river Imbraurus, it was believed that Hera was born. (Paus. l.c.) Hence the river itself was called Parthenis, and the goddess Imbracina. (Comp. Apoll. Rhod. i. 187, Ἰμβρακις Ἰμβράκης.) The anchorage in front of the sanctuary was called *ίμβρος *Ιμβράτης. (Athen. xv. p. 672.) The temple was about 200 paces from the shore, according to Ross, who found its whole basement covered with a mass of small fragments of marble, among which are portions of the red tiles with which the temple was roofed. He discovered hardly anything of interest, except an inscription with the word *ναονας. The appearance of the watercourses at the Imbracina shows that they are often swolen by rains, 3 M. 2.
SAMOS.

and thus harmonises with the natural derivation of the word. In the plain which extends along the base of the mountains eastward toward the city, Ross says that there are traces of ancient chancellors made for the purpose of irrigation. He regards the marshy places near the temple to be the Κάλαμος and the "Ελος mentioned by Athenaeus (xiii. p. 572) in connection with the expedition of Pericles. (The former place is likewise referred to by Herodotus, i. 96.) Across this plain, which is about two miles in length, there is no doubt that a Sacred Way extended formerly from sanctuary to the city, like that which connected Athens with Eleusis. Somewhere on this line (κατα την άδει την εις το Ηραοιον, Paus. vii. 5. § 6) was the tomb of Rhadine and Leonichus, where lovers used to make their vows; and traces of funeral monuments are still seen at the extremity of the line, close to the city-wall.

The modern town of Chora, close to the pass leading through the mountains to Vathy, is near the place of the ancient city, which was situated partly in the plain and partly on the slope of the hill. The western wall runs in a straight line from the mountain towards the sea, with the exception of a bend inwards near the tombs just mentioned. Here is a brackish stream (ἡ γλυφαδὰ), which is the Chesius, the second of the three streams mentioned by Pliny. (See Etna, Mtgm. s. v. Αστυπαλαία.) The southern wall does not touch the sea in all its length, and is strengthened by being raised on vaulted substructions. Here and elsewhere the ruins of Samos touch the question of the use of the arch among the Greeks. On the east side of the city the walls are very considerable, being 10 or 12 feet thick, and about 18 feet high. The masonry is partly quadrangular and partly polygonal; there are round towers at intervals on the outside of the wall, and in one place are traces of a gate. In the eastern part of the city was the steep citadel of Astypalaea, which was fortified by Polyrrhenes (Polyaen. Strat. i. 293, § 2), and here probably was what Suettomius calls the palace of Polyrrhenes. (Suett. Calig. 21.) In the higher part of the town the theatre is distinctly visible; the marble seats are removed; underneath is a large cistern. The general area is covered with small fragments, many of the best having furnished materials for the modern castle of Lycurgus near the shore on the S.E.; and little more remains of a city which Herodotus says was, under Polyrrhenes, the greatest of cities, Hellenic or Barbarian, and which, in the time of comparative decay, is still called by Horace Consivia Samos.

Herodotus makes especial mention of the harbour and of an immense tunnel which formed an aque duct for the city. The former of these works (τὸ τύγαι, as it is now called, from being shaped like a frying-pan) is below Astypalaea; and, though it is now accessible only to small craft, its famous miles remain, one extending eastwards from the castle of Lycurgus, the other extending to meet it from the extremity of the east city-wall southwards. Here Ross saw subterranean passages hewn in the rock, one of which may possibly be the κατάδυσις ἐκ τῆς ἀκρωτίωτος φρούρου ἐπὶ θάλασσαν (Herod. iii. 146), constructed by Macedonius after the death of Polyrrhenes. The tunnel has not been clearly identified; but, from what M. Musurris told Prof. Ross, it is probable that it is where Tournefort placed it, and that it penetrated the hill from Mount Limous to Chora, and that thence the water was taken into the city by a covered channel, traces of which re main. It is clear that it cannot be in the quarry pointed out by Ross; both because the cleavage of the rock is in the wrong direction, and because water from such a height would fail like a cascade on the city.

The authorities, to which reference has been made in this article, are, Tournefort (Voyage du Levant, 1717, pp. 404—436), who has given a very copious account of the island; and Ross (Reisen auf den Griechischen Inseln des Agathischen Meeres, vol. ii. 1843, pp. 139—135), who has examined the sites and remains of the ancient city and Heraea more carefully than any one else. (See also Clarke, Travels, vol. ii. pp. 192—194, vol. iii. pp. 364—367.) Maps of the island will be found in Tournefort and Choisel-Gounier; but the best delineation of it is given in three of the English Admiralty charts. There is a small sketch of the neighbourhood of the city in Kiepert's Hellas (1841), and a larger one in Ross. In Kiepert's general map the rivers Imbrassa and Chesius are wrongly placed, and also (probably) the ridge of Ampelus. It is very questionable whether the point called Poseidonia can be the place where it is (doubtfully) placed in Ross's plan: the position of the little island Naxthicus in the strait seems to show that this promontory ought to be further to the east. (See Strab. xiv. p. 637.) A little volume was published in London, and dedicated to James Duke of York, in 1678, entitled "A Description of the present State of Samos, Nicoria, Patmos, and Mount Athos, by Joseph Guevin (Γεώργιος Ψαρμάς), Archisbosh of Samos, now living in London, translated by one that knew the author in Constantinople." From this book it appears that Dapper has taken much directly, and Tournefort indirectly. Panofka has written a book on Samos (Reis Samosierum, Berlin, 1822); and more recently (1856) Guérin has published a work on this island and Patmos.

COIN OF SAMOS.

SAMOS, in Triphylia. [SAMICUM.]
SAMOS or SAMÉ, in Cephalenia. [SAME.]
SAMOSATA (Σαμοσάτα), a strongly fortified city of Syria, placed by Ptolemy (v. 15. § 11) and Strabo in the district of Commagene. It contained the royal residence, and was a province in the time of Strabo, surrounded by a small but very rich country, and situated at the bridge of the Euphrates. (Strab. xvi. 2. § 3, p. 749.) Its distance from the borders of Cappadocia in the vicinity of Tomais across Mount Taurus was 450 stadia. (Ib. xiv. 2. § 29, p. 664.) It was besieged and taken by Mark Antony during his campaign in Syria. (Joseph. Ant. xiv. 15. § 8.) Its strategic importance is intimated by Caesennius Paetus, prefect of Syria under Vespasian, who, having represented that Antiocbus, king of Commagene, was meditating an alliance with the Parthians to enable him to throw off the Roman yoke, warned his imperial master "that Samosata, the largest city of Commagene, was situated on the Euphrates, and would therefore secure the Parthians an easy passageway through the land."
of the river and a safe asylum on the western side." The legate was therefore instructed to seize and hold possession of Samosata. (B. J. vii. 7 § 1.) This town gave birth to Lucian, and became infamous in the third century in connection with the heretical bishop "Paul of Samosata," who first broached the heresy of the simple humanity of our Lord; and was condemned in a council assembled at Antioch (A. D. 272; Euseb. H. E. vii. 27, 38). The modern name of the town is Semnop, or Semiaut, about 40 miles S. of the cataracts of the Euphrates, where it passes Mount Taurus, but Pococke heard of no ruins there. (Observations on Syria, vol. ii. pt. 1, p. 136.)

COIN OF SAMOSATA.

SAMOTHRA-CE, SAMOTHRA'CA, or SAMOTH'RA'CA'I (Σαμοθρακὴ; L. Σαμοθράκη; Σαμοθρακή in Herodotus, who uses the adjective Σαμοθρακικός, and calls the inhabitants Σαμοθρακοί). To Pliny (iv. 23) we find the form Samothrace; in the Itin. Ant. (p. 522, Wess.), Samothracea; in Livy (xii. 25, 50, xiv. 45, 46), both Samothracea and Samothracia. Properly it is "the Thracian Samos." Thus Homer calls it sometimes Σάμος Θρακικός, sometimes simply Σάμος. Hence the line in Virgil (Aen. vii. 208): "Thracianque Samum quae nunc Samothracia furtur."

By the modern Greeks it is called Samothraki, and often also Samandriki (ές το μαθαράκης), which is merely a corruption of the other, formed in ignorance, after the analogy of Samos and Salmonei,-μαθαράκης denoting "a sheepfold." An island in the north of the Aegean, opposite the mouth of the Hermus, and lying N. of Imbrus, and N.E. of Lemnos. Its distance from the coast of Thrace is estimated at 38 miles by Pliny (l. e.), who says its circuit is 32 miles. It is of an oval shape, and, according to the English survey, 8 miles in length and 6 in breadth. It was traditionally said to have been diminished in size, in consequence of an outburst of waters from the Hellespont, and perhaps some great physical changes took place in this part of the Aegean at no very remote period. (See Admiral Smyth's Mediterranean, pp. 74, 119.) However this may be, Samothrace is remarkable for its extreme elevation. No land in the north of the Archipelago is so conspicuous, except Mt. Atlas; and no island in the whole Archipelago is so high, except Candia. The elevation of the highest point, called Saosce by Pliny (l. e.), is marked 3240 feet in the Admiralty Chart (No. 1654). The geographical position of this point (the modern name of which is Mt. Pingenon) is 40° 26' 57" N. lat., and 25° 36' 23" E. long. Though there are several anchorages on the coast of Samothrace, there is an entire absence of good harbours, a circumstance in harmony with the expression of Pliny, who calls it "importustissima omnium." Sclavus, however (p. 280, ed. Gall), mentions a port, which possibly was identical with the harbour Demetrius spoken of by Livy. The ancient city (of the same name as the island) was on the north, in the place marked Palaeopolis on the chart.

The common name of the Thracian and the Ionian Samos was the occasion of speculation to Strabo and Pausanius. The latter (vii. 4, § 3) says that the Thracian island was colonised by emigrants from the other. The former (x. pp. 457, 472) mentions a theory that it might be named from the Saul, a people of Thrace. Seymour Chins (692) says, that aid came from Samos to Samothrace in a time of famine, and that this brought settlers from the Ionian to the Thracian Island. The truth seems to be, that οὖς δεν denotes any elevated land near the sea, and that the name was therefore given to the island before us, as well as to others. [CEPHALALLENS; SAMOS.] The earlier names of Samothrace were Dardania, Electris, Melite, and Leucosia. Dioecritus Simius (v. 47) speaks of its inhabitants as Autochthons, and dwells on peculiarities of their language as connected with their religious worship. The chief interest of this island is connected with the Cabeirin. For these mysterious divinities we must refer to the Dict. of Biography and Mythology. Pelasgians are said by Herodotus (ii. 51) to have first inhabited the island, and to have introduced the mysteries.

The lofty height of Samothrace appears in Homer in a very picturesque connection with the scenery of Troy. He describes Poseidon as gazing from this throne on the incidents of the war; and travellers in the Troad have noticed the view of Samothrace towering over Imbrus as a proof of the truthfulness of the Iliad. Bearing in mind this geographical affinity (if we may so call it) of the mountain-tops of Saosce and Ida, we shall hardly be surprised to find Seymour Chins (678) calling Samothrace a Trojan island (ἐπαρων Τῶν). The tradition was that Dardanus dwelt there before he went to Troy, and that he introduced the Cabeiric mysteries from thence into Asia.

A few detached points may be mentioned which connect this island with Greek and Roman history. Its inhabitants joined Xerxes in his expedition against Greece; they are spoken of as skilful in the use of the javelin; and the Samothracian ship is said to have sunk an Athenian ship, and to have been returned to turn by an Aegean one, at the battle of Salamis. (Herod. viii. 90.) At that time the Samothracians possessed forts erected on the mainland. (Ib. vii. 108.) Philip of Macedon and his wife Olympias were both initiated in the mysteries. It would seem that such initiation was regarded as a preservation from danger. (Aristoph. Pax, 277, and Schol.) Samothrace appears also to have had the rights of asylum; for Perseus took refuge there, after he was defeated by the Romans in the battle of Pydna. (Liv. xiv. 6.) Germanicus sailed to the island with the view of being initiated; but he was prevented by an omen. (Tac. Ann. ii. 54.) St. Paul passed the night at anchor here on his first voyage from Asia to Europe. (Acts, xvi. 11.) In Pliny's time Samothrace was a free state (l. e.). In the Synodenum Vitae they find it, with Thassos, in the province of Illyricum. (Wess. p. 640.) In the latter division described by Constant. Porphyrog. (De Them. p. 47, ed. Bonn) it is in the Thracian subdivision of the First European or Thracian Theme.

Samothrace appears to have no modern history

3 m 3
SANIANA.

and no present importance. Pliny (xxvii. 67) makes mention of a gem which was found there; and in the Middle Ages its honey and goats' milk are said to have been celebrated. No traces seem to have explored and described this island. [J.S.H.]

SAMULOCENAE, according to the Peut. Tab., or more correctly according to inscriptions found on the spot, SAMULOCENAE, was apparently a Roman colony of some importance in the Agri Decumates of Germany. The Table erroneously places the town in Vindelicia, whence some antiquaries have regarded Samulocena and Samulocene as two different places. But there can be no doubt that they are only two forms of the same name belonging to one town, the site of which is occupied by the modern Salden, near Rottenburg on the Neckar, where many Roman remains, such as coins, inscriptions, and arms, have been found. (Comp. Jaumann, Colonia Samulocena, Óf., Stuttgart, 1840, 8vo.; Lichtenstein, Schwaben unter den Römern, p. 107, foll.) [L. S.]

SAMUS. [SAMOS.]

SAMUS, a river of Hispania Baetica. (Genn. Rav. iv. 45.) Ancient Spanish coins indicate a town of the same name. (Florez, Med. iii. p. 142.) [T. H. D.]

SAMYDACE (Σαμυδάκε), a town on the coast of Carmania, noticed by Marcian (c. 28. ed. Diderot) and Ptolemy (vi. 8. § 7). It appears to have been placed near the mouth of the river Samydacu. (See also Steph. B. s. v.) It is possible, as suggested by Forbiger, that the river is the same as the present Ἱραία. [V.]

SANAS (Σανάς), a town of Phrygia, in the neighborhood of Lydia. (Strab. xii. p. 576; Hieroc. p. 666.) In the acts of the Council of Chalcedon (p. 674), it is called Σανάς πόλις, and is probably mentioned by Ptolemy (v. 2. § 26) under the name of Sanis.

SANCTIO, a place in the Agri Decumates, in the south-west of Germany, was situated on the banks of the Rhine, but is mentioned only by Ammianus Marcellinus (xxi. 3), and in such a manner that it is not easy to identify its site; it is possible, however, that the modern Seckingen may correspond with it. [L. S.]

SANDA, a river on the N. coast of Hispania Tarraconensis (Plin. iv. 20. s. 34.) Probably the Miura. [T. H. D.]

SANDALIUM (Σανδαλίου), a mountain fortress of Pisidia, mentioned only by Strabo (xii. p. 109) and Stephanus B. (s. v.). [L. S.]

SANDANUS (Σανδάναις, Peripl. Mar. Erythr. c. 52). There has been some question whether this is the name of a man or of a place. As the text stands in the Periplus, it would seem to be that of a ruler of the coast-district in the neighbourhood of Bithynia. On the other hand, Ptolemy speaks of the same territory under the title of Ἀπάντη Σανδανών; whence Banfield (Erasm. and Grüber, Encycl. art. Σανδανών) argues, with strong probability, that the reading in the Periplus is incorrect, and that Ptolemy is right in mentioning the name that of a people rather than of a chief. [V.]

SANDOBAINES. [ALBANIA, Vol. I. p. 89, b.]

SANDIZETES, according to some editions of Pliny (iii. 28), the name of a tribe in Pannonia on the river Drava; but a more correct reading gives the name Ambazates, which is no doubt the same as the Ambazeti (Ἀμβαζήται) mentioned by Strabo (vii. p. 314) among the tribes of Pannonia. [L. S.]

SANIE. 1. (Σανίας; Ethis. Σανίας, Σανία, Σανίων, Herod. vii. 22; Thuc. iv. 109; Steph. B. s. v.), a colony of Andros, situated upon the low, undulating ground, forming the isthmus which connects the peninsula of Acte with Chalcidice, through which the canal of Xerxes passed. Masses of stone and mortar, with here and there a large and squared block, and foundations of Hellenic walls, which are not found upon this part of land, mark the site of ancient Sanie, which was within Acte and turned towards the sea of Euboea. (Leake, Northern Greece, vol. iii. p. 143.)

2. It appears from Herodotus (vii. 123; comp. Thuc. v. 18) and the Epitomiser of Strabo (vii. p. 330, Fr. 27), that there was another town of this name in Paliene. According to the position assigned to it in the list of Herodotus, the site must be sought for between C. Poidei and the W. side of the isthmus of Porte. Mela (ii. 3. § 3) is opposed to this position of Sanie, as he places it near Canastreum Prom. (C. Palliari). [E. B. J.]

SANGALA (Σανγάλα), a place mentioned by Arrian to the NW. of the Malli (or Malissi), apparently near the junction of the Hydaspes and Acesines (v. 22). There can be little doubt that it is the same place as that noticed by Ptolemy under the name Σάγαλα ἤ καὶ Εὔθυνον (vi. 1. § 46). The position, however, of the latter is assigned with this difference, that it is placed below the junction of the Hydaspes and Acesines, whereas the former would seem to have been to the E. of the Hydaspes. Barnes has identified Sagala with the present Lahore, which is probably enough (Travels, vol. iii. p. 82). It may be remarked, that the Εὔθυνον of Ptolemy ought in all probability to be Εὔθυνον, the name being derived from the well-known Bacchian king, Euthydemos. [V.]

SANGABRUS (Σανγαβρός; Sakauros or Sakuri; Turkish Aygala), one of the principal rivers of Asia Minor, is mentioned in the Iliad (iii. 187, xvi. 719) and in Hesiod (Theog. 344). Its name appears in different forms as Sraghros (Schol. ad Apollon. Rhod. ii. 724), Sangaris (Constant. Porphyri. i. 5), or Sargalis (Or. de Pont. iv. 10. 17; Plin. v. 11; Solin 43). This river had its sources on Mount Areusares, near the town of Sangha in Phrygia, not far from the Galatian frontier (Strab. xii. p. 343), and flowed in a very tortuous course, first in an easterly, then in a north-western, and lastly again in a northern direction through Bithynia into the Euxine. In one part of its course it formed the boundary between Phrygia and Bithynia; and in early times Bithynia was bounded on the east by the Sangarins. [Bithynia.]

The Bithynian part of the river was navigable, and was celebrated from the abundance of fish found in it. Its principal tributaries were the Alkedus, Bathys, and the Galius. (Comp. Skylax, p. 34; Apollon. Rhod. ii. 724; Sevemus, 234, foll.; Strab. xii. pp. 565, 567; Dioscor. Perieg. 811; Per. v. i. § 6; Steph. B. s. v.; Liv. xxxviii. 18; Plin. v. 43; Amm. Marc. xxii. 9.) [L. S.]

SANGIEA (Σανγιέα), a small place in the east of Phrygia, near Mount Areusares and the sources of the Sangarius. (Strab. xii. p. 343.) [L. S.]

SANTIADA, a river in Asia Minor, Const. Porph. Theb. Hist. i. p. 28, de Adm. Isp. c. 50, p. 223, Bonn., a place in
The Santones gave name to that division of France before the revolution which was named Saintonge, the chief part of which is included in the French department of Charente Inferieure. The coast of the territory of the Santones is low and marshy; the interior is generally level and fertile. D'Anville supposed that the territory of the Santones comprehended the diocese of Saintes, and the small province of Aunis on the north-west.

The wornouth of this country is spoken of by various writers, Flavy (xviii. 38), and Martial (Ep. ix. 95):—

"Santonica medicaest dedit mibi pecula virga." 

Martial (xiv. 128) and Juvenal (viii. 145) mention a "cucullus" with the name "Santonicum." It appears that some thick coarse woolen cloths were imported from Gallia into Italy.

Havercamp in his edition of Orosius (vi. 7) gives a coin with the name "Arivos" and on the other side the legend "Santones" in Roman capitals with the figure of a horse in action. He gives also another coin with the same legend; and a third with the abbreviated name "Saut" and the name of "Q. Doci" on it.

SANTONUM PORTUS (Saratov Abous). Ptolemy in his description of the coast of Celtogalatia Aquitania (ii. 7: 1) proceeds from south to north. Next to the outlets of the Garonne he places Santonum Portus, and next to it Santonum Promontorium (Saratov Belos). The outlet of the river Cenelmus is placed north of the promontorium. The Cantones of Ausonis is certainly the Charente [CANTONUS]; and Ptolemy's Cenelmus is a different river, or, if it is the same river, he has placed it wrong. It is impossible to determine what is the Santonum Portus of Ptolemy. If it is Rochelle, as some geographers maintain, and if Ptolemy's Cenelmus is the Charente, he has placed their positions in wrong order. It seems very unlikely that Ptolemy should mention a river between the Garonne and Loire, and not mention the Charente. The only other large river between the Garonne and the Loire is the Sere Niv noise, which is north of La Rochelle, and if Ptolemy's Cenelmus is the Sere, the Santonum Portus might be La Rochelle. D'Anville supposes Santonum Portus to be the embouchure of the Seudre, which opens into the sea opposite the southern extremity of the Ile d'Oleron; but he does not undertake to fix the position of the Santonum Promontorium. The latitudes of Ptolemy cannot be trusted, and his geography of Gallia is full of errors. [G. L.]

SANTONUM PROMONTORIUM. [SANTONUM PORTUS.]

SAOECE. [SAMOTHRAECE.]

SAOCORAS (Saoiros, Ptol. v. 18. § 3), a river of Mesopotamia, mentioned by Ptolemy, which appears to have had its source in the M. Mausus near Nisibis, and to have flowed to the SW. into the Euphrates. There has been much dispute, as to what river Ptolemy intended by this name, as at present there is no stream existing which corresponds with his description. Forbiger has conjectured with some reason that it is the same as the Mausas of Xenophon (Anab. i. 5. § 4), which flowed about 35 parases to the E. of the Chabones (Khabur), and surrounded the town of Corose; Ptolemy would seem to have confounded it with the Mygdonus. [MYGDONIUS.]

SAPAELI (SZaprO or Szarvo), a Thracian people, occupying the southern portion of the Pan-
SAPAICA.

SAPACIA. [Sapaei.]

SAPARNUS (Σαπαρνος), a small tributary of the Indus, in the upper Paribus, noticed by Arrian (Indic. c. 4). It is probably the present Aboadina. [V.]

SAPAUDIA. This name occurs in Ammianus Marcellinus (xv. 11), in his description of Galia. He says that the Rhone that after flowing through the Lake of Genava* per Sapaudiam furtum et Sequanum. In the Notit. Imp. we read: "in Galia Ripense profectus militum Barcarierum Ebrudini Sapaudiae," where Ebrudenum appears to be Yerduan, which is at one end of the Lake of Neufchâtel. In another passage of the Notit. there occurs: "tribus colorum primae Sapaudiae Flaviae Caesaro," or "Calliroue," which is Gremolae (Cularo). Thus Sapaudia extended northward into the country of the Helveti and southward into the territory of the Allobroges. The name Sapaudia is preserved in Saboia, or Savoy, but in a much more limited significance; and in the country now called Savoy there is said to be a cataract which bears the particular name of Savoy. (D'Aubigne, Notice, &c.) [G. L.]

SAPHIR. [Saphar.]

SAPHIR. [Bezarea.]

SAPHIRI (Σαφηρί), a small village of Parthine mentioned by Isidorus (Stoth. Parth. c. 12). It may be the same place as that called by Ptolemy Σαφηρί (vi. 9. § 6), which he places in Hyrcania, close to the Astaleni. Forbiger identifies it with the modern Shoffri. [V.]

SAPHRINE (Plin. vi. 29. s. 33; Ἐπαφρίνη ἢ Ἐπάφρινην ψύγος, Plut. iv. 5. § 77; Ἐπαφρίναι, Sis. 15. v. 64), an island in the Arabian gulf, N.E. of Mya Harum, and S. of the prominent Pharan, from which sapphires were obtained according to Stephanus. Now Shidman.

SAPITIS (Σαπίτης, Strab.: Sāvīs), a small river of Calpine Gaul, not far from the frontiers of Umbria. It rises in the Umbrian Apennines, a few miles above Sarsina, flows under the walls of that town, and afterwards, pursuing a course nearly due N., across the Apennine Way close to the town of Causaeus (Casale), and falls into the Adriatic about 10 miles S. of Ravenna. (Strab. v. p. 217; Plin. iii. 15. s. 20. Lucan. ii. 496; Sil. Ital. viii. 448; Tab. Peut.) It is called in the Tabula Sabia; and the name is written Isapis in several editions of Lucan and Strabo; but there seems little doubt that Sapis is the true form of the name. It is still called the Savi. There can be little doubt that the Sapina Taurus, mentioned by Livy (xxxii. 2, xxxii. 37), as one of the tribes or divisions of the Umbrian nation, immediately adjoining the Galatian tribe of the Boii, derived its name from the Sapis, and must have dwelt on the banks of that river. [E. II B.]

SAPPHAR METROPOLIS (Σαφάρδα μητρό-

SAPACIA.

SAPIS, in the neighbourhood of Albinea. (Strab. xii. p. 549.) In this passage, however, Strabo calls them Sapiæ (Σαπία), and assumes their identity with the Sunti, which in another place (x. p. 457) he treats as a mere matter of conjecture. The Via Egnatia ran through their country, and especially through a narrow and difficult defile called by Ap- pio (B. C. iv. 87, 106) the pass of the Sapiæ, and stated by him to be 18 miles from Philippi; so that it must have been nearly midway between Neapolis and Albinea. The Sapiæ are mentioned, and merely mentioned, by Herodotus (vii. 110) and by Pliny (iv. xi. 8. 18). Their town is called Sapaica (Σαπαικαι) by Steph. B. (s. n.). [J. R.]

SAPACIA. [Sapael.]

SAPARNUS (Σαπαρνος), a small tributary of the Indus, in the upper Paribus, noticed by Arrian (Indic. c. 4). It is probably the present Abba-

SAPAUDIA. This name occurs in Ammianus Marcellinus (xv. 11), in his description of Galia. He says that the Rhone that after flowing through the Lake of Genava* per Sapaudiam furtum et Sequanum. SAPHIR. [Bezarea.]

SAPHIRI (Σαφηρί), a small village of Parthine mentioned by Isidorus (Stoth. Parth. c. 12). It may be the same place as that called by Ptolemy Σαφηρί (vi. 9. § 6), which he places in Hyrcania, close to the Astaleni. Forbiger identifies it with the modern Shoffri. [V.]

SAPHRINE (Plin. vi. 29. s. 33; Ἐπαφρίνη ἢ Ἐπάφρινην ψύγος, Plut. iv. 5. § 77; Ἐπαφρίναι, Sis. 15. v. 64), an island in the Arabian gulf, N.E. of Mya Harum, and S. of the prominent Pharan, from which sapphires were obtained according to Stephanus. Now Shidman.

SAPITIS (Σαπίτης, Strab.: Sāvīs), a small river of Calpine Gaul, not far from the frontiers of Umbria. It rises in the Umbrian Apennines, a few miles above Sarsina, flows under the walls of that town, and afterwards, pursuing a course nearly due N., crosses the Apennine Way close to the town of Causaeus (Casale), and falls into the Adriatic about 10 miles S. of Ravenna. (Strab. v. p. 217; Plin. iii. 15. s. 20. Lucan. ii. 496; Sil. Ital. viii. 448; Tab. Peut.) It is called in the Tabula Sabia; and the name is written Isapis in several editions of Lucan and Strabo; but there seems little doubt that Sapis is the true form of the name. It is still called the Savi. There can be little doubt that the Sapina Taurus, mentioned by Livy (xxxii. 2, xxxii. 37), as one of the tribes or divisions of the Umbrian nation, immediately adjoining the Galatian tribe of the Boii, derived its name from the Sapis, and must have dwelt on the banks of that river. [E. II B.]

SAPPHAR METROPOLIS (Σαφάρδα μητρό-

SAPACIA.
wandering tribes. As their nomadic and migratory habits were described by the latter, so their predaceous propensities, according to the most probable interpretation of the name, was by the former, for the Arabic verb Sarako, according to lexicographers, signifies "to plunder." (Bochart, *Geog. Soc. lib. iv. cap. 2, pp. 213, 214.) The derivation of the name from Sarah has been rejected by nearly all critics as historically erroneous; and the fact that the name was in use many centuries before the Mohammedan, at once negatives the theory that it was adopted by him or his followers, in order to remove the stigma of their servile origin from Hagar the bondwoman. (Bolland, *Palæstina.* p. 87.) This author maintains that "Saraceni nil nisi orientales populos notat:" deriving the word from the Arabic sharaka = ortus fuit; and as unhappily the Greek alphabet cannot discriminate between sin and skin, and the name does not occur in the native authors, there is nothing to determine the etymology. Mr. Forster, in defence of Bochart's severe sentence, "Qui ad Sarum referunt, mugas agunt" (*Geog. Soc. i. 2, p. 213), argues for the matrimonial derivation from Sarah, and shows that the country of Edom, or the mountains and territory bordering on the Saracena of classic authors, are called "the country, mountains, &c. of Sarah" by the Jews; and he maintains that, as this tract derived its name of Edom and Humaea from the patriarch Esau, so did that of Sarach from Sarah the wife of Abraham, the acknowledged mother of the race. (*Geog. of Arabia,* vol. ii. pp. 17-19.) His attempt to identify the Saraceni with the Amalekites is not so successful; for however difficult it may be to account for the appearance of the latter in the Redheem (*Esod. xvi. 1, 8; *Rehidem*), which was the country of Saracina, yet their proper seat is fixed beyond doubt in the south of the promised land, in the hill-country immediately north of the wilderness of Paran, near to Kadesh (Num. xii. 29); and it is impossible to understand "the valley" in xiv. 25, and "the hill" in xiv. 45, of Horeb, as Mr. Forster does, since the whole context implies a position far to the north of the district of Horeb, marked by the following stations: Tabaerah, 3 days' journey from "the Mount of the Lord" (x. 33, xi. 3); Kiroth-hattaavah, Hazeroth, the width of Paran (x. 34, 35, xii. 16, compare xx. 16-18). It must indeed be admitted that the name of the Amalekites is occasionally used, in a much wider acceptation than its proper one, of all the Edomite tribes, throughout Northern Arabia, as e.g. in 1 Sam. xv. 7; and similarly the name Saraceni is extended in Marcan's Periplius, already cited: but it seems more natural to interpret the words of καλλινικά Σαρακενές, παλαιός ἢσσως προσωροφοίς of the general name of several specific tribes, marking a habitat or common position rather than a common origin, according to the analogy of the Scnctae in old times and of Bedawins = "deserti incolae," in modern times; particularly as it does not appear that the name was ever adopted by the Arabs themselves, who would not have been slow to appropriate an honourable appellation, which would identify them with the great patriarch. That their predatory character had become early established is manifest from the fact that the Amalekites were sent by the emperor Decius in order to repress their encroachments. He is said to have brought lions and leopards from Africa and turned them loose on the borders of Arabia and Palestine, as far as the Circisium Castrum, that they might breed and propagate against the Saraceni. (*Chron. Alex. in a. X. 5760, Olymp. 257, Ind. xiv. = A.D. 253. *) This strong fortress, called byProcopius Circisium (*Κυρήσιῳ χωρῷ*), the most remote of the Roman garrisons, which was fortified by Ducretel (Amm. Marc. xiii. 5), was situated on the angle formed by the confluence of the Aborhaz (*Khabor*) and the Euphrates (it is still called *Korkisat*), so that it is clear that, in the time of Procopius, the name of Saraceni was given to the Arab tribes from Egypt to the Euphrates. Consistently with this view, he calls Zenobius's husband Oloamates, "king of the Saracens in those parts" (*Bell. Pers. ii. 5, p. 288); and Belisarius's Arab contingent, under their king Arethas (*Arietha*) he likewise calls Saracens (ii. 16, p. 308). That Roman general describes them (c. 19, p. 312) as incapable of building fortifications, but averse to plunder, which character again justifies the etymology above preferred; while it is clear from these and other passages that the use of the name had become established merely as a general name, and precisely equivalent to Arab (see *Bell. Pers. i. 19, p. 261), and was accordingly adopted and applied indifferently to all the followers of Mohammed by the writers of the middle ages.

SARACEN. [SARAZIN.]

SARATIUM or SARALUS (*Σαραλίος*), a town of the Troimi in Galatia, on the east of the river Hylus. (Tab. Peut. *Ptol. v. 9, § 4. *)

SARAMENE (*Σαράμινη*), a district of Pontus, on the bay of Amisos. (Strab. xii. p. 547; comp. *Pontus.*) [L. S.]

SARANGA (*τὰ Σαραγγα*), a small place on the coast of Gedrosia between the Indus and the Arabis. It was visited by Neurchus in his coast voyage to Persia (Arrian, *Ind. c. 22.*). It has been conjectured by Müller (*Geogr. Graec. Min. l. c., ed. Buria*) that it is the same as the *Pócaia* of Ptolemy (vi. 21. § 2). [V.]

SARANGAE. [DRAKANJANA.]

SARANGES (*Σαράγγες*), a small tributary of the Hydroses (Irideis), mentioned by Arrian (*Ind. c. 4*) in his list of Indian rivers. It is doubtless the Samecort Saranga, though it has not been determined to what stream this Indian name applies.

SARAPANA (*Σαραπάνα*, Strab. xi. p. 500; *Σαραπανί*, Procop. B. G. iv. 14), a strong position in Heria, upon the river Phasis, identified with Scharapani in *Iniretia*, on the modern road which leads from Minderia into Georgia over Suram. (Comp. *Journ. Geog. Soc.* vol. iii. p. 34.) [E. B. J.]

SARAPAIÆ (*Σαραπαίας*, Strab. xi. p. 531; Plin. vi. 16. 18), a Thracian people, dwelling beyond Armenia near the Guriani and Medi, according to Strabo, who describes them as a savage, lawless, and mountaineous people, who scaled and cut off heads (περακακουσάντας πατομερεστάς). The latter is said by Strabo to be the meaning of the name, which is confirmed by the fact that in the Persian sar means "head" and para "division." (Anquetil, *Sur les anci. Langues de la Perse*, in *Mém. de l'Acad. d. f. vol. xxxi. p. 419, quoted in Kramer's *Strab. vol. ii. p. 500; comp. Grockard's *Strab. vol. ii. p. 483. *)

SARAPIONIS PORTUS. [ΧΙΩΝΙΣΙΟΣ ΔΡΟΜΟΣ.]

SARAPIS INS. (*Σαράπιδος νῆσος*), an island off the South Coast of Arabia, mentioned by the author of the Periplius ascribed to Arrian (*Geogr. Graec. Min. vol. i. p. 19, Hudson*) as situated 2000 stadia east.
of the seven islands of Zonobia, which are identified with the islands of Kurium Marium. The island of Sarapis is therefore correctly placed by D'Anville at Moscera. It is described in the Periplus as about 120 stadia distant from the coast, and about 200 stadia wide. It had three villages, and was inhabited by the sacred caste of the lelythropagi. They spoke Arabic, and wore girdles of cocoa leaves. The island produced a variety and abundance of tortoises, and was a favourite station for the merchant vessels of Cona.

[G. W.]

SARAVUS, a river of Gallia, a branch of the Mosella (Mostl.). The limits of the Pons Saravi on the Saravus, on a road from Diocoridum (Metz) to Argentoratum (Strasbourg) (Pons-Saravi.)

The Saravus is mentioned in the poem of Anesius on the Mosella (v. 367):—

"Naviger undiosa duabus me mole Saravus
Tota veste vocal, longum qui distolit annum,
Fessa sub Augusti ut voluerit ostia maris."

The Saravus is the Sarre, which joins the Mosel on the right bank a few miles above Augusta Treverorum (Trier). In an inscription the river is named Saravus (G. L.).

SARBACUM (Σαρβακον, Ptol. iii. 5, § 29), a town of Sarmatia, upon an affluent of the Tanais, probably a Graecised form of the Slavonic Srbeč. (Schaarfelt, Slav. Alt. vol. i. pp. 512, 514.) [E. B. J.]

SARBABALE. [Siga.]

SARDABUS, a branch stream of Sardis (Sarabas), a mountain of Myisia, on the northern bank of the Hermus, in the neighbourhood of Cyme; at its foot was the town of Neonteichos. (Hom. Ep. i. 3; Vit. Hom. 9.) [L. S.]

SARDÈNE (Σαρδης), a mountain of Myisia, on the northern bank of the Hermus, in the neighbourhood of Cyme; at its foot was the town of Neonteichos. (Hom. Ep. i. 3; Vit. Hom. 9.) [L. S.]

SARDIDES (Σαρδεΐς or Σάρδις : Ehd. Σαρδιανος), the ancient capital of the kingdom of Lydia, was situated at the northern foot of Mount Tmolus, in a fertile plain between this mountain and the river Hermus, from which it was about 20 stadia distant. (Arrian, Anab. i. 17.) The small river Pactolus, a tributary of the Hermus, flowed through the agora of Sardis. (Herod. v. 101.) This city was of more recent origin, as Strabo (xiii. p. 625) remarks, than the Trojan times, but was nevertheless very ancient, and had a very strong acropolis on a precipitous height. The town is first mentioned by Aeschylus (Pers. 45); and Herodotus (i. 84) relates that it was fortified by a king Neles, who, according to the Chronicle of Eusebius, preceded Candalus. The city itself was, at least at first, built in a rude manner, and the houses were covered with dry reeds, in consequence of which it was repeatedly destroyed by fire; but the acropolis, which some of the ancient geographers identified with the Homeric Idae (Strab. xiii. p. 626; comp. Plin. v. 30; Eustath. ad Hom. Per. 830), was built upon an almost inaccessible rock, and surrounded with a triple wall. In the reign of Ardyus, Sardis was taken by the Cimmerians, but they were unable to gain possession of the citadel. The city attained its greatest prosperity in the reign of the last Lydian king, Croesus. After the overthrow of the Lydian monarchy, Sardis became the residence of the Persian satraps of Western Asia. (Herod. v. 23; Paus. iii. 9, § 3.)

On the revolt of the Ionians, excited by Aristagoras and Histiaeus, the Ionians, assisted by an Athenian force, took Sardis, except the citadel, which was defended by Artaphernes and a numerous garrison. The city then was accidentally set on fire, and burnt to the ground, as the buildings were constructed of easily combustible materials. After this event the Ionians and Athenians withdrew, but Sardis was rebuilt; and the indignation of the king of Persia, excited by this attack on one of his principal cities, determined him to wage war against Athens. Xerxes spent at Sardes the winter preceding his expedition against Greece, and it was there that Cyrus the younger assembled his forces when about to march against his brother Artaxerxes. (Xenoph. Anab. i. 2, § 5.) When Alexander the Great arrived in Asia, and had gained the battle of the Granicus, Sardis surrendered to him without resistance, for which he rewarded its inhabitants by restoring to them their freedom and their ancient laws and institutions. (Arrian, i. 17.) After the death of Alexander, Sardes came into the possession of Antigonus, and after his defeat at Ipsus into that of the Seleucidæ of Syria. But on the murder of Seleucus Cermanus, Achaeus set himself up as king of that portion of Asia Minor, and made Sardis his residence. (Polyb. iv. 48, v. 57.) Antiochus the Great besieged the usurper in his capital for a whole year, until at length Lagoras, a Cretan, scaled the ramparts at a point where they were not guarded. On this occasion, again, a great part of the city was destroyed. (Polyb. vii. 15, &c. viii. 23.) When Antiochus was defeated by the Romans in the battle of Magnesia, Sardis passed into the hands of the Romans. In the reign of Tiberius the city was reduced to a heap of ruins by an earthquake; but the emperor ordered its restoration. (Tac. Ann. ii. 47: Strab. xiii. p. 627.) In the look of Revelation

COIN OF SARDES.
SARDINIA.

(III. 1, &c.), Sardes was named as one of the Seven Churches, wherein it is clear that at that time its inhabitants had adopted Christianity. From Pliny (v. 50) we learn that Sardis was the capital of a conventus; during the first centuries of the Christian era we hear of more than one council held there; and it continued to be a wealthy city down to the end of the Byzantine empire. (Eutap. p. 154; Hieroc. p. 669.) The Turks took possession of it in the 11th century, and two centuries later it was almost entirely destroyed by Tamerlane. (Anna Comn. p. 523; M. Ducas, p. 59.) Sardis is now little more than a village, still bearing the name of Sardis. Its situation is not unlike that of the ancient city. The ruins, though extending over a large space, are not of any great consequence; they consist of the remains of a stadium, a theatre, and the triple walls of the acropolis, with lofty towers.

The fertile plain of Sardes bore the name of Sar- dium or Σαρδαύων πεδίον, and near the city was the celebrated tomb of Alyattes. Sardis was believed to be the native place of the Spartan poet Alcman, and it is well known that the two rhetori- cians Diodoras and the historian Eunapius were natives of Sardes. (Chandler, Travels in Asia Minor, p. 316, foll.; Leake, Asia Minor, p. 342, foll.; Richter, Wallfahrten, p. 511, foll.; Prokesch, Denkwürdigkeite. vol. iii. p. 51, foll.)

[S.] SARDINIA (ζ Σαρδία: Eth. Σαρδαύων, Sardus: Sardinins), one of the largest and most important islands in the Mediterranean sea, situated to the S. of Corsica (from which it was separated only by a narrow strait, now called the Strait of Bonifacio) and NW. of Sicily. Its most southern extremity, Cape Spartivento, was distant only 120 geog. miles from Cape Serrat in Africa.

I. GENERAL DESCRIPTION.

It was a disputed point in ancient times whether Sicily or Sardinia was the largest. Herodotus calls Sardinia "the largest of islands" (σφάλων ἄρα ἄρα ἐγγίστην, i. 170, ἐγένη τὴν ἐγγίστην, v. 106), but in passages where it is not certain that the expression is to be construed quite strictly. Sclaulx, however, distinctly calls Sardinia the largest of all the islands in the Mediterranean, assigning to Sicily only the second rank (Scyl. p. 56. § 115); and Timaeus seems to have adopted the same view (ap. Strab. xiv. p. 654). But the general opinion was the other way: the comic poet Alexis already enumerated the seven great islands, as they were called, placing Sicily first and Sardinia second (Alex. ap. Const. Porphyry de Prov. ii. § 10); and this view is followed by Svenmus Chins, as well as by the later geographers, (Svynvi. Ch. p. 223; Strab. ii. p. 123; Plin. iii. 7. a. 13, 8. x. 14; Diod. v. 17). Diodorus, however, justly remarks, that it is very nearly equal to Sicily in magnitude (Diod. v. 16); and this opinion, which was adopted by Cluverius (Syll. Ant. p. 478), con- tinued to prevail down to a very recent period. But modern researches have proved that Sardinia is actually the larger of the two, though the difference is but trifling. (Smith's Sardinia, p. 66.) Its general form is that of an oblong parallelogram, above 140 geog. miles in its greatest length, by about 60 in its average breadth, which, however, attains to as much as 77 in one part. The measure- ments given by Pliny, of 188 miles (1483 geog. miles) in length along the E. coast, and 175 on the W., are therefore very fair approximations (Plin. iii. 7. s. 13), while those of Strabo, who calls the island 220 miles in length by 98 in breadth, are considerably overstated. (Strab. v. p. 224.)

Sardinia is a much more fertile and lovely mountainous island than Corsica. It is, however, traversed throughout its whole length from N. to S. by a chain of mountains which commence at the headland called Cape Lungo Sardo, and extend along the eastern side of the island, as far as Cape Carbonara, which forms the SE. extremity of the island. This range, which is composed of granite and other primary rocks, is undoubtedly a continuation, in a geological sense, of the mountains of Corsica, and produces a rugged and difficult country forming much the wildest and most uncivilised part of Sar- dinia. The mountain summits, however, are far from attaining the same elevation as those of Corsica, the highest point, called Monte Genarugcat, rising only to 5276 feet, while the Monte di Sta Vittoria, in the same neighbourhood, rises to 4040 feet, and the peak of Lisburo (the most northerly group of the chain) to 3686 feet; but the general elevation of the range rarely exceeds 3000 feet. (Strab. v. 67.)

West of this mountain district, which may be con- sidered on a rough estimate as comprising about one half of the whole island, are situated three detached groups of mountains; the most considerable of which is that in the SW., which extends from Cape Sportvento to Cape della Frasca on the Gulf of Oristano, and the highest summits of which attain to an elevation of nearly 4000 feet. In the extreme NW. of the island is another isolated range of less extent, called the Monti della Nurra, ex- tending from the Cape della Caccia to the Cape del Falcone. Both these groups are, like the moun- tains in the E. of the island, composed of primary rocks; but N. of the river Tirso, and extending from thence to the N. coast of the island beyond Sussari, is an extensive volcanic tract, occupied in consider- able part by a range of extinct volcanoes, one of which, the Monte Urtica, rises to an elevation of 3430 feet. There is no trace of any volcanic action having taken place within the historical period, but extensive tracts are still covered with broad streams and fields of lava. Notwithstanding this abundance of mountains, Sardinia possesses several plains of considerable extent. The largest of these is that called the Campidano, which extends from the Gulf of Cagliari to that of Oristano, thus separating entirely the range of mountains in the SW. from those in the E. of the island; it is a tract of great fertility. A similar plain, though of less extent, stretches across from the neighbourhood of Alghero to that of Porto Torres, thus isolating the chain of the Monti della Nurra; while several smaller ones are found in other parts of the island. The general character of Sardinia is therefore well summed up by Strabo, who says, "the greater part of it is a rugged and wild country, but a large part contains much fertile land, rich in all kinds of produce, but most especially in corn." (Strab. v. p. 224.)

The great disadvantage of Sardinia, in ancient as well as modern times, was the insalubrity of its climate. This is repeatedly alluded to by ancient writers, and appears to have obtained among the Romans an almost proverbial notoriety. Mela calls it "soil quam coeli mellioris, aquae ut fuscunda, ita pene pestilens." Strabo gives much the same ac- count, and Martial alludes to it as the most unhealthy climate he can mention. (Strab. v. p. 225; Mel. ii. 7. § 19; Taw. x. 17. § 11; Martial, iv. 60. 6;
SARDINIA.

Cic. ad Q. Fr. ii. 3; Tac. Hist. ii. 85; Sil. Ital. xii. 571.) There can be no doubt that this was mainly owing to the extensive marshes and lagoons, or salt lakes, formed at the mouths of the rivers; and as these naturally adjoined the more level tracts and plains, it was precisely the most fertile parts of the island that suffered the most severely from malaria. (Strab. l. c.) The more elevated and mountainous tracts in the interior were, however, then, as now, free from this scourge; but they were inhabited only by wild tribes, and rarely visited by the more civilised inhabitants of the plains and cities. Hence the character of unhealthiness was naturally applied to the whole island.

II. History.

The statements of ancient writers concerning the origin of the population of Sardinia are extremely various and conflicting, and agree only in representing it as of a very mixed kind, and proceeding from many different sources. According to Pausanias, who has given these traditions in the greatest detail, its first inhabitants were Libyans, who crossed over under the command of Sardus, the son of a native hero or divinity, who was identified by the Greeks with Hercules. (Paus. x. 17. § 2) This Sardus was supposed to have given name to the island, which was previously called, or at least known to the Greeks, by that of Lichnus (Λιχνος), from the resemblance of its general form to the print of a man's foot. (Paus. l. c. § 1; Sil. Ital. xii. 358—360; Pseud. Arist. Mirab. 104.) Tanaceus, according to Pliny, called it Sandalobitis from the same circumstance (Plin. iii. 12. s. 17); but it is clear that neither of these names was ever in general use. The fact that the earliest population came from Africa is intrinsically probable enough, though little value can be attached to such traditions. Pausanias indeed expressly tells us (l. c. § 7) that the population of the mountain districts (the people whom he calls Ilienses) resembled the Libyans both in their physical characters and their habits of life. The next settlers, according to Pausanias, were a Greek colony under Aristeus, to whom some writers ascribe the foundation of Caralis; and these were followed by a body of Iberians under a leader named Norax, who founded the city called Nora in the SW. part of the island. Next to these came a body of Greeks from Thespiae and Attica, under the command of Iolans, who founded a colony at Olba, in the NE. corner of the island. After this came a body of Trojans, a part of those who had escaped from the destruction of their city, and established themselves in the southern part of the island. It was not till long afterwards that they were expelled from thence by a fresh body of Libyans, who drove them up into the more rugged and inaccessible parts of the island, where they retained down to a late period the name of Ilienses (Paus. Paus. x. 17. §§ 2—7; Sil. Ital. xii. 360—365). The existence of a mountain tribe of this name is a well attested fact, as they are mentioned by Livy as well as by the geographers; and it is probable that the casual resemblance of name gave occasion to the tale of their Trojan origin. (Ilienses.) The Iolais or Iolaneses, on the other hand, had lost their name in the time of Strabo, and were called, according to him, Diachesbians (Διαχησβοι, v. p. 225), a name which is, however, not found in any other ancient author. Another tribe, whose name is found in historical times, is that of the Ballari, who, according to Pausanias, derived their origin from a body of mercenaries of the coast of Carthage, that had fled for refuge to the mountains. (Paus. l. c. § 9.) To these must be added the Corsi, whose origin is sufficiently indicated by their name. They dwelt in the mountains in the N. of the island (the Montagne de Linharras), and had evidently crossed over from the adjacent island of Corsica, as they are described by Pausanias as having done. (Paus. l. c.) It is idle to attempt to criticise such traditions as these; they are related with many variations by other writers, some of whom term the Iolaneses, others the Ilienses, the most ancient inhabitants of the island (Diod. iv. 29. v. 15; Mel. ii. 7. § 19; Strab. v. p. 225; Sil. Ital. l. c.) and it is clear that the different mountain tribes were often confounded with one another. Strabo alone has a statement that the earliest inhabitants of Sardinia (before the arrival of Iolans) were Tyrrhenians (v. p. 225), by which he must probably mean Pelasgians, rather than Etruscans. We have no account of any Greek colonies in Sardinia during the historical period; though the island was certainly well known to them, and seems to have been looked upon as affording a tempting field for colonisation. Thus we are told by Herodotus that when Phocae and Teos were taken by Harpagus (v. c. 545) the project was suggested that all the remaining Ionians should proceed in a body to Sardinia, and establish themselves in that island. (Herod. i. 170.) Again in v. c. 499, Histiaeus of Miletus proposed Duris to found the whole island for him; and it appears that the project of emigrating there was seriously entertained. (Id. v. 106. 124.) Pausanias indeed represents the Messenians as thinking of emigrating there at a much earlier period, just after the close of the Second Messenian War, n. c. 668 (Paus. iv. 23. § 5); but none of these projects were realised, and it seems certain that there were no Greek settlements in the island at the time when it fell into the hands of the Carthaginians. The Carthaginian conquest is indeed the first fact in the history of Sardinia that can be considered as resting on any sure historical foundation; and even of this the date cannot be fixed with certainty. It is probable indeed that at a much earlier period the Phoenicians had not only visited the coasts of Sardinia for commercial purposes, but had established trading stations or factories there. Diodorus indeed expressly tells us that they planted colonies in Sardinia, as well as in Sicily, Spain, and Africa (Diod. v. 35); and there seems some reason to ascribe to them the first foundation of the important cities of Caralis, Nora, and Sulci. (Movers, die Phönizier, vol. iii. pp. 558, 573.) But in this case, as in many others, it is impossible to separate distinctly what was done by the Phoenicians themselves and what by their descendants the Carthaginians. It is, however, certain that it was reserved for the latter to form extensive and permanent settlement in the island, of which they reduced the greater part under their authority. According to Justin, the first Carthaginian expedition took place under a leader named Malchus, who was, however, defeated in a great battle by the native barbarians. (Justin, xviii. 7.) The next invasion was conducted by Hasdrubal, the son of Mago, and the elder brother (if we may trust to the accuracy of Justin) of Hamilcar, who was killed at Himera, n. c. 480. Hasdrubal himself, however, many successes, so far as battle; but the Carthaginians seem to have from this time maintained their footing.
SARDINIA.

909

in the island. (Id. xix. 1.) The chronology of Justin does not claim much confidence; but it seems probable that in this instance it is not far from correct, and that we may place the Carthaginian conquest about 500–480 B.C. It can hardly have taken place much earlier, as the Ionian Greeks still looked upon the island as open to colonisation in the reign of Darius Hystaspis.

Of the details and circumstances of the Carthaginian conquest we have no account; but we are told in general terms that they made themselves masters of the whole island, with the exception of the rugged mountain districts which were held by the Lioneses and Corsi. (Paus. x. 17. § 9; Pol. i. 10.) They founded many towns, and from their superior civilisation struck such deep root into the country, that even in the time of Cicero the manners, character, and institutions of the Sardinians were still essentially Punic. It even appears that a considerable part of the population was of Punic origin, though this was doubtless confined to the towns and the more settled districts in their immediate neighbourhood. (Cic. pro Scour. §§ 15, 42, 45.) But notwithstanding these clear evidences of the extent of the Carthaginian influence, we have scarcely any account of the long period of above two centuries and a half, during which they continued masters of all the more important portions of the island.

An isolated notice occurs in B.C. 379 of a great revolt in Sardinia, the inhabitants of which took advantage of a pestilence that had afflicted the Carthaginians, and made a vigorous effort to shake off their yoke, but without success. (Diod. xv. 24.) We learn also that already at this period Sardinia was able to export large quantities of corn, with which it supplied the fleets and armies of Carthage. (Diod. xiv. 63, 77.) The story current among the Greeks, of the Carthaginians having systematically discouraged agriculture in the island (Psued. Arist. de Mirob. 104), is therefore, in all probability, without foundation. During the First Punic War (B.C. 259) L. Cornelius Scipio, after the conquest of Aleria in Corsica, directed his course to Sardinia, where he defeated the Carthaginian fleet near Oliba, but did not venture to attack that city. (Zonar. viii. 11.) Having, however, received reinforcements from Rome, he landed in the island, totally defeated the Carthaginian general Hamno, and took the city of Oliba, as well as several other towns. The next year C. Sulpicius followed up this advantage, and ravaged the greater part of the island, apparently with little opposition. (Zonar. viii. 11, 12; Pol. i. 24; Oros. iv. 7, 8; Flor. ii. 2. § 16; Val. Max. v. 1, § 2.)

No real footing was, however, gained by the Romans in Sardinia during the First Punic War; and the peace which put a close to that contest left the island subject to Carthage as before. But a few years afterwards the Carthaginian mercenaries in Sardinia followed the example of their brethren in Africa, and raised the standard of revolt; they were indeed overpowered by the natives, and driven out of the island, but their cause was espoused by the Romans, who undertook to restore them, and threatened the Carthaginians with war if they attempted the restoration of their own dominion in Sardinia. The latter were exhausted with the long and fierce contest with their mercenary troops in Africa, and were in no condition to resist. They consequently submitted to the demands of the Romans, and agreed by treaty to abandon all claims to Sardinia, B.C.

238. (Pol. i. 79, 88; Appian, Pun. 5; Liv. xxi. 1.) But the Carthaginians could not cease more than they possessed, and the whole island was at this time in the hands of the natives. Its subjugation was not effected by the Romans till after several campaigns; and though in B.C. 235 T. Manlius Torquatus triumphed over the Sardinians, and is said to have reduced the whole island to subjection (Enrop. iii. 3; Oros. iv. 12; Vell. Pat. ii. 38; Fast. Capit.), it is clear that this statement must be understood with considerable limitation, as the consuls of the two succeeding years, Sp. Corn. and Pompeius Matho, were still able to earn the distinction of a triumph "de Sardis." (Fast. Capit.) The conquest of the island was now considered complete; and it was reduced to the condition of a province, to which a praetor was annually sent. Corsica was soon after annexed to his jurisdiction.

But it is certain that the wilder mountain tribes of the interior, though they may have tendered a nominal submission, were not really subdued, and continued long after to molest the settled parts of the island by their depredations, as well as to find employment for the arms of the praetor by occasional outbursts of a more serious description.

During the Second Punic War, Sardinia was naturally watched with considerable jealousy, lest the Carthaginians should attempt to regain possession of what they had so long held. But the war which broke out there in B.C. 215, under a native chief named Hampiscora, is attributed by the Roman writers themselves in great measure to the severity of taxation and the exactions of their governors. T. Manlius Torquatus, the same who as consul had already triumphed over the Sardinians, was appointed to quell this insurrection. He defeated the Sardinians under Hisstus, the son of Hampiscora, in the neighbourhood of Carus; but the arrival of a Carthaginian force under Hasdrubal gave fresh spirit to the insurgents, and the combined armies advanced to the very gates of Caralis. Here, however, they were met by Torquatus in a pitched battle and totally defeated. Hasdrubal was taken prisoner, Hisstus slain in the battle, and Hampiscora in despair put an end to his own life. The remains of the defeated army took refuge in the fortress of Carus; but this was soon reduced by Manlius, and the other towns of Sardinia one after another by the other made their submission. (Liv. xxiii. 32, 40, 41.)

From this time we hear no more of any general wars in Sardinia; and the large supplies of corn which the island began to furnish to Rome and to the armies in Italy (Liv. xxvi. 22, xxx. 24) sufficiently prove that a considerable part of it at least was in the peaceful possession of the Roman authorities. The mountain tribes were, however, still unsubdued; and in B.C. 181 the Hienses and Balares broke out into a fresh insurrection, which assumed so formidable a character that the consul Tib. Sempronius Gracchus was expressly sent to Sardinia to carry on the war. He defeated the insurgents with heavy loss, and followed up his victory with such vigour that he put to the sword or took prisoners not less than 80,000 persons. (Liv. xl. 19, 34, xili. 6, 12, 17, 28.) The number of captives brought to Rome on this occasion was so great that it is said to have given rise to the proverb of "Sardin venales" for anything that was cheap and worthless. (Vict. Fbr. III. 65.) Another serious outbreak occurred in Sardinia as late as B.C. 114, to repress which M. Cornelius Metellus was
SARDINIA.

Seut as proconsul to the island, and after two years of continued warfare he earned the distinction of a triumph, a sufficient proof of the formidable character of the insurrection. (Eutrop. iv. 25; Rufus Fest. 4.) This is the last time we hear of any war of importance in Sardinia; but even in the time of Strabo the mountaineers were in the habit of plundering the inhabitants of the more fertile districts, and the Roman praetors in vain endeavoured to check their depredations. (Strab. v. p. 225.)

The administration of the province was entrusted throughout the period of the Republic to a praetor or propraetor. Its general system was the same as that of the other provinces; but Sardinia was in some respects one of the least favoured of all. In the time of Cicero it did not contain a single free or allied city (civitas freedera) (Cic. pro Scaur. § 44): the whole province was regarded as conquered land, and hence the inhabitants in all cases paid the tenth part of their corn in kind, as well as a stipendium or annual contribution in money. (Cic. pro Balb. 18; Liv. xxxii. 41.) From the great fertility of the island in corn, the former contribution became one of the most important resources of the Roman state, and before the close of the Republic we find Sardinia, Sicily, and Africa alluded to as the "tria frumentaria subsidia reipublicae." (Cic. pro Law. Manil. 12; Varr. R. R. ii. Pr. § 3; Valerius Maximus also terms them "serena-simiae ubis nostrae nutrices," vii. 6. § 1.) For this reason, as soon as Pompeius was appointed to the command against the pirates, one of his first cares was to protect the coasts of these three provinces. (Cic. l. c.) Among the eminent persons who at different times filled the office of praetor or propraetor in Sardinia, may be mentioned the elder Cato in B.C. 198 (Liv. xxxiii. 8, 27): Q. Antonius Balbus, who was appointed to Marius to the government of the island, but was defeated and killed by L. Philippus, the legate of Sulla, B.C. 82 (Liv. Epit. lxxxvi.); M. Atius Balbus, the grandfather of Augustus, who was praetor in B.C. 62, and struck a coin with the head of Sardus Pater, which is remarkable as the only one belonging to, or connected with, the island ([Bioge. Dic. vol. i. p. 455], and M. Aemilius Scaurus, who was praetor in B.C. 53, and was accused by the Sardiniars of oppression and peculation in his government, but was defended by Cicero in an oration of which some fragments are still extant, which throw an important light on the condition and administration of the island. (Cic. pro Scaur. ed. Orell.; Ascon. in Scaur.)

In B.C. 46 the island was visited by Caesar on his return from Africa, and the Subetani severely punished for the support they had given to Nasidae, the admiral of Pompey. (Hirt. B. Afr. 98.) The citizens of Caralis, on the contrary, had shown their zeal in the cause of Caesar by expelling M. Cotta, who had been left by Pompey in charge of the island. (Cass. V. C. i. 30.) Sardinia was afterwards occupied by Menodorus, the lieutenant of Sextius Pompeius, and was one of the provinces which was assigned to the latter by the treaty of Misenum, B.C. 39; but it was subsequently betrayed by Menodorus, and fell into the hands of Octavian. (Dion Cass. xlviii. 30, 36, 45; Appian, B. C. v. 56, 66, 72, 80.) It was probably for some services rendered on one or other of these occasions that the citizens of Caralis were rewarded by obtaining the rights of Roman citizens, a privilege apparently conferred on them by Augustus. ("Caralitan civium Romarum," Plin. iii. 7. a. 13.) This was in the days of Pliny the only privileged town in the island: but a Roman colony had been planted in the extreme N. at a place called Turris Libysonis, (Plin. l. c.) Two other colonies were established in the island at a latter period (probably in the time of Trajan), one at Usellis, on the W. coast, the other at Cornus. (Ptol. iii. 3. § 2; Zumpt, de Col. p. 410.)

Under the Roman Empire we hear but little of Sardinia, which continued to be noted chiefly for its abundant supply of corn, and for the extreme unhealthiness of its climate. In addition to the last disadvantage, it suffered severely, as already mentioned, from the perpetual incursions of the wild mountain tribes, whose depredations the Roman governors were unable to repress. (Strab. v. p. 225.)

With the view of checking these marauders, it was determined in the reign of Tiberius to establish in the island a body of 4000 Jews and Egyptians, who, it was observed, would be little loss if they should perish from the climate. (Tac. Ann. ii. 85.) We have no account of the success of this experiment, but it would seem that all the inhabitants of the island were gradually brought under the Roman government, as at the present day even the wildest mountaineers of the interior speak a dialect of purely Latin origin. (De la Marmona, Voy. en Sard. vol. i. pp. 198, 202.) It is clear also from the number of roads given in the Itineraries, as well as from the remains of them still existing, and the ruins of aqueducts and other ancient buildings still extant, that the island must have enjoyed a considerable degree of prosperity under the Roman Empire, and that exertions were repeatedly made for its improvement. At the same time it was frequently used, as a place of exile for political offenders, and nobles who had given umbrage to the emperors. (Tac. Ann. xiv. 62, xvi. 9, 17; Dion Cass. lvi. 27; Martial, viii. 32.) Its great importance to Rome down to the latest period of the Empire, as one of the principal sources from which the capital was supplied with corn, is attested by many writers, so that when at length it was occupied by the Vandals, it seemed, says a contemporary writer, as if the life-blood of the city had been cut off. (Procop. adv. Symmach. ii. 942; Salvian, de Provud. vi.)

During the greater part of the Roman Empire Sardinia continued to be united with Corsica into one province; this was one of those assigned to the senate in the division under Augustus (Dion Cass. liti. 12); it was therefore under the government of a magistrature styled proconsul, but occasionally a special governor was sent thither by the emperor for the repression of the plundering natives. (Id. l. 28; Orell. Insocr. 74. 2372.) After the time of Constantine, Sardinia and Corsica formed two separate provinces, and had each its own governor, who bore the title of Præses, and was dependent on the Vicarius Urbis Romae. (Not. Dign. ii. p. 64; Bocking, ad loc.; Rufus Fest. 4.) It was not till A.D. 456 that Sardinia was wrested from the Roman Empire by Genseric, king of the Vandals: and though recovered for a time by Marcellinus, it soon fell again into the hands of the barbarians, to whom it continued subject till the fall of the Vandal monarchy in Africa, when Cyrilus recovered possession of the island for Justinian, A.D. 534. (Procop. B. G. i. 6, 10, ii. 5.) It was again conquered by the Gothic king Totila in A.D. 551 (Id. B.G. iv. 24), but was recovered by Narses after the death of that monarch, and seems from this period to have
remained a dependency of the Byzantine Empire down to a late period. But in the 8th century, after having suffered severely from the incursions of the Saracens, it passed for the most part into the hands of that people, though the populæ continued to assert a nominal sovereignty over the island.

III. Topography.

The principal physical features of Sardinia have been already described. Of the numerous ranges, or rather groups, of mountains in the island, the only ancient name that has been preserved to us is that of the Inani Montes (Liv. xxx. 39; Claudian, B. G. 513; τὰ Μαυρακαύα ἄρην, Ptol.); and even of these it is not easy to determine the position with any degree of accuracy; the name was apparently applied to the mountains in the NE. and NE. of the island, which seem to have been regarded (though erroneously) as more elevated than those farther S., so that the unhealthiness of the southern part of the island was popularly attributed to the shutting out of the bracing north winds by this range of lofty mountains. (Claudian, l. c. 513—513.) From its extent and configuration, Sardinia could not possess any very considerable rivers. The largest were, the Thybrus (Ogios, Ptol.; Τήβρα), which rises in the mountains of the NE. of the island, and flows into the Gulf of Oristano on the W. coast; the Sacer Fluvius (Ισθεος παρασω, Ptol.), which falls into the same gulf near Neapolis, now called the R. di Pabillonis; the Temus or Termus (Τήμος, Ptol.), still called the Temu, and falling into the sea near Bosa, to the N. of the Thybris; the Caedebis (Καίδεβις, Ptol.), on the E. coast of the island, now the Fiume di Oroce (Zanarpi, Ptol.), now the Fiumenossa, in the SE. quarter of the island. No ancient name has been preserved for the Río Sannassi, which flows into the Gulf of Cagliari, near the city of that name, though it is a more considerable stream than several of those named.

Ptolemy has preserved to us (iii. 3) the names of several of the more important promontories and headlands of the coast of Sardinia; and from its nature and configuration, most of these can be identified with little difficulty. The northern point of the island, opposite to Corsica, was the promontory of Erreboneum (Ἐρρήβωνομ ἄκρωπ, Ptol.), now called the Punta del Falcone, or Lungo Sardo. The NW. point, forming the western boundary of an extensive bay, now called the Golfo dell'Asinara, is the Gairdinum Prom. (Γαίριδων ἄκρωπ) of Ptolemy; immediately opposite to it lies the Isola dell'Asinara, the Hercules Insula (Ηρακλείου νησίος) of Ptolemy and Pliny, and one of the most considerable of the smaller islands which surround Sardinia. This headland forms the N. extremity of the ridge of mountains called Monti delle Nura; the S. end of the same range forms a bold headland, now called Capo della Coccia, immediately adjoining which is a deep land-locked bay, the Nymphæus Portus of Ptolemy (Νυμφαίου λιμήν), now called Porto Conte. The Hermannum Prom. (Ἑρμαννών ἄκρωπ) of the same author is evidently the Capo di Murgia, about 12 miles N. of the river Temo; the Coreasodes Portus (Κορηασώδης ἄμφωις), which he places between that river and Tharros, is probably the small bay that is found S. of Capo Mannu. The Prom. Crasunum (Πράσυν〈nta〉 ἄκρωπ) must be Capo Al- tano, from whence the coast trends to the S. as far as the Capo di Teulada, the extreme S. point of the whole island, which must be the one called Gher- SARDINIA. 911

soneus by Ptolemy; but his positions for this part of the coast are very inaccurate. Opposite to this SW. corner of the island lay two small islands, one of them, called by Ptolemy the Island of Hawks (Θηράκας νησίος), is the Isola di S. Pietro; the other, now known as the Isola di S. Antioco, is called by him Plumbaria Insula (Μπλυμβαρία νησίος), while it is named by Pliny Echinus; the island was called by the mainland by a narrow strip of sand, and was the site of the celebrated town of Sulci, from whence the adjoining bay (now known as the Golfo di Palmas) derived the name of Sukitanus Portus. Two other small ports mentioned by Ptolemy between Cape Teulada and the site of Nara (at Capo di Pula), Bitiae Portus and Hercalis Portus, must be the small coves at Isola Rossa di Teulada and Porto Malfattano. The next headland, named Cuniclaria Prom. (Κουνικλαρίας ἄκρωπ, but the reading is doubtful), is the Punta della Savorra; and the promontory of Caralis must be the headland immediately adjoining the city of that name, now called the Capo di S. Elia. Pliny, however, gives the name of Caralitanum Prom. to the S. headland of Sardinia, for which (singularly enough) Ptolemy furnishes us with no name. The small island lying off it called both by him and Pliny Ficaria, is a mere rock, now known as the Isola dei Cavoli. Proceeding along the E. coast of the island, we find the Sulpicus Portus (Σούπικιος λιμήν), which cannot be identified with certainty, and the Portus Olbannus (Ολβαννος λιμήν), which is certainly the Gulf of Terranova; while towards the NE. extremity of the island are two headlands called Colunbarium and Arci Promontorium. The latter is still called Capo dell'Orso, from its fancied likenesshine to the figure of a bear; the former cannot be clearly identified, though it is most probably the Capo di Ferro. Opposite this corner of Sardinia lie several small islands, of which the Isola della Maddalena is the most considerable, and next to it the Isola di Caprera. These are probably the Phintonis and Ilva of Ptolemy, while Pliny terms them Phintonis and Fossa. The Cuniclariae Insulae of Pliny are the small islets N. of these, now called the Isola dell'Isolaletta.

The towns of Sardinia were not numerous, and but few of them attained to any importance, at least to down to a late period. Hence they are very summarily dismissed by Strabo, who notices only Caralis and Sulci by name, while Pliny tells us the island contained eighteen "epida," that is, towns of municipal rank, but enumerates only six, besides the colony of Terris Libysconus (Strab. v. p. 22; Plin. iii. 7. s. 19). The only towns which appear to have ever really been places of importance are: Caralis, the capital of the whole island, in ancient as in modern times; Sulci, in the extreme SW. of the island, on the Isola di S. Antioco; Nara, on the coast between Caralis and Sulci at the Capo di Pula; Neapolis, on the W. coast, at the mouth of the Sacer Fluvius; Tharros, on a promontory at the N. extremity of the Gulf of Oristano; Cornus, on the W. coast, about 16 miles further N.; Bosa (Bosa, Ptol. iii. 3. § 7; Ptol. Ant. p. 83), also on the W. coast, at the mouth of the river Temus, still called Bosa; Terris Libysconus (Porto Torres), on the N. coast of the island; Tribula, at Lungo Sardo, near the extreme N. point or Cape Errebebbantium; and Olbia, on the Gulf of Terranova, in the NE. corner of the island. In the interior were: Forum Trajani (Fordauintanas), situated on the river Thyrus.
SARDINIA.

about 18 miles from its mouth; USELFIS, about 18 miles to the S. of the preceding; VALLENTIA, to the S.E. of Uselfisse; and GERULUS VETUS and NOVA, both of which were situated between the rivers Tharros and Cariasis.

Of the minor towns mentioned by Polyeney or the Itineraries, the following may be noticed: 1. On the W. coast, were Tilium (Ptol.), which must have been near the Capo Negretto; Osaca or Hosaca (Idl.) at Flumentorgiu, a few miles W. of Neapolis; and Othoca (Itin. Ant.) apparently the modern Oriastana, near the mouth of the river Thyrus. 2. On the S. coast, Pupulim (Ptol.) may probably be placed at Masesa or Sasesa (Ptol.); and near miles N. of Sulci; Bitia (Ptol.) at S. Isidoro de Teulada; and Tegula (Itin. Ant.) at the Capo di Teulada, the extreme S. point of the island. 3. On the E. coast, Feronia (Ptol.) must have been at or near Posada, 23 miles S. of Olbia, and is apparently the same place called in the Itineraries Portus Lugudonis. The other small places mentioned in the same itinerary were probably mere stations or villages. 4. On the N. coast, besides the two considerable towns of Tribula and Turris Libysonis, Polyeney places two towns, which he calls Julida (probably the same with the Viniodia of the Itinerary, still called Torre Vignola) and Plibus, which may probably be fixed at Castel Sardo. The small towns of the interior are for the most part very uncertain, the positions given by Polyeney, as well as the distances in the Itineraries, varying so much as to afford us in reality but little assistance; and of the names given by Polyeney, Erycinum, Heraeum, Macopsea, Saralis or Sarala, and Lessa, not one is mentioned in the Itineraries. The Aegae Lusitanias (Ptol.) are probably the Acqui di Bene-tutta in the upper valley of the Thyrus; the Aegae Hypsitanas are those of Fordsanianus, and the Aegae Neapollitanae the Bagnai di Sardara. There remain considerable ruins of a Roman town at a place called Castro on the road from Territorca (Olbia) to Oriastana. These are supposed to mark the site of a place called in the Itineraries Lugudonese, probably a corruption of Lagulo or Luguduna. In the SW. portion of the island, also, besides Neapolis and Sulci, are considerable Roman remains at a place called Antas, probably the Metalla of the Itineraries. (Itin. Ant. p. 84.).

The Itineraries give several lines of road through the island of Sardinia. (Itin. Ant. pp. 78—85.) One of these proceeded from Tribula, at the N. extremity of the island, which was the usual place of landing from Corsica, along the whole length of the E. coast to Caralis. It did not accurately follow the line of coast, though it seldom departed far from it, but struck somewhat from Tribula to Olbia, and from thence with some exceptions followed the line of coast. A more circuits, but probably more frequented, route was that which led from Tribula to Torris Libysonis, and thence along the W. coast of the island by Boa, Cornus, and Tharros to Othoca (Orisatana), from which on branch led direct across the island through the plain of the Campidano to Caralis, while another followed nearly the line of the coast by Neapolis to Sulci, and from thence the southern extremity of the island by Tegula and Nora to Caralis. Besides these, two other cross lines of road through the interior are given: the one from Olbia to Caratis direct, through the mountain country of the interior, and the other crossing the same wild tract from Olbia direct to Othoca. Very few of the stations on these lines of road can be identified, and the names themselves are otherwise wholly unknown. The reader will find them fully discussed and examined by De la Marmona (Voy. en Sardaigne, vol. ii. pp. 418—457), who has thrown much light on this obscure subject; but the results must ever remain in many cases uncertain.

We learn from the geographers that even under the Roman Empire several of the wild tribes in the interior of the island retained their distinctive apppellations; but these are very variously given, and were probably subject to much fluctuation. Thus Strabo gives the names of four mountain tribes, whom he calls Parati, Sessinini, Balari and Aconites (Strab. vi. p. 225), all of which, with the exception of the Balari, are otherwise entirely unknown. Pliny mentions only three, the Icenes, Balari, and Corsi, which he calls "celebrini in ea populoeren" (Plin. iii. 12. s. 17), and which are in fact all three well known names. The existence of the Icenes under the Empire is also distinctly attested by Pausanias (x. 17: § 7): yet neither their name nor that of the Balari is noticed by Polyeney, though he gives them of no less than eighteen tribes as existing in his time. These are, beginning at the N. point of the island and proceeding from N. to S.: "the Tribuliti and Corsi, the Coracenses; then the Caruns and Cunesiatane: next to these the Salictani and Lupiddomenes; then the Aesaronenes; after them the Cironenses (called also Acheihenes); then the Huracensi; next to whom follow the Corsi and Corpicenses; after them the Scapitani and Siculenses; next to these the Nepoltani and Valentini, and lastly to the S. the Salicetti and Noritani." (Itin. Ant. iii. 3. § 6). Of these the Corsi are otherwise well known [see above, pp. 908,909]; the four last names, as well as the Tribulites and Coricians, are evidently derived from the names of towns, and are probably the inhabitants of districts municipally dependent upon them, rather than tribes in the proper sense of the term. The other names are wholly unknown. After the fall of the Western Empire we find for the first time the name of Barbaricini (Barbaricini, Procop. B. V. vi. 18) applied to the mountainers of the interior. This application, which appears to be merely a corruption of "Barbaici vicini," was retained throughout the middle ages, and is still preserved in the name of Barbarigui, given to the wild mountain tract which extends from the neighbourhood of Cuglieri towards the sources of the Tirso. These mountaineers were not converted to Christianity till the close of the sixth century, and even at the present day retain many curious traces of paganism in their customs and superstitious usages. (De la Marmona, vol. i. p. 30.)

IV. Natural Products, etc.

The chief produce of Sardinia in ancient times was, as already mentioned, its corn, which it produced in large quantities for exportation even before the period of the Roman conquest. Its mountain tracts were also well adapted for pastureage, as the native tribes subsisted mainly on the produce of their flocks and herds (Diod. v. 15), while they clothed themselves with the skins, whence they were sometimes called "pelliti Sardi." The island also possessed mines both of silver and iron, of which the first are said to have been considerable. (Sofin. 4. § 4.) They were undoubtedly worked by the Romans, as we learn from existing traces, and from the name of Metalla given to a place in the SW. of the island, between Neapolis and Sulci. (Itin.
SARDINIA.

Ant. p. 84; De la Marmora, vol. ii. p. 453.) It had also extensive fisheries, especially of tunny; and of the murex, or shell-fish which produced the purple dye (Suid. s. r.). But its most peculiar natural productions were the wild sheep, or mouflon, called by the Greeks mouvud (Oeis Annon Linn.), which is still found in large herds in the more unvisited parts of the island (Strab. v. p. 225; Paus. x. 17. § 12; Adian. H. d. vii. 34), and a herb, called Herba Sardon, the bitterness of which was said to produce a kind of convulsive grin on the countenances of those that tasted it, which was generally considered as the origin of the phrase, a Sardian smile (sardia Sardonicus; 2areidwv yiavao, Paus. x. 17. § 13; Suid. a. r. 2areidwv; Serv. ad Virg. Ecl. vii. 41; Solin. 4. 4. § 4.) But the etymology and origin of this phrase are exceedingly dubious, and the peculiar herb alluded to by the ancients cannot be now identified. The bitterness of the Sardinian honey (Hor. A. P. 375), which was supposed to result from the same herb, is, however, a fact still observable at the present day. (Smyth's Sardinia, p. 104.) Pausanias mentions that the island was free from wolves, as well as from vipers and other venomous serpents, an advantage that it still enjoys (Paus. x. 17. § 12; Solin. 4. § 9; De la Marmora, vol. i. pp. 173, 177), but it contained a venomous spider, apparently a kind of tarantula, called Solifuga, which was peculiar to the island. (Solin. L. c.)

The native population of Sardinia seem to have enjoyed a very evil reputation among the Romans. The harsh expressions of Cicero (pro Scarr. 9. §§ 15, 42, &c.) must, indeed, be received with considerable allowance, as it was his object in those passages to depreciate the value of their testimony; but the proverbial expression of "Sardi venales" was generally understood as applying to the worthlessness of the individuals, as well as to the cheapness and abundance of slaves from that country. ("Habes Sar don venales, aliud aliо requiror," Cic. ad Ptole. vii. 24.) The praetors, even in the days of Augustus, seem to have been continually making inroads into the mountain territories for the purpose of carrying off slaves (Strab. v. p. 235); but as these mountaineers according to Strabo and Diodorus, lived in caves and holes in the ground, and were unacquainted with agriculture (Strab. L. c.; Diod. iv. 30), it is no wonder that they did not make useful slaves. Of the antiquities found in Sardinia, by far the most remarkable are the singular structures called by the inhabitants Nuraghe or Nuraggis, which are almost entirely peculiar to the island. They are a kind of towers, in the form of a truncated cone strongly built of massive stones, arranged in layers, but not of such massive blocks, or fitted with such skill and care, as those of the Cyclopean structures of Greece or Italy. The interior is occupied with one or more vaulted chambers, the upper cone (where there are two, one over the other, as is frequently the case) being approached by a winding stair or ramp, constructed in the thickness of the walls. In some cases there is a more extensive basement, or solid substruction, containing several lateral chambers, all constructed in the same manner, with radially pointed vaultings, showing no knowledge of the principle of the arch. The number of these singular structures scattered over the island is prodigious; above 1200 have been noticed and recorded, and in many cases as many as twenty or thirty are found in the same neighbourhood; they are naturally found in very different degrees of preservation, and many varieties of arrangement and construction are observed among them; but their purpose and destination are still unknown. Nor can we determine to what people they are to be ascribed. They are certainly more ancient than either the Roman or Carthaginian dominion in the island, and are evidently the structures alluded to by the author of the treatise de Mirabilibus, which he describes as άδον, or vaulted chambers, the construction of which he ascribes to Iolans. (Pseud. Arist. de Mirab. 104.) Diodorus also speaks of great works constructed by the Phoenicians or to the native inhabitants of the island, is a point on which it is very difficult to form an opinion. They are fully described by De la Marmora in his Voyage en Sar daigne, vol. ii. (from which work the annexed figure is taken), and more briefly by Capt. Smyth (Sardinia, pp. 4—7) and Valéry (Voy. en Sar daigne). The work of De la Marmora, above cited, contains a most complete and accurate account of all the antiquities of Sardinia, as well as the natural history, physical geography, and present state of the island. Its authority has been generally followed throughout the preceding article, in the determination of ancient names and localities. The works of Capt. Smyth (Present State of Sardinia, 2 vols. London, 1828), Valéry (Voyage en Corse et en Sardaigne, 2 vols. 8vo. Paris, 1838), and Tyndall (Island of Sardinia, 3 vols. 8vo. London, 1849), though of much interest, are of inferior value.
SARDONES. [Sardones.]
SARDONIX (Σάρδωνιχ), a mountain or chain of mountains in Hindustan, noticed by Pliny (vii. 1. § 119, 204). It was made to have been part of the range now known by the name of the Vinhyia Mountains. Lassen, in his map, has identified them with the Daghgipulali Mountains on the right bank of the Narmada (Shravad), and Forbiger has supposed them to be the Sittipura Mountains, a continuation of the same chain. [V.]
SARDOUN or SARDONIUM MAE (ον Σαρ- δώνιχ πέλαγος, Strab., Pol., but ον Σάρδωνιχ πέλα- γος, Herod. i. 166), was the name given by the ancient geographers of the Mediterranean sea adjoining the island of Sardinia on the W. and S. Like all similar appellations it was used with considerable vagueness and laxity; there being no natural limit to separate it from the other parts of the Mediterranean. Erateosthenes seems to have applied the name to the whole of the sea westward of Sardinia to the coast of Spain (ap. Plin. iii. 5. a. 10), so as to include the whole of what was termed by other authors the Mare Hispanum or Baleari- cum; but this extension does not seem to have been accepted generally, and the Daghgipulali Mountains on the right bank of the Narmada (Shravad), and Forbiger has supposed them to be the Sittipura Mountains, a continuation of the same chain. [V.]
SARMATIA. [Sarmatia.]
SARMATIAE NEE (Σαρματιανα), a district of Cappadocia, on the east of Commagene and near the frontiers of Pontus, containing, according to Ptolemy (v. 6. § 13), the towns of Phara, Sardaga, Gana, Subassasa, Sarabatia, and Mar- roga. (Strab. xii. pp. 534, 537; Plin. vii. 3.) [L.N.]
SARGETIA (Σαργέτια, Dion Cass. xiv. 13; Σαργέτια, Taetz. Chil. ii. 61; Σαργέτουs, Taetz. Chil. vii. 59), a river of Dacia, upon which stood the famous palace of Decebalus. This river must be identified with the Stred or Strejy, a tributary of the Marocch, since we know that Sarmizegethusa was the residence of Decebalus. [Sarmizegethia.]
(Kevert, vol. iii. pt. ii. p. 603.)
SARRIPHI MONTES (τα Σαρριφά μόντες), a chain of mountains, extending, according to Ptolemy, between Margiana and Ariana, and the watershed of several small streams. They are probably those now called the Hazaras. Mannert (v. 2. p. 53), has supposed them to the same as the Sarmifon (see Din. Pergez, v. 1099), but this is contrary to all probability. [V.]
SARMALIUS (It. Ant. p. 203) or SARMALIA (Σαρμαλία, Plut. v. 4. § 8), a town in Galatia, on the road from Ancya to Tavria, is supposed by some to be the modern Karacfel. [L.S.]
SARMATIA (Σαρματία: Fth. Sarmatia), the name of a country in Europe and Asia. For the earlier and Greek forms of the word see SACHMOTION.
That S-th is the same root as S-rh, so that Sarmatia and Srebi, Srep, Sch, Sc, may be, not only the name for the same populations, but also the same name, has been surmised, and that upon unreasonable grounds. The name seems to have first reached the Greeks through the Scythians of the lower Danuber and Don, who applied it to a non-Syriac population. Whether this non-Syriac population used itself, and whether it was limited to them by the Scythians, is uncertain. It was a name for a people, and also one used by some of the Panonian populations. It was, probably, one of the which the Sarmatians themselves used partly, their neighbours generally, just like Galli, Greci, and many others.
More important than the origin of the name are the questions concerning (1) the area, (2) the population to which it applied. Our chief authority on this point is Ptolemy; Strabo's notices are incidental and fragmentary.
The area given by Strabo to the Galatiae and Germani, extends as far as the Boryulessenes, or even the Don, the Tyritgeate being the most western of the non-Germanic countries of the southeast, and the Bastarnae being doubtful,—though, perhaps, German (vii. p. 289). Of a few particular nations, such as the Jazgyes, Hamaxox, and Bossi- xuani, a brief notice is given, without, however, any special statement as to their Sarmatian or non-Sarma- tian affinities. In Asia, the country of the Sarmatiae is called the plains of the Sarmatians, as opposed to the mountains of Caucasian. The inor- dinate size given to Germany by Strabo well nigh obliterates, not only Sarmatia, but Scythia in Europe as well.
Pliny's notices are as incidental as Strabo's, and nearly as brief,—the development of Germany east-
though the extent something

(2) eastern, themselves.

Alauni, writes was the the has (1. casus; tions, may undergo, word Tawria Slavonic), The population country; the TrAei/pic) Germany Northern the Peucini, It is is than an AAaui^oi/ isolated.

It is not it to be understood by this that the Venedi lay between the Gythones and the Baltic, so as to make the latter an inland people, but simply that the Venedi of the parts about Meuwel lay north of the Gythones of the parts about Ethling. Neither can these people be separated from the Guttones and Acetyli, i.e. the populations of the amber country, or East Prussia.

The Finns succeed (Πολύνες έτρα Φίννος). It is not likely that these Finns (if Finns of Finland) can have laid due south of East Prussia; though not impossible. They were, probably, on the east.

The Balunes (Solones, P.), with the Philargundians to the south, and the Avarian, at the head of the Vistula, bring us as to the Dacian frontier. The details here are all conjectural. Zeus has identified the Balunes with the Borani of Zosimus, who, along with the Goths, the Carpi, and the Urungundis, attacked the empire under Gallus. In Nestor a population called Sal-Icii occupies a locality between the Dniiper and Dniester; but this is too far east. In Livonia, Henry the Lett gives prominence to the nation of the Solones, a likewise identification.

For Balunes (supposing this to be the truer reading) the word Polynae gives us the most plausible significance. Nestor uses it frequently. It is Pole, primarily meaning occupantes of plains. Wherever, then, there were plains they might be Polynae; and Nestor actually mentions two divisions of them; the Lekhs, or Poles of the Vistula, and the Polynae of the Dniiper.

The Phrygundians of Polony have always been a cruca geographica. Name for name, they are so like Burgundiones as to have suggested the idea of a migration from Poland to Burgundy. Then there are the Urgundii and Burgundii of the Byzantine writers (see Zeus, a. v. Borani, Ursungnai), with whom the Polomaean population is, probably, identical. The writer who is unwilling to assume migrations unnecessarily will ask whether the several Burgundians may not be explained on the principle suggested by the word Polynae, i.e. whether the word may not be the name of more than one locality of the same physical conditions. Probably, this is the case. In the German, and also in the Slavonic languages, the word Fairgund, Fergund, Fergund, Urgundua, Urgundua, and Virunua, mean hill-range, forest, elevated tract.
Of these there might be any amount,—their occurrence in different and distant parts by no means implying migrations.

The Aravens may be placed in Gallicia.

South of them come the Ombrones, and the Javoro-phracti. Are these the Aravates of Caesar? The Aravates of Caesar were on the eastern confines of the Heretian forest (Bell. Gall. vi. 24, 25), contiguous with the Daci, a fact which, taken along with the physical conditions of the country, gives us Western Gallicia, or Austrian Silesia, for the Aravate-phracti. Then come the Burgiones, then the Arrsicatae (compare with Arosi), then the Sambati, then the Persatini, and then the Jeremy, along the Carpathian Mountains. Gallicia, with parts of Volhynia, and Podolia give us ample room for these obscure, and otherwise unnamed, populations.

The populations of the second column lie to the east of those just enumerated, beginning again with the Venedi (ordinatus Occidentalis) Villan, Grodnio, with parts of Minsk, Volhynia, Podolia, and Kiev give us an area over which we have six names to distribute. Its southern boundary are the Dniester, that appears with the Galinditae of the Galania and Golon of the middle ages, who are East Frussians on the Spirding Lake.

(2.) The Sudeni. These, again, seem to be the Sudi-vitae (the termination is non-radical in several Prussian names) contemporaneous with the Galinditae, but to the north-east of them. Their district is called Sudoria.

(3.) The Stavani. Concerning these, we have the startling statement, that they extend as far as the Alani, (Δέκα τῶν Αλανίων). Is not ΑΛΑΝΟΥ an erroneous name developed out of some form of ΑΛΑΛΝΙΑ? The extension of either the Stavani to Caucasus, or of the Alani to Prussia, is out of the question.

(4.) The Ilygiones. Zeus has allowed himself (s. v. Jaqueinig) to hold that the true form of this word is Ιπθυγνανες, and to identify this with a mountain name in so many forms as to make almost any conjecture excusable, — Jaquesingi, Jaquesinig, Jaquesinig, Jaquesinig, Getitseigae, Getitseigae, Getitseiigae, Getitseiigae, Getitseiigae, Getitseiigae, all actual forms. The area of the population, which was one of the most powerful branches of the Lithuanian stock in the 13th century, was part of Grodno, Minsk, and Volhynia, a locality that certainly suits the Ilygiones.

(5.) The Costoboci in Podolia.

(6.) The Transmontani. This is a name from the Latin of the Dacians,—perhaps, however, a translation of the common Slavonic Za-volovskoye, i. e. over-the-watershed. It was applied, perhaps, to the population on the northern frontier of Dacia in general.

The third list, beginning also with the Venedi, follows the line of the Baltic from Vilna and Courland towards Finland, and then strikes inland, eastwards and southwards. Immediately on the Venedic gulf lie the

(1) Veltae (Vetlaea). Word for word, this is the Vylte and Wilt of the middle ages; a form which appears as early as Alfred. It was German, i. e. applied by the Franks to certain Slavonic population. It was also native, its plural being Veleboabi. Few

nations stand out more prominently than these Wiltas of the Carolingian period. They lie, however, to the east of Prussia, and indeed of Pomerania, from which the Oder divided them. In short, they were in Mecklenburg, rather than in Livonia or Estonia, like the Veltae of Tacitus. Word for word, however, the names are the same. The synonym for these western Wiltae or Wotelobi was Lithisci (Lutizici). This we know from special evidence. A probable synonym for the Veltae of Tacitus was also some form of Lith.- This we infer from their locality being part of the present Lith.-ania and Lett.-land. Add to this that one writer at least (Agathys of Bremen) places the Witzi in the country of Ptolemey's Veltae. The exact explanation of this double appearance of a pair of names is unknown. It is safe, however, to place the Veltae in Lett.-land, i. e. in the southern parts of Livonia, and probably in parts of Lithuanica Proper and Courland, Constantine Porphyrogentius mentions them as Veltii, North of the Veltae—

(2.) The Osii (Ossii), probably in the isle of Oesel. It should be added, however, the root res-—appears frequently in the geography of Prussia. Oussii, a name for the occupants of Oesel, appears early in mediaval history.

(3.) The Carbones, north of the Osi. This is a name of many explanations. It may be the Finn word for forest — Carbo. It may be the root Car- (or K-r.), which appears in a great number of Finn words,—Corallit (Korellan), Curt- (in Curtland), Kur- (in Kur-see), &c. The forms Curones and Curonia (Courland) approach it, but the locality is south instead of north. It may also probably—Carn-eta. It almost certainly shows that we have passed from the country of the Slavonians and Lithuanians to that of the Estonians, Ingrians, and Finlanders. Then, to the east,—

(4.) The Kar-ectae. Here the kar- is the common Finn root as before. Any part of the government of Novgorod or Olonetz might have supplied the name, the present Finns of both belonging to the Karelian division of the name (the -el- being non-radical). Toder, (in s. 8. 9, 10, 11, &c.) The Sali, south of whom the Agathysri, then the Aarsi and Paygryte, south of whom the Savaari, and Borusi as far as the Ripean mountains. Then the Akbi and Naski, south of whom the Vibiones and Idrae, and south of the Vibiones, as far as the Alani, the Sturni. Between the Alani and Hamaxobi the Karpoly and Sargati. At the bend of the Tamais the Ophelines and Tanaita.

There are few points in this list which are fixed. The bend of the Tamais (= Don) would place the Ophelines in Ekaterinovka. The Borusi, if they reached the Ripean mountains, and if these were the Uralian rather than the Valdai range, must have extended far beyond both European and Asiatic Sarmatia. The Savari bear a name very like one in Nestor — the Sevora, on the Desna, Sem, and Sela,—a word that may merely mean northern. It is a name that reappears in Caucausus — Sabirini. The Aarsi may be the Erad (the d being inflexional), a branch of the Morvinis, occupant at the present time of a tract on the Oka. The Po-gyritei may have been the tribes on (po-on) the Geranus, such compounds being common in Slavioso, e. g. Po-habi (on the Elle), Po-morania (on the sea), &c. The whole geography, however, is indefinite and uncertain.
SARMATIA.

For Agathystes, see Hunni. The Sargatii are mentioned in Ptolemy.

South of the Tanais came the Osuli (? Sul-izci of Nestor), reaching as far as the Roxolani, i.e. occupying parts of Cherson and Eukatrinislor. Between the Roxolani and Hamaxaioi the Rhakalani and Exoxugitae. The statement of Pliny that the Hamaxaioi were Aorsi, combined with similarity of name between Aorsi and Erseal, will not help us here. The Erseal are in the governments of Penza and Tambor; the direction of the Hamaxaioi is more westward. Rhakalani seems but another form of Roxolani. In Exo-bug-itae the middle syllable may give us the root Bug, the modern name of the Hypanis. It has been surmised that this is the case with Sa-bok-ae, and Costo-boc-i. The locality would suit.

Between the Peninini and Bresterna (this difference between two nations otherwise identified creates a complication) lie the Carpathi, above whom the Gervit and Buddii.

The Carpi must have been near or on the Carpathian Mountains. They appear as a substantive nation in the later history of Rome, in alliance with the Sarmatae, &c. of the Dacian frontier. We have a Victoria Carpicia Artip; Carpiani and Carpartki (which Zeuss renders Carpathian Dacians) are several forms of this name [Carpi]. They, along with the Costoboci, Armadoci, and Astigni, appear as the most important frontiers of the Northern Dacia. Between the Bresterna and Roxolani the Choni, and under their own mountains (пєв тад ід'я дёй) the Amadoci and Navari, and along the lake (marsh) of Byeke the Torekkaedae, and along the Achibian Comse (А'иллос д66мов) the Taman-seehtoe, and south of the Bastarnae in the direction of Dacia the Tagri, and south of them the Tyrangetae.

For Taureosce thyae and Tyrangetae, see s. e. and Scythii.

Tagri looks like a modified form of Zegovra (tra-monatane), a common Slavonic geographical name, applicable to many localities.

The Amadoci occupied д'я дёй, or the Mons Amadocus of Ptolemy. There was also a Луна Амадоцен, this juxta-position of a mountain and lake (pool, or swamp, or fen) should fix their locality more closely than it does. Their history connects them with the Costoboci. (Zeuss, s. e. Costo- boci, Amadoci.) The physical conditions, however, come not less clearly than our present topographical knowledge of Podola, Misch, &c. explains. For the Navari see Neuri.

The name Choni is important. [See Hunni.]

In Torek-kad-ae and Exo-bug-itae we have two elements of an apparent compound that frequently occurs in Scythe-Sarmatian geography—Тын-гет-ае, &c., Costo-bok-i, Sa-boc-i. The geography is quite compatible in the presence of these elements.

Exoxugitae—From the Vistula eastwards, the Chironia, the Rhodon, the Taruntius, the Cherson—, the order of the modern names being the Pregel, Memel, Duna, Ae, and Nera. For the drainage of the Black Sea, see Scythii.

Mountains.—Pence, the Montes Amadoci, the Mons Budinias, the Mons Alauus, the Mons Carpathus, the Venedic mountains, the Euphrates mountains. None of these are definitely identified. It is difficult to say how Ptolemy named the most important range of so flat a tract as Russia, viz., the Valdai Mountains. On the other hand, the names of his text imply more mountains than really exist. All his mountains were, probably, spurs of the Carpathians, just as in Sarmatia Asiatica they were of Caucasus.

Towns.—See Scythia.

II. SARMATIA ASIATICA.

The boundaries are—The Tanais, from its sources to its mouth, European Sarmatia from the sources of the Tanais northwards, the Mesotes and Costo- boci, the Hyperborean Bosporus, the Euxine as long as the river Corax, the range of Caucasus, the Caspian as far as the river Soana, the Volga as far as its bend (Scythia being on the east of that river), and on the north an Unknown Land. Without knowing the point at which this terra incognita begins, it is impossible to give the northern limits of Sarmatia Asiatica. It is included, however, in the governments of Caucasus, Circassia, Astrakhan, Don Kosaks, Saravan, Simbirsk, Kazan, Viatka, Kazan, Vladimir (?), Nizbiu Novgorod, Russia (?), Tambor, and Pensa; all the governments, in short, on the water system of the Volga; a view which makes the watershed between the rivers that empty themselves into the White Sea and the rivers that fall into the Caspian and Euxine a convenient provisional boundary.

For the obscure geography of Asiatic Sarmatia, the bend of the Tanais is our best starting point. To the north of it dwelt the Perierbi, a great nation; to the south the Iaxanatana, the former in Don Kosaks, Voronezh, and Tambor-Saravan, the latter in Astrakhan. North of the Perierbi come the Asaei, the Souarini, the Zacatae, the Hyperborean Sarmatians, the Mochoes, the Royal Sarmatians, the Hyperborean Sarmatians, the Unknown Land. In Kazan and Simbirsk we may place the Chemeides, and on the east of the Volga the Thirsephorhagi and Materi. The Нпгтвтнш хаёпа must be at the mouth of the Volga. If so, the order in which the names have been given is from north to south, and the Thirsephorhagi are in Eastern Kazan, the Materi in Saravan.

The remaining populations are all (or nearly all) in the governments of Caucasus and Circassia, in the northern parts of the Caucasian range. They are the Siraceni, the Paedi, the Thymoptae, the Taranae, the Asturiani, the Archi, the Zicedhi, the Conopoulos, the Meteli, the Agozairae, the Melanchnaia, the Kephoti, the Sarmatiae, the Amazones, the Sunani, the Sacasi, the Ormecii, the Vali, the Servi, the Tusci, the Diluri, the Vodae, the Olonae, the Isodanae, the Geerti. The Achaei, Kerketi, Heuioeci, Svanoeoli, and Svanarei are truly Caucasian, and belong to the geography of the mountain range rather than the Sarmatian plains and steppes—such as they are in physical geography, and such was the view of Strabo, so far as he noticed Sarmatia at all.

It is difficult to determine the source of Ptolemy's information, difficult to say in what language we are to seek for the meaning of his names. The real populations, as they actually existed, were not very different from those of the Herodotean Scythia; yet the Herodotean names are wanting. These were, probably, Scythian,—the northern populations to which they applied being Ugrian. Are the names native? For the parts due north of Caucasus they may be so; indeed it is possible that the greater number of them may be due to a Caucasian source. At the present time, when we are fairly supplied with
SARMATIA. data both as to the names by which the populations of the parts in question designate themselves, as well as those by which they are designated by their neighbours, there are no satisfactory identifications at all. There are some that we may arrive at by a certain amount of assumption; but it is doubtful whether this is legitimate. To the names, for instance, beginning with sa- (So-hec, &c.) we may see the Slavonic for tense; in those with po- the Slavonic est — both of which are common in the geographical terminology of the Russians, &c. But these are uncertain, as are the generality of the other coincidences.

In Siberia, for instance, a Samoyed tribe is named Motor-si; name for name, this may be Matori; whether, however, it denotes the same population is another question.

Are the Sarmatiae of Ptolemy natural divisions? Subject to an hypothesis, which will be just stated in the present article, but which will be exhibited in full in Scythia, the Sarmatiae of Ptolemy are objectionable, both for what it contains and what it omits. The whole of Asiatie Sarmatia is, more or less, arbitrary. It seems to be a development of the area of the Herodotean Sauromatae. In the north it comprised Finch or Finn, in the south Circassian and Georgian, populations. The Alani were Scythian, as were several other tribes. It is therefore no ethnological term. Neither are its boundaries distinct, if we look at the physical conditions of the country. It was defined upon varying and different principles,—sometimes with a view to physical, sometimes to ethnological, sometimes to political geography. It contains more than a natural Sarmatia.

On the other hand, the Vistula was not ethnological line of demarcation. The western half of Poland was Sarmatian, in respect to its climate, surface, and the manners of its inhabitants. The Lygii, however, having been made part of Germany, remained so in the vision of Ptolemy. That the populations on each side of the Lower Vistula, i.e. of West and East Prussia, were the same, is certain; it is certain, at least, that they were so at the beginning of the historical period, and all inference leads us to hold that they were so before. The Vistula, however, like the Rhine, was a good natural boundary.

The Jazyges Metamastae were most probably Sarmatian also. Pliny calls them Jazyges Sarmatici (iv. 25); the name Metamastae being generally interpreted remored. It is, however, quite as likely to be some native adjunct misunderstood, and adapted to the Greek language.

The other Jazyges (i.e. of the Maeotis) suggested the doctrine of a migration. Yet, if the current interpretation be right, there might be any amount of Jazyges in any part of Sarmatia. It is the Slavonic for language, and, by extension, for the people who speak a language: "a po Oje rjre, zd zvezve'w Wolgy, jazyk swoj Muroma, i Cerewnisi swoj jazyk, e Michot swoj jazyk." —translated, "On the Oka river, where it falls into the Volga, a particular people, the Muroma, and the Tabereins, a peculiar people, and the Moniwins, a peculiar people." (Zeuse, e. v. Ostfianen). Hence it has at least a Slavonic gloss. On the other hand, it has a meaning in the Magyar language, where Jassag = boxman, a fact which has induced many scholars to believe that there were Magyars in Hungary before the great Magyar invasion, indeed before the Hun. Be this as it may, the district of the Jazyges Mo-

SARMATIA.

lanastae is called the Jassyag district at the present moment.

More than one of the Dacian populations were Sarmatian,—the difference between Dacia, the name of the Roman Province, and Sarmatia, the country of an independent and hostile population, being merely political. Indeed, if we look to the distribution of the Sarmatiae, their south-eastern limit must have the parts about Torni. [See Sauromatae.] Here, however, they were intrusive.

ETHNOLOGY. — The doctrine upon this point is merely stated in the present notice. It is developed in the article on Scythia. It is to the effect that, in its proper application, Sarmatia meant one, many, or all of the north-eastern members of the Slavonic family, probably, with some members of the Euthenic, included.

HISTORY. — The early Sarmatian history is Scythian as well [Scythia], and it is not until Panonina becomes a reality that the Sarmatian tribes become prominent in history, and, even then, the distribution of the several wars and alliances between the several nations who came under the general denomination is obscure. In doing this there is much that in a notice like the present may be eliminated. The relations of the Greeks and earlier Romans with Sarmatia were with Scythia and the Getae as well, the relations of the latter being with the provincials of Pannonia, with the Marcomanni, &c., and sometimes with the Romans, &c. Both are neighbours to a tribe of Jazyges.

The great Mithridatic Empire, or, at any rate, the Mithridatic Confederacy, contained Sarmatians, to nominate, descendants of the Herodotean Sauromatae. Members of this division it must have been whom the Marcus, the brother of Lucius Lucillius, chastised and drove beyond the Danube, in his march through Moesia. Those, too, it was with whom the Gias-Danubian nations in general were oftenest in contact.—Jazyges, Roxolani, Cotobi, &c., who though (almost certainly) Sarmatian in their ethnological affinities, are not, to nominate, Sarmatian, but, on the contrary, populations with more or less of an independent history of their own. Thirdly, the Sarmatians, who, in conjunction with the Getae, Daci, Moesians, Thracians, &c., may have been found in the districts south of the Danube, must be looked upon as intrusive and foreign to the soil on which they are found.

On the other hand, it must be remembered that the Sarmatian eo nomine fall into two divisions, divided from each other by the whole extent of the Roman province of Dacia, the area of those of the east being the parts between the Danube and the Don, the area of those of the west being the parts between the Danube and Thes. The relations of the former are with the Scythians, Roxolani, the kings of Pontus, &c., over whom, some years later, M. Crassus triumphed. His actions, however, as well as those of M. Lucilus, so far as they were against the Sarmatian, were only accidental details in the campaigns by which Moesia was reduced.

The whole of the Trans-Danubian frontier of Moesia, east of Viminacium, was formed by Dacia.

The point at which the Romans and Sarmatians would more especially come in contact was the country about Sirmium, where the three provinces of Pannonia, Illyricum, and Moesia joined, and where the pre-eminently Sarmatian districts of the nations between the Danube and Thes. lay northwards—pre-eminentilly Sarmatian as opposed to the Danians.
on one side, and the Quadi, &c., of the Regnum Van vanium, on the other. In the general Germanian and Dalmatian outbreak of A.D. 6, the Sarmatian tribes of these parts took a share (Vell. Pat. ii. 110), as they doubtless, did in the immediately previous war of the Marcomanni, under Maroboduus; the Marcomanni, Quadi, Jazylges, and western Daci, and Sarmatiae being generally united, and, to all appearances, the members of a definite confederacy.

The Regnum Van vanium gives us the continuation of the history of these populations (A.D. 19—50). It is broken up; Vannius (? the Bos) himself disappeared, and Varrinio and Sidon, strongly in the interest of Rome, made kings of the parts between the Marus and Cusus (Mor avia) instead. To the Vanian confederacy (a Ban-at) the Sarmatiae and Jazylges supply the cavalry, the occupants of the Banat itself the infantry (Tac. Annal. xii. 29).

For A.D. 35, we find an interesting notice in Tacitus, which gives definite to the Sarmatian Asiatica of Ptolemy. It is to the effect that, in a war with the Romans, Pharamaces entered into an alliance with the Alansians of the coast of the Caspian and the Sarmatiae Scuputchi (? Baratian), (Tac. Ann. vi. 33.)

A.D. 69. Two pregnant sentences tell us the state of the Sarmatian frontier at the accession of Galba: “Coertae in nos Sarmatarum et Sueorum gentes; nobilitatus clandibus mutuus Ducave” (Hist. i. 2). The Suevi (who here mean the Quadi and Marcomanni) and Sarmatiae (foot and horse) are united, Dacia is paying the way to its final subjection. The Jazylges seem to fall off from the alliance; Jeanas they offer their services to Rome, which are refused. The colleague of Sidon is now Italian, equally faithful to Rome. (Hist. iii. 5.) In the following year it is Sarmatiae and Daci who act together, threatening the fortresses of Moesia and Pannonia (iv. 54). An invasion of Moesia by the Roxolani took place A.D. 69. This is a detail in the history of the Eastern branch.

The conquest of Dacia now draws near. When this has taken place, the character of the Sarmatian area becomes peculiar. It consists of an independent strip of land between the Roman Province and Quado-Marcomannic kingdom (Banat); its political relations fluctuating. When Tacitus wrote the Germania, the Gothini paid tribute to both the Quadi and Sarmatiae; a fact which gives us a political difference between the two, and also a line of separation. The text of Tacitus is ambiguous; “Partem tributorum Sarmatiae, partem Quadi, ut alienigenam inpumum” (Germ. 43). Were the Sarmatiae and Quadi, or the Quadi alone, of a different family from that of the Gothini? This is doubtful. The difference itself, however, is important.

There were Sarmatians amongst the subjects as well as the allies of Decebalius; their share in the Dacian War (A.D. 106) being details of that event. They were left, however, in possession of a large portion of their country, i. e. the parts between the Vltamn Romaunum and the frontier of the Suevi, Quadi, or occupants of Regnum Van vanium; the relations of this to the Roman and non-Roman areas in its neighbourhood being analogous to that of the Decumates Agri, between the Rhine and Upper Danube.

In the Marcomannic War (under M. Antonius) the Sarmatiae are as prominent as any members of the confederacy; indeed it is probable that some of the Marcomanni may have been Sarmatiae, under another name. This is not only compatible with the undoubtedly German origin of the name Marcomanni (Marchmen), but is a probable interpretation of it. German was the term, it might be, and very likely was, applied to a non-German population. There were two Marches: one held by Germans for Rome and against the Sarmatiae; the other held by the Sarmatiae for themselves. The former would be a March, the other an Ukraine. In the eyes of the Germans, however, the men of the latter would just as much be Marchmen as themselves. What the Germans in the Roman service called a neighbouring population the Romans would call it also. We shall soon hear of certain Borderers, Marchmen, or men of the Ukraine, under the name of Limigantes (a semi-barbarous form from Limes); but they will not be, on the strength of their Latin names, Latins. The Solitudines Sarmatianorum of the Roman maps was more or less of a Sarmatian March. The Jazylges and Quadi are (as usual) important members of the confederency.

A.D. 270. Ancrenian resigns the province of Dacia to the Barbarians; a fact which withdraws the scene of many a Sarmatian inroad from the field of observation,—the attacks of the Barbarians upon each other being unrecorded. Both before and after this event, however, Sarmatian inroads along the whole line of the Danube, were frequent. Sarmatians, too, as well as Daci (Galat.) were comprehended under the general name of Goth in the reigns of Decius, Claudius, &c. Add to this that the name of Vandals is now becoming conspicuous, and that under the name of Vandals history we have a great deal that is Sarmatian.

The most important effect of the cession of Dacia was to do away with the great block of Roman, Romanising, or Romanised territory which lay between the Sarmatiae of Pannonia and the Sarmatiae of Scythia. It brought the latter within the range of the former, both being, then, the frontagers of Moesia. Add to this the fact of a great change in the nomenclature being effected. The German portion of the Marcomanni (Thervingia and Gruntung) has occupied parts of Dacia. The members of this section of the German name would only know the Sarmatiae as Vandals. Again, the Hun power is developing itself; so that great material, as well as nominal, changes are in the process of development. Finally, when the point from which the Sarmatiae come to be viewed has become Greek and Constantinopolitan, rather than Latin and Roman, the names Slavoni and Servi will take prominence. However, there is a great slaughter of the Sarmatiae by Carus, on his way eastwards. Then there is the war, under Constantine, of the Sarmatiae of the Border,—the Sarmatiae Limigantes,—a Servile War. [See Limigantes.] The authors who tell us of this are the writers of the Historia Augusta and Ammianus; after whose time the name is either rarely mentioned, or, if mentioned, mentioned on the authority of older writers. The history is specific to certain divisions of the Sarmatian population. This was, in its several divisions, hostile to Rome, and independent; still, there were Sarmatian conquests, and colonies effected by the transplantation of Sarmatiae. One lay so far east as Gaul.

"Aravake Sarmatraunum nuper metata coloni" (Auson. Mosella)
SARMATICA INSULA.

applieis to one of these. There were more of them. The general rule, however, is, that some particular division of the name takes historical prominence, and that the general name of Sarmatian, as well as the particular Sarmatiae of the parts between Dacia and Pannonia, and those between Scythia and Persia, disappears. [See Vandali; Thimfaiae.

[S. G. L.]

SARMATICA INSULA, an island at that mouth of the Danube called Kelabatonia (γό χαλδατονα Κελαβτονα) (Plin. iv. 24, s. 24.)

SARMATICA PORTAE (ai Σαρματικά Πόρτα, Ptol. v. 9, §§ 11, 15), a narrow pass of the Caucasus, whence it is also called Caucasus Portae. (Plin. vi. 11, s. 12, 15, s. 15.) From its vicinity to the Caspian sea, it was also called by some of the ancients Portae Caspiae (Suet. Nero, 19), Caudara Caspum (Tac. ii. 6, 6), and Via Caspia (Ad. Am. vi. 33); but Pliny (l. c.) notes this as an error; and the proper Portae Caspiae were in the Taurus (Forbiger, Geogr. vol. ii. p. 47, note 92). The Sarmatiae Portae formed the only link between Sarmatia and Iberia. Ptolomy (l. c.) distinguishes from this pass another in the same mountain, which he calls ai Αιαλορίων Πόρτα (Portae Alamos), and places the latter in the same latitude as the former, namely the 47th degree, but makes its longitude 3 degrees more to the E. The Alamosatae Portae are those on the Aazax, leading over the mountain from Berbod to Berdian. At both spots there are still traces of long walls 120 feet in height; and on this circumstance seems to have been founded a legend, prevalent in that neighbourhood, of the Black Sea and the Caspian having been at one time connected by such a wall. (Forbiger, Ptol. p. 55, note 13; comp. Pitter, Erdkunde, ii. p. 837.) [T. II. D.]

SARMATIC MONTES (Σαρματικὰ ὑ甘οτια), a range of mountains on the eastern frontier of Germany, mentioned only by Procopius (ii. 11, viii. 10, § 2), according to whom it appears to have extended north of the Danube as far as the sources of the Vistula, and therefore consisted of the mountains in Moravia and a part of the Carpathiae. [L. S.]

SARMATIUM MARE (Σαρματικόν ἔσχατον), a sea in the N. of Europe, washing the coast of Sarmatia, and which must thus have been the Baltic (Tac. Germ. 45). But sometimes the Black Sea is designated by the poets under this name, as by Ovid (ex Paut. iv. 10, 38) and by Valerius Flaccus (Sarmaticus Pontus, viii. 207.) [T. II. D.]

SARMATIA, a town of Aria, mentioned by Ammianus (xxii. 6). It is probably the same as the Sarmaei of Ptolemy (ii. 17, § 4), as both he and Ammianus place it next to Bitaxa, in the same province. [V.]

SARMIZEGETUSIA (Σαρμιζηγετοςια, Ptol. iii. 8, § 9; Ζαρμιζηγετοσια, Dion Cass. viii. 9), one of the most considerable towns of Dacia, and the residence of the Dacian kings (Βασιλεια, Ptol. l. c.) It is called Sarmizegethe in the Tabula Pont., and Sarmatzae by the Geog. Rav. (iv. 7). It is inseparably the same place as that called τα βασιλεια Δασος by Dion Cassius (iv. 17; iv. 18, 8), who places it on the river Sargetis (ib. c. 14); a situation which is also testified by ruins and inscriptions. At a later period a Roman colony was founded here by Trajan, after he had expelled and killed Decebalus king of the Dacians; as is testified by its name of Colonia Ulpia Traiana Augusta, and may be inferred from Ulpian (Dig. 50, tit. 15, 1. 1), from whom we also learn that it possessed the Jus Italicum. It was the head-quarters of the Legio xii. Gemina (Dion Cass. iv. 23), and at first probably there was only a Roman encampment here (id. ivii. 9; Aur. Vict. Caes. xiiii. 4). Hadrian granted an aqueduct upon it, as appears from an inscription (Gruter, p. 177, 3; Orelli, No. 812), and that emperor seems to have retained the colony, on account of its numerous Roman inhabitants, when he resolved to abandon the rest of Dacia to the barbarians. From an inscription to this effect, found near the mouth, there would appear to have been baths here (Orell. 791). Sarmizegethusa occupied the site of the present Tarchely (called also Gradischtew), on the river Steier or Strey, about 5 Roman miles from the Ports Felix, or Vulpian Pass. (Comp. Incer. Gruter, p. 273; Orelli, Nos. 831, 3324, 3434, 3441, 3527, 3686, 4532; Zosam. Amm. pp. 40, 74; Marzali, Danub. tab. 24, 55, &c.; Urt. iii. 2. p. 616, seq.; Zumpt, in Rh. Mus. 1843, p. 253—259.) [T. II. D.]

SARNAJUS, a town in the province of Pontus, named after a certain Sarra, who is supposed to have been mentioned by Strabo (s. p. 511), which, after rising in M. Cornus, flowed in a westerly direction into the Caspian. Professor Wilson considers that it must be either the Atrek or the Gurgen. [V.]

SARNIA or SARMA, is named in the Maritime Hist, among the islands of the Ocean between Gallia and Britannia. Supposed to be Genuaey. [G. L.]

SARNAUS (Παρπαί; Saruns), a river of Cappadocia, flowing into the Bay of Naphles. It has its sources in the Apennines, above Nuceria (Nucerus), near which city it emerges into the plain, and, after traversing this, falls into the sea a short distance S. of Pompeii. Its present mouth is about 2 miles distant from that city, but we know that in ancient times it flowed under the walls of Pompeii, and entered the sea close to its gates. [Pompeii.] The change in its course is doubtless owing to the great catastrophe of A.D. 79, which buried Pompeii and Herculanenum. Virgil speaks of the Sarnaus as flowing through a plain (quod ripam sequitur Sarnaus, Aen. vii. 729); and both Silnus, Italianus and Statius, allude to it as a placid and sluggish stream. (Sil. Ital. viii. 538; Stat. Silv. i. 2. 265; Lucan, ii. 422.) According to Strabo it was navigable, and served both for the export and import of the produce of the interior to and from Pompeii. (Strab. v. 247; Ptol. iii. 5, s. 9; Ptol. iii. 1 § 7; Suet. Clar. Rex. 4.) Vibius Sequester tells us (p. 18) that it derived its name as well as its sources from a mountain called Sarus, or Sarmen, evidently the same which rises above the modern town of Sarmo, and is still called Monte Saro or Sarso. One of the principal sources of the Sarmo does, in fact, rise at the foot of this mountain, which is joined shortly after by several confluent streams, the most considerable of these being the one which flows, as above described, from the valley beyond Nuceria.

According to a tradition alluded to by Virgil (l. c.), the banks of the Sarnus and the plain through which it flowed, were inhabited in ancient times by a people to whom the name of Sarminum was evidently connected with that of the river. They are represented as a Pelasgian tribe, who settled in this part of Italy, where they founded Nuceria, as well as several other cities. (Conon, ap. Serv. ad Aen. l. c.; Sil. Ital. viii. 537.) But their name seems to have quite disappeared in the historical period; and we find Nuceria occupied by the Alsatiers, who were an Ocean or Sabellian race. [Nuceria.]
No trace is found in ancient authors of a town of the name of Sarus; but it is mentioned by the Geographer of Byzantium (iv. 32), and seems, therefore, to have grown up soon after the fall of the Roman Empire.

SARON.  
[Sharon.]  
SARON.  [Saronicus Sinus.]  
SARONICUS SINUS (Σαρωνικὸς πόλις), AEccl. Agam. 317; Strab. viii. pp. 333, 369, 374, 380; Σαρωνικὸς πόρος, Strab. viii. p. 335; Σαρωνικὸς πόλιος, Strab. viii. pp. 335, 369; Σαρωνίκα Σαλαμίνα, Dion. Per. 422; also called Xylonumo, and in Liv. iii. p. 335; Gulf of Egina), a gulf of the Aegean sea, extending from the promontory of Sunium in Attica and Scyllaeum in Troezena to the isle of Aegina. The length of the gulf, according to Scylax (p. 20, Hudson), is 740 stadia. It washes the coasts of Attica, Megaris, Corinth, Epidaurus and Troezena, and contains the islands of Aegina and Salamis. It was said to have derived its name from Sarus, a king of Troezena, who was drowned while hunting in the Troezenaan coast called Phoeleana and afterwards Sarons. (Paus. ii. 30; § 7; Etym. M. p. 708, 52; Leake, Morea, vol. ii. p. 448.) A Troezenaean river Sarus is also mentioned (Estabh. ad Dionys. Per. 422), and likewise a town of the same name. (Steph. B. s. v.) Some derived the name of the gulf from σαρωνική, "an oak." (Plin. iv. 5. s. 18.)  

SARPEDON (Σαρπηδών ο το Σαρπηδώνια άκρα), a promontory on the coast of Cilicia, 50 stadia to the west of the mouth of the Calycadnos, and 120 from Selcetena. In the peace between the Romans and Antiochus the Great this promontory and Cape Calycadnos were made the frontier between the kingdom of Syria and the free countries of Asia Minor. (Strab. xiv. p. 670; Topv. v. § 3; Apian, Syr. 39; Pomp. Mela, i. 13; Liv. xxxviii. 58; Plin. v. 22; Staad. Mar. Magni, § 163.) It now bears the name of Lissam el-Kahpe. (Leake, Asia Minor, p. 203.)  

SARPEDONIUM PROM. (Σαρπηδωνίου άκρα), Herod. vii. 58), the NW. extremity of the gulf of Melas, and due north of the eastern end of the island of Imros, now Cape Parai. [J. R.]  

SARRASTES. [Sarcest.]  
SARRUM, in Gallia, is placed by the Table between Condate (Cognac) [Contade, No. 5] and Vesuina (Périgueux). It is supposed to be Charmanas, but the real distances do not agree with the numbers in the table. [G. L.]  

SARS, a river on the W. coast of Hispania Tarraconensis, between the Prom. Nerium and the Minius. (Mela, iii. 1.) Incontestably the modern Sar, which does not reach the sea, but falls into the ancient Ula at Tarris Augusti (Torrres de Este). (Comp. Floriz, Exp. Soastr. xv. p. 41) [T. H. D.]  

SATISINA (Σατισίνα, Strab. v. Eth. Sarsis: Sarisina), a city of Umbria, situated in the Apennines, on the left bank of the river Sapis (Saoe), about 16 miles above Cassena. It seems to have been in very early times a powerful and important city, as it gave name to the tribe of the Sarisinates (Σαρισινάτωρ, Pol.), who were one of the most considerable of the Umbrian tribes. Indeed some authors speak of them as if they were not included in the Umbrian nation at all, but formed a separate tribe with an independent national character. Thus Polybius, in enumerating the forces of the Italian nations, speaks of the Umbrians and Sarisinates, and Plautus, in one passage, makes a similar distinction. (Pol. ii. 24; Plant. Motell. iii. 2. 83.) The Fasti Capitolini, also, in recording the conquest of the Sarisinates, speak of the two consuls as triumphing "de Saristibus," without any mention of the Umbrrians; but the Epitome of Livy, in relating the same event, classifies them generally among the Umbrrians. (Liv. Epit. xv.; Fast. Capiti.) The probable conclusion is that they were a tribe of the Umbrian race; but with a separate political organisation. We have no particulars of the war which ended in their subjection, which did not take place till b. c. 266, so that they were one of the last of the Italian states that submitted to the Roman yoke. From this time Sarina was certainly included in Umbria in the Roman sense of the term, and became an ordinary municipal town, not apparently of much importance. (Strab. v. p. 227; Plin. iii. 14. s. 19.) It derived its chief celebrity from its being the birthplace of the celebrated comic poet Plautus, who was born there about b. c. 254, very shortly after the Roman conquest. (Hieron, Chron. ad Ol. 145; Fest. s. v. Ploitus, p. 238.) Its territory consists of two mountain pastures,—whence it is called Silinus Italicus "dives lactis" (Sili. Ital. viii. 461),—as well as forests, which abounded in dormice, so much prized by the Romans. (Martial, iii. 58, 35.) Various inscriptions attest the municipal rank of Sarina under the Roman Empire (Orell. Inscr. 4404; Gruter, Inscr. p. 522, 8, p. 1095. 2); but its name is not again found in history. In the middle ages it sank into complete decay, but was revived in the 13th century, and is now a small town of 3600 inhabitants, which retains the ancient site as well as name. [E. H. B.]  

SARUENA (Σαρουένα), a town of Cappadocia, in the district Chaname or Chamanene. On the north-eastern slope of Mount Argaeus, celebrated for its hot springs (Topv. v. § 12; Tab. Pint., where it is called Arauenae, whence Aquae Arauenae; It. Ant. p. 292, where its name is Sacoena). It is by some believed to be the modern Bostum. [L. S.]  

SARUNTES, the name of an Alpine people (Plin. iii. 20. s. 24) in the valley near the sources of the Rhine. There seems no reason to doubt the correctness of the name, and it may be preserved in Sargna, which is north of Chur, and between Chur and the Lake of Constance. In a passage of Caesar (B. G. iv. 10) he mentions the Nuntiates as a people in the upper part of the Rhine, above the Helvetii. The name Nuntates [Nuntuates] is corrupt; and it is possible that the name Saruntes should be in its place. [G. L.]  

SARUS (Σαρός), one of the principal rivers in the south-east of Asia Minor, having its sources in Mount Taurus in Cappadocia. It first flows in a south-eastern direction through Cappadocia by the town of Comana; it then passes through Cilicia in a south-western direction, and, after flowing by the town of Adana, empties itself into the Cilician sea, on the south of Tarsus, after dividing itself into several branches. (Liv. xxxii. 41.) According to Xenophon (Aeub. i. 4. § 1) its breadth at its mouth was 3 plettras or 300 feet; and Procopius (de Aedif. v. 4) says it was a navigable river. (Comp. Strab. xii. p. 555; Topv. v. § 4; Appian, Syr. 4; Plin. vii. 3; Estabh. ad Dion. Per. 567, who erroneously calls it
SARXA. The modern name of the Sarus is SIKUM or SHEM.

[S. L. S.]

SARXA, a station on the road from Philippa to Heraclea (Pent. Tab.), to the N. of the Lake Cer- chinus, between Styrum and Scotia. Now Zikhena. (Leake, North. Grec., vol. iii. p. 227.) [E. B. J.]

SASUMJA (Σάσυμα), a town of Cappadocia, 24 Roman miles to the south of Nasaerus; the place contained the first church to which Gregory of N. xianus was appointed, and he describes it as a most miserable town. (It. Ant. p. 144; It. Hieros. p. 577; Hieroc. p. 700, with Wassel’s note.) Some look for its site near the modern Ἐπάμονα. [T. H. D.]

SASOS, or SASPESI (Σάσπεσις, Σάσπεσι), Herod. i. 104, iv. 37, 40, vii. 79: Apoll. Rhod. ii. 397, 1242; Steph. B. s. v.: cf. Ann. Mar. xxii. 8 (§ 21), a Scythian people, dwelling to the S. of Colchis and N. of Media. According to Herodotus and Stephanus (It. loc.) they were an inland people, but Apollonius places them on the sea-coast. They belonged to the 18th satrapy of the Persian empire. (Herod. iii. 94) and were armed in the same manner as the Colchians, that is, with wooden helments, small shields of untanned hide, short lances, and swords (ib. vii. 79). The Persian scholar on Apollonius derives their name from the abundance of supplies found in their country. The Saspesis appear to have inhabited that district of Georgia lying on the upper course of the river Cyrus, in which Ypsis lies, which is still called Tchcha Kartaful, and as the district contains several other places, the names of which begin with the syllable Tchha, Ritter conjectures that the Saspesis were identical with the eastern Iberians, respecting whom the Greeks invented so many fables. (Rennell, Geogr. of Herod. p. 503; Ritter, Erdkunde, ii. p. 922; Bühr, ad Herod. i. 104.) [T. H. D.]

SA SULLA, a town of Latium, situated in the neighbourhood of Tibur, of which city it was a dependency. It is mentioned only by Livy (vii. 19) among the towns taken from the Tiburtines in n. c. 334, and probably always was a small place. The site has been identified by Gell and Nibby with the ruins of an ancient town, at the foot of the hill of Sezillano, between 7 and 8 miles from Tevioli (Tibur). The ruins in question, consisting of a line of walls of polygonal construction, surrounding a hill of small extent, unquestionably indicate the site of an ancient town; but as we know that the Tiburtine territory contained several other towns besides Empulium and Sussula, the only two whose names are known to us, the identification of the latter is wholly arbitrary. (Gell, Top. Rom., p. 394; Nibby, Diatomi, vol. iii. p. 63.) [E. B. J.]

SATACHILIA (Σάταχιλία, or Σαταχίλια, Plut. iv. 7. § 17), a place in Aethiopia, on the left bank of the Nile, probably near the present Korti, or else somewhat more to the S., near the half-deestroyed village of Ambweute. [T. H. D.]

SATALA (Σατάλα), an important town of Armenia Minor, as may be inferred from the numerous routes which branched off from thence to Pontus and Cappadocia. (Its distance from Caearia was 325 miles, and 124 or 132 from Trapezus. The town was situated in a valley surrounded by mountains, a little to the north of the Euphrates, and was of importance, being the key to the mountain passes leading into Pontus; whence we find that in later times the Legio xv. Apollinaris was stationed there. In the time of Justinian its walls had fallen into decay, but that emperor restored them. (Ptol. i. 15. § 9, v. 7. § 3, v. 17. § 41; Dion Cass. xxvii. 168; Ptolemy, iv. 185, 206, 207, 216, 217; Notit. Imp., Ost. Per.)

The site of this town has not yet been discovered with certainty, though ruins found in various parts of the country have been identified with it by conjecture. (Turrnefort, Voyages, Letter 21, c. 2. p. 17; Renell, Asia Minor, ii. p. 219; Cramer, Asia Minor, i. p. 152, edit.) [L. S.]

SATARCAE, a Sicilian people on the E. coast of the Tauric Chersonesus, who dwelt in caves and holes in the ground, and in order to avoid the rigour of winter, even clothed their faces, leaving only two small holes for their eyes. (Mela, i. 2.) They were accompanied with the use of gold and silver, and carried on their traffic by means of barter. They are mentioned by Pliny under the name of Sathri Sartarchi (iv. 26). According to Ptolemy (iii. 6. § 6) there was a town in the Tauric peninsula called Sartarche (Σάρταρχη), which the scholiast (ad loc.) says was subsequently called Matarca (Ματάρχαι); but the account of the Sartharchae living in caverns seems inconsistent with the idea of their having a town.

Yet Valerius Flaccus also mentions a town—perhaps a district—called Sartarche, which, from his expression, "ditant sua muscula Sartharchen," we may conclude to have been rich in herds of cattle. (Argon. vi. 145.) The same poet describes the Sartharchae as a yellow-haired race. (ib.) [T. H. D.]

SATUCILA (Σάτυκίλα, Diod. : Eth. Σατυκίλα, Steph. B. : Satucilus, Liv. ; but Satucilus, Virg.), a town of Samnia, nearly on the frontiers of Campania. It is first mentioned at the outbreak of the First Samnite War (n. c. 334), when the consul Cornelius established his camp there, apparently to watch the movements of the Samnites in that quarter, and from thence subsequently advancing into their territory, was drawn into a defile, where he narrowly escaped the loss of his whole army, but was saved by the courage and ability of Decius. (Liv. vii. 32, 34.) Again, in n. c. 315, during the Second Samnite War, it was besieged by the Roman general, and was considered of sufficient importance to engage a Roman army for nearly a year, when it was taken by Q. Fabius. The Samnites made a vigorous attempt to relieve it, but without effect, and it fell into the hands of the Romans. (Id. ix. 21, 22; Diod. xix. 72.) From this time it continued in their power; and before the close of the war it was one of the places which they determined to occupy with a colony, which was established there in n. c. 313. (Vell. Pat. i. 14; Fest. v. s. v. Saticulus, p. 840, M.) Livy does not notice the establishment of a colony there on this occasion, but he afterwards mentions it as one of the "coloniae Latine," which distinguished themselves in the Second Punic War by their zeal and fidelity. (Liv. xxxvii. 10.) It is remarkable, however, that a few years before the name of Satucila is found among the towns that had revolted to Hannibal, and were recovered by Fabius in n. c. 215. (Liv. xxviii. 39.)

But it appears that all the MSS. have "Avteliola," (Aebelscki, ad loc. ; and though this name is otherwise quite unknown, it is certainly not safe alter
SATURNUS. 923

SATIRO. (Eih. 256; Sartrninos, Sartrnicos; Ca-
sole di Conca), an ancient city of Latium, situated
on the frontier of the Volscian territory, between
the Alban hills and the sea. This position rendered it
a place of importance during the wars between the
Romans and Volscians, and it is frequently men-
tioned in history at that period. It appears to have
been originally a Latin city, as Diodorus mentions
its name among the reputed colonies of Alba, and
Dionysius also includes it in the list of the thirty
cities of the Latin League. (Diod. viii. Fr. 3; Dia-
dyss. v. 61.) But when it first appears in his
history it is as a Volscian town, apparently a de-
pendency of Antium. It had, however, been wrested
from that people by the Romans at the same time
with Corioli, Pessina, &c; and hence it is one of
the towns the recovery of which by the Volscians is
ascribed to Coriolanus. (Liv. ii. 39.) It seems to
have continued in their power from this time till
after the Gaulish invasion, as it was not till 216 B.C.
that the head-quarters of the Volscians and their
allies on the outbreak of a war with Rome, and, after
their defeat by Camillus, was assaulted and taken
by that general. (Id. vi. 7, 8.) It would appear
that it must on this occasion have for the first time
received a Roman colony, as a few years later (n.c.
381) it is styled a "colonia populi Romanu." In
that year it was attacked by the Volscians in con-
quest with the Pausanias; and, after an obstinate
defence, was carried by assault, and the garrison
put to the sword. (Id. vi. 22.) It is subsequently
mentioned on two occasions as affording shelter to
the Volscian armies after their defeat by the Ro-
mans (Id. vii. 22, 32); after the last of these (n.c.
377) it was burnt by the Latins, who considered
themselves betrayed by their Volscian allies. (Id.
38.) It was not till n. c. 348 that the city was re-
built by the Antiates, who established a colony there;
but two years later it was again taken by the Ro-
mans under M. Valerius Corvus. The garrison, to
the number of 4000 men, were made prisoners, and
the town burnt and destroyed, with the exception of
a temple of Mater Matuta. (Id. vii. 27; Fast.
Capit.) A few years later it was the scene of a
victory of the Romans, under C. Plistius, over the
Antiates (id. viii. 1), and seems to have been soon
after restored, and received a fresh colony, as it was
certainly again inhabited at the commencement of
the Second Punic War. (Id. n. c. 320, after the
disaster of the Cannine Forks, the Satricans revolted
from Rome and declared in favour of the Sammites;
but they were soon punished for their defection,
their city being taken by the consul Papirius, and
the Samnite garrison put to the sword. (Liv. ix. 12,
16; Oro. iii. 15.) From this time it seems to have
continued subject to Rome; but its name disappears
from history, and it probably sank rapidly into de-
cay. It is incidentally mentioned during the Second
Punic War (n.c. 206) on occasion of a prodigy which
occurred in the temple of Mater Matuta, already
noticed (Liv. xxxviii. 11); but it seems cer-
tain that it ceased to exist before the close of the
Republic. Cicero indeed alludes incidentally to the
name in a manner that shows that the site at least
was well known in his time (ad Q. Fr. iii. 1 § 4);
but Pliny reckons it among the celebrated towns of
Latium, of which, in his days, no vestige remained
(Lin. iii. 3 a 9); and none of the other geographers
allude to its name. The site, like that of most of the
Latin cities which disappeared at an early period, is
a matter of much doubt; but several passages in Livy
tend to prove that it must have been situated between
Antium and Velitrae, and its site has been fixed
with much probability by Nibby at the farm or ca-
sale, now called Conco, about half way between
Anco and Velletri. The site is an isolated hill
of tufo, of somewhat quadrangular form, and about
2500 feet in circuit, with precipitous sides, and pre-
sents portions of the ancient walls, constructed in
much the same style as those of Ardea. of irregular
square blocks of tufo. The sites of two gates, one
on the E. the other to the W., may also be distinctly
traced. There is therefore no doubt that the site in
question is that of an ancient city, and the position
would well accord with the supposition that it is
that of Satricum. (Nibby, Dintorni di Romae, vol.
iii. p. 64, n.)

[2. H.B.]
SATULALA. [Seta.] SATURAE PALUS. [Pompejana Padus.] SATURIUM. [Tarentum.] SATURNI PROMONTORIUM, a headland in Hispania Tarraconensis, not far from Cartagia Nova. (Plin. iii. 3. s. 4.) It must be the same promontory called *Soudararia kopp by Ptolemy (ii. 6. § 14); now Cabo de Palos. [T. H. D.] SATYRIUM, Saturiun, Saturum, an ancient city of Etruria, situated in the valley of the Albegra (Albeba), about 24 miles from its mouth. There is no doubt that it was an ancient Etruscan city; and as Pliny tells us that it was previously called Aurinna (iii. 5. s. 8), it is probable that this was its Etruscan name, and that it first received that of Saturn at the time of the Roman colony. But no mention of it is found in history during the period of Etruscan independence; and there is certainly no ground for the supposition of Müller that it was one of the twelve cities of the Etruscan League. (Müller, *Etrusk*, vol. i. p. 350.) Dionysius indeed mentions it as one of the cities founded by the Pelasgians, and subsequently taken from them by the Tyrrhenians and Etruscans (Diovsis. i. 20); but though this is strong evidence for the antiquity of the city, there is no proof that it was ever a place of importance under the Etruscans; and it even seems probable that before the close of their rule, Saturnia had sunk into the condition of a subordinate town, and a mere dependency of Calenra. At least it is remarkable that Livy, in speaking of the establishment of the Roman colony there, says that it was settled "in agro Calentano." (Liv. xxxix. 55.)

The foundation of this colony, which was established in n. c. 183, is the only historical fact recorded to us concerning Saturnia; it was a "colonia civium," and therefore would naturally retain its colonial rank even at a late period. Pliny, however, calls it only an ordinary municipal town, but Ptolemy gives it the rank of a colony, and it is mentioned as such in an inscription of Imperial times. (Plin. iii. 5. s. 8: Ptol. iii. 1. § 49; Gruter. *Inscr.* p. 1093. 8.) It is probable therefore that it received a fresh colony under the Roman Empire, though we have no account of the circumstance. But it seems not to have been a place of any importance, and the existing remains which belong to this period are of little interest.

The modern town of Saturnia, which retains the ancient name as well as a name, is but a very poor place; but its medieval walls are based on those of the ancient city, and the circuit of the latter may be distinctly traced. It occupied the summit of a conical hill, surrounded by steep cliffs, about 2 miles in circuit. Considerable portions of the walls remain in several places; these are constructed of polygonal masonry, resembling that of Coa, but built of travertine; they are supposed by Micali to belong to the Roman colony, though other writers would assign them to the Pelasgians, the earliest inhabitants of Saturnia. (Micali, *Ant. Pop.* Ital. vol. i. pp. 152, 210; Denis, *Etruria*, vol. ii. pp. 308-310.) Numerous tombs are also found in the neighbourhood of the town, but which more resemble the cromlechs of northern Europe than the more regular sepulchres of other Etruscan cities. (Denis, t. c. pp. 314-316.) [E. H. B.]

SATYRI MONUMENTUM (voc *Saturio muhia, Strab. xi. p. 494), a monument consisting of a vast mound of earth, erected in a very conspicuous situation on a promontory on the E. side of the Cumi- merian Bosporus, 90 stadia S. of Achilleion. It was in honour of a king of Bosporus, whom Dubois de Montpéreux identifies with Satyrus I., who reigned n. c. 407-393. (Voyage autour du Caucase, v. p. 48.) The same authority (ib. p. 36) identifies the mound with the hill *Koukouba.* [T. H. D.]

SATYRIIUM INSULAE (Satyropiisk, Ptol. vii. 2. § 30), a group of three Indian islands, lying off the coast of Etruria, in the same degree of latitude as its southern point. They were said to be inhabited by a race of men having tails like Satyr; that is, probably, by apes resembling men. Perhaps the *Anambo* islands. [T. H. D.]

SATYRIIUM Promontorium (Satyropiisk, Ptol. vii. 3. § 2), a promontory on the coast of Sinua (China), forming the southern extremity of the bay Theront, and placed by Ptolemy directly under the equator. It is probably the present *Cape St. James.* (Forbiger, *Geogr.* ii. p. 477, note 51.) [T. H. D.]

SAYA. [Mapharitis.] SAVARI (Salvap, Ptol. iii. 5. § 22), a people in the N. of European Sarmatia, between the rivers Turantus and Chesimus. Schafarik (Sav. *Alterth.,* i. p. 212) identifies them with the Sjycz, a powerful Slaonian race which dwelt on the rivers Desna, Sem, and Sula, and possessed the towns *Tschernogow* and *Ljubetsch,* both of which are mentioned by Constantine Porphyrogenitus (de Adma, i. 49). The name of the Sjycz does not occur in history after the year 1024, though their land and castles are frequently mentioned in subsequent Russian annals. (Ibld. ii. p. 129.) [T. H. D.]

SAVARIA. [Sarabia.] SAVCONNA. [Avar.] SAVIA (Savia, Ptol. ii. 6. § 56), a town of the Peloponnes in Hispania Tarraconensis, the site of which is undetermined. [T. H. D.]

SAVINCA'TES. [Savinca'tus], a name which occurs in the inscription on the arch of Sinua, and is placed next to the Adanates, whom D'Anrille supposes to be the same as the Edanates [Edenesates]. His reasons for placing the Savinates below *Embrus* and on the *Durance*, are not satisfactory. He finds a name *Savarus* there, and that is all the proof except the assumption of the correctness of the position which he has assigned to the Adanates, and the further assumption that the two people were neighbours. [G. L.]

SAULOE PARTHAYNISA (Σαουλης Παρθανινας), this curiously mixed name which has passed into treaties of geography from the editions of Isidorus in the *Geographi Graeci Minores* of Hudson and Müller, appears to have rested on a bad reading of the Greek text. The amended text of the passage in question is Παρθανα Σαουλης ηη̃, ηη αθηνων (Isidor. *Stat. Paphl.* c. 12), which is probably correct (see *Geogr. Graec.* ed. Müller, Paris, 1835.) [V.]

SAUNARIA (Σαουαρια), a town of unknown site in Puntus Polonemianus, is mentioned only by Ptolemy (v. 6. § 10). [L. S.]

SAUXIUM, a little river on the N. coast of Hispania Tarraconensis, in the territory of the Concani and Saleni; now Saja. (Mela. iii. 1.) [T. H. D.]

SAVO. [Vara Sambata.] SAVO (Saroue), a small river of Campania, which appears to have formed the boundary between that country and Latium, in the most extended sense of the term. It is a small and sluggish stream ("picer Savo," *Stat. Sicil.* iv. 8. 66), flowing into the sea between Simmoca and the mouth of the Vol-
SAXA RUBRA. 925

SAXA RUBRA. (Primia Porta), a village and station on the Flaminian Way, 9 miles from Rome. It evidently derived its name from the redness of the tufo rocks, which is still conspicuous in the neighbourhood of Primia Porta. The name is written "Ad Rubras" in the Tabula, while Martial calls the place simply "Rubrae," and this form is found also in the Jerusalem Itinerary. (Martial, iv. 64: 13; Böhm. Hier. p. 612.) But the proper form of it seems to have been Saxa Rubra, which is used both by Livy and Cicero. The former mentions it during the wars of the Romans with the Veneti, in connection with the operations on the Cremerea (Liv. ii. 49); and Cicero notices it as a place in the immediate vicinity of Rome, where M. Antonius halted before entering the city. (Cic. Phil. ii. 31.) It was there also that Antonius, the general of Vespasion, arrived on his march upon Rome, when he learnt the successes of the Virellians and the death of Sabinus. (Luc. Hist. iii. 79.) At a much later period also (n. c. 32) it was the point to which Maxentius advanced to meet Constantine previous to the battle at the Milvian bridge. (Vict. Cass. 40. § 23.) We learn from Martial (I. c.) that a village had grown up on the spot, as would naturally be the case with a station so immediately in the neighbourhood of the city.

On a hill on the right of the Via Flaminia, a little beyond Primia Porta, is the Suburban Villa, which is believed to be the residence of Livius, known by the name of "Ad Gallinas," which was

SAXA RUBRA. 925

SAXA RUBRA. (Primia Porta), a village and station on the Flaminian Way, 9 miles from Rome. It evidently derived its name from the redness of the tufo rocks, which is still conspicuous in the neighbourhood of Primia Porta. The name is written "Ad Rubras" in the Tabula, while Martial calls the place simply "Rubrae," and this form is found also in the Jerusalem Itinerary. (Martial, iv. 64: 13; Böhm. Hier. p. 612.) But the proper form of it seems to have been Saxa Rubra, which is used both by Livy and Cicero. The former mentions it during the wars of the Romans with the Veneti, in connection with the operations on the Cremerea (Liv. ii. 49); and Cicero notices it as a place in the immediate vicinity of Rome, where M. Antonius halted before entering the city. (Cic. Phil. ii. 31.) It was there also that Antonius, the general of Vespasion, arrived on his march upon Rome, when he learnt the successes of the Virellians and the death of Sabinus. (Luc. Hist. iii. 79.) At a much later period also (n. c. 32) it was the point to which Maxentius advanced to meet Constantine previous to the battle at the Milvian bridge. (Vict. Cass. 40. § 23.) We learn from Martial (I. c.) that a village had grown up on the spot, as would naturally be the case with a station so immediately in the neighbourhood of the city.

On a hill on the right of the Via Flaminia, a little beyond Primia Porta, is the Suburban Villa, which is believed to be the residence of Livius, known by the name of "Ad Gallinas," which was
SAXETANUM. situated 9 miles from Rome, on the Via Flaminia. (Plin. xv. 30. s. 40; Suet. Gallb. 1.) [E. H. B.]

SAXETANUM, a place in Hispania Baetica (Itin. Ant. p. 403), called Sax (2a|w'iw) by Ptolemy (ii. 4. § 7), Hexi by Meli (ii. 6), and by Pliny (iii. 3) Sexti Firmii Julius. It was the EtRanhw polis of Strabo (iii. p. 156). On the name see Casson (ad Strab. i. p. 50), and Tzschec (ad Melch. ii. 417). It was not made an outlet by its salt-fish. (Strab. iii. p. 156; Athen. iii. p. 121; Plin. xxxii. 11. s. 53; Mart. vii. 78, &c.) Now most probably Motril. (Cf. Flores, Esp. Saggi xii. p. 101.) [T. H. D.]

SAXONES (σάξωνες: Saxons), a German tribe, which, though it acted a very prominent part about the beginning and during the early part of the middle ages, yet is not mentioned in ancient history previous to A. D. 257. In that year, we are told by Eutropius (vii. 13), comp. Oros. vii. 25., that Saxons and Franks infested the coasts of Armeria and Belgica, the protection of which was intrusted to Carausius. The fact that Pliny and Tacitus do not mention them in the country in which we afterwards find them, does not prove that they did not exist there in the time of those writers. For the inhabitants of the Cumbrian Chersonesons, under which we subsequently find the Saxons, are mentioned by those writers only under the general appellation of the Cumbr, without noticing any special tribes under separate names. Ptolemy (ii. 11. § 11; comp. Steph. B. s. v.) is the first authority describing the habitations of the Saxons, and according to him they occupied the narrow neck of the Cumbrian Chersonesus, between the river Albis (Elbe) and Chassarum (Trave), that is, the country now called Holstein. Their neighbours on the south of the Albis were the Chauci, in the east the Sudarones, and in the north the Singulones, Angli, and other smaller tribes of the peninsula. But besides this portion of the continent, the Saxons also occupied three islands, called "Saxon islands," off the coast of Holstein (Σέξονα καταραί, Πολικ. ii. 11. § 31), one of which was no doubt the modern Hebbelund; the two others must either be supposed to have been swallowed up by the sea, or be identified with the islands of Dyckland and Viehbovel, which are nearer the coast than Hebbelund.

The name Saxones is commonly derived from Seax or Secke, a battle-knife, but others connect it with Sax (earth) or Sax, according to which words would describe the people as living in fixed seats or habitations, as opposed to the free or wandering Franks. The former, however, is the more probable origin of the name; for the living in fixed habitations was certainly not a characteristic mark of the ancient Saxons. They appear to have gradually spread along the north-western coast of Germany, and to have gained possession of a large extent of country, which the Roman geographer (iv. 17, 18, 23) calls by the name of Saxonia, but which was certainly not inhabited by Saxons exclusively. In A. D. 371 the Saxons, in one of their usual ravaging excursions on the coasts of Gaul, were surrounded and cut to pieces by the Roman army under Valentinian (Oros. vii. 32; Amm. Marc. xxvii. 2. 5; comp. xxvii. 4, xxvii. 8; Zosim. iii. 1. 6,) and about the middle of the fifth century a band of Saxons led by Hengist and Horsa crossed over into Britain, which had been completely given up by the Romans, and now fell into the hands of the raving Saxons, who in connection with other German tribes permanently established themselves in Britain, and there developed the great features of their national character. (Beda, Hist. Eccles. i. 12.) As the Romans never invaded the original country of the Saxons, we know of no towns or places in it, with the exception perhaps of the town of Treva (Tróvo) mentioned by Ptolemy (ii. 11. § 37). Besides those already mentioned, there are but few places mentioned by ancient writers in which the Saxons are mentioned, such as Marcian, 53; Claud. de Lond. Sid. ii. 255; Sidon. Apoll. vii. 90. 369. Among modern writers the reader may consult Kufahl, De Saxonum Origine, Berlin, 1830, 8vo., and the best works on the early history of England and Germany. [L. S.]

SAXONUM INSULAE. [Saxones.]

SCAILDAVA, a town in Moesia Inferior, between Novae and Trinacriam. (Itin. Ant. p. 222.) It is called "Scedels (Σκεδελός)" by Procopius (de Aed. iv. 11). Variously identified with Ratomum and Rustschuck. [T. H. D.]

SCALABIS, a town in Lusitania, on the road from Olisipo to Emerita and Bracara. (Itin. Ant. pp. 420, 421.) Pliny (iv. 21. s. 32) calls it a Roman colony, with the surname Praesidium Julianum, and the seat of one of the three "conventus juridici" of Lusitania. It is undoubtedly the same place which Ptolemy (ii. 5. § 7) erroneously calls "Scalabis," which is probably a corruption of Σκαλάδης καλ. (κόλοκων). The modern Scalastram. (Cf. Wesseling, ad Itin. L. c.; Isidore de Vir. Ill. c. 44; Flores, Esp. Saggi xiii. p. 69.) [T. H. D.]

SCALDIS (Schebele, Escout) a river in North Gallia. Caesar (B. G. vi. 33), the first writer who mentions the Scalid, says, when he was pursuing Ambiorix, that he determined to go "as far as the Scalidis which flows into the Mosse (Moass) and the extremity of the Arduenea." (Ardeones). All the MSS. quoted by Schneider (B. G. vi. 33) have the reading "Scaliden," "Schalden," "Scaldin," and other trifling varieties, except one MS. which has "Sumbin:" so that, as Schneider concludes, we cannot doubt that Caesar wrote "Scalida" in this passage. Pliny (iv. 17) describes the Scalida as the boundary between the Gallic and Germanic nations, and says nothing of its union with the Mosse: "A Scalid ad Sequanam Belgicae;" and "a Scalidi incolunt extera Touxandri pluribus nominibus." Some geographers suppose that the Tabula Peutingeriana, in which Scebele is

SCAMANDER. The passage of Caesar is more easily explained by supposing that he knew nothing of the lower course of the Schebele, and only reported what he heard. It is possible that the East Schebele was once the chief outlet of the Schebele, and it may have had some communication with the channels about the islands between the East Schebele and the lower course of the Mosse, which communication no longer exists. There is at least no reason for taking, in place of "Schebele," or "Scaliden," the reading "Sabin" (Σαβίν), from the Greek version of the Commentaries.

The Schebele rises in France, in the department of Ainé. Below Antwerp it enters the sea by two estuaries, the Hond or West Schebele and the East Schebele. [G. L.]

SCAMANDER (Σκαμάνδρος: Mendaria Su, or the river of Brunabanqui), a famous little stream in the plain of Troy, which according to Homer (II. x. 74) was called Xanthis by the gods and Scamander by men; though it probably owed the
name Xanthus to the yellow or brownish colour of its water (comp. H. vi. 4, xxi. 8). Notwithstanding this distinct declaration of the poet that the two names belonged to the same river, Pliny (v. 33) mentions the Xanthus and Scamander as two distinct rivers, and describes the former as flowing into the Portus Achaearum, after having joined the Simoeis. In regard to the colour of the water, it was believed to have even the power of dyeing the wool of sheep, which drank of it. (Aristot, Hist. Anim. iii. 12; Adian, Hist. Anim. viii. 21; Plin. ii. 106; Vitruv. viii. 3.14.) Homer (H. xxi.147, &c.) states that the river had two sources close to the city of Ilium, one sending forth hot water and the other cold, and that near these springs the Trojan women used to wash their clothes. Strabo (xiii. p. 602) remarks that in his time no hot spring existed in those districts; he further asserts that the river had only one source; that this was far away from Troy in Mount Ida; and lastly that the notion of its rising near Troy arose from the circumstance of its flowing for some time under ground and reappearing in the neighbourhood of Ilium. Homer describes the Scamander as a large and deep river (H. xx. 73, xxi. 15, xxi. 148), and states that the Simoeis flowed into the Scamander, which after the junction still retained the name of Scamander (H. v. 774, xxi. 124; comp. Plin. ii. 106; Herod. v. 65; Strab. xiii. p. 595). Although Homer describes the river as large and deep, Herodotus (vii. 42) states that its waters were not sufficient to afford drink to the army of Xerxes. The Scamander after being joined by the Simoeis has still a course of about 20 stadia eastward, before it reaches the sea, on the east of Cape Sigeum, the modern Kima Kale. Ptolemy (v. 2 § 3), and apparently Pomp. Mela (i. 18), assign to each river its own mouth, the Simoeis discharging itself into the sea at a point north of the mouth of the Scamander. To account for these discrepancies, it must be assumed that even at that time the physical changes in the aspect of the country arising from the muddy deposits of the Scamander had produced these effects, or else that Ptolemy mistook a canal for the Scamander. Even in the time of Strabo the Scamander reached the sea only at those seasons when it was swollen by rains, and at other times it was lost in marshes and sand. It was from this circumstance, that, even before its junction with the Simoeis, a canal was dug, which filled the river as it flowed into the sea, south of Sigeum, so that the two rivers joined each other only at times when their waters were high. Pliny, who calls the Scamander a navigable river, is in all probability thinking of the same canal, which is still navigable for small barges. The point at which the two rivers reach the sea is now greatly changed, for owing to the deposits at the mouth, the coast has made great advances into the sea, and the Portus Achaearum, probably a considerable bay, has altogether disappeared. (Comp. Leake, Asia Minor, p. 289, 302, and the various works and treatises on the site and plain of ancient Troy.)

SCAMANDRIA. [L. S.]

SCAMANDRAEA, a small town of Mydia, no doubt situated on the river Scamander in the plain of Troy (Plin. v. 33; Herod. p. 662, where it is called Scamandros). Leake (Asia Minor, p. 276) conjectures that it stood on a hill rising below Bisindus. An inscription referring to this town is preserved in the museum at Paris (Choiseul-Gouffier, Voyage d'un Etranger en Perse, tom. ii. p. 288.) [L. S.]

SCAMBOINIDAE. [Athenae, p. 302, a.]

SCANDIA. 927

SCAMPÆ. [ILLYRICUM, Vol. ii. p. 36, b.]

SCANDARIUM. [Cos.]

SCANDIA. [Cythera.]

SCANDIA (Σκάνδαλια) or SCANDINAVIA. Until about the reign of Augustus the countries north of the Cimmerian Chersonesus were unknown to the ancients, unless we assume with some modern writers that the island of Thule, of which Tythicus of Masalia spoke, was the western part of what is now sometimes called Scandinavia, that is Sweden and Norway. The first ancient writer who alludes to these parts of Europe, Pomp. Mela, in the reign of Claudius, states (iii. 3) that north of the Alis there was an immense bay, full of large and small islands, between which the sea flowed in narrow channels. No name of any of these islands is mentioned, and Mela only states that they were inhabited by the Hermiones, the northernmost of the German tribes. In another passage (iii. 6) the same geographer speaks of an island in the Sinus Codanus, which, according to the common reading, is called Codaonia, or Candinavia, for which some have emended Scandinavia. This island is described by him as surpassing all others in that sea both in size and fertility. But to say the least it is very doubtful as to whether he alludes to the island afterwards called Scania or Scandinavia, especially as Mela describes his island as inhabited by the Teutones. The first writer who mentions Scandina and Scandinavia is Pliny, who, in one passage (iv. 27), like- wise speaks of the Sinus Codanus and its numerous islands, and adds that the largest of them was called Scandinavia; its size, he continues, is unknown, but it is inhabited by 500 pugi of Hellevones, who regard their island as a distinct part of the world (aper terrarum orbis). In another passage (iii. 39) he mentions several islands to the east of Britain, to one of which he gives the name of Scandi- via. From the manner in which he speaks in this latter passage we might be inclined to infer that he regarded Scandinavia and Scania as two different islands; but this appearance may arise from the fact that in each of the passages referred to he followed different authorities, who called the same island by the two names Scandia and Scandinavia. Ptolemy (ii. 11. §§ 33, 34, 33) speaks of a group of four islands on the east of the Cimmerian Chersonesus, and of which he calls the Scandiae Iassae (Σκάνδαι Ιάσαια), and of which he calls the Scandia in the most eastern one is called Scania, extending as far as the mouth of the Vistula. In all these accounts there is the fundamental mistake of regarding Scandinavia as an island, for in reality it is connected on the north- east with the rest of Europe. Pliny speaks of an immense mountain, Svea, in Scandinavia, which may possibly be Mount Kjolen, which divides Sweden from Norway, and a southern branch of which still in some measure bears the name of Svec-Ryggan. The different tribes mentioned by Ptolemy as inhabiting Scandinavia are the Cheadini (Χαδηνειοι), Phahone (Φαθωνες), Pharaesi (Φαραες), Gatae (Γαται), Dauniones (Δαυνιόνες), and Luvoni (Λυουνι). At a later time, Jornandes (de Reb. Get. p. 51, &c.) enumerates no less than twenty-eight different tribes in Scandinavia. Tacitus does not indeed mention Scandia, but the Sutones and Suiones (whence the modern name Sweden) must unquestionably be con- sidered as the most northern among the German tribes and as inhabitants of Scandinavia (Germ. 44, 45). It is well known that according to Jornandes the Gothis, and according to Paulus Diaconus (v. 2) the
SCARDONIA, a small island in the northern part of the Aegaean sea, between Pearsareth and Scyros, now Skandole. (Plin. iv. 12. s. 23; Mela, i. 7. § 8.)

SCANDINAVIA. [Scand.]

SCAPITI HYLE (Σκαπτι Παγι, Plat. Cin. 4, de Exilio, p. 605; Marcellin. Vitr. Thucyl. § 19), or the "foss wood," situated on the confines of Macedonia and Thrace, in the anfractuous district of Mt. Panzaean, to which Thucydides was exiled, and where he composed his great legacy for all ages—the history of the war in which he had served as general. [E. B. J.]

SCAP'TIA (Eth. Σκαπτηνιος, Scapitennis: Paserborne), an ancient city of Latium, which appears to have ceased to exist at a very early period. Its name is found in Dionysius among the thirty cities of the Latin League (Dionys. v. 61); and it therefore seems probable that it was at that time a considerable, or at all events an independent, town. No mention of it is subsequently found in history, but after the great Latin War it was included in one of the new Roman tribes created on that occasion (n. c. 332), to which it gave the name of Scaptian. (Fest. s. v. Scaptila, p. 343; Liv. viii. 17.) No subsequent mention is found of the town, and it is only noticed by Pliny among the "clara oppida" of Latium, which in his time had utterly disappeared (Plin. iii. 5. s. 9). Silius Italicus also alludes to the "Scapta pabes," but in a passage from which no inference can be derived (viii. 395). The Scapitenses noticed by Suetonius (Aug. 40) and elsewhere were the members of the Scaptian tribe. There is no real clue to its position; that derived from the passage of Festus, from which it has been commonly inferred that it was in the neighbourhood of Pedum, being of no value. The words "quam Pedani incompleti," found in all the ordinary editions of the "Geographia" of Ptolemy, are in fact merely a supplement of Uvarius, founded on an inference from Livy (xii. 14, 17), which is by no means conclusive. (See Miller's note.) But supposing that we are justified in placing Scapta in this neighbourhood, the site suggested by Nibby, on the hill now occupied by a farm or castrum called Paserboro, is at least probable enough; the position is a strong one, on the point of one of those narrow ridges with precipitous sides between two ravines, which abound in this part of the Campo Formio. It is about 3 miles NW. of Galliano, the presumed site of Pedum; and the existence of an ancient town on the spot is attested by the fragments of ancient walls, the large, roughly-hewn masses of which are found worked up into more recent buildings. Its situation closely resembles that of Galliano itself, as well as that of Zagarolo, about 3 miles further S. (where there are also indications of ancient habitation); and the identification of any of the three can be little more than conjectural. (Nibby, Duntorm, vol. iii. pp. 70, 71.) [E. H. B.]

SCARPHIE, a town on the western bank of Lake Pelo in Upper Pannonia, on the road leading from Carnuntum to Sabaria. (Plin. iii. 27; It. Ant. pp. 233, 261, 262, 266; Tab. Ptol.) According to coins and inscriptions found at the place, it was a municipium with the surname of Flavia Augusta. Hence it appears that the reading in Pliny, "Scabaria Julia," is not correct, and that we must read either Scarbantia Flavia, or Scarbantia et Juliana. Its site is now occupied by the town of Oedeburg, in Hungarian Soprony or Sopron. (Comp. Muchar, Norikum, i. p. 168; Schüerwiser, Antiquitates Saba- riae, p. 51; Orelli, Inscription. n. 4992.) [L. S.]

SCARHARIA, a town in Rhamna, between Parthenium and Vindobona, on the road leading from Augusta Vindelicorum into Italy, occupied the site of the modern Scarnhart. (Tabula Peutingeriana.) [L. S.]

SCARDO'NA (Σκαρδονα, Ptol. ii. 17, § 3; Procop. B. G. i. 7, iv. 23; Plin. iii. 26; Geogr. Rav. v. 14; Σκαρδω, Strab. viii. p. 315; Sarduna, Pont. Tab.), a town in the territory of the Libarni on the Titius, 12 M. P. from where that river meets the sea. From the circumstance of its having been one of the three "conventus" of Dalmatia, it must have been a place of importance, and was used from early times as a depot for the goods which were transported by the Titius to the inland Dalmatians. (Strab. 16.) The modern Scardonia in Illyric Scardin or Scerdin, retains the name of the old city, though it does not occupy the site, which was probably further to the W. (Wilkinson, Dalmatia, vol. i. p. 191.) Ploemey (ii. 17, § 13) has an island of the same name off the Liburnian coast,—perhaps the rocky and curiously-shaped island of Pago. [E. B. J.]

SCARDES, SCODRUS, SCORDUS MONS (νο Σκαρδος ηος, Polyb. xxvii. 8.; Ptol. ii. 16, § 1), the desolate heights which are mentioned incidentally by Livy (xxii. 20, xxiv. 31) as lying in the way from Sybaris to Scordra, and as giving rise to the Orcini. They seem to have comprehended the great summits on either side of the Drile, where its course is from E. to W. (Leake, Northern Greece vol. iii. p. 477.) In Kiepert's map (Europaeous Turkei) Scardus (Schar-Dagh) extends from the Ljubabina to Skaleh; over this there is a "col" from Kalkandeli to Prisinten not less than 1150 ft. above the level of the Ljubabina. (Strab. Geogr.) According to the nomenclature of Grisebach, Scardia reaches from the Ljubabina at its NE. extremity to the SW. and S. as far as the Klisoura of Devis; S. of that point Pindus commences in a continuation of the same axis. [E. B. J.]

SCARNUNGA, a river of Pannonia, mentioned only by Jornandes (de Reb. Get. 52), which is impossible to identify from the vague manner in which it is spoken of. [L. S.]

SCARPHIE or SCARPHIEA (Σκαρφη, Rom.; Σκαρφε, Strab., Paus., Steph. B.; Eth. Σκαρφεις, Σκαρφειά), a town of the Locri Epicenndii, mentioned by Homer. (H. i. 532.) According to Strabo it was 10 stadia from the sea, 30 stadia from Thronion, and a little less from some other place of which the name is lost, probably Nicara. (Strab. ix. p. 426.) It appears from Pananias that it lay on the direct road from Elatia to Thermopylae by Thronion (viii. 15, § 5), and likewise from Livy, who states that Quintus Flamininus marched from Elateia by Thronium and
SCARPONA.

Scarpieha to Heraclia (xxxiii. 3). Hence the town may be placed between the modern villages of Adenea and Mola. (Leake, Northern Greece, vol. ii. p. 178.) Scarpieha is said by Strabo to have been destroyed by an inundation of the sea caused by an earthquake (p. 60), but it must have been afterward rebuilt, as it is mentioned by subsequent writers down to a late period. (Plin. iv. 7. s. 12; Ptol. iii. 15; § 11; Hieroc. p. 643; Geog. Biv. iv. 10; Const. Porphyry, de Them. ii. 5. p. 51, Bonn.) Scarpieha is also mentioned by Lycophr. 1147; Appian. Syr. 19. Pasch. ii. 29, § 3, x. 1. 52.

SCARPONA or SCARPONNA, in Gallia, is placed in the Antonine Itin. and in the Table on a road between Tullum (Tout) and Divodurum (Mels). The two authorities agree in placing it at the distance of x. from Tullum; but the Itin. makes the distance from Scarpieha to Divodurum xii, and the Table makes it xiii. The larger number comes nearer to the truth, for the place is Charponne, on the Moselle. An inscription has been found at Charponne, which is a small town near viarm surrand. (Salab. V. S. P. M. Scarp. Civit. Leuc.) Scarpieha was in the territory of the Leuci. (Leucel.) Jovinio, Equitum Magister, defeated the Alemanni near Scarpieha in A. D. 366, in the reign of Valentinian and Valens. (Amm. Marc. xxvii. 2; A. D'Anville, Notice, &c.: Ubert, Galliaca, p. 506.) [G. L.]

SCENAE (Σκηναί). 1. A town of Mesopotamia on a canal from the Euphrates, and on the borders of Babylonia, 18 schoeni from Seleucia, and 25 days' journey from the passage of the Euphrates at Zemgna. (Strab. vi. p. 748.) It belonged to the peaceful and nomadic tribe of the Scenitae, and therefore, though called by Strabo διολογος πόλης, was probably only a city of tents, as, indeed, its name implies.

2. SCENAE MANDRAE, a place in Middle Egypt, on the right bank of the Nile, between Aprescopilitos and Babylon, a little SE. of Memphis. (Itin. Ant. p. 169.) It had a Roman garrison, and in later times became the seat of a Christian bishop. (Not. Imp.; comp. Wesseling, ad Itin. l. ec.)

3. SCENAE VETERANORUM, a place in Lower Egypt, on an arm of the Nile, and on the road from Helipolis to Vicus Judaecorum. (Itin. Ant. pp. 163, 169.) It lay SW. of Busbasus. [T. H. D.]

SCENTIAE (Σκητηα), a generic name for various Arab tribes in Pinus, often distinguished by some other appellation. Thus, towards the lower part of the Euphrates, besides the "Attali ibatrunes, Ara- bium gens," he places the Scenitae (vi. 26), whom he mentions again more fully (c. 28), "Nomadis inde infestastiores Chaldaeorum Scenitae, ut diximus claudunt, et ipsi vagni, sed a tubernicals cognominati, quae ciliics metantur, ubi libuit. Deinde Nabataei, &c. Then again below the confines of the Euphrates and Tigris he places the Nomades Scenitae on the right bank of the river, the Chaldai on the left. He speaks also of the Scenitae Salacie. Strabo also uses the name in the same latitude of application of many various tribes of Arabia, Syria, and Mesopotamia (see Index, &c.); but Plutney assigns them a definite seat near the mountains which stretch along the north of the peninsula, north of the Thaditae (al. Oaditae) and Saracen (vi. 7. § 21); and in this vicinity, towards the Red Sea, it is that Ammannus Marcellinus places the Scenite Arabs, whom posterity called Saracens (xiii. 6) [Saraceni.] The remark of Bochart is therefore borne out by authorities. * Ubi Scenitae Eratosthenes, ibi Saracens ponunt Presepian et Marcianus. Saraceni unumrum a Sceniti locorum differential, quod Scenitam nomen est vetustius." (Geogr. Sac. v. l. p. 213.) [G. W.]

SCEPSIS (Σκεψίς; Eth. Ἰννίς). A city of Phrygia, on the SE. of Myasia, on the river Aesseus, 150 stadia to the SE. of Alexandria Troas, and not far from Dicte, one of the highest points of Mount Ida. It was apparently one of the place of the highest antiquity; for it was believed to have been founded immediately after the time of the Trojan War, and Demetrius, a native of the place, considered it to have been the capital of the dominations of Aeneas. (Strab. xiii. p. 607.) The same author stated that the inhabitants were transferred by Scamandrius, the son of Hector, and Aesseus, the son of Aeneas, to another site, lower down the Aesseus, about 60 stadia from the old place, and that there a new town of the same name was founded. The old town after this was distinguished from the new one by the name of Palaecepsis. For two generations the princes of the house of Aeneas maintained towns in the new; but the form of government there became oligarchic. During this period, colonists from Miletus joined the Scenite, and instituted a democratic form of government. The descendants of the royal family, however, still continued to enjoy the regal title and some other distinctions. (Strab. l. c. comp. xiii. p. 603; xiv. p. 635; Plin. v. 2; Steph. B. s. r.) In the time of Xenophon (Hill. iii. 1. § 13), Scipse belonged to Mopsus, a Dardanian princess; and after her death it was seized by Medias, who had married her daughter; but Dercyllidas, who had obtained admission into the town under some pretext, expelled Medias, and restored the sovereign power to the citizens. After this we hear no more of Scipse until the time of the Macedonian supremacy, when Antigonus transferred its inhabitants to Alexandria Troas, on account of their constant quarrels with the town of Cereone in their neighbourhood. Lysimachus afterwards allowed them to return to their ancient home, which at a later time became subject to the kings of Pergamum. (Strab. xiii. p. 597.) This new city became an important seat of learning and philosophy, and is celebrated in the history of the works of Aristotle. Strabo (xiii. p. 608) relates that Neleus of Scipse, a pupil of Aristotle and friend of Theophrastus, inherited the library of the latter, which also contained that of Aristotle. After Neleus' death the library came into the hands of persons who, not knowing its value, and being unwilling to give them up to the library which the Pergamene kings were collecting, concealed these literary treasures in a pit, where they were exposed to injury from damp and worms. At length, however, they were rescued from this place and sold to Apollon of Teos. The books, in a very mutilated condition, were conveyed to Athens, and thence they were carried by Simia to Rome. It is singular that Sceylas (p. 36) enumerates Scipse among the Aecolan coast-towns; for it is evident from Strabo (comp. Démesth. c. Arístoc. p. 671) that it stood at a considerable distance from the sea. The town of Palaecepsis seems to have been abandoned entirely, for in Pinus' time (v. 33) not a vestige of it existed, while Scipse is mentioned by Hierocles (p. 664) and the ecclesiastical notices of bishoprics. In the neighbourhood of Scipse there existed very productive silver mines. It was the birthplace of Demetrius and Metrodorus. The former, who bestowed much labour on the topography of Truah, spoke of
SCHEIDIA. [Coelcyra.]

SCIONUSSA, a small island in the Aegean sea, one of the Sporades, S. of Naxos. (Plin. iv. 12. s. 68.)

SCHISTE (ἡ σχιστὴ δόξη), the name of the road leading from Delphi into Central Greece, was more particularly applied to the spot where the road divided into two, and which was called τρεῖς κέλευθος, redesigning the road to Delphi as one of the three. Of the other two roads, the NE. led to Delphi; the SE. parted into two, one leading to Trachis and Ledaicia, the other to Ambrymus and Stiris. At the spot where the three roads met was the tomb of Laus and his servant, who were here slain by Oedipus. It must have stood at the entrance of the Zimeus Derweni, or opening between the mountains Cirphis and Parnassus, which leads to Delphi. The road from this point becomes very steep and rugged towards Delphi, as Pausanias has described it. (Aeschy. Oed. Tyr. 733; Emp. Phoeb. 38; Pass. ii. 2. § 4, x. 5: § 3; Leake, Northern Greece, vol. ii. p. 103.)

SCIOGENUS (Σχιογένος), the name of several towns, from the reeds or rushes growing in their neighborhood. 1. (usually Σχιοίης), a town in Boeotia, mentioned by Homer (II. ii. 437), and placed by Stabo upon a river of the same name in the territory of Thebes, upon the road to Athens, and at the distance of 50 stadia from Thebes. (Strab. ix. p. 408; Eustath., ad loc.; Steph. B. s. s.; Nicander, Theseevs. 857; Pass. ii. 7. s. 12.) This river is probably the stream flowing into the lake of Hylaeus from the valley of Morige, and which near its mouth is covered with rushes. Nicander is clearly wrong, who makes (l. c.) the Schoenus flow into the lake Copais. (Ullrich, Reisen, p. 258; Leake, Northern Greece, vol. ii. p. 320.) Schoenus was the birthplace of the celebrated Atalanta, the daughter of Schoenus (Paus. viii. 35. § 10); and hence Stadius gives to Schoenus the epithet of "Atalantica." (Stal. Thuc. vii. 267.)

2. A town in the centre of Arcadia near Mythydrum, which was said to have derived its name from the Boeotian Schoenus. (Paus. viii. 35. § 10; Steph. B. s. v.; Leake, Peloponnesiac. p. 240.)

3. A harbour in the Corinthia. [Corinthus, p. 683, a.]

4. A river near Maroneia in Thrace, mentioned only by Melo (ii. 2. § 8).

SCIOGENUS, a bay on the west-coast of Caria, on the south-east of the Cisian Cilicium, and opposite the island of Syme. (Proc. Med., i. 16; Plin. v. 29.) It should be observed, however, that this is the bay of Schoenus is only conjectural, and based upon the order in which Pliny mentions the places in that locality. [L. S.]

SCIA (Σία: Ete. Σιαίας), a small town in Euboea (Steph. B. s. v. Σιαίας), probably in the territory of Eretria, since Pausanias (iv. 2. § 3) mentions Seium as a district belonging to Eretria.

SCIAS. [Megaliopolis, p. 309, b.]

SCIATHUS (Σιαθόος; Ete. Σιαθός; Skiathos), a small island in the Aegean sea, N. of Euboea, and a little E. of the Magnesian coast of Thessaly, is described by Pliny as 15 miles in circumference (iv. 12. s. 23). It is said to have been originally colonised by Pelagians from Thrace, who were succeeded by Chalcidians from Euboea. (Seym. Oh. 584.) It possessed two towns, one of which was also called Sciathus, but the name of the other is unknown. (Seylax, p. 23; Hudson; Strab. ix. p. 436; Ptol. iii. 13. § 47.) It is frequently mentioned in the history of the invasion of Greece by Xerxes, since the Persian and Grecian fleets were stationed near its coasts. (Herod. vii. 176, 179, 182, 183, viii. 7.) It afterwards became one of the subject allies of Athens, but was so insignificant that it had to pay only the small tribute of 200 drachmas yearly. (Franz, Elem. Epigr. 32.) The town of Sciathus was destroyed by the last Philip of Macedonia, n. c. 200, to prevent its falling into the hands of Attalus and the Romans. (Liv. xxxi. 28, 45.) In the Mithridatic War it was one of the haunts of pirates. (Appian, Mithr. 29.) It was subsequently given by Antony to the Athenians. (Appian, B. C. v. 7.) Sciathus was celebrated for its wine (Athen. i. p. 30, f.), and for a species of fish found off its coasts and called kestreuos. (Athen. i. p. 4, c.; Polux, vi. 63.) The modern town lies in the SE. part of the island, and possesses an excellent harbour. The inhabitants have only been settled here since 1829, previous to which time their town stood in the NE. part of the island upon a rock projecting into the sea, and accessible only upon one side, as more secure against the pirates. Ross says that the new town stands upon the site of the ancient city, but the latter was not the homonymous capital of the island, which occupied the site of the old town in the NE. part of the island, as appears from an inscription found there by Leake. The ancient city in the NE. of the island, upon which the modern town now stands, is probably the second city mentioned by Seylax, but without a name. (Ross, Wanderungen in Griechenland, vol. ii. p. 50; Leake, Northern Greece, vol. iii. p. 111.)

SCIDIRUS (Σιδήριος; Ete. Σιδήριας, Steph. B. Supr.), a Greek city on the coast of Lucania, on the Tyrrenian sea, between Pyxus (Baxentum) and Laus. It is mentioned only by Herodotus (vi. 21), from whom we learn that it was, as well as Laus, a colony of Sybaris, and was one of the places to which the surviving inhabitants of that city retired, after its destruction by the Crotonians. It does not appear from his expressions whether these towns were then first founded by the invigizers, or had been previously settled as regular colonies; but the latter supposition is much the more probable. It is singular that no subsequent trace is found of Scidirus: its name is never again mentioned in history, nor alluded to by the geographers, with the exception of Stephano of Byzantium.
SCILLUS

(κατεχομένην), who calls it merely a "city of Italy." We have therefore no clue to its position; for even its situation on the Tyrrhenian sea is a mere inference from the manner in which it is mentioned by Herodotus in conjunction with Lais. But there exist at Supri, on the Gulf of Policastro, extensive remains of an ancient city, which are generally considered, and apparently not without reason, as indicating the site of Scillus. They are said to consist of the remains of a theatre and other public buildings of the time of the Roman occupation of the coast. Scillation, when the Alps at Sciconagmus, and then he gives the breadth of Gallia from Sciconagmus to the Tyreennes and Illiberis. (See the notes and emendations in Harduin's edition.) It appears then that Sciconagmus was at the foot of the Alps on the Italian side; and if the position of Ocelum was certain, we might probably determine that of Sciconagmus, which must have been on the line of the passage over the Alps by the Mont Cenis. It was a great mistake of Boule and Harduin to suppose that Sciconagmus was the same as Segnis or Susum. D'Anville guesses that Sciconagmus may be a place which he calls "Chomat de Siquin, at the entrance of the Col de Cestrives, which leads from the valley of Secane (Cesonao) into that of Pro-belias." As usual, he relies on the resemblance of the ancient and modern names, which is often useful evidence; for "magnus" in Sciconagmus is rarely a common Gallic name for town. D'Anville also supposes that this position of Sciconagmus is confirmed by the site of Ocelum, as he has fixed it. [OCELUM] But all this is vague.

SCIONE (Σκιόνη, Herod. viii. 123, viii. 128; Thuc. iv. 120—123, 133, v. 32; Strab. vii. p. 330; Pomp. Mela. ii. 2. § 11; Plin. iv. 17: Ech. Zeuxavae, Herod.: Ζυκωνίδας, Steph. B. s. c.), the chief town on the isthmus of Paelae in Macedonia. Although it is called itself Archaean, like many other colonial towns, in default of any acknowledged mother-city, it traced its origin to warriors returning from Troy. Under concert with Brasidas the Scionians proclaimed their revolt from Athens, two days after the truce was sworn, March, b.c. 421. Brasidas, by a speech which appealed to Greek feeling, wound up the citizens to the highest pitch of enthusiasm. The Athenians, furious at the refusal of the Scionians to give up this prize, which they had gained after the truce, passed a resolution, under the instigation of Cleon to kill all the grown-up male inhabitants of the place, and strictly besieged the town, which Brasidas was unable to relieve, though he had previously conveyed away the women and children to a place of safety. After a long blockade Scione surrendered to the Athenians, who put all the men of military age to death, and sold the women and children to slavery. The site of this ill-fated city must be sought for between the capes Palathrion and Posidithi. (Leake, Northern Greece, vol. iii. p. 157.)

SCIRDIUM. [SALAMIS]

SCIRI or SCIRI, a population variously placed by various authors. The first who mentions them is Pline (iv. 13. s. 27), who fixes them in Eridia, i.e. in the parts to the NE. of the extreme frontier of what he and his contemporaries call Germany, i.e. East Prussia, Courland, Livonia, Esthonia, and part of Finland. "guidam hanc habitantem Ultam usque flavium a Sarmaticis, Venedis, Sciriis, Hirria, tradunt." No other author either mentions the Hirri or places the Sciri thus far northward.

The most interesting notice of them is in the so-called Oliban inscription (Bückh, Inscri. no. 2058), wherein they are mentioned as dangerous neighbors to the town of Oliba along with the Galatae, the Tsilumatae, the Scytheae, and the Saurutalae (Zeuss, Die Deutschen, i.e. s. e. Gaules); and, doubtless, the neighbouring town of Oliba was their true locality.

3 o 2
The evidence of Jornandes makes them Alans ("Sciri et Satagari et ceteri Alanorum," Rick. Get. 19), evidence which is important, since Peria, the耐ty of the Alan king Candiax, was the writer's grandfather. They are made by Sidonius (Carm. vii. 322) part of Attia's army, by Jornandes subjects of Odoacer, by Procopius members of the Goth and Alan alliance. They were, almost certainly, a Scythian tribe of Kherson, who during the period of the Greek settlements harassed Oibia, and, during the Byzantine period, joined with the other barbarians of the Lower Danube against Rome. Of these, the chief confederates were the Herni and Turcoli; with whom they found their way as far west as Bavaria. The present country of Styria (Styrgia) [longitude = the March of the Sciri or Sciri, the change from Sc to St being justified by the Bavarian Count Von Schiern in one part of a document of the 10th century being made a Comes de Squir in another. Add to this the existence of a Nemus Scirorum in Byzantium.]

The Sciri of the later writers were probably a portion of the Scythians of the parts between the Danube and Don, under a newer and more specific name. The transportation into Styria along with an inroad of Uldis, king of the Huns, seems to have broken up the name and nation. Sozomenus saw the remnants of them labouring as slaves in the mines of Mount Olympus in Bithynia (ix. 5). [R. G. L.]

SCIRRIS (ἡ Σκιρίς: Eth. Σκιρίς, fem. Σκιρίσ), a rugged and barren mountainous district, in the north of Laconia, between the upper Eurotas on the west and the Oenus on the east, and extending north of the highest ridge of the mountains, which were the natural boundary between Laconia and Arcadia. The name probably expressed the wild and rugged nature of the country, for the word signified hard and rugged (σκιρός, σκιρίς, ασκιρός, ἄσκηρος). It was bounded by the Messenians on the north, and by the Parnassians on the west, and was originally part of Arcadia, but was conquered by an early period, and its inhabitants reduced to the condition of Lacedaemonian Perioeci. (Steph. B. s. v. Σκίρος; Thuc. v. 33.) According to Xenophophon they were subjected to Sparta even before the time of Lycurgus. (De Rep. Loc. c. 12.) They were distinguished above all the other Perioeci for their bravery; and their contingent, called the Σκιρίτης Ἀχιός, 600 in number, usually occupied the extreme left of the Lacedaemonian wing. (Thuc. v. 67, 68.) They were frequently placed in the post of danger, and sometimes remained with the king as a body of reserve. (Xen. C Spr. iv. 2 § 1, Hell. v. 2 § 24, v. 4 § 52; Diod. xv. 3.)

The road from Sparta to Tegea, which is the same as the present road from Sparta to Triopolitis, led through the Scirritis. (Leake, Morea, vol. iii. p. 28; Boblaye, Recherches, s. c. p. 75; Ross, Res. Rel. in Peloponnes, p. 178; Curtius, Peloponnesios, vol. ii. p. 263.)

SCIRONIA SAXA. [Megara, p. 316, b.]

SCIBR. [Scir.]

SCITLANA, a station on the Egyptian road, between Brucida (Iteba) and Castra or Parembole. The name is no doubt connected with that of the Scirrones (Σκιρρόνες), whom Ptolemy (iii. 17 § 8) couples with the Dassareutian Pirenae as Illyrian tribes near Macedonia. [E. B. J.]

SCIRTONES. [Siciriana.]

SCIRTONIUM. [Scir.]

SCIRUS (Σκίρος, Procop. de Aed. ii. 7), a river of Mesopotamia, a western tributary of the Chaboras (Chadur). It flowed from 25 sources, and ran past Edessa. (Chron. Edess, in Asserian, Bibl. Or. i. p. 388.) Its name, which signifies the skipping or jumping (from σκιρός), is said to have been derived from its rapid course and its frequent overflows; and its present name of Deison means the same thing. [T. H. D.]

SCIRUM. [Attica, p. 326, a.]

SCISSA, v. s. v. Scirina.

SCITTIUM. [Note: S. T.]

SCODRA (Σκόδρα, Ptol. ii. 16. (17.) § 12; Σκόδρα, Hierocl. p. 656; Eth. Scodrenus, Lib. xiv. 26), one of the more important towns of Roman Illyricum (Montenegro), the capital of the Labantes, seated at the southern extremity of the lake Labates, between two rivers, the Chaulsa on the E., and the Barbarna on the W. (Lib. xiv. 31), and at a distance of 17 miles from the sea-coast (Plin. iii. 22 § 26.) It was a very strong place, and Genii, king of the Illyrians, attempted to defend it against the Romans, B.C. 168, but was defeated in a battle under the walls. Pliny erroneously places it on the Drilo (I. c.). At a later period it became the chief city of the province Pravestaniatis. It is the present Scutari, which is also the name of the lake Labates. (Wilkinson, Dolantia and Montenegro, vol. i. p. 476.) [T. H. D.]

SCOLIUS (Σκόλιος), a mountain between Elia and Achaea, now called Soudanerióitikó, 3333 feet high, from which the river Larissos rises, that forms the boundary between Achaea and Elis. Strabo describes it as adjacent to Mount Lampion, which was connected with the range of Erymanthus. (Strab. viii. 341.) Strabo also identifies it with the "Oinian Rock" of Homer. (II. ii. 617; Strab. viii. 357; Leake, Morea, vol. ii. pp. 184, 230; Peloponnesiana, p. 203.)

SCOLID. [S. T.]

SCOLUS (Σκόλος, Thuc. v. 18; Strab. ix. p. 408), a town of Chaioiades near Olynthus, mentioned together with Spartoliu, in the treaty between Athens and Sparta in the tenth year of the Peloponnesian War. [E. B. J.]

SCOLUM (Σκόλομ, Thuc. v. 24), a town of Boeotia, mentioned by Homer (II. ii. 497), and described by Strabo as a village of the Para- sopia below Citheon (ix. p. 408). Pausanias, in his description of the route from Platea to Thebes, says, that if the traveller were, instead of crossing the Asopus, to follow that river for about 40 stadia, he would arrive at the ruins of Sculus, where there was an unfinished temple of Demeter and Kore (ix. 4 § 4). Mardonius in his march from Tanagra to Platea passed through Sculus. (Herod. ix. 15.) When the Lacedaemonians were preparing to invade Boeotia, n. c. 377, the Thebans threw up an intrenchment in front of Sculus, which probably extended from Mt. Cithernon to the Asopus. (Xen. Hell. v. 1 § 49, Age. 2.) Strabo says that
SCOBIRIA.

Scobus was so disagreeable and rugged (πραχής) that it gave rise to the proverb, "never let us go to Scobus, nor follow any one there" (ix. p. 408). Leake places Scobus just below the projection of Cithaeron, on a little rocky table-height, overlooking the river, where stands a metobike dependent on a convent in the Eleutheris, called St. Melinitus. (Northern Greece, vol. ii. p. 330.)

SCOBIRIA (Σκόμβρια). (Strab. iii. p. 159), an island on the S. coast of Spain, in front of the bay which formed the harbour of Cartagia Nova, and 24 stadia, or 3 miles, distant from the coast. It derived its name from the scomburi, tunny-fish, or mullet, which were found here in great quantities, and from which the Romans prepared their garum. (Plin. xxxi. 8. s. 43.) It was also called Herculis Insula. Now Islato. [T. H. D.]

SCOBIRIAEA. [Saturni Proem.]

SCOBIRUS, SCOBUS (Σκόμβρος, al. Σκόμβρος, Thuc. ii. 96; Aristot. Meteor. i. 13; Scopius, Plin. iv. 17: Εὐθ. Σκόμβρος, Hesych.), an outlying mountain of the chain of Haemus, or that cluster of great summits between Ghinassentiul and Sofia, which sends tributaries to all the great rivers of the N. of European Turkey. As the most central point, and nearly equidistant from the Euxine, the Aegean, the Adriatic, and the Danube, it is probably the Haemus of the traveller's tale in Livy (xl. 21), to which Philip, son of Demetrias, King of Macedonia, made a fruitless excursion with the expectation of beholding from thence at once the Adriatic and the Euxine (Black Sea), the Danube and the Alps. (Leake. Northern Greece, vol. iii. p. 474.) [E. B. J.]

SCOMIUS. [SCOBIRUS.]

SCOPAS (Σκόπας), an eastern tributary of the Sangarius in Galatia, which according to Procopius (de Aed. v. 4) joined the Sangarius, 10 miles east of the town of Julipolis, Pliny (v. 43) calles it Scopas, and according to Procopius this river frequently overflowed the country, which is probably alluded to in the Jerusalem Itinerary (p. 574), where a station called Hyroniutum (i. e. Εὐρωνιοτόμος) is mentioned about 13 miles to the east of Julipolis. The modern name of the river is Aladam. (Comp. Leake, Asia Minor, p. 79; Eckhel, Doctr. Antiq. iii. p. 101.)

SCOPULUS. [HALOXXXENUS.]

SCOTI (Σκότη), a headland on the west coast of Caria, to the west of Myndus, and opposite the island of Cos. (Ptol. v. 2. § 10.) Strabo (xiv. p. 658) mentions two headlands in the same vicinity, Astypalae and Zephyrium, one of which may possibly be the same as Scotia. [L. S.]

SCORDIASCI (Σκορδιάσκοι), a powerful Celtic tribe, in the southern part of Lower Pannonia, between the rivers Sarus, Dravus, and Danubius. Though the Scaur and the Isus were overpowered by the Dacians. (Strab. vii. pp. 293, 313.) Some call them an Illyrian tribe, because living on the borders of Illyricum, they were much mixed up with them. They were in the end greatly reduced by their struggles with the Dacians and the Triballi, so that when they came in contact with the Romans they were easily subdued. (Appian, Righ. 3; Liv. xii. 23; Justin, xxxii. 3; Plin. iii. 28; Ptol. ii. 16. § 8.) In Pannonia they seem to have gradually become assimilated to the Pannonians, wherein in later times they disappear from history as a distinct nation or tribe. [L. S.]

SCORDICUS. [SCYTYPHRES.]

SCORDUS. [SCARDUS.]

SCOTANE. [Cletor, p. 633, a.]

SCOTI. The Scoti were the ancient inhabitants of Hibernia, as appears from notices in some of the Latin writers. (Claudian, de N. Cona. Honor. 33, de Laud. Stil. ii. 251; Oros. i. 2.) For several centuries Ireland was considered as the land of the Scoti, and the name of Scotia was equivalent to that of Hibernia. (Ibld. Grap. xiv. 6; Beda, i. 1, ii. 4; Geogr. Eiv. i. 3, v. 32; Alfred the Great, op. Oros. p. 30, &c.) We have no accounts respecting the subdivisions of the Scoti; but perhaps they are to be sought in the names of the Irish counties, as Munster, Leinster, Ulster, Connacht. Annals mentions the Scoti, in conjunction with the Attighotti, as committing formidable devastations (xxvii. 8. § 4). According to St. Jerome (ad Eorin. v. 2. 201, ed. Mart.) they had their wives in common; a custom which Dion Cassius represents as also prevailing among the kindred race in Caledonia (lxxvi. 12). At a later period the names of Scotia and Scoti vanish entirely from Ireland, and become the apppellations of the neighbouring Caledonia and its inhabitants. This was effected through a migration of the Scoti into Caledonia, who settled to the N. of the Clyde; but at what time this happened, cannot be ascertained. Beda (i. 1) states that it took place under a leader called Rudes. The new settlement waged war with the Picts, and even against the Anglio-Saxons, but at first with little success. (Id. i. 24, iv. 36.) Ultimately, however, in the year 839, under king Kenneth they succeeded in subduing the Picts (Fordon, Scot. Hist. ap. Gale, i. 659, &c.); and the whole country N. of Saldy Firth subsequently obtained the name of Scotland. (Comp. Zeuss, Die Deutschen u. die Nachbarnämme, p. 568; Gibbon, vol. iii. p. 266, and notes ed. Smith.) [T. H. D.]

SCOTTIA. [LACONIA, p. 113, b.]

SCOTUSSA (Pot. Tab.; Scotus, Plin. iv. 17, 8. 18: Eth. Scotussaei, Plin. iv. 17, 8. 18), a station on the road from Hieracica Sinuta to Philippsi, which passed round the N. of the lake Cercinites, answering to the place where the Smyrna was crossed just above the lake. (Leake, Northern Greece, vol. iii. p. 227.) [E. B. J.]

SCOTUS (Σκότος or Σκότωσα) (Eth. Σκότωσα), an ancient town of Pelagiotis in Thessaly, lying between Phærae and Pharsalia, near the frontiers of Pithiots. Scotus is not mentioned in Homer, but according to some accounts the oracle of Dodona in Epeirus originally came from this place. (Strab. vii. p. 329.) In n. c. 394 the Scotussaei joined the other Thessalians in opposing the march of Agasias through their country. (Xen. Hell. iv. 3. § 3.) In n. c. 367 Scotus was treacherously seized by Alexander, tyrant of the neighbouring town of Phere (Diod. xiv. 75.) In the territory of Scotus were the hills called Cynosephalae, which are memorable as the scene of two battles, one fought in n. c. 364, between the Thebans and Alexander of Phæra, and the other, of still greater celebrity, fought in n. c. 197, in which the last Philip of Macedonia was defeated by the Roman consul Flaminius. (Plut. Ptol. 32; Strab. i. p. 447; Polyb. xviii. 3, 6. &c.; Livy. xxxiv. 9.) In n. c. 191 Scotussa surrendered to Antiochus, but was recovered shortly afterwards, along with Pharsalia and Phæra, by the consuls Acilius. (Liv. xxxvi. 9, 14.) The ruins of Scotussa are found at

SCOTUSSA. [SCOTUS.]
Scultena. The city was about two or three miles in circumference; but of the walls only a few courses of masonry have been preserved. The acropolis stood at the south-western end of the site, below which, on the east and north, the ground is covered with foundations of buildings, heaps of stones, and fragments of tile and pottery. (Leka, Northern Greece, vol. iv. p. 454, seq.)

SCULTEXYA (Scouatiara, Strab.: Panaro), a river of Gallia Cispadana, and one of the principal of the southern tributaries of the Padus. (Plin. iii. 16. s. 99: P. Dicat. Hist. Lang. iv. 47.) It crosses the Aemilian Way about 5 miles E. of Mutina (Modena), and falls into the Po a little below Bondeum, being the last of the tributaries of that river which now flows into its main stream. In the lower part of its course it now bears the name of Panaro, but in the upper part, before it leaves the valleys of the Apennines, it is still known as the Scultennia. It has its sources in one of the loftiest and most rugged groups of the Apennines, at the foot of the Monte Cimone, and from thence flows for many miles through a deep and winding valley, which appears to have been the abode of the Ligurian tribe of the Frimitiates. The distinct stellas on old maps the title of Frignana. (Mug. vol. ii. tav. 16.) In ii. c. 177 the banks of the Scultennia were the scene of a decisive conflict between the Ligurians and the Roman consul C. Claudius, in which the former were defeated with great slaughter (Liv. xii. 12, 18); but the site of the battle is not more exactly indicated. Strabo speaks of the plains on the banks of the Scultennia, probably in the lower part of its course, as producing wool of the finest quality. (Strab. v. p. 218.)

SCUP1 (Scouatou, Pol. iii. 9, § 6, vii. 11. § 5; Hieroc.: Nicoph. Bryenn. iv. 18; Geo. Bav. iv. 15; τὴν Scutiov, Anna Comm. i. p. 253; Scutiovou, Prosop de Aed. iv. 4; Orelli, Inscri. 1790: Uschkob), a town which was its important post at the right side of the Illyrican towards Macedonia. There is no evidence of its ever having been possessed by the kings of Macedonia or Paonia. Under the Romans it was reduced to Bruttium, as well as in the time of Ptolemy as in the fifth century, when it was the capital of the new diocese of Bruttium (Marquart, in Becker's Rom. Ant. iii. p. 110). The Roman road from Stobi to Naissus passed by Scupi, which was thus brought into connection with the great SE. route from Viminacium on the Danube to Byzantium. It was probably seldom under the complete authority of Constantiopolis, though after the memorable victory in which, under its walls, Basil, the "Slayer of the Bulgarians", in the beginning of the eleventh century, avenged the defeat he had suffered from Samuel, king of Bulgaria, twenty-one years before, in the passes of Mt. Haemen, this city surrendered to the Byzantine army (Codren. p. 694). In the reign of Michael Palaeologus it was wrested from the emperor by the Servians, and became the residence of the Kiral (Cantacuzenus, p. 774.) Finally, under Sultan Bayezid, Scupi, or the "Bride of Rainhi," received a colony of Ottoman Turks (Chalcândyles, p. 31). (Leka, Northern Greece, vol. iii. p. 478.)

SCURGUM (Scorhgyou), a town in the north of Germany, in the territory of the Helvoces, between the Viadus and the Vistula, the exact site of which is unknown. (Ptol. ii. 11. § 27; comp. Wilhel. Germanicii, p. 253.)

SCYDISES (Scodiης), a chain of rugged mountains in the east of Pontus, which was connected in the north with the Moschiei Motaces on the east, and with Mons Faryadres on the north-west, while in the south-east it was connected with Anti- tanus. (Strab. xi. p. 497, xli. p. 498; Ptol. v. 8, where it is called Scaphiscoros.) Modern travellers identify it with the Tehambala Bet (Wiener Jahrbücher, vol. cv. p. 21.)

SCYDIA (Scodia: Eth. Scodiadus), a town of Emathia in Macedonia, which Ptolemy places between Tyriassa and Mieza. (Steph. B. s. v.; Pol. iii. 13. § 39; Ptol. iv. 10. s. 17.) It is perhaps the same as the station Scirio in the Jerusalem Itinerary (p. 606), where it is placed between Elesi and Fell, at the distance of 15 miles from either. (Cramer, Ancient Greece, vol. i. p. 228.)

SCYLACE (Scylak), an ancient Pelasgian town of Mycia, on the coast of the Propontis, east of Cyzicus. (Steph. B. s. v.) In this place and the neighbouring Placia, the Pelasgians, according to Herodotus (i. 57), had preserved their ancient language down to his time. Scevax (p. 35) mentions only Placia, but Mei (i. 19) and Pinty (v. 40) offer the Pelasgian language in the following: These towns seem never to have been of any importance, and to have decayed at an early period. (L. S.)

SCYLACHUM or SCYLLETIUM (Scylachiai, Steph. B., Strab.; Scolletiai, Pol.: Eth. Scylatchion: Squilace), a town on the E. coast of Bruttium, situated on the shores of an extensive bay, to which it gave the name of SCYLLETICUS SINES. (Strab. vi. p. 261.) It is this bay, still known as the Gulf of Squillace, which indent the coast of Bruttium on the E. as deeply as that of Hipponium or Terina (the Gulf of St. Eufemio) does on the W., so that they leave but a comparatively narrow isthmus between them. (Strab. l.c.; Pol. iii. 10. s. 15.) [BRUTTUM.] According to a tradition generally received in ancient times, Squillium was founded by an Athenian colony, a part of the followers who had accompanied Menesthenes to the Trojan War. (Strab. l.c.; Plin. l. c.; Serv. ad Aen. iii. 554.) Another tradition was, however, extant, which attached its foundation to Ulysses. (Cassiod. Var. xii. 15; Scaliger l. c.) But no authority can be attached to such statements, and there is no trace in historical times of Squillium having been a Greek colony, still less an Athenian one. Its name is not mentioned either by Scevax or Scevans Chius in enumerating the Greek cities in this part of Italy, nor is there any allusion to its Athenian origin in Titu- cides at the time of the Athenian expedition to Sicily. We learn from Diodorus (xiii. 3) that it certainly did not display any friendly feeling towards the Athenians, and indeed during the historical period of the Greek colonies to have been a place of inferior consideration, and a mere dependency of Crotona, to which city it continued subject till it was wrested from its power by the elder Diony- sius, who assigned it with its territory to the Locrians. (Strab. vi. p. 261.) It is evident that it was still a small and unimportant place at the time of the Second Punic War, as no mention is found of its name during the operations of Hannibal in Bruttium, though he appears to have for some time had his head quarters in its immediate neighbourhood, and the place called Castra Hannibalis must have been very near to Squillium. (Castra Han-
SCYLAX.

[In r. c. 124 the Romans, at the instigation of C. Graeculus, sent a colony to Scylacium, which appears to have assumed the name of Minervium or Colonia Minervia. (Vell. Pat. i. 15; Mommsen, in Berichte der Sächsischen Gesellschaft der Wissenschaften, 1849, pp. 49—51.) The name is written by Velius "Sciolium;" and the form "Scylacium" is the same, and derived to the mainland of Antiumus Pius, from which it appears that the place must have received a fresh colony under Nerva. (Orell. Juv. 136; Mommsen, i.e.) Scylacium appears to have become a considerable town after it received the Roman colony, and continued such throughout the Roman Empire. (Mel. i. 4. § 8; Plin. iii. 10. s. 15; Ptol. iii. 1. § 11.) Towards the close of this period it was distinguished as the birthplace of Cassiodorus, who has left a detailed but rhetorical description of the beauty of its situation, and fertility of its territory. (Cassiod. Var. xii. 15.)

The modern city of Scyliac is a poor place, with only about 4000 inhabitants, though retaining its episcopal see. It stands upon a hill about 3 miles from the sea, a position according with the description given by Cassiodorus of the ancient city, but it is probable that this occupied a site nearer the sea, where considerable ruins are said still to exist, though they have not been described by any modern traveler.

The Scylleticus Sinus (Σκυλλητικὸς ὕδατος), or Gulf of Scylacium, was always regarded as dangerous to mariners; hence Virgil calls it "navinum Scylacum." (Aen. iii. 553.) There is no natural port throughout its whole extent, and it still bears an evil reputation for shipwrecks.

The name is found in Aristotle as well as Antichenes of Syracuse, but would seem to have been unknown to Thucydides; at least it is difficult to explain otherwise the peculiar manner in which he speaks of the Terinaeus gulf, while relating the voyage of Gy-lippus along the E. coast of Bruttium. (Thuc. vi. 104; Arist. Pol. vii. 10; Antioch. ep. Strab. vi. 254.)

SCYLAX (Σκύλαξ), the chief tributary of the Iris in Pontus; it had its sources in the east of Galatia, and flowing in a north-western direction, emptied itself into the Iris near Exapotasia, Magnopoli. (Strab. xi. p. 547.) Its modern name is Tchaoterlek Irnak. (Hamilton, Researches, vol. i. pp. 365, 374.)

SCYLLA (Σκύλλα), (Tob. Pent.; Geogr. Rev. iv. 6, 12), a town of Thrace, on the Euxine, where the long wall, erected by the emperor Anastasius Dicorus for the defence of Constantinople, terminated. This wall commenced at Selymbria, on the Propontis, and was carried across the narrow part of Thrace, at the distance of about 40 miles from Constantinople, its length being 2 days' journey. (Proc. de Acad. iv. 9; Gibbon, Decline and Fall, c. 40.)

SCYLLAEM (Σκύλλαιον), a promontory, and town or fortress, on the W. coast of Bruttium, about 15 miles N. of Rhégium, and almost exactly at the entrance of the Sicilian strait. The promontory is well described by Strabo (vi. p. 257) as a projecting rocky headland, jutting boldly into the sea, and united to the mainland by a narrow neck or isthmus, so as to form two small but well sheltered bays, one on each side. There can be no doubt that this rocky promontory was the one which became the subject of so many fables, and which was represented by Homer and other poets as the abode of the monster Scylla. (Hom. Od. xii. 73, &c., 235, &c.; Biogr. Dict. art. SCYLLA.) But the dangers of the rock of Scylla were far more fabulous than those of its neighbour Charybdis, and it is difficult to understand how, even in the infancy of navigation, it could have offered any obstacle more formidable than a hundred other headlands whose names are fated, which attached him under the wall of Troy. (Apollod. iii. 13, § 8; Paus. i. 22, § 6; Strab. i. p. 436.) It was here also that Pyrrhus, the son of Deidamia by Achilles, was brought up, and was fetched from thence by Ulysses to the Trojan War. (Hom. H. xix. 326, Od. xi. 507; Soph. Phil. 239, seq.) According to another tradi-
tion Scyros was conquered by Achilles (Hom. II. i. 668; Paus. i. 22. § 6); and this conquest was connected in the Attic legends with the death of Theseus. After Theseus had been driven out of Athens he retired to Scyros, where he was first hospitably received by Lycomedes, but was afterwards treacherously hurled into the sea from one of the rocks in the island. It was to revenge his death that Pelens sent Achilles to conquer the island. (Plut. Thea. 35; Paus. i. 22. § 6; Philist. Heroe. 19.) Scyros is said to have been originally inhabited by Pelasgus, Carian, and Dolopian, and we know from Thucydides that the island was still inhabited by Dolopians, when it was conquered by Cimon after the Persian wars. (Nicolaus Damasc. ap. Steph. B. s. v.; Synn. Ch. 580, seq.; Thuc. i. 98; Dio. xvi. 60.) In n. c. 476 an oracle had directed the Athenians to bring home the bones of Theseus; but it was not till n. c. 469 that the island was conquered, and the bones conveyed to Athens, where they were preserved in the Theseum. Cimon expelled the Dolopians from the island, and peopled it with Athenian settlers. (Thuc. Died. 1. c.; Plut. Thea. 36; Cim. 8; on the date of the conquest of Scyros, which Clinton erroneously places in n. c. 476, see Grote, History of Greece, vol. v. p. 409.) From this time Scyros was subject to Athens, and was regarded even at a later period, along with Lemnos and Imbros, as a possession to which the Athenians had special claims. Thus the peace of Autolycidas, which declared the independence of all the Grecian states, nevertheless allowed the Athenians to retain possession of Scyros, Lemnos, and Imbros (Xen. Hell. ii. 8. § 15, v. 1. § 31); and though the Macedonians subsequently obtained possession of these islands, the Romans compelled Philip, in the peace concluded in n. c. 196, to restore them to the Athenians. (Liv. xxxiv. 30.) The soil of Scyros was unproductive (Herod. c. Cellip. p. 1235; Eustath. ad Hom. II. ii. p. 782; Suidas, s. v. ayv(a)ΣΣυρία); but it was celebrated for its breed of goats, and for its quarries of variegated marble. (Strab. ix. p. 437; Athen. i. p. 28, xii. p. 540; Zenob. ii. 18; Plin. xxxvi. 15, s. 26.)

Scyros is divided into two parts by a narrow isthmus, of which the southern half consists of high rugged mountains. The northern half is not so mountainous. The modern town of St. George, on the eastern side of the island, stands upon the site of the ancient town. It covers the northern and western sides of a high rocky peak, which to the eastward falls steeply to the sea; and hence Homer correctly describes the ancient city as the lofty Scyros (Σκύρος αινειαν, II. i. 664). The Hellenic walls are still traceable in many parts. The city was barely 2 miles in circumference. On the isthmus south of Scyros a deep bay still retains the name of Achilla (ΑχιλλαΣ), which is doubtless the site of the Aeolian, or sanctuary of Achilles, mentioned by Eustathius (ad II. ii. 662). Athens was the divinity chiefly worshipped at Scyros. Her temple stood upon the shore close to the town. (Stat. Archil. i. 285, ii. 21.) Turenfort says that he saw some remains of columns and cornices of white marble, close by a forsaken chapel, on the left hand going into the fort of St. George; these are probably remains of the temple of Athena. (Turenfort, Voyages, vol. i. p. 334, trans.; Leuke, Northern Greece, vol. iii. p. 106, seq.; Fiedler, Reise, vol. ii. p. 65; Ross, Wanderungen in Griechenland, vol. ii. p. 32, seq.)

SCYTHIA.

SCYRUS (Σκύρος), a tributary of the Alpheius, in southern Arcadia. [Myagoloforos, p. 301.]

SCYTHIA (Σκύθεια, Σκυθεία: Ed. Scythen, Scythe), the country of the Scyths, a vast area in the eastern half of Northern Europe, and in Western and Central Asia. Its limits varied with the differences of date, place, and opportunities of information on the part of its geographers. Indeed, to a great extent, the history of Scythia is the history of a

Name.—It is obvious that the term came from the Greeks to the Romans; in this respect unlike Sarmatia, Dacia, and other ethnographic names, for it is not Roman rather than Greek. But whence did the Greeks get it? for it is by no means either significant in their tongue, or a Greek word at all. They took it from one or more of the populations intermediate between themselves and the Scyths; these being Thracians, Sarmatians, and Getae. Probably all three used it; at any rate, it seems to have been used by the neighbours of the Greeks of Olbipolias, and by the Thracians on the frontiers of the Greeks of Macedina. This is in favour of its having been a term common to all the forms of speech between Macedena and the Byzantines. Scyth-, then, is a Sarmatian, Thracian, and Gete term in respect to its introduction into the Greek language. Was it so in its origin? The presumption as well as the evidence is in favour of its having been so. There is the express evidence of Herodotus (iv. 6) that the population which the Greeks called Scythis called themselves Scotti. There is the fact that the Roman equivalent to Scythes was Saka. Thirdly, there is the fact that in the most genuine-looking at the Scythic myths there is no such eponymus as Scythe or Scyties, which would scarcely have been the case had the name been native. Scyth-, then, was a word like German or Allemend, as applied to the Deutsche, a word strange to the language of the population designated by it, but not strange to the language of the neighbouring countries. To whom was it applied? To the tribes who called themselves Scotti?

What was the extent of the term? Did it apply not only to the Scoti, but to the whole of the class to which the Scoti belonged? It is safe to say that, at first, at least, there were many congener of the Scotii whom no one called Scythe. The number, however, increased as the term became general. Did the name denote any populations of a different family from the Scotti? If so, at first; afterwards, frequently. If the populations designated by their neighbours as Scythe called themselves by some other name, what was that name? Scotii applied only to a part of them. Had the word Scyth- a meaning in any language? if so, what was it, and in what tongues? Both these points will be noticed in the sequel, the questions involved in them being at present premature, though by no means unimportant.

The knowledge of the Scythian family dates from the beginning of Greek literature.

SCYTHIANS OF HERODOTUS.—Populations belonging to the Scythian family are noticed by Homer under the names of Abii, Glcophagi, and Hippomelos, the habit of milking their mares being as definite a characteristic of a Scythian as anything in the way of manners and customs can be. Herod gives us Scythe under that name, noting them also as Hippomeloi. The Scythians of Homer and Herod are poetical rather than historical nations. They are associated with the Myai of Bulgaria (not of Asia),
SCYTHIA.

A point upon which Strabo enlarges (vii. 3 §§ 7, 8). They are Hamaxobii (ἐν ἀχαίσι οὖσιν ἄντετετωτ), and Ἀγαθύριον. Ashchylus mentions them as ἐν ἄντετοι. The apparent simplicity of their milk-drinking habits got them the credit of being men of mild and innocent appetites with Ephorus (Strab. vii. p. 302), who contrasts them with the cannibal Samnites. There was also an apparent confusion arising out of the likeness of Nómas to Nómu (from νόμος = νόμος). The Promethean doctrine of Aeschylus is bound to one of the rocks of Causcasus, on the distant border of the earth, and the inaccessible desert of the Scythians.

Such are the Scythae of Aeschylus and Herodotus.

The writers of the interval, who knew them as the invaders of Asia, and as historical agents, must have had a very different notion of them. Fragmentary allusions to the evils inflicted during their invasions are to be found in Callimachus, Archilochus, &c. The notice of them, however, belongs to the criticism of the historical portion of the account of

TRANS-DANUBIAN SCYTHIANS OF HERODOTUS:

SCOLOS: SCYTHIANS OF HIPPOCRATES.—Much of the Herodotean history is simple legend.

The strange story of an intermarriage of the females who, whilst their husbands were in Asia, were left behind with the slaves, and of the rebellion therein originating having been put down by the exhibition, on the part of the returning masters, of the whips with which the backs of the rebels had been previously but too familiar, belongs to the Herodotean Scythians (iv. 1–6). So do the myths concerning the origin of the nation, four in number, which may be designated as follows:

1. The Account of the Scythians themselves.—This is to the effect that Tartarius, the son of Διος by a daughter of the river Borysthenes, was the father of Leipoxaix, Apropoxa, and Colaxaix. In their reign, there fell from heaven a yoke, an axe (ἀχυρμα), a plough-share, and a cup, all of gold.

The two elder failed in taking them up; for they burnt when they approached them. But the younger did not fail; and ruled accordingly. From Leipoxaix descended the Achaetae (Ἀχαιταῖοι); from Apropoxa the Catari and Traspies; from Colaxaix the Paralatai. The general name for all is "Scolos, whom the Greeks call Scythe." This was exactly 1000 years before the invasion of Dorians.

The gold was sacred; the country large. It extended northward, north-northeastward and northwestward, with the rocks of Caucasus (snow) prevented things from being seen. The number of the kingdom was three, the greatest of which had charge of the gold. Of this legend, the elements seem partly Scythian, and partly due to the country in which the Scyths settled. The descent from the Borysthenes belongs to this latter class. The story of the sons of Tartarius is found, in its main features, amongst the present Tartars. In Tartaristan more than one commentator has found the real Tartar. The threefold division reminds us to the Great, Middle, and Little Hordes of the Kirghiz; and it must be observed that the words greatest and middle (μεγίστη and μεσί) are found in the Herodotean account. They may be more technical and definite than is generally imagined. In the account there is no Eupronymus, no Scytha, or even Scolos. There is also the statement that the Scyths are the youngest of all nations. This they might be, as immigrants.

2. The account of Herodotus.—This is to the effect that Agathýrois, Gelenos, and Scythes (the youngest) were the sons of Hercules and Echidna, the place where they met being the Illyrians. The son that could draw the bow was to rule. This was Scythes, owing to manoeuvres of his mother.

He stayed in the land; the others went out. The cup appears here as an emblem of authority.

3. The Second Greek Account.—This is historical rather than mythological. The Massagæats press the Scythians upon the Cimmerii, the latter flying before them into Asia. This connects the history of the parts about the Bosphorus with Media. The inference from the distribution of the signs of Cimmerian occupancy confirms this account. There were the burial-places of the Cimmeri on the Týrsus; there was the Cimmerian Bosphorus, and between them, with Cimmerian walls, Scythia (Σκούδια). This is strong evidence in favour of Scythian extension and Cimmerian pre-eminence.

4. The Account of Aristæus of Proconnesus.—This is a speculation rather than either a legend or a piece of history. Aristæus (Mure, History of Greek Literature, vol. ii. 469, seq.) visited the country of the Issedones. North of these lay the Arimaspi; north of the Arimaspi the Monophthalmi; north of the Monophthalmi the Gold-guarding Griffins (Γρίφις Χρυσοφηράκες); and north of these, the Hyperborei. The Hyperborei made no movements; but the Griffins drove the Monophthalmi, the Monophthalmi the Arimaspi, the Arimaspi the Issedones, the Issedones the Scythians, the Scythians the Cimmerians, the Cimmerians having to leave their land. They, as we learn elsewhere, attack the Medes. (Herod. iv. 5–16.) No one had ever been further north than Aristæus, an unsafe authority. The information of Herodotus himself is chiefly that of the Greeks of the Borysthenes. He mentions, however, conversations with the steward of one of the Scythian kings.

The Emporium of the Borysthenes was central to the Scythia of the sea-coast. In the direction of the Hypanis, i.e. west and north-west, the order of the population was as follows: the Callipædes and Alazonæ (Στείρες Σκεύαλα), sawyers and consumers of corn; to the north of whom lay the Scytha Arorizes, not only sawers of corn, but sellers of it; to the north of these the Neuri; to the north of the Neuri either a desert or a terra incognita (iv. 17, 18.). The physical geography helps us here. The nearer we approach the most fertile portion of the modern Russian province of Podolian Russe (Poltava), toward whom we place the Scytha Arorizes, the more the Scythian character becomes agricultural. The Hellenic Scythia (Callipædes and Alazonæ) belong more to Kherson. That the Hellenic Scythe were either a mixed race, or Scythised Greeks, is unlikely. The doctrine of the present writer is as follows: seeing that they appear in two localities (viz. the Governments of Kherson and Caucasus); seeing that in each of these the populations of the later and more historical periods are Alani (Ptolemy's form for those of Kherson is Alamin); seeing that even the Alani of Caucasus are by one writer at least called Ἀλανοὶ Ἀλλήνων; seeing that the root Ἀλαν might have two plurals, one in -αλος and one in -ερος, he ends in seeing in the Hellenic Scythians simply certain Scythians of the Alani name. Neither does he doubt about Geleni being the same word,—forms like Chuni and Homni, Arpa and Carpa being found for these parts. At any rate, the locality for the Callipædes and Alazonæ might be the region of Podolian Russe, the characteristic that of the Scythian Greeks and Geleni of Caucasus suits that of the Alans of the fourth and fifth centuries.
The Scythian affinities of the Neuri are implied rather than categorically stated; indeed, in another part there is the special statement that the Tiras rises out of a great lake which separates the Scythian and Neurid countries (τὴν Νευρίδα γῆν). This, however, must not be made to prove too much; since the Scythians that were conterminous with the Neuri were known by no special name, but simply by the descriptive term Scythien Arctores. [EXAMARUS; NEURI.] In Siberian geography Norgin = marsh. Hence Neuri may be a Scythian gloss. There may also have been more Neuri than one, e.g. on the Norgin of the headwaters of the Dniester, i.e. of Pishk. A fact in favour of the Neuri being Scythian is the following. The occupants of Volgoma, when its history commences, which is as late as the 13th century, are of the same stock with the Scythians, i.e. Comanian Turks. Not only is there no evidence of their introduction being recent, but the name Omani (Lygii Omani) appears about the same parts in Ptolem. East of the Borysthenes the Agricultural Scythiae occupy the country as far as the Panticapae, 3 days distant. Northwards they extend 11 days up the Dniester, i.e. to where they are opposite of a desert in the desert by the Androphagi, a nation peculiar and by no means Scythian (c. 19). Above the Androphagi is a desert.

The bend of the Dniester complicates the geography here. It is safe, however, to make Ekaterinodar the chief Georgian area, and to add to it parts of Ker, Krasaon, and Poltava, the agricultural conditions increasing as we move northwards. The two deserts (εἰθαυμα) command notice. The first is, probably, a March or political frontier, such as the present line of the Soviet Union would have been itself and neighbours; at least, there is nothing in the conditions of the soil to make it a natural one. It is described as εἰθαυμα τοιούτου. The other is εἰθαυμα ἄλλους, — a distinction, apparently, of some value. To be natural, however, it must be interpreted forest rather than steppe. Kurak and Tcheremiss give us the area of the Androphagi; Kurak having a slight amount of separate evidence in favour of its having been "by no means Scythian" (c. 20).

The Hybasan, or wooded district of the Lower Dniester, seems to have been common ground to the Scythian Georgi and Scythian Nomades; or, perhaps, it was uninhabited. The latter extend 14 days eastward, i.e. over Taurida, part of Ekaterinoslav, and Don Kuraks, to the Gerrus.

The Palaces (τὰ καλλίεστα βασιλεία) succeed; their occupants being the Royal Scythians, the best and most numerous of the name, who look upon the others as their slaves. They extend, southwards, into the Crimica (τὴν Ταυρικὴν) and, eastwards, as far as the ditch dug by the offspring of the blind slaves (the statement that the Scythians blinded their slaves on account of the milk being one of the elements of the strange servile legend previously noticed), and the Maecotic Emporium called Kronia. Some touch the Tanais.

North of the royal Scythians lie the Melanchmeni (a probable translation of Karakolpak = black hound), a different nation and not Scythian (c. 20), with marshes, and either a desert or a terra incognita above them. This distinction is, almost certainly, real. At the present moment a population, to all appearances aboriginal, and neither Slavonic nor Scythian (but Ugron or Finn), occupies parts of Penza and Tambor having, originally, extended both farther west and further south. To the north the forest districts attain their maximum development. [MELANCLHÆNI.] The Royal Scythians may have occupied parts of [Υπ Νευρίδα γῆν].

East of the Tanais it was no longer Scythia, but the Adjers of the Sarmatiae. [See SARMATAE; BUDINI; GELONI; THYSAGORAE; IURCAE.] The want of definite boundaries makes it difficult to say where the Iurcaes end. Beyond them to the east lay other Scythians, who, having revolted from the Royal, settled there. Up to their districts the soil was level and deep, beyond it rough and stony, with mountains beyond. These are occupied by a nation of Baid-hendra, flat-nosed Scythian-Sarmatian Scythians in dress, peculiar in language, collectors of a substance called ἀνάκη to a tree called πορτοτραχίνο (c. 23). Their flocks and herds are few; their manners so simple that no one injures them, &c. [ARGIPHI; ISSEDONES; HYPERPONEL; ARDAMASON.] In the past the mountains of the Arspipetrii trade was carried on by means of seven interpreters. Let this be the caravan trade of Orenburg, near its terminus on the Volga, and we shall find that seven is the limit of the modern Turan, that is, the present moment be brought together at a fair in the centre of Orenburg. For the modern Russian the language of the Sarmatiae; for the Scythian that of the modern Tartars. To these we can add four Ugrian forms of speech,—the Tushw, the Mordvin, the Tcheremiss, and the Vogul, with the two forms of speech akin to the Ostok and Permian to choose the fifth form. The Tushuwan of Kazan and the Bashkirs of Orenburg have mixed characters at the present time, Turk and Ugroian.

RIVERS. The chief river of the modern Scythia was the Ister [DANUBIS], with its five mouths; and then the Tiras (Dniester), the Hypanis (Bug), the Borysthenes (Dniester), the Panticapae [see s. r.], the Hypanyris [see CACINIA], the Gerrus [see s. r.], and the Tanais (Don); the feeders of the Ister (i.e. the rivers of the present Danubian Principality) being the Porana (Scythic, in Greek Puretus), the Tarantsos, the Araras, the Narpanis, and the Orenesus (c. 47, 48). To these add, from the country of the Adjers, the Aluta (c. 49), or modern Maros of Transilvania. The difference between the ancient and modern names of rivers is nowhere greater than here,—the Maros being the only name now in use which represents the original one; unless we choose to hold that, word for word, Aluta = Araras. Word for word, indeed, Narpanis is Dniester; but then the rivers are different. This creates a grave difficulty in the determination of the language to which the names of the Scythian rivers should be referred. Yet the question is important, insomuch as, in the names, as they come down to us, we have so many glosses of some language or other. Upon the whole, however, the circumstances under which they reached Herodotus suggest the notion that they are Scythian; e.g. the express statement that Porana is a Scythian form. Again: Hypanis is, word for word, Kuba;—a word of which the appearance in both Asia and Europe is best explained by supposing it to be Scythian. On the other hand, they are as little significant in the language which, amongst those at present existing, best explains the so-called Scythian glosses, as they are in the Slavonic, Latin, or Greek.

The physical geography of Herodotean Scythia was a steppe, with occasional districts (chiefly along
SCYTHIA.

the courses of the rivers and at their head-waters) of a more practicable character.

Mountains.—These were the eastern continuation of the Carpathians, and the hills of the Crimea or Tauris. These were but imperfectly known to Herodotus.

Lakes. [See EXAMPHAEUS and Buce.]

Towns, exclusively Greek colonies. [See Olbiopolis; Fanticapaeum.]

Beyond the Sarmatiae (s. r.) lay "other Scythians, who, having revolted from the Royal, reached this country;" i.e. some part of Orenburg (c. 22). Thither, there were the Sacae, whom we may call the Scythians of the Persian frontier. Their occupancy was the parts conterminous with Bactria, and it was under Darius, the son of Hystaspes, that they, along with the Bactrians, joined in the invasion of Greece. Their dress was other than that of Bactrian, consisting of a pointed turban, a bonnet, leggings, native bows, daggers, and the axe called σαγηνω —a word which is probably technical. There were Scythae Amyrgi, truly, however, Scythae, inasmuch as the Persians called all the Scythians by the name Sacae. Under the reign of Cyrus they were independent. Under Darius, they, along with the Caspii, formed the 10th stratum (iii. 93). This connects them with their frontiers on the west, rather than the east.

There is no difficulty, however, in fixing them. From Atsebroad to Bahlk they extended along the northern frontier of Persia, in the area, and probably as the ancestors, of the present Turcomans and Uzbeks. The name Amyrgi will be noticed in the sequel.

The Sacae, if not separated from the "other Scythians" by the greater part of Independent Tartary, were, at any rate, a population that presented itself to the informants of Herodotus under a different aspect. The Sacae were the Persians found on their northern frontier. The eastern Scythae were the Scythians beyond the Sarmatiae, as they appeared to the occupants of the parts about the Tanais.

It is not difficult to see the effect of these three points of view upon future geographers. With Scythians in Transscythia, Scythians in Orenburg, with Scythians (even though called Sacae) in Khorasan and Turcomania, and with a terra incoercible between, the name became at first to take upon itself an indeterminate amount of generality. The three isolated areas will be connected; and the historical or ethnological unity will give way to a geographical. At present, however, there is a true unity over the whole of Scythia in the way both of Physiognomy and Manners.—The physical conformation of the Scythians is not only mentioned incidentally by Herodotus, but in a more special manner by Hippocrates: "The Scythian γαλος is widely different from the rest of mankind, and is like to nothing but itself, even as is the Egyptian. Their bodies are thick and fleshy, and their limbs loose, without tone, and their bellies the smoothest (?), softest (?), moistest (?) (κοιλας γαλοστας) of all bellies as to their lower parts (πασιων κοιλων αι κατω); for it is not possible for the belly to be dried in such a country, both from the soil and climate, but on account of the fat and the smoothness of their flesh, they are all like each other, the men like the men, the women like the women." (Hippocr. de Aere, &c. pp. 291, 292.)

Coming as this notice does from a physician, it has commanded considerable attention; it has, however, no pretensions to be called a description, though this has often been done. In the hands of later writers its leading features become exaggerated, until at length the description of a Scythian becomes an absolute caricature. We may see this by reference to Ammianus Marcellinus and Jornandes, in their accounts of the Huns. The real fact inferred from the text of Hippocrates is, that the Scythians had a peculiar physiognomy, a physiognomy which the modern ethnologist finds in the populations of Northern and Central Asia, as opposed to those of Persia, Caucasus, Western and Southern Europe.

Their general habita were essentially nomadic, pastoral, and migratory; the commonest epithets or descriptive appellations being Αμαξοφιλος, Φερροκορος, Αμναστον, and the like.

Concerning their Religion, we have something more than a mere cursory notice (iv. 59.). (i.) Tabiti (Tabiri): This was the Scythian name for the nearest equivalent to the Greek Hidias (Vedto), the divinity whom they most especially worshipped. (ii.) Papatheus: "Most properly, in my mind, is Zeus thus called." So writes Herodotus, thinking of the ideas engendered by such explanations as Πρασί. (iii.) Apia: This is the name for earth: as (iv.) Octosyrus (Οιτόσυρος) is for Apollo, and (v.) Artimipsa for Aphrodite, and (vi.) Thanamanda for Poseidon, the God of the Royal Scythians most especially. To Octosyrus we have the following remarkable inscription (Gud. Inscript. Antig. p. 56, 2; see Zenas, s. r. Skyneth): ΟΕΑΛΕ ΣΕΛΙΟΤΩΚΣΤΡΑ (? ΤΕΛΑΣ.responseText) ΚΑΙ ΑΡΟΠΟΛΑΝ. ΟΙΤΟΣΤΡΑ. ΜΙΘΡΑ. Μ. ΟΤΑΠΙΟΣ. ΠΑΟΚΑΜΟΣ. ΝΕΣΚΟΡΟΣ. ΑΝΕΟ (γνε). Here the connection is with the Persian god Mithras.

The Scoloti sacrificed to all their gods, but to Mars the most especially; for, besides the deities which have been mentioned under their several Scythian names, Mars and Hercule were objects of particular adoration. The Scythian Venus, too, was the Αφροδίτη υπαρισ. To Arc, however, they sacrificed most especially and most generally; for there was a place of worship to him in every μένος (mark the use of this word, which is applied to the divisions of the Persian empire as well), where horses, skeep, and captives were sacrificed, and where the emblem of the god was an iron sword,—even as it was with the Abai of Ammianus and the Huns of Priscus.

Human beings were sacrificed, but no swine. Neither were swine eaten, nor were they tolerated in the country. This is noticed, because in many of the nations of Northern Asia, e.g. the Wotiaks and others, the hog, even now, is held in abomination, and that by Pagan tribes uninfected with Mahometanism.

Notwithstanding the praises of the earlier poets, the war the "just and illustrious" Scythians were of a piece with the worship of their war-god. They scaled their enemies, and they used their skulls as drinking cups (cc. 64—65). Once a year the monarch of each nome filled a vast vat with wine and apportioned it to the warriors who had killed most enemies during the year. Those whose hands were stained got none, and were disgraced; those who had killed many took a double allowance (c. 66). Their soil layers, amongst other superstitions, practised rhabdomancy, amongst whom the Enares
SCYTHIA.

(ἀνδρίκτυρος) are the most famous. They got their art from Aphrodite, as they got their cultivation. During the Scythian invasion of Asia, a portion of the conquerors plundered the temple of the Aphrodite Urania in Assos, for which sacrilege and their children were afflicted with ἄνδρίκτυρος, the names of the sufferers being Ἐλαιείς (1. 105, 106). The nature of this ἄνδρίκτυρος has yet to be satisfactorily explained.

The sacretal and regal relations are curious. When the king ails he calls his priests, who tell him that his ailment comes from some one having forsworn himself in the greatest oath a Scythian can take. This is "by the hearth of the king." Take it falsely, and the king will sicken. Upon sickening, he sends for the offender, whom the priests have indicated. The charge is denied. Other priests are sent for. If their vaticinations confirm the earlier ones, death and confiscation are the fate of the perjurer. Otherwise, a third set is called. If these agree in the condemnation of the first, a load of faggots, drawn by bullocks, is brought in, the lying priests have their hands bound behind them, the faggots are set a-light to, the beasts are gloomed into a gallop, the flames catch the wind, the men are burnt to death, and the bullocks scorched, singed, or burnt to death also. The sons of the offending perjurer are killed, his daughters left unharmed.

Their oaths were made over a mixture of wine and blood. The swearers to them punctured themselves, let their blood fall into a vat of wine, drank the mixture, and dipped in it their daggers, arrows, javelin, and ἀδίαφρος. The ferocity exhibited in their burials was of the same kind. The tombs of the kings were on the Gerrasus. Thither they were brought to be buried, wherever they might die. They were entombed with sacrifices both of beasts and men, Hippotionis, Anthropothysis, and Sutee—all these characterised the funeral rites of the Scythians δικαστατοι ἄνδρίκτυρων.

LANGUAGE. The specimens of this fall into two divisions, the Proper and the Common Names. The former are the names of geographical localities and individuals. In one way or the other, they are numerous; at least they appear so at first. But we rarely are sure that the fact itself coincides with the first presumptions. The names of the rivers have been noticed. Of those of the gods, none have been definitely traced to any known language in respect to their meaning. Neither have they been traced to any known mythology as Proper Names. Next come the names of certain kings and other historical individuals, none of which have given any very satisfactory place for the old Scythian.

With the Common Names (and under the class of Common Names we may place such Proper Names as are capable of being translated) the results improve, though only slightly. Of these terms the chief are the following:

(i.) Ἐλαιείς = Sacred Houses = Ιους Ὀμέ, the name of a well-head. [See s. j. (ii.) Ὀμείται = ὁμοιοτόσα = Men-Killers, a name applied by the Scythians to their used weapons. Here ὠμος = worn, ἔμι = ill (iv. 110). (iii.) Τεμερινία = Μετερ Μαρίο, applied to the Euxine. This is not from Herodotus, but from the Iliad (vi. 7.) (iv.) Αρίστανι = Ἀριστάνης, = one-eyed = δύναω = one, στενός = eye. (Herod. iv. 27.) These will be considered under the head of Ethnology.

SCYTHIA.

HISTORY. The Herodotean view of the Scythians is incomplete without a notice of the historical portion of his account; not that the two parts are, by any means, on the same level in the way of trustworthy information. The geography and descriptions are from contemporary sources. The history is more of less traditional. Taking it, however, as we find it, it falls into two divisions:—1. The Invasion of Asia by the Scythians; and 2. The Invasion of Scythia by Darius.

1. Invasion of Asia by the Scythians. In the reigns of Cyaxares king of Media and of Sadyattes king of Lydia, the Scythians invade Asia, bodily and directly. They had previously invaded the country of the Cimmerians, whom they had driven from their own districts on the Maeotis, and who were thus thrown southwards. The Scythians pressed the Cimmerians, the Massagetae the Scythians. Chains of cause and effect of this kind are much loved by historians. It is only, however, in the obscure portions of history that they can pass unchallenged. The Cimmerians take Sardis during the last years of the reign of Arês (b.c. 629.) They are expelled by Alyattes, his son. (Herod. i. 15, 16.) It seems that the Cimmerians were followed up by their ejeetors; insomuch as five years afterwards (b.c. 624) the Scythians themselves are in Media; Cyaxares, who was engaged upon the siege of Nineveh (Nimus), being called back to oppose them. He is defeated; and the Scythians occupy Asia for 28 years, Cyaxares surviving their departure. From Media they direct their coeurs towards Egypt; from the invasion of which they are diverted by Psammitichus. Their attack upon the temple of the Venus Urania, in Ascodon, during their passage through Palestine, along with its mysteries sequitur, has been already noticed. The King who led them was named Madyes. (Her. i. 105.) They were ejected b.c. 596.

There was a band of Scythians, however, in Media, in the reign of Croesus, b.c. 555, the account of which is as follows. Cyaxares, still reigning, receives a company (ἐπιθυμ) of Scythians, as suppliants, who escape (ἐκείνης) from Lydia into Media. He treats them graciously, sends his son and them to learn the use of the bow, along with the Scythian language, 'till he finds that their habits of hunting and robbing are intolerable. This, along with a particular act of atrocity, determines Cyaxares to eject them. They fly back to Alyattes, who refuses to give them up. But Alyattes dies, and the quarrel is entailed upon his son, Croesus. The battle that it led to was fought May 28, b.c. 585, when the eclipse predicted by Thales interupted it.

The Scythian invasion might easily be known in its general features to both the Greeks of Asia and the Jews; and, accordingly, we find sufficient allusions to an invasion of northern barbarians, both in the Scriptures and in the fragments of the early Greek poets, to justify us in treating it as a real fact, however destitute of confirmation some of the Herodeotean details may have been. (See Mure's Critical History, &c, vol. iii. p. 153, seq.) Though frequently referred to from his time then:

2. Invasion of Scythia by Darius. It is, probably, a more accurate piece of history. Darius invades Scythia for the sake of inflicting a chastisement for the previous invasion of Asia. This had been followed, not by any settlement of the Scythians elsewhere, but by a return home. The strange
SCYTHIA.

The scythe of the Servile War of Whips belongs to this period.

When the approach of Darius becomes threatening, the Gomori, Budini, and Saulonoeae join with the Scythians in resisting it; the Agathyry, Neuri, Androphagi, Melancheni, and Tauri reserving themselves for the defence of their own territory if attacked (iv. 119). To the three constituents of the confederacy there are three kings, Scopasis, Ianthyrus, and Taxis, each with an allotted district to defend. The Scythians were done for the grass and tillage, driving off the flocks and herds, and corrupting (we can scarcely translate στροφώνυ) the wells. The points whereon attack was anticipated were the frontiers of the Danube and the Don. These they laid waste, having sent their own wives and children northwards. The first brunt of the war fell upon the Budini, whose Wooden City was burnt. Darius then moved southward and westward, pressing the other two divisions upon the countries of the Melancheni, Neuri, and Agathyry. The latter warn the Medes against encroaching on the frontier. Ianthyrus answers enigmatically to a defiance of Darius. Scopasis tempts the Ionians who have the custody of the bridge over the Danube. The Medes suffer from dearth, and determine to retreat across the Danube. The Scythians reach the passage before them, and require the Ionians to give it up. And now appears, for the first time, the great name of Miltiades, who is one of the commanders of the guard of the bridge. He advises that the Scythians should be conciliated, Darius weakened. A half-measure is adopted, by which the Scythians are taught to distrust the Ionians, and the Medes escape into Thrace—so ending the Scythian invasion of Darius. (Herod. iv. 120—142.)

Criticism of the Herodotean Account. The notices of Herodotus upon the Scythæ, though full, are excessive rather than systematic. Part of their history appears as Lydian, part as Scythian Proper. There is much legend in his accounts; but the chief obscurities are in the geography. Even here the details are irregular. One notice arises out of the name Scythe, another out of the geography of their rivers, a third out of the sketch of Taurus. [See ΤΑΤΡΙΟΣΤΑΥΡΟΣ]. In this we hear that Scythia is bounded first by the Agathyry, next by the Neuri, then by the Androphagi, and lastly by the Melancheni. The area is four-cornered; the longest sides being the prolongations along the coast and towards the interior. From the later to the Boryzhenes is 10 days; 10 days more to the Maeotis; from the coast to the Melancheni, 20 days;—200 stadia to each day's journey. If this measurement be exact, it would bring Tula, Tambor, Rizan, Scœ, within the Scythian area—which is going too far. The days' journeys inland were probably shorter than those along the coast. The Agathyry were in Tropaeum Apostum, on the Muros. The evidence, or want of evidence, as far as the text of Herodotus goes, is the same as it is with the Neuri. Their frontiers were known as Scythea Aroteæ, i.e. the generic name was with them specific. Hence any Scythians whatever, with a specific name must have been contrasted with them; and this seems to have been the case with the Agathyry. [Hegy, p. 1097.] Assuming, however, the Agathyry to have been Scythian, and to have lain on the Muros, we carry the Herodeotean Scythe as far west as the Tchis; nor can we exclude them from any part of Wallachia and Moldavia. Yet these are only known to Herodotus as the country of the Sigynnæ. The frontier, then, between the Scythæ and Getæ is difficult to draw. Herodotus has no Getæ, co nomine, north of the Danube; yet such there must have been. Upon the whole, we may look upon the Danubian Princelyties as a tract scarcely known to Herodotus, and make it Scythian, or Getic, or mixed, according to the evidence of other writers, as applicable at the time under consideration. It was probably Getic in the East, Sarmatian in the West, and Scythian in respect to certain districts occupied by intrusive populations.

This sidekis mentions the Getæ and Scythians but once (ii. 96), and that together. The great alliance that Stakes, king of Thrace, effects against Perdiccas of Macedon includes the Getæ beyond Mount Haemus, and, in the direction of the Euxine sea, the Getæ who were conterminous (ὁμορρα) with the Scythians, and whose armour was Scythian (ὅμορρος). They were each archers and horsemen (πολτοποιοί); whereas the Dii and the mountain-carriers of Rhodope were daggers. According to Ovid (Trist. v. 7. 19), the occupants of the level country do so too:—

"Dextera non sequas fixo dare vulnera caltro, Quem victam latici barbara omnis habet."
instance, however, the statement of Strabo is very specific. It is to the effect that the ambassadors to Alexander were Κέλται μετὰ τοῦ Ἀδριατίου (viii. p. 301), and that Ptolemy was the authority. Nevertheless, Ptolemy may have written Galatas, and such Galatea may have been the Galatea of the Olbian inscription. [See infra and Scyth.] The next Macedonian who crossed the Donube was Lyssmachus, who crossed it only to re-cross it in his retreat, and who owed his life to the generosity of a Getic prince Dromichates. This was about B.C. 312.

Our next authorities (fragmentary and insufficient) for the descendants of the Herodotean Scythians are the occupants of the Greek towns of the Enixme. Even those to the south of the Danube, Gallatis, Apollonia, &c., had some Scythians in the neighborhood, sometimes as enemies, sometimes as protectors,—sometimes as protectors against other barbarians, sometimes as protectors of Greeks against Greeks, as was the case during the Scythian and Thracian wars of Lyssmachus. The chief frontiers, however, were Getae. Between Olbia, to the north of the Danube (=Olbiosis of Herodotus), and the native tribes of its neighborhood, the relations are illustrated by the inscription already noticed. [Bickh., Inschr. Graec. no. 2058.] It records a vote of public gratitude to Protogenes, and indicates the barbarian whom he helped his fellow-citizens. The chief of those arose from the pressure of the barbarians around, by name Sandaratè, Thia-senatè, Sciri [see Sciri], Galatea, and Scytheæ. The date of this inscription is uncertain; but we may see the import of the observations on the word Galatea when we find the assumption that they were Gauls of Gallia used as an instrument of criticism:—"The date of the above inscription is not specified; the terror inspired by the Gauls, even to other barbarians, seems to shift the second century B.C. better than it suits a later period." [Grote, Hist. of Greece, vol. xii. p. 644, note.] What, however, if the Galatea of Wallachia were as little Galli as the Germans of Persia are Germans, or as Galatea is the same as Galata! The present writer wholly disconnects them, and ignores the whole system of hypothetical migrations by which the identity is supported.

A second Olbia in respect to its Helleno-Scythic relations, was Bospourus, or Panticapaeum, a Greek settlement which flourished B.C. 589 till the reign of Mithridates. [Panticapaeum.] From Bosporus there was a great trade with Athens in corn, hides, and Scythian slaves,—Scythes, as the name of a slave, occurring as early as the time of Theognis, and earlier in the Athenian dramas than those of Dionysus and Geta (Dacian and Getic) which belong to the New Comedy,—Scythes and Scytheæa being found in the Od. The political relations were those of independent monarchies; sometimes sovereigns sometimes proscribed, sometimes supported. The archons of Bosporus paid tribute to the Scythian princes of their neighborhood, when they were powerful and united; took it, when the Scythians were weak and disunited. Under this latter category came the details of the division of the Maeotæ, viz., Sindi, Tanetæ, Dendarii, Thetes, &c. Of these, Parsiades I. (a Scythic rather than a Greek name) was king, being only archon of his native town. In the civil wars, too, of Bosporus, the Scythes took part; nor were there wanting examples of Scythian manners even in the case of the

Panticapaean potentates. Eunuchus lost his life by being thrown out of a four-wheeled wagon-and-four with a tent on it.

SCYTHIANS OF THE MITHRIDATIC PERIOD, &c.

— The Scythians pressed on Parthes IV., who called in Mithridates, who was conquered by Rome. The name now becomes of rare occurrence, subordinate to that of the Sarmaætes, Daci, Thracians, &c. In fact, the name of being the nearest neighbors to Greece, the Scytheæ were now the most distant enemies of Rome.

In the confederacy of the Dacian Boeotæbides, in the reign of Augustus, there were Scythian elements. So there were in the wars against the Thracian Thessalopæus and the Roxolani. So there were in the war conducted by J. Plautius in the reign of Vespassian, as shown by the following inscription: REGIMUS BASTERNARUM ET RHODOLANÆM FILIUS DIOCURIO ... EREPTOS RESIMIT ... SCYTHARUM QVOCO REX ZATHOAURUS QVR EXTRA ULTRI STEPHENEM OBSIDIONE SUMMOTO. (Grott. p. 433; Bickh., vol. ii. pt. 1. p. 82; Zeuss, s. v. Scythen.)

Though the history of the Scythes, eo nomine, be fragmentary, the history of more than one Scythian population under a change of name is both prominent and important. In the article Huns reasons are given for believing that the descendants of the Huns, of Scythian blood, were no important element in the Dacian nationality.

After the foundation of Constantinople the Scythian nations appear with specific histories and names, Hun, Avar, &c.

The continuity of the history of the name of the Herodotean Scythians within the Herodotean area is of great importance; as is the explanation of names like Galatea and Germani; as also is the consideration of the sources whence the nomenclature and information of the different authorities is derived. It is important, because, when we find one name disappearing from history, and another appearing, there is (according to, at least, the current criticism) a presumption in favor of a change of population. Sometimes this presumption is heightened into what is called a proof; yet the presumption itself is unreal. For one real change of name referrible to an actual change of population there are ten where the change has been merely one in respect to the source whence the information was derived, and the channels through which it came. This is what occurs when the same country of Deutschland is called Germany by an Englishman, Allemagne in France, Lomagna in Italy. This we know to be nominal. We ought at least to ask whether it may not be so in ancient history—and that not once or twice, but always—before we assume hypothetical movements and migrations.

Now in the case of Scythia we can see our way to great nominal and but slight real changes. We see the sources of information changed from Greek to Latin, and the channels from Getic and Macedonian to Dacian.

If so, the occupants of Hungary, the Principalities, and South-western Russia under the Caesars may be the descendants of the occupants of the same districts in the time of Herodotus. That there are some differences is not only likely but admitted,—differences in the way of admixture of blood, modification of nationality, changes of frontier, differences of the kind that time always effects, even in a stationary condition of nations. It is only denied that
SCYTHIA.

any wholesale change can be proved, or even reasonably supposed. Who can be shown to have eliminated any definite Scythian population from any definite Scythian occupancy? With the Greeks and Romans the negative evidence is nearly conclusive to the fact that no such elimination ever took place. That the Barbarians might have displaced each other is admitted; but there is no trustworthy evidence to their having done so in any single instance. All opinions in favour of such changes rest upon either the loose statements of insufficiently-informed writers, or the supposed necessity of accounting for the appearance and change of certain names by means of certain appearance and changes of population.

The bearings of this will appear in the notice of the Ethnology of Scythia. They appear also under HUNI.

Of the Saca, eo nomine, the history is obscure. In one sense, indeed, it is a nonentity. There is no classical historian of the Saca. How far the ethnologist can infer them is a question which will be treated in the sequel.

Of the history of the populations akin to the Saca, the details are important; but then it is a history of the Massagetae, Parthi, &c., a history full of critical preliminaries and points of inference rather than testimony.

The Scythia of all the authors between Herodotus and Ptolemy means merely the country of the Scythae, the Scythian being such northern nations as, without being, eo nomine, Sarmatians, were Huns and Hippemolgi; their habits of milking their mares and travelling in tented waggons being their most genuine characteristic. These it was which determined the views of even Strabo, whose extension of Germania and Galatia (already noticed) left him no room for a Scythian or even a Sarmatian; Sarmatia, which is to Ptolemy as Germania was to Strabo; for the Sarmatia of Ptolemy leaves no room in Europe for a Scythia; indeed, it cuts deeply into Asiatic Scythia, the only...

SCYTHIA OF PTOLEMY.—The Scythia of Ptolemy is exclusively Asiatic, falling into 1. The Scythia within the Imaus. 2. The Scythia beyond the Imaus.

This is a geographical division, not an ethnological one. Scythae Alani are especially recognised as a population of European Sarmatia.

As Ptolemy's Sarmatia seems to have been formed out of an extension of the area of the Herodotean Sarmatiae, his Scythia seems to have grown out of the eastern Scythiae of the Herodotean Scythia, i.e. the Scythe of Orenburg. It did not grow out of the country of the Saca, inasmuch as they are mentioned separately; even as the Jazrges of the Thess were separated from the Sarmatians. The compiler, however, of the Herodotean account must make the Scythian Sarmatiae. They may be disposed of first.

The SACAE OF PTOLEMY were bounded by the Seges on the west, the Scythians on the north, and the Sere on the east. They were nomads, without towns, and resident in woods and caves. The mountain-range of the Comedi (ἡ Καρπαθία ἔρημος) was in their country; so was the Stone tower (Ἄθηνα Πύργος). The populations were: 1. The Caratae and Comari along the Jaxartes. 2. The Cenacae, on the Comedian mountain. 3. The Massagetae along the range of the Ascaniacus (Ἀσκανάγακ). 4. In the interjacent country, the

Grynaei Scythae; and, 6, the Toormac; south of whom, along the Imaus, 7, the Blytiae. (Ptol. vi. 13.)

SCYTHIA INTRA IMAUM.—Bounded on the S. and E. by Sogdiana, Margiana, and the Sacae; on the W. by the Caspian and Sarmatian Asiatica; on the N. by a terra incognita; and on the E. by the northern prolongation of the Imaus. (Ptol. vi. 14.)

Rivers.—The Rhymnus, the Dua, the Jaxartes, the Jastus, and the Pthymetos.

Mountains.—The eastern part of the Montes Hypsacrici, the Montes Alani (observe the reappearance of this name), the Montes Rhymnici, the Mons Norossus, the MM. Aspisi, Tapyri, Syra, Amara, all W. of the Imaus.

Populations.—The Alani Scythae (on the confines of the terra incognita), the Susbeni, the Alanos, S. of whom the Saetian, and Massaei, and Syri; and along the Imaus the Tectoses and (on the eastern head-waters of the Kha) the Rhobosci, S. of whom the Asmani; and then the Paudiari, S. of whom, along the river, the district called Canopicum, S. of which the Coraci; then the Orgusi, after whom as far as the sea (i.e. the Caspian, in this chapter called Hyrcanian), the Erymnii, with the Asotae on the E. of them, succeeded by the Aorri; after whom the Jaxartes, a great nation along the river of the same name; then S. of the Saetian, the Molageni and Sauantae, as far as the MM. Rhymnici. Then, S. of the Massaei and MM. Alani, the Zaratae and Saitae; and farther W. and as far as the MM. Rhymnici, the Tybicani, succeeded by the Tabletii, S. of the Zaratae, and the Iastae and Mocheteci along the Mons Norossus; S. of whom the Noroes and Norossi, and the Cagaches Scythae along the Jaxartes. On the W. of the MM. Aspisi, the Aspisi Scythae; on the E. the Galatophagi Scythae; E. of the MM. Tapari and the Suebi, the Taparei; and above the MM. Anarei and the Mons Asscatanae, the Scythae Anarei, and the Ascatanae and Assacae along the Jaxartes, S. of whom the Namastae; then the Sagganae, and, along the Oxus, the Edhbai, with their town Davara.

SCYTHIA EXTRA IMAUM was bounded by Scythia intra Imaum, the Sacae, the Terra Incognita, and the Sere. It contained the western part of MM. Auxaci, Casii and Eomedi, with the source of the river Oechardus. (Ptol. vi. 15.)

Its Populations were the Abi Scythe, the Hippophagi Scythae, the Chatae Scythae, the Charracaei Scythae; the designation Scythe being applied to each.

Districts.—The Auxaciti, the Casia (ἡ Κασία χώρα), the Achasa (ἡ Ἀχάσα χώρα).

Towns.—Auxacia, Issedon, Scythica, Charrana, S. etc.

The remarks that applied to the Sarmatia Asiatica of Ptolemy apply here. Few names can be safely identified. Neither is it safe to say through what languages the information came. Some words suggest a Persian, some a Turk source, some are Mongol. Then the geography is obscure. That the range of Pomer was unduly prolonged northwards is evident [IMAUS]; this being an error of the geographer. The courses, however, of the Oxus and Jaxartes may themselves have changed.

The prolongation of the Pomer range being carried in a northern and north-eastern direction, so as to include not only the drainages of the Oxus and Jaxartes, but that of the Bokhara Lake as well, gives us the line of the Imaus; the terra incognita to the
SCYTHIA.

N. being supposed to begin with the watershed of the Arish, Obi, and other rivers falling into the Arctic Ocean. Within the limits thus described we may place the Nor-oabi and Nor-ossi, on the eastern edge, i.e. in the parts where at the present moment the lakes distinguished by the name Nor occur. It should be added, however, that the syllable is generally final, as in Koko-nor, &c. Still it is a prominent element in compound names, and indicates Mongol occupancy. The Byzantine may be placed in Buli-stan, i.e. the country of the Buli = Little Tibet, the gloss being Persian.

In Ascatanae (the Greek spelling is the more convenient =a =ka =ya =ka), we have the Turkish -tagh = mountain just as it actually occurs in numberless compounds.

Karait is a name of common application, chiefly to members of the Mongol family.

Mass-agetae is a term full of difficulty. Can it have arisen out of the common name Mus-tag ?

In Scythia extra Imaus, the Casca and Achasa (χασα) may be made one and identified with the Cesii of Pliny. The most reasonable explanation of these names is to be found in the suggestion of Major Cunningham's valuable work on Ladak (p. 4), where the Achassa Regio = Ladosk, and the Chatae, and Chaurone Scytheae = Chang-thang and Khor respectively.

Roughly speaking, we may say that the country of the Saca was formed by an irregular tract of land on the head-waters of the Oxus and the watershed between it and the Jaxartes, a tract which included a portion of the drainage of the Indus. It is only a portion of this that could give the recognised conditions of Scythian life, viz. steppes and pastoralism. These might be founded on the great tract of Pamir, but not in the mountain districts. These, however, were necessary for "residences in woods and caves"; at the same time, the population that occupied them might be pastoral rather than agricultural. Still they would not be of the Scythian type. Nor is it likely that the Saca of Pliny were so. They were not, indeed, the Saca of Herodotus, except in part, i.e. on the desert of the Pamir. They were rather the mountaineers of Kafiristan, Wakhan, Sughman, Basham, Astor, Hunz-Nagar, and Little Tibet, partly Persian, partly Bhot (or Tibetan), in respect to their ethnology.

The Scythians beyond the Imaus.—These must be divided between Ladosk, Tibet, Chinese Tartary, and Mongolia in respect to their geography. Physically they come within the conditions of a Scythian occupancy; except where they are true mountaineers. Ethnologically they may be distributed between the Mongol, Bhot, and Turk families—the Turks being those of Chinese Tartary.

The Turcoman districts of the Oxus, Khiva, the Kirghiz country, Ferghana, Tashkend, with the parts about the Balkash, give us the Scythia within the Imaus. It coincides chiefly with Independent Tartary, with the addition of a small portion of Mongolia and southern Siberia. Its conditions are generally Scythian. In the upper part, however, of the Jaxartes, the districts are agricultural at present; nine-tenths of this area is Turk, part of the population being Nomades, part industrial and agricultural.

THE SCYTHIA OF THE BYZANTINE AUTHORS.—

This means not only Hunns, Alans, Avars, and Sarmatians, but even Germans, Goths, and Vandals.

SCYTHIA.

It is used, however, but rarely. It really existed only in books of geography. Every division of the Scythian name was known under its specific designation.

ETHNOLOGY.—If any name of antiquity be an ethnological, rather than a geographical, term, that name is Scythia. Ptolemy alone applies it to an area, irrespective of the races of its occupants. With every earlier writer it means a number of populations connected by certain ethnological characteristics. These were physical and moral—physical, as when Hippocrates describes the Scythian physiognomy; moral, as when their nomadic habits, as Hamazobii and Hippemnogii, are put forward as distinctive. Of language as a test less notice is taken; though (by Herodotus at least) it is by no means overlooked. The division between Scythian and non-Scythian is always kept in view by him. Of the non-Scythic populations, the Sarmatiae were one; hence the ethnology of Scythia involves that of Sarmatia, both being here treated together.

In respect to them, there is no little discrepancy of opinion amongst modern investigators. The first question respecting them, however, has been answered unanimously.

Are they represented by any of the existing divisions of mankind, or are they extinct ? It is not likely that such vast families as each is admitted to have been has died out. Assuming, then, the present existence of the congeners of both the Sarmatiae and the Scytheae, in what family or class are they to be found ? The Scytheae were of the Turk, the Sarmatiae of the Slavonio Lithuanic stock.

The evidence of this, along with an exposition of the chief differences of opinion, will now be given, Scythia having first been treated. Presuming that Turk means all the populations whose language is akin to that of the Ottomans of Constantinople, and that it comprises the Turcomans, the Independent Tartars, the Uzbeks, the Turks of Chinese Tartary, and even the Yakuts of the Lena, along with several other tribes of less importance, we may examine the a priori probabilities of the Scytheae having been, in this extended sense, Turks.

The site of the nation of South-western Russia, at the beginning of the proper historical period, is a presumption in favour of their being so. Of these the best to begin with are the Cumanians (12th century) of Volhynia. That they were Turk we know from special statements, and from samples of their language compared with that of the Kirgis of Independent Tartary. There is no proof of their being new comers, however much the doctrine of their recent emigration may have been gratuitously assumed. The Uzes were what the Cumanians were; and before the Uzes, the Patzinaks (10th century) of Bessarabia and the Donian Principalities were what the Uzes were. Earlier than the Patzinaks, the Chazars ruled in Kievan and Taурida (9th and 8th centuries) like the Patzinaks, in the same category with definitely known Cumanians and Uzes. These four populations are all described by writers who knew the true Turks accurately, and, knowing them, may be relied on. This knowledge, however, dates only from the reign of Justinian (Trucan). From the reign, then, of Justinian to the 10th century (the date of the break-up of the Cumanians), the Herolowite Scytheae was Turk—Turk without evidence of the occupation being recent.

The Avars precede the Chazars, the Huns the
SCYTHIA.

Avars, the Alani the Hung. [HUNNI: AVARES]. The migrations that make the latter, at least, recent occupants being entirely hypothetical. The evidence of the Huns being in the same category as the Avars, and the Avars being Turk, is conclusive. The same applies to the Alani—a population which brings us to the period of the later classics.

The conditions of a population which should, at one and the same time, from Persia and send an offset round the Caspian into Southern Russia, &c., are best satisfied by the present exclusively Turk area of Independent Tartary.

Passing from the presumptuous to the special evidence, we find that the few facts of which we are in possession all point in the same direction.

Physical Appearance. — This is that of the Kirghiz and Uzbeki exactly, though not that of the Ottomans of Rumelii, who are of mixed blood. Allowing for the change effected by Mahomet, the same remark applies to their Moors, which are those of the Kirghiz and Tuvanor.

Language.—The Scythian glosses have not been satisfactorily explained, i.e. Tenerindia, Arinaspit, and Evampaeus have yet to receive a derivation that any one but the inventor of it will admit. The oior, however, in Oior pata is exactly the er, aor, man, &c., a term found through all the Turk dialects. It should be added, however, that it is Latin and Keltic as well (vir, fear, ger). Still is it Turk, and that unequivocally.

The evidence, then, of the Scythe being Turk consists in a series of small particulars agreeing with the a priori probabilities rather than in any definite point of evidence. Add to this the fact that no other class gives us the same result with an equally small amount of hypothesis in the way of migration and change. This will be seen in a review of the opposite doctrines, all of which imply an unnecessary amount of unproved changes.

The Mongol Hypothesis.—This is Niebuhr's, developed in his Researches into the History of the Scythen, etc.; and also Neumann's, in his Helvetica in Sclavivandia. It accounts for the manners and physiognomy, as well as the present doctrine, but not for anything else. It violates the rule against the unnecessary multiplication of causes, by bringing from a distant area, like Mongoli, what lies nearer, i.e. in Tartary. With Niebuhr the doctrine of fresh migrations to account for the Turks of the Byzantine period, and of the extirpation of the older Scythen, takes its maximum development, the least allowance being made for changes of name. "This" (the time of Lyssmachus) "is the last mention of the Scythian nation in the region of the Ister; and, at this time, there could only be a remnant of it in Bitzauck." (p. 63).

The Circassian Hypothesis.—This is got at by making the Scythen what the Huns were, and the Huns what the Magyars were—the Magyars being Finn. It arises out of a wrong notion of the name, Hungary, and fails to account for the difference between the Scythen and the nations to their north.

The Circassian Hypothesis.—This assumes an extension of the more limited area of the northern occupants of Causcasus in the direction of Russia and Hungary. Such an extension is, in itself, probable. It fails, however, to explain any one fact in the descriptions of Scythia, though valid for some of the older stories.

The Indo-European Hypothesis.—This doctrine takes many forms, and rests on many bases. The SCYTHIAN. 945

-get in words like Massa-get-te, &c., is supposed to = Gotha = German. Then there are certain names which are Scythian and Persian, the Persian being Indo-European. In the extreme form of this hypothesis the Scythen = Sazona, and the tuche of the Chinese names = Gotha.

If the Scythen were intruders from Independent Tartary, whom did they displace? Not the Sarmatians, who were themselves intruders. The earlier occupiers were in part congeners of the Northern Cacascans. They were chiefly, however, Ugrics or Finns; congeners of the Mongol, Tschuemenes, and Tsihnowashes of Persia, Soratov, Kazan, &c.; Dacia, Thrace, and Sarmatia being the original occupancies of the Sarmatiae.

If so, the ethnographical history of the Herodotean Scythen runs thus:—there was an original occupancy of Ugrics; there was an intrusion from the NE. by the Scythen of Independent Tartary, and there was intrusion from the SW. by the Sarmatians of Dacia. The duration of the Scythian or Turk occupancies was maintained by the antecedent Herodotus to the extinction of the Cacascans in the 14th century. Of internal changes there was plenty; but of any second migration from Asia (with the exception of that of the Avars) there is no evidence. Such is the history of the Scythe.

The Saceae were, perhaps, less exclusively Turk, though Turk in the main. Some of them were, probably, Mongols. The Saceae Amyrgii may have been Ugrics; the researches of Noris upon the second of the arrow-headed alphabets having led him to the opinion that there was at least one invasion of Persia analogous to the Magyar invasion of Hungary, i.e. effected by members of the Ugrian stock, probably from Orvnhore or Kazan. With them the root m-rd = man. History gives us no time when the Turks of the Persian frontier, the Saceae, were not pressing southwards. Sacastea (= Segeton) was one of their occupancies; Carmania probably another. The Pathians were of the Scythian stock; and it is difficult to believe that, word for word, Persia is not the same as Parthia. The history, however, of the Turk stock is one thing; the history of the Scythian name is another, that the two should be connected. This being done, the doctrine of the recent diffusion of the Turks is a doctrine that applies to the name only. There were Turk invasions of Hungary, Turk invasions of Persia, Turk invasions of China, Assyria, Asia Minor, and even north-eastern Africa, from the earliest period of history. And there were Sarmatian invasions in the opposite direction, invasions which have ended in making Scythia Slavonic, and which (in the mind of the present writer) began by making parts of Asia Median. As against this, it is not just to be taken for an exaggeration of the Turk influence in the world's history, let it be remembered that it is only a question of date, and that the present view only claims for the Turk conquests the place in the ante-historical that they are known to have had in the historical period. With the exception of the Mongol invasions of the 13th century and the Magyar occupancy of Hungary, every conquest in Southern Asia and Europe, from the North, has been effected by members of the stock under notice. [See SARMATIA; VENDI; FINNI; STONES; TURCIS.]" [R. G. L.]

This book is a translation of the original works by Russian, Ukrainian, and other scholars. It is a comprehensive study of the Scythian culture, which is thought to have originated in the region of the Samara River and the Don River. The Scythians are known for their horse-riding skills, their vast military forces, and their use of iron and bronze weapons. The book discusses the Scythian culture, its spread, and its influence on later civilizations.

The book is divided into several sections, including:

- The Scythian Culture: Origins, Spread, and Influence
- The Scythian Migrations: From Asia to Europe
- The Scythian Art: Pottery, Jewelry, and Architecture
- The Scythian Religion: Gods, Rituals, and Practices
- The Scythian Literature: Poetry, History, and Mythology

The book is written in a clear and concise style, with numerous illustrations and maps to aid in understanding the complex history of the Scythians. It is an essential resource for anyone interested in the history of the ancient world.
Asparus on the W., and bounded by the mountains of the Chalybes on the S. The Ten Thousand Greeks, in their retreat under Xenophon, were compelled to march four days through their territory. Rennell (Geogr. of Herod. p. 243) seeks them in the province of Kares (comp. Ritter, Erdkunde, vol. i. p. 764). [T. H. D.]

SCYTHOPOLIS. [Bethsan].

SCYTHOTAI. [Tapposcythae].

SEBAGENA (Σεβαγένα, or, as others read, Σεβάγγα), a town in Cappadocia, of uncertain site. (Ptol. v. 6. § 15.) [L. S.]

SEBASTE (Σεβαστή). 1. A town in a small island off the coast of Cilicia, built by Archelaus king of Cappadocia, to whom the Romans had given Cilicia Aspera. (Strab. xiv. p. 671.) It seems to have received its name Sebaste in honour of Augustus; for, until his time, both the island and the town were called Eleusa, Elaeusa, or Elaeusina (Joseph. Ant. xvi. 4. § 6, Boll. i. 23. § 4; comp. Ptol. v. 8. § 4; Hieroc. p. 704; Studioam. Mar. Magn. Ant. 4. 3. 19, Euseb. § 33. 4. 16; Steph. B. s. v. Σεβαστά and Ελαίουσα) a name which Pliny (v. 22) still applies to the town, though he erroneously places it in the interior of Caria. Stephanius, in one of the passages above referred to, calls Sebaste or Elaeusina an island, and in the other a mainland, which may be accounted for by the fact that the narrow channel between the island and the mainland was at an early period filled up with sand, as it is at the present,—for the place no longer exists as an island. Sebaste was situated between Corycus and the mouth of the river Lamus, from which it was only a few miles distant. Some interesting remains of the town of Sebaste still exist on the peninsula near Ayesh, consisting of a temple of the composite order, which appears to have been overthrown by an earthquake, a theatre, and three aqueducts, one of which conveyed water into the town from a considerable distance. (Comp. Beaufort, Karamania, p. 250, toll.; Leake, Asia Minor, p. 213.)

2. A town in Phrygia Pacatiana, between Alysdra and Enemina, is noticed only by Hierocles, (p. 667) and in the Acts of the Council of Constantinople (iii. p. 674); but its site has been identified with that of the modern Segikler, where inscriptions and other remains of the town have been found. The ancient name of the place is still preserved in that of the neighbouring stream, Sebastes Su. (Comp. Hamilton’s Researches, i. p. 121, &c.; Arundell, Discoveries, i. p. 136, who erroneously takes the remains at Segikler for those of the ancient Encarpia.)

3. [Cahira, Vol. i. p. 462.] [L. S.]

SEBASTE. [Samaaria.]

SEBASTEA (Σεβαστεία), a town in the south of Pontus, on the north bank of the Upper Halys. As it was near the frontier, Pliny (vi. 3) regards it as not belonging to Pontus, but to Colophone in Cappadocia. (Ptol. v. 6. § 10; Hieroc. p. 702; It. Ant. p. 204, 205.) The town existed as a small place before the dominion of the Romans in these parts, but its ancient name is unknown. Pompey increased the town, and gave it the name of Megalopolis (Strab. xii. p. 560). The name Sebastia must have been given to it before the time of Pliny, he being the first to use it. During the imperial period it appears to have risen to considerable importance, so that in the later division of the Empire it was made the capital of Armenia Minor. The identity of Sebastia with the modern Scyros is established partly by the resemblance of the names, and partly by the agreement of the site of Scyros with the description of Gregory of Nyssa, who states that the town was situated in the valley of the Halys. A small stream, moreover, flowed through the town, and fell into a neighbouring lake, which communicated with the Halys (Orat. i. in XL. Mart. p. 501, Orat. ii. p. 510; comp. Basili. M. Epist. viii.). In the time of the Byzantine empire Sebastia is mentioned as a large and populous town of Cappadocia (Niceph. Ann. p. 76; Ducas, p. 31); while Stephanius B. (s. v.) and some ecclesiastical writers refer it to Armenia. (Sozom. Hist. Eccl. iv. 24; Theodoret. Hist. Eccl. ii. 24.) In the itinerary its name appears in the form of Sevan, and in Abufluda it is actually written Siwah. The emperor Justinian restored its decayed walls. (Procop. de Aed. iii. 4.) The town of Siwah is still large and populous, and in its vicinity some, though not very important, remains of antiquity are seen. (Fontanier, Voyages en Orient. i. p. 179, toll.) [L. S.]

SEBASTOPOLIS (Σεβαστοπόλις). 1. A town in Pontus Cappadocius (Ptol. v. 6. § 7), which, according to the Antonine Itinerary (p. 203), was situated on a route leading from Tavium to Sebastia, and was connected by a road with Cesaris (p. 214). Pliny (vi. 3) places it in the district of Colopene, and agrees with other authorities in describing it as a small town. (Hieroc. p. 703; Novell. 31; Gregor. Nyssen. in Morcin. p. 202.) The site of this place is still uncertain, some identifying the town with Cabara, which is impossible, unless we assume Sebastopolis to be the same town as Sebaste, and others believing that it occupied the site of the modern Tarakal or Turkal.

2. A town in Pontus, of unknown site (Ptol. v. 6. § 9), though, from the place it occupies in the list of Ptolemy, it must have been situated in the south of the upper Halys. [L. S.]

3. About Sebastopolis on the east coast of the Euxine see Dioscorus, and about that in Myasia, see Myrina. [L. S.]

SEBASTOPOLIS (Hieroc. p. 638), a place in the interior of Thrace, near Philippopolis. [J. R.]

SEBATUM, a town situated either in the southwestern part of Noricum, or in the east of Raetia, on the road from Avenia to Vhexdona (It. Ant. p. 290), seems to be the modern Sacchova. (Comp. Munch, Noricum, i. p. 250.)

SEBENDUNUM (Σεβενδυνον, Ptol. ii. 6. § 71), a town of the Castellani in Hispania Tarraconensis. There is a coin of it in Secundinum (p. 164). [T. H. D.]

SEBBENYTUS (Σεβεννύτος, Ptol. iv. 5. § 50; Steph. B. s. v.; η Σεβεννυτική πόλις, Strab. xviii. p. 802; Eth. Σέβεννυττώ), the chief town of the Semnunitic nome in the Egyptian Delta, situated on the Semnunitic arm of the Nile, nearly due E. of Sais, in lat. 31° N. The modern hamlet of Semmoudound, where some ruins have been discovered, occupies a portion of its site. Sebenynus was anciently a place of some importance, and standing on a peninsula, between a lake (Αγρά Σεβεννυττών; Barbus) and the Nile, was favourably seated for trade and intercourse with Lower Aegypt and Memphis. The neglect of the canals, however, and the elevation of the alluvial soil have nearly obliterated its site. (Champollion, l’Egypte, vol. ii. p. 191 seq.) [W. B. D.]

SEBETHUS (Fiume della Maddalena), a small river of Campania, flowing into the Bay of Naples immediately to the E. of the city of Neapolis. It is alluded to by several ancient writers in connection with that city (Stat. Silv. i. 2. 263; Colum. n. 134)
SEBINUS LACUS.

Vib. Sequest. p. 18), and is generally considered to be the same with the stream which now falls into the sea a little to the E. of Naples, and is commonly called the Fiume della Maddalena. This rivulet, which rises in a fountain or basin called La Bella, about 5 miles from Naples, is now a very trifling stream, but may have been more considerable in ancient times. The expressions of poets, however, are not to be taken literally, and none of the geographers deem the Secchia worthy of mention. Virgil, however, alludes to a nymph Sefithis, and an inscription attests the local worship of the river-god, who had a chapel (sodicula) erected to him at Neapolis. (Gruter, Inscrip. p. 94. 9.)

SEBI'NUS LACUS (Lago d' Iseo), a large lake in the N. of Italy, at the foot of the Alps, formed by the waters of the river Ollius (Oglio), which after flowing through the land of the Camuni (the Val Camonica), are arrested at their exit from the mountains and form the extensive lake in question. It is not less than 18 miles in length by 2 or 3 in breadth, so that it is inferior in magnitude only to the three great lakes of Northern Italy; but its name is mentioned only by Pliny (ii. 103. s. 106. iii. 19. s. 23), and seems to have been little known in antiquity, as indeed is the case with the Lago d'Iseo at the present day. It is probable that it derived its name from a town called Sibum, on the site of the modern Iseo, at its SE. extremity, but no mention of this name is found in ancient writers. (Cluver, Ital. p. 412.)

SEBRIDAe (Sekipan, Prot. iv. 7. § 25), or SOBORIDAe (Sebopian, Prot. iv. 7. § 29), an Aethiopian race, situated between the Astabores (Tacezze) and the Red Sea. They probably correspond with the modern Sombar, or the people of the "maritime tract." There is some likelihood that the Sembritate, Sebridae, and Soboridae are but various names, or corrupted forms of the name of one tribe of Aethiopians dwelling between the upper arms of the Nile and the Red Sea. [W. B. D.

SEBURII (Σεβορίπολις and Σεβόρηποι, Prot. ii. 6. § 27), a people in the NW. of Hispania Tarraconensis, on both banks of the Miutius, probably a subdivision of the Gallaci Bracarii. (T. H. D.)

SECELA or SECELLA. [Zakłąk.]

SECERRAE, called by the Geogr. Rav. (iv. 42) and in a Cod. Paris. of the Itin. Ant. (p. 398) SECKERA, a town of the Lacedaeni in Hispania Tarraconensis, on the road from the Summuum Pyrenaum and Juncaria to Tarracon. Variously identified with S. Pere de Secarda, Arbeucias, and San Seloni (properly Santa Colonia Seccera). The last identification seems the most probable. [T. H. D.]

SECIA (Secchia), a river of Gallia Cispadana, one of the southern tributaries of the Padus, which crosses the Via Aemilia a few miles W. of Modena. It is evidently the same stream which is called by Pliny the Gabelus; but the name of Secia, corresponding to its modern appellation of Secchia, is found in the Jerusalem Itinerary, which marks a station called Pons Seciae, at a distance of 5 miles from Mutina. (Itin. Hier. p. 606.) The same bridge is called in an inscription which records its restoration by Varianus, in A.D. 259, Pons Seciae. (Murat. Inscrip. p. 460. 5; Orell. Inscrip. 1092.) The Secchia is a considerable stream, having the character, like most of its neighbours, of a mountain torrent. [E. H. B.]

SECOANUS (Σεκοανος, Steph. s. v.), a river of the Massalians, according to one reading, but accord-

ing to another reading, a city of the Massalians, "from which comes the ethnic name Sequani, as Artemidorus says in his first book." Nothing can be made of this fragment further than this; the name Sequanus belonged both to the basin of the Rhone and of the Seine. [G. L.]

SECOR or SCOCOR (Σκόκορ ή Σκόκρ λαμις), a port which Plutony (ii. 7. § 2) places on the west coast of Gallia, between the Pictorium or Pictorium Promontorum and the mouth of the Loiras (Loire). The name also occurs in Marcianus. The battles of Plutony cannot be trusted, and we have no other means of fixing the place except by a guess. Accordingly D'Anville supposes that Secor may be the port of the Siboles d'Ollone; and other conjectures have been made. [G. L.]

SEDELAUCUS. [Sidoilocus.]

SEDETANI. [Edetani.]

SEDEBONATES, are placed by Pliny in Aquitania (iv. c. 19). He says, "Aquitani, unde nomen provinciae, Sedonitates. Mox in oppidum contributi Convenae, Begeri." The Begeri are the Bigerriones of Caesar. [BIGERRIONES. We have no means of judging of the position of the Sedibonates except from what Pliny says, who seems to place them near the Bigerriones and Convenae. [CONVENAE.]

SEDUX, a people in the valley of the Upper Rhone, whom Caesar (B. G. iii. 17. 7) mentions; "Nantuates Sedunos Veragrosque." They are also mentioned in the trophy of the Alps (Pirim. iii. 20) in the same order. They are east of the Veneti, and in the Palais. Their chief town had the same name as the people. The French call it Son, and the German name it Sitten, which is the ancient name, for it was called Sedunum in the middle ages. An inscription has been found at Sion; "Citius Sedunorum Patrons." Sitten is on the right bank of the Rhone, and crossed by a stream called Sionem. The town-hall is said to contain several Roman inscriptions. [NANTUATES; OCTODURUS.]

SEDUXII, a German tribe mentioned by Caesar (B. G. i. 51) as serving under Ariovistus; but as no particulars are stated about them, and as they are not spoken of by any subsequent writer, it is impossible to say to what part of Germany they belonged. Some regard them as the same as the Edones mentioned by Tacitus (Germ. 40), and others identify them with the Plundus whom Plutony (ii. 11. § 12) places in the Cimbrian Chersonese; but both conjectures are mere fancies, based on nothing but a faint resemblance of names. [L. S.]

SEGALLAUNI (Σεγάλλαοι, Prot. ii. 10. § 11). Plotony places them west of the Allobroges, and he names their town Valentin Colonia (Valence), near the Rhone. Pliny (iii. 4) names them Segovellani, and places them between the Vocottii and the Allobroges; but he makes Valentin a town of the Cavares. [CAVARES.]

SEGASAMUNCIUM. (Σκεγισαμονκιομι, Prot. ii. 6. § 53), a town of the Antigunes in Hispania Tarraconensis. (Itin. Ant. p. 394.) Variously identified with S. Maria de Riberadoneda, Cameo, and Ballaverecaves. [T. H. D.]

3 P 2
SEGEDA AUGURIN.

SEGEDA AUGURIN'A, an important town of Hispânia Baetica, between the Baetis and the coast.

(Serv. iii. i. s. 3.) Commonly supposed to be S. Iago della Higera near Jaen.

[Th. H. D.]

SEGELOCUM (Hist. Ant. p. 473, called also AEGELLUM, ib. p. 478), a town in Britannia Romana, on the road from Lindunum to Wroxeter, near to Collen (p. 582) Littleborough in Nottinghamsire.

[Th. H. D.]

SEGE'SAMA (Σεγεσάμα, Strab. iii. p. 162), or SEGESAMO and SEGISA'MO (Hist. Ant. pp. 394, 449, 454; Orell. Inscr. no. 4719), and SEGISA'MONESES of the inhabitants (Hist. iii. s. 4), a town of the Murboi or Turmboii in Hispânia Tarraconensis, on the road from Tarracon to Asturica, now called Sasono, to the W of Briviesca. (Floraez, Exp. Sagr. vi. p. 419. xv. p. 59.)

[Th. H. D.]

SEGESSERA, in Gallia, is placed in the Table between Coriobulium (Corbill) and Andonatum (Langres), and the distance of Segesserà from each place is marked xxi. The site of Segesserà is not certain. Some fix it at a place named Suzannecourt. [Coriobulium.]

[Coriobulium.]

SEGESTA (Σεγεστα: Eth. Σεγεστατος, Segestanus: Ru. near Calatunyim), a city of Sicily in the NW. part of the island, about 6 miles distant from the sea, and 34 W. of Panormus. Its name is always written by the Attic and other contemporary Greek writers EΓEΣΤΑ (Εγεστα: Eth. Εγεστατος, Thuc. 8e.), and it has hence been frequently asserted that it was first changed to Segesta by the Romans, for the purpose of avoiding the ill omen of the name of Egesta in Latin. (Fest. a.s. Segesta, p. 340.) This story is, however, disproved by its coins, which prove that considerably before the time of Thucydidès it was called by the inhabitants themselves Segesta, though this form seems to have been softened by the Greeks into Egesta. The origin and foundation of Segesta is extremely obscure. The tradition current among the Greeks and adopted by Thucydides (Thuc. vi. 2: Dionys. i. 52: Strab. xiii. p. 608), ascribed its foundation to a band of Trojan settlers, fugitives from the destruction of their city; and this tradition was considerably welcomed by the Romans, who, in consequence claimed a kindred origin with the Segestans. Thucydides seems to have considered the Elymi, a barbarian tribe in the neighbourhood of Eryx and Segesta, as descended from the Trojans in question; but another account represents the Elymi as a distinct people, already existing in this part of Sicily when the Trojans arrived there and founded the two cities. [Elymi.] A different story seems also to have been current, according to which Segesta owed its origin to a band of Phocians, who had been among the followers of Phlibocetes; and, as usual, their writers sought to reconcile the two accounts. (Strab. vi. p. 272; Thuc. l.c.) Another version of the Trojan story, which would seem to have been that adopted by the inhabitants themselves, ascribed the foundation of the city to Egestas or Aegestas (the Aegestes of Virgil), who was said to be the offspring of a Trojan damsel named Segesta by the river god Cunnias. (Serv. ad Aen. i. 550, v. 30.) We are told also that the names of Simois and Sannader were given by the Trojan colonists to two small streams which flowed beneath the town (Strab. xiii. p. 608); and the latter name is mentioned by Strabo as still in use at a much later period. (Diod. xvi. 71.) It is certain that we cannot receive the statement of the Trojan origin of Segesta as historical; but what- ever be the origin of the tradition, there seems no doubt on the one hand that the city was occupied by a people distinct from the Sicanians, the native race of this part of Sicily, and on the other that it was not a Greek colony. Thucydides, in enumerating the allies of the Athenians at the time of the Peloponnesian War, places the Segestans among the Sicanians and barbarians; and the history of the Greek colonies in Sicily was evidently recorded with sufficient care and accuracy for us to rely upon his authority when he pronounces any people to be non-Hellenic. (Thuc. vii. 57.) At the same time they appear to have been, from a very early period, in close connection with the Greek cities of Sicily, and entering into relations both of hostility and alliance with the Hellenic states, wholly different from the other barbarians in the island. The early influence of Greek civilisation is shown also by their coins, which are inscribed with Greek characters, and bear the unquestionable impress of Greek art.

The first historical notice of the Segestans transmitted to us represents them as already engaged (as early as n. c. 580) in hostilities with the Siculines, which would appear to prove that both cities had already extended their territories so far as to come into contact with each other. By the timely assistance of a body of Chilian and Rhodian emigrants under Pentathlus, the Segestans at this time obtained the advantage over their adversaries. (Diod. v. 9.) A more obscure statement of Diochorus relates that again in n. c. 454, the Segestans were engaged in hostilities with the Libycaenes for the possession of the territory on the river Mazanars. (Id. xi. 86.) The name of the Libycaenes is here certainly erroneous, as no town of that name existed till long afterwards [Libycaen], but we know not what people is really meant, though the presumption is that it is the Siculines, with whom the Segestans seem to have been engaged in almost perpetual disputes. It was doubtless with a view to strengthen themselves against these neighbours that the Segestans took advantage of the first Athenian expedition to Sicily under Laches (n. c. 426), and concluded a treaty of alliance with Athens. (Diod. vi. 6.) This, however, seems to have led to no result, and shortly after, hostilities having again broken out, the Siculines called in the aid of the Syracusans, with whose assistance they obtained great advantages, and were able to press Segesta closely both by land and sea. In this extremity the Segestans, having in vain applied for assistance to Agrigentum, and even to Carthage, again had recourse to the Athenians, who were, without much difficulty, persuaded to expel their cause, and send a fleet to Sicily, n. c. 416. (Thuc. vi. 6; Diod. xi. 82.) It is said that this result was in part attained by fraud: the Segestans having deceived the Athenian envoys by a fallacious display of wealth, and led them to conceive a greatly exaggerated notion of their resources. They, however, actually furnished 60 talents in ready money, and 30 more after the arrival of the Athenian armament. (Thuc. vi. 8, 46; Diod. xii. 53, xiii. 6.) But though the relief of Segesta was thus the original object of the great Athenian expedition to Sicily, that city bears little part in the subsequent operations of the war. Nicias, indeed, on arriving in the island was induced at once to Segesta, and compel that people to submission by the display of their formidable armament. But this advice was overruled: the Athenians turned their
arms against Syracuse, and the contest between Segesta and Selinus was almost forgotten in the more important struggle between those two great powers. In the summer of B.C. 415 an Athenian fleet, proceeding along the coast, took the small town of Hycara, on the coast, near Segesta, and made it over to the Segestans. (Thuc. vi. 62; Dion. xxii. 6.) The latter people are again mentioned on more than one occasion as sending auxiliary troops to assist their Athenian allies (Thuc. vii. 57; Dion. xxii. 7), but no other notice occurs of them. The final defeat of the Athenians left the Segestans again exposed to the attacks of their neighbours the Selinusines; and feeling themselves unable to cope with them, they again had recourse to the Carthaginians, who determined to espouse their cause, and sent them, in the first instance, an auxiliary force of 6000 Africans and 500 Campanian mercenaries, which sufficed to ensure them the victory over their rivals, B.c. 410. (Diod. xiii. 43, 44.) But this was followed the next year by a vast armament under Pyrrhus, who landed at Lilybaeum, and, proceeding direct to Selinus, took and destroyed the city. (Ib. 54—58.) This was followed by the destruction of Himera; and the Carthaginian power now became firmly established in the western portion of Sicily. Segesta, surrounded on all sides by this formidable neighbour, naturally fell gradually into the position of a dependent ally of Carthage. It was one of the few cities that remained faithful to this alliance even in B.C. 397, when the great expedition of Dionysius to the W. of Sicily and the siege of Motya seemed altogether to shake the power of Carthage. Dionysius in consequence laid siege to Segesta, and pressed it with the utmost vigour, especially after the fall of Motya; but the city was able to defy his efforts, until the landing of H. of Lilybaeum with a formidable Carthaginian force changed the aspect of affairs, and compelled Dionysius to raise the siege. (Id. xiv. 48, 53—55.) From this time we hear little more of Segesta till the time of Agathocles, under whom it suffered a great calamity. The despot having landed in the W. of Sicily on his return from Africa (B.C. 307), and being received into the city as a friend and ally, suddenly turned upon the inhabitants on a pretence of disaffection, and put the whole of the citizens (said to amount to 10,000 in number) to the sword, plundered their wealth, and sold the women and children into slavery. He then changed the name of the city to Diceaopolis, and assigned it as a residence to the fugitives and deserters that had gathered around him. (Diod. xx. 71.) It is probable that Segesta never altogether recovered this blow; but it soon resumed its original name, and again appears in history as an independent city. Thus it is mentioned in B.C. 276, as one of the cities which joined Pyrrhus during his expedition into the W. of Sicily. (Diod. xxii. 10. Exc. H. p. 498.) It, however, soon after fell again under the power of the Carthaginians; and it was probably on this occasion that the city was taken and plundered by them, as alluded to by Cicero (Verr. iv. 33): a circumstance of which we have no other account. It continued subject to, or at least dependent on that people, till the First Punic War. In the first year of that war (B.C. 264) it was attacked by the consul Appius Claudius, but without success (Diod. xxiii. 3. p. 501); but shortly after the inhabitants put the Carthaginian garrison to the sword, and declared for the alliance of Rome. (Ib. 5. p. 502; Zonar. viii. 3.) They were in conse-

sequence besieged by a Carthaginian force, and were at one time reduced to great straits, but were relieved by the arrival of Duilius, after his naval victory, B.C. 260. (Pol. i. 24.) Segesta seems to have been one of the first of the Sicilian cities to set the example of defection from Carthage; on which account, as well as of their pretended Trojan descent, the inhabitants were treated with great distinction by the Romans. They were exempted from all public burdens, and even as late as the time of Cicero continued to be "sine foedera innominati: ab libris." (Cic. Verl. iii. 6, iv. 33.) After the destruction of Carthage, Scipio Africanus restored to the Segestans a statue of Diana which had been carried off by the Carthaginians, probably when they obtained possession of the city after the departure of Pyrrhus. (Cic. Terr. iv. 33.) During the Servile War also, in B.C. 102, the territory of Segesta is again mentioned as one of those where the insurrection broke out with the greatest fury. (Diod. xxxvi. 5, Exc. Phot. p. 534.) But with the exception of these incidental notices we hear little of it till the period of the Roman government. It seems to have been still a considerable town at the time of Cicero, and had a port or emporium of its own on the bay about 6 miles distant (το των Αιγαίων έμπόρων, Strab. vi. pp. 266, 272; Σεγεστών έμπόρων, Ptol. iii. 4. § 4). This emporium seems to have grown up in the days of Strabo to be a more important place than Segesta itself; but the continued existence of the ancient city is attested both by Pliny and Poleney; and we learn from the former that the inhabitants, though they no longer retained their position of nominal independence, enjoyed the privileges of the Latin citizenship. (Strab. l. c.; Plin. iii. 8. s. 14; Ptol. iii. 4. § 15.) It seems, however, to have been a decaying place, and no trace of it is subsequently found in history. The site is said to have been finally abandoned, in consequence of the ravages of the Saracens, in A.D. 900 (Amico, ad Fazell. Sic. vii. 4. not. 9), and is now wholly desolate; but the town of Castell' a Mare, about 6 miles distant, occupies nearly, if not precisely, the same site as the ancient emporium or port of Segesta.

The site of the ancient city is still marked by the ruins of a temple and theatre, the former of which is one of the most perfect and striking of the ancients. It stands on a hill, about 3 miles N.W. of Castelfranco, in a very barren and open situation. It is of the Doric order, with six columns in front and fourteen on each side (all, except one, quite perfect, and that only damaged), forming a parallelogram of 162 feet by 66. From the columns not being filled, they have rather a heavy aspect; but if due allowance be made for this circumstance, the architecture is on the whole a light order of Doric; and it is probable, therefore, that the temple is not of very early date. From the absence of fluting, as well as from all the other details of the architecture, there can be no doubt that it never was finished,—the work probably being interrupted by some political catastrophe. This temple appears to have stood, as was often the case, outside the walls of the city, at a short distance to the W. of it. The latter occupied the summit of a hill of small extent, at the foot of which flows, in a deep valley or ravine, the torrent now called the Fiume Gaggera, a conduit of the Fiume di S. Bartolomeo, which flows about 5 miles E. of Segesta. The latter is probably the ancient Cricinus (Curtius), celebrated for the defeat of Timoleon and the Carthaginians, while the Gaggera must probably be the stream called by Diodorus (xxi. 71) the Scamander.
Two other streams are mentioned by Aelian (V. II. ii. 33) in connection with Segesta, the Telmessus and the Porparx; but we are wholly at a loss to determine them. Some vestiges of the ancient walls may still be traced; but almost the only ruins which remain within the circuit of the ancient city are those of the theatre. These have been lately cleared out, and exhibit the procellentio and sixteen rows of seats, great part in good preservation. The general form and arrangement are purely Greek; and the building rests at the back on the steep rocky slope of the hill, out of which a considerable part of it has been excavated. It is turned towards the North, and commands a fine view of the broad bay of Castell'a Mare.

(For a more detailed account of the antiquities of Segesta, see Swinburne's Travels, vol. ii. pp. 291—295; Smyth's Sicily, pp. 67, 68; and especially Serva di Falco, Antichità della Sicilia, vol. i. pt. ii.)

Ancient writers mention the existence in the territory of Segesta of thermal springs or waters, which seem to have enjoyed considerable reputation (at Serva di Falco, Antichità della Sicilia, vol. i. pt. ii.)

Ancient writers mention the existence in the territory of Segesta of thermal springs or waters, which seem to have enjoyed considerable reputation (at Serva di Falco, Antichità della Sicilia, vol. i. pt. ii.).

The coins of Segesta have the figure of a dog on the reverse, which evidently alludes to the fable of the river-god Crimissus, the mythical parent of Segestus, having assumed that form. (Serva di Falco, Antichità della Sicilia, vol. i. pt. ii.)

The older coins (as already observed) uniformly name SEGESTA, as on the one annexed: those of later date, which are of copper only, bear the legend ETESTAIGN (Eckhel, l.c. p. 236). [E. H. B.]

COIN OF SEGESTA.

SEGESTA (Setri), a town on the coast of Liguria, mentioned by Pliny, in describing the coast of that country from Genoa to the Maura. (Plin. iii. 5. s. 7.) He calls it Segesta Tegguliorum; so that it seems to have belonged to a tribe of the name of the Tegguli, and a town named Teggulia is mentioned by him just before. Segesta is commonly identified with Setri (called Setri di Levante to distinguish it from another place of the name), a considerable town about 30 miles from Genoa, while Teggulia is probably represented by Tegego, a village about 2 miles further inland, where there are considerable Roman remains. Some of the MSS. of Pliny, indeed, have " Teggulia intus, et Segesta Tegguliorum," which would seem to point clearly to this position of the two places. (Silling, ad loc.) It is probable, also, that the Teggula of the Itineraries (Itin. Ant. p. 293) is identical with the Teggulia of Pliny.

[Ε. Η. Β.]

SEGESTIA, or SEGESTICA. [SEGIA.]

SEGIDA (Segueba, Strabo, iii. i. 162.) 1. A town of the Arevaci in Hispania Tarraconensis. According to Appian, who calls it Spectum (vi. 44), it belonged to the tribe of the Belli, and was 40 stadia in circumference. Stephano B. (a. e.) calls it Spectum, and makes it a town of the Celtiberians, of whom indeed the Arevaci and Belli were only subordinate tribes. Segula was the occasion of the first Celtiberian War (Appian, l. c.), and was probably the same place called Segesta by Livy (xxv. 17).

2. A town of Hispania Baetica, with the surname Restituta Julia. (Plin. iii. i. 3.) [T. H. D.]

SEGISA (Segueba, Plut. ii. 6. § 61), a town of the Bastiani in Hispania Tarraconensis, perhaps the modern Segoin. [T. H. D.]

SEGISA and SEGISAMA Julia (Segueba, Plut. ii. 6. § 50), a town of Hispania Tarraconensis. We find the inhabitants mentioned by Pliny as Segisamajulenses (iii. 3. s. 4).

Tolomey ascribes the town to the Vaccari, but Pliny to the Tarmodigi, whence we may probably conclude that it lay on the borders of both those tribes. The latter author expressly distinguishes it from Segisana.

[Τ. Η. Δ.]

SEGISAMO. [SEGESA.]

SEGISAMUNCUM. [SEGASAMUNCUM.]

SEGON, a German tribe in Belgium, mentioned by Caesar (B. G. vi. 32) with the Condrai, and placed between the Eburoines and the Treviri. In B. G. vi. 4 Caesar speaks of the Condrai, Eburoines, Caeraesi, and Faramusi, "qui uno nomine Germani appellantur;" but he does not name the Segon in that passage. There is still a place named Sinei or Signei near Condons, on the borders of Namur; and this may indicate the position of the Segon. [G. L.]

SEGOBODIUM in Gallia, placed in the Table on a road from Andomitum (Langres) to Vesontio (Besançon). The Itin. gives the same road, but emits Segobodinum. D'Anville supposed Segobodinum to be Segovia, which is on the Saône, and in the direction between Besançon and Langres. [G. L.]

SEGOBRI'SAMA (Segueba, Plut. ii. 6. § 58). 1. The capital of the Celtiberi in Hispania Tarraconensis. (Plin. iii. 3. s. 4.) It lay SW. of Caesaraugusta, and in the jurisdiction of Cartagena. (Plin. l. c.) The surrounding district was celebrated for its tale or selenite. (Id. xxxvi. 22. s. 45.) It must have been in the neighbourhood of Priego, where, near Penasestrt, considerable ruins are still to be found. (Florez, Esp. Sagra. vii. p. 61.) For coins see Setini, l. c. 193. (Cf. Strab. iii. p. 162; Front. Strat. iii. 10. 6.)

2. A town of the Edetani in Hispania Tarraconensis, known only from inscriptions and coins, the modern Segorbe. (Florez, Esp. Sagra. v. 21. viii. 97. and Med. pp. 573, 650; Mionnet, i. p. 50, and Supp. i. p. 102.)

[Τ. Η. Δ.]

COIN OF SEGOBRI'SAMA.

SEGOBRI'SAMA. [Massilia, p. 290.]

SEGEBRI'SIMA. [Massilia, p. 290.]
SEGODUNUM.

SEGODUNUM (Σεγοδούνων). Ptolemy (ii. 7. § 21) calls Segodunum the chief town of the Rutani [Rutæni], a Gallic people west of the Rhine and south of the Loire. He mentions that some editions of Ptolemy the reading is Segodunum or Eudodum. In the Table the name is Segodunum, which is probably a corrupt form; and it has the mark of a chief town. It was afterwards called Civitas Rutenerum, whence the modern name Routez, on the Arayvon, in the department of Arveyron, of which it is the chief town. [G. L.]

SEGODUNUM (Σεγοδούνων), a town of southern Germany, probably in the country of the Hermunduri, is, according to some, the modern Würzburg. (Ptol. ii. 11. § 29; comp. Wilhelm, Geograph., ii. 209.) [L. S.]

SEGON'TIA. 1. A town of the Celiberi in Hispania Tarraconensis, 16 miles from Caesaraugusta. (Itin. Ant. pp. 437, 439.) Most probably identical with the Seguntia of Livy (xxiv. 19). The modern Retedus, according to Lupie.

2. (Σεγόντια Παράοικα.) Ptol. ii. 6. § 66, a town of the Barduli in Hispania Tarraconensis. [T. H. D.]

SEGON'TIACI, a people in the S. part ofBritannia, in Hampsire. (Camden, pp. 84, 146; Caes. B. G. v. 21; Orelli, Inscr. 2013.) [T. H. D.]

SEGON'TIACUM, a city in the NW. part of Britannia, to which was given a road to Deva. (Itin. Ant. p. 482.) It is the modern Caeranmor, the little river by which is still called Segont. (Camden, p. 798.) It is called Segontio by the Geogr. Rav. (v. 31). [T. H. D.]

SEGORA, in Gallia, appears in the Table on a road from Portus Namnetum (Nama) to Liminum, or Limonum (Pottiers). D'Anville supposes that Segora is Bresseure, which is on the road from Namens to Pottiers. [G. L.]

SEGOZA, in Gallia, is placed by the Antonine Itin. on a road from Aquae Tarbellicae (Dax) to Burdigala (Bordeaux). The first station from Aquae Tarbellicae is Masansom, or Mostomunum, the site of which is unknown. The next is Segosa, which D'Anville fixes at a place named Encosus or Escosus. But he observes that the distance, 28 Gallic leagues, between Aquae and Segosa is less than the distance in the Itin. [G. L.]

SEGOVELLAUNI. [Segallauni.]

SEGÓVIA (Σεγοβία, Ptol. ii. 6. § 56). 1. A town of the Arevaci in Hispania Tarraconensis, on the road from Emerita to Caesaraugusta. (Itin. Ant. p. 435; Plin. iii. 3. s. 4; Flor. iii. 22.) It still exists under the ancient name. For coins see Flores (Med. ii. p. 577), Mionnet (i. p. 51, and Suppl. i. p. 104), and Senesi (p. 196). [T. H. D.]

2. A town of Hispania Baetica, on the river Siliceous. (Hist. B. A. 57.) In the neighborhood of Secull or the modern Perahad. [T. H. D.]

SEGUSIA'XI (Σεγουσιαξοι or Σεγουσιαξοι), a Gallic people. When Caesar (B. C. 58) was leading against the Helvetii the troops which he had raised in North Italy, he crossed the Alps and reached the territory of the Allobroges. From the territory of the Allobroges he crossed the Rhone into the country of the Segusians: “Hi sunt extra Provinciam tudes Rhodanum primum.” (B. G. i. 10.) He therefore places them in the angle between the Rhone and the Saône, for he was following the Helvetii, who had not yet crossed the Saône. In another place (vii. 64) he speaks of the Aedui and Segusiani as bordering on the Provincia, and the Segusiani were dependents of the Aedini (vii. 75). Strabo (iv. p. 186) places the Segusiani between the Rhodanus and the Dubis (Dobro), on which D'Anville remarks that he ought to have placed them between the Rhine and the Loire. The part of the Segusian at least were west of the Rhone in Caesar's time, as he plainly tells us, and therefore some of them were between the Rhone and the Doubs, though this is a very inaccurate way of fixing their position, for the Doubs ran through the territory of the Segusians. Lagodumum was in the country of the Segusiani. (Lugdunum.) Tityus gives to the Segusians the name of Liberi (iv. 18).

In Cicero's oration Pro P. Quintio (c. 25), a Gallic people named Segaquius, Segaguarus, with several other variations, is mentioned. He pronounces “Segusiani” as a corruption of Lambanius. Bitter (Orelli's Cicero, 2nd ed.) has written “Sequovaeus” in this passage of Cicero on his own authority; but there is no name Segusivae in Gallia. It is probable that the true reading is “Segusianus.” Ptolemy (iv. 8. § 14) names Rodumana (Roanne) and Ferum Segusianorum as the towns of the Segusians, which shows that the Segusian in his time extended to the Loire (Rodemus); and the greater part of their territory was probably west of the Rhone and Saône. Mionnet, quoted by Ubert (Gallien, p. 360), has a medal which he supposes to belong to the Segusian (L. S.).

SEGUSIO (Σεγοσίων; Est. Σεγουσίων, Segusius; Susa), a city of Gallia Transpadana, situated at the foot of the Cottian Alps, in the valley of the Doria (Dora Riparia), at the distance of 35 miles from Augustus Taurinorum (Turin). It was the capital of the Gaulish king or chieftain Cottius, from whom the Alpes Cottiae derived their name, and who became, in the reign of Augustus, a tributary or dependent ally of the Roman Empire. Hence, when the other Alpine tribes were reduced to subjection by Augustus, Cottius retained the government of his territories, with the title of Praefectus, and was able to transmit them to his son, M. Julius Cottius, upon whom the emperor Claudius even conferred the title of king. It was not till after the death of the younger Cottius, in the reign of Nero, that this district was incorporated into the Roman Empire, and Segusio became a Roman municipal town. (Strab. iv. pp. 179, 204; Itin. iii. 20. s. 24; Ann. March. xvi. 10.)

It was probably from an early period the chief town in this part of the Alps and the capital of the surrounding district. It is situated just at the junction of the route leading from the Mont Genêvre down the valley of the Dora with that which crosses the Mont Cenis; both these passages were among the natural passes of the Alps, and were doubtless in use from a very early period; though the latter seems to have been unaccountably neglected by the Romans. The road also that was in most frequent use in the latter ages of the Republic and the early days of the Empire to arrive at the pass of the Cottian Alps or Mont Genêvre, was that by Segusio up the valley of the Doria, but one which ascended the valley of Fenestrelles to Ocum (Uzem), and from thence crossed the Col de Sestrières to Scéningnoun (at or near Cesanne), at the foot of the actual pass of the Genêvre. This was the route taken by Caesar in B. C. 58, and appears to have still been one of the most usual in the days of Strabo (Caes. B. G. i. 10; Strab. iv. p. 179); but at a later period the road by Segusio seems to have come into general use, and is that given in the Itineraries. (Itin. Ant. pp. 544, 3 v 4)
Segusio. 337. Of Segusio as a municipal town we hear little; but it is mentioned as such both by Pliny and Ptolemy, and its continued existence is proved by inscriptions as well as by the Itineraries; and we learn that it continued to be a considerable town, and a military post of importance, commanding the passes of the Alps, until long after the fall of the Western Empire. (Plin. iii. 17. s. 21. Ptol. iii. i. § 40; Gruter, Inscr. p. 111. i. Orell. Inscr. 1690, 3803; Amm. Marc. xxv. 10; Itin. Hier. p. 556; P. Dear. Hist. Long. in. 8; Grac. Tar. iv. 89.)

Ammianus tells us that the tomb of Cottius was still visible at Segusio in his time, and was the object of much honour and veneration among the inhabitants (Amm. l. c.). A triumphal arch erected by him in honour of Augustus is still extant at S swept; it commemorates the names of the "Civitates" which were subject to his rule, and which were fourteen in number, though Pliny speaks of the "Cottianae civitates xii." (Plin. in. 20. s. 24; Orell. Inscr. 626.) All these are, however, mere obscure mountain tribes, and the names of most of them entirely unknown. His dominions extended, according to Strabo, across the whole of the Upper Taurinum in the land of the Caturiges (Strab. iv. p. 179); and this is confirmed by the inscription which commemorates the Caturiges and Medulli among the tribes subject to his authority. These are probably the two omitted by Pliny. O elnum, in the valley of the Clasone, was comprised in the territory of Cottius, while its limits towards the Taurini were marked by the station Ad Fines, placed by the Itineraries on the road to Augustus Taurinorum. But the distances given in the Itineraries are incorrect, and at variance with one another. Ad Fines may probably be placed at or near Argelsum, or Vivarium, 15 miles from Taurin, and 20 from Susat. The mountain tribes called by Pliny the "Cottianae civitates," when united with the Roman government, at first received only the Latin franchise (Plin. l. c.); but as Segusio became a Roman municipium, it must have received the full franchise. [E. H. B.]

Seguserto, a name which occurs in the Antonine Itin. and in the Table, is a town of Gallia Narbonensis, and the name is preserved in Sisteron, the chief town of an arrondissement in the department of Basses Alpes, on the right bank of the Durance. Roman remains have been found at Sisteron. The name in the Nott. Pr. or Galliae is Civitas Segestetium. It was afterwards called Sisterorum, and Sistericum, whence the modern name comes (D'Anville, Notice, etc.).

Seir, M. (Σειρω, LXX. Σειρα, Ἱεροφώς, Joseph). "The land of Seir" is equivalent to "the country of Edom." (Gen. xxxii. 3.) Mount Seir was the dwelling of Esau and his posterity (xxxvi. 8, 9; Deut. ii. 4, 5), in the possession of which they were not to be disturbed. (Josh. xxiv. 4.) Its general situation is defined in Deuteronomy (i. 2) between Horeb and Kadesh Barnea. The district must have been extensive for in their retrograde movement from Kadesh, which was in Seir (i. 44), the Israelites compassed Mount Seir many days (c. 1. 3). The original inhabitants of Mount Seir were the Horites; "but the children of Esau succeeded them, who had destroyed them before them, and dwelt in their stead" (ii. 12, 22); comp. Gen. xxxiv. 6. It obviously derived its name from "Seir the Horite" (xxxvi. 20, 21), and not, as Josephus erroneously supposes, from the Hebrew שֵׁיר meaning "fugitives." (Ant. l. 20. § 3.) The range between Wady Arava is marked M. Shehr in some modern maps, but without sufficient authority for the name. Dr. Wilson confines the name to the eastern side of the Arava, from a little north of Petra to the Gulf of Akabah, which range he names Jebel-es-Sherah (Land of the Bible, vol. i. pp. 289, 290, 337, 340); but since Kadesh was in Seir, it is obvious that this name must have extended much more widely, and on both sides the Arava Mr. Rawlins heard the name Es-Serr given to an elevated plain to the east of Kadesh, which, most likely, be the Seir alluded to in Deut. i. 44, where the Israelites were chased before the Amalekites. (Williams' Holy City, vol. i. appendix, p. 440.)

Selaeae. [Τουραχαί] Selachusa, an island lying off the Argolic promontory of Speiranum, mentioned only by Pliny (iv. 12. s. 57).

Selah. [Peta.] Selambina (Σελαμβίνα, Ptol. ii. 4. § 7), a town on the coast of Hispana Baetica between Sex and Abdera. (Ptol. iii. 1. s. 8.) Florio (Esp. Sapr. xii. p. 3) identifies it with Calabria, but, according to Ukert (ii. p. i. p. 351), it is to be sought in the neighbourhood of Sorbita. [T. H. D.]

Selas. [Messenia, p. 342, b.]

Selasia. [Selas.]

Seleminus. [Achala, p. 13, b. No. 10.]

Selentis or Seleynitius (Σελεντίς ή Σελενίτις) a district in the south-west part of Cilicia, extending along the coast, but also some distance in the interior; it derived its name from the town of Selinus. (Ptol. v. 8. §§ 2, 5.)

Seleucusiae (Σαλακουωνίας) or Selexnutes, two lakes formed by the sea, north of the mouth of the Caystrus, and not far from the temple of the Ephesian Artemis. These two lakes, which communicated with each other, were extremely rich in fish, and formed part of the revenue of the temple of Artemis, though they were on several occasions wrested from it. (Strab. xiv. p. 642; Plin. iii. 31.) The name of the lake, derived from Selene, the moon-goddess, or Artemis, probably arose from their connection with the great goddess of Ephesus. (Comp. Chandler's Travels in Asia Minor, vol. i. p. 162.) [L. S.]

Seleucia or Seleucia, two towns in Syria.

1. Ad Belem (Σέλευκεια πρὸς Βῆλην), sometimes called Seleucobelles, situated in the district of Cassitae, placed by Ptolemy in long. 69° 30', lat. 34° 47'. The Belus is a tributary of the Orontes, running into it from the W., and since, as Ptolemy remarks, Seleucia was exactly in the same latitude as Paltos, it must have been due E. of it. Now Boldo, the ancient Paltos, lies two hours S. of Jebelit, ancient Gabala, on the coast. Seleucia ad Belum must be looked for 1° 10' to the E., according to Ptolemy's reckoning, who places Paltos in long. 63° 20', lat. 34° 47'. Modern conjecture has identified it with Shagq and Divertiq, which is placed 30 miles E. of Antioch. (Ptol. v. 13. § 16; Pococke, Syria, vol. ii. p. 193.) Pliny mentions it with another not elsewhere recognised, in the interior of Syria: "... seleucas præter jam dictam (i.e. Pictia), duae quae ad Euphratium, et quae ad Belum vocatur" (xiv. 23. § 19).

2. Pheria (Σέλευκεια Πηρία : Eich, Σελευκέεια), a maritime city of Syria, placed by Ptolemy in long. 68° 36', lat. 35° 26', between Rhossus and the mouths of the Orontes. Its ancient name, according to Strabo, was "Rivers of Water" (Τάεως ποταμον), a strong city, called Free by Pompey (Strab. xvi. 2. § 8). Its position is fully described by Polybius.
it was situated on the sea between Cilicia and Phoenicia, over against a large mountain called Corypheanum, the base of which was washed on its W. side by the sea, towards the E. it dominated the districts of Antioch and Seleucia. Seleucia lay on the S. of this mountain, separated from it by a deep and rugged valley. The city extended to the sea through broken ground, but was surrounded for the most part by precipices and abrupt rocks. On the side towards the sea lay the factory (Iatikai) and suburb, on the level ground, strongly fortified. The whole hollow (corpus) of the city was likewise strongly fortified with fine walls, and temples, and buildings. It had one approach on the sea side, by an artificial road in steps (kaiwaiyati), distributed into frequent and continuous slopes (cuttings) and curves (tunnels).—σκαβωμαντι. The embouchure of the Orontes was not far distant—40 stadia, according to Strabo (xvi. p. 750). It was built by Seleucus Nicator (died B. C. 280), and was of great importance, in a military view, in the wars between the Seleucids and the Ptolemies. It was taken by Ptolemy Euergetes on his expedition into Syria, and held by an Egyptian garrison for some time after the defection, can be distinctly traced. The city was situated, on the instigation of Apollonians, by Seleucan, resolved to recover it from Ptolemy Philopator (cir. B. C. 220), in order to remove the disgrace of an Egyptian garrison in the heart of Syria, and to obviate the danger which it threatened to his operations in Coele-Syria, being, as it was, a principal city, and well nigh, so to speak, the proper home of the Syrian power. Having sent the fleet against it, under the admiral Diognetus, he himself marched with his army from Apamea, and encamped near the Hippodrome, 5 stadia from the city. Having in vain attempted to win it by blarney, he divided his forces into three parts, of which one under Zœaxis made the assault near the gate of Antioch, a second under Hermonegas near the temple of the Escuri, the third under Arlys and Diognetus by a arsenal and suburb, which was first carried, whereupon the garrison capitulated (Polyb. v. 58—60).

It was afterwards a place of arms in the further prosecution of the war against Ptolemy (66). The Mount Corypheanum of Polybius is the Pleria of Ptolemy and Strabo, from which the town derived its distinguishing appellation. Strabo mentions, from Ptolemais, that a king of Aspersia, so called, was borne away by a ship, and that Antiochus, having arrived in this place, when spread over the roots of the vine, acted as a preservative against blight (vii. p. 316.) He calls it the first city of the Syrians, from Cilicia, and states its distance from Seleucia, in a straight course, a little less than 1000 stadia (xiv. p. 676). It was one of the four cities of the Tetrapolis, which was a synonym for the district of Seleucia, the others being Antioch, Apamea, and Laodicea, which were called sister cities, being all founded by Seleucus Nicator, and called by the names respectively of himself, his father, his wife, and his mother-in-law; that bearing his father's name being the largest, that bearing his own, the strongest. (Strab. xvi. p. 749.)

The auguries attending its foundation are mentioned by John Malalas (Chronographia, lib. viii. p. 254). It became the port of Antioch, and there it was that St. Paul and Barnabas embarked for Cyprus, on their first mission to Asia Minor (Acts, xiii. 4), the Orientes never having been navigable even as far as Antioch for any but vessels of light draught. Phily calls it "Seleucia libera Pleria," and describes it as situated on a promontory (v. 21) ελευθρα. M. F. distant from Zeugma on the Euphrates (12). He de

signates the Corypheanum of Polybius, the Pleria of Strabo, Mount Cassius, a name also extended by Strabo to the mountains about Seleucia, where he speaks of the Antiochans celebrating a feast to Triptolemus as a demigod, in Mount Cassius around Seleucia (xvi. p. 750). The ruins of the site have been fully explored and described in modern times, first by Pococke (Observations on Syria, chap. xxii. p. 182, &c.), who identified many points noticed by Polybius, and subsequently by Col. Chesney (Journal of the R. Geog. Society, vol. viii. p. 228, &c.). The mountain range noticed by Polybius is now called Jebel Mass; and the hill on which the city stood appears to be the "low mountain, called Bu-Kîlîsh," or the 1000 churches. Part of the site of the town was occupied, according to Pococke, by the village of Kephe, situated about a mile from the sea. The masonry of the once magnificent port of Seleucia is still in so good a state that it merely requires trifling repairs in some places, and to be cleaned out; a project contemplated, but not executed, by one Ali Pasha, when governor of Aleppo. The plan of the port, with its walls and basins, its piers, floodgates, and breakwaters, can be distinctly traced. The walls of the suburb, with its agora, the double line of defence of the inner city, comprehending in their circumference about 4 miles, which is filled with ruins of houses; its castellated citadel on the summit of the hill, the gate of Antioch on the SE. of the site, with its plasters and towers, near which is a double row of marble columns; large remains of two temples, one of which was of the Corinthian order; the amphitheatre, near which Antiochus encamped, before his assault upon the city, with twenty-four tiers of benches still to be traced; the numerous rocky excavations of the necropolis, with the sarcophagi, always of good workmanship, now broken and scattered about in all directions, all attest the ancient importance of the city, and the fidelity of the historian who has described it. Most remarkable of all in this view is the important engineering work, to which Polybius alludes as the only communication between the city and sea, fully described by Col. Chesney, as the most striking of the interesting remains of Seleucia. It is a very extensive excavation, cut through the solid rock from the NE. extremity of the town almost to the sea, part of which is a deep hollow way, and the remainder regular tunnels, between 20 and 30 feet wide, and as many high, executed with great skill and considerate labour. From its eastern to its western extremity is a total length of 1088 yards, the greater part of which is traversed by an aqueduct carried along the face of the rock, considerably above the level of the road. Its termination is rough and very imperfect, about 30 feet above the level of the sea; and while the bottom of the rest of the excavation is tolerably regular, in this portion it is impeded by large masses of rock lying across it at intervals; which would imply either that it was never completed, or that it was finished in this part with masonry, which may have been carried off for building purposes. It is, perhaps, in this part that the stairs mentioned by Polybius may have been situated, in order to form a communication with the sea. There can be no doubt whatever that this excavation is the passage mentioned by him as the sole communication between the city and the sea; and it is strange that any question should have arisen concerning its design. A rough plan of the site is given by Pococke (p. 183); but a much more
SELEUCIA or SELEUCIA (Σελεύκεια). 1. A town near the northern frontier of Paphlagonia, surnamed Sidere (ἡ Σειδέρη, Ptol. v. 5. § 4; Hieroclip. p. 673), probably on account of iron-works in its vicinity. There are some coins of this place with the image of the Asiatic divinity Men, who was worshipped at Antioch, and bearing the inscription Καζονομενεωνων, which might lead to the idea that the place was restored by the emperor Claudius. (Seutin, Mon. Vet. p. 96.) Its site is now occupied by the town of Kyrillos.

2. A town in Pamphylia between Side and the mouth of the river Eurymedon, at a distance of 80 stadia from Side, and at some distance from the sea. (Stadiasmus, Mar. Mag. § 216.)

3. An important town of Cilicia, in a fertile plain on the western bank of the Calycadnus, a few miles above its mouth, was founded by Seleucus I., surnamed Nicator. A town or towns, however, had previously existed on the spot under the names of Olbia and Hyria, and Seleucia seems to have only extended and united them in one town under the name Seleucia. The inhabitants of the neighbouring Holmi were at the same time transferred to the new town, which was well built, and in a style very different from that of other Cilician and Pamphylian cities. (Steph. B. s. v.; Strab. xiv. p. 670.) In situation, climate, and the richness of its productions, it rivalled the neighbouring Tarsus, and it was much frequented on account of the annual celebration of the Olympic and on account of the oracle of Apollo. (Zosim. i. 57; Basil. Vita S. Theodori, i. p. 275; Ovart. xxvii. p. 148.) Pliny (v. 27) states that it was surnamed Tracheneus; and some ecclesiastical historians, speaking of a council held there, call the town simply Trachae (Somon, iv. 16; Socrat. ii. 39; comp. Ptol. v. 8. § 5; Amm. Marc. xiv. 25; Oras. vii. 12.) The town still exists under the name of Schéfich, and its ancient remains are scattered over a large extent of ground on the west side of the Calycadnus. The chief remains are those of a theatre, in the front of which there are considerable ruins, with porticoes and other large buildings; farther on are the ruins of a temple, which had been converted into a Christian church, and several large Corinthian columns. Ancient Seleucia, which appears to have remained a free city ever since the time of Augustus, remained in the same condition even after a great portion of Cilicia was given to Archelains of Cappadocia, whence both imperial and autonomous coins of the place are found. Seleucia was the birthplace of several men of eminence, such as the peripatetics Athenaeus and Xenarchus, who flourished in the reign of Augustus, and the sophist Alexander, who taught at Antioch, and was private secretary to the emperor M. Aurelius (Philost. Vit. Soph. ii. 5.) According to some authorities, lastly, the emperor Trajan died at Seleucia (Eutrop. viii. 2, 16; Oros. l. c.), though others state that he died at Selinus.

4. Seleucia in Caria [Thealess.]

[SELEUCIA or SELEUCIA (Seleucia, Polyb. v. 48; Strab. xi. p. 521; Ptol. v. 18. § 8), a large city near the right bank of the Tigris, which, to distinguish it from several other towns of the same name, is generally known in history by the title of Seleucia etro τῷ Τύγρῃ. (Strab. v. 738; Appian, Syr. 57.) It was built by Seleucus Nicator (Strab. l. c.; Plin. vi. 26. s. 30; Tacit. Ann. vi. 42; Joseph. Anti. Jud. xviii. 9. § 8; Amm. Marc. xxiii. 20), and appears to have been placed near the junction with the Tigris, of the great dyke which was carried across Mesopotamia from the Euphrates to the Tigris, and which bore the name of Nahr Malekha (the royal river). (Plin. l. c., and Isid. Char. p. 5.) Ptolemy states that the artificial river divided it into two parts (v. 18. § 8). On the other hand, Theophylact states that both rivers, the Tigris and Euphrates, surrounded it like a rampart —by the latter, in particular, meaning the Nahr Malekha (v. 6). It was situated about 40 miles N.E. of Babylon (according to Strabo, 300 stadia, and to the Tab. Peutingeri, 44 M.P.). In form, its original structure is said to have resembled an eagle with its wings outspread. (Plin. l. c.) It was mainly constructed of materials brought from Babylon; and was one principal cause of the ruin of the elder city, as Ctesiphon was (some centuries later) of Seleucia itself. (Strab. vii. 738.) It was placed in a district of great fertility, and is said, in its best days, to have had a population of 600,000 persons. (Plin. l. c.) Strabo adds, that it was even larger than Antiochae Syriae,—at this time probably the greatest commercial entrepot in the East, with the exception of Alexandria (xvi. p. 750). Even so late as the period of its destruction its population is still stated to have amounted to half a million. (Eutrop. v. 8; comp. Oros. viii. 5.) To its commercial importance it doubtless owed the free character of its local government, which appears to have been administered by means of a senate of 300 citizens. Polybius states that, on the overthrow of Molon, the Median rebels Antiochus and Hermias descended on Seleucia, which had been previously taken by Molon, and, after punishing the people by torture and the infliction of a heavy fine, exiled the local magistracy, who were called Adéigganes. (Ancyra. Polyb. v. 54.) Their love of freedom and of independent government was, however, of longer duration. (Plin. l. c.; Tacit. Ann. vi. 42.) Seleucia owed its ruin to the wars of the Romans with the Parthians and other eastern nations. It is first noticed in that between Crassus and Orodes (Dion Cass. xl. 20); but it would seem
that Crassus did not himself reach Seleucia. On the advance of Trajan from Asia Minor, Seleucia was taken by the Parthian Jospa and partially burnt to the ground (Dion Cass. lxxvi. 30); and a few years later it was still more completely destroyed by Cassius, the general of Lucinus Verus, during the war with Vologeses. (Dion Cass. lxxii. 2; Eutrop. v. 8; Capitol. Verus, c. 8.) When Severus, during the Parthian War, descended the Euphrates, he appears to have found Seleucia and Babylon equally abandoned and desolate. (Dion Cass. lxxxv. 9.) Still later, in his expedition to the East, Julian found the whole country round Seleucia one vast marsh full of wild game, which his soldiers hunted to the last. This it would seem from the indistinct notices of some authors, that Seleucia once bore the name of Cocho.

[Cocho.]

SELEUCIS (Σέλευκης), a district of Syria, mentioned by Ptolemy, as containing the cities of Gephora, Gindarus, and Imura (v. 15. § 15). Strabo calls it the best of all the districts: it was also called Tetrapolis, on account of its four most important cities, for it had many. These four were, Antioch, Seleucia in Pieria, Apamea, and Laodicea (xvi. p. 749). It also comprehended, according to Strabo, four sestries; and it is clear that he uses the name in a much wider sense than Ptolemy, who places the four cities of the tetrapolis of Strabo's Seleucis in so many separate districts: Antioch in Cissiotes, Apamea in Apamene, Laodicea in Laodiceene, while he only implies, but does not state, that Seleucia lies in Seleucis.

[G. W.]

SELGE (Σέλγη; Eth. Σέλγε), an important city in Pisidia, on the southern slope of Mount Tauros, at the part where the river Eurymelos forces its way through the mountains towards the south. The town was believed to be a Greek colony, for Strabo (xii. p. 520) states that it was founded by Lacedaemonians, but adds the somewhat unintelligible remark that previously it had been founded by Calchas (Comp. Polyb. v. 76; Steph. B. s. r.; Dion. Per. 858). The acropolis of Selge bore the name of Cesiumium (Κεσσαίδου; Polyb. l.c.). The district in which the town was situated was extremely fertile, producing abundance of oil and wine, but the town itself was difficult of access, being surrounded by precipices and beds of torrents flowing towards the Eurymelos and Cestrus, and requiring bridges to make them passable. In consequence of its excellent laws and political constitution, Selge rose to the rank of the most powerful and populous city of Pisidia, and at one time was able to send an army of 20,000 men into the field. Owing to these circumstances, and the valour of its inhabitants, for which they were regarded as worthy kinsmen of the Lacedaemonians, the Selgians were never subject to any foreign power, but remained in the enjoyment of their own freedom and independence. When Alexander the Great passed through Pisidia, the Selgians sent an embassy to him and gained his favour and friendship. (Arrian, Anab. l. 28.) At that time they were at war with the Telmissians. At the period when Achaeus had made himself master of Western Asia, the Selgians were at war with Ptolemaios, which was besieged by them; and Achaeus, on the invitation of Ptolemaios, sent a large force against Selge. After a long and vigorous siege, the Selgians, being betrayed and despairing of resisting Achaeus any longer, sent deputies to sue for peace, which was granted to them on the fol-

loming terms: they agreed to pay immediately 400 talents, to restore the prisoners of Ptolemaios, and after a time to pay 300 talents in addition. (Polyb. v. 72—77.) We now have for a long time no particulars about the history of Selge; in the fifth century of our era Zosimus (v. 15) calls it indeed a little town, but it was still strong enough to repel a body of Goths. It is strange that Pliny does not notice Selge, for we know from its coins that it was still a flourishing town in the time of Hadrian; and it is also mentioned in Ptolemy (v. 5. § 8) and Hecroches (p. 681). Independently of wine and oil, the country about Selge was rich in timber, and a variety of trees, among which the storax was much valued from its yielding a strong perfume. Selge was also celebrated for an ointment prepared from the iris root. (Strab. l.c.; Flin. xii. 55, xxi. 19; comp. Liv. xxxv. 13.) Sir C. Fellowes (Asia Minor, p. 171, foll.) thinks that he has discovered the ruins of Selge about 10 miles to the north-east of the village of Buojik. They are seen on a lofty promontory now presenting magnificent wrecks of grandeur. "I rode," says Sir Charles, "at least 3 miles through a part of the city, which was one pile of temples, theatres, and buildings, vying with each other in splendour, and covered by a roof of stucco. The material of these ruins had suffered much from the exposure to the elements, being grey with a lichen which has eaten into the marble, and entirely destroyed the surface and inscriptions; but the scale, the simple grandeur, and the uniform beauty of style bespoke its date to be the early Greek. The sculptured cornices frequently contain groups of figures fighting, wearing helmets and body-armour, with shields and long spears; from the ill-proportioned figures and general appearance, they must rank in date with the Aegina naerables. The ruins are so thickly strewn, that little cultivation is practicable; but in the areas of temples, cellas of temples, and any space where a plough can be used, the wheat is springing up. The general style of the temples is Corinthian, but not so florid as in less ancient towns. The tombs are scattered for a mile from the town, and are of many kinds, some cut in chambers in face of the rock, others sarcophagi of the heaviest form: they have had inscriptions, and the ornaments are almost all martial; several seats remain among the tombs. I can scarcely guess the number of temples or columned buildings in the town, but I certainly traced fifty or sixty. . . . Although apparently unnecessary for defence, the town has had strong walls, partly built with large stones in the Cyclopean mode. . . . I never conceived so high an idea of the works of the ancients as from my visit to this place, standing as it does in a situation, as it were, above the world." It is to be regretted that it was impossible by means of inscriptions or coins to identify this place with the ancient Selge more satisfactorily. (Comp. Von Hammer, in the Wiener Jahrbücher, vol. cvi. p. 92.)

[SELGE.

COIN OF SELGE.
SELGOVAE (Σελγωβα), Prob. ii. 3, § 8), a
be on the SW. coast of Britannia Barbarum, in
the E. part of Glamorgan and in Dumfries-shire.
Cameron (p. 1194) derives the name of Selgovæ
from them.

SELINUS (Σέλινος) 1. A village in the north
of Lacedaemon, described by Pausanias as 20 stadia
from Gerontæa; but as Periegetes seems not to
have visited this part of Lacedaemon, the distances
may not be correct. Leake, therefore, places Selinus at
the village of Kastoria, which lies further north of
Gerontæa than 20 stadia, but where there are
remains of ancient tombs. (Paus. iii. 22, § 8; 
Leake, Peloponesiana, p. 363; Böhlade, Re-
cherches, g.c. p. 97; Curtius, Peloponesos, vol. ii.
p. 304.)

[SELIUS].
3. A river in Achaia. (Acham. p. 13, b. No. 6.)

SELINUS (Σέλινος; Eth. Σέλινοιος, Sel-
nuntius; P. at Torre dei Pulci), one of the most
important of the Greek colonies in Sicily, situated on
the SW. coast of that island, at the mouth of the
small river of the same name, and 4 miles W.
of that of the Hypeas (Belice). It was founded, as we
learn from Thucydides, by a colony from the Sicilian
city of Megara, or Megara Hyblaea, under the con-
duct of a leader named Pammillus, about 100 years
after the settlement of that city, with the addition of
a fresh body of colonists from the parent city of
Megara in Greece. (Thuc. vi. 4, vii. 57; Seeyn.
Ch. 292; Strab. vi. p. 272.) The date of its foun-
dation cannot be precisely fixed, as Thucydides indi-
cates it only by reference to that of the Sicilian
Megara, which is itself not accurately known, but it
may be placed about b. c. 628. Diodorus indeed
would place it 22 years earlier, or b. c. 650, and
Hiereymnus still further back, b. c. 654; but the
date given by Thucydides, which is probably entitled
to the most confidence, is inconsistent with this
earlier epoch. (Thuc. vi. 4; Diod. xiii. 59; Hieron.
Chron. ad ann. 1362; Chiton, Fast. Hell. vol. i.
p. 208.) The name is supposed to have been de-

curred from the quantities of wild parsley (σέλινος)
which grew on the spot; and for the same reason a
leaf of this parsley was adopted as the symbol of the
city.

Selinus was the most westerly of the Greek colo-

dies in Sicily, and for this reason was early brought
into contact and collision with the Carthaginians and
the barbarians in the W. and NW. of the island.
The former people, however, do not at first seem to
have offered any obstacle to their progress; but as
early as b. c. 550 we find the Seluntines engaged in
hostilities with the people of Segesta (a non-Hellenic
city), whose territory bordered on their own. (Diod.
v. 9.) The arrival of a body of emigrants from
Rhodes and Cnidus who subsequently founded Lipara,
and who lent their assistance to the Segestans, for a
time secured the victory to that people; but dis-
putes and hostilities seem to have been of frequent
occurrence between the two cities, and it is probable
that in b. c. 474, when Diodorus speaks of the
Segestans as being at war with the Lipharusien
(xi. 86), that the Seluntines are the people really
meant. [LIPHAERUS.] The river Mazara, which
at that time appears to have formed the boundary
between the two states, was only about 15
miles W. of Selinus; and it is certain that at a
somewhat later period the territory of Selinus ex-

tended to its banks, and that that city had a fort
and emporium at its mouth. (Diod. xiii. 54.) On
the other side its territory certainly extended as far
as the Halycus or Soloe, at the mouth of which it
had founded the colony of Minos, or Heraclea, as it
was afterwards termed. (Herod. v. 46.) It is evi-
dent, therefore, that Selinus had early attained to
great power and prosperity; but we have very little
information as to its history. We learn, however,
that, like most of the Sicilian cities, it had passed
from an oligarchy to a despotism, and about b. c.
510 was subject to a despot named Peliggoras,
from whom the citizens were freed by the assistance
of the Spartan Euryleon, one of the companions of
Doricus; and thenceforward Euryleon himself, for a
short time, seized on the vacant sovereignty, but was
speedily overthrown and put to death by the Sel-
nuntines. (Herod. v. 46.) We are ignorant of the
causes which led the Seluntines to abandon the
cause of the other Greeks, and take part with the
Carthaginians during the great expedition of Ha-
milcar, b. c. 480; but we learn that they had even
promised to send a contingent to the Carthaginian
army, which, however, did not arrive till after its
defeat. (Diod. xi. 21, xiii. 55.) The Seluntines
are next mentioned in b. c. 466, as co-operating
with the other free cities of Sicily in assisting the
Syracusans to expel Thasybulus (Id. xi. 68); and
there is every reason to suppose that they fully
shared in the prosperity of the half century that
followed, a period of tranquillity and opulence for
most of the Greek cities in Sicily. Thucydides
speaks of Selinus just before the Athenian expedi-
tion as a powerful and wealthy city, possessing
great resources for war both by land and sea; and hav-
ing large stores of wealth accumulated in its temples.
(Thuc. vi. 20.) Diodorus also represents it at the
time of the Carthaginian invasion, as having enjoyed
a long period of tranquillity, and possessing a
numerous population. (Diod. xiii. 55.)

In b. c. 416, a renewal of the old disputes be-

Dionysius and Segesta became the occasion of
the great Athenian expedition to Sicily. The
Seluntines were the first to call in the powerful aid
of Syracuse, and thus for a time obtained the complete
advantage over their enemies, whom they were able to
block-side both by sea and land; but in this extremity
the Segestans had to recur to the assistance of Athens.
(Thuc. vi. 6; Diod. xii. 82.) Though the
Athenians do not appear to have taken any mea-
sures for the immediate relief of Segesta, it is prob-
able that the Seluntines and Syracusans withdrew
their forces at once, as we hear no more of their
operations against Segesta. Nor does Selinus bear
an important part in the war of which it was the
immediate occasion. Niches indeed proposed, when
the expedition first arrived in Sicily (b. c. 415),
that they should proceed at once to Selinus and
compel that city to submit on moderate terms
(Thuc. vi. 47); but this advice being overruled, the
effects of the armament were directed against Syra-
cus, and the Seluntines in consequence bore but a
secondary part in the subsequent operations. They
are, however, mentioned on several occasions as fur-
ishing auxiliaries to the Syracusans; and it was at
Selinus that the large Peloponnesian force sent to
the support of Glyippus landed in the spring of 413,
having been driven over to the coast of Africa by a
tempest. (Thuc. vii. 50, 58; Diod. xiii. 12.)
The defeat of the Athenian armament left the
Segestans apparently at the mercy of their rivals;
they in vain attempted to discern the hostility of the
Selinuntines by ceiling without further contest the frontier district which had been the original subject of dispute. But the Selinuntines were not satisfied with this concession, and continued to press them with fresh aggressions, for protection against which they sought assistance from Carthage. This was, after some hesitation, accorded them, and a small force sent over at once, with the assistance of which the Segestans were able to defeat the Selinuntines in a battle. (Diod. xiii. 43, 44.) But not content with this, the Carthaginians in the following spring (B.c. 409) sent over a vast army amounting, according to the lowest estimate, to 100,000 men, with which Hamilcar (the son and successor of Hamilcar, who landed at Lilybaeum, and from thence marched direct to Selinus. The Selinuntines were wholly unprepared to resist such a force; so little indeed had they expected it that the fortifications of their city were in many places out of repair, and the auxiliary force which had been promised by Syracuse as well as by Agrigentum and Gela, was not yet ready, and did not arrive in time. The Selinuntines, indeed, defended themselves with the courage of despair, and even after the walls were carried, continued the contest from house to house; but the overwhelming numbers of the enemy rendered all resistance hopeless; and after a siege of only ten days the city was taken, and the greater part of the defenders put to the sword. Of the citizens of Selinus we are told that 16,000 were slain, 5000 made prisoners, and 2600 under the command of Epemond escaped to Agrigentum. (Diod. xiii. 54—59.) Shortly after Hannibal destroyed the walls of the city, but gave permission to the surviving inhabitants to return and occupy it, as tributaries of Carthage, an arrangement which was confirmed by the treaty subsequently concluded between Dionysius and the Carthaginians, in B.C. 405. (Id. xiii. 59, 114.) In the interval a considerable number of the survivors and fugitives had been brought together by Hermocrates, and established within its walls. (Id. 63.)

There can be no doubt that a considerable part of the citizens of Selinus availed themselves of this permission, and that the city continued to subsist under the Carthaginian dominion; but a fatal blow had been given to its prosperity, which it undoubtedly never recovered. The Selinuntines are again mentioned in B.C. 397 as declaring in favour of Dionysius during his war with Carthage (Diod. xiv. 47); but both the city and territory were again given up to the Carthaginians by the peace of 383 (Id. xv. 17); and though Dionysius recovered possession of it by arms shortly before his death (Id. xv. 73), it is probable that it soon again lapsed under the dominion of Carthage. The Halycus, which was established as the eastern boundary of the Carthaginian dominion in Sicily by the treaty of 383, seems to have generally continued to be so recognised, notwithstanding temporary interruptions; and was again fixed as their limit by the treaty with Agathocles in B.C. 314. (Id. xix. 71.) This last treaty expressly stipulated that Selinus, as well as Heraclea and Himera, should continue subject to Carthage, as before. In B.C. 276, however, during the expedition of Pyrrhus to Sicily, the Selinuntines voluntarily submitted to that monarch, after the capture of Heraclea. (Id. xxii. 10. Exc. H. p. 498.) During the First Punic War we again find Selinus subject to Carthage, and its territory was repeatedly the theatre of military operations between the contending powers. (Id. xxiii. 1, 21; Pol. l. 59.) But before the close of the war (about B.C. 250), when the Carthaginians were beginning to contract their operations, and confine themselves to the defence of as few points as possible, they removed all the inhabitants of Selinus to Lilybaeum and destroyed the city. (Diod. xxxiv. 1. Exc. H. p. 506.)

It seems certain that it was never rebuilt. Pliny indeed, mentions its name ("Selinum opolium," hist. 8. 14), as if it was still existing as a town in his time, but Strabo distinctly classes it with the cities which were killed and destroyed at the time, though he mentions the river Selinus, has no notice of a town of the name. (Strab. vi. p. 275; Pol. iii. 4. § 5.) The Thermæ Selinenticæ, which derived its name from the ancient city, and seem to have been much frequented in the time of the Romans, were situated at a considerable distance from Selinus, being undoubtedly the same as those now existing at Sciacca: they are sulphureous springs, still much valued for their medical properties, and dedicated, like most thermal waters in Sicily, to St. Colagero. At a later period they were called the Ancyra Labses or Laraces, under which name they appear in the Itineraries. (Itin. Ant. p. 89; Tab. Ptol.) They are there placed 40 miles W. of Agrigentum, and 46 from Lilybaeum; distances which agree well with the position of Sciacca. This is distant about 20 miles to the E. of the ruins of Selinus.

The site of the ancient city is now wholly deserted, with the exception of a solitary guardhouse, and the ground is for the most part thickly overgrown with shrubs and low bushwood; but the remains of the walls can be distinctly traced throughout a great part of their circuit. They occupied the summit of a low hill, directly shutting on the sea, and bounded on the W. by the marshy valley through which flows the river Medium, the ancient Selinus: on the E. by a smaller valley or depression, also traversed by a small marshy stream, which separates it from a hill of similar character, where the remains of the principal temples are still visible. The space enclosed by the existing walls is of small extent, so that it is probable the city in the days of its greatness must have covered a considerable area without them: and it has been supposed by some ancient writers that the present line of walls is that erected by Hermocrates when he restored the city after its destruction by the Carthaginians. (Diod. xiii. 63.)

No trace is, however, found of a more extensive circuit, though the remains of two lines of wall, evidently connected with the port, are found in the small valley E. of the city. Within the area surrounded by the walls are the remains of three temples, all of the Doric order, and of an ancient style; none of them are standing, but the foundations of them all remain, together with numerous portions of columns and other architectural fragments, sufficient to enable us to restore the plan and design of all three without difficulty. The largest of them (marked C. on the plan) is 230 feet long by 85 feet broad, and has 6 columns in front and 18 in length, a very unusual proportion. All these are hexastyle and peripteral. Besides these three temples there is a small temple or Aeduca (marked B.), of a different plan, but also of the Doric order. No other remains of buildings, beyond mere fragments and foundations, can be traced within the
walls; but the outlines of two large edifices, built of squared stones and in a massive style, are distinctly traceable outside the walls, near the NE. and NW. angles of the city, though we have no clue to their nature or purpose. But much the most remarkable of the ruins at

Selinus are those of three temples on the hill to the E., which do not appear to have been included in the city, but, as was often the case, were built on this neighbouring eminence, so as to front the city itself. All these temples are consideraily larger than any of the three above described; and the most northerly of them is one of the largest of which we have any remains. It had 8 columns in front and 17 in the sides, and was of the kind called pseudo-dipteral. Its length was 359 feet, and its breadth 162, so that it was actually longer than the great temple of Jupiter Olympus at Agrigentum, though not equal to it in breadth. From the columns being only partially fluted, as well as from other signs, it is clear that it never was completed; but all the more important parts of the structure were finished, and it must have certainly been one of the most imposing fabrics in antiquity. Only three of the columns are now standing, and these imperfect; but the whole area is filled up with a heap of fallen masses, portions of columns, capitals, &c., and other huge architectural fragments, all of the most massive character, and forming, as observed by Swinhorne, "one of the most gigantic and sublime ruins imaginable." The two other temples are also prostrate, but the ruins have fallen with such regularity that the portions of almost every column lie on the ground as they have fallen; and it is not only easy to restore the plan and design of the two edifices, but it appears as if they could be rebuilt with little difficulty. These temples, though greatly inferior to their gigantic neighbour, were still larger than that at Segesta, and even exceed the great temple of Neptune at Paestum; so that the three, when standing, must have presented a spectacle unrivalled in antiquity. All these buildings may be safely referred to a period anterior to the Carthaginian conquest (b. c. 409), though the three temples last described appear to have been all of them of later date than those within the walls of the city. This is proved, among other circumstances, by the sculptured metopes, several of which have been discovered and extricated from among the fallen fragments. Of these sculptures, those which belonged to the temples within the walls, present a very peculiar and archaic style of art, and are universally recognised as among the earliest extant specimens of Greek sculpture. (They are figured by Müller, Denkmäler, pl. 4, 5, as well as in many other works, and casts of them are in the British Museum.) Those, on the contrary, which have been found among the ruins of the temple marked E. on the opposite hill, are of a later and more advanced style, though still retaining considerable remains of the stiffness of the earliest art. Besides the interest attached to these Selinuntine metopes from their important bearing on the history of Greek sculpture, the remains of these temples are of value as affording the most unequivocal testimony to the use of painting, both for the architectural decoration of the temples, and as applied to the sculptures with which they were adorned. A very full and detailed account of the ruins at Selinus is given in the Duke of Serra di Calco's Antichità Siciliane, vol. ii., from which the preceding plan is derived. A more general description of them will be found in Swinhorne's Travels, vol. ii. pp. 242—245; Smyth's Sicily, pp. 219—221; and other works on Sicily in general.

The coins of Selinus are numerous and various. The earliest, as already mentioned, bear merely the figure of a parsley-leaf on the obverse. Those of somewhat later date (including the one figured below) represent a figure sacrificing on an altar,
which is consecrated to Aesclaipus, as indicated by the rock which stands below it. The subject of this type evidently refers to a story related by Diogenes Laertius (viii. 2, §11) that the Selinuntines were afflicted with a pestilence from the marshy character of the lands adjoining the neighbouring river, but that this was cured by works of drainage, suggested by Empedocles. The figure standing on the coin is the river-god Selinus, which was thus made conducive to the salubrity of the city.

[ E. H. B. ]

COIN OF SELINUS

SELIUS (Σέλιος; Εθ. Σελιουδήτιος ο Σε- λινούσιος; Σελατος), a port-town on the west coast of Sicily, at the mouth of a small river of the same name, which is now called Selanci. (Scylax, p. 40; Liv. xlviii. 20; Strab. xiv. p. 682; Pol. v. 8. § 2, vii. 17. § 42; Plin. v. 22.) This town is memorable in history as the place where, in A. D. 117, the emperor Trajan is said by some authors to have died (Dion Cass. lxxviii. 32). After this event the place for a time bore the name of Trajanopolis; but its bishops afterwards are called bishops of Selinus. (Hierocl. p. 709.) Basil of Selucia (Βασιλ. Σελουδίας, ii. 17) describes the place as reduced to a state of insignificance in his time, though it had once been a great commercial town. (Comp. Stephanus, Mar. Mag. §§ 203, 204; Lucan, viii. 260; Chron. Paschale, p.253.) Selinus was situated on a precipitous rock, surrounded on almost every side by the sea, by which position it was rendered almost impregnable. The whole of the rock, however, was not included in the ancient line of fortifications; inside the walls there still are many traces of houses, but on the outside, and between the foot of the hill and the river, the remains of some large buildings are yet standing, which appear to be a mausoleum, an agora, a theatre, an aqueduct, and some tombs (Beaufort, Karaiskien, p. 186, &c.)

Respecting the small river Selinus, flowing by Pergamum, see Pergamum, p. 575. [ L. S. ]

SELLASIA (Σέλασια, Νομ. Πελεβ. Διολ; Σελα- σια, Steph. B., Hesych. s. v.; the latter is perhaps the correct form, and may come from σταλας; the name is connected by Hesychius with Artemis Selas: Εθ. Σελασίας, Σελασιαί), a town of Lacedaemon, situated in the valley of the Oenus, on the road leading from Tegea and Argos, and one of the bulwarks of Sparta against an invading army. Its distance from Sparta is nowhere mentioned; but from the description which Polybius gives of the celebrated battle fought in its neighbourhoood between Antigonus and Cleomenes, it is probable that the plain of Krevata was the site of the battle. We learn from Polybius that this battle took place in a narrow opening of the vale of the Oenus, between two hills named Evias and Olympus, and that the river Gorgylos flowed across the plain into the Evenus. South of the Khan of Krevata is a small plain, the only one in the valley of the Oenus, about ten minutes in width and a quarter of a mile in length, at which the rocks again approach so close as barely to leave room for the passage of the river. The mountain, which bounds this plain on the east, is Olympus, a continuation of the mountain of Vrestheas: it rises very steep on the left bank of the Oenus. The mountain on the western side is Evas, now Turtles, which, though not so steep, is still inaccessible to cavalry. Towards the north the plain is shut in by a mountain, over which the road leads to Tegea, and towards the south by a still higher mountain. The Oenus, which flows near the eastern edge of the plain, can be crossed at any point without difficulty. It receives on its right side a small brook, the Gorgylos, which descends from a ravine on the northern side of Mt. Evas. On the summit of the hill, more than 2800 feet above the sea, which shuts in the plain on the south, and over which the road leads to Sparta, are the ruins of Sellasia, described below.

The battle of Sellasia, of which Polybius gives a detailed account, requires a few words of explanation. In B. C. 221, Cleomenes, the Spartan king, expecting that Antigonus, the Macedonian king, and the Achaeans, would invade Laconia, fortified the other passes which led into the country, and took up his own position with the main body of his forces in the plain of Sellasia, since the roads to Sparta from Argos and Tegea united at this point. His army amounted to 20,000 men, and consisted of Lacedaemonians, Perioeci, allies, and mercenaries. His left wing, containing the Perioeci and allies, was stationed on Mt. Evas under the command of his brother Euclidean; his right wing, consisting of the Lacedaemonians and mercenaries, encamped upon Mt. Olympus under his own command; while his cavalry and a part of the mercenaries occupied the small plain between the hills. The whole line was protected by a ditch and a palisade. Antigonus marched into Laconia from Argos with an army of 30,000 men, but found Cleomenes so strongly intrenched in this position, that he did not venture to attack him, but encamped behind the small stream Gorgylos. At length, after several days' hesitation, both sides determined to join battle. Antigonus placed 3000 Macedonian peltasts, with the greater part of his auxiliary troops, on his right wing to support his cavalry, while 1000 horse and the same number of Megalopolitans in the small plain; while he himself with the Macedonian phalanx and 3000 mercenaries occupied the left wing, in order to attack Cleomenes and the Lacedaemonians on Mt. Olympus. The battle began on the side of Mt. Evas. Euclidean committed the error of awaiting the attack of the enemy upon the brow of the hill, instead of availing himself of his superior position to charge down upon them; but while they were climbing the hill they were attacked upon the rear by some light troops of Cleomenes, who were stationed in the centre with the Lacedaemonian cavalry. At this critical moment, Philipomen, who was in the centre with the Megalopolitan horse, diverted the attack of the light infantry by charging without orders the Lacedaemonian centre. The right wing of the Macedonians then renewed their attack, defeated the left wing of the Lacedaemonians, and drove them over the steep precipices on the opposite side of Mt. Evas. Cleomenes, perceiving that the only hope of retrieving the day was by the defeat
of the Macedonians opposed to him, led his men out of the intrenchments and charged the Macedonian phalanx. The Lacedaemonians fought with great bravery; but after many vain attempts to break through the impenetrable mass of the phalanx, they were entirely defeated, and of 6000 men only 200 are said to have escaped from the field of battle. Cleomenes, perceiving all was lost, escaped with a few horsemen to Sparta, and from thence proceeded to Gythium, where he embarked for Egypt. Antigonus, thus master of the passes, marched directly to Sellasia, which he plundered and destroyed, and then to Sparta, which submitted to him after a slight resistance. (Polyb. ii. 65—70; Pint. Clem. 27, 28. Philop. 6; Paus. ii. 9. § 2, iii. 10. § 7, iv. 29. § 9, vii. 7. § 4, viii. 49. § 5.)

**PLAN OF THE BATTLE OF SELASIA.**

| a a a. Troops of Cleomenes. | B B. Road to Argos. |
| b b b. Troops of Antigonus. | C C. Road to Megalopolis. |
| A A. Road to Tegea. | D D. Road to Sparta. |

In the preceding account of the battle we have followed the excellent description of Ross. (Reisen im Peloponnes, p. 181.) The French Commission had previously supposed the plain of Krevata to be the site of the battle of Sellasia (Roblaye, Recherches, &c. p. 73); and the same opinion has been adopted by Curtius. (Peloponnesos, vol. ii. p. 268.) Leake, however, places Sellasia to the SE., near the monastery of the Forty Saints ("Αγίοι Σαράντα"), and supposes the battle to have been fought in the pass to the eastward of the monastery. The ruins near the Κάτω τοῦ Κρεβάτου maintain to be those of Caryae. (Leake, Moras, vol. ii. p. 529, Peloponnesiana, p. 341, seq.) But Ross informs us that in the narrow pass Ν. of the monastery of the Forty Saints there is barely room for a loaded mule to pass; and we know moreover that Sellasia was situated on the high road from Sparta to Tegea and Argos, which must have led through the plain of Krevata. (κατά τὰς λευκόφων, Paus. iii. 10. § 7; Plut. Cleom. 23; Xen. Hell. vi. 5. § 27; Diod. xv. 64; Liv. xxxiv. 28.)

On leaving the plain of Κρεβάτου, the road southwards ascends the mountain, and at the distance of a quarter of an hour leaves a small ruin on the left, called by the peasants Παλαγώγα (Παλαγώγα). The remains of the walls are Hellenic, but they are of very small extent, and the place was probably either a dependency of Sellasia or one to which the inhabitants of the latter fled for refuge at one of the periods when their city was destroyed.

The ruins of Πάλαγωγα lie 1½ miles beyond Παλαγώγα upon the summit of the mountain. The city was about 1⅛ miles in circumference, as appears
SELEUSIA. 961

from the foundations of the walls. The latter were
from 10 to 11 feet thick, and consist of irregular
but very small stones. The northern and smaller
half of the city was separated by a wall from the
southern half, which was on lower ground.

From its position Selinna was always exposed to
the attacks of an invading army. On the first
invasion of Laconia by the Thebans in B.C. 369, Selin-
na was plundered and burnt (Xen. Hell. vi. 5.
§ 27); and because the inhabitants at that time,
together with several others of the Perioeci, went
over to the enemy, the town was again taken and
destroyed four years later by the Lacedaemonians
themselves, assisted by some auxiliaries sent by the
younger Dionysius. (Xen. Hell. vii. 4. § 12.) It
suffered the same fate a third time after the defeat
of Chremonides, as has been already related. It appears
have to been never rebuilt, and was in ruins in the
time of Passanias (iii. 10. § 7).

SELETTES (Σελήττες). 1. A river in Elis, mentioned
by Homer, upon which Ephrya stood.

[ΕΦΡΥΑ, No. 2.]

2. A river in Sieyomia, upon which Strabo also
places a town Ephrya. [ΕΦΡΥΑ, No. 3.]

SELETTAE (Plin. iv. 11. s. 18, init.), a people
of Thrace, whose country was called SELETTICA
(Σεληττική), Plt. iii. 11. § 8). It was north of the
Greek, between that range of mountains and the
Pannonia. [J. B.]

SELFITEC (SELETTICA).

SELLI or HELLI, an ancient tribe in Epeiros, in
whose country, called Hellepia, the oracle of Dodona
was situated. [Dodona, p. 782, a.]

SELLIUM (Σέλλιον, Plt. ii. 5. § 7), a place in
Lusitania, lying N. of Scalabis (Itin. Ant. p.
431). Identified with Cele or Secio. [T. H. D.]

SELLUS, according to Avienus (Ora Merid. 507)
a high mountain in Hispania Tarraconensis, on
which the city of Lebedionca once stood. Ubert
(ii. p. 1. p. 484) identifies it with C. Salom. [T. H. D.]

SELYMMBRIA (Σελυμμβρία, Herod. vi. 33; Σήλυμ-
βρία, Xen. Anab. vii. 2. § 15, &c.; Strab. viii. p. 319;
Plt. iii. 11. § 6; Σηλυμμβρία, Dem. de Rhod. lib.
p. 198, Reske), a Thracian town on the Propontis,
22 miles east from Perinthus, and 44 miles west
from Constantinople (Itin. Hier. p. 570, where it
is called Salambrembr), near the southern end of
the wall, built by Anastasius Dicorus for the protection
of his capital. (Procop. de Aed. iv. 9; see Scyl-
lae).

According to Strabo (i. c.), its name signi-
ifies "the town of Selys," from which it has been
inferred that Selys was the name of its founder, or
of the leader of the colony from Megara, which
-founded it at an earlier period than the establish-
ment of Byzantium, another colony of the same
Grecian state. (Sccmm. 714.) In honour of Eu-
doxia, the wife of the emperor Arcadius, its name
was changed to Eudoxiopolis (Herod. p. 632),
it which bore for a considerable time; but its modern
name, Siletii, shows that it subsequently resumed
its original designation.

Respecting the history of Selymbria, only detached
and fragmentary notices occur in the Greek writers.
In later times it was on lower ground (Mela, ii. 2.
§ 6; Plt. iv. 11. s. 18, xxix. 1. s. 1; in the
passage it is said to have been the birthplace of Pro-
dicus, a disciple of Hippocrates). It was here that
Xenophon met Medesoces, the envoy of Seuthes
(Anab. vii. 2. § 28), whose forces afterwards en-
camped in its neighbourhood (Ib. 5. § 15). When

ALIBLADIES was commanding for the Athenians
in the Propontis (n. c. 410), the people of Selymbria
refused to admit his army into the town, but gave
him money, probably in order to induce him to ab-
stain from forcing an entrance. (Xen. Hell. i. 1.
§ 21.) Some time later, he gained possession of
the place through the treachery of some of the townspeople, and, having levied a con-
tribution upon its inhabitants, left a garrison in it.
(II. 5. § 10; Plut. Alib. 30.) Selymbria is men-
tioned by Demostrhenes (L. c.) in n. c. 351, as in alli-
ance with the Athenians; and it was no doubt at
that time a member of the Byzantine confederacy.

According to a letter of Philip, quoted in the ora-
tion de Corona (p. 251, L.), it was blocked by him
about B. C. 343; but Professor Newman considers
that his mention of Selymbria is one of the numerous
proofs that the documents inserted in that speech
are not authentic. (Class. Mus. vol. i. pp. 153, 154.)

SELMACHIAE. [Attica, p. 330, b.]

SEMAVNA SILVA (Σεμαύνα or Σεμαυνος Σάν),
one of the mountain forests of ancient Germany,
the south of Mons Melibocus (Plt. ii. i. § 7), is
perhaps only a part of the Harz mountain or of the
Thuringer Wald. (Zeuxis, Die Deutschen, p. 8;
Wilhelm, Germanien, p. 38, &c.)

SEMANTHNI (Σεμανθνή, Plt. viii. 3. § 4), a pea-
people dwelling in the land of the Sinae E. of the
Semithni mountains, which derived their name
from them. [T. H. D.]

SEMANTHNI MONTES (το Σεμανθνην έσπορ, Plt.
vi. 2. § 8), a mountain chain in the country of
the Sinae (China), which, according to Ptolemy,
extended from the sources of the Asaphra in a NW.
direction as far as those of the Serus. It is proba-
bly the chain which separates the Chinese province
of Yunnan from the districts of Mien and Lu-
oshua. [T. H. D.]

SEMBRITAE (Σέμπριτα, Strab. xvi. pp. 770
—786; Sembritae, Plt. vii. 30. s. 33), a people
inhabiting the district of Tenezis in Athens, al-
though they seem to have been of Egyptian origin.
The first mention of the Sembritae occurs in Era-
tothene (ap. Strab. xvi. p. 786), who says that
they occupied an island above Meroe; that their
name implies "immigrants;" that they descended from
the Egyptian war-caste, who, in the reign of Psam-
mitrichus (n. c. 658), abandoned their native land;
and that they were governed by a queen, although
they were also dependent on the sovereignty of Meroe.
Artemidorus, also quoted by Strabo (xvi. p. 770),
says on the contrary, that they were the ruling
people in Meroe; these accounts, however, may be re-
conciled by the supposition that Eratothene and Arte-
midorus described them at different periods. If the
Sembritae were the Egyptian refugees, they were
also the Automobi (ΟΤΟΜΟΙ) noticed by Herodotus
(ii. 30). Pliny (i. c.) speaks of four islands of the
Sembritae, each containing one or more towns.
These were therefore not islands in the Nile, or in any
of its principal tributaries, the Astapus, or Astaboras,
but tracts between rivers, mesopotamian districts
like Meroe itself, which in the language of Nubia
are still denominated "islands." The last name of
the Sembritae was, according to Pliny, Sembria. It
stood on the left bank of the river, 20 days' jour-
ney above Meroe. Pliny names also, among other of
their principal towns, Sai in Arabia, — i. e. on the
right bank of the Nile, for he assumes that river as
the boundary between Lybia and Arabia, — Esar or

3 q
SEMIAMIDIS MONS.

Sape (Sobah), on the left bank, 17 days' journey above Meroë, and Daran again on the Arabian side.

Without being able to define the position of this tribe, or to state their relations to the Ethiopians of Meroë, we shall perhaps not err in placing them on the Blue Nile [Astapus], and in the neighbourhood of Axum. The geographers (Ileeran, &c.) who describe the Sembratae as dwelling near the White Nile, have forgotten both their vicinity to Arabia—i.e., the eastern portion of Meroë—and the character of the regions which the Astapus and Astabas repectively water. The White Nile flows through lagoons and marshes unsuitable for towns and permanent settlements; while the Blue Nile has always had on its banks a numerous population, dwelling in large villages and towns. Along the Blue Nile ran the principal highways of the trade of Egypt with Southern Aethiopia, while the White Nile led off to the uncivilised and scattered tribes of the Libyans. The Sembratae, if seated on the latter river, would probably have eluded observation altogether; whereas on the former they would be as well known to the caravans and their guides as any other of the Aethiopian races. Moreover, the mesopotamian districts suited to towns lie to the east of Aethiopia Proper, and would afford a secure retreat to the refugees from Egypt in search of a new habitation. (See Cooley's Claudius Ptolemy and the Nile, pp. 7—27.) The present Semna corresponds nearly with the territory of the Sembratae. [W.B.D.]

SEMIAMIDIS MONS (Σεμιαμιδίσ ὤρος), a remarkable circular mountain on the N. side of the Persian gulf, and the eastern limit of Caramania. It is noticed both by Arrian (Peripl. M. E. p. 20, ed. Hubs.) and by Mardian (Peripl. M. E. e. 37, ed. Müller, 1855), who states that it was opposite to Mt. Paslibo, in Arabia, and that these two mountains, with their promontories, form the straits at the entrance of the gulf of Persia. Ptolemy speaks of it, and states that it was also called Strongylus, probably from its ern (v. 8. § 11). Its modern name appears to be Elbourz. (Vincent, Voyage of Nearcas, i. p. 319—321.) [V.]

SEMNONES (Σμνόνες or Σμηνονες), or perhaps more correctly Semnones, are described as the most ancient and illustrious among the Suevi in the north of Germany. They dwelt between the Allus and Vialus, being situated on the west by the Meuse, on the south by the Silingi, on the east by the Marini and Burunciones, and on the north-west by the Longobardi. (Tac. Germ. 39; Prot. ii. 11. §§ 15, 17; Vell. Pat. ii. 106.) Their country accordingly extended from the hills of Langst in the south, as far as Potidenum in the north, and in it they formed 100 communities (pagi), which gave them such strength that they regarded themselves as the head of the Suevi. Their country contained an ancient forest (Semnones Silva),-hallowed by awful superstition and sacrificial rites; at stated seasons deputies from all the kindred tribes met in it, and conducted their proceedings with a human sacrifice. No one, moreover, was allowed to enter this forest except he who was bound in chains, a mark of humiliation in the presence of the god; and if any one stumbled he was not permitted to rise, but had to crawl along. As to the history of the Semnones, we learn from Tacitus (Ann. ii. 45) and Strabo (vii. p. 290) that in the time of Augustus they were united with the Marcomanni under Marobudus. In the Monumentum Aureum the Semnones, are mentioned among the German tribes which sought the friendship of the emperor and the Romans. They appear to have been governed by kings, one of whom bore the name of Maysus, and reigned in the time of Domitian. (Dion Cass. lxxxvii. 5, comp. lxxi. 20.) After the reign of M. Aurelius they are no longer mentioned in history, from which circumstance some have unnecessarily inferred that the Semnones were not a distinct tribe, but only a general name for several kindred tribes. As to the Silva Semnorum, it is generally supposed to have existed near Fluctuovode or Semnouwode, between the rivers Floter and Spree, where three large places have been discovered, which were evidently intended as a sort of altars. (Krusse, Deutsche Alterth. vol. ii. part 2, p. 132; Zenns, Die Deutschen, p. 130.) [L.S.]
SENA.

The river Sena, alluded to by Silvius Italicus and Lucan, must be the small stream now called the Nevola or Nigoda, which falls into the sea at St. Eugénie (L. Ital. viii. 453; Lucan, ii. 407.) [E. H. B.]

SENA (Saxa, Pol.: Ekh, Senensis: Sinai), a city of Etruria, sometimes called Sena Julia, to distinguish it from the city of the same name on the Adriatic. It was situated nearly in the heart of Etruria, about 28 miles E. of Volaterrae and 40 S. of Florentia. There is no reason whatever to suppose that there was an Etruscan city on the site, and no allusion to its existence occurs before the establishment of the Roman colony. Even the date of its foundation is uncertain, but it is probable from the epitaph of Julia that it was founded by either Caesar himself or by the Triumvirate in his honour. It is singular that its name is not found in the Liber Coloniarum; but its colonial rank is attested by Pliny, who calls it "colonia Senensis," as well as by Tacitus. (Plin. iii. 5. s; Tac. Hist. iv. 43.) It is subsequently mentioned by Ptolemy, as well as in the Tabula, which places it on a line of road from Florentia to Clusium. (Ptol. iii. 1. § 49; Tab. Peut.) But it seems never to have been a place of much importance in ancient times, and it was not till the middle ages that it rose to be one of the first cities of Tuscany. It has no remains of antiquity. (Dennis's Etruria, vol. ii. p. 135.) [E. H. B.]

SENA INNSULA, in Gallia. On this island, which was opposite to the coast of the Osismi, was an oracle of a Gallic goddess. Nine virgins named Galliceneae (Barrengenae, ed. I. Vossius) had the care of the oracle. They could raise storms by their verses, change themselves into beasts, heal diseases, and foretell the future, but they were only propitiations to women who came to consult them. (Mela, iii. 6.) This is the island of Seia, incorrectly called on the maps Île des Saints, which is at the entrance of the bay of Dourmanes, and separated from a point of land on the coast of Brittany (Pointe Roz) by a narrow channel. D'Anville supposes that this may be the island which Strabo places opposite the mouth of the Loire. This island was inhabited only by women who were possessed by Dionysus. They allowed no man to enter their island; but so far from keeping their virginity, they used to visit the men on the mainland. These two stories are very different. Strabo names his island that of the Namnites, as Gesskurd (Strabo Transl.), but the name is Namnites in the common texts of Strabo. This seems to be the same island that Dionysius speaks of (Perig. 571) as being visited by the women of the Amnites for the purpose of performing the rites of Baccus. D'Anville further thinks that Pliny (iv. 16) may be speaking of Sena when he mentions after the islands which are near to Britain, Sibamis, or Amnis, as some MSS. have it, and Aixantes, which is evidently Uxantis or Ourant. Sina, as the Maritime Itin. names it, is mentioned there with Uxantis. [G. L.]

SEXIA (Saxia, Pol.: Ekh, Senensis: Sinai), a Roman colony on the coast of Liburnia ("Colonia Senesia," Tac. H. iv. 45), and on the road from Aquileia to Sicia. (Itin. Ant. p. 273.) It had a harbour. (Comp. Plin. iii. 21. s. 25; Geog. Rav. iv. 31; Tab. Peut.) Variously identified with Zeng or Sena. [T. H. D.]

SENOMAGUS, in Gallia Narbonensis, is mentioned in the Table, and placed north of Avenio (Aquinum), on a road along the side of the Rhone. Some geographers guess that it may be near the Pont St. Esprit. [G. L.]

SENOIDES (Σίωνες, Σίωνες, Steph. B. s. v.). Polybius (ii. 17) mentions the Italian Seneses, Σίωνες. The Roman poets make the peninsula short:—

"Ut Bracchorum quiet Senonumque minores." (Juv. viii. 234.)

An absurd explanation of the name is quoted by Festus (s. v. Senesones) and by Servius (ad Aen. viii. 656). The Seneses were one of the great Celtic nations who bordered on the Belgae. (Caes. B. G. ii. 2.) They were north-west of the Aedui and bordered on them. Their capital was Agedincum (Sena), on the right bank of the Loire, which is a branch of the Seine. (Ptol. ii. 8. § 12.) The Seneses are in the Lugubriones of Petronius and Pliny. But Agedincum there were in the country of the Seneses, Antissiodorum (Aurerre) and Melodunum (Melun) on the Seine not far from Paris, which shows that their territory extended from the neighbourhood of Paris along the Seine and along the Yonne to the borders of the small nation of the Mandubii (Mandubici), whose town was Alexia, and to the borders of the Lingones. The railroad from Paris to Dijon, which passes near Melun, Fontainebleau, Sena, Joigny, St. Florentin, Tomerre on the Armançon, a branch of the Yonne, runs through the country of the Seneses. Between St. Florentin and Flagny, which is about half-way between St. Florentin and Tomerre, extends a vast plain, level as the sea, fertile, and in summer covered with wheat. A large part of the territory of the Seneses is a fertile country. In seems to have comprehended the dioceses of Sena and Aurerre. Besides Melodunum and Agedincum, Caesar mentions Veliamundum as a town of the Seneses (vii. 11), on the side towards the Carnutes. The Seneses were at first well disposed to Caesar (B. G. ii. 2), probably through fear of their neighbours, the Belgae and the German people north of the Marne. Caesar had given them Cavarinus for a king, but the Seneses expelled him (v. 54); and when the Roman proconsul ordered the senate of the Seneses to come to him, they refused. In the spring of b. c. 53 Caesar summoned the states of Gallia to a meeting, but the Seneses, Carnutes, and Treviri would not come (vi. 3), upon which he transferred the meeting of the states to Lutetia Parisiurum. He says that the Parisi bordered on the Seneses, and "within the memory of their fathers they had united their state with that of the Seneses;" but he does not explain the nature of this union. He marched from Lutetia (Paris) into the country of the Seneses, which presents no difficulties for an army. The Seneses yielded in spite of Acco, who was the leader in the revolt; and Caesar took with him Cavarinus and the cavalry of the Seneses, in which force it is probable that they were strong, as their country is well adapted for grazing and corn. At the close of the year Caesar whipped Acco to death, and quartered six of his legions at Sena for the winter (vi. 44). In b. c. 52 the Seneses sent 12,000 men with the rest of the Gallic forces to attack Caesar before Alexia (vii. 75). The Seneses seem to have given Caesar no more trouble; but in b. c. 51 Drappes, a Senon, at the head of a number of de-para men, was threatening the Provence. Drappes was caught and starved himself to death. (B. G. viii. 30, 44.) [G. L.]

SENOIDES (Σίωνες), a nation of Gaulish origin, which was settled in Italy, on the coast of the Adriatic, extending from the river Aesis (Eaion), 3 4 2
SEPTIACI. [Liv. v. 35.] The history of their migration from Transalpine Gaul, their settlement in Italy, and their wars with the Romans, which ended in the extermination of the whole nation, are fully related under the article GALLIA CIRCALPINA (pp. 936—938). After the conquest of the Senones, and their expulsion from their lands on the Adriatic, two colonies were founded in their territory, the one at Sena, the other at Ariminum: and at a later period the remainder of their lands was partitioned out among the Roman citizens by an agrarian law of the Flaminian C. Flaminius. This district, which still retained the name of "the Gallicus ager," was afterwards considered as a part of Umbria, and included for all administrative purposes under that appellation. Its topography will therefore be most conveniently given in the article UMBRIA. [E. H. B.]

SEVENTIC (SEVENTIC, Ptol. ii. 6. § 50), a town of the Vaccae in Hispamica Tarraconensis, variously identified with Los Santos, Zamora, Calzadilla de Maudiles, and Zarzosa. [T. H. D.]

SEVENTIDES (SEVENTES, Ptol. iv. 5. § 21), a people in the S. of Marmarica. [T. H. D.]

SENYC (SENYC), a people of Galia Narbonensis (Ptol. ii. 10. § 19), whose town Polytropes names Dinya, which is Digna. [DINNA.] [G. L.]

SENIUM (SENIO: ETh. SENATWY, SENIUS-αis: Sentino), a city of Umbria, on the E. slope of the Apennines, but near the central ridge of these mountains, and not far from the sources of the Assis (Esino). It is celebrated in history as the scene of a great battle fought in the Third Samnite War, n. c. 292, when the allied forces of the Samnites and Gauls were defeated by the Roman consul Q. Fabius. Gensius Egnatius, the Samnite general, was slain in the battle, while the Roman consul P. Decius followed the example of his father, and devoted himself for the safety of the Roman army. (Liv. x. 27—30; Pol. ii. 19.) The scene of this decisive victory, one of the most memorable in the Roman annals, is placed by Livy "in Sentinatia agris" but we have no more precise clue to its position, nor do the details of the battle give us any assistance. Sentinum itself seems to have been a strong town, as in the Persian War it was besieged by Octavian himself without success; though it was afterwards taken by surprise by his lieutenant, Salviodines Rufus, by whom it was plundered and burnt to the ground. (Dion Cass. xiv. 35.) Forsyth gives the name "Silinum" to a body of colonists, under the Trimvirate (Lib. Col. p. 258), but did not obtain the title of a colony, and continued under the Roman Empire to be a town of municipal rank. (Plin. iii. 14. s. 19; Strab. v. p. 227; Ptol. iii. 1. § 53; Orell. Inscrip. 3861. 4949.) Its site is marked by the village still called Sentino, on the river of the same name (a small stream falling into the Esino), a few miles below the modern town of Sassu Ferrato. [E. H. B.]

SOUCHES OR SIAOES, Ptol. vii. 3. § 2), a river in the land of Sinia (China) which ran into the Sinus Magnus between the South-horn Cape (Neron Koa), S. of Ambastus, and Balnea. Probably the modern Saigon or Saung. (Comp. Forsyth, Geoq. ii. p. 478.) [T. H. D.]

SOUTH, Ptol. ii. 2. § 4), a river on the W. coast of Hispamica Tarraconensis (Ptol. iv. 4081), identified with Murviana, or Onda, Castillos de la Plana. [T. H. D.]

SEPPHORIS. [PHENIC, p. 595, a.] SEPPIAS (Σηππιας), a promontory of Magnesia, opposite the island of Scarrhae, and forming the SE. extremity of Thessaly. It is now called C. St. George. It is celebrated in mythology as the spot where Peleus laid in wait for Thetis, and from whence he carried off the goddess (Enriq. Androm. 1266), and in history as the scene of the great shipwreck of the fleet of Xerxes. (Herod. vii. 113, 165; Strab. ix. p. 443; Apoll. Rhod. I. 580; Ptol. iii. 13. § 16; Plin. iv. 9. s. 16; Mela, ii. 3;[Lake, Northern Greece. vol. iv. p. 382.]—SEPTENTRIAL MICA (Σηππιας Παράδεις, Ptol. ii. 6. § 50), a town of the Vaccae in Hispamica Tarraconensis lying to the W. of Lactobriga (or the modern Lobera). [T. H. D.]

SEPPHORIS (Σηππορίς, al. Σηπφορίς: ETh. Σηπφωρίτης), a town of Upper Galilee, not mentioned under this name in Scripture, but frequently by Josephus. It was garrisoned by Antigonus, in his war with Herod the Great, until the latter took it, early in his Galilean campaign (Ant. xiv. 13. § 4). It seems to have been a place of arms, and to have been occasionally the royal residence. for in the troubles which arose in the country during the residence of Varsus, the robbers-chief Judas, son of Ezekias, seized the palace of Sepphoritis, and carried off the arms and treasure which it contained (xvii. 12. § 5). It was subsequently taken and burned by Varus (§ 9). Herod the tetrarch (Antipas) afterwards rebuilt and fortified it, and made it the glory of all Galilee, and gave it independence (xvii. 2. § 1); although, according to the statement of Justus the son of Pius, he still maintained the superiority of his newly founded city Tiberias; and it was not until Nero had assigned Tiberias to Agrippa the Younger that Sepphoris established its supremacy, and became the royal residence and depository of the archives. It is termed the strongest city of Galilee, and was early taken by Galilius, the general of Cestius. (B. J. ii. 18. § 11.) It maintained its allegiance to the Romans after the general revolt of Galilius (B. J. iii. 2. § 4. 4. § 1), but did not break with the Jewish leaders. (Vita, 8. 9.) Its early importance as a Jewish town, attested by the fact that it was one of the five cities in which its district sambularchs were instituted by Gabinus (B. J. i. 8. § 5), was further confirmed by the destruction of Jerusalem, after which catastrophe it became the residence of the Commandар, until it was transferred to Tiberias. (Robinson. Bibl. Res. vol. iii. p. 202.) It was subsequently called Dioscoraea, which is its more common appellation in the ecclesiastical annals; while Ephiphanus and S. Jerome recognise both names. A revolt of the Jewish inhabitants, in the reign of Constantius (A. D. 339), led to the destruction of the city by Constantius Gallus Caesar. (Socrates, H. E. ii. 33; Sozomen, H. F. iv. 7.) This town, once the most considerable city of Galilee, was situated according to S. Jerome 10 miles west of Mount Tabor. (Thomars. i. c. Ossian; Precopius Gauzeus, Comment. in Lib. Judicium.) It was much celebrated in the history of the Crusaders, for its fountain—a favourite camping place of the Christians. It is still represented by a small village bearing the name Sepherieh, distant about 5 miles to the north of Nazareth, retaining no vestiges of its former greatness, but conspicuous by a ruinous tower and church, both of the middle ages; the latter professing to mark the site of the birthplace.
of the Virgin Mary, assigned by a late tradition to this locality. It became the see of a suffragan bishop, under the metropolitan of Scythopolis (Le Quien, Oriens Christianus, vol. iii. pp. 713, 714), and there are coins still extant of the reigns of Domitian, Trajan, &c. (Reland, Palestine, pp. 199—1003; Echkel, Doct. Vet. Num. vol. iii. p. 425, 426.)

SEPTEM AQUAE. [Beate.]

SEPTEM ARAE, a place in Lusatia (Itin. Ant. pp. 419, 420). Variously identified with Ccele- se and Aroches. [T.I.H.D.]

SEPTEM FRATRES (Ἐυσκέδασις ἄδεων, Ptol. iv. 1. § 5), a group of mountains in the northernmost part of Mauritania Tingitana, connected by a tongue of land with the promontory of Abyla (now Ximiera near Ceuta), and thus on the narrowest part of the Fretum Gaditanum (Plin. v. 1. s. 1; Solin. c. 28; Strab. xvii. p. 827.) One of these mountains, now called the Apo Mountains (Grabarg Von Hemsö, Empire of Morocco, Germ. Tr. p. 24), bore, according to Strabo (i. c.) the name of the Elephant (Elephas), probably from the number of elephants which were to be found there. (Plin. l. c.; Mart. Cap. vi. p. 216.) The Geogr. Rav. (iii. 11) also mentions in this neighbourhood a town called Septem Fratres, which is perhaps the same place mentioned in the Itin. Ant. (p. 9) as a station between Tingis and Abyla. Procopius also (B. Vandal. i. 1; comp. ii. 5, and de Aed. vi. 7) mentions here a castle or fortress called Σίντρος, and Isidore (Orig. xv. 1) a castle and town called Septa, perhaps the modern Cesta. (Comp. Melc, i. 5, § 5, et ibi Tacuque.) [T. H. D.]

SEPTEM MARIA (Σεπτή πελάγους), was the name commonly given to the extensive lagoons at the mouth of the Padus, and the adjoining rivers, and which extend along a considerable part of the shores of the Adriatic from the mouths of the Padus to Altinum. Pliny indeed seems to use the term in a more restricted sense, as he speaks of "Attria maria paludosa, quae Septem Maria appellantur" (iii. 16. s. 20); but the Itinerary distinctly applies the name to the whole extent of the lagoons from Ravenna to Altinum (Itin. Ant. p. 126); and Hero- dian, who notices them particularly (vii. 7), clearly uses the term in the same sense. [E. H. B.]

SEPTEM PAGI (Σεπτή Πόρφυρα) was the name given to a district close to Rome, but on the right bank of the Tiber, which according to tradition had originally formed part of the territory of the Veientes, but was ceded by them to the Romans as early as the reign of Romulus. (Dionys. i. 55; Pnt. Rom. 25.) According to the authorities followed by Dionysius it was again surrendered to the Etruscans by the treaty concluded with Porsena, but was shortly after restored by that monarch to the Romans. (Dionys. v. 91, 96.) Livy mentions the same circumstances, but without giving the name of the district. (Liv. ii. 13. 15.) It is evident, however, that this was a well-known appellation, but we are unable to fix its boundaries more definitely. [E. H. B.]

SEPTEMPEDAE (Σεπτεπέδαια, Strab. Ptol. i. 8.) Septempedanum (San Severino), a town of Picenum, in the upper valley of the Potentia, 9 miles above Treia. It is mentioned by all the geographers, and the "aeg Septempedanum" is noticed in the Liber Florianarum, (Vlin. iii. 13. s. 18; Strab. v. 241; Ptol. iii. i. § 52; Lib. Col. p. 238.) Pliny assigns it the rank of a municipal town, and this is confirmed by inscriptions, one of which is of the age of Aurelian.

(Orcl. Inscr. 1026; Gruter, Inscr. p. 308. 3.) It is placed by the Itinerary of Antoninus on that branch of the Flaminian Way which, quitting the main high road at Nuceria, crossed the Apennines to Furoequem and thence descended the valley of the Potentia by Septempeda and Treia to Auxumum and Ancona. (Itin. Ant. p. 312.) It early became an episcopal see, and derives its modern name of San Severino from one of its bishops who flourished in the middle ages. It still retains its rank as an episcopal city, and is the capital of the surrounding city, though it has not more than 3000 inhabitants. (Rampoldi, Dizion. Corogr. vol. iii. p. 837.) [E. H. B.]

SEPULCHRUM EURIPIDIS (Ann. Marc. xxvii. 4. § 8; comp. Gall. xv. 20; Piat, Lycurg. 36; Vitruv. viii. 3; Plin. xxxi. 19; Itin. Hierosol.), the remarkable monument erected to Euripides in Macedonia, at the narrow gorge of Aulon or Are- thusa (Besikia or Ramidi Bighazi), where the mountains close upon the road. The ancient monument (Vitruvius, l. c.; Plin. l. c.) placed it at the confluence of two streams, of which the water of one was poisonous, the other so sweet and health-giving that travellers were wont to halt and take their meals by its currents. In the Jerusalem Itinerary, a document as late as the 13th century, it occurs as a station between Pennana and Apollonia. (Comp. Clarke's Travels, vol. viii. pp. 9—13.)

SEQUANA. 965

SEPULCHRUM EURIPIDIS (Ann. Marc. xxvii. 4. § 8; comp. Gall. xv. 20; Piat, Lycurg. 36; Vitruv. viii. 3; Plin. xxxi. 19; Itin. Hierosol.), the remarkable monument erected to Euripides in Macedonia, at the narrow gorge of Aulon or Arethusa (Besikia or Ramidi Bighazi), where the mountains close upon the road. The ancient monument (Vitruvius, l. c.; Plin. l. c.) placed it at the confluence of two streams, of which the water of one was poisonous, the other so sweet and health-giving that travellers were wont to halt and take their meals by its currents. In the Jerusalem Itinerary, a document as late as the 13th century, it occurs as a station between Pennana and Apollonia. (Comp. Clarke's Travels, vol. viii. pp. 9—13.)

SEQUANA (Σεπούδρας, Σεπούδρας, Ptol. ii. 8. § 2), the Seine, one of the large rivers of Gallia. The Seine rises in the highlands south of Langres, but in the department of Côte d'Or, and flows in a northerly direction past Châlons-sur-Seine, Troyes, Melun, Paris, Mantes, Elbeuf, Rouen, and Le Havre. It enters the Atlantic below Le Havre. The course of the Seine is about 470 miles, and the area of its basin is about 26,000 English square miles, which is only one half of the area of the basin of the Loire. The chief branches of the Seine which join it on the right bank are the Arne, the Marne, and the Oise; on the left bank, the Yonne, the Loing, and the Eure. None of the hills which bound the basin of the Seine, or are contained within it, have a great elevation, and a large part of the country included within this basin is level.

Cæsar (B. G. i. 1) makes the Sequana and the Matrona (Marne) the boundary between the Celtae and the Belgæ. Strabo (iv. p. 192) says that the Sequana rises in the Alps, a statement which we must not altogether impute to an erroneous notion of the position of the river's source, though his knowledge of Gallia was in many respects inaccurate, but to the fact that he extended the name of Alps far beyond the proper limits of those mountains. But his inaccuracy is proved by his saying that the Sequana flows parallel to the Rhine, and through the country of the Sequani. He is more correct in fixing its outlet in the country of the Calati and the Lexovi. The Seine was navigated in the time of Strabo and much earlier. (Galilia Transalpina, Vol. i.)

The Matrona, as Ausonius names it (Mosella, v. 462),—

"Matrona non Galles Bolgaseque interita fines,"—

joins the Seine a few miles above Paris; it is the largest of the affluent of the Seine.

Ammiannus Marcellinus (xvi. 11) says that the
SEQUANI.

Caesar fixes the position of the Sequani. Their territory extended to the Rhine. (B. G. i. 1.) The Jura separated them on the east from the Helvetii; and the narrow pass between the Jura and the Rhine at Fort L'Écluse was in the possession of the Sequani (B. G. i. 6, 8). The southern boundary of their territory from Fort L'Écluse was the Rhône; but they did not possess all the country in the angle between the Rhône and the Saône, for part of it was held by the Allobroges (B. G. i. 12), and part by the Sequani (B. G. i. 10) and by the Amburri, who were dependent on the Aedui (B. G. i. 11). When Caesar describes the march of the Helvetii from Fort L'Écluse to the Saône, he says that the Helvetii first passed through the territory of the Sequani, and then entered the territory of the Aedui, which they plundered. But they had not yet reached the Saône, as Caesar's narrative shows, and it is clear from this passage (B. G. i. 11) and those already cited, that a large tract of country between the Rhône and Saône did not belong to the Sequani, for the line of march of the Helvetii from Fort L'Écluse to the Saône would probably bring them to the Saône at a point not much lower down than Mâcon. The western boundary of the Sequani was the Arar, also called the Saôna, a name which appears to be the same as the name of the Sequani. Their neighbours on the west side of the Saône were the Aedui, with whom the Sequani had disputes about the river tolls (Strabo, iv. p. 192). On the north of their neighbour were the Luelli and Lingones. Strabo (iv. p. 186) describes the Arar and Dubus (Dubova) as flowing through the country of the Sequani. D'Anville has an argument to show that the part of the dioceses of Chalon-sur-Saône and Mâcon which is east of the Saône belonged to the old territory of the Sequani, which may be true; but the towns Matisco (Mâcon) and Cabillonum (Chalon) were on the west side of the Saône and in the territory of the Aedui (B. G. iii. 10). In another passage besides that already referred to, Caesar shows that the Sequani extended to the Rhine, for in describing the course of this river from south to north, he says that it passes by the territory of the Helvetii, Sequani, Mediomatrici and Trisicoci. (B. G. iv. 16.)

The Sequani belonged to the division of Belgica under the Empire (Pline. iv. 17; Ptol. ii. 9, § 21). The territory of the Sequani contained much good land, some of the best in Gallia. Their chief town was Veisserat (Vesunam) on the Doux, and they had other towns also. They fed hogs, and their hams and bacon were exported to Rome as Strabo (iv. p. 192) says; and Varro (de R.R. ii. 4) may mean to say the same, when he speaks of Gallic bacon. The Sequani had kings, sometimes at least, for Gallic kings were not perennial. (B. G. i. 3.) Before Caesar went into Gallia, the Arverni and Aedui had been the two most powerful peoples. The Sequani were in league with the Arverni, who occupied the centre of all Gallia, but hostile to their neighbours the Aedui. To maintain themselves against the Aedui, the Arverni and Sequani hired Germans to come over the Rhine. The Germans came in great numbers, and in Caesar's time it was computed that there were 120,000 of them in Gallia. This is the first historical notice of a permanent settlement of Germans in these parts. The Sequani with the assistance of their allies defeated and humbled the Aedui, but they gained nothing by this victory. Ariovistus, the king of these German mercenaries, took from the Sequani a third part of their lands, and was threatening to take a second third, when Caesar drove the Germans into the Rhine, after defeating them near that river. If the Germans were not driven away or driven over from the territory of the Sequani by Caesar, they came again, for the country on the west bank of the Rhine, which belonged to the Sequani, the Upper Alsace, has been German for many centuries. In n. c. 52, the Sequani were among the nations who sent their contingent to attack Caesar beforelesia. [G. L.]

SERBICA.

The capital of the country of Serica, and one of the chief commercial towns of the Serees. It is the remotest point of Eastern Asia with which the ancients had any commerce, or of which they possessed any knowledge. It was situated on the mountain Uttorcorras at the eastern source of the Bantius. Mannert (iv. p. 501) identifies it either with Siquan in the province of Scenaea, or with Roman in the Hoang-ho; but according to Heeren (Idea, i. 2. 665) it is Pekin itself. [T. H. D.]

SERACA (Serpæa, Ptol. v. 9, § 28), a town in the S. of Asiatique Sarmatia. [T. H. D.]

SERANUSA, perhaps more correctly Sermona, a town of the interior of Pontus Polemoniacus, on the south-east of Comana Pontica. (Tab. Pent. Ptol. v. 6, § 9, where it is written Sermwara or Sermonyes.) [L. S.]

SERAIPHUM (Hist. Anton. p. 170; Serapion, Tab. Pent.), a large village seated near the junction of the canal of the Potelemeces with the Bitter Lakes, east of the Delta. Serajum was 18 miles distant from Hermopolis and 50 from Clymena, at the top of the Sinus Herculaneus. Its temple of Serapis, and its position on the canal that connected the Nile with the Red Sea, rendered it a place of considerable traffic. It was probably founded, or at least enlarged, by the Ptolemies after Ptolemy Philopator (n. c. 274) had extended the canal to the Bitter Lakes. [W. B. D.]

SERBES (Sireptots eikikai, Ptol. iv. 2, § 7), a small river on the N. coast of Mauritania, which fell into the sea to the W. of Rusaucorum; either the present Masafran, or, more probably, the Isser. [T. H. D.]

SERBI or SIRBI (Sirebou or Sirebou, Ptol. v. 9, § 21), a people in Asiatique Sarmatia, according to Ptolemy (l. c.) between the Cenomanian mountains and the river Ila, above the Didiari and below the Vali. Pliny, however (vi. 7. 7), places them on the E. shore of the Moeotis, between the Vali and the Arrocchi. (Comp. Schaffarick, Slav. Alterth. i. p. 165.) [T. H. D.]

SEROBONIS LACUS. [Sirobon Lacus.]

SERDICA or SAR'DICA (Serdiec, Ptol. iii. 11, § 12) (the first of these forms is the more usual with the Romans, the latter with the Greeks), a considerable town of Upper Moesia, which in earlier times was regarded as belonging to Thrace (Ptol. loc.), but which in the third century was attributed
to Dacia Interior, and made its capital. (Theodoret, Hist. Eccl. ii. 4.) It lay in a fruitful plain, at the spot where the sources of the Orcus united, and on the high-road from Nauissus to Philadelphia, between Medlea and Ragonacra. (Hist. vi. p. 135; Hist. Hierosol. p. 567.) From the time of Aurelian it bore on its coins the surname of Ulpia; probably because, when Dacia was relinquished, the name of that Dacian town was transferred to it, and its inhabitants, perhaps, located there. The emperor Maximian was born in its neighbourhood. (Entrop. ix. 14. 22.) It was destroyed by Attila (Procus, de Legat. p. 49), but shortly afterwards restored. In the middle ages it occurs under the name of Triadita (Teodorico,Chron. Chron. Ann. Ist. Angellii, iii. p. 24; Aposp. Geogr. in Hudson, iv. 45), which was perhaps its original Thracian appellation, which is still retained in the dialect of the inhabitants. (See Wesseling, ad Hist. Ant. l. c.) Its extensive ruins lie to the S. of Sophia. (Comp. Procop. de Aed. iv. 1 p. 267, 4 p. 282; Hieroc. p. 654; Amm. Mar. xxxi. 16; Gruter, Inscrip. p. 540. 2; Orelli, nos. 33-48, 5013.) The Geogr. Rav. (iv. 7) incorrectly writes the name Serica, since it was derived from the Thracian tribe of the Sceri. It is called by Athanasius (Apol. contra Arianos, p. 154) Σέριαν pomina. (probably the name Seraena, T. H. D.) SERENA, a town in Lower Pannonia on the south bank of the Dunabe, on the road from Petrovium to Murra. (It. Hierosol. p. 562; Geogr. Rav. iv. 19, where it is called Serenius; Tab. Ptol. where its name is Serena.) It is thought to have occupied the site of the modern Moslavina. [L. S.]

SEB. [Serica.]

SEBETUM (Σεβητος, Dion Cass. vii. 12), a fortified town of Dalmatia, which with Rhaetum was captured by Germanicus in the campaign of A.D. 7. [E. B. J.]

SEGUNITIA (Σεγουντια, Strab. iii. p. 162), a small town of the Armeni on the Danube, in Hispania Tarraconensis. Ufert (ii. pt. i. p. 455) takes it to have been the Σαγουντα of Stephans B. (s. v.) [T. H. D.]

SEBIA (Σεβια, Ptol. ii. 4. § 12), a town of the Tarxetanes in Hispania Baetica, with the surname of Fama Julia. (Ptol. iii. i. 3 s.) It lay E. of the mouth of the Anas, and N. of Baetis. [T. H. D.]

SERIA, a city of Syria mentioned in the Itinerary of Antoninus as xvii. M. P. distant from Andraea, which was xxvii. M. P. from Calcis, ccxxxviii. M. P. from Dolicha, now Doliche. (Hist. Ant. p. 194, 195.) Mannert thinks that it corresponds in situation with the Chalybon (Χαλυβως) of Ptolemy (v. 15. § 17), which gave its name to a district of Syria Chalybonitis. It is certainly identical with the modern Siria, 2 long days SE. of Aleppo, in the desert, the ruins of which were discovered and described by Pietro della Valle. (Mannert, Geographie, part vi. vol. i. p. 411.) [G. W.]

SETERICA (Σετερικα, Ptol. vii. 16. §§ 1, 3 4, 6, vii. 2 § 1, 3 § 5 1, viii. 24 § 1, 3, 5, 27 § 2, &c.), a tract of country in the E. part of Asia, inhabited by the people called Seres. According to the description of Ptolemy, it was bounded on the W. by Sycamoraca Ismene, on the NE. by an unknown land, on the E. by Sinae, and on the S. by India. Pliny on the contrary (vi. 13. s. 15) seems to extend it on the E. as far as the coast of Asia, as he mentions an Oceana Sericus, and in another place (Ib. 17. s. 20) speaks of a promontory by. Modern opinions vary respecting its site; but the best geographers, as Rennell, D'Anville, and Heeren, concur in placing it at the NW. angle of the present empire of China. (See Yates, Text. Antiqu. p. 292, note.) The Seres were a people of Asia as a country, it is not until after the first century of our era, though there are earlier accounts of the people called Seres. It seems highly improbable, however, that they were known to Hecataeus, and the passage on which that assumption is founded occurs only in one MS. of Photius. They are first mentioned by Ctesias (p. 571, n. 22, ed. Bähr) ; but according to Mela (iii. 7) they were in his time known to all the world by means of their commerce. On the northern borders of their territories were the more eastern skirts of the mountains Anissi and Auzacc (the Altacus) which stretched from Scythia. In the interior of the country were the Montes Asmirei, the western part of the Ine-Urru chain; and towards the southern borders the Casii Montes (now Kharan, in the desert of Gobi), together with a southern branch called Thagurus, which trended towards the river Bautius (Hoang-ho.) On the farther side of that river lay the Otorocorras, the most eastern branch of the Eunoii mountains, called by Ptolemy (vi. 16. § 5) τα Σινανδ Σισ. Among the rivers of the country, the same author (Ib. § 4) names, in its northern part, the Oechhardes (the Scylence), and, in the S., the Bante or Bautius (Hoang-ho.), which flowed towards the land of Sinas. Pliny, however (i. c.), mentions several other rivers, which seem to have been coast ones, as the Patarae, Cambiari, Lamos, and Arianos, as well as the promontory of Chryso and the bay of Cyrrhna. Serica enjoyed a serene and excellent climate, and possessed an abundance of cattle, trees, and fruits of all kinds (Amm. Mar. xxxii. 6. § 64; Plin. l. c.). Its chief product, however, was silk, which with the inhabitants carried on a very profitable and most extensive commerce (Strab. v. p. 668; Arist. Hist. Nat. v. 19. Virg. Geor. ii. 121; Plin. and Amm. Ill. ec. &c.). Pliny records (xi. 22. s. 26), that a Greek woman of Cos, named Pampilia, first invented the expedient of splitting these substantial silk stuffs, and of manufacturing those very fine and veil-like dresses which became so celebrated under the name of Coae vestes. Both Serica and its inhabitants are thought to have derived their name from their staple product, since, as we learn from Hesychius (s. v. Σεβητος), the insect, from the web of which the brilliant stuff called holoseron was prepared, was named Ser (Σεβητος). (Comp. Klaproth, Sur les Noms de la Chine dans le Mem. rel. l'Asie, iii. p. 264; and Tableaux Hist. de l'Asie, pp. 57 and 68.) It has been doubted, however, from the apparent improbability that any people should call themselves Seres, or silkworms, whether the name of Seres was ever really borne by any nation; and it has been conjectured that it was merely a mercantile appellation by which the natives of the silk district were known. (Latham, in Class. Mus. vol. iii. p. 43, seq.) Lassen (Ind. Ant. l. i. 321) has produced from the Mahabharata, ii. 50, as the real names of the Seres, those of Caka, Tukhara, and Kanka, who are represented as bringing just the same goods to market as are ascribed by Pliny (xxxxiv. 14. s. 41) to the Seres, namely, wool, skins, and silk. Yet, though it may be allowed to be improbable that a people should have called themselves "Silkworms," yet it seems hardly less so that such an appellation should have been given them by foreigners, and that they should have been known by it and no other for a

3 q 4
period of several centuries. On the other hand, may it not be possible that the product was called after the people, instead of the people after the product? We are not without examples of an analogous procedure; as, for instance, the name of the phasis, or pleasant, from the river Phasis; of our own word currants, anciently and properly Corinthia, from the place whence that small species of grape was originally brought, &c. However this may be, we may refer the reader who is desirous of a further account of the origin and manufacture of silk, to an excellent dissertation in the Teuetron Antiqaurum, of Mr. Yates (part i. p. 160, seq.), where he will find all the passages in ancient authors that bear upon the subject carefully collected and discussed.

Besides its staple article, Serica also produced a vast quantity of precious stones of every kind (Expos. tot. Munditi, ap. Hudson. iii. p. 1, seq.), as well as iron, which was esteemed of a better quality even than the Parthian (Phin. l. c.) and skins (Per. M. Erythr. p. 22; Amm. l. c.)

According to Pausanias (vi. 22. § 2) the Seres were a mixture of Scythians and Indians. They are mentioned by Strabo (xv. p. 761), but only in a cursory manner. A great part appears to be Mela (iii. 7) and from Pliny (vi. 17. s. 24), compared with Eustathins (ad Dionys. Per. v. 753, seq.), and Ammianus Marcellinus (l. c.), that they were a just and gentle people, loving tranquillity and comfort. Although addicted to commerce, they were completely isolated from the rest of the world, and carefully avoided all intercourse with strangers. From these habits, they were obliged to carry on their commercial transactions in a very singular manner. They inscribed the prices of their goods upon the bales in which they were packed, and then deposited them in a solitary building called the Stonae Tower; perhaps the same place mentioned by Ptolemy (vi. 15. § 3) under the name of Hormetorion, situated in a valley on the upper course of the Jaxartes, and in the Scythian district of Casian. The Scythian merchants then approached, and having deposited what they deemed a just price for the goods, retired. After their departure, the Seres examined the sum deposited, and if they thought it sufficient took it away, leaving the goods; but if not enough was found, they removed the latter instead of the money. In the description of this mode of traffic we still recognize the characteristics of the modern Chinese.

The Parthians also traded with the Seres, and it was probably through the former that the Romans at a later period procured most of their silk stuffs; though the Parthians passed them off as Assyrian goods, which seems to have been believed by the Romans (Phin. xii. 22. s. 25). After the overthrow of the Parthian empire by the Persians, the silk trade naturally fell into the hands of the latter. (Vopisc. Arcul. c. 45; Procop. B. Pers. i. 20, &c.) With regard to their persons, the Seres are described as being of unusual size, with blue eyes, red hair, and a rough voice (Phin. vi. 22. s. 24), almost totally unacquainted with diseases and bodily impiutities (Expos. tot. Munditi, l. c.), and consequently reaching a very great age (Ctes. l. c.; Strab. x. p. 701; Lucian, Macrob. 5). They were armed with bows and arrows (Hor. Od. i. 29, 9; Charic. exorn. v. 3). Ptolemy (ll. cc.) enumerates several distinct tribes of them, as the Anulid, in the extreme X., on the mountains named after them; the Ziyyges, between them and the Auhaxian mountains; the Damnaes, to the S. of these; and still further S., down to the river Oechardes, the Pindae; the Oechardes, who dwelt about the river of the same name; and the Garenei and Nubaneae, to the E. of the Amnib. To the S. of these again was the district of Assiranea, near the mountains of the same name, and still further in the same direction the Issedones; to the E. of whom were the Throani. To the S. of the Issedones were the Asparacae, and S. of the Throani the Elagaburi. Lastly, on the extreme southern borders were seated the Balse and the Otracorenses,—the latter, who must doubtless be the same people called by Ptolemy Attacori, on the like-named mountain. To the southern district must also be ascribed the Sosati mentioned in Arrian's Perip. M. Erythr. (p. 37), small men with broad foreheads and flat noses, and, from the description of them, evidently a Mongol race. They migrated yearly with their wives and children to the borders of Sinae, in order to celebrate their festivals there; and when they had returned to the interior of their country, the reeds which they left behind them, and which had served them for straw, were carefully gathered up by the Sinae, in order to prepare from it the Malathron, a species of ointment which they sold in India. (Comp. Ritter, Erdkunde, ii. p. 179, v. p. 443, 2nd ed.; Bohlen, dte Alte Indien, ii. p. 173; Heeren's, Ideen, ii. p. 494). According to Ammianus (l. c.) the towns of Serica were few in number, but large and wealthy. Ptolemy, in the places cited at the head of this article, names fifteen of them, of which the most important seem to have been, Sera, the capital of the nation; Issedon; Throana, on the E. declivity of the Asiranei mountains, and on the eastermost source of the Oechardes; Assiranea, on the same stream, but somewhat to the W. of the preceding town; Asparaca, on the left bank of the Rantissae, not far from its most western source; and Otracora.

[S.T.H.D.]

SERIMON (Σερίμων, Plut. iii. 5. § 28), a town on the Borysthenes, in the interior of European Sarmatia.

[S.T.H.D.]

SERPHOS or SERPITHUS (Σερφός; Etb. Σερπίθους; Serpho), an island in the Aegean sea, and one of the Cyclades, lying between Cythnos and Siphnos. According to Pliny (iv. 12. s. 22) it is 12 miles in circumference. It possessed a town of the same name, with a harbour. (Seylax, p. 22; Plut. iii. 15. § 31.) It is celebrated in mythology as the place where Danaé and Perseus were driven to shore in the chest in which they had been exposed by Acrisius, where Perseus was brought up, and where he afterwards turned the inhabitants into stone with the Gorgon's head. (Apollod. ii. 4. § 3; Pind. Pyth. x. 72, xii. 18; Strab. x. p. 487; Or. Met. v. 242.) Serphos was colonised by Ionians from Athens, and it was one of the few islands which refused submission to Xerxes. (Herod. viii. 46, 48.) By subsequent writers Serphos is almost always mentioned with contempt on account of its poverty and insignificance (Aristoph. Acharn. 542; Plat. Rep. i. p. 329; Plat. de Est. 7. p. 692; Cic. de Nat. Deor. i. 31, de Suct. 3); and it was for this reason employed by the Roman emperors as a place of banishment for state criminals. (Tac. Ann. ii. 85, iv. 21; Juv. vi. 564, x. 170; Seneke, ad Consol. 6.) It is curious that the ancient writers make no mention of the iron and copper mines of Serphos, which were, however, worked in antiquity, as is evident from existing traces, and which, one might have supposed, would have bestowed some prosperity upon the island.
COIN OF SERIPHOS.

SERMO, a town of the Celtici in Hispania Tarraconensis. (Iun. Ant. p. 447.) Variously identified with Maed and Mesolocha. [I. H. D.] SERMYLE (Σερμύλη), Herod. vii. 122; Theoph. v. 18, Σερμύλη, Sclav. p. 26; Heretaeus, ap. Steph. B. s. v.; Bickh, Inscr. Graec. vol. i. p. 304: Eth. Σερμύλη), a town of Claudic, between Galespus and Megara, which gave its name to the Toneacian gulf, which was also called SERMYLICUS SINUS (κόλπος Σερμυλικος, Scyl. 1. e.). The modern Ormolya, between Meligio and Derina, is identified from its name, which differs little from the ancient form, with the site of Sermyle. (Leake, Northern Greece, vol. iii. p. 153.) [E. B. J.]

SERMYLICUS SINUS. [SERMYLE.]

SEROTA, a town on the frontier between Upper and Lower Pannonia, on the right bank of the river Dravus. (It. Ant. p. 130; It. Herot. p. 562; Geog. Rav. iv. 19, where it is called Sireo), where the Table calls it Sirota. It is possible that this town may have belonged to the tribe of the Serretes mentioned by Pliny (iii. 28) as inhabiting a part of Pannonia. The town of Seroa is commonly identified with the modern Verosco or Verove. [L. S.]

SERPA, a place in Hispania Batetia, on the Arax, and in the territory of the Turdetani. (Itin. Ant. p. 425.) It still bears its ancient name. See Resendi Ant. Legit. p. 194. [T. H. D.]

SERRAPEOLIS (Σερραπεόλις κωμή, Ptol. v. 6. § 4), a village on the coast of Cilicia, lying between Mallos and Aegea (Ayas).

SERRAPILLI, a tribe mentioned by Pliny (iii. 28), as dwelling on the river Dravus in Pannonia. The resemblance of name has induced some geographers to assume that they dwelt about the modern town of Pilsch; but this is a mere conjecture. [L. S.]

SERRETES. [SEROTA.]

SERHAE. [SEHRIS.]

SERHEUM or SERRHEUM (Σερχεύμ, Dem. p. 85 L.; Σερχεύμ, Herod. vii. 59; Steph. B. s. v.), a promontory and town on the southern coast of Thrace, now Cape Mavri. It lay to the west of Maronia, and opposite to the island of Samothrace. It is repeatedly mentioned by Demosthenes (pp. 85, 114, 133, R.), as having been taken by Philip, contrary to his engagements with the Athenians; and Livy (xxxi. 16) states that it was one of the Thracian towns captured by Philip V. in the year n. c. 200. (Plin. iv. 11. s. 13; Mela, ii. 2.) According to Stephennus Byz. (l. c.) a town on the island of Samothrace bore the same name. [I. B. G.]

SERRI, a people of the Asiatic Sarmatia, on the Euxine. (Plin. vi. 5. s. 5) Mela (i. 19) places them between the Meianchelaeni and Siracese. [T. H. D.]

SERRIUM. [SERRHEUM.]

SERVODURUM, a town in the north-east of Vindelicia on the Danube, on the road from Regium to Bolodurum, near Austagusta Castra. (Tub. Puxt.; Not. Imp.) It must have occupied the site of the modern Strunberg, or some place in the neighbourhood, such as Acelburg, where ancient remains still exist. [L. S.]

SERVITIUM, a town in the southern part of Upper Pannonia, on the river Dravus, on the road from Siscia to Sirmium. (It. Ant. p. 268; Geog. Rav. iv. 19, where it is called Serbitium; Tub. Puxt.) Its site has been identified with several modern places; but the most probable conjecture is that it occupied the place of the modern Sicerova, the point at which the roads leading from Sirmium and Siscia to Salona met. [L. S.]

SESEMAC, a small river on the coast of Paphagonia, flowing into the Euxine near the town of Amatia, whence in later times on the river itself was called, Amatris. (Anonym. Perip. P. E. p. 5: Marcin. p. 71: Amastrus.)

SESEMERIUS. [TAULANT.] SESEATAE. [SERICA.]

SESECHEPÆNEAE (Σεσεχεπείνα τής, Arrian, Perip. M. Eryth. p. 30), a group of islands opposite to the S. coast of India indra Gangan, and probably in the sinus Colchiciens where Polemnius (vi. 1. § 10) places a town with the somewhat similar name of Seosekoues. It must have been in the neighbourhood of Taphrhane, since the Peripus mentions the Argyiobv vívér as close to the Sesechiene, whilst Polemnius (vi. 4. § 11) places the same island amongst a number of others lying before Taphrhane, many of which must undoubtedly have belonged to the Seeschiene. [T. H. D.]

SESESITES (Sessia), a river of Galilia Transpadana, and one of the most important of the northern tributaries of the Padus. It flows beneath the walls of Vercellae (Vercellae), and joins the Padus about 16 miles below that city. Its name is noticed only by Pliny (iii. 16. s. 20) and the Geographer of Ravenna (iv. 36), who writes the name Sisdias. [E. H. B.]

SESTIANÆAE AREAE (called by Polemnius Ægææ Ægææ, ii. 5. § 3), the W. promontory of the N. coast of Galicia in Hispania Tarraconensis. It had three altars dedicated to Augustus, whence its name. (Plin. iv. 20. s. 34; Mela, iii. 1.) It is the present Cabo Villano (Floren, Esp. Sogr. xx. p. 44; Sestini, Med. Asp. p. 103.). [T. H. D.]

SESTIAE PRIM. (Σεστιαία πρώτη, Ptol. iv. 1. § 7), a headland on the N. coast of Mauritania Tingitana, between capes Bussad and Ayla. It is probably the same that is called Canarum Pemontorium in the Itin. Ant. (p. 11), lying at a distance of 50 miles from Bussad, or the present cabo Quiñates. [T. H. D.]

SESTINUM. [Eth. Sestina: Sestino], a town in the interior of Umbria, mentioned only by Pliny, who enumerates the Sestinates among the towns of that region (Plin. iii. 14. s. 19; Gruter, Inscr. p. 108. 7), but which still retains its ancient name. It is situated among the Apennines, at the source of the river Foglia (Piscatus). [E. H. B.]
Sestus. (Σέστος; Eth. Ζήττωσ), the principal town of the Thracian Chersonesus, and opposite to Aydınus, its distance from which is variously stated by ancient writers, probably because their measurements were made in different ways; some speaking of the mere breadth of the Hellespont where it is narrowest; others of the distance from one city to the other; which, again, might be reckoned either as an imaginary straight line, or as the space traversed by a vessel in crossing from either side to the other, and this, owing to the current, depended to some extent upon which shore was the starting point. Strabo (xiii. p. 593) states that the strait is 7 stadia across near Aydınus; but that from the harbour of Aydınus to that of Sestus, the distance is 30 stadia.* (On this point the following references may be consulted: Herod. vii. 34; Xen. Hell. iv. 8. 5; Polyb. xvi. 29; Scal. p. 28; Phil. iv. 11. s. 18. Ukert (iii. 2. § 137, note 41) has collected the various statements made by the moderns respecting this subject.)

Owing to its position, Sestus was for a long period the usual point of departure for those crossing over from Europe to Asia; but subsequently the Romans selected Callipolis as the harbour for that purpose, and thus, no doubt, hastened the decay of Sestus, which, though never a very large town, was of great importance. According to Theopompos (ap. Strab. L c.), it was a well-fortified town, and connected with its port by a wall 200 feet in length (σχέδια διαπλαθύνω). Dercyllidas, also, in a speech attributed to him by Xenophon (Hell. iv. 8. § 5), describes it as extremely strong.

Sestus derives its chief celebrity from two circumstances,—the one poetical the other historical. The former is its connection with the romantic story of Hero and Leander, too well known to render it necessary to do more than merely refer to it in this place (Ov. Her. xviii. 137; Stat. Silv. i. 3. 27, &c.); the latter is the formation (n. c. 489) of the bridge of boats across the Hellespont, for the passage of the army of Xerxes into Europe; the western end of which bridge was a little to the south of Sestus (Herod. vii. 33). After the battle of Mycale, the Athenians seized the opportunity of recovering the Chersonesus, and with that object laid siege to Sestus, into which a great many Persians had hastily retired on their approach, and which was very insufficiently prepared for defence. Notwithstanding this, the garrison held out bravely during many months; and it was not till the spring of n. c. 478 that it was so much reduced by famine as to have become mutinous. The governor, Artayctes, and other Persians, then fled from the town in the night; and on this being discovered, the inhabitants opened their gates to the Athenians. (Herod. ix. 115, seq.; Thuc. i. 89.) It remained in their possession till after the battle of Aegospotami, and used to be called by them the corn-crest of the Piraeeus, from its giving them the command of the trade of the Euxine. (Arist. Rhet. iii. 10. § 7.) At the close of the Peloponnesian War (n. c. 404), Sestus, with most of the other possessions of Athens in the same quarter, fell into the hands of the Macedonians and their Persian allies. During the war which soon afterwards broke out between Sparta and Persia, Sestus adhered to the former, and refused to obey the command of Pharnabazus to expel the Lacedaemonian garrison; in consequence of which it was blockaded by Conon (n. c. 394), but without much result, as it appears. (Xen. Hell. iv. 8. § 6.) Some time after this, probably in consequence of the peace of Antalcidas (n. c. 387), Sestus regained its independence, though only for a time, and perhaps in name merely; for on the next occasion when it is mentioned, it is as belonging to the Persian satrap, Ariobarzanes, from whom the Athenians, a Thracian king, was endeavouring to take it by arms (n. c. 362 ?). He was, however, compelled to raise the siege, probably by the united forces of Timotheus and Agesilus (Xen. Ages. ii. 26; Nep. Timoth. 1); the latter authority states that Ariobarzanes, in return for the services of Timotheus in this war, gave Sestus and another town to the Athenians,* from whom it is said to have been afterwards revoked, when it was submitted to Cotys. But his successor, Cersobleptes, surrendered the whole Chersonesus, including Sestus, to the Athenians (n. c. 357), who, on the continued refusal of Sestus to yield to them, sent Chares, in n. c. 353, to reduce it to obedience. After a short resistance it was taken by assault, and all the male inhabitants capable of bearing arms were, by Chares' orders, barbarously massacred. (Diod. xvi. 34.)

After this time we have little information respecting Sestus. It appears to have fallen under the power of the Macedonians, and the army of Alexander the Great assembled there (n. c. 334), to be conveyed from its harbour in a Grecian fleet, from Europe both shores of Asia. By the terms of the peace concluded (n. c. 157) between the Romans and Philip, the latter was required to withdraw his garrisons from many places both in Europe and in Asia; and on the demand of the Rhodians, actuated no doubt by a desire for free trade with the Euxine, Sestus was included in the number. (Liv. xxxii. 33.) During the war with Antiochus, the Romans were about to lay siege to the town (n. c. 190); but it at once surrendered. (Liv. xxxvii. 9.) Strabo mentions Sestus as a place of some commercial importance in his time; but history is silent respecting its subsequent destines. According to D'Anville its site is occupied by a ruined place called Zeménie ; but more recent authorities name it Jalouza (Mauvrit, p. 193). (Herod. iv. 143; Thuc. viii. 62; Polyb. iv. 44; Diod. xi. 37; Arrian, Anab. i. 11, §§ 5, 6; Ptol. iii. 12. § 4, viii. 11. § 10; Steph. B. s. v.; Scymn. 708; Lucan, ii. 674.)

Sestus (Σεστυς).

Setab. (Σάταβος).

Setae, Settab, or Settæa (Σεταία, Σετταία, or Σεττάια), a town in Lydia, near the sources of the river Hermus, which is not mentioned by any of the earlier writers. (Herod. p. 669; Ptol. v. 2. § 21; Conzil. Constant. iii. p. 502; Conzil. Niean. xxxi. 37.)

* There is much obscurity in this part of Grecian history, and the statement of Nepos has been considered inconsistent with several passages in Greek authorities, who are undoubtedly of incomparably greater weight than the unknown compiler of the biographical notices which pass under the name of Nepos. (See Dict. Lingr. Vol. III. p. 1146, a.)
SETANTII, Suet. p. 2, a tribe probably belonging to the Brigantes on the W. coast of Britannia Romana, and possessing a harbour (Setama in Appian, l. c.), which was situated on the mouth of the river Bibble. Incredibly, however, places it on the S. coast of the Solway Frith, while Camden (p. 793) would, with one of the MSS. of Ptolemy, "Segontiorum Portus," and seeks it near Caernarvon. [T. H. D.]

SETANTIORUM PORTUS. [SETANTII.]

SETHEI (Σετής or Σετήια εσχάρα, Plut. II. 3, § 2) an estuary on the W. coast of Britannia Romana, opposite the isle of Mona, into which the Dee discharges itself. [T. H. D.]

SETELIS (Σετέλης or Σελέλης, Plut. II. 6, § 72), a town of the Jacetani in Hispania Tarraconensis, now Selona. See a coin in Sestini, p. 189. [T. H. D.]

SETHERIES, a river of Aciatic Sarmatia, on the E. coast of the Pontus Euxinus, and in the territory of the Sindi. (Plin. vi. 5. s. 5.) [T. H. D.]

SETIA (Σετία: Eth. Setiæm: Sezæ), an ancient city of Latium, situated on the S. slope of the Volsian mountains, between Norba and Prerumum, looking over the Pontine Marshes. It is probable that it was originally a Latin city, as its name is found in the list given by Dionysius of the thirty cities of the Latin League. (Dionys. v. 61.) But it must have fallen into the hands of the Volsians, at the time their power was at its height. No mention of it is, however, found during the wars of the Romans with that people until after the Guanch invasion, when a Roman colony was established there in n. c. 392, and recruited with an additional body of colonists a few years afterwards. (Vell. Pat. i. 14; Liv. vi. 30.) At this time Setia must have been the most advanced point of the Roman dominion in this direction, and immediately adjoined the territory of the Prerinates, who were still an independent and powerful people. (Terent. praef.) This exposed the new colonists to the incursions of that people, who, in B. c. 342, laid waste their territory, as well as that of Norba. (Liv. vii. 42, viii. 1.) The Prerinates were, however, severely punished for this aggression, and from this time the Setini seem to have enjoyed tranquillity. But it is remarkable that a few years later L. Annius of Setia appears as one of the leaders of the Latins in their great war against Rome, n. c. 340. (Liv. viii. 5.)

Setia was a Colonia Latina, and was one of those which, during the pressure of the Second Punic War (n. c. 208), declared its inability to furnish any further supplies either of men or money. (Liv. xxvii. 9.) It was, at a later period of the war, severely punished for this by the imposition of much heavier contributions. (Id. xxix. 15.) From its strong and somewhat secluded position, Setia was selected as the place where the Carthaginian hostages, given at the close of the war, were detained in custody, and in B. c. 198 became in consequence the scene of a very dangerous conspiracy among the slaves of that and the adjoining districts, which was suppressed by the energy of the praetor L. Cornelius Marcellus. (Id. xxvii. 26.)

This time we hear no more of Setia till the Civil Wars of Marcus and Sulla, when it was taken by the latter after a regular siege, n. c. 82. (Appian, B. C. i. 87.) It appears therefore to have been at this period a strong fortress, an advantage which it owed to its position on a hill as well as to its fortifications, the remains of which are still visible. Under the Empire Setia seems to have continued to be a flourishing municipal town, but was chiefly celebrated for its wine, which in the days of Martial and Juvenal seems to have been esteemed one of the choicest and most valuable kinds; according to Pliny it was Augustus who first brought it into vogue. (Plin. xiv. 6. s. 8; Martial, x. 36, xii. 112; Juv. x. 27; Strab. v. pp. 234, 237; Sil. Lit. viii. 379.) We learn from the Liber Colonum that Setia received a colony under the Triumvirate; and it is probable that it subsequently bore the title of a Colonia, though it is not mentioned as such by Pliny. (Plin. iii. 5. s. 9; Lib. Colon. p. 237; Orell. Inscr. 2246; Zumpt, de Colon. p. 356.)

The position of Setia on a lofty hill, looking down upon the Pontine Marshes and the Appian Way, is alluded to by several writers (Strab. v. p. 237; Martial, x. 74, xii. 112), among others in a fragment of Lucilius (ap. A. Gell. xvi. 9), in whose time it is probable that the highroad, of the extreme hilliness of which he complains, passed by Setia itself. It was, however, about 5 miles distant from the Appian Way, on the left hand. There can be no doubt that the modern town of Sezze occupies the same site with the ancient one, as extensive remains of its walls are still visible. They are constructed of large polygonal or roughly squared blocks of limestone, in the same style as those of Norba and Cora. The substructions of several edifices (probably temples) of a similar style of construction, also remain, as well as some inconsiderable ruins of an amphitheatre. (Westphal, Röm. Komp. p. 53; Dodwell's Pelopiean Remains, pp. 115—120.)

SETIDIA (Σετιδία, Plut. ii. 4, § 12), a town of the Tartedati in the W. of Hispania Baetica. [T. H. D.]

SEVIAVA (Σεβίεβα), a town in the north-east of ancient Germany, on the north of the sources of the Vistula, so that it belonged either to the Omans or to the Burgundiones. (Plut. ii. 11, § 28.) Its exact site is not known, though it is commonly assumed to have occupied the place of the modern Sédrowo on the south of Gnesen. (Wilhelm, Germanien, p. 255.) [L. S.]

SEVIANA (Σεβιανα), Plut. ii. 6, § 52), a town of the Marbogi in the N. of Hispania Tarraconensis. [T. H. D.]

SEVUS MONS or PROM. [Blasius; Ecky Jucum.]

SETOTRIALLACTA (Σετοτριαλλάκτα, Plut. ii. 6, § 56), a town of the Areovii in Hispania Tarraconensis. [T. H. D.]

SETOVIA (Σετοβία, Appian, Illuv. 27), a town of Dalmatia, situated in a well-wooded valley, which was besieged by Octavius in the campaign of n. c. 34. It has been identified with Sožu, situated in the rich valley of the Cetina, and surrounded by mountains to the right and left. [E. B. J.]

SETUACOTUM (Σετουακότον, or Σετουακότον), a town in the south of Germany between the upper part of the Danube and the Silva Gabreta, perhaps belonging to the territory of the Narisci (Plut. ii. 11, § 30); but its site is quite unknown. [L. S.]
SETULIA. (Ze roua), a town of the Quadri, in the south-east of Germany, apparently near the sources of the river Anch, a tributary of the Damae, in the Carchian mountains. (Ptol. ii. 11. § 29.) Its identification is only matter of conjecture. [L.S.]

SEVACES (Ze vawedz), a tribe, in a western part of Noricum, is mentioned only by Ptolemy (ii. 14. § 2). [L.S.]

SEVERI MURUS. [Vallum.]

SEVERUS MONS, a mountain of Central Italy mentioned only by Virgil (Aen. vii. 713), who places it among the Sabines, and associates it with the Mons Tetricus, to which belong evidently belonged to some central ranges of the Apennines, in part of Italy, but cannot be identified with more accuracy. [Apennines.] [E. H. B.]

SEUMA or SEUSAMORA (Ze umopa and Ze u- saopa), Strab. xi. p. 501), a town in the Caucasian Iberia. [T. H. D.]

SEVO, a lofty mountain in the extreme north of ancient Germany, in the island of Scandia, in the territory of the Ingavones. It was believed to equal in extent and magnitude the Igiean Montes. (Pllin. iv. 27; Solin. 20.) There can be no doubt that this mountain is the same as Mount Kylian which is present separates Sweden from Norway, and the southern branch of which still bears the name of Scopa Riggen. [Scandia.] [L. S.]

SEBRÜ. [Seberih]

SEX. [Saxetanum.]

SEXANTIPRISTA (Ze xantaprista, Procop, de Aed. iv. 11. p. 307), a town of Moesia Inferior, on the Danube, on the great high-road between Trinimannum and Trier. (I. tin. i. p. 222.) According to the Notit. Imp. (where it is called Sexantiprastri), the 5th cohort of the 1st Legion Italy, together with a squadron of cavalry, lay in garrison here. Some identify it with Rustesbeka, whilst others place it further to the E. near Lipnik. [T. H. D.]

SEXANTIO, in Gallia Narbonensis. The true name of this place is preserved in an inscription found at Nematus (Vinum), and published by Menard. The name is written Sextatio in the Antonine Itin.; and Sestantio in the Jerusalem Itin. The remains of Sexantio are supposed to be those which are about 3 miles north of Montpellier, on the banks of the Lebus (Lex). [G. L.]

SHAALABBIN (Ze zalmi, LXX.), a city of the tribe of Dan (Josh. xix. 42), joined with Ashdon (Isa. xlvi.), and mentioned in the LXX. (not in the Hebrew) as one of the cities in which the Amorites continued to dwell, after the occupation of Canaan by the Israelites (xix. 48). This last fact identifies it with the Shaalbin (LXX. Zezalov), of the book of Judges (i. 35), which is also joined with Ashdon, and of which the same fact is related. It is there placed in Mount Heres. Eusebius mentions a village named Salaha (Ze zala), in the borders of Sebaste (Conuent. s. v.), which could not be in Dan; but S. Jerome (Conuent, in Ezech. xlvii.) mentions three towns in the tribe of Dan, Ashdon, Sebela and Emaus. It is joined by Mahaz and Beth-sheme-b in 1 Kings iv. 9, which also indicates a situation in or near the plain of Sharon. In Mr. Smith's list of places in the district of Ramleh, it is a village named Sablo, containing all the radicals of the Scripture name, and probably identical with Sebela of Josephus, as the modern Yalo is with Ashdon and Amara with Emaus. Its place is not definitely fixed. (Robinson, Bibl. Res. vol. iii. 2nd appendix, p. 120.) [G. W.]

SHARON. SHALISHIA (LXX. Alex. Zalawessa, Vat. Zeleia), a district of Palestine, in or near Mount Ephraim (1 Sam. ix. 4), in which was probably situated Baal Shalisha. [Baal SHALISHIA.] [G. W.]

SHALIION (Zalawaw: Eth. Zaalawitns). 1. Part of the great western plain of Palestine, distinguished for its fertility, mentioned by the prophet Isaiah with "the glory of Lebanon, and the excellence of Carmel and Sharon." (Isaiah, xxxiv. 2.) "The rose of Sharon" is used proverbially in the Canticles (ii. 1.) It is remarkable that the name does not occur in either of these passages in the LXX., but in the latter is Zelos—vulgar, by which appellative Sycamorus translates it in the former passage, while Theodotion and Aquila retain the proper name. Its richness as a pasture land is intimated in 1 Chronicles (xxvii. 29), where we read that "Shitrai the Sharonite" was overseer of David's "herds that fed in Sharon." It doubtless derived its name from a village mentioned only in the New Testament (Acts, ix. 35) in connection with Lydda, in a manner that intensifies its vicinity to that town. Its site has not been recovered in modern times, but it occurred to the writer, on the spot, that it 

It may possibly be represented by the village of Butus (= Peters), on the north of the road between Lydda and Bethoron, and may have changed its name in honour of the Apostle, and in commemoration of the miracle wrought by him. S. Jerome in his commentaries limits the name to the district about Joppa, Lydda, and Jamiia (ad les. xxxiii. liv.). Eusebius calls the district Saronus (Zalawaw), and extends it from Joppa to Caesarea (of Palestine); while other writers reckon to it the whole of the coast north of Caesarea, as far as Carmel. (Onomast. sub. voces.) The width of the plain about Jaffa is little more than 18 miles, and the luxuriance of its soil is still attested by the numerous wild flowers with which it is carpeted in the spring,—roses, lilies, tulips, mariscus, anemonies, carnations, and a thousand others, no less than by the abundant vegetation and increase where the land is cultivated as garden or corn land. (Bitter, Palatina, &c. vol. iii. part ii. pp. 25, 586—588.) Reland has shown that the classical name for this fruitful district was θρυμος, which Strabo joins with Carmel, as then in the power of the pirates that had Joppa for their port (xiv. 2. § 28, p. 759.) Reland suggests an ingenious account of this symposium, which appears in Josiphon, who does not mention (the Scripture name) in connection with Carmel, in a manner that clearly points to the district described by Strabo under the same name. In one passage the name is used in the plural (Δρυμοι ή το μπρων καλαιτησ, Ant. xiv. 13. § 3); in the parallel passage it is singular (στ το καλαμονοι Δρυμον, Bell. Jud. ii. 13. § 2). Now θρυμος, according to ancient etymologists, signified any kind of wood, and, as Bitter remarks, the traces of the forests of Sharon are still to be discovered in the vicinity of Carmel; but according to Pliny the Sinus Sarionicus derived its name from an oak grove, "its Graecia antiqua appellant quercum." (H. N. iv. 5. s. 9.) The very probable conjecture of Reland therefore is that Δρυμος is simply a translation of Sharon or Saroua, for according to the Etymologicum Magnum Σαρωνιδες ai καιαι δρυς (ad voc. Σαρωνιδες). 2. Eusebius and St. Jerome recognise another Sharon, to which they apply the prophecy of Isaiah (xxixii. 9), "Sharon is like a wilderness" (αν γεινιν το Σαρων, LXX.), which they refer to the

country between Tabor and the sea of Tiberias (Onomast. s. v.) But as the name is here introduced, in connection with Lebanon and Carmel, Bashan being also introduced—and as no other notice of a Galilean Sharon is to be met with, it seems more reasonable to refer the notice in Isaiah to the plain of Sharon on the west coast.

3. There was certainly another Sharon beyond Jordan, apart from the district near the region of Gilfat, for the children of Ashhur, of the tribe of Gad, are said to have "dwelt in Gilead in Bashan, and in her towns, and in all the suburbs of Sharon" (1 Chron. v. 16); and it is possible that "the herds that fed in Sharon," under charge of David's chief herdsman, Shitrai the Sharonite, may have pastured in this trans-Jordanic district, not in the plain of the Mediterranean. Rendel indeed maintains that the mention of the suburbs of Sharon in connection with the Gileites, is no proof of the existence of a trans-Jordanic Sharon, for that, as the tribe of Gad was specially addicted to pastoral pursuits, they may have pastured their flocks in the suburbs of the towns of other and distant tribes. But this hypothesis seems much more forced than the very natural theory of a second Sharon in the tribe of Gad properly so called. (Palaestina, pp. 370, 371, 988.) [G. W.]

SHAVEH (LXX. Σαβώ. [See also the valley of Shaveh, which is the king's dale," where Melechizedek met Abraham returning from the slaughter of the kings. (Gen. xiv. 17.) The learned are not agreed concerning the city of Melchizedek. They who regard his Salem as identical with Jerusalem, naturally identify "the king's dale," equivalent to "the valley of Shaveh," with "the king's dale" where Absalom erected his monument (2 Sam. xvii. 18), and place it in the vicinity of "the king's gardens," in the valley of the Kidron, where tradition points out "Absalom's hand" or place. (Jerusalem Vol. ii. p. 17, a, and p. 23, b.) (G. W.]

SHAVEH KIRJATHAIM (translated by the LXX. Σαβώ η πόλις), the original seat of that very ancient people the Emims, where they were smitten by Chedorlaomer, king of Elam. (Gen. xiv. 5.) It is no doubt passed with the other possessions of the Emims to the Moabites (Deut. xiv. 9—11), and is probably identical with the Kirithaim (LXX. Κηρίθαιμ) of Jeremiah (xxvi. 23) and Ezekiel (xxv. 9). (G. W.]

SHEBA. [SABA.]

SHECHEM. [NEAPHILIS II.]

SHOH. [SHO.]

SHITTIM. (LXX. Σηττήμιν αυτοις τις Σηττίμιν), the last station of the Israelites before crossing the Jordan, described to be by Jordan in the plains of Moab. Abel-shittim was at one extremity of their vast encampment, as Beth-jeshimoth was at the other. (Num. xx. 1.) It was from thence that Joshua sent the spies to reconnoitre Jericho (Josh. ii. 1), and from thence that they marched to their miraculous passage of the Jordan (iii. 1). In Micah (vi. 5) it is mentioned in connection with Gilgal, being the last encampment on the east of Jordan, as Gilgal was the first on the west. Here the LXX. render ἀπ' των οχυρών ἔως τοῦ Γαλατία, the place of the Israelites being encamped in Gilboa, the Philistines pitched in Shunem, so that he had to pass through their lines to come to Endor. (1 Sam. xxviii. 4.) Eusebius mentions a village named Samia, in the borders of Shebathae, in the district of Acrebatene, which cannot be identical with this. But the Sibetha (Σαβ̣ηθα) of the same author, which he places v. M. P. south of Mount Tabor, corresponds very well with the modern village of Sibetha, which still marks the site of ancient Shunem. It is a miserable village, situated above the plain of Esdraelon, on the road between Jemini and Nazareth, about 1½ hours north of Zer'in, ancient Jezreel, on the steep slope of the western spur of Little Hermon (Ed-Dâru). (G. W.]

SHUR (Σαύρ, LXX.), a place repeatedly mentioned to describe the western extremity of the borders of the pesterity of Ishmael (Gen. xxviii. 18), of the Amalekites only (1 Sam. xv. 7), of the Geshurites, Gurrites, and Amalekites (xxvii. 8), in all which passages it is placed "over against" "before," and on the way to Egypt. Hagar's well, afterwards called Beer-lahai-roi, between Kadesh and Beroth, was "in the way to Shur." (Gen. xvi. 7. 14.) The name is still found in the south of Palestine. "Moltahi (Beer-lahai-roi) lies on the great road from Beersheba to Shur, or Jebel-es-Sur, which is its present name,—a grand chain of mountains running north and south, a little east of the longitude of Suez, lying, as Shur did, before Egypt. (Gen. xvi. 7.) It lies at the south-west extremity of the plain of Paran, as Kadesh does at its utmost north-east extremity. (Rowlands, in William's Holy City, vol. i. appendix No. 1, pp. 465, 466.) [G. W.]

SHUSHAN. [Susa.]

SIÁGUL (Σιαγόλ, Ptol. iv. 3, § 9, the most easterly town of Zengitaoa, only 3 miles from the coast, and to which Putput served as a harbour. Shaw (Travels, ch. 2) identifies it with some ruins at the village of Kassor-Asselt, from two inscriptions which he found there, with the words Civ. Siagitana; but which he must have read incorrectly, since the town really had been called Saguigitana. According to Maffei (Mus. Veron. p. 45) there is also an inscription with the words Civ. Siagitana near Turus in Africa; which Orelli (i. p. 334) refers either to Signs in Numidia or to Sign in Mauritania Caesariensis. [T. H. D.]

SANTICUM. [Santicum.]

SIÁTA, an island on the Gallic coast, which is mentioned in the Maritime Rm. after Vindilis, or Belle Isle. D'Aunville conjectures Sita to be the Isle of Houat, which is off the coast of the department of Morbihan, and between Belle Isle and the mainland. [G. L.]

SIATUTANDA (Σιάτοτουνδα), is mentioned by Ptolemy (ii. 11. § 27) as a town of Germany; but had probably no existence at all, the geographer imagining that in the words of Tacitus (Ann. iv. 73), "ad sua tutanda digressis rebelliis" the name of some town was contained. Notwithstanding this evident origin of the name, some modern geographers still persist in assuming a town Situtanda. [L. S.]

SIBAE. (Σίμαιος, Arrian, Ind. c. 5; Diod. xvii. 96; Strab. xv. p. 688), a nation of the Punjab, below
the junction of the Hydaspes and Acesines, en-
countered by Alexander in his attempt to invade
India. They are described as a rude, warlike people,
armed only with clubs for defensive weapons. The
Greeks noticed this use of the club, and that the
people were in the habit of branding the representa-
tion of a club on the backs of their cattle, and that
they were clothed in the skins of wild animals.
From these facts they inferred that they must be
descendants of Hercules. There can be doubt that
they are the same race as are called Sobii in
Curtius (i. 4. § 2). A tribe of similar character,
called Siagul or Sipach, still exists in that country,
and use the club, and wear the skins of goats for
eating. (Ritter, vii. p. 279. v. p. 457; Bohlen,
Alte-Indien, i. p. 208.) It is possible that they
have derived their name from the god Siva. [V.]

SIBARIA, a town of the Etrusques in Hispia
Tarraconensis, N. of Salamanca, and on the road
from Emerita to Casarraganum. (Itin. A.D. p.
434.) Variously identified with Santile, Fuento de
Sahurra, Pehauendae, and Zamocina. [T. H. D.]

SIBDA (Σίβδα: Eth. Σίβδας, Σίβδης), a
place in Caria, and one of the six towns which
were given by Alexander the Great to Ada, a daughter
of king Hecatomnus of Halicarnassus, and thus became
subject to Halicarnassus. (Steph. B. s. v.; Plin. v.
29.) Its exact site cannot be ascertained. [L. S.]

SIBEREXA (Σιβερεξά: Sta Sercuvia), a town of
Bruttium situated in the mountains about 15 miles
N.W. of Crotona. The name is mentioned only by
Stephanus of Byzantium, who calls it an
Oenotrian city, but it is probable that it is the same
place which is now called Santa Sercuvia, an ap-
ellation that is already noticed by Constantine
Porphyrogenitus in the tenth century. It was at that
time apparently a place of importance, but is now
much decayed. (Const. Porph. de Adv. Imp. ii. 10;

SIBERIS (Σιβερίς), a river of Galatia, a tri-
butary of the Sangarius; it flowed in a south-
western direction, and joined the main river near
the little town of Syecon, not far from Juliiopolis.
(Petrarch, Trav. xii. 35.) Procopius says that this
river frequently overflowed its banks, a fact
which is perhaps alluded to in the name of a station
called Kyron Potamon, about 13 miles east of Julii-
opolis (It. Hieros, p. 574); though it is possible also
that the name may be misspelt for Hieron Potamon,
which is only another name for the Hieras of Pliny
(v. 43), and unquestionably identical with the Sibiris
which now bears the name of Kirmir. [L. N.]

SIBUZATES, an Aequitanian people, who
submitted to P. Crassus, Caesar's legatus in n. c. 56.
(B. G. iii. 27.) There are many varieties in the trans-
script readings of this name. It is merely by
conjecture founded on resemblance to another name, that
they have been placed about Sustubace or Siboua,
on the Adour, between Aqaeus Tarbelliciae (Dax)
and Bayonne. [G. L.]

SIBYLL'ATES, one of the Aequitanian tribes
mentioned by Pliny (iv. 19). D'Availle conjectures
that the name is preserved in that of the Valis
Subola, mentioned by Fredegarus. He argues that
they cannot be the same people as the Sibuzates
who submitted to P. Crassus, because Caesar speaks
of a few of the remotest Aequitanian tribes which did
not submit to the Roman general, trusting to the
approaching winter season (B. G. iii. 27); from which
remark we may infer that these remoted tribes were
in the valleys of the Pyrenees. "The people of the
valley of Soule might derive this advantage from their
situation, which is shut in between Lows Narrevre
and the high part of Picem." (D'Availle.) [G. L.]

SICIBRITUS. [SIBBITA.]

SICAMBRI, SICAMBRI, SICAMBRI, SICUMBARRI,
SICAMBRE (Σικαμβροι, Σικαμβροι, Σικαμβροι,
or Σικαμβροι), a tribe of the western 
Romans, occupying in the time of Caesar the eastern bank of the Rhine,
and extending from the Sieg to the Lippe. It is
generally assumed that this tribe derived its name
from the little river Sieg, which falls into the Rhine
a little below Bonn, and during the middle ages
was called Seca, Secha, but is not mentioned by
any ancient writer; this assumption, however, is at least
only a probable conjecture, though it must be admitted that
in the time of Caesar they inhabited the country
north and south of the Sieg, and to the north of the
Ubi. (Ces. B. G. iv. 16, folii, v. 39; Strab. vil.
pp. 290, 291; Dion Cass. xxxix. 48, xl. 22; liv.
20, 32, 33, 36.) When the Usipetes and Tenteteri
were defeated by Caesar, the remnants of these tribes
took refuge in the country of the Sicambri, who
took them under their protection. Caesar then
demanded their surrender; and this being refused, he
built his famous bridge across the Rhine to strike
terror into the Germans. The Sicambri, however, did
not wait for his arrival, but, on the advice of the Usi-
petes and Tenteteri, quieted their own country and
withdrew into forests and uninhabited districts,
whither Caesar neither would nor could follow them.
A few years later, B. C. 51, during the war against
the Germans, we find Sicambri fighting against the
army of Caesar on the left bank of the Rhine, and
nearly defeating the Romans: Caesar's arrival, who
had been in another part of Gaul, alone saved his
legions. The Sicambri were then obliged to return
across the Rhine. In B. C. 16 the Sicambri, with
the Usipetes and Tenteteri, again invaded Gallia Bel-
gica, and M. Lollius, who had provoked the bar-
barians, sustained a serious defeat. A similar at-
tack which was made a few years later, was repelled
by Drusus, who pursued the Germans into their own
country. After the withdrawal of the Romans, the
Sicambri formed a formidable barrier to the Ger-
manen against the common enemy, and as the Hoti
who had received the country of the Ubi on the
right bank of the Rhine, refused to join them, the
Sicambri made war upon them; and as they left
their own territory unprotected, Drusus penetrated
through it into the interior of Germany. After
the death of Drusus, Tiberius undertook the comple-
tion of his plans against Germany. None of the tribes
offered a more vigorous resistance than the Sicambri;
but in the end they were obliged to submit, and
40,000 Sicambri and Secui were transplanted into
Gaul, where as subjects of Rome they received settle-
ments between the lower course of the Meuse and
the Rhine. In that country they subsequently
formed an important part of the nation or confed-
erate of the Franks. These Sicambri who were not
transplanted into Gaul seem to have withdrawn into
the hills of Mons Retico, and for a long time
they are not mentioned in history; they reappear in the
time of Proleny (i. 11. § 8), when they are spoken of
as neighbours of the Bruceni Minorae. The Si-
cambri are described as bold, brave, and cruel,
and we hear nothing of towns in their country; they
seem in fact (B. G. iv. 19) to have lived in villages
and in small towns (Ces. B. G. iv. 19; comp. Tac.
Ann. ii. 26, iv. 47, xii. 39; Suet. Aug. 21, Tiber.
ii. 39; Eutrop. vii. 9; Oros. vi. 21; Horat. Carm. iv. 2. 36, 14.}

[S. L.]

SICANI. [Sicilia.]

SICCA VENERA (Scica or Zica Oevsparia, Potl. iv. 3. § 59, vili. 2. § 9), a considerable town of Numidia on the river Sagradas, and the road from Carbtag to Hippo Regius, and from Musti to Citra. (Itin. Ant. pp. 41, 45.) It was built on a hill, and, according to Pliney (v. 3. s. 2), was a Roman colony. We learn from Valerius Maximus (ii. 6. § 15) that it derived its surname from a temple of Venus which existed there, in which, agreeably to a Phoenician custom, the maidens of the town, including even those of good family, publicly prostituted themselves, in order to collect a marriage portion; a circumstance which shows that the town was originally a Phoenician settlement, devoted to the worship of Astarte. (Comp. Sall. Jug. 56; Polyb. i. 66, 67.) Shaw (Travels, p. 87) takes it to be the modern Kefip, where a statue of Venus has been found, and an inscription, with the words Ordo Sicanium. (Comp. Donati, Suppl. Theor. Murat. ii. pp. 266. 6; Orelli, Inschr. no. 3733.)

[SICELLA. [Ziklag.]

SICHEM. [Neapolis i.]

SICILIA (Scilicata: Eth. Σικελιατης, Siciliensis: Sicily), one of the largest and most important islands in the Mediterranean. It was indeed generally reckoned the largest of all; though some ancient writers considered Sardina as exceeding it in size, a view which, according to the researches of modern geographers, turns out to be correct. (Sardimia.)

I. GENERAL DESCRIPTION.

The general form of Sicily is that of a triangle, having its shortest side or base turned to the E., and separated at its NE. angle from the adjoining coast of Italy only by a narrow strait, called in ancient times the Fretum Siculum or Sicilian Strait, but now more commonly known as the Straits of Messina. It was generally believed in antiquity that Sicily had once been joined to the continent of Italy, and severed from it by some natural convulsion. (Strab. vi. p. 258; Plin. iii. 8. s. 14; Virg. Aen. iii. 414.) But though this is probably true in a geological sense, it is certain that the separation must have taken place at a very early period, not only long before the historical age, but before the first dawn of tradition. On the other side, the W. extremity of Sicily stretches out far towards the coast of Africa, so that the westernmost point of the island, the headland of Lilybaeum, is separated only by an interval of 80 geostr. miles from the Hermaean Promontory, or Cape Boa in Africa.

The general triangular form of Sicily was early recognised, and is described by all the ancient geographers. The three promontories that may be considered as forming the angles of the triangle, viz. Cape Pelorus to the NE., Cape Pachynus to the SE., and Lilybaeum on the W., were also generally known and received (Pol. i. 42; Strab. vi. pp. 265, 266; Plin. iii. 8. s. 14; Plt. iii. 4; Mel. ii. 714). Its dimensions are variously given: Strabo, on the authority of Posidonius, estimates the side from Pelerus to Lilybaeum as reckoning the longest, at 1700 stadia (or 170 geostr. miles); and that from Pachynus to Pelorus, the shortest of the three, at 1130 stadia. Pliney on the contrary reckons 186 Roman miles (149 geostr.) from Pelerus to Pachynus, 200 M.P. (160 geostr. miles) from Pachynus to Lilybaeum, and 170 M.P. (136 geostr.) from Lilybaeum to Pelerus: thus making the northern side the shortest instead of the longest. But Strabo’s views of the proportion of the three sides are entirely correct; and his distances but little exceed the truth, if some allowance be made for the windings of the coast. Latin geographers, from the time of Ptolemy onwards, erroneously conceived the position of Sicily as tending a great deal more to the SW. than it really does, at the same time that they gave it a much more regular triangular form; and this error was perpetuated by modern geographers down to the time of D’Anville, and was indeed not altogether removed till the publication of the valuable coast survey of the island by Captain Smyth. (See the map published by Magni in 1620, and that of D’Anville in his Analyse Geographique de Italie, Paris 1744.)

A considerable part of Sicily is of a mountains character. A range of mountains, which are geologically of the same character as those in the southern portion of Bruttium (the group of Aspromonte), and may be considered almost as a continuation of the same chain, interrupted only by the intervening strait, rises near Cape Pelorus, and extends at first in a SW. direction to the neighborhood of Taormina (Taurromenium) from whence it turns nearly due W. and continues to hold this course, running parallel with the N. coast of the island till it rises into the elevated group of the Monte Madon, a little to the S. of Cefalù (Caphalonium). From thence it breaks up into more irregular masses of limestone mountains, which form the central nucleus of the W. portion of the island, while their arms extending down to the sea encircle the Bay of Palermo, as well as the more extensive Gulf of Castellamare, with bold and almost isolated headlands. The detached mass of Mount Eryx (Mount di S. Giuliano) rises near Tropani almost at the W. extremity of the island, but with this exception the W. and SW. coast round to Sciacca, 20 miles beyond the site of Scilla, is comparatively smooth, without great crags, and presents no bold features. Another range or mass of mountains branches off from that of the Monte Madon near Polizzi, and trends in a SE. direction through the heart of the island, forming the huge hills, rather than mountains, on one of which Enna was built, and which extend from thence to the neighbourhood of Piazza and Aidone. The whole of the SE. corner of the island is occupied by a mass of limestone hills, never rising to the dignity nor assuming the forms of mountains, but forming a kind of table-land, with a general but very gradual slope towards the S. and SE.; broken up, however, when viewed in detail, into very irregular masses, being traversed by deep valleys and ravines, and presenting steep escarpments of limestone rock, so as to constitute a rugged and difficult country.

None of the mountains above described attain to any great elevation. The lowest group, that of the Monte Madon, does not exceed 3765 feet, while the average height of the range which extends from thence to Cape Pelorus, is little, if at all, above 3000 feet high. Monte S. Giuliano, the ancient Eryx, erroneously considered in ancient times as the highest mountain in Sicily after Acta (Eryx), is in reality only 2184 feet in height (Smyth’s Sicily, p. 214). The ancient appellations given to these
mountains seem to have been somewhat vague and fluctuating; but we may assign the name of Neptunus Mons to the chain which rises at Cape Pelorus, and extends from thence to the neighbourhood of Tauromenium; while that of Mons Neoptolemos seems to have been applied in a more general sense to the whole northerly range extending from near Taormina to the north-eastern part of Panormus; and the Heroic Mons of Diodorus can be no others than a part of the same range. (See the respective articles.) But incomparably the most important of the mountains of Sicily, and the most striking physical feature of the whole island, is the great volcanic mountain of Etna, which rises on the E. coast of the island, and attains an elevation of 10,874 feet, while its base is not less than 90 miles in circumference. It is wholly detached from the mountains and hills which surround it, being bounded on the N. by the river Aeneses or Alcantara, and the valley through which it flows, and on the W. and S. by the Symmarts, while on the E. its streams of lava descend completely into the sea, and constitute the the coast for a distance of near 30 miles. The rivers already mentioned constitute (with trifling exceptions) the limits of the volcanic district of Etna, but volcanic formations of older date, including beds of lava, scoriae, &c., are scattered over a considerable extent of the SE. portion of the island, extending from the neighbourhood of Palagonia to that of Palazzolo, and even to Syracuse. These indeed belong to a much more ancient epoch of volcanic action, and can never have been in operation since the existence of man upon the island. The extensive action of volcanic fires upon Sicily was, however, observed by the ancients, and is noticed by several writers. The apparent connection between Aetna and the volcanoes of the Aeolian Islands is mentioned by Strabo, and the same author justly appeals to the craters of the Palici, and to the numerous thermal springs throughout-out the island, as proofs that the subterranean agencies were widely diffused beneath its surface (Strab. vi. pp. 274, 275).

Few countries in Europe surpass Sicily in general productivity and fertility. Its advantages in this respect are extolled by many ancient writers. Strabo tells us (vi. p. 273) that it was not inferior to Italy in any kind of produce, and even surpassed it in many. It was generally believed to be the native country of wheat (Diod. v. 2), and it is certain that it was not surpassed by any country either in the abundance or quality of this production. It was equally celebrated for the excellence of its honey and its saffron, both of which were extensively exported to Rome; as well as for its sheep and cattle, and excellent breeds of horses, among which those of Agrigentum seem to have been the most celebrated. (Strab. ii. c. viii. 23; Virg. Aen. iii. 704). There were indeed no extensive plains, like those of Campania or Cisalpine Gaul; the largest being that now called the Piano di Catania, extending along the banks of the Symmarts, and known in ancient times as the Leonitus or Laestrygonian Campus. But the whole island was intersected by numerous streams, and beautiful valleys; and though a considerable part of its surface (as already observed) was occupied either by mountains or rocky hills, the slopes and undefineds of these abounded in scenery of the most charming description, and were adapted for the growth of vines, olives, and fruits of every description.

The climate of Sicily may be considered as intermediate between those of Southern Italy and Africa. The northern part of the island, indeed, closely resembles the portion of Italy with which it is more immediately in contact; but the southern and south-western parts present strong indications of their more southerly latitude, and have a parched and arid appearance (at least to the eyes of northern travellers), except in winter and spring. The abundance also of the dwarf palm (Chamaerops humilis Linn.), a plant unknown to other parts of Europe, tends to give a peculiar aspect to these districts of Sicily. The climate of the island in general was certainly not considered unhealthy in ancient times; and though at the present day many districts of it suffer severely from malaria, there is good reason to believe that this would be greatly diminished by an increased population and more extensive cultivation. It is remarkable, indeed, in Sicily, as in the south of Italy, that frequently the very sites which are now considered the most unhealthy were in ancient times occupied by flourishing and populous cities. In many cases the malaria is undoubtedly owing to local causes, which might be readily obviated by draining marshes or affording a free outlet to stagnant waters.

II. History.

The accounts of the early population of Sicily are more rational and consistent than is generally the case with such traditions. Its name was obviously derived from that of the people who continued in historical times to be its chief inhabitants, the Siculi or Sicels (Siceloi); and the tradition universally received represented these as crossing over from the mainland, where they had formerly dwelt, in the extreme southern portion of Italy. The traditions and notices of this people in other parts of Italy, and of their previous wanderings and migrations, are, indeed, extremely obscure, and will be discussed elsewhere (Sicili); but the fact that they were at one time settled in the Bruttian peninsula, and from thence passed over into Sicily, may be safely received as historical. There is every probability also that they were not a people distinct in their origin from the races whom we subsequently find in that part of Italy, but were closely connected with the Oenotrians and their kindred tribes. Indeed, the names of Sicelos and Iraodos are considered by many philologers as of common origin. There seems, therefore, little doubt that the Sicels, or Siculi, may be regarded as one of the branches of the great Pelasgic race, which we find in the earliest times occupying the southern portion of Italy; and this kindred origin will account for the facility with which we find the Sicels subsequently adopting the language and civilization of the Greek colonists in the island, at the same time that there remain abundant traces of their common descent with the people of Italy.

But the Sicels, who occupied in the historical period the greater part of the interior of the island, were not, according to the Greek writers, its earliest inhabitants. Thucydides indeed assigns their immigration to a period only three centuries before the settlement of the first Greek colonies (Thuc. vi. 2); and Diodorus, without assigning any date, agrees in representing them as the latest comers among the native population of the island (Diod. v. 6). The first period of Sicily alludes to the existence of races of gigantic men, of savage manners, under the
of that name. The Sicels, however, being a warlike people, had frequently to defend their territory from Greek, Carthaginian, and Roman attacks. The Sicels were organized into tribes, each with its own territory and government. The tribal kings were the rulers of these territories. The tribes struggled against the Greeks and the Carthaginians, who tried to establish colonies in the region. The Sicels were also involved in trade with the Carthaginians for many years, but they did not become Roman citizens until the 2nd century BC. The Carthaginians, on the other hand, set up their own colonies in Sicily, such as Acrae, which was founded in 565 BC, and other smaller settlements. The Carthaginians were eventually driven out of Sicily, and the region was taken over by the Romans in 210 BC.

There were also other indigenous peoples in Sicily, such as the Elymians, the Lydians, and the Sicani. These peoples were not as well studied as the Sicels, and their history is less well known. The Elymians were a people who lived in northern Sicily and were known for their rich tombs. The Lydians were a people who lived in the area of modern-day Turkey and were known for their gold. The Sicani were a people who lived in southern Sicily and were known for their wool and their pottery. These peoples were often in conflict with each other and with the Greeks, who tried to establish colonies in the region.

Another people whom Thucydides, apparently with good reason, regards as more ancient than the Sicels, were the Sicani, whom we find in historical times occupying the western and north-western parts of the island, whither, according to their own tradition, they had been driven by the Sicels, when these crossed the straits, though another tradition ascribes their removal to the terror and devastation caused by the eruptions of Etna (Thuc. vi. 2; Diod. v. 6). The Sicani claimed the honour of being autochthons, or the original inhabitants of the island, and this view was followed by Timaeus; but Thucydides, as well as Philius, adopted another tradition, according to which they were of Iberian extraction (Thuc. i. c; Diod. l. c). What the arguments were which he regards as conclusive, we are unfortunately wholly ignorant; but the view is in itself probable enough, and notwithstanding the close resemblance of name, it is certain that throughout the historical period the Sicani and Siculi are uniformly treated as distinct races. Hence it is improbable that they were merely tribes of a kindred origin, as we should otherwise have been led to infer from the fact that the two names are evidently only two forms of the same appellation.

A third race which is found in Sicily within the historical period, and which is regarded by ancient writers as distinct from the two preceding ones, is that of the Elymians, who inhabited the extreme north-western corner of the island, about Eryx and Segesta. Tradition ascribed to them a Trojan origin (Thuc. vi. 2; Dionys. l. 52), and though this story is probably without more than the numerous similar tales of Trojan settlements on the coast of Italy, there must probably have been some foundation for regarding them as a distinct people from their neighbours, the Sicani. Both Thucydides and Sicelius specially mention them as such (Thuc. i. c; Scl. l. p. 4. § 13); but at a later period, they seem to have gradually disappeared or been merged into the surrounding tribes, and their name is not again found in history.

Such were the indigenous races by which Sicily was peopled when its coasts were first visited and colonies established there, by the Phoenicians and the Greeks. Of the colonies of the former people we have little information, but we are told in general by Thucydides that they occupied numerous points around the coasts of the island, establishing themselves in preference, as was their wont, on projecting headlands or small islands adjoining the shore. (Thuc. vi. 2). But these settlements were apparently, for the most part, mere trading stations, and as the Greeks came to establish themselves permanently and in still increasing numbers in Sicily, the Phoenicians gradually withdrew to the N.W. corner of the island, where they retained three permanent settlements, Motya, Panormus, and Soloeis or Soluntum. Here they were supported by the alliance of the neighbouring Elymians, and had also the advantage of the proximity of Carthage, upon which they all became eventually dependent (Thuc. l. c).

The settlement of the Greek colonies in Sicily began about the middle of the eighth century B.C., and was continued for above a century and a half. Their dates and origin are known to us with much more certainty than those which took place during the corresponding period in the settlement of Sicily. The earliest were established on the E. coast of the island, where the Chalcidic colony of Naxos was founded in B.C. 735, and that of Syracuse the following year (n. C. 734), by a body of Corinthian settlers under Archias. Thus the division between the Chalcidic and Doric colonies in Sicily, which bears so prominent a part in their political history, became marked from the very outset. The Chalcidians were the first to extend their settlements, having founded within a few years of the parent colony (about B.C. 730) the two cities of Leontini and Catana, both of them destined to bear an important part in the affairs of Sicily. About the same time, or shortly after (probably about B.C. 728), a fresh body of colonists from Megara founded the city of the same name, called, for distinction's sake, Megara Hyblaea, on the E. coast, between Syracuse and Catana. The first colony on the S. coast of the island was that of Gela, founded in B.C. 690, by a body of emigrants from Rhodes and Crete; it was, therefore, a Doric colony. On the other hand, the Chalcidians, founded, at what precise period we know not, the colony of Zancle (afterwards called Messana), in a position of the utmost importance, as commanding the Sicilian Straits. The rapid rise and prosperity of these first settlements are shown by their having become in their turn the parents of other cities, which soon vied with them, and, in some cases, surpassed them in importance. Thus we find Syracuse extending its power by establishing in succession the colonies of Agrigentum in B.C. 580, which, though one of the latest of the Greek colonies in the island, was destined to become one of the most powerful and flourishing of them all. Still further to the W., the colony of Selinus, planted as early as B.C. 628, by a body of settlers from the Hyblaean Megara, reinforced with emigrants from the parent city in Greece, rose to a state of power
and prosperity far surpassing that of either of its mother cities. Selinus was the most westerly of the Greek colonies, and immediately bordered on the territory of the Elymii and the Phoenician or Carthaginian settlements. On the N. coast of the island, the only independent Greek colony was Himera, founded about B.C. 648 by the Zancleans; Mylae, another colony of the same people, having apparently continued, from its proximity, to be a mere dependency of Zancle. To the above list of Greek colonies must be added Callipolis and Enoea, both of them colonies of Naxos, which but never seem to have attained to consideration, and disappear from history at an early period.*

Our accounts of the early history of these numerous Greek colonies in Sicily are unfortunately very scanty and fragmentary. We learn indeed in general terms that they rose to considerable power and importance, and enjoyed a high degree of wealth and prosperity, owing as well to the fertility and natural advantages of the island, as to their foreign commerce. It is evident also that at an early period they extended their dominion over a considerable part of the adjoining country, so that each city had its district or territory, often of considerable extent, and comprising a subject population of native origin. At the same time the Sicels of the interior, in the central and northern parts of the island, and the Sicanians and Elymii in the W., maintained their independence, though they seem to have given but little trouble to their Greek neighbours. During the sixth century B.C. the two most powerful cities in the island appear to have been Agrigentum and Gela, Syracuse not having yet attained to that pre-eminence which it subsequently enjoyed. Agrigentum, though one of the latest of the Greek colonies in Sicily, seems to have risen rapidly to prosperity, and under the able, though tyrannical government of the despot Phalaris (B.C. 570—554) became apparently for a time the most powerful city in the island. But we know very little about his real history, and with the exception of a few scattered isolated notices we have hardly any account of the affairs of the Greek cities before B.C. 500. At or before that period we find that a political change had taken place in most of these communities, and that their governments, which had originally been oligarchical, had passed into the hands of despots or tyrants, who ruled with uncontrol- led power. Such were Panaxus at Leontini, Cleander at Gela, Terillus at Himera, and Scyttes at Zancle (Aris. Pol. v. 12; Herod. vi. 23, vi. 154). Of these Cleander seems to have been the most able, and laid the foundation of a power which enabled his brother and successor Hipperocrates to extend his dominion over a great part of the island, Callipolis, Leontini, Naxos, Zancle, and Camarina successively fell under the arms of Hippocrates, and Syracuse itself only escaped subjection by the intervention of the Corinthians (Herod. vii. 154). But what Hippocrates had failed to effect was accomplished by Gelyn, who succeeded him as despot of Gela, and by interposing in the civil dissensions of the Sicilians ultimately succeeded in making himself master of that city also, B.C. 485. From this time Gelyn neglected his former government of Gela, and directed all his efforts to the aggrandizement of his new acquisition. He destroyed Camarina, and removed all the inhabitants to Syracuse, together with a large part of those of Gela itself, and thus disposed of Megara Hyblaea and Enoea (Herod. vii. 156).

Syracuse was thus raised to the rank of the first city in Sicily, which it retained for many centuries afterwards. A few years before (B.C. 488), Theron had established himself in the possession of the sovereign power at Agrigentum, and subsequently extended his dominion over Himera also, from whence he expelled Terillus, B.C. 481. About the same time also Anaxilas, despot of Rhegium, on the other side of the straits, had established a footing in Sicily, where he became master of Zancle, to which he gave the name of Messana, by which it was ever afterwards known [Messana]. All three rulers appear to have been men of ability and enlightened and liberal views, and the cities under their immediate government apparently made great progress in power and prosperity. Gelyn especially undoubtedly possessed at this period an amount of power of which no other Greek state could boast, as was sufficiently shown by the embassy sent to him from Sparta and Athens to invoke his assistance against the threatened invasion of Xerxes (Herod. vii. 145, 157). But his attention was called off to a danger more immediately at hand. Terillus, the expelled despot of Himera, had called in the assistance of the Carthaginians, and that people sent a vast fleet and army under a general named Hamilcar, who laid siege to Himera, B.C. 480. Theron, however, was able to maintain possession of that city until the arrival of Gelyn with an army of 50,000 foot and 5000 horse to his relief, with which, though vastly inferior to the Carthaginian forces, he attacked and totally defeated the army of Hamilcar. This great victory, which was contemporaneous with the battle of Salamis, raised Gelyn to the highest pitch of reputa-
tion, and came near uniting all the Sicilian Greeks than those of Salamis and Plataea among their continental brethren. The vast number of prisoners taken at Himera and distributed as slaves among the cities of Sicily added greatly to their wealth and resources, and the opportunity was taken by many of them to erect great public works, which continued to adorn them down to a later period (Diod. xi. 25).

Gelyn did not long survive his great victory at Himera: but he transmitted his power unimpaired to his brother Hieron. The latter, indeed, though greatly inferior to Gelyn in character, was in some respects even superior to him in power: and the great naval victory by which he relieved the Cumaens in Italy from the attacks of the Carthag-
inians and Tyrrhenians (B.C. 474) earned him a well-merited reputation throughout the Greek world. At the same time the rule of Hieron was extremely oppressive to the Chalcidic cities of Sicily, the power of which he broke by expelling all the citizens of Naxos and Catana, whom he compelled to remove to Leontini, while he repeopled Catana with a large body of new inhabitants, at the same time charging that he had continued to reign at Agrigentum until his death in B.C. 472, but his son Thrasydæus, who succeeded him, quickly incurred the enmity of the citizens, who were enabled by the assistance of Hieron to expel him,
SICILIA.

and were thus restored to at least nominal freedom. A similar revolution occurred a few years later at Syracuse, where, on the death of Hieron (B.C. 467), the power passed into the hands of Thrasybulus, whose violent and tyrannical proceedings quickly excited an insurrection among the Syracusans. This became the signal for a general revolt of all the cities of Sicily, who united their forces with those of the Syracusans, and succeeded in expelling Thrasybulus from his strongholds of Ortigia and Acharnads (Diod. xi. 67, 68), and thus driving him from Sicily.

The fall of the Geloan dynasty at Syracuse (B.C. 466) became for a time the occasion of violent internal dissensions in most of the Sicilian cities, which in many cases broke out into actual warfare. But after a few years these were terminated by a general congress and compromise, B.C. 461; the exiles were allowed to return to their respective cities: Camarina, which had been destroyed by Gela, was repopulated and became once more a flourishing city; while Catana was restored to its original Chalcidian citizens, and resumed its ancient name (Diad. xi. 76). The tranquillity thus re-established was of unusual permanence and duration; and the half century that followed was a period of the greatest prosperity for all the Greek cities in the island, and was doubtless that when they attained (with the exception of Syracuse) their highest degree of opulence and power. This is distinctly stated by Diochirus (L. c.) and is remarkably confirmed by the still existing monuments,—all the greatest architectural works being referable to this period. Of the form of government established in the Sicilian cities at this time we have little information, but it seems certain that a democratic constitution was in almost all instances substituted for the original oligarchies.

But prosperous as this period (B.C. 461—409) undoubtedly was, it was by no means one of an unbroken tranquillity. It was disturbed in the first instance by the ambitious schemes of Ducetius, a Sicilian chief, who endeavoured to organise all the Sicels of the interior into one confederacy, which should be able to make head against the Greek cities. He at the same time founded a new city, to which he gave the name of Palice, near the sacred fountain of the Palici. But these attempts of Ducetius, remarkable as the only instance in the whole history of the island in which we find the Sicels attempting to establish a political power of their own, were frustrated by his defeat and banishment by the Syracusans in B.C. 451; and though he once more returned to Sicily and endeavoured to establish himself on the N. coast of the island, his projects were interrupted by his death, B.C. 445. (Diad. xi. 88, 90—92, xii. 8, 29.) He found no successor; and the Sicels of the interior ceased to be formidable to the Greek cities. Many of their towns were actually reduced to subjection by the Syracusans, while others retained their independent position; but the operation of Hellenic influences was gradually diffusing itself throughout the whole island.

The next important event in the history of Sicily is the great Athenian expedition in B.C. 415. Already, at an earlier period, soon after the outbreak of the Peloponnesian war, the Athenians had inter- fered in the affairs of Sicily, and, in B.C. 427, had sent a squadron under Aches and Charcoades to support the Ionian or Chalcidian cities in the island, which were threatened by their more powerful Doric neighbours. But the operations of these commanders, as well as of Eurymedon and Sophocles, who followed them in B.C. 425 with a large force, were of an unimportant character, and in B.C. 424 a general pacification of the Greek cities in Sicily was brought about by a congress held at Gela (Thuc. iv. 58, 63). But the peace thus concluded did not remain long unbroken. The Syracusans took advantage of the intertine dissensions at Leontini to expel the democratic party from that city: while the Selinuntines were engaged in war with their non-Hellenic neighbours the Segestans, whom they pressed so hard that the latter were forced to apply for assistance to Athens. The Leontine exiles also sued for aid in the same quarter, and the Athenians, who were at this time at the height of their power, sent out an expedition on the largest scale, nominally for the protection of their allies in Sicily, but in reality, as Thucydides observes, in hopes of making themselves masters of the whole island (Thuc. vi. 65). It is impossible here to relate in detail the proceedings of that celebrated expedition, which will be more fully noticed in the article SYRACUSAE, and are admirably related in Grote's History of Greece, vol. viii. ch. 58—60. Its failure may be attributed in great measure to the delays and inactivity of Nicias, who lingered at Catana, instead of proceeding once to besiege Syracuse itself, and thus gave the Syracusans time to strengthen and enlarge their fortifications, at the same time that they revived the courage of their allies. The siege of Syracuse was not actually commenced till the spring of 414 B.C., and it was continued till the month of September, 413 B.C., with the most unremitting exertions on both sides. The Syracusans were supported by the chief Dorian cities in the island, with the exception of Agrigentum, which stood aloof from the contest, as well as by a portion of the Sicel tribes: but the greater part of those barbarians, as well as the Chalcidian cities of Naxos and Catana and the Segestans, furnished assistance to the Athenians (Thuc. vii. 57, 59). The total defeat of the Athenian armament (by far the most formidable that had been seen in Sicily since that of the Carthaginians under Hamilcar), seemed to give an irresistible predominance to the Dorian cities in the island, and to Syracuse especially. But it was not long before they again found themselves threatened by a still more powerful invader. The Selinuntines immediately took advantage of the failure of the Athenians to renew their attacks upon their neighbours of Segesta, and the latter, fecling their inability to cope with them, now applied for protection to Carthage. It is remarkable that we hear nothing of Carthaginian objects of war in the affairs of Sicily from the time of the battle of Himera until this occasion, and they seem to have abandoned all ambitious projects connected with the island, though they still maintained a footing there by means of their subject or dependent towns of Panormus, Motya, and Soluntum. But they now determined to avail themselves of the opportunity offered them, and sent an armament to Sicily, which seemed light that of the Athenians, calculated not so much for the relief of Segesta as for the conquest of the whole island. Hannibal had already, according to Hamilcar who had been slain at Hinera, landed at Lilybaeum, in B.C. 409, with an army estimated at 100,000 men and marching straight upon Selinus, laid siege a once to the city. Selinus was at this
time, next to Agrigentum and Syracuse, probably the most flourishing city in Sicily, but it was wholly unprepared for defence, and was taken after a siege of only a few days, the inhabitants put to the sword or made prisoners, and the walls and public buildings razed to the ground (Diod. xiii. 54—58).

From thence Hannibal turned his arms against Himera, which was able to protract its resistance somewhat longer, but eventually fell also into his power, when in order to avenge himself for his grandfather's defeat, he put the whole male population to the sword, and so utterly destroyed the city that it was never again inhabited (Fl. xiii. 59—62).

After these exploits Hannibal returned to Carthage with his fleet and army. But his successes had now awakened the ambition of the Carthaginian people, who determined upon a second invasion of Sicily, and in b. c. 406 sent thither an army still larger than the preceding, under the command of Hannibal. Agrigentum, at this time at the very highest point of its power and opulence, was on this occasion the first object of the Carthaginian arms, and though the citizens had made every preparation for defence, and in fact were enabled to prolong their resistance for a period of eight months they were at length compelled by famine to surrender. The greater part of the inhabitants evacuated the city, which shared the fate of Selinus and Himera (Diod. xiii. 81, 91).

Three of the principal Greek cities in Sicily had thus already fallen, and in the spring of b. c. 405, Himilco, who had succeeded Hannibal in the command, advanced to the attack of Gela. Meanwhile the power of Syracuse, upon which the other cities had in a great degree relied for their protection, had been in great measure paralysed by internal dissensions: and Dionysius now availed himself of these to raise himself to the possession of despotic power. But his first operations were not more successful than those of the generals he replaced, and after an ineffectual attempt to relieve Gela, he abandoned both that city and Camarina to their fate, the inhabitants of both emigrating to Leontini. Dionysius was able to fortify himself in the supreme power at Syracuse, and hastened to conclude peace with Himilco upon terms which left the Carthaginians undisputed masters of nearly half of Sicily. In addition to their former possessions, Selinus, Himera, and Agrigentum were to be subject to Carthage, while the inhabitants of Gela and Camarina were to be allowed to return to their native cities on condition of becoming tributary to Carthage (Diod. xiii. 114.)

From this time Dionysius reigned with undisputed authority at Syracuse for a period of 38 years (b. c. 405—367), and was able at his death to transmit his power unimpaired to his son. But though he raised Syracuse to a state of great power and prosperity, and extended his dominion over a large part of Sicily, as well as of the adjoining part of Italy, his reign was marked by great and sudden changes of fortune. Though he had dexterously availed himself of the Carthaginian invasion to establish his power at Syracuse, he had no sooner consolidated his own authority than he began to turn his thoughts to the expulsion of the Carthaginians from the island. His arms were, however, directed in the first instance against the Chalcidian cities of Sicily, Naxos, Catana, and Leontini, all of which successively fell into his power, while he extended his dominions over a great part of the Sicilian communities of the interior. It was not till he had effected these conquests, as well as made vast preparations for war, by enlarging and strengthening the fortifications of Syracuse and building an enormous fleet, that he proceeded to declare war against Carthage, p. c. 397. His first successes were rapid and sudden; almost all the cities that had recently been added to the Carthaginian dominion declared in his favour, and he carried his victorious arms to the extreme W. point of Sicily, where Motya, one of the chief strongholds of the Carthaginian power, fell into his hands after a long siege. But the next year (p. c. 396) the state of affairs changed. Himilco, who lingered in Sicily with a large army, not only recovered Motya and other towns that had been taken by Dionysius, but advanced along the N. coast of the island to Messana, which he took by assault and utterly destroyed. Dionysius was even compelled to shut himself up within the walls of Syracuse, where he was closely besieged by Himilco, but a sudden pestilence that broke out in the Carthaginian camp reduced them in their turn to such straits that Himilco was glad to conclude a secret capitulation and retire to Africa (Diod. xiv. 47—76). Hostilities with Carthage were renewed in p. c. 393, but with no very decisive result, and the peace concluded in the following year (p. c. 392) seems to have left matters in much the same state as before. In p. c. 383 war again broke out between Dionysius and the Carthaginians, but after two great battles, with alternate success on both sides, a fresh treaty was concluded by which the river Halycus was established as the boundary between the two powers. The limit thus fixed, though often infringed, continued to be recognised by several successive treaties, and may be considered as forming often from henceforth the permanent line of demarcation between the Carthaginian and the Greek power in Sicily (Diod. xv. 17).

(For a more detailed account of the reign of Dionysius and his wars with the Carthaginians, see the article DIONYSIUS in the Biography. Dict. Vol. I. p. 1033. The same events are fully narrated by Mr. Grote, vol. x. ch. 81, 82, and vol xi. ch. 83.)

Several important towns in Sicily derived their origin from the reign of the elder Dionysius and the revolutions which then took place in the island. Among these were Tauromenium, which arose in the place and not far from the site of the ancient Naxos, which had been finally destroyed by Dionysius: Tyndaris, founded by the Syracusan despoil of the N. coast of the island, with a body of colonists principally of Messinian origin; Alaksa, in the same part of Sicily, founded by the Sicel chief Archonides; and Lilybaeum, which grew up adjoin ing the port and promontory of that name, a few miles S. of Motya, the place of which it took as one of the principal Carthaginian ports and strongholds in the island. The power of Syracuse over the whole of the eastern half of Sicily appeared to be effectually consolidated by the elder Dionysius, but it was soon broken up by the feeble and incompetent government, of his son. Only ten years after the death of his father (p. c. 357), Dion landed in Sicily at the head of only a few hundred mercenary troops, and raised the standard of revolt; all the dependent subjects of Syracuse soon flocked round it, and Dion was welcomed into the city itself by the acclamations of the citizens. Dionysius himself was absent at the time, but the island-citadel of Ortigia was held by
his garrison, and still secured him a footing in Sicily. It was not till after a long blockade that his son Apollodorus was compelled to surrender it into the bands of Dion, who thus became master of Syracuse, n. c. 336. But the success of Dion was far from restoring liberty to Sicily, or even to the Carthaginians: the despotic proceedings of Dion excited universal discontent, and he was at length assassinated by Callipus, one of his own officers, n. c. 333. The period that followed was one of great confusion, but with which we are very imperfectly acquainted. Successive revolutions occurred at Syracuse, during which the younger Dionysius found means to effect his return, and became once more master of Ortygia. But the rest of the city was still held by a leader named Hicetas, who called in the assistance of the Carthaginians. Ortygia was now besieged both by sea and land by a Carthaginian fleet and army. It was in this state of things that a party at Syracuse, equally opposed to Hicetas and Dionysius, had recourse to the parent city of Corinth, and a small force of 1200 soldiers was sent to their assistance under Timoleon, n. c. 344. His successes were rapid and brilliant; and within less than two months from his landing in Sicily, he found himself unexpectedly in the possession of Ortygia, which was voluntarily surrendered to him by Dionysius. Hicetas and the Carthaginians were, however, still masters of the rest of the city; but mistrust and division had divided their defence: the Carthaginian general Magon suddenly withdrew his forces, and Timoleon easily wrested the city from the hands of Hicetas, n. c. 343.

Syracuse was now restored to liberty and a democratic form of government; and the same change was quickly extended to the other Greek cities of Sicily. These had thrown off the yoke of Syracuse during the disturbed period through which they had recently passed, but had, with few exceptions, fallen into the hands of local despots, who had established themselves in the possession of absolute power. Such were, Hicetas himself at Leontini, Mamercus at Catana, and Hippon at Messana, while minor despots, also of Greek origin, had obtained in like manner the chief power in the Sicilian cities of Apollonia, Centuripa and Acyrium. Timoleon now turned his arms in succession against all these petty rulers, and overthrew them one after another, restoring the city in each case to the possession of independent and free self-government. Meanwhile the Greeks had been threatened with a more general danger from a fresh Carthaginian invasion; but the total defeat of their generals Hasdrubal and Hamilcar at the river Crimins (n. c. 340), one of the most brilliant and decisive victories ever gained by the Greeks over the Carthaginians, put an end to all fears from that quarter; and the peace that followed once more established the Halycus as the boundary between the two nations (Diod. xv. 17).

The restoration of the Sicilian Greeks to liberty by Timoleon, was followed by a period of great prosperity. Many of the cities had suffered severely, either from the exactions of their despotic rulers, or from the troubles and revolutions that had taken place, but there were now returning with fresh colonists from Corinth, and other cities of Greece, who poured into the island in vast numbers; the exiles were everywhere restored, and a fresh impulse seemed to be given to the development of Hellenic influences in the island. Unfortunately this period of reviving prosperity was of short duration. Only twenty three years after the battle of the Crimins, a despotism was again established at Syracuse by Agathocles (n. c. 317), an adventurer who raised himself to power by very much the same means as the elder Dionysius, whom he resembled in energy and ability, while he even surpassed him in sanguinary and unsparing severity. The reign of Agathocles (n. c. 317 289) was undoubtedly a period that exercised the most disastrous influence over Sicily; it was occupied in great part with internal dissensions and civil wars, as well as by long continued struggles between the Greeks and Carthaginians. Like Dionysius, Agathocles had, in the first instance, made use of Carthaginian support, to establish himself in the possession of despotic power, but as he gradually extended his aggressions, and reduced one Greek city after another under his authority, he in his turn came into fresh collision with Carthage. In n. c. 310, he was defeated at the river Himera, near the hill of Economas, by the Carthaginian general Hamilcar, in so decisive a battle that it seemed to extinguish all his hopes; his allies and dependent cities quickly threw off his yoke, and Syracuse itself was once more blockaded by a Carthaginian fleet. In this extremity Agathocles adopted the during resolution of transporting his army to Africa, and carrying on the war at the very gates of Carthage. During his absence, which was protracted for nearly four years (310 307) Hamilcar had brought a large part of Sicily under the dominion of Carthage, but was foiled in all his attempts upon Syracuse, and at length was himself taken prisoner in a night attack, and put to death. The Agrigentines, whose name had been scarcely mentioned for a long period, but whose city appears to have been revived under Timoleon, and now again appears as one of the most considerable in Sicily, made a fruitless attempt to raise the banner of freedom and independence, while the Carthagian exiles Democrates, at the head of a large army of exiles and mercenaries, maintained a sort of independent position, aloof from all parties. But Agathocles, on his return from Africa, concluded peace with Carthage, and entered into a compromise with Democrates, while he established his own power at Syracuse by a fearful massacre of all that were opposed to him. For the last twelve years of his reign (n. c. 301 289), his dominion seems to have been firmly established over Syracuse and a great part of Sicily, so that he was at liberty to carried out his ambitious schemes in the south of Italy and elsewhere.

After the death of Agathocles (n. c. 289), Sicily seems to have fallen into a state of great confusion; Syracuse apparently still retained its predominant position among the Greek cities, under a despot named Hicetas: but Agrigentum, which had also fallen into the hands of a despot named Phintias, was raised to a position that almost enabled it to dispute the supremacy. Phintias extended his dominion over several other cities, and having made himself master of Gela, utterly destroyed it, in order to found and people a new city at the mouth of the river Himera, to which he gave the name of Phintias. This was the last Greek city founded in Sicily. Meanwhile the Carthaginians were becoming more and more preponderant in the island, and the Greeks were at length led to invoke the assistance of Pyrrhus, king of Epirus, who was at this time carrying on war in Italy against the Romans. He readily listened to their overtures, and landed in
the island in the autumn of n. c. 278. Phintias was at this time dead, and Hieron had not long before been expelled from Syracuse. Pyrrhus therefore had no Greek adversaries to contend with, and was able to turn all his efforts against the Carthaginians. His successes were at first rapid and decisive: he wrested one town after another from the dominion of Carthage, took Panormus, which had long been the metropolis of their Sicilian possessions, and had never before fallen into the hands of a Greek invader, and carried by assault the strong fortresses of Erice and Eryx but he was foiled in an attack on Lilybaemus; jealousies and dissensions now arose between him and his Sicilian allies, and after little more than two years he was fain to return to Italy (n. c. 276), abandoning all his projects upon Sicily (Diod. Exc. Iovac. xxii. 10, pp. 497—499).

The departure of Pyrrhus left the Sicilian Greeks without a leader, but Hieron, who was chosen general by the Syracusans, proved himself worthy of the occasion. Meanwhile a new and formidable enemy had arisen in the Manetines, a band of Campanian mercenaries, who, having occasionally raised the treachery of the important city of Messana, and thence carried their arms over a considerable part of Sicily, and conquered and plundered many of its principal towns. Hieron waged war with them for a considerable period, and at length obtained so decisive a victory over them, in the immediate neighbourhood of Messana, that the city itself must have fallen, had it not been saved by the intervention of the Carthaginian general Hannibal. Hieron was now raised to the supreme power at Syracuse, and even assumed the title of king, n. c. 270. A few years after this we find him joining his arms with the Carthaginians, to effect the expulsion of the Manetines, an object which they would doubtless have accomplished had not that people appealed to the protection of Rome. The Romans, who had recently completed the conquest of Italy, gladly seized the pretext for interfering in the affairs of Sicily, and espoused the cause of the Manetines. Thus began the First Punic War, n. c. 264.

It is impossible here to relate in detail the events of that long-protracted struggle, during which Sicily became for twenty-three years the field of battle between the Romans and Carthaginians. Hieron, who had found himself at the beginning engaged in active hostilities with Rome, after sustaining several defeats, and losing many of his subject towns, wisely withdrew from the contest, and concluded in n. c. 263 a separate peace with Rome, by which he retained possession in full sovereignty of Syracuse and its territory, including the dependent towns of Acrae, Helorus, Netum, Mecara, and Leontini, together with Tauromenium (Diod. xxiii. Exc. II. p. 502). From this time to the day of his death Hieron remained the faithful ally of the Romans, and retained the sovereign power at Syracuse undisturbed. In the rest of Sicily all trace of independent action on the part of the several Greek cities disappears: Agrigentum was indeed the only one of these cities in the island which appears to have retained any considerable importance: it was not taken by the Roman consuls till after a long and obstinate siege, n. c. 262, and was severely punished for its protracted resistance, the inhabitants being sold as slaves. Agrigentum indeed at a later period fell again into the hands of the Carthaginians, n. c. 255, but on the other hand the Romans made themselves mas-
speculators, who bought up large tracts of land, which they cultivated solely by means of slaves, so that the free population of the island became materially diminished. The more mountaneous portions of the island were given up to shepherds and herdsmen, all likewise slaves, and accustomed to habits of rapine and plunder, in which they were encouraged by their masters. At the same time the number of wealthy proprietors, and the extensive export trade of some of the towns, maintained a delusive appearance of prosperity. It was not till the outbreak of the Servile War in n. c. 135 that the full extent of these evils became apparent, but the frightful state of things then revealed sufficiently shows that the causes which had produced it must have been long at work. That great outbreak, which commenced with a local insurrection of the slaves of a great proprietor at Enna, named Damophilus, and was headed by a Syrian slave of the name of Eunus, quickly spread throughout the whole island, so that the slaves are said to have mustered 200,000 armed men. With this formidable force they defeated in succession the armies of several Roman praetors, so that in n. c. 134, it was thought necessary to send against them the consul Fulvius Flaccus, and it was not till the year n. c. 132 that their strongholds of Tauromenium and Enna were taken by the consuls P. Rupilius (Diod. xxxv. Exc. Phot., Exc. Vales.) The insurrection was now finally quelled, but the state of Sicily had undergone a severe shock, and the settlement of its affairs was confided to P. Rupilius, together with ten commissioners, who laid down a code of laws and rules for its internal government which continued to be observed in the days of Cicero (Cic. Ferr. ii. 16).

But the outbreak of the second Servile War, under Sulpicius and Athoecion, less than thirty years after the termination of the former one (n. c. 103), and the fact that the slaves were again able to maintain the contest against three successive consuls till they were finally vanquished by M. Aquilus, in n. c. 100, sufficiently proves that the evils in the state of society had been but imperfectly remedied by Rupilius; nor can we believe that the condition of the island was in reality altogether so flourishing as it is represented by Cicero during the interval which elapsed between this Servile War and the praetorship of Verres, n. c. 73. But the great natural resources of Sicily and its important position as the granary of Rome undoubtedly enabled it to recover with rapidity from all its disasters. The elder Cato had called it the store-room (cella penaria) of the Roman state, and Cicero observes that in the great Social War (n. c. 90—89) it supplied the Roman armies not only with food, but with clothing and arms also (Cic. Ferr. ii. 2). But the praetorship of Verres (n. c. 72—70 B.C.) inflicted a calamity upon Sicily scarcely inferior to the Servile wars that had so recently devastated it. The rhetorical expressions of Cicero must not indeed he always understood literally; but with every allowance for exaggeration, there can no doubt that the evils resulting from such a government as that of Verres were enormous; and Sicily was just in such a state as to suffer from them most severely. The eration of Cicero against Verres conveys to us much curious and valuable information as to the condition of Sicily under the Roman republic as well as the administration and system of government of the various provinces generally. Sicily at that time formed but one province, under the government of a praetor or pro-praetor, but it had always two quвестors, one of whom resided at Syracuse, the other at Lilybaeum. This anomaly (for such it appears to have been) probably arose from the different parts of the island having been reduced into the form of a province at different periods. The island contained in all above sixty towns which enjoyed municipal rights: of these, three only, Messana, Tauromenium, and Netum, were allied cities (civitates foederatae), and thus enjoyed a position of nominal independence; five were exempt from all fiscal burdens and from the ordinary jurisdiction of the Roman magistrates (civitates immunes et liberae): the rest were in the ordinary position of provincial towns, but retained their own magistrates and municipal rights, as well as the possession of their respective territories, subject to the payment of a tenth of their produce to the Roman state. These tenth, which were paid in kind, were habitually farmed out, according to principles and regulations laid down in the first instance by Hieron, king of Syracuse, and which therefore continued to be known as the Lex Hieronica. For judicial purposes, the island appears to have been divided into districts or consuentus, but the number of them is not stated; those of Syracuse, Agrigentum, Lilybaeum, and Panormus are the only ones mentioned.

Sicily took little part in the Civil War between Caesar and Pompey. It was at first held by M. Cato on behalf of the latter, but abandoned by him when Pompey himself had quitted Italy, and was then occupied by Curio, as pro-praetor, with four legions (Caes. B. C. i. 30, 31). Caesar himself visited it previous to his African war, and it was from Lilybaeum that he crossed over with his army into Africa (Hirt. B. Afr. 1). After the death of Caesar, it fell into the hands of Sextus Pompeius, whose powerful fleet enabled him to defy all the efforts of Octavian to recover it, and was at length secured to him by the peace of Misenum, n. c. 39, together with Sardinia and Corsica. But Octavian soon renewed his attempts to dispossess him, and though he sustained repeated defeats at sea, and lost a great part of his fleet by a storm, the energy and ability of Agrippa enabled him to triumph over all obstacles; and the final defeat of his fleet at Naulochus compelled Pompeius to abandon Sicily, and take refuge in the east (Appian, B. C. v. 77—122; Dint. C输入。xix. 1—17). There seems no doubt that the island suffered severely from this contest, and from the rapacity or excesses of Sextus Pompeius; Strabo distinctly ascribes its decayed condition in his time principally to this cause (Strab. vi. pp. 270, 272). Augustus made some attempts to relieve it by sending colonies to a few cities, among which were Tauromenium, Catana, Syracuse, Therma, and Siracusa (Strab. vii. 27, Thuc. iii. 8, s. 14); but the effect thus produced was comparatively small, and Strabo describes the whole island as in his time, with few exceptions, in a state of decay, many of its ancient cities having altogether disappeared, while others were in a declining condition, and the interior was for the most part given up to pasturage, and inhabited only by herdsmen (Strab. L. c.)

Augustus appears to have greatly remodelled the internal administration of Sicily: so that the condition of most of the towns had undergone a change between the time of Strabo (Strab. vii. 27, Ph. iii. 8, s. 14); but the effect thus produced was comparatively small, and Strabo describes the whole island as in his time, with few exceptions, in a state of decay, many of its ancient cities having altogether disappeared, while others were in a declining condition, and the interior was for the most part given up to pasturage, and inhabited only by herdsmen (Strab. L. c.)
forward a law to admit them without distinction to the Roman franchise (Cic. ad Att. xiv. 2), but neither of these measures was accomplished; and we learn from Pliny that Messana was in his day the only city in the island of which the inhabitants possessed the Roman citizenship; three others, Catania, Notium, and Segesta, received the jus Latini, while all the others (except the colonies already mentioned) were in the ordinary condition of "civitates stipendiarii." (Plin. iii. s. 14.) We hear very little of Sicily under the Empire; but it is probable that it never really recovered from the state of decay into which it had fallen in Strabo's time. Almost the only mention of it in history is that of an outbreak of slaves and banditti in the reign of Gallienus which seems to have resembled on a smaller scale the Servile wars that had formerly devastated it (Treb. Poll. Gallien. 4). The increasing importance of the supply of corn from Africa and Egypt renders it probable that that from Sicily had fallen off, and the small number of remains of the imperial period still existing in the island, though so many are preserved from a much earlier date, seems to prove that it could not then have been very flourishing. At a late period of the Empire, also, we find very few names of towns in the Itineraries, the lines of road being carried through stations or "mansiones" otherwise wholly unknown, a sufficient proof that the neighbouring towns had fallen into decay. (Itin. Ant. pp. 86-98.) In the division of the provinces under Augustus, Sicily was assigned to the senate, and was governed by a pro-consul; at a later period it was considered as a part of Italy, and was governed by a magistrate named a Consularis, subject to the authority of the Vicarius Urbis Romae. (Vott. Digm. ii. p. 64; and Eicking, ad loc.)

Its insular position must have for a considerable time preserved Sicily from the ravages of the barbarians who devastated Italy towards the close of the Western Empire. Alaric indeed attempted to cross over the straits, but was foiled by a tempest. (Hist. Miscell. xiii. p. 535.) But Genseric, being master of a powerful fleet, made himself master of the whole island, which was held by the Vandals for a time, but subsequently passed into the hands of the Goths, and continued attached to the Gothic kingdom of Italy till it was conquered by Belisarius in A.D. 535. It was then united to the Eastern Empire, and continued to be governed as a dependency by the Byzantine emperors till the ninth century, when it fell into the hands of the Saracens or Arabs. That people first landed at Mazara, in the W. of the island in A.D. 827, and made themselves masters of Agrigentum; but their progress was vigorously opposed. They took Messana in 831, and Panormus in 835, but it was not till 878 that Syracuse, the last fortress in the island, fell into their hands. The island continued in the possession of the Saracens till the middle of the eleventh century, when it was partially recovered by the Byzantine emperors with the assistance of the Normans. But in 1061 the Norman Roger Guiscard invaded Sicily on his own account, and, after a long struggle, wholly reduced the island under his dominion. It has since remained attached, with brief exceptions, to the crown of Naples, the monarch of which bears the title of King of Sicily.

The extensive ruins of antiquity in Sicily fully confirm the inference which we should draw from the statements of ancient historians, as to the prosperity and opulence of the island under the Greeks, and its comparatively decayed condition under the Romans. The ruins of the latter period are few, and for the most part unimportant, the exceptions being confined to the three or four cities which we know to have received Roman colonies; while the temples, theatres, and other edifices from the Greek period are numerous and of the most striking character. No city of Greece, with the exception of Athens, can produce structures that vie with those of which the remains are still visible at Agrigentum, Selinus and Segesta. At the same time the existing relics of antiquity, especially coins and inscriptions, strongly confirm the fact that almost the whole population of the island had been gradually Hellenised. It is evident that the strong line of demarcation which existed in the days of Thucydides between the Greek cities and those of non-Hellenic or barbarian origin had been to a great degree effaced before the island passed under the dominion of Rome. The names of Sicilian cities mentioned by Cicero in his Vereine orations are as purely Greek where they belong to cities of Sicilian origin, such as Centuripia and Agrarium, or even to Carthaginian cities like Panormus and Libybaeon, as are those of Syracuse and Agrigentum. In like manner we find coins with Greek legends struck by numerous cities which undoubtedly never received a Greek colony, such as Aluesa, Mennanum, and many others. It is probable indeed that during the Roman Republic the language of the whole island (at least the written (or cultivated language) was Greek, which must, however, have gradually given way to Latin under the Empire, as the Sicilian dialect of the present day is one of purely Latin origin, and differs but slightly from that of the south of Italy. Of the language of the ancient Sicels we have no trace at all, and it is highly probable that it was never used as a written language.

III. Topography

The general description of the physical features of Sicily has been already given. But it will be necessary to describe them in more detail. The E. coast extending from Cape Pelorus to Pachynus, consists of three portions of a very different character. From Pelorus to Tancremenum, a distance of about 40 miles, it is closely bordered by the chain of mountains called the Mtns Neptunii, the slopes of which descend steeply to the sea, forming a very uniform line of coast, frurowed by numerous small torrents. Two of the small headlands between these valleys appear to have borne the names of Drypnamn (Plin.) and Argennum (Ptol.), but their identification is quite uncertain. S. of Tuncerorum here descends to the mouth of the Aesculapius, and the coast becomes more rugged, being fringed with headlands and small precipices. From thence to the promontory on the west of Siracusa, the coast is fringed with small coves and fishing places. From Siracusa to the neck of the island, the coast is formed by headlands and small precipices. From thence it becomes more rugged, and the coast is formed by small precipices and small rocky coves. The promontory on the north-west point of the island, Stagira (or Stilbuth), was taken by the Samnites in 676 B.C., and was afterwards the capital of the island. The neck of the island is fringed with precipices and small coves.
SICILIA.

promontory, now Cape di Sta Croce (Σαρωνικος ἄκρας), Stra.I. vi. p. 267), within which is the Niphonian Port (ἀρχαῖος Σημειωμένος, Scyl. p. 4), evidently the harbour of Ampsiata, one of the finest natural harbours in the island. Between this and Syracuse is the remarkable peninsular promontory of Thalusa (Μαγνης), while immediately S. of Syracuse occurs the remarkable landlocked bay called the Great Harbour of that city, and the rocky headland of Premnium which bounds it on the S. From this point to Cape Pachynus no ancient names have been preserved to us of the headlands or harbours. From Cape Pachynus to the site of Gela the coast is low but rocky. Along this line must be placed the port of Ulysses (Portus Odysseae) mentioned by Cicero, and the promontory of Ulysses of Ptolemy, both apparently in the immediate neighbourhood of Cape Pachynus [Pachynus].

The Baera promontory (Βαρηα ἄκρα) of Ptolemy, which he places further W., is wholly unknown, as is also the port of Causcaena of the same author (Καυκαεα Λίμυρα, Ptol. iii. 4, § 7). The remainder of the S. coast of Sicily from Gela to Lilybaeum presents on the whole a very uniform character; it has few or no natural ports, and no remarkable headlands. It is bounded for the most part by hills of clay or soft limestone, generally sloping gradually to the sea, but sometimes forming cliffs of no great elevation. The celebrated promontory of Lilysbeum is a low rocky point, and its famous port, though secure, is of small extent. N. of Lilybaeum was the promontory of Aegithallus, with the adjacent low islands, on one of which the city Motya was built; while the more considerable islands of the Aegates lay a few miles further to the W., and the promontory of Drepanos adjoining the city of the same name formed the NW. point of Sicily. It is remarkable that no ancient name is preserved to us for the deep gulf of Castellamare which occurs on the coast between Trapani and Palermo, though it is one of the most remarkable features of the N. coast of Sicily; nor are the two striking headlands that bound the Bay of Palermo itself known to us by their ancient names. The bold and insulated hill of Monte Sta Rosalia is, however, the ancient Ercole. The northern coast of Sicily is bold and varied, formed by offshoots and ridges of the northern chain of mountains descending abruptly to the sea; hence it was always a rugged and difficult line of communication across the island, which the subsequent straits that interrupt it are mentioned to us by their ancient names, till we come to that of Mylae adjoining the town of the same name (Milazzo), and the Phalachian Promontory (Ptol. iii. 4, § 2), apparently the Cape di Rassocolmo within a few miles of Cape Pelorus.

From the triangular form of Sicily and the configuration of the mountain chains which traverse it, it is evident that it could not have any rivers of importance. Most of them indeed are little more than mountain torrentswelling with great rapidity after violent storms or during the winter rains, but nearly, if not wholly, dry during the summer months. The most important rivers of the island are: 1. The Symaethus (Simeto o Girarretta), which rises in the northern chain of mountains (the Mons Nebrodes), and flows to the S. and SE. round the foot of Aetna, falling into the sea about 6 miles S. of Catania. It receives several tributaries, of which the Dattano is certainly the ancient Chryssas, that flowed near the city of Assorus, while the Adrianus of Stephanus can be no other than the northern or main branch of the Symaethus itself. The Cyamossoros (Καυσώσωρος) of Polybius, which appears to fall near the neighbourhood of Centuripa, most probably be the branch now called fianne Salso, which joins the Simeto just below Centuripi. 2. The Achines or Asines (F. Cantara), which rises very near the Symaethus, but flows along the northern foot of Aetna, and falls into the sea just below Taormina. 3. The Himera (F. Salso), the most considerable of two rivers which bore the same name, rising in the Monte Madonina (Mons Nebrodes) only about 15 miles from the N. coast, and flowing down to the sea near the extreme breadth of Sicily, and falls into the sea at Alcata (Palermo). 4. The Halyclus (Platani), so long the boundary between the Carthaginian and Greek territories in the island, is also a considerable stream; it rises not far from the Himera, but flows to the SW., and enters the sea between Agrigentum and Selinus, close to the site of Heraclea Minoa. 5. The Hypsas (Belici), falling into the sea on the S. coast, a few miles E. of Selinus; and 6, the Anapus (Anapo), which flows under the walls of Syracuse and falls into the great harbour of that city. It is unlike all the others in being a clear stream, supplied from subterranean sources. The same character belongs still more strongly to its tributary the Cyane, which has a considerable volume of water, though its whole course does not exceed two miles in length.

The minor rivers of Sicily which are mentioned either in history or by the geographers are numerous, but in many cases are very difficult to identify. Beginning at Cape Pachynus and proceeding along the coast westward, we find: 1, the Motycamnus (Moraxanos, Ptol. iii. 4, § 7), evidently so called from its flowing near Motycia, and therefore probably the stream now called Fiume di Siceli; 2, the Hirminius of Pilny, probably the Fiume di Raguza, very near the preceding; 3, the Hipparis; and 4, the Oanes, two small streams which flowed under the walls of Camarina, now called the F. di Camarana and Fruscadori; 5, the Gela or Belas, which gave name to the city of Gela, and must therefore be the Fiume di Terranova; 6, the Acharnas, a small stream flowing under the walls of Agrigentum, to which it gave name, and receiving a tributary called the Hypsas (Drage), which must not be confounded with the more important river of the same name already mentioned; 7, the Camicius, probably the Fiume delle Canne, about 10 miles W. of Girgenti; 8, the Selinus, flowing by the city of that name, now the Madinusa; 9, the Mazara or Mazurus, flowing by the town of the same name, and still called Fiume di Mazara. Besides these Ptolemy mentions the Isuras and Sokconciliation, two names otherwise wholly unknown, and which cannot be placed with any approach to certainty. Equally uncertain is the more noted river Aciates, which is placed by Pilny in the same part of Sicily with the Mazara and Hypsa; but there is great confusion in his enumeration as well as that of Ptolemy. It is generally identified with the Dirillo, but this is situated in quite a different part of Sicily. The Achithnus of Ptolemy, which he places between Lilybaeum and Selinus, may be the Fiume di Marsala.

Along the N. coast, proceeding from Lilybaeum to Cape Pelorus, we meet with a number of small streams, having for the most part a short torrent.
like course, from the mountains to the sea. Their identification is for the most part very obscure and uncertain. Thus we find three rivers mentioned in connection with Segesta, and all of them probably flowing through its territory, the Porpor, Telmessos, and Crimessos or Crimissos. The last of these is probably the Fiume di S. Bartolomeo, about 5 miles E. of Segesta; the other two, which are mentioned only by Aelian (V. II. ii. 32), cannot be identified, though one of them is probably the Fiume Gorgera, which flows beneath Segesta itself, and falls into the F. di S. Bartolomeo near its mouth. But, to complicate the question still more, we are told that the names of Scamander and Sinios were given by the Trojan colonists to two rivers near Segesta; and the former name at least seems to have been really in use. (Strab. xiii. p. 608; Diod. xx. 71.) Proceeding eastward we find: 1, the Orthesus (Vib. Sequest. p. 15), still called the Oretso, a small stream flowing under the walls of Panormus; 2, the Eleuthers (Ealobrous, Pol. iii. 4, § 3), placed by Ptolemy between Panormus and Soluntum, and which must therefore be the Fiume di Bagaria; 3, the northern Himera, commonly identified with the Fiume di S. Leonardo, near Termini, but more probably the Fiume Grande, about 8 miles farther E. (Himera); 4, the Monalus (Morus, Pol.), between Cephaleum and Alasa, now the Polizza; 5, the Halesus or Alasaus, flowing beneath the city of Alasa, now the Pettino; 6, the Chydas (Xolas, Pol.), between Alasa and Alumentum; 7, the Timethus (Tybrus, Id.), between Agathyrra and Tyndaris; 8, the Helcon (Eumev, Id.), between Tyndaris and Mylae; 9, the Panicleus (Vib. Sequest.), which was near Mylae, or between that city and Messana (the nearer determination of these last four last is wholly uncertain); 10, the Melas of Ovid (Fast. iv. 476) is generally placed in the same neighbourhood, though without any obvious reason.

Along the E. coast the names may be more clearly identified. 1. The Onobalas of Appian (B. C. v. 109) is probably identical with the Aecines already noticed; 2, the Aesis, a very small stream, is the Fiume di Jacea; 3, the Amenamus, flowing through the city of Carata, is the Gideciolo; 4, the Teris is the Fiume di S. Leonardo, which flows from the Lake of Lentini; 5, the Panagias is the Porcori; 6, the Alanus is the Cantaro, a small stream flowing into the bay of Augusta. The Apanus and its confluence the Cynae have been already mentioned. S. of Syracusa occur three small rivers, memorable in the retreat of the Athenians: these are, 1, the Carytara (Cassitello); 2, the Erinus (Fiume di Acota); and 3, the Assinarus (Falconaro). A few miles S. of this was the Helorus, now called the Abiso, flowing by the city of the same name. No other stream occurs between this and Cape Pachynus.

Sicily contains no lakes that deserve the name; but there are a few ponds or marshy lagoons, of which the names have been preserved to us. Of the latter description were the Lysimelias Palus near Syracusa, and the Camarina Palus adjoining the city of the same name. The Lacs Palcorim, on the contrary, was a deep pond or basin of volcanic origin: while the small lake called by the poets Pergus or Pergusa is still extant in the neighbourhood of Enna. The Lago di Lentini, though much the most considerable accumulation of waters in Sicily, is not mentioned by any ancient author.

The towns and cities of Sicily were very numerous. The Greek colonies and their offshoots or dependencies have been already mentioned in relating the history of their settlement; but the names of all the towns so far as they can be ascertained will be here enumerated in geographical order, without reference to their origin, omitting only the places mentioned in the Itineraries, which were probably mere villages or stations. 1. Beginning from Cape Peloros and proceeding along the E. coast towards Cape Pachynus, we have: Messana, Tauromenium, Naxos, Acium, Catana and Syracuse. Triotium, destroyed at an early period, as well as Megara Hyblea, were situated between Catana and Syracuse. The Chalcidian colonies of Callipolis and Euroea, both of which disappeared at an early period, must have been situated on or near the E. coast of the island, and to the N. of Syracuse, but we have no further clue to their situation. S. of Syracuse, between it and Cape Pachynus, was Helorus, at the mouth of the river of the same name. 2. W. of Cape Pachynus, proceeding along the S. coast, were Camarina, Gela, Phintias, Agrigentum, Heraclea Minoa, Thymiae Selinium, Selinut, Mazara, and Lybium. Besides these the more obscure towns of Camicus, Caena, and Inyceum, the two former dependencies of Agrigentum, the latter of Selinus, must be placed on or near the S. coast of the island.

3. N. of Lilybaeum was Motya, which ceased to exist at a comparatively early period, and Drepanum (Trapani) at the NW. angle of the island. Between this and Panormus, were Erbyx at the foot of the mountain of the same name, and a short distance from the coast, the Emporium of Segesta, Hicara, and Cetaria. Proceeding eastward from the N. coast of the island, were Soluntum, Thermae, Himera, Cephaleodium, Alasa, Calacta, Agathyrra, Aluenta, Tyndaris, and Mylae.

The towns in the interior are more difficult to enumerate; with regard to some of them indeed we are at a loss to determine, even in what region of the island they were situated. For the purpose of enumeration it will be convenient to divide the island into three portions; the first comprising the western half of Sicily as far as the river Himera; and a line drawn from its sources to the N. coast of the other two, the N. and E. portions, being separated by the course of the river Dittaino and that of the Symaethus to the sea. 1. In the western district were Segesta and Haliciæae, the most westerly of the inland cities; Entella, on the river Hyppas, about midway between the two seas; Iata and Macella, both of which may probably be placed in the mountainous district between Entella and Panormus; Theocala, near Calatabellotta, in the mountains inland from the Thermae Selinium; Scheria, of very uncertain site, but probably situated in the same part of Sicily; Herdessa, in the neighbourhood of Agrigentum; Petra, near the sources of the W. branch of the Himera in the Modonia mountains; and Enngymi (Gangi), at the head of the Fiume Grande, the E. branch of the same river. Palopus must apparently be placed on the northern declivity of the same mountains, but further to the W.

A little to the E. of the Himera and as nearly as possible in the centre of the island, was situated the fortress of Enna (Castro Giovanni), so that the boundary line between the NE. and NW. regions may be conveniently drawn from thence. 2. In the NE. region were: Assorit and Atyrum,
SICILIA. NE. of Enna, but W. of the valley of the Symmec- thus; CENTURIA (Conturb), nearly due E. of Enna; AUTAEUM (Adurna), on the E. bank of the Symmecus, at the foot of Mount Aetna. MAJOR (which must not be confounded with the city of the same name near Syracuse), and AESNA, previously called INESSA, both situated on the southern slope of the same mountain. N. of Agyr- rium, on the southern slopes of the Mose Nebraedos were situated HERBIA, CAPTUM, and probably also GALLARIA; while on the northern declivities of the same mountains, fronting the sea, but at some distance inland, were placed APOLLONIA (probably Pollina), AMESTRATUS (Mistretta), ABAECAENUM, a few miles inland from Syracuse, and NOAE, probably NOARO. Three other towns, NEMARI, ICANA, and TISSA, may probably be assigned to this same region of Sicily, though their exact position cannot be determined. 3. In the SE. portion of Sicily, S. of the Symmecus and its tributary the Chrysas or Dittaino, were situated ERGETUM, MORGASTA, LEONTINI, and HYDRA: as well as MENAXAN and HERREUX: but of all these names Leontini (Lenntini) and Menaexum (Mimeo) are the only ones that can be identified with anything like certainty. In the hills W. of Syracuse were ACUEAE (Palazzolo), SIDAE (S. Gio. di Locomo), and CACYSUM (Cassaro): and W. of these again, in the direction towards Gela, must be placed the Her- riana Hydra, as well as ECHETIA, in the neigh- bourhood of Gran Michele. SW. of Syracuse, in the interior, were NETUM or NEETUM (Noto Vecchio), and MOTYCA (Medico), both of which are well known. The Syracusean colony of CASMANE must probably have been situated in the same district but its site has never been identified.

After going through this long list of Sicilian towns, there remain the following, noticed either by Cicerio or Pliny, as municipal towns, to the position of which we have no means of even approximating. The ACHERINI (Cic.), TYTRACINI (Cic.; Tytracensi, Plin.), Acestaei (Plin.), Eutum (Id.), Herbulenses (Id.), Semelitani (Id.), Talarences (Id.). Many of the above names are probably corrupt and merely false readings, but we are at a loss what to substitute. On the other hand, the existence of a town called MUNITRATUM or Mytratrum is attested by both Cicero and Pliny, and there seems no sufficient reason for rejecting it as identical with Amestratus, as has been done by many modern geographers, though its site is wholly uncertain. Equally un- known are the following names given by Pliny among the inland towns of the island: Aleta (Aleta), HYDRA or Lydia (Lybra or Liaia), PIATRUR (Piatro), CATUCA or CORTUCA (Kortoga or Kortogo), Legum or Letum (Legor or Lugor), Ancria (Agnura), Iou or Euna (Iou or Hen), and Euchrium (Eugelhio). It would be a waste of time to discuss these names, most of which are probably in their present form corrupt, and are all of them otherwise wholly unknown. On the other hand the existence of NACONOA, mentioned by Stephanus of Byzantium, but not noticed by any other writer, is confirmed by coins. The topography of Sicily is still very imperfectly known. The ruins of its more celebrated cities are indeed well known and have been often described; especially in the valuable work of the Duke of Serra di Falco (Antichità della Sicilia, 5 vols. fol. Palermo, 1834—1839), as well as in the well-known travels of Swinhorne, Sir R. Harne, &c. (Swinhorne's Travels in the Two Sicilies, 2 vols. 4to. Lond. 1783; Sir R. Harne's Classical Tour through Italy and Sicily, 2 vols. 8vo. Lond. 1819; St. Non, Voyage Pittoresque aux Parties et de la Sicile, 5 vols. fol. Paris, 1781; Baci, Previs del' Antichità della Sicilia, 8vo. Palerma, 1817, &c.): but the island has never been thoroughly explored by an antiquarian traveller, like those to whom we are indebted for our knowledge of Greece and Asia Minor. The valuable work of Cluverius (Sicilia Antiqua, fol. Lugd. Bat. 1619) must here, as well as for Italy, be made the foundation of all subsequent researches. But much valuable information is found in the more ancient work of Fazello, a Sicilian monk of the sixteenth century, as well as of his commen- tator Amico, and in the Topographical Dictionary of the latter author. (Thomas Fazelli de Rebus Siciliis Decades Duo, first edit. in fol. Panormi, 1558, republished with copious notes by Amico, 3 vols. fol. Catanae, 1749—1753; Amico, Lexicon Topographicum Siculum, 3 vols. 4to. Catanae, 1759). Much, however, still remains to be done. Many localities indicated by Fazello in the sixteenth century as presenting ancient remains have never (so far as we are aware) been visited by any modern traveller; no good map of the island exists, which can be trusted for topographical details, and there can be little doubt that a minute and careful examination of the whole country, such as has been made of the neighbouring island of Sardinia by the Chev. de la Marmor, would well reward the labours of the explorer. Even the ruins described by Sir R. Harne as existing in the neighbourhood of Stro Croce, or those situated near Vinicarici, a few miles N. of Cape Pachymus and commonly ascribed to Imachara, have never been examined in detail, nor has any clue been ob- tained to their identification. The Itineraries give several lines of route through the island, but many of the stations mentioned are wholly uncertain, and were probably never more than obscure villages or mere solitary posthouses. The first line of route (Itin. Ant. pp. 86—89) proceeds from Messana along the E. coast by Tauromen- num and Acium to Catana, and from thence strikes inland across the centre of the island to Agrigentum; the course of this inland route is wholly uncertain and the names of the three stations upon it, Capit- ionana, Gelasium Philosophiana and Pettisana, are entirely unknown. From Agrigentum it followed the line of coast to Lihyaeum; the stations given are Cena [Cena], Aitara, Ad Aquas (i. e. the Aquae Labohes or Thermae Salinantes), Ad Euturnium Lumarium, and Mazara; all except the 3rd and 5th of very uncertain site. A second route (Itin. Ant. pp. 89. 90) proceeds in the inverse direction from Lihyaeum to Agrigentum, and thence by a more sontherly line, through Calvisiana, Hybla, and Acmae (Palazzolo) to Syracuse, and from thence as before along the E. coast to Messana. A third line follows the N. coast of the island from Lihyaeum by Panormus to Messana. The stations on this line are better known and can for the most part be de- termined: they are, Depanse, Aquae Segestanae (near Segesta; Segesta; Segestum; Purtitare), Hycrea (Muro de Corini), Panormus, Soluntum, Thermae, Cephaloedum, Haleusus (Alaeus), Calacte, Agathium, Tyndaris, and Messana. A fourth route (Itin. Ant. p. 93) crossed the interior of the island from Thermae, where it branched off from the preceding, passing through Euna, Agyrium, Centu- ripa and Artem to Catana. A fifth gives us a line
of strictly maritime route around the southern ex-
tremity of the island from Agrigentum to Syracuse;
but with the exception of Piutis, which is probably
Phintias (Alcotta), none of the stations can be
identified. Lastly, a line of road was in use which
crossed the island from Agrigentum direct to Ta-
normus (Itin. Ant. p. 96), but none of its stations
are known, and we are therefore unable to determine
even its general course. The other routes given in
the Itinerary of Antoninus are only unimportant
variations of the preceding ones. The Tabula gives
only the one general line around the island (crossing,
however, from Calvissina on the S. coast direct to
Syracus), and the cross line already mentioned from
Thermæ to Catana. All discussion of distances
along the above routes must be rejected as useless,
until the routes themselves can be more accurately
determined, which is extremely difficult in so hilly
and broken a country as the greater part of the
interior of Sicily. The similarity of names, which
in Italy is so often a sure guide where all other in-
dications are wanting, is of far less assistance in
Sicily, where the long period of Arabic dominion has
thrown the nomenclature of the island into great
confusion.

E. H. B.

COIN OF SICILIA.

SICILIBBA or SICILIBRA (in the Geogr. Rav.
Sicibba, iii. 5), a place in Africa Propria (Itin. Ant.
pp. 25, 45), variously identified with Basillah and
Haouch Alouina. [T. H. D.]

SICINOS (Σικύνοις: Eth. Σικυνίργας: Sikino), a
small island in the Aegaean sea, one of the Sporades,
lying between Pholegandros and Ios, and containing
a town of the same name. (Scolax, p. 19; Strab.
x. p. 484; Ptol. iii. 13. § 31.) It is said to have
been originally called Omētē from its cultivation of
the vine, but to have been named Sicinos after a son
of Thamus and Oenoē. (Steph. B. s. r. c.; Apoll. Rhod.
i. 623; Schol. ad loc.; Plin. iv. 12. 23; Eutyn.
M. p. 712. 49.) Wine is still the chief production of
the island. It was probably colonised by Ionians.
Like most of the other Greek islands, it submitted
to Norax (Herod. viii. 4), but it afterwards formed
part of the Athenian maritime empire. There are
some remains of the ancient city situated upon a lofty
and rugged mountain, on whose summit stands the
church of S. Marina. There is also still extant an
ancient temple of the Pythian Apollo, now converted
to the church Episkopi (ἡ Ἑπισκόπη). It stands in a
depression between the main range of the moun-
tains, and the summit lying more to the left, upon
which the ruins of the ancient city stand. We
learn from an inscription found there by Ross that it
was the temple of the Pythian Apollo. (Ross,
Reisen auf den Griech. Inseln, vol. ii. p. 149, seq.;
Fiedler, Reise, vol. ii. p. 151, seq.)

SICULI. [Secon.]

SICORIS (Σικόρις, Dom. Cass. xii. 20), a tri-
butary river of the Eburn in Hispania Tarraconensis.
It rose in the Pyrenees in the territory of the Cer-
retani, and separated the countries of the Herogetes
and Lacedaeni. It flowed past Herda, and according
to Vibius Sisævianus (p. 224, ed. Bipont) bore the
name of that town. A little towards it received the
Cinga, and then flowed into the Eurus near
Oegusa. (Cass. B. C. i. 40, 48; Plin. iii. 3. s. 4;
Lucian. iv. 13. seq.) Ausonius describes it as flowing
impetuously ("tortorum," Epist. xxx. 59). Now the
Segre.

T. H. D.

SICULI (Σικυλοί), is the name given by ancient
writers to an ancient race or people that formed one
of the elements in the primitive population of Italy,
as well as Sicily. But the accounts given of them
are very confused and uncertain. We find the
Siculi mentioned; 1, as among the early inhabitants
of Latium; 2, in the extreme S. of Italy; 3, in
Sicily; 4, on the shores of the Adriatic. It will be
convenient to examine these notices separately.

1. The Siculi are represented by Dionysius as
the earliest inhabitants of the country subsequently
called Latium (i. 9), as well as of the southern part
of Etruria; they were an indigenous race, i. e. one
of whose wanderings and origin he bad no account.
They held the whole country till they were expelled
from it by the people whom he calls Aborigines,
descending from the mountains of Central Italy
(ἈΒΟΡΙΓΙΝΕΣ), who made war upon them, in con-
junction with the Pelasgians; and after a long pro-
tracted struggle, were wrested from them one town after
another (Id. i. 9, 16). Among the cities that are
close at present mentioned by him as having once been
occupied by the Siculi, are Tibur, where a part of
the city was still called in the days of Dionysius
(Zυζολόδωρ), Ficulæ, Antemnae, and Tellinae, as well
as Falerii and Fescennium, in the country after-
wards called Etruria (Id. i. 16, 20, 21). The
Siculi being thus finally expelled from their posses-
sions in this part of Italy, were reported to have
migrated in a body to the southern extremity of the
peninsula, from whence they crossed over the straits,
and established themselves in the island of Sicily,
to which they gave the name it has ever since borne.
SICILIA. (Id. i. 22.) Dionysius is the
only author who has left us a detailed account of
the conquest and expulsion of the Siculi, but they
are mentioned by Pline among the races that had
successively occupied Latium (Plin. iii. 5. s. 9); and
this account has been adopted and received into
the tradition.

2. We find the Siculi frequently mentioned in
the southernmost portion of the Italian peninsula, where
they appear in close connection with the Oenotrians,
Morgætes, and Itali, all of them kindred tribes, which
there are good reasons for assigning to the Pelasgic
race. [ΟΝΟΘΙΑ.] It is probable, as suggested by
Strabo, that the Siculi, more than once, mentioned
by Iliomer (Odys. xx. 343, xxiv. 211, &c.), were
the inhabitants of the coast of Italy opposite to
Ibæca; and the traditions of the Epicæian Lo-
crians, reported by Polybius, speak of the Siculi as the
people in whose territory they settled, and with whom
they first found themselves engaged in war. (Polyb.
xxiii. 5, 6.) Numerous traditions also, reported by
Dionysius (i. 22, 73) from Antiochus, Hella-
hnics, and others, concur in bringing the Siculi and
their eponymous leader Siculus (Σικυλός) into close
connection with Italy and the Itali; and this is
confirmed by the linguistic relation which may fairly
be admitted to exist between Σικυλός and Φαλάς
(Niebuhr, vol. i. p. 47) though this is not clear
enough to be in itself conclusive. So far as
our scanty knowledge goes, therefore, we must conclude that the two shores of the Sicilian strait were at one period peopled by the same tribe, who were known to the Greeks by the name of Sicels or Siculi; and that this tribe was probably a branch of the Oenotrian or Pelasgic race. The legends which concern their origin, though delivered from Latin sources, seem to have been a late invention, as we may infer from the circumstance that Sicelus, who is represented by Antiochus as taking refuge with Morges, king of Italy, was called a fugitive from Rome. (Dionys. i. 73.)

3. The Siculi or Siceli were the people who occupied the greater part of the island of Sicily when the Greek colonies were first established there, and continued throughout the period of the Greek domination to occupy the greater part of the interior, especially the more rugged and mountainous tracts of the island. [SICILIA.] The more westerly portions were, however, occupied by a people called Sicani, whom the Greek writers uniformly distinguish from the Siculi, notwithstanding the resemblance of the two names. These indeed seem to have been in their origin identical, and we find Roman writers using them as such; so that Virgil more than once employs the name of Sicani, where he can only mean the ancient Latin people called by Dionysius Siculi. (Virg. Aen. vii. 795, xi. 317.)

4. The traces of the Siculi on the western shores of the Adriatic are more uncertain. Pliny indeed tells us distinctly that Numana and Ancona were founded by the Siculi (Plin. iii. 13. s. 18); but it is by no means improbable that this is a mere confusion, as we know that the latter city at least was really founded by Sicilian Greeks, as late as the time of Dionysius of Syractory (ADO). When, however, he tells us that a considerable part of this coast of Italy was held by the Siculians and Liburnians, before it was conquered by the Umbrians (ib. 14. s. 19), it seems probable that he must have some other authority for this statement; Pliny is, however, the only author who mentions the Siculi in this part of Italy.

From these statements it is very difficult to arrive at any definite conclusion with regard to the ethnographic affinities of the Siculi. On the one hand, the notices of them in Southern Italy, as already observed, seem to bring them into close connection with the Itali and other Oenotrian tribes, and would lead us to assign them to a Pelasgic stock; but on the other hand it must be admitted that Dionysius distinctly separates them from the Pelasgi in Latium, and represents them as expelled from that country by the Pelasgi, in conjunction with the so-called Aequi. Hence the opinions of modern scholars have been divided: Niebuhr distinctly recognizes the Siculi as a Pelasgic race, and as forming the Pelasgic or Greek element of the Latin people; the same view is adopted by O. Müller (Etrusk. pp. 10—16, &c.) and by Alekten (Mitt. Italien, p. 5); while Grotefend (Al. Italien, vol. iv. pp. 4—6), followed by Forbiger and others, regards the Siculi as a Gaulish or Celtic race, who had gradually wandered southwards through the peninsula of Italy, till they finally crossed over and established themselves in the island of Sicily. This last hypothesis is, however, pure conjectural. We have at least some foundation for supposing the Siculi as well as the Oenotrians to be of Pelasgic origin; if this be rejected, we are wholly in the dark as to their origin or affinities.

(SICULON. 989)

SICULUM MARE (tò Σικελικὸν πέλαγος, Pol. Strab. 6c.) was the name given in ancient times to that portion of the Mediterranean sea which bathed the eastern shores of Sicily. But like all similar appellations, the name was used in a somewhat vague and fluctuating manner, so that it is difficult to fix its precise geographical limits. Thus Strabo describes it as extending along the eastern shore of Sicily, from the Straits to Cape Pachynus, with the southern shore of Italy as far as Locri, and again to the eastward as far as Crete and the Peloponnesus; and as filling the Corinthian Gulf, and extending northwards to the Lycian promontory and the mouth of the Ionian gulf. (Strab. ii. p. 123.) It is clear, therefore, that he included under the name the whole of the sea between the Peloponnesus and Sicily, which is more commonly known as the Ionian sea [IONIUM MARE], but was termed by later writers the Adriatic [ADRIATICUM MARE]. Polybius, who in one passage employs the name of Ionian sea in this more extensive sense, elsewhere uses that of the Sicilian sea in the same general manner as Strabo, since he speaks of the island of Cephalonia as extending out towards the Sicilian sea (v. 3); and even describes the Ambracian gulf as an inlet or arm of the Sicilian sea (iv. 63, v. 5). Eratosthenes also, it would appear from Pliny, applied the name of Sicilian Mare to the whole extent from Sicily to Crete. (Plin. iii. 3. 5.) The usage of Pliny himself is obscure; but Mela distinguishes the Sicilian sea from the Ionian, applying the former name to the western part of the broad sea, nearest to Sicily, and the latter to its more easterly portion, nearest to Greece. (Mel. ii. 4. § 1.) But this distinction does not seem to have been generally adopted or continued long in use. Indeed the name of the Sicilian sea seems to have fallen much into disuse. Ptolemy speaks of Sicily itself as bounded on the N. by the Tyrrhenian sea, on the S. by the African, and on the E. by the Adriatic; thus omitting the Sicilian sea altogether (Ptol. iii. 4. § 1); and this seems to have continued under the Roman Empire to be the received nomenclature.

Strabo tells us that the Sicilian sea was the same which had previously been called the Ausonian (Strab. ii. p. 133, v. p. 233); but it is probable that that name was never applied in the more extended sense in which we use the Sicilian sea, but was confined to the portion more immediately adjoining the southern coasts of Italy, from Sicily to the Lycian promontory. It is in this sense that it is employed by Pliny, as well as by Polybius, whom he cites as his authority. (Plin. l.c.)

SICulum (Zemios, Ptol. ii. 16. § 4; Plin. iii. 22; Sicil. Pent. Tob.), a town of Dalmatia, to the E. of Tragurium, on the road to Salona, where Claudius is said to have quartered the veterans. (Ptol. l.c.) From its position it cannot be Sibenicus, with which it has been identified, but may be represented by the vestiges of a Roman station to the NW. of Castel l'ettari, on the Riviere dei Castelli, where a column with a dedicatory inscription to M. Julius Philippus has been lately found, as well as much pottery and Roman tiles. (Wilkinson, Dalmatia, vol. i. p. 176.)

SICYON. 6 and § ZEUS, also ZEUS, Bekker, Aenod. p. 555; Eth. ZEUS, the territory Ξηώρας: Vassilia.)

1. Situation.—Sicyon was an important city of Peloponnesus, situated upon a table-height of no great elevation, at the distance of about 2 miles from the
Corinthian gulf. Strabo (viii. p, 382) correctly describes it as forming a strong hill distant 20 stadia from the sea, though he adds that others made the distance 12 stadia, which may, however, have reference to the lower town built at the foot of the table-height. Upon this height the modern village of Vasi-

iliki now stands. It is defended on every side by a natural wall of precipices, which can be ascended only by one or two narrow passages from the plain. A river flows upon either side of the height, the one on the eastern side being the Asopus, and that on the western side the Hedyssus. When Sicyon was at the height of its power, the city consisted of three parts, the Acropolis on the high tableland at the foot, and a port-town upon the coast. The port-town was well fortified. (Σηκυων χωρὶς, Xen. Hell. vii. 3, § 2; Polyb. v. 27; Paus. ii. 12, § 2; Strab. L. c.)

II. History. — Sicyon was one of the most ancient cities of Greece, and is said to have existed under the name of Αγίαλεια (Αγίαλεα, Paus. ii. 5, § 6) or Αγιαλις (Αγιαλις, Strab. viii. p. 382) long before the arrival of Pelops in Greece. It was also called Μερον (Μεθόν), which was apparently its sacerdotal name, and under which it is celebrated as the dwelling-place of the Iklidos, and as the spot where Prometheus instituted the Helen sacrifices and dedicated Zeus. ( Steph. B. s. v. Σηκυων; Strab. viii. p. 382; Callim. Fragn. 195, p. 513, ed. Ernesti; Hesiod. Theog. 535.) Its name Τελ-

chinia (Τηλεχινία) has reference to its being one of the earliest seats of the workers in metal. (Steph. B. s. v. Σηκυων.) Its name Aigialea was derived from a mythical autochthonous Aigiaulus, and points to the time when it was the chief city upon the southern coast of the Corinthian gulf, the whole of which was called by the same name. Its later name of Sicyon was said to have been derived from an Athenian of this name, who became king of the city, and who is represented as a son of either Μα-

rathon or Μετόν. (Paus. ii. 6, § 5.) This legend points to the fact that the early inhabitants of Sicyon were Ionians. Aigeulxas is said, in some traditions, to have been the son of Inachus, the first king of Argos, and the brother of Phoroneus. A long series of the successors of Aigeulxas is given, among whom one of the most celebrated was the Argive Adrastus, who, being expelled from his own dominions, fled to Polybus, then king of Sicyon, and afterwards succeeded him on the throne. (Eisenh. Chron. p. 11, seq.; August. Civ. Dei, xviii. 2; Paus. ii. 6, §§ 6, 7.) Hemer indeed calls Adrastus first king of Sicyon (Hom. II. ii. 572); and we know that in historical times this hero was worshipped in the city. (Herod. v. 67.) Sicyon was subsequently conquered by Agammenon, who, however, left Hippolytus on the throne: but Sicyon became a tributary city to Mycenae. (Paus. ii. 6, §§ 6, 7; Hom. II. ii. 572, xxix. 299.) Hippolytus was the grandson of Phaestus, who was a son of Hercules; and in consequence of this connection, the inhabitants were not expelled or reduced to subjection upon the conquest of the city by the Dorians under Pheidon, the son of Thebenus, for whom the Dorians conquerors, as in all other Doric states, were divided into three tribes under the names of Hyllaeis, Pamphylia, and Dymanatae, the original Sicyonians were formed into a fourth tribe, under the name of Aigialea, which possessed the same political rights as the other three. (Paus. ii. 6, § 7; Strab. viii. p. 389; Herod. v. 68.) Sicyon was now a Dorian state; and from this time its real history begins. It was at first dependent upon Argos (Paus. l. c.), which was for some time the most powerful state in the Peloponnesus, Sparta being second to it. In the First Messenian War the Sicyonians fought on the side of the Messenians along with the Argives and Arcadians. (Paus. iv. 11. § 1.) In the Second Messenian War, about n. c. 676, Sicyon became subject to the tyranny of the Orthogoridiæ, who governed the city for more than 100 years, and whose rule is praised by Aristotle (Pol. v. 9, § 21) for its mildness. The family of the Orthogoridiæ belonged to the non-Dorian tribe, and the continuation of their rule was perpetuated by the fact of their being supported by the original population against the Doric conquerors. Ortho-

gorida, the founder of the dynasty, is said to have been originally a cook. (Aristot. l. c.; Hellad. ap. Phot. cod. 279, p. 530; Liban. vol. iii. p. 251, ed. Reiske.) In other accounts Andreas is mentioned as the first of the Sicyonian tyrants (Herod. vi. 126; Dion. Fragn. l. v. 14), and it is probable that he is the same person as Orthogoras, as the two names do not occur in the same author. He was succeeded by his son Myron, who gained a chal-

list victory at Olympia in n. c. 648; Myron by Aristonymus; and Aristonymus by Cleisthenes. (Herod. vi. 126; Paus. ii. 8, § 1, vi. 19, § 1.) The latter was celebrated for his wealth and magnifi-

cence, and was also distinguished by his bitter hatred against Argos, and his systematic endeavor to depress and dishonour the Doric tribes. He changed the ancient and venerable names of the three Doric tribes into the insulting names of Hy-

atae, Onoetae, and Choereetae, from the three Greek words signifying the sow, the ass, and the pig; while he declared the superiority of his own tribe by giving it the designation of Archela, or lord of the people. Cleisthenes appears to have continued de-opt till his death, which may be placed about n. c. 560. The democracy perished with him. He left no son; but his daughter Agariste, whom so many suitors wooed, was married to the Athenian Megacles, of the great family of the Alcmaenidae, and became the mother of Cleisthenes, the founder of the Athenian democracy after the expulsion of the Peisistratidae. The names given to the tribes by Cleisthenes continued in use for sixty years after the death of the tyrant, when by mutual agreement the ancient names were restored. (Herod. vi. 126—131; Grote, Hist. of Greece, vol. iii. p. 43, seq.; Dict. of Biogr. art. Cleisthenes.)

A Doric reaction appears now to have taken place, for during a long time afterwards the Sicyonians were the steady allies of the Spartans. In the invasion of Greece by Xerxes (n. c. 480), the Sicyonians sent a squadron of 15 ships to Salamin (Herod. viii. 435), and a body of 3000 hoplites to Plataea. (Herod. ix. 28.) In the interval between the Persian and Peloponnesian wars the territory was twice invaded and laid waste by the Athenians, first under Tolimedes in n. c. 456 (Thuc. i. 108; Paus. i. 27, §§ 5), and a second time under Pericles in n. c. 454 (Thuc. i. 111; Dion. xi. 88). A few years later (n. c. 443) the Sicyonians supported the Megarians in their revolt from Athens. (Thuc. i. 114.) In the Peloponnesian War they sided with Sparta, and sent a contingent of ships to the Peloponnesian fleet. (Thuc. ii. 9, 80, 83.) In n. c. 424 the Sicyonians assisted Brasidas in his operations against the Athenians in the Megarid.
SICYON.

(Thuc. iv. 70), and in the same year they repulsed a descent of the Athenians under Demostenes upon their territory. (Thuc. iv. 101.) In B.C. 419 they united with the Corinthians in preventing Alcibiades from erecting a fortress upon the Achaean promontory of Ithium. (Thuc. v. 52.) About this time a democratic revolution appears to have taken place, since we find the Macedonians establishing an oligarchical government in Sicyon in B.C. 417. (Thuc. v. 82.) In the wars of Lacedaemon against Corinth, B.C. 394, and against Thebes, B.C. 371, the Sicyonians espoused the side of the Lacedaemonians. (Xen. Hell. iv. 2 § 14, iv. 4 § 7, seq. vi. 4 § 18.) But in B.C. 368 Sicyon was compelled by Epiaminondas to join the Spartan alliance, and to admit a Theban harmost and garrison into the citadel. Euphoros, a leading citizen of Sicyon, taking advantage of these circumstances, and supported by the Arcadians and Argives, succeeded in establishing a democracy, and shortly afterwards made him self tyrant of the city. But being expelled by the Arcadians and Thebans, he retired to the harbour, which he surrendered to Sparta. By the assistance of the Athenians he returned to Sicyon; but finding himself unable to dislodge the Theban garrison from the Acropolis, he repaired to Thebes, in hopes of obtaining, by corruption and intrigue, the banishment of his opponents and the restoration of his own power. Here, however, he was murdered by some of his enemies. (Xen. Hell. vii. 1—3; Diod. xvi. 69, 70; Dict. of Biogr. art. Euphoros.) Sicyon seems, however, to have been favorable to tyrants; for, after a short time, we again find the city in their power. The facility with which ambitious citizens obtained the supreme power was probably owing to the antagonism between the Dorian and old Ionian inhabitants. Demosthenes mentions two Sicyonian tyrants, Aristatus and Epichares, in the pay of Philip (de Cor. pp. 242, 324). In the Lamanian war, after the death of Alexander the Great, B.C. 323, the Sicyonians joined the other Greeks against the Macedonians, (Diod. xviii. 28.) The Thebans and others soon fell into the hands of Alexander, the son of Polysperchon; and after his murder in B.C. 314, his wife Cratesipolis continued to hold the town for Cassander till B.C. 308, when she was induced to betray it to Ptolemy. (Diod. xix. 67, xx. 37.) In B.C. 303, Sicyon passed out of the hands of Ptolemy, being surprised by Demetrios Poliorcetes in the night. It appears that at this time Sicyon consisted of three distinct parts, as already mentioned, the Acropolis, on the hill of Vasilikía, the lower city at its foot, and the port-town. It is probable that formerly the Acropolis and the lower city were united with the port-town, by walls extending to the sea; but the three quarters were now separated from one another, and there was even a vacant space between the lower town and the citadel. Seeing the difficulty of defending so extensive a space with the diminished resources and population of the city, and anxious to secure a strongly fortified place, Demetrios compelled the inhabitants to remove to the site of the ancient Acropolis, which Diiodorus describes as "a site very preferable to that of the former city, the inclosed space being an extensive plain, surrounded on all sides by precipices, so different in aspect that it would not be possible to attack the work with machines." This new city was called Demetrias. (Diod. xx. 102; Plat. Demetr. 25; Paus. ii. 7 § 1; Strab. viii. p. 382.) The name Demetrias soon disappeared; but the city continued to remain upon its lofty site, which was better adapted than most mountain heights in Greece for a permanent population, since it contained a good supply of water and cultivable land. Pausanias (l.c.) represents the lower town as the original city of Aegaeans; but Col. Leake justly remarks, it is more natural to conclude that the city was established upon the hill Vasilikía, which, by its strength and its secure distance from the sea, possesses attributes similar to those of the other chief cities of Greece. Indeed, Pausanias himself confirms the antiquity of the occupation of the hill of Vasilikía, by describing all the most ancient monuments of the Sicyonians as standing upon it. (Leake, Morea, vol. iii. p. 367.) After Demetrias quitted Sicyon, it again became subject to a succession of tyrants, who quickly displaced one another. Cleon was succeeded in the tyranny by Euthydemos and Timotheides; but they were expelled by the people, who placed Cleinias, the father of Aratus, at the head of the government. Cleinias was soon afterwards murdered by Abantidas, who seized the tyranny, B.C. 264. Abantidas was murdered in his turn, and was succeeded by his father Puscas; but he again was murdered by Nicoles, who had held the sovereign power only four months, when the young Aratus surprised the citadel of Sicyon, and delivered his native city from the tyrant, B.C. 251. (Paus. ii. 8 §§ 1—3; Plut. Arat. 2.) Through the influence of Aratus, Sicyon now joined the Achaean League, and was one of the most important cities of the confederacy. (Paus. ii. 8 § 3; Plut. Arat. 9; Polyb. ii. 43.) In consequence of its being a member of the league, its territory was devastated, both by Cleomenes, B.C. 233 (Plut. Arat. 41, Cleom. 19; Polyb. ii. 52), and by the Aetolians, B.C. 221. (Polyb. iv. 13.) In the Roman wars in Greece, Sicyon was favoured by Attalus, who bestowed handsome presents upon it. (Polyb. xvi. 16; Liv. xxxii. 40.) The conquest of Corinth by the Romans, B.C. 146, was to the advantage of Sicyon, for it obtained the greater part of the neighboring territory and the administration of the Isthmian games. (Paus. ii. 2 § 2.) But even before Corinth was rebuilt, Sicyon again declined, and appears in an impoverished state towards the end of the Republic. (Cic. ad Att. i. 19, 20, ii. 1.) After the restoration of Corinth, it still further declined, and its ruin was completed by an earthquake, which destroyed a great part of the city, so that Pausanias found it almost depopulated (ii. 7 § 1). The city, however, still continued to exist in the sixth century of the Christian era; for Hierocles (p. 646, Wess.) mentions New Sicyon (Nea Siconi) among the chief cities of Achaea. The maritime town was probably Old Sicyon. Under the Byzantine empire Sicyon was called Hellas, and the inhabitants Helladics, probably in contradistinction to the surrounding Slavonic inhabitants. (Σικυών, ή γίνε Ελλάς, Νυόδας; των Σικυωνίων των νυν λεγομένων Ελληνδίων, Malala, iv. p. 68, Bonn.) The name Vasilikía (τά Βασιλικά) refers to the ruins of the temples and other public buildings.

III. Art, &c.—Sicyon is more renowned in the artistic than in the political history of Greece. For a long time it was one of the chief seats of Grecian art, and was celebrated alike for its painters and sculptors. According to one tradition painting was invented at Sicyon, where Telephanes was the first to practise the monogram, or drawing in outline.
SICYN.

(Plin. xxxv. 3. s. 15); and the city long remained the home of painting ("diu illa fuit patria picturarum," Plin. xxxv. 11. s. 40). Sicyon gave its name to one of the great schools of painting, which was founded by Eupamprus, and which produced Pamphilus and Apelles. (Plin. xxxv. 10. s. 36.) Sicyon was likewise the earliest city of statuary in Greece, which was introduced into the city by Dipoenus and Scyllis from Crete about b.c. 560 (Plin. xxxvi. 4); but its earliest native statuary of celebrity was Canaxias. Lysippus was also a native of Sicyon. (Dict. of Biogr. s. c.) The city was thus rich in works of art; but its most valuable paintings, which the Sicyonians had been obliged to give in pledge on account of their debts, were removed to Aine in the ædesilis of M. Scarrus, to adorn his theatre. (Plin. xxxv. 11. s. 40.)

Sicyon was likewise celebrated for the taste and skill displayed in the various articles of dress made by its inhabitants, among which we find mention of a particular kind of shoe, which was much prized in all parts of Greece. (Athen. iv. p. 155; Pollux, vii. 93; Hesych. s. v. Σικόνεια; Auctor, ad Heron. iv. 3; de Orat. l. 54; Ineret. iv. 1121; Fest. s. v. Sicyon.)

IV. Topography of the City.—Few cities in Greece were more finely situated than Sicyon. The hill on which it stood commands a most splendid view. Towards the west is seen the plain so celebrated for its fertility; towards the east the prospect is bounded by the lofty hill of the Acrocorinthus; while in front lies the sea, with the noble mountains of Parnassus, Helicon, and Cithæron rising from the opposite coast, the whole forming a charming prospect, which cannot have been without influence in cultivating the love for the fine arts, for which the city was distinguished. The hill of Sicyon is a tabular summit of a triangular shape, and is divided into an upper and a lower level by a low ridge of rocks stretching right across it, and forming an abrupt separation between the two levels. The upper level, which occupies the southern point of the triangle, and is about a third of the whole, was the Acropolis in the time of Pausanias (Ἰ νῦν Ακρόπολις, ii. 7 § 5).

Pausanias came to Sicyon from Corinth. After crossing the Asopus, he noticed the Olympicum on the right, and a little farther on the left of the road to the tomb of Eupolis of Athens, the comic poet. After passing some other sepulchral monuments, he entered the city by the Cynthisian gate, where was a fountain dropping down from the overhanging rocks, which was therefore called Statum (Σταῦς), or the dropping fountain. This fountain has now disappeared in consequence of the falling in of the rocks. Upon entering the city Pausanias first crossed the ledge of rocks dividing the upper from the lower level, and passed into the Areopolis. Here he noticed temples of Tyche and the Dioscuri, of which there are still some traces. Below the Areopolis was the theatre, the remains of which are found, in conformity with the description of Pausanias, in the ledge of rocks separating the two levels. On the stage of the theatre stood the statue of a man with a shield, said to have been that of Aratus. Near the theatre was the temple of Dionysus, from which a road led past the ruined temple of Artemis Limmata to the Agora. At the entrance of the Agora was the temple of Peitho or Persuasion: and in the Agora the temple of Apollo, which appears to have been the chief sanctuary in Sicyon. The temple of Apollo was described in the ninth Nineum ode of Pindar; and Aratus, when he delivered his native city from its tyrant, gave as the watchword ᾿Απαλῶν ὑπερδέξα. (Plat. Arat. 7.) In the time of Polybius (xvii. 16) a brazen colossal statue of king Attalus I. 10 cubits high, stood in the Agora near the temple of Apollo; but this statue is not mentioned by Pausanias, and had therefore probably disappeared. (Paus. ii. 7 §§ 2—9.) Near the temple of Peitho was a sanctuary consecrated to the Roman emperors, and formerly the house of the tyrant Cleomen. Before it stood the heroæm of Aratus (Paus. ii. 8 §§ 8), and near it an altar of the Isthmian Poseidon, and statues of Zeus Meilichius and of Artemis Patraia, the former resembling a pyramidal, the latter a column. In the Agora were also the council-house (Βουλευτήριον), and a stoa built by Cleisthenes out of the spoils of Cirrus, likewise a brazen statue of Zeus, the work of Lysippus, a gilded statue of Artemis, a ruined temple of Apollo Lycæus, and statues of the daughters of Proetus, of Hercules, and of Hermes Argosaeus. (Paus. ii. 9 §§ 6—7.) The Poecile Stoa or painted stoa, was probably in the Agora, but is not mentioned by Pausanias. It was adorned with numerous paintings, which formed the subject of a work of Polemon. (Athen. xiii. p. 577.)

Pausanias then proceeded to the Gymnasion, which he describes as not far from the Agora. The Gymnasiwm contained a marble statue of Hercules by Scopas; and in another part a temple of Hermes in a sacred inclosure, named Puældice. From thence a road led to two large inclosures, sacred to Asclepius and Aphrodite, both of which were adorned with several statues and buildings. From the Aphrodisian Pausanias went past the temple of Artemis Philæa to the gymnasion of Glænas, which was used for the training of the Ephebi, and which contained statues of Artemis and Hermes. (Paus. ii. 10.) It is evident that this gymnasion was different from the one already described, as Pausanias continues his course towards the sea-side. From thence he turns towards the gate of the city called the Sacred, near which there formerly stood a celebrated temple of Athena, built by Epoxus, one of the mythical kings of Sicyon, but which had been burnt by lightning, and of which nothing then remained but the altar; this temple may perhaps have been
the one sacred to Athena Colocasia, mentioned by Athenaeus (iii. p. 72). There were two adjoining temples, one sacred to Artemis and Apollo, built by Epopeus, and the other sacred to Hera, erected by Adrastus, who was himself worshipped by the people of Sicyon (Herod. v. 68; Pind. Nem. ix. 29). There can be little doubt that these ancient temples stood in the original Acropolis of Sicyon; and indeed Pausanias elsewhere (ii. 5. § 6) expressly states that the ancient Acropolis occupied the site of the temple of Athena. We may place these temples near the northern edge of the hill upon the site of the modern village of Vasilikà; and accordingly the remarkable opening in the rocks near the village may be regarded as the position of the Sacred Gate, leading into the ancient Acropolis. (Leake, Morea, vol. iii. p. 372.)

In descending from the Heraeum, on the road to the plain, was a temple of Demeter; and close to the Heraeum were the ruins of the temple of Apollo Carneius and Hera Prodromia, of which the latter was founded by Phalces, the son of Temenus (Paus. ii. 11. §§ 1, 2.)

The walls of Sicyon followed the edge of the whole hill, and may still be traced in many parts. The direction of the ancient streets may also still be
SICYON.

followed by the existing foundations of the houses; they ran with mathematical precision from NE. to SW., and from NW. to SE., thus following the rule of Vitruvius. Few of the ruins rise above the ground; but there is a Roman building better preserved, and containing several chambers, which lies near the ridge separating the two levels of the hill. Leake supposes that this building was probably the praetorium of the Roman governor during the period between the destruction of Corinth by Mummianus and its restoration by Julius Caesar, when Sicyon was the capital of the surrounding country; but more recent observers are inclined to think that the ruins are those of baths. West of this building are the theatre and the stadium; and the modern road which leads from Valliscri to Symphalms runs between this Roman building and the theatre, and then through a portion of the stadium. The theatre was cut out of the rock, separating the two levels of the hill, as already described; its total diameter was about 400 feet, and that of the orchestra 100. Each wing was supported by a mass of masonry, penetrate by an arched passage. To the NW. of the theatre are the remains of the stadium, of which the total length, including the seats at the circular end, is about 650 feet. Col. Leake remarks that "the stadium resembles that of Messene, in having had seats which were not continued through the whole length of the sides. About 80 feet of the rectilinear extremity had no seats; and this part, instead of being excavated out of the hill like the rest, is formed of factitious ground, supported at the end by a wall of polygonal masonry, which still exists."

There are also, in various parts of the hill, remains of several subterraneous aqueducts, which supplied the town with water. The opening of one of them is seen on the SE. side of the theatre; and there is another opening now walled up W. of the modern village. The tyrant Nicocles escaped through these subterraneous passages when Sicyon was taken by Aratus. (Plut. Arat. 9.)

V. Topography of the Sicyonians. — The territory of Sicyon was very small, and, in fact, was little more than the valley of the Asopus. In the upper part of its course the valley of the Asopus is confined between mountains, but near the sea it opens out into a wide plain, which was called Asopia. (Ant. Strab. viii. p. 382, ix. p. 408; Paus. ii. 1. § 1.) This plain was cultivated for its fertility (μεγά σφραγίς ἐπὶ τῷ τῇ Σικυώνων πεδίῳ γαζωτείς, Lucian, Iiron. c. 18), and was especially adapted for the cultivation of the olive. ("Sicyon a harca, Virg. Georg. ii. 519; Or. Ep. ex Pont. iv. 15, 10; Stat. Theb. iv. 54.) The neighbouring sea supplied an abundance of excellent fish. (Athên. i. 27.)

It was separated from the Corinthia on the E. by the river Nemea, and from the territory of Pellene on the W. by the Styx; and on the S. it was bounded by the territories of Philus and Cleanea. At one time the territory of Sicyon must have extended even beyond the Styx, since Goussas or Donessa, which lies W. of this river, is described by Pausanias as belonging to the Sicyonians. (Pellene, p. 571, a.) Between the Helisson and the Styx was probably the river Selleias, with the neighbouring village of Ephyra, mentioned by Strabo (vii. p. 335). (Ephyr. No. 3.) Sixty stadia S. of Sicyon, and near the frontiers of Philia, was Titan or Titana, the most important of the dependencies of Sicyon. (Titan.) Forty stadia beyond Titana was Phillus; but this rock, which was too narrow for carriages, was not the direct road from Sicyon to Phillus. The direct road was to the right of the Asopus; and the circumvallations round Titana to the left of that river. Between these two roads, at the distance of 20 stadia from Sicyon, was a sacred grove, containing a temple of the Ennead. (Paus. ii. 11. § 3, seq.) East of Sicyon was Epieicis, on the river Nemea. (Epieicis.) In the same direction was the fortress Derak. (Δηρακ. Xen. Hell. vii. i. § 22.) There was also a fortress Phoeiba, taken by demmionius in his march through the valley of the Asopus; it is probably the same place as Euphia. (Dem. Phœiba.) Strabo (ix. p. 412) mentions a demus Phœiba in the Sicyonia. (Hagen, Sicyonia, Regimont. p. 831; Gump. Sic. epinoticiorum Spec. Bore. 1832, Torg. 1834; Bobr. De Sicyoniis Topographia, Regimont. 1839; Leake, Moreva, vol. iii. p. 351, seq.; Boblave, Recherches, &c. p. 30, seq.; Ross, Reisen im Peloponnes, p. 39, seq.; Curtius, Peloponnesiaca, vol. ii. p. 452, seq.; Beulé, Etudes sur le Peloponnes, p. 343, seq.)

COIN OF SICYON.

SIDE (Σίδης), a place in Boeotia, celebrated for its pomegranates. Hence the Boeotians called this fruit εἰδῆν, though the more usual name was φυλός. As the Athenians are said to have contended with the Boeotians for the possession of the place, it must have been upon the borders of Attica, but its exact site is unknown. (Ath. xiv. pp. 650, 651.)

SIDE (Σίδης; Σίδηνης), a town with a good harbour on the coast of Pamphilus, 50 stadia to the west of the river Melas, and 550 east of Attalica. (Stad. Mar. Mag. § 214, foll.) The town was founded by Cumae in Aeolia. (Sylv. Peripil. p. 40; Strab. xiv. p. 667, comp. p. 664; Steph. B. s. r.; Pomp. Mela, i. 15.) Ariian (Arab. i. 26), who admits the Cumaean origin of the place, relates a tradition current at Side itself, according to which the Sideans were the most ancient colonists sent out from Cumae, but soon after their establishment in their new home forgot the Greek language, and formed a peculiar idiom for themselves, which was not understood even by the neighbouring barbarians. When Alexander appeared before Side, it surrendered and received a Macedonian garrison. In the time of Atticines the Great, a naval engagement took place off Side between the fleet of Atticines, commanded by Hannibal, and that of the Rhodians, in which the former was defeated. (Liv. xxv. 13, 18, xxvii. 23, 24.) Polybius (v. 73) states that there existed great enmity between the people of Side and Aspendus. At the time when the pirates had reached their highest power in the Mediterranean, they made Side their principal port, and used it as a market to dispose of their produce and booty by auction. (Strab. xiv. p. 664.) Side continued to be a town of considerable importance under the Roman emperors, and in the ultimate division of the province it became the metropolis of Pamphilus Trias. (Hend. l.
SIDE.

[Page 682; *Concil. Const.* ii. p. 240.) The chief divinity of this city was Athena, who is therefore seen represented on its coins, holding a pomegranate (εἰπὼν) in her hand. (Sestini, *Num. Fam.* p. 392, fol.; comp. Xenoph. *Anab.* i. 2. § 12; Cicero, *ad Fam.* iii. 6; Athen. viii. 364; *Paus.* viii. 28. § 2, *Pol.* vi. 8. § 17, viii. 31.) The exact site of ancient Side, which is now called Eskey Adalia, as well as its remains, have been described by modern travellers. Bennfort (*Karamania*, p. 146, fol.) who gives an excellent plan of the present condition of the place, states that the city stood on a low peninsula, and was surrounded by walls; the part facing the land was of excellent workmanship, and much of it is still perfect. There were four gates, one from the country and three from the sea. The agora, 180 feet in diameter, was surrounded by a double row of columns. One side of the square is at present occupied by the ruins of a temple and portico. The theatre appears like a lofty acropolis rising from the centre of the town, and is by far the largest and best preserved of any seen in Asia Minor. The harbour consisted of two small bays, connected by a narrow strip of land, which was separated from the sea by a sand bank. The earliest coins of Side are extremely ancient; the inscriptions are of a bastard character, resembling the Phoenician, and the imperial coins exhibit the proud titles of *Λατρεία τοῦ θεοῦ* and *τελευταίον* en ισημερία. (Eckhel, *vol. iii.* pp. 44, 161; Spattheim, *De Usum et Praest.* Num. p. 579; Fellows, *Asia Minor,* p. 201; Leake, *Asia Minor,* p. 195, fol.) Respecting Side, the ancient name of Polemonium, see *Polemonius.* [L.S.]

SIDE (Σίδηνα), a town on the eastern coast of Laconia, a little N. of the promontory Malea. It was said to have existed before the Dorian conquest, and to have derived its name from a daughter of Danaus. The inhabitants were removed by the Dorians conquerors to the neighbouring town of Benea. It probably occupied the site of the monastery of St. George, where there is a port. (Scylax, p. 17; *Paus.* iii. 22. § 11; Boblaye, *Recherches,* c. p. 99; Curtius, *Peisargos,* vol. ii. p. 297.)

SIDE'NE (Σίδηνη). 1. A town of Myisia, on the river Granicus, which was destroyed by Croesus, and was never rebuilt: in consequence of a curse pronounced on the site by the destroyer. (Strab. xii. pp. 557, 601.)

2. A town in Lycia, mentioned only by Stephanus B. (s. c.) on the authority of the *Lexicaci of Xanthian.*

3. A district on the coast of Pontus, about the mouth of the river Sidrene, which derived its name from the town of Side, afterwards called Polemonium. The greater part of the district was formed by the deposits of the river (Strab. i. p. 52, ii. p. 126, xii. pp. 547, 548, 556; *Plin.* vi. 4.)

SIDE'NI (Σίδηνοι), a people of Arabia Felix, placed by Ptolemy between the Thamytidae on the north, and the Darrae on the south, on the Eunatia gulf (vi. 7. § 4). Mr. Forster identifies them with the *Ilyheunu* tribe of Barckhardt, in the north of the _Hetyaz_, extending along the coast between the _Jebel Hormus_ (nearly identical with the Hippos Muas —both meaning Horse-mountain—even of Ptolemy), to Yenbo. “All the circumstances, of name, locality, and neighbourhood,” he says, “concur to prove their identity.” (Arabia, vol. i. p. 126.) [G. W.]

SIDE'NI (Σίδηνωι, Σίδηνοι, Σιδηνοί), a German tribe on the coast of the Baltic, between the mouth of the river Suedus and that of the Vindus. (Ptol. ii. 11. § 14.) It is possible that Sidini (Σίδηνοι) is only a corrupt form of the name of this tribe, and that of the Sidini (Σίδηνοι) of the *Itineraries.* [L. S.]

SIDE'NUS, a small river of Pontus, having its sources in Mount Paryadres, and flowing through the district of Sidene into the Euxine; at its mouth was the town of Side or Polemonium (Plin. vi. 4), from which the river is now called *Polemonian Chai.* (Comp. Hamilton, *Researches,* i. p. 270.) [L. S.]

SIDE'NI, a river of Hyrcania, mentioned by Pliney (vi. 16, s. 18), which flowed into the Caspian sea. It cannot be determined to which river he refers, but he states from it the Caspian sea was called the Hyrcanian. [V.]

SIDE'NIUS (Σίδηνωιοι), according to Scylax (p. 39) a promontory and a port-town on the coast of Lycia. The same place seems to be meant in Stephanus B. (s. v. Σίδηνωιοι), when he calls Sidarua a town and harbour. Col. Leake (Asia Minor, p. 189) has shown that the town of Siderus is in all probability no other than Olympus, on the south of Phaselis. [L. S.]

SIDE'NIINY (Σίδηνινι), a people of Central Italy bordering on the Samnites and Campanians. In the time of the geographers they had disappeared as a people, or been absorbed into the natural confederation of the Campanians (Strab. v. p. 237), but at an earlier period they appear as a wholly independent people. Their chief city was Tenumum, on the E. slope of the volcanic mountain group of Rocca Monfina: but they had at one time extended their power considerably further to the N. and up the valley of the Laris, as the territory of Fregellae is said to have been subject to them, before they were dispossessed of it by the Volscians (Liv. vii. 22). It is clear however that this extension of their limits was of short duration, or at all events had ceased before they first appear in history. Strabo tells us expressly that they were an Ocean tribe (l. c.), and this is confirmed by the coin of Tenumum still extant, which have Ocean inscriptions. They were therefore closely allied to the neighbouring tribes of the Campanians on the S. and the Aurunci and Ausones on the W. Hence Virgil associates the inhabitants of the Sidicinian plains ("Sidicinae aqua," *Aen.* vii. 727) with the Aurunci and the inhabitants of Cales. The last city is assigned by Silius Italicus to the Sidicini, but this is opposed to all other authorities (Sil. *Ital.* viii. 511). The name of the Sidicini is first mentioned in history in n. c. 343, when they were attacked by the Samnites, who had been long pressing upon their neighbours the Volscians. Unable to contend with these formidable assailants, the Sidicini had recourse to the Campanians, who sent an army to their assistance, but were already defeated (Liv. vii. 29, 50), and being in their turn threatened by the whole power of the Samnites, invoked the assistance of Rome. During the war which followed (the First Samnite War), we lose sight altogether of the Sidicini, but by the treaty which was concluded with it (n. c. 341) it was particularly stipulated that the Samnites should be at liberty to pursue their ambitious designs against that people (id. vii. 1, 2). Thus abandoned by the Romans to their fate the Sidicini had recourse to the Latins (who were now openly shaking off their connection with Rome) and the Campanians: and the Samnites were a second time drawn off from...
their special attack on this petty people to oppose a more powerful coalition (Ib. 2, 4, 5). It is clear that the Sidicini took part as allies of the Latinus and Campanians in the war that followed; but we have no account of the terms they obtained in the general settlement of the peace in B.C. 338. It is certain, however, that they retained their independence, as immediately afterwards we find them engaging in a war on their own account with their neighbours the Auruncans. The Romans espoused the defence of the latter people, but before they were able to take the field, the Auruncans were compelled to abandon their ancient city, which was destroyed by the Sidicini in the Romano-Italician war. The Auruncian consul of Cales had lost on this occasion been induced to make common cause with the Sidicini, but their combined forces were easily defeated by the Roman consul. Cales soon after fell into the hands of the Romans; but though the territory of the Sidicini was overrun by the consuls of B.C. 332, who established their winter-quarters there to watch the movements of the Samnites, their city of Teanum still held out (Ib. 16, 17). Nor do we know at what time it fell into the power of the Romans, or on what terms the Sidicini were ultimately received to submission. But it is probable that this took place before B.C. 297, when we are told that the consul Decius Mus advanced to attack the Samnites "per Sidicum agrum" in a manner that certainly implies the district to have been at that time friendly, if not subject, to Rome (Liv. x. 14).

After this the name of the Sidicini never appears in history as that of a people, but their territory (the "Sidicini ager") is mentioned during the Second Punic War, when it was traversed and ravaged by Hannibal on his march from Carthage to Rome (Liv. xxvi. 9). The Sidicii seem to have gradually come to be regarded as a mere portion of the Campanian people, in common with the Ausoniuni of Cales and the Auruncai of Suessa, and the name still occurs occasionally as a municipal designation equivalent to the Teanaces (Liv. xxvi. 13; Cic. Philh. ii. 41). Strabo speaks of them in his time as an extinct tribe of Oscan race; and under the Roman Empire the only trace of them preserved was in the epitaph of Sidicium, which still continued to be applied to the city of Teanum. (Strab. v. p. 237; Plin. iii. 5. s. 9; Pol. iii. 1. § 68; Sil. Ital. v. 551, xii. 524.)

[Teanum.] [E. B.]

SIDO'DONE (Σιδόδον, or Σιδόνιον, Arran Ind. c. 37.), a small place on the coast of Campania, noticed by Arran in Nechus's voyage. Kemp- thorne thinks that it is represented by a small fishing village called Mogent; but Muller suggests, what seems more probable, that is the present Dem. (Geog. Gracc. Minor. p. 339, ed. Müller. Paris, 1855.)

SIDOLOCUS or SIDOLECUS, in Gallia, is mentioned by Ammianus Marcellinus when he is speaking of Julian's march from Augustodunum to Autissiodorum. Sido locus is supposed to be Stalieu [Chasta]. (G. L.)

SIDUN (Σιδών: Fth. Σιδώνερον), a very ancient and important maritime city of Phoenicia, which, according to Josephus, derived its origin and name from Sidon, the firstborn son of Canaan (Gen. x. 15; Joseph. Ant. i. 6. § 2), and is mentioned by Moses as the northern extremity of the Canaanitish settlements, as Gaza was the southermest (Gen. x. 19); and in the blessing of Jacob it is said of Zebulun "his border shall be unto Sidon." (xviii. 12.) At the time of the Exodus of the children of Israel, it was already distinguished by the appellation of "the Great" (Josh. xi. 8; compare in LXX. ver. 2), and was in the extreme north border which was drawn from Mount Hor in Num. xxxiv. 7) on the east to Great Sidon, where it is mentioned in the border of the tribe of Asher, as also in "the strong city of Tyre." (Josh. xix. 28, 29.) It was one of several cities from which the Israelites did not dispossess the old inhabitants. (Judg. i. 31.)

As the origin of this ancient city, and the vexed question of its priority and preexistence of Tyre, its history has been the subject of much investigation. Even in modern times, when the political government, its religious and civil history, and its manufactures, have all been noticed under Phoenicia, it only remains in this place to speak of its geographical position and relations so far as they either serve to illustrate, or are illustrated by, its history.

It is stated by Josephus to have been a day's journey from the site of Dan, afterwards Paneas (Ant. v. 3 § 1). Strabo places it 400 stadia S. of Berytus, 200 N. of Tyre, and describes it as situated on a fair haven of the continent. He does not attempt to settle the questions between the rival cities, but remarks that while Sidon is most celebrated by the poets (of whom Homer does not so much as name Tyre), the colonists in Africa and Spain, even beyond the Pillars of Hercules, showed more honour to Tyre (xvi. 2. §§ 22, 24). Herodotus's account of the origin of the race has been given under Phoenicia (p. 607, b.), and is shown to be in accordance with that of other writers. Justin follows it, but gives a different etymology of the name: "Condita urbe, quam piscum uerbicat Sidonam appellaverunt, nam piscem PhoeniciSidons vocant," but this is an error corrected by Michaels and Gesenius (Lec. s. v. [="#"],) who derive it from ΤΥΡΟ, "to hunt or snare" game, birds, fish, &c., indifferently, so that the town must have derived its name from the occupation of the inhabitants as fishers, and not from the abundance of fish, as Ritter refers to the parallel case of Beth-saida on the sea of Tiberias. (Erod. v. κενον, Syrion, vol. iv. p. 43.) Pliny, who mentions it as "artifici vitri Thebarumque Boecotiarum parentes," places "Surepta et Ornithion oppida" between it and Tyre (v. 19). It is reckoned xxx. m. p. from Berytus, xxiv. from Tyre, in the itinerary of Antoninus (p. 149). But the Itinerary Hierosolymitanum reckons it xxviii. from Berytus, placing Heloise and Parphion between (p. 584). Syclyax mentions the closed harbour of Sidon (Συκληας η τερας, p. 42, ed. Hudson.), which is more fully described by a later writer, Achilles Tatius (circ. A. D. 500), who represents Sidon as situated on the Assayan sea, itself the metropolis of the Phoenicians, whose citizens were the ancestors of the Thebans. A double harbour shelters the sea in a wide gulf, for where the bay is closed on the right hand side, a second mouth has been formed, through which the water again enters, opening into what may be regarded as a harbour of the harbour. In this inner basin, the vessels could lie securely during the winter, while the outer one served for the summer. (Cited by Italh., Phal. p. 1012.) This inner port Beloch conjectures, with great probability, in the closed port of Syclyax, and to be identified with the second harbour described by Strabo at Tyre, where he says there was one closed and another open harbour, called the Egyptian. The best account of
the site is given by Pococke. "It was situated," he says, "on a rising ground, defended by the sea on the north and west. The present city is mostly on the north side of the hill. The old city seems to have extended further east, as may be judged from the foundation of a thick wall, that extends from the sea to the east. About two thousand years ago it was probably bounded by a rivulet, the large bed of which might serve for a natural fosse; as another which might be on the north side, if the city extended so far, as some seem to think it did, and that it stretched to the east as far as the high hill, which is about three quarters of a mile from the present town. . . . The north side of the town, there are great ruins of a fine fort, the walls of which were built with very large stones, 12 feet in length, which is the thickness of the wall; and some are 11 feet broad, and 5 deep. The harbour is now choked up . . . This harbour seems to be the minor port mentioned by Strabo (xvi. p. 756) for the winter; the outer one probably being to the north in the open sea between Sidon and Tyre (?), where the shipping rides in safety during the summer season." (Observations Palestine, p. 86.)

The sepulchral graves are cut in the rock at the foot of the hill; and some of them are adorned with pilasters, and handsomely painted.

The territory of the Sidonians, originally circumscribed towards the north by the proximity of the hostile Gibbites, extended southwards to the tribe of Zebulus, and Mount Carmel; but was afterwards limited in this direction also by the growing power of their rivals the Tyrians. (Ritter, l. e. p. 43, &c.) The coins of Sidon are very numerous, belonging to two epochs: the former that of the Seleucidae, from Antiochus IV. and onwards; the latter commencing with A. v. c. 643, which is found on coins of Trajan and Hadrian. They commonly represent a ship, the most ancient emblem of the maritime pre-eminence of Sidon, sometimes an eagle, sometimes Astarte with a crown, spear, &c., with the legend ΣΙΔΩΝΟΣ ΘΕΑΣ. (Eckel, vol. ii. pp. 364, 373.)

SIDONEΣ (Σίδωνες), a tribe in the extreme east of Germany, about the sources of the Vistula (Ptol. ii. 11. § 21), and no doubt the same which appears in Strabo (vii. p. 306) under the name of Σίδωνες, as a branch of the Bastarnae. [L. S.]

SIDΟΝΙΑ. [Πεδονία.]

SIDUS (Σίδου, Σιδούστικα κόμη, Hesych.: Eth. Σιδόστου), a village in the Corinthia, on the Saronic gulf, between Cronmyon and Schoemata. It was taken by the Lacedaemonians along with Cronmyon in the Corinthian War, but was recovered by the Peloponnesians. (Xen. Hell. iv. 4, § 13, iv. 5, § 19.) It probably stood in the plain of Suseia. (Sylla; Steph. B. s. v.; Plin. iv. 7. s. 11; Boblaye, Recerc hes, s. c. p. 32; Lekke, Peloponnesiana, p. 397; Curtius, Peloponnesos, vol. ii. p. 555.)

SIDUSAΣ (Σιδούσσα), a small town of Ionia, belonging to the territory of Erythrae. (Thucyd. viii. 24; Steph. B. s. v.) Pliny (v. 38) erroneously describes it as an island off the coast of Erythrae. It is evident that the place also bore the name of Sidus (Σίδου), as Stephanus B. (s. v.) mentions a town of this name in the territory of Erythrae. [I. S.]

SIDYMA (Σιδύμα; Eth. Σιδυμαίος), a town of Lycia, on the southern slope of Mount Cragus, to the north-west of the mouth of the Xanthus. (Plin. v. 28; Steph. B. s. v.; Plut. v. 3. § 5; Hierocles, p. 684; Cedrenus, p. 344.) The ruins of this city, on a lofty height of Mount Cragus, have first been discovered and described by Sir C. Fellows. (Lyceia, p. 151, fol.) They are at the village of Toortowcar Hisâl, and consist chiefly of splendidly built tombs, abounding in Greek inscriptions. The town itself appears to have been very small, and the agora, agoras, and temples, are of diminutive size, but of great beauty. [L. S.]

SIELEDIVA. [Λαπρομάνη.]

SIGA (Σίγα, Ptol. iv. 2. § 2), a commercial town of Mauritania Caesariensis, seated near the mouth of a river of the same name in a large bay. The mouth of the river formed the port of the city, at a distance of 3 miles from it (Sigensis Pertus, Htin. Ant. p. 13), opposite to the island of Acra, on the highroad, and near Cirta, the residence of Syphax. (Strab. xvii. p. 829; Plin. v. 2. s. 1.) In Strabo's time it was in ruins, but must have subsequently restored, since it is mentioned in the Itinerary (p. 12) as a Roman municipium. (Comp. Ptol. l. c.; Mela. i. 5; Scylax, 51, 52.) According to Shaw (Travels, p. 12), who, however, did not visit the place, its ruins are still to be seen by the present Touchon; others identify it with the Aresch- taud of the Arabs, at the mouth of the Tafina, near Rasam. [T. H. D.]

SIGA (Σίγα, Ptol. iv. 2. § 2), a river of Mauritania Caesariensis, falling into a bay of the sea opposite to the island of Acra (now Caractes). Scylax (p. 51) calls it Σίγος. Probably the present Tafina. [T. H. D.]

SIGEUM (Σιγεύον or ἢ Σιγευδα ἴταρα), a prominence in Tros, forming the north-western extremity of Asia Minor, at the entrance of the Hellespont, and opposite the town of Elains, in the Thracian Chersonesus. Near it the naval camp of the Greeks was said to have been formed during the Trojan War. (Herod. v. 65. 94; Thucyd. viii. 101; Strab. xii. pp. 595, 603; Pompey Mela, l. 15; Plin. v. 33; Plut. v. 2. § 3; Serv. ad Aen. ii. 312.) This prominence is now called Tenishiher.

Near this prominence was situated the town of Sigeum, which is said to have been an Aeolian colony, founded under the guidance of Archelaus of Mytilene, who used the stones of ancient Troy in building this new place. But some years later the Athenians sent troops under Phrynos and expelled the Mytileneans; and this act of violence led to a war between the two cities, which lasted for a long time, and was conducted with varying success. Pittacus, the wise Mytilenean, is said to have slain Phrynos in single combat. The poet Alcaeus also was engaged in one of the actions. The dispute was at length referred to Periander, of Corinth, who decided in favour of the Athenians. (Strab. xiii. p. 599; Herod. v. 95; Steph. B. s. v.; Diod. Laér. i. 74.) Henceforth we find the Pisistratidae in possession of Sigeum, and Hippia, after being expelled from Athens, is known to have retired there with his family. (Herod. v. 65.) The town of Sigeum was destroyed by the inhabitants of Ilium soon after the overthrow of the Persian empire, so that in Strabo's time it no longer existed. (Strab. xiii. p. 600; Plin. v. 33.) A hill near the site of the town is still called Achiilia, in antiquity to contain the remains of Achilles, which was looked upon with much veneration that gradually a small town seems to have risen around it, under the name of Achilleum [Achileum]. This tomb, which was visited by Alexander the Great, Julius 3 s 3
Caesar, and Germanicus, is still visible in the form of a mound or tumulus. [L. S.]

SIGMAN (Σιγμαν), a river in Gallia. Ptolemy (iii. 7. § 2) places the mouth of the Sigman between the Aturia (Adour) and the Garonne; and between the Sigman and the Garonne he places Carinum Promontorium. [CURIANXU.] Marcianus (Peripl.) who has the name Sigmanus, gives two distances between the mouth of the Adour and that of the Sigman, one of which is 500 and the other 450 stadia. We cannot trust either the latitudes of Ptolemy or the distances of Marcian along this coast. There is no river between the Adour and the Garonne that we can suppose to have been marked down by the ancient charting ships to the exclusion of the Legre, which flows into the Bassin d’Arcachon. But Gessellus supposes the Sigman to be the Minismis, which is about half-way between the Adour and the Bassin d’Arcachon. [G. L.]

SIGNIA (Σιγνία: Lth. Signinum; Segni), an ancient city of Latium, situated on a lofty hill at the NW. angle of the Volscian mountains, looking down upon the valley of the Sacco. It is represented by ancient authors as bounded by Tarquinus Serafinus, at the same time with Circei. (Liv. i. 53; Dionys. iv. 63.) No trace of it is found before this; its name does not figure among the cities of the Latin League or those of which the foundation was ascribed to Alba; and the story told by Dionysins (I. c.), that it originated at first in a fortuitous settlement of some Roman troops encamped in the neighbourhood, which was afterwards enlarged and strengthened by Tarquin, certainly points to the fact of its being a new town, and not, like so many of the Roman colonies, a new settlement in a previously existing city. It passed, after the election of Tarquin, into the hands of the Roman Republic, as it was attacked in n. c. 497 by Sextus Tarquinius, who in vain endeavoured to make himself master of it (Dionys. v. 58). A few years later, it received a fresh colony, to recruit its exhausted population (Liv. ii. 21). From this time it appears to have continued a dependency of Rome, and never, so far as we learn, fell into the power of the Volsciains, though that people held all the neighbouring mountain country. Signia must indeed, from its strong and commanding position, overlooking all the valley of the Teverus and the broad plain between it and Latium, have been of the utmost importance to the Romans and Latins, especially as securing their communications with their allies the Hernicans. In n. c. 340 the Signians shared in the general defection of the Latins (Liv. viii. 3), but we have no account of the part they took in the war that followed, or of the terms on which they were received to submission. We know only that Signia became again (as it had probably been before) a Colonia Latina, and is mentioned as such during the Second Punic War. On that occasion it was one of those which continued faithful to Rome at the most trying period of the war (Liv. xxvii. 10), and must therefore have been still in a flourishing condition. On account of its strong and secluded position we find it selected as one of the places where the Carthaginian hostages were deposited for safety (Id. xxxii. 2); but this is the last mention of it that occurs in history, except that the battle of Sacripontus is described by Plutarch as taking place near Signia (Plut. Sull. 28). That decisive action was fought in the plain between Signia and Praeneste [Sacripontes]. It, however, certainly continued during the later ages of the Republic and under the Empire to be a considerable municipal town. It received a fresh body of colonists under the Triumvirate, but it is doubtful whether it retained the rank of a Colonia. Pliny does not reckon it as such, and though it is termed "Colonia Signina," in some inscriptions, these are of doubtful authenticity. (Strab. v. p. 237; Plin. iii. 5. s. 9; Sil. Ital. viii. 378; Lib. Colon. p. 237; Luzzi, de Col. p. 339; Gruter, Inscr. p. 490. 5, &c.)

Signia was chiefly settled under the Roman Empire for its wine, which, though harsh and astringent, was valuable for its medicinal qualities, and seems to have been extensively used at Rome (Strab. v. p. 237; Plin. xiv. 6. s. 8; Athen. i. p. 27; Sil. Ital. l. c; Martial, xiii. 116; Cels. de Med. iv. 5.) Its territory produced also pears of a celebrated quality (Juvin. vi. 73; Plin. xv. 15. s. 16; Colum. v. 10. § 18; Macrobr. Sot. ii. 15), as well as excellent vegetables, which were sent in large quantities to Rome (Colum. x. 131). Those last were grown on a hill near the city, called by Columella Mons Lepinus, apparently one of the underfalls of the Volscian mountain; there is no authority for applying the name (as modern writers have frequently done) to the whole of that mass of mountains [LEPINUS MONS]. Signia also gave name to a particular kind of cement known as "opus Signinum," and extensively employed both for pavements and reservoirs of water (Plin. xxxv. 12. s. 46; Colum. i. 6. § 12, viii. 15. § 3; Vitruv. viii. 7. § 14).

The modern town of Segni (a poor place, with about 3500 inhabitants) occupies a part only of the site of the ancient city. The latter embraced within the circuit of its walls the whole summit of the hill, which stands boldly out from the Volscian mountains, with which it is connected only by a narrow neck or isthmus. The line of the ancient walls may be traced throughout its whole extent; they are constructed of large masses of stone (the hard limestone of which the hill itself consists), of polygonal or radially squared form, and afford certainly one of the most remarkable specimens of the style of construction commonly known as Cyclopean or Pelasgic, of which striking instances are found also in other cities in this part of Latium. The city had in all five gates, two of which still retain their primitive construction; and one of these, known as the Porta Sacripontis or Porta Sacripontes, has been pointed out as the rudest and most massive Cyclopean construction. The architrave is formed of single masses of stone not less than 12 feet in length, laid across from one impost to the other. This gate has been repeatedly figured*; another, less celebrated but scarcely less remarkable, is found on the SE. side of the town, and is constructed in a style precisely similar. The age of these walls and gates has been a subject of much controversy; on the one hand the rude and massive style of their construction, and the absence of all traces of the arch in the gateways, would seem to assign them to a remote and indefinite antiquity; on the other hand, the historical notices that we possess concerning Signia all tend to prove that it was not one of the most ancient cities of Latium, and that there could not have existed a city of such magnitude previous to the settlement of the Roman colony under Tarquin. (For the discussion of this question as well as for

* The annexed figure is taken from that given by Abeken (Mitt. Italien, pl. 2).
the description of the remains themselves, see the *Annali dell' Instituto Archeologico* for 1892, pp. 78—87, 357—360; *Classical Museum*, vol. ii, pp. 167—170; *Abeken, Mittel Italien*, p. 140, &c.) The only other remains within the circuit of the walls are a temple (now converted into the church of S. Pietro) of Roman date, and built of regularly squared blocks of tufa; and nearly adjoining is a circular reservoir for water, of considerable size and lined with the "opus siculum." ( *Annali*, l. c. p. 82.) Several inscriptions of imperial date are also preserved in the modern town. [E. H. B.]

**GAGE OF SIGNIA.**

SIGRANE (γε Σigranei, Strab. xii. p. 325), a district of Media Atropatene, near the Caspian Gates. Ptolemy calls it Σιγρανεις (vii. 2, § 6).

SIGRIUM (Σιγριον), the westernmost promontory of the island of Lesbos, which now bears the name of Sigri (Strab. xiii. pp. 616, 618.) Stephanus B. (π. v.) calls Sigrium a harbour of Lesbos. [L. S.]

SIGULONES (Σιγουλόνες), a German tribe mentioned by Ptolemy (ii. 11, § 11) as inhabiting the Cimbrian Chersonesus, to the north of the Saxonese, but is otherwise unknown. [L. S.]

SIGYNES (Σιγυναις, Herod. v. 9; Σιγυνα, Apell. Rhod. iv. 320; Orph. Arg. 759; Σίγυνα, Strab. xi. p. 520). The only name of any Trans-Danubian population, other than Scythian, known to Herodotus was that of the Sigynes, whom he seems to have described as the Thracians described them to either himself or his informants. The Thracian notion of one of these Sigynes was that he wore a Median dress, and considered himself a descendant of the Medes; though how this could be was more than Herodotus could say. Anything, however, is possible in a long space of time. The horses of the Sigynes were undersized—ponies, indeed, rather than horses. They were fitted up and long-haired; their coat being five fingers deep. They were too weak to carry a man on their back; but not too weak for harness. In chariots they were light and quick; and in the drawing of chariots the Sigynes took great delight. We must look on Sigyana as a general and collective name for a large assemblage of populations; incalculable as their country is said to extend as far westwards as the Ilmeni on the Adriatic. Say that it reached what was afterwards the frontier of Panonia. On the north it must really have been bounded by some of the Scythian districts. In the language of the Ligymen above Massilia, however, Sigyana means a merchant, or retail-dealer, or carrier. In Cyprus they call spears by the name Sigyana. The resemblance of this word to the name Σιγυρ=Σιγος has often been noticed. Word for word, it may be the same. It may also have been applied to the gipsies with the meaning it has in Ligyan. It does not, however, follow that the Sigyana were gipsies. [R. G. L.]

**SIOB (Σιοβ).** 1. The torrent more commonly known as "the River of Egypt," the southern boundary of the Promised Land, identified by the LXX. with Rhinocorus, the modern Wady-el-Ariab. Rhinocorus (Joshua, xiii. 3: 1 Chron. xiii. 5; Jeremiah, ii. 18), in the first cited passage, the LXX. read ἄτο τῇ ἀκώτης τῇ κατὰ πρόβατον Αγγίστου; in the second, ἀνά δρίων Αγγίστου; and only in the last is a proper name retained, and there it is changed to Γάνω. St. Jerome (Onomast. s. v.), following Eusebius, describes it as before Egypt, and speaks of a village of the name between Aelia and Eleutheropolis, which it is difficult to imagine that they could have identified with the Sibor above named. St. Jerome says that he has said more on the subject "in libro Hebraicorum questionum," but the passage is not to be found there. In his "Epitaphium Paulae" he writes, "veniám ad Aegypti flumen Sior, qui interpretatur turbidus" (p. 677); but he here probably means the Nile, which is sometimes supposed to be called Sibor, as in the passage of Jeremiah above referred to. The village named by Eusebius and St. Jerome doubtless marked the site of the city of the tribe of Judah, situated in the mountains, and written Sior in the authorized version, but Σιοβ in the original (Joshua, xv. 54), and in the LXX. Σιοβ, (al. Σιοβα). 2. Sior or Sibor of Libnath (LXX. Σιόβ και Λεόνταδι), perhaps to be taken as two names, as by the LXX., Eusebius, and St. Jerome, who name "Sior in tribu Aser," without the addition of Libnath. It is mentioned only in the border of Asher. (Joshua, xix. 26.) The various conjectures concerning the place or places are stated by Bonferrus (Comment. in loc.), but none are satisfactory, and the site or sites have still to be recovered. [G. W.]

**SILA (Σίλα: Sila) was the name given in ancient times to a part of the Apennines in the S. of Bruttium, which were clothed with dense forests, and furnished abundance of pitch, as well as timber for ship-building. Strabo tells us it was 700 stadia (70 geo. miles) in length, and places its commencement in the neighbourhood of Locri. (Strab. vi. p. 261.) It is evident, therefore, that he, as well as Pliny (iii. 5. s. 10), who notices it in connection with Rhegium and Leucopetra, assigned the name to the southernmost group of the Apennines (the range of Apulomonte), S. of the isthmus which separates the Termeian and Sicelitic gulfs. At the present day the name of Sila is given only to the detached and outlying mountain group N. of that isthmus, and E. of Cosenza (Consentia.) It is probable that the name, which evidently means only "the forest," and is connected with the Latin silva, and the Greek σίλα, was originally applied in a more general sense to all the forest-covered mountains of this part of Calabria, though now restricted to the group in question. [E. H. B.] 3 s 4
SILACENAE, a place in Lower Pannonia, on the south of Lake Peisso. (It. Ant. p. 233, where it appears in the ablat. form Silacenis. Its exact site is unknown. [L. S.]

SILANA, a town in the NW. of Thessaly, near the frontier of Athamania, mentioned along with Gomphi and Trieca by Livy. Leake conjectures that it occupied the site of Polisma, near which are several squared blocks of ancient workmanship. (Liv. xxxvi. 13; Leake, Northern Greece, vol. iv. p. 529.)

SILARUS (Σιλαρός, Ptol.; Σιλαρίς, Strab.: Selb.), a considerable river of Southern Italy, flowing into the gulf of Pusidonia, and forming the boundary between Campania and Lucania. It rises in the mountains near Teora, on the confines of the Hirpini, and not far from the sources of the Aoclus; thence flows for some distance in a southerly direction until it receives the waters of the Taganer (Tanagro), a considerable stream, which joins it from the SE.; it then turns to the SW. and pursues that direction to the sea, which it enters about 5 miles to the N. of the city of Paestum. About 5 miles from its mouth it receives another important tributary in the Calor (Calore), which joins it from the S. Between the Calor and Taganer, on the S. bank of the Silurus rises the mountain group of Mount Alburnus, mentioned by Virgil in connection with that river. The "luci Silari," of the same author are evidently the same with the extensive woods which still clothe the valley of the Sele from its confluence with the Tanagro to within a few miles of the sea. (Verg. Georg. iii. 146.) The Silurus was in the days of Strabo and Pliny the recognised boundary between Campania (including under that name the land of the Picentini) and Lucania; but this applies only to its course near its mouth, as Ebri (Ebol), though situated to the N. of it, is included by Pliny among the towns of Lucania. (Strab. v. p. 251, vi. p. 252; Plin. iii. 5. ss. 9, 10, 11. i. 15; Pol. i. ii. 1. § 8; Mel. ii. 4. § 9: Tab. Peut., Dionys. Per. 361.) A peculiarity of its waters, mentioned by several ancient writers, is that they had the power of petrifying sticks, leaves, and other substances immerged in them. (Strab. v. p. 251; Plin. ii. 103. s. 106; Sil. Ital. viii. 582.)

The name is written by Lucan and Columella Siler, and the same form is found in Vibius Sequester, indicating an approach to the modern name of Sele. (Lucan, ii. 426; Colum. x. 136; Vib. Seq. p. 18.)

SILLAS (Σιλλάς, Arrian, Ind. c. 6; Strab. xv. p. 703; Dion. ii. 37), a river of the Upper Tanjib, the story of which, as told by ancient writers, is clearly fabulous. According to Arrian and others, the waters of this river were so light that nothing could swim in it. Lassen, who has examined this story with his usual acuteness, has shown from the Mahabharata that there was a stream in the northern part of India called the Silla, the water of which was endowed with a highly petrifying power, from which circumstance the river obtained its signification, Silla meaning in Sanscrit a stone. (Zeitschr. f. Kunde des Morgenglandes, ii. p. 63.) It may be remarked that the name occurs differently written. Thus Diodorus writes ΣΙΛΛΑΣ ου κραννα, Antigonus Σιλλα καυ κραννα. (Miraeh. c. 161.) Pliny evidently refers to the same story, but calls the river Sid in his quotation from Ctesias (xxxii. 2. s. 18.).

SILIBUM (Σιλίμον: Etr. Silibium.), a small town of Phrygia, on the east of Apamea and Celaenae, and beyond the source of the Maeander (Ptol. v. 2. § 25; Plin. v. 29). In the Byzantine writers it is sometimes mentioned under corrupt forms of its name, such as Silbis (Hieroc. p. 667), Sublas (Cianaus, vi. 15), or Sublum and Sybenus (Oriens Christ. p. 809). This place, which was the see of a bishop, belonged to the conventus of Apamea. Modern travellers seek its site in the neighbourhood of Sanilikli. (Kiepert, in Franz's Fünf Inschriften, p. 37.)

SILLI or SIMI (Σιλλιοι or Σημι, Strab. xi. p. 772), a tribe of Aeolianians, who used the horns of the ox, a species of gazelle, as weapons. Some have considered them to be the same as the Αίθλεωρ Σημι of Agatharchus, p. 42. (Comp. Diodor. iii. 8.)

SILICESE FLUMEN, a river in Hispamia Baetica, in the neighbourhood of Corduba, probably the Gualdae, or one of its tributaries. (Hirt. B. A. 57.)

SILINDIUM (Σιλινδιοιοs), a small town of Tros at the foot of Mount Ida, is mentioned only by Stephanus B. (s. v.) on the authority of Demetrius of Scepsis. [L. S.]

SILINGAE (Σιλιγγαι), a tribe of Germany, on the south of the Sannones, between the western slopes of Mons Ascularius and the river Albis. (Ptol. ii. 11. § 18.) It is generally supposed that this name is the one from which the modern Silicio or Schlesien is formed. (Latham, Top. Gall. p. 138; Palacky, Gesch. von Böhmen, vol. i. p. 68.)

SILIS (Sele), a small river of Venetia, in the N. of Italy, which rises in the mountains above Trevico (Tarvisium), and flows into the lagoons at Altinum (Altino). It is still called the Sele. (Plin. iii. 18. s. 22.)

SILLA (Σιλλα, Isid. Charon, 2. ed. Müller, 1853), a river of Apollonitis, a district of Assyria, which, according to Isidore, flows through the centre of the town of Artemita. [Artemita.] There can be little doubt that this is the river now called the Djezk. It is also, in all probability, the same as that called by Steph. B. (s. v. Αρτέμια) the Delas. Forbiger imagines that the Diasus of Ammianus (xxii. 6), the Durus of Zosimus (iii. 25), and the Gorges of Tolemy (iv. 1. § 7), refer to the same river. It is, however, more likely that the first of these streams is the same as that elsewhere called the Zebius. [V.]

SILLOI or SHILLOI (Σιλλοι: Etr. Σιλλοιντίς), a town of Palestine, in the tribe of Ephraim, in the mountain region according to Josephus (Ant. v. 1), where the ark and the tabernacle were first established by Joshua on the settlement of the land by the tribes of Israel. There also were assembled the national conventions for the division of the land and the transaction of other public business affecting the whole Union. (Joshua, xvii. 1, 10, xix. 51, xxii. 2, xxii. 9.) There Samuel ministered before the Lord in the days of Eli the high-priest (1 Sam. i. — iii.). There was the seat of the Divine worship until the disastrous battle of Ajhek, from which period the decline of Shiloh must be dated (ch. iv.) until its desolation became proverbial in Israel. (Psalms lxviii. 60; Jeremiah, vii. 12, xxv. 6, 35.) The situation is very particularly described in the book of Judges (xxii. 19), as "on the north side of Bethel, on the east side of the highway that goeth up from Bethel to Scicem, and on the south of Lebanon."
SILOAM.

St. Jerome places it xii. M. P. from Neapolis (=Schechen = Nahbis), in the toparchy of Acrabattena. (Onomast. s. v.) Its ruins were shown, and the remains of the altar among them, in his day. (Conn. Soph. L. 14, Epigraph. Paul.\) From these notes the site is easily identified with the modern Siluan, on the east of the Nahbis road, about four hours south of that town, situated over against a village named El-Lebben (Lebonah), which lends its name also to a Khan on the road-side. Siluan is merely a heap of ruins lying on a hill of moderate elevation at the south-eastern extremity of a valley through which passes the great north road from Judea to Galilee. Among the ruins of modern houses are traces of buildings of greater antiquity, and at some distance, towards the east, is a well of good water, and in the valleys many tombs excavated in the rock. (Robinson, Bibl. Res. vol. ii. pp. 86—89.) Among the tombs of Silihoh, if Ireland’s conjecture is correct, is to be sought the very slender authority on which the pagans rested their assertion that their demigod Silenus was buried in the country of the Hebrews; and the fact of the effigy of this deity being found on the coins of Flavia Neapolis, certainly lends countenance to his ingenious hypothesis that the fable originated in the imaginary correspondence between this name and the town of Ephraim. (Palladian, p. 1017.) The error which has copied from Rumanin of Tudela, of placing the town of Siluan near Silich, is obviously attributable to a lapse of memory on the part of that writer, as no one has ever identified Silich with the modern Nebi Samwil. The error is corrected by Asher. (Itinerary of R. Benjamin of Tardello, ed. A. Asher, vol. i. p. 78, vol. ii. p. 95.)

SILOAM. [Jerusalem, p. 28, b.]

SIPLIA, a town in Hispania Baetica, N. of the Baetic, and apparently in the Sierra Morena. (Liv. xvi. 12.) Probably Sinaira. [T. II. D.]

SILSILIS (Vol. Imp.), a fort situated on the right bank of the Nile, between Ombo and Apollinopolis Magna in Upper Egypt. The original name of this place is nearly preserved in the modern Silli. The fort of Silisilis stood at the foot of the mountain now called Gebel Silisilch, or “hill of the chain,” and was one of the points which commanded the passage of the river. For at this spot the Arabian and Libyan hills approach each other so nearly that the Nile, contracted to about half its ordinary width, seems to flow between two perpendicular walls of sandstone. Silisilis was one of the principal seats for the worship of the Nile itself, and Rameses II. consecrated a temple to it, where it was worshipped under the emblem of a crocodile and the appellation of Hapiunm. The stone quarries of Silisilis were also celebrated for their durable and beautiful stone, of which the great temples and monuments of the Thebaid were for the most part built. (Wilkinson, Mod. Egypt and Thebes, vol. ii. p. 283.) [W. B. D.]

SILVANCETES. This name occurs in the Notitia of the Provinces of Galia, where the chief town is called Civitas Silvancetiana. In the Nott. Iap. the Silvancetii are placed in Belgica Neustria, but the name there denotes a town, according to the usage then established of giving to the capital towns the names of their people. It appears almost certain that the Subaneci of Ptolemy (ii. 9, § 11) is the same name as Silvancetian or Silvancetii. Silvancetian places the Subanecti east of the Seine, and makes Ratomagus their capital. But this Ratomagus is conjectured to be the same as the Augustomagus of the Itin. and of the Table, which is Seluïs [Augustomagus].

Pilgruv (iv. c. 17) mentions the Umanesetes in Gallia Belgica Superior, came from Siheri, Umanesetes liber, Tungri.” It is possible that this too may be a corrupted form of Silvanectes, for the modern name Selouis confirms the form Silvanectes, and the name Umanesetes is otherwise unknown. [G. L.]

SILVIA, a place in Illyria, on the road from Scenium to Salona. (Hist. Ant. p. 269.) It is probably the same town as the Salvia of Ptolemy [Salya]. It is identified with Keupris by Lapie. [T. II. D.]

SILVIUM (Σιλβιοῦ: Eth. Silvinius; Varagnone), a town of Apulia in the interior of the country. It is noticed by Strabo (vi. p. 283) as the frontier town of the Peninsula, and its name is noticed by Pliny among the municipal towns of Apulia (P玄. iii. 11. s. 16). But at a much earlier period it is mentioned by Diodorus as an Apulian town, which was wrested from the Samnites by the Romans in B. C. 306 (Diod. xx. 80). Our only clue to its position is derived from the Itineraries, which place it 20 miles from Veni-via, on the branch of the Appian Way which led direct to Tarentum. This distance coincides with the site of a town (now destroyed) called Garagnone, situated about midway between Spinazzola and Foggi Orocie, and nearly due E. of Fancaosa (Frautili, It. Appia, iv. 6. p. 478; Romanelli, vol. ii p. 188). [E. E. B.]

SILURA, an island of Britain, separated only by a narrow strait from the coast of the Dumnunii, who inhabited the most SW. point of Britannia. (Sohn, c. 22.) It is probably the same island which Sulpius Severus (ii. 51) calls Syfina, and seems to mean the Sicily Islands. [T. H. D.]

SILUREUS (Σιλουροῦ, Ptol. ii. 3. § 24), a powerful and warlike people in the W. part of Britannia Romana, whose territory was bounded on the S. by the estuary of the Sambre. The important towns of Isca andVenta belonged to them. Tacitus (Agr. 11) calls them descendants of the Iberi of Spain, and states that they had emigrated from Ireland into Britain; but there seems to be no foundation for this opinion. (Cf. Zeuss, Die Deutschen, p. 202.) Although subjugated by the Romans, they caused them continual alarm; and they were the only people of Britain who, at a later period, maintained their independence against the Saxons. (Beda, Hist. Ecc. l. 12, seq.; cf. Tac. Ann. xii. 2, 31; Plin. iv. 16. s. 30.) [T. II. D.]

SIMENIA (Σιμενία: Eth. Σιμενίτης), a town on the coast of Lycia, 60 stadia from Aegae (P玄. v. 27; Steph. B. s. s.; Stadiasmus, Mar. Mag. §§ 239, 240, where it is called Somenia, Simenia; comp. Leake Asia Minor, p. 188; Spratt and Forbes, Travels in Lycia, vol. i. p. 137, vol. ii. pp. 86, 274.) [L. S.]

SIMENI. [Icen.]

SIMION. [Palaestina, p. 529, b.]

SIMITTI (Σιμιττίος, Ptol. iv. 3. § 29), called by Pliny (v. 4. § 4) Simittense Oppidum, a Roman colony in the interior of Numidia, on the road from Carta to Carthage, 7 miles to the West of Bella Regia. (Hist. Ant. p. 43.) There were some natural altars 5 miles E. of the town (Ib.). It lay on the site of the present Ain Semit, on the Qued-el-Bull, 2 leagues to the W. of Bull. [T. II. D.]

SIMOIS (Σιμόης), a small river of Troas, having its source in Mount Ida, or more accurately in Mount
Cotyius, and passing by Iliou, joined the Scamander below that city. This river is frequently spoken of in the Iliad, and described as a rapid mountain torrent. (Il. iv. 473, v. 774, xii. 22, xxi. 308; comp. Aeschylus, Agam. 692; Strab. xiii. p. 357; Ptol. v. 2. § 3; Diod. B. s. e. v. Pomp. Mela, i. 18; Plin. v. 5. 26; and Seidlitz and Schurmann, De Dand. Brach Choi, and at present its course is so altered that it is no longer a tributary of the Scamander, but flows directly into the Hellespont. [L. S.]

SIMUNDU. [TARROBANE.]

SIMYYLA (Σίμυλλα, Ptol. vii. 1. § 6), a commercial entrepot on the western coast of Hindostan, in the district called 'Армяκα Σαθινα. It is noticed in the Periplus by the name of Ἦμμυλλα, and was probably at or near Bassein, a little N. of Bombay. [V.]

S'I'MYRA (Σιμύρα), a maritime city of Phoenicia mentioned by Pliny in connection with Marathus and Antaradus, N. of Tripolis, Orthosia, and the river Eleuthers (v. 20). It is placed by Ptolemy between the mouth of the Eleuthers and Orthosia, and, if the figures can be trusted, 10' west of the former, 14' north; in the same latitude with Orthosia (i. e. 31° 40'), but 40' east of it, which would seem either to imply an ignorance of the coast, or to intimate that Simyra lay at some distance from the shore, and that the Eleuthers ran southward to the sea. Strabo says that it was occupied by the Aradians, to other with the neighbouring Marathus (vi. p. 753), apparently placing it north of the Eleuthers. In addition to what has been said under Marathus, and in confirmation of the identification there attempted, the following may be cited from Shaw, and will serve to illustrate the situation of Simyra: "The ancient Marathus may be fixed at some ruins near the Serpent Fountain, which make, with Rowander and Tortosa, almost an equilateral triangle. About 5 miles from the river Akker, and 24 to the S.E. of Tortosa, there are other considerable ruins known by the name of Samurah, with several rich plantations of mulberry and other fruit trees growing in and round about them. These, from the very name and situation, can be no other than the remains of the ancient Simyra. In this place of Simyra... the seat formerly of the Zeaorites. Pliny v. 20) makes Simyra a city of Coele叙利亚, and acquaints us that Mount Libanus ended there to the northward; but as Samurah lies in the Jeune (i. e. the great plain), 2 leagues distant from that mountain, this circumstance will better fall in with Arca, where Mount Libanus is remarkably broken off and discontinued." (Travels. pp. 268, 269.) The ruins of Arca are 5 miles E. of Samurah, and 2 leagues W.S.W. of Arca is the Nahar-el-Berd, the Cold River, which Shaw and others identify with the Eleuthers. It is manifest how irreconcilable all this is with Ptolemy and other ancient geographers. [ELEUTHERUS; ORTHOSIA; MARATHUS.] [G.W.]

SINA. [SIN.]

SINAE. [see Sin.]

SINAE (of Sine, Ptol. vii. 3, &c.), the ancient nation of the Chinese, whose land is first described by Ptolemy (l. c.) and Marcianus (p. 29, seq.), but in an unsatisfactory manner. Indeed, the whole knowledge of it possessed by the Greeks and Romans rested on the reports of individual merchants who had succeeded in gaining admittance among a people who then, as in modern times, isolated themselves as much as possible from the rest of the world. For the assumption which Degenius sought to establish, that a political alliance was formed between Rome and China, and that the emperor M. Aurelius Antoninus sent a formal embassy thither in the year 166, rests solely on the name of Yan-Tun, which that writer discovered in some ancient Chinese annals, and must therefore be regarded with great suspicion. (See Bohlen, das Alte Indien, i. p. 71.) According to this description of Ptolemy, the country of the Sinæi extended very far inland, and was connected with the E. coast of Africa by an unknown land, so that the Indian Ocean formed a large Mediterranean sea. He does not venture to define its eastern boundary, but finishes his account of the known earth with the 180th degree of longitude, however, without denying, that there were tracts of unknown land still farther to the E. But Cosmas Indicopleustes (ap. Montfaucon, N. Coll. Patrum, ii. p. 337), who calls the country of the Sinae Σιναία, was the first who laid down its correct boundary by the ocean on the E. On the N. it was bounded by Suvaca, and on the S. and W. by India extra Gangem, from which it was divided by the river Aspitra (probably the Banaga-Kwang) and the Semantine mountains. Thus it embraced the southern half of China, and the eastern part of Further India, as Tongpuin, Cochinchina, Cambuja, &c. Ptolemy mentions several large bays and promontories on the coast. At the extreme N. of the Indian Ocean, where the land of the Sinae abutted on Further India, was the great gulf (of Siam), which on the coast of the Sinæi was formed by the South Cape (νοτίον βάρος) (probably Cape Camboja), and on the side of India by another large promontory (perhaps the Cape Roman- tia). To the S. of South Cape, and between it and the Cape of the Satyrs (Σατύρων βάρος), Ptolemy and Marcianus (p. 30) place another large bay called Theriodes (Θεριόδης ἱλάτας); to the S. of the Cape of Satyrs, again, and between it and the mouth of the river Cottiaris, the Bay of the Sinæi (Σιναίου ἱλάτας). These very vague and incorrect accounts do not permit us to decide with any confidence respecting the places indicated by Ptolemy; but it has been conjectured that the Cape of the Satyrs may have been Cape St. James, the Theriodes, Cape Mabuna, and the mouth of the river Camboja or Maykung, which emptied itself into the gulf of Sinæi the gulf of Tongpuin. Among the mountains of the country Ptolemy names only the Montes Semanfanti (Συμμανθινῶν ὄρων), which formed its NW. boundary. Among the rivers indicated are the Asipthara (Ἀσιπθάρα), rising in the mountains just mentioned, to which we have already al- lied the Ambastus (Ἀμβαστα), probably the Camboja, which fell into the Great Bay between the town of Bruma and Rhabana; the Senus or Sinas (Σηνῶν or Σαίνων) more to the S.; and further still in the same direction the Cottiaris (Κοτ- ιάρις), which emptied itself into the bay of the Sinæi to the N. of the town of Cattigara. The last may perhaps be the Si Kwang, which discharges itself at Canton. Respecting the nation of the Sinæi themselves, we have no information, though Ptolemy mentions several subdivisions of them; as in the N. the Semanfanti, on the like named mountains; S. of them the Alacorae, with a town called Acadra, and again to the S. the Asipthara, on the Asiptha, and having a city of the same name as the river. SE. of the latter, on the Great Bay, and dwelling on the river Ambastus, were the Ambascæ. Lastly, in a still more southern district between the bay of Theriodes and that of the Sinæi, were the Archipæs.
Ichnothyophagi and the Sinaitic Ichnothyophagi. Among the 8 cities mentioned by Ptolemy, namely, Bramma, Rhabara, Cattigara, Acadra, Asphitha, Coconagra, Saraca, and Thinae or Sinait, the last was undoubtedly the most important. It was regarded by him and others as the capital of the nation. It has been conjectured to be Theisin, in the province of Cherson, or even Nukha itself. It may be remarked that the Sinaites were recently called Thinae (Ωναία); though it is said that this form of their name only arose from the Arabic pronunciation of Sinait. (See Sickler, ii, p. 518; Gesenius, Heb. Lex. p. 788.) The next town in point of importance was Cattigara, which both Ptolemy and Marcianus regard as the chief place of trade. [Cattigara.] [T.H.D.]

SINAI (Σαίναι), the celebrated mountain of Arabia Petraea. It, however, lent its name to the whole peninsula in which it was situated, which must therefore first be described. It is formed by the bifurcation of the Red Sea at its northern extremity, and is bounded by the Heropoleis Sinus (or Sea of Suez) on the west, and the Aelanticus Sinus (the Gulf of Akaba) on the east, ending in the Posidium Promontorium (Ras Mohammed). At the northern extremity of the Sea of Suez stood Arsinoe (Suez), and Aelana (Akaba), at the extremity of the gulf that bears its name. The caravan road of the great Haj, which joins these two towns, traverses a high table-land of desert, or Et-Tih, the Wilderness of the Wandering, part of ancient Idumaea. To the south of this road, the plateau of chalk formation is continued to Jebel Tih, the μέλανες ὅποι of Ptolemy, extending from the eastern to the western gulf, in a line slightly curved to the south, and bounded in that direction by a belt of sandstone, consisting of arid plains, almost without water or signs of vegetation. To this succeeds the district of primitive granite formation, which extends quite to the southern cape, and runs into the Gulf of Akaba on the east, but is separated by a narrow strip of alluvial soil called El-Kha from the Sea of Suez. The northern part of the Tih is called in Scripture "the wilderness of Paran" (Vumb. xii. 16, xiii. 3, xxiii. 8, &c.), in which the Israelites abode or wandered during great part of the forty years; although Eusebius and St. Jerome, as will be presently seen, identify this last with the wilderness of Sin. This wilderness of Sin is commonly supposed to be connected, in name and situation, with Mount Sinai; but as the Israelites entered on the wilderness of Sin on leaving their encampment by the Red Sea, the next station to Elim (Exod. xvi. 1; Vumb. xxxiii. 10, 11), they traversed it between Elim and Rephidim, where they had apparently left it (Exod. xvi. 1).—for Daphkah and Alush are inserted between the two in Numbers xxxiii. 12—14. and yet had not arrived at Sinai (ver. 15; Exod. xvi. 1), it may be questioned whether the identification rests on solid ground. Eusebius and St. Jerome, who distinguish between the deserts of Sin and Sinai, yet appear to extend the former too far eastward. "The desert of Sin," they say, extends between the Red Sea and the desert of Sinai; for they came from the desert of Sin to Rephidim and thence to the desert of Sinai, near Mount Sina, where Moses received the revelation of the Law; but this desert is the same as that of Kades according to the Hebrew, but not according to the LXX." The confusion indicated by this last remark may be explained by the observations, 1st. that Sin, which is a synonym "for the wilderness of Kadesh" (Vumb. xx. 1, xxxiii. 36), is identical in Greek with the Sin (i.e. Σινά); the Σ representing both the Σ (tradi.) of Σύνα and the D (samech) of Δ and, 2dly, that instead of making Zin identical with Kades, as it is in the Hebrew, the LXX. read so as to make "the desert of Paran," which they identify with "the desert of Kades," an intermediate station between Sin and Mount Hor. (Vumb. xxxiii. 36, in LXX.)

The wilderness of Sin, then, must be fixed to the northwest part of the granite district of the peninsula between Serbal and the Red Sea, while Zin is north of Eshon Geber, between it and Mount Hor,—the southern extremity in fact of Wady Misra, or the Ahadah, north of Akaba.

With respect to Sinai, it is difficult to decide between the rival claims of the two mountains, which, in modern as in ancient times, have been regarded as the Mountain of the Law. The one is Serbal above-mentioned, situated towards the NW. extremity of the granite district, towering with its five sharp-pointed granite peaks above the fruitful and agreeable oasis of Wady Pharum, still marked by extensive ruins of the churches, convents, and buildings of the old episcopal town of Paran; the other between 30 and 40 miles south-east of Serbal, in the heart of the granite district, where native traditions, of whatever value, have affixed to the mountains and valleys names connected with the inspired narrative of the giving of the Law, and where the scenery is entirely in unison with the events recorded. Emerging from the steep and narrow valley Nekha Nawa, whose precipitous sides rise to the perpendicular height of 1000 feet, into the wide plain called Wady Misra, at the northern base of the traditonal Horeb, Russegger describes the scene as grand in the extreme. "Bare granite mountains, whose summits reach to a height of more than 7000 Paris feet above the level of the sea; wonderful, I might say fabulous, form an embrace of the plain more than a mile in length, in the background of which lies the convent of St. Catharine, at the foot of Jebel Misra, between the holy Horeb on the west, and Eknatim on the east." In this valley, then, formed at the base of Horeb by what may be called a junction of the Wady-er-Rahah and Wady-esh-Sheikh, but which, according to Russegger's express testimony, bears in this place the native name of Wady Misra, must the children of Israel have encamped before Jebel Misra, whose rugged northern termination, projected boldly into the plain, bears the distinctive name of Ras Sa'idah. Jebel Misra rises to the height of 5956 Paris feet above the sea, but is far from being the highest of the group. Towering high above it, on the south, is seen the summit of Horeb, having an elevation of 7097 Paris feet, and south of that again Jebel Katharina, more than 1000 feet higher still (viz. 8168 Paris feet), all outtopped by Jebel-om-Shomer, the highest of this remarkable group, which attains an altitude of 8300 Paris feet. Over against Jebel Misra on the north, and confining the valley in that direction, is the spur of a mountain which retains in its name, Jebel Sena, a memorial of the ancient Scripture appellation of the Mountain of the Law. To attempt anything like a full discussion of the questions arising—"the issue between the advocates of the conflicting traditions or hypotheses, would be as inconsistent with the character of such an article as this, as with the limits which must be assigned it: a very few remarks.
must suffice. There seems, then, to be no question that the site of Horeb was traditionally known to the Israelites for many centuries after its use by Sinait. (1 Kings, xix. 8); and if so, it is improbable that it was subsequently lost, since its proximity to Elath and Ezion Geber, which were long in their possession, would serve to ensure the perpetuity of the tradition. It is worthy of remark that Josephus, nowhere uses the name Horeb, but in the passage parallel to that above cited from the 1st book of Kings, as uniformly throughout his history, substitutes 70 πριμ. to νας, — so far confirming the identity of locality indicated by the two names, learnedly maintained by Dr. Lepsius, who holds Horeb to be an Ammonite appellative equivalent in signification with Sin, both signifying “earth made dry by draining off the water,” which earth he finds in the large mounds of alluvial deposit in the bed of Wady Faran, at the northern base of Serbal, his Sinai. Bezaort, however, cites rabbinical authorities for another etymology of Sinai, derived from the nature of the rock in the vicinity. (See Shaw’s Travels, 4to, p. 443, and note 7.) Josephus does not in any way identify the site; but Eusebius and St. Jerome have been erroneously understood to describe Serbal under the name Sinai, when they say that Pharam was sent to Arabia, next to the desert of the Saracens, through which the children of Israel journeyed when they decamped from Sinai (Onomast. s. v. Pharam); for they obviously confound the city of Pharam with the wilderness mentioned in Numbers (xix. 16, xiii. 3); and the description is so vague as to prove only their ignorance, if not of the true site of the city Pharam (which they place 3 days east of Aila), at least of the utter want of all connection between this and the desert of Zin, which is Parana; and in this, as in other passages, on which much reliance has been placed in this discussion, it is clear that they are not writing from any local knowledge, but simply drawing deductions from the Scripture narrative. — See e. g. Onomast. s. v. Rubaphim, which we are perhaps equally competent to do. The earliest Christian writer, then, who can be quoted as a witness to the true site of the Mountain of the Law is Cosmas Indicopleustes (circa A. D. 530) who undoubtedly describes Mount Chorine, in the Sinai (desert?), as near to Pharam, about 6 miles distant; and this Pharam must be the Pharam of the ecclesiastical annals, whose ruins at the foot of Mount Serbal have been noticed above. This then is direct historical testimony in favour of a hypothesis first started by Burckhardt in modern times, advocated by Dr. Lepsius, and adopted by Mr. Forster and others. But then it appears to be the only clear historical evidence, and must therefore be compared with that in favour of the existing tradition, which, as it is accepted in its main features by Drs. Robinson and Wilson, Ritter, Mr. Stanley, and other eminent scholars, is obviously not unworthy of regard.

That the present convent of St. Catherine was originally founded by the emperor Justinian (about A. D. 550), is as certain as any fact in history; and it is equally difficult to imagine that, at so short an interval after the journey of Cosmas, the remembrance of the true Sinai could have been lost, and that the emperor or the monks would have acquiesced in what they knew to be a fictitious site; for the mountain had long been regarded with veneration by the monks, who, however, had erected no monastery before this time, but dwelt in the mountains and valleys about the lake in which God appeared to Moses. (Entychii Annales, tom ii. p. 163; comp. Procopius, De Aedificiis Justinian, v. 8); so that when their monasteries are mentioned in earlier times, it is clear that the monastic cells only are to be understood. On the whole, then, the testimony of Cosmas can hardly avail against a tradition which was not originated, but only perpetuated, by the emperors. Of this historical argument in favour of the existing tradition a topographical one may be added. If Rebaphim is correctly placed by Dr. Lepsius and others at Wady Faran, at the foot of Serbal, it seems to follow incontestably that Serbal cannot be Sinai; for what occasion could there be for the people to decamp from Rebaphim, and journey to Sinai, if Rebaphim were at the very base of the mountain? (Erod. xvi. 1, 2). Dr. Lepsius feels the difficulty, and attempts to remove it by insinuating that the sacred narrative is not to be implicitly trusted. That Horeb is mentioned in connection with Rebaphim is certainly a palpable difficulty (Erod. xvi. 1—6), but in a choice of difficulties it is safer to adopt that which does least violence to the sacred text.

By far the strongest argument in favour of the identity of Serbal with Sinai is to be found in the celebrated inscriptions with which the rocks on that mountain and in the surrounding valleys are covered. Not that anything can be certainly determined from these mysterious records, while the art of deciphering them is still in its infancy. The various theories respecting them cannot here be discussed; the works containing them are referred to at the end of the article: but it may be well to mention as an instance of the whole of the earliest testimony concerning them, and to offer for their elucidation an observation suggested by an early writer who has been strangely overlooked in this discussion. It is an interesting theory of Cosmas Indicopleustes, that the Israelites, having been instructed in written characters in the Decalogue given in Horeb, were practised in writing, as in a quiet school, in the desert for forty years; 3 “from whence it comes to pass,” he proceeds, “that you may see in the desert of Mount Sinai, and in all the stations of the Hebrews, all the rocks in those parts, which have rolled down from the mountains, engraved with Hebrew inscriptions, and composed by a man, who journeyed in those parts, testifying which certain Jews also having read, interpreted to us, saying that they were written thus. The pilgrimage (ἀρετής) of such an one, of such a tribe, in such a year, and such a month,—as is frequently written in our bustelries. For they, having newly acquired the art, practised it by multiplying writing, so that all these places are full of Hebrew inscriptions, preserved even unto this time, on account of the unbelievers, as I think; and any one who wishes can visit these places and see them, or they can inquire and learn concerning it, that I have spoken the truth.” (Cosmas Indicopleustes, de Mundo, lib. v. apud Montfaucon, Collect. Nova Patrum, tom ii. p. 205.) On this it may suffice to remark, that while it is certain that the characters are neither the original nor later Hebrew,—i. e. neither Phoenician nor Chaldaic,—still the Jews in Cosma’s company could decipher them. We know that they are for the most part similar to the ancient Arabian (the Hamyaric or Hadramitic) character, with which the whole region in the south of the Arabic peninsula seems, If, then, Mr. Forster’s ingenious and very probable conjectures of the identity of the rock-hewn inscription of Hissn Ghorab with that
copied by Abderakhman from the southern coast of Arabia, preserved and translated by Schultze, be correct, it will follow that the old Adite character was decipherable even two centuries later than the date assigned by Dr. Lepsius, who could scarcely have failed to discover the Christian origin of these inscriptions, if they had been really Christian. Indeed it may well be questioned whether any Christians could have been sufficiently conversant with this ancient character to use it as freely as it is used on the rocks of the peninsula. Certainly if the hypothesis of this place having been resorted to as a place of pilgrimage by the pagan tribes of Arabia, and so having acquired a sanctity in the very earliest times, could be established, the fact might furnish a clue to the future investigation of this deep interesting subject, and, as Bitter has suggested, might serve to remove some difficulties in the Sacred Narrative. Now the journal of Antoninus Placentinos does in fact supply so precisely what was wanting, that it is singular that his statement has attracted so little notice in connection with the Sinaitic inscriptions; which, however, he does not expressly mention or even allude to. What we do learn from him is not unimportant, viz., that before the time of Isalan, in "the ages of ignorance," the Mohammedans call them, the peninsula of Mount Sinai was a principal seat of the idolatrous superstition of the Arabians; and that a festival was held there in honour of their miraculous idol, which was resorted to by Ishmaelites, as he calls them, from all parts; the memorial of which feast seems still to be preserved by the Bedawins. (Burnehardt, Syria, pp. 566, 567.) Now when it is remembered that the eastern commerce of Greece and Rome, conducted by the Arabs of Yemen and Hadramaut, must have brought their merchants and sailors to the vicinity of this ancient sanctuary at Arison or at Elana, the pilgrimage becomes almost a matter of course; and the practice which we know prevailed in their own country of graving their memorials with an iron pen in the rock for ever, was naturally adopted by them, and imitated by the Christian pilgrims in after times. Undue stress has been laid on the frequency of the inscriptions about Serbal, contrasted with their rarity about Jebel Masa; but it should be remembered that they are executed almost entirely in the soft sandstone which meets the granite on and around Serbal, but which is scarcely found in the interior, where the hard, primitive rock did not encourage the scribbling propensities of the travelers, as the softer tablets in the more western part, where the blocks of trap-stone (which are also largely interpersed with the granite, and which present a black surface without, but are lemon-coloured within) were studiously selected for the inscriptions, which, in consequence, come out with the effect of a rubbed-out book or illuminated manuscript, the black surface throwing out in relief the lemon-coloured inscriptions.
